Family Housing Construction, Navy	$0	$0	$725,264
Family Housing Construction, Air Force	$0	$0	$690,767
Total	**$17,260,149**	**$22,808,041**	**$29,085,536**

Table 2: Detailed Mandatory Breakout

BLI	Reconciliation Bin Title	FY 2025 ($K)	FY 2026 ($K)[1]	FY 2027 ($K)
Major Construction – Homeland Defense Over-The-Horizon Radar (INC)	Homeland Defense	$0	$0	$217,000
Minor Military Construction	Homeland Defense	$0	$0	$190,000
Total		**$0**	**$0**	**$407,000**

[1] In accordance with Section 20013 of Public Law 119-21 ("OBBBA"), a detailed Military Construction spend plan for FY2026 was submitted to Congress in April 2026 update

MANDATORY FUNDING JUSTIFICATION:

Defense -Wide Military Construction: The FY 2027 request for Military Construction includes $26,400,903 thousand of discretionary and $2,684,633 thousand of mandatory (reconciliation) for a total of $3,809,951 thousand.

The FY 2027 mandatory request includes $217 million of Defense-Wide Military Construction to build a long-range, early-detection over-the-horizon radar facility as part of a conjunctionally funded project with the U.S. Air Force. The request also supports $190 million of unspecified minor military construction for smaller facility projects supporting homeland defense requirements across various locations.

The FY 2026 amount for Military Construction includes $3,784,301 thousand of discretionary and $628,600 thousand of mandatory (reconciliation) for a total of $4,412,901 thousand.

Defense-Wide Family Housing Construction and Operations: No mandatory funding is requested in these appropriations.

FY 2027 Budget Estimates
Military Construction, Defense-Wide
Table of Contents

Preparation of the Military Construction, Defense-Wide budget cost the Department of War a total of approximately $967,500 in FY 2026. This includes $1,500 in expenses and $966,000 in DoW labor.

FY 2027 Budget Estimates
Military Construction, Defense-Wide

(Including Transfer of Funds)

For acquisition, construction, installation, and equipment of temporary or permanent public works, installations, facilities, and real property for activities and agencies of the Department of War (other than the military departments), as currently authorized by law, $3,402,951,000 to remain available until September 30, 2031: *Provided,* That such amounts of this appropriation as may be determined by the Secretary of War available for military construction or family housing as he may designate, to be merged with and to be available for the same purposes, and for the same time period, as the appropriation or fund to which transferred: *Provided further*, That of the amount appropriated, not to exceed $417,252,000 shall be available for study, planning, design, architect and engineer services, as authorized by law, unless the Secretary of War determines that additional obligations are necessary for such purposes and notifies the Committees on Appropriations of both Houses of Congress of his determination and the reason therefore.

FY 2027 Budget Estimates
Military Construction, Defense-Wide
Special Program Considerations

ENERGY RESILIENCE AND CONSERVATION

The Energy Resilience and Conservation Investment Program (ERCIP) is a critical investment in our national security and the defense of our homeland. ERCIP projects are essential for installation energy capabilities for power projection and sustainment of our military forces. The $694.3 million in ERCIP construction funds high-priority projects focused on needed improvements to installation energy resilience for critical missions. These projects deploy cutting-edge technologies, including advanced energy storage systems, next-generation geothermal and nuclear capabilities, and sophisticated microgrid networks, ensuring that warfighting capability remains operational 24/7 around the globe. An additional $39.3 million of design funds supports a robust pipeline of future ERCIP projects. This ensures our military installations are resilient and have reliable power needed to fulfill their role as weapons systems necessary to defend the nation, both now and into the future.

FLOODPLAIN MANAGEMENT AND WETLANDS PROTECTION

Proposed land acquisitions, disposals, and installation construction projects have been planned to allow the proper management of flood plains and the protection of wetlands by avoiding long-and short-term adverse impacts, reducing the risk of flood losses, and minimizing the loss or degradation of wetlands. Project planning is in accordance with the requirements of Executive Order Nos. 11988, Floodplain Management, and 11990, Protection of Wetlands, and the Floodplain Management Guidelines of the U.S. Water Resources Council. Projects have been sited to avoid or reduce the risk of flood loss, minimize the impact of floods on human safety, health and welfare, preserve and enhance the natural and beneficial values of wetlands and minimize the destruction, loss or degradation of wetlands.

DESIGN FOR ACCESSIBILITY OF PHYSICALLY HANDICAPPED PERSONNEL

In accordance with Public Law 90480 and the Americans with Disabilities Act Accessibility Guidelines, provisions for physically handicapped personnel will be provided for, where appropriate, in the design of facilities included in this program.

PLANNING IN THE NATIONAL CAPITAL REGION

Projects located in the National Capital Region are submitted to the National Capital Planning Commission for budgetary review and comment as part of the Commission's annual review of the Future Years Defense Plan (FYDP). Construction projects within the District of Columbia with the exception of the Bolling/Anacostia area are submitted to the commission for approval prior to the start of construction.

10. Description of Proposed Construction:
Construct a Substance Abuse and Rehabilitation Program (SARP) facility to support enhanced patient care for addiction medicine and behavioral health patients with a medium-risk level that minimizes security risks, provides residential treatment rooms, and appropriate individual and group therapy rooms. The new facility will align with current clinical care standards and provide a safe and appropriate treatment environment to support the current and future workload.

Special costs include Operations & Maintenance Manuals, Comprehensive Interior Design, Post Construction Award Services, Enhanced Commissioning.

Supporting facilities include utilities, antiterrorism/force protection measures, and environmental protection measures. Site improvements include parking, paving, walks, curb, gutter, signage, and storm water management.

Demolition includes disposal of the existing SARP buildings (H2034 with 23,674 SF and H2036 with 4,588 SF).

The project will be designed in accordance with Unified Facilities Criteria (UFC) 4-510-01 Design: Military Medical Facilities, other facilities requirements, and MHS World Class principles per World Class Checklist Requirements. Operations and Maintenance Manuals will be provided.

11. REQ: 25,319 SF ADQT: 0 SF SUBSTD: 28,262 SF

PROJECT:

Construct a Substance Abuse Rehabilitation Program facility at Naval Air Station Jacksonville (CURRENT MISSION)

REQUIREMENT:
The SARP requirement is to provide Substance Abuse counseling and rehabilitative services to the active-duty population and to dependents and other beneficiaries (18 years and older). SARP services include residential treatment,

1. Component DEF (DHA)	FY 2027 MILITARY CONSTRUCTION PROJECT DATA	2. Date APRIL 2026

3. Installation and Location/UIC:	4. Project Title:
Jacksonville, Florida	Ambulatory Care Center Substance Abuse Rehabilitation Program (SARP) Replacement

5. Program Element	6. Category Code	7. Project Number	8. Project Cost ($000)
87717DHA	55030	97777	40,000

REQUIREMENT (Continued):

intensive outpatient program, outpatient counseling and continuing care. The SARP facility will incorporate designated space to deliver holistic behavioral health care to include recreation therapy, art classes, yoga, mindfulness, and other physical activities. The replacement facility supports the long-term mission requirements.

CURRENT SITUATION:
The SARP Counseling/Residential facility is a previous barracks building that is not designed to support patient care. The facility layout contributes to security risks and issues due to patient bedroom doors opening directly to an exterior courtyard and the lack of a panic system. The overnight security Officer of the Watch consists of a single roaming guard with limited facility oversight. Patients that are not fully ambulatory may not be accommodated in this multi-story facility because it lacks a full elevator.

There is no common space to support patient socialization. The counseling rooms are too small to accommodate the optimal group size of 10 patients and two facilitators, while offices are oversized and waste space. Load bearing walls limit the ability to reconfigure the facility to meet the needs of the SARP clinical services. The adjacent SARP Training and Education building has sustained substantial water damage, with a high potential of mold inside the walls. The poor construction and lack of a hard ceiling fail to prevent air and humidity infiltration, which is difficult to control in the Florida climate.

IMPACT IF NOT PROVIDED:
If this project is not provided, the SARP program will continue in a facility that is not suited for patient care or fully ABA compliant. Load bearing walls limit the ability to reconfigure the built environment which hinders the ability to observe and monitor patients. Patients who are a flight risk or considered less stable will not be accepted for residential services and will be referred to the economy for care where there is a lack of military-specific programming. The cost of maintaining aged facilities and systems will continue to increase due to the failing infrastructure and the facilities' deficient architectural and engineering systems.

ADDITIONAL:
This submission is supported by an economic analysis. The project is not in the 100-year floodplain.

JOINT USE CERTIFICATION:
The Director, Defense Health Agency, Facilities Enterprise has reviewed this project for joint use potential. Joint use construction is recommended.

12. Supplemental Data:

A. Design Data (Estimated):

(1) Acquisition Strategy:	Design Bid Build
(2) Design Data:	
(a) Design/RFP Started:	AUG/2024

10. Description of Proposed Construction:
This is the tenth increment of the NAVSUPPACT Bethesda MD, Medical Center Addition/Alteration (MCAA). The project will construct a new addition for in-patient and out-patient medical care, renovate the existing hospital Buildings 9 and 10, provide information systems, and provide appropriate antiterrorism measures. Deteriorated Buildings 2, 4, 6, 7, 8 and 100 of the main hospital complex will be demolished. Construction requires appropriate setbacks for access to natural light. Supporting facilities include utilities, paving, site improvements, special foundations, and environmental mitigation. The project will be designed in accordance with Unified Facilities Criteria (UFC) 4-510-01 Design: Military Medical Facilities, UFC 1-200-01 General Building Requirements, UFC 1-200-02 High Performance and Sustainable Building Requirements, UFC 4-010-01 DoW Minimum Antiterrorism Standards for Buildings, barrier free design in accordance with Architectural Barriers Act (ABA) Accessibility Standard and DEPSECDEF Memorandum “Access for People with Disabilities” dated 10/31/2008, and MHS World Class principles per World Class Checklist Requirements. The project will be designed to LEED Healthcare (HC) Silver certified. Operations and Maintenance Manuals, Enhanced Commissioning, and Comprehensive Interior Design will be provided.

11. REQ: 2,551,618 SF ADQT: 608,163 SUBSTD: 1,229,477 SF

PROJECT:
The using Activity for this project is: Walter Reed National Military Medical Center (WRNMMC). The project implements a comprehensive master plan to provide sufficient world-class military medical facilities and an integrated system of healthcare delivery for the National Capital Region. This renovation of, and addition to WRNMMC will provide wounded warriors, active-duty military personnel, and other beneficiaries with world-class healthcare services based on the principles of evidence-based design. This project encompasses 124,050 SF of renovations to currently occupied space, demolition of approximately 332,000 SF of aged and deficient buildings, and the construction of a new 589,928 SF state-of-the-art medical services building that will address the facility and program deficiencies identified by the Defense Health Board in their 2009 report. Specific goals of the project include single-bed patient rooms, promotion of family-centered care, use of natural light, and establishing clear way finding for patients, families, visitors and staff. The project will right-size the facility, modernize architectural and engineering systems, improve clinical spaces to support adjacencies, provide functional areas for the Women's Center and Ambulatory Surgery suites. The project will also modernize the Graduate and Professional Medical Education facility and integrate the latest medical technologies throughout the medical center infrastructure. (CURRENT MISSION)

REQUIREMENT:
The new construction and renovations incorporate the 2010 Joint Task Force study findings and creates a new north-south and east-west axes of travel and will include a new major public entrance on the east side of the facility. Development of these direct pathways will facilitate way finding and improve connectivity among clinics, offices, and community facilities.

CURRENT SITUATION:
The current hospital configuration does not meet the needs of the military healthcare mission at this installation. The existing facility lacks flexibility, prohibits expansion, contains deficient electrical, mechanical, and environmental engineering systems, and does not provide adequate space to meet health mission programs.

IMPACT IF NOT PROVIDED:
The concerns presented in the May 2009 report from the Defense Health Board will persist at this inefficient, outdated, and deficient facility without modernization and improvement to its infrastructure, and the Walter Reed National Military Medical Center will not be able to provide proper healthcare and medical treatment to our military personnel.

JOINT USE CERTIFICATION:
The Chief, Defense Health Agency, Facilities Enterprise, has reviewed this project for Joint Use potential. Joint Use construction is recommended.

12. Supplemental Data:
A. Estimated Execution Data:

(1) Acquisition Strategy:	Design Bid Build
(2) Design Data:	
(a) Design Started:	FEB/2013
(b) Percent of Design Completed as of Jan 2026 (BY-1):	100%
(c) Design Complete:	AUG/2017
(d) Total Design Cost ($000):	35,140
(e) Energy Studies and/or Life Cycle Analysis Performed:	Yes

1. Component DEF (DHA)	**FY 2027 MILITARY CONSTRUCTION PROJECT DATA**			2. Date APRIL 2026

10. Description of Proposed Construction:
Construct support facilities: structured parking garage for approximately 900 spaces, medical center operations supply, seven replacement loading dock bays and three trash dumpster positions for clean and dirty logistics, as well as preserving three food service docks with two food waste container locations, relocation of the Navy whole body counting dosimetry facility, pedestrian bridge between garage and medical center, patient drop-off canopies, logistics tunnels; standby/emergency power generator system includes generator enclosure, generators, exhaust system, fuel vaults and pumping equipment; and electrical substation to support Walter Reed National Military Medical Center.

Site Improvements include utilities, existing delivery truck docks and loading area improvements, signage, antiterrorism/force protection measures, paving, walks, curb, gutter, storm water management and environmental protection measures.

Special costs include Operations & Maintenance Manuals, Comprehensive Interior Design, Post Construction Award Services, Enhanced Commissioning.

Demolition includes the disposal of the existing support facility building 54 (331,735 SF) and most of support facility building 55 (389,482 SF) will be demolished. Approximately two structural bays of the ground level of building 55 require renovation to support the existing utilities between the central utility plant and building 9, medical gas storage and manifold room, food service delivery docks, and alteration for the electrical substation.

Description of Proposed Construction (Continued):

The project will be designed in accordance with Unified Facilities Criteria (UFC) 4-510-01 Design: Military Medical Facilities, other facilities criteria, and MHS World Class principles per World Class Checklist Requirements. Operations and Maintenance Manuals will be provided.

11. REQ:		ADQT:	SUBSTD:
CATCODE 85310	236,222 SY	114,859 SY	121,363 SY

PROJECT:
Construct a Medical Support Facility at Naval Support Activity Bethesda. (CURRENT MISSION)

REQUIREMENT:
The facility is required to provide Walter Reed National Military Medical Center (WRNMMC) support facilities to optimize site parking and hospital emergency generator protection, Logistics, Information Technology (IT), Emergency Response and Naval Dosimetry with direct connections to the existing medical center. This also includes the renovation and some replacement of the medical warehouse.

CURRENT SITUATION:
Advancing structural deterioration of cracked concrete and corroded rebar in B-54 and B-55 support facilities are projected to for condemnation in the 2029 to 2031 time frame. Due to this deterioration and safety concerns, the top two decks of both structures are closed to parking, resulting in a loss of approximately 360 parking spaces. Condemnation of both garages will result in a loss of 1,673 parking spaces. The new location will only support 886 parking spaces leaving a deficit of 788 spaces.

IMPACT IF NOT PROVIDED:
A loss of essential services provided within B-54 and B-55, i.e. parking, emergency generators, IT and Logistics, will effectively cripple the WRNMMC medical mission. Lack of parking and the loss of Logistics will result in patients being referred to the economy for care. Lack of emergency power and the ability to get need medical supplies into the facility will result in loss of Joint Commission accreditation.

ADDITIONAL:
This submission is supported by an economic analysis. The project is not in the 100-year floodplain.

JOINT USE CERTIFICATION:
The chief, Defense Health Agency, Facilities Enterprise has reviewed this project for joint use potential. Joint use construction is recommended.

12. Supplemental Data:

A. Design Data (Estimated):

(1) Acquisition Strategy:	Design Build
(2) Design Data:	
(a) Design/RFP Started:	OCT 2023
(b) Percent of Design Completed as of JAN 2026 (BY-1):	35%
(c) Design/RFP Complete:	JAN 2026
(d) Total Design Cost ($000):	6,690

Creech Air Force Base provides combat-ready Airmen, aircraft, and equipment around the globe supporting national objectives. The installation flies MQ-9 Reaper and RQ-170 Sentinel aircraft to provide war-fighters long endurance, real-time reconnaissance, surveillance and precision attack against crucial fixed and time-critical targets. They also conduct remotely piloted aircraft (RPA) initial qualification training for aircrew, intelligence and maintenance personnel.

10. Description of Proposed Construction:
Construct a flight medicine clinic, an addition to the existing dental clinic and alterations to the existing dental clinic and an ambulance garage that provides outpatient medical and dental care to the active-duty personnel. The new facility will align with current clinical care standards and provide a safe and appropriate treatment environment to support the current and future workload.

Site improvements include commissioning, utilities, parking, paving, walks, storm drainage, curbs, gutters, access drive, storm water management, Low Impact Development, and environmental protection measures.

Special costs include Operations & Maintenance Manuals, Comprehensive Interior Design, Post Construction Award Services, Enhanced Commissioning.

The project will be designed in accordance with Unified Facilities Criteria (UFC) 4-510-01 Design: Military Medical Facilities, other facility requirements, and MHS World Class principles per World Class Checklist Requirements. Operations and Maintenance Manuals will be provided

(Continued):

REQUIREMENT:
Creech Air Force Base (AFB) requires expanded clinical operations at Creech Ambulatory Care Center to provide outpatient medical and dental care to active-duty members. The new facility will provide right sized clinical space for Physical/ Occupational Therapy, Optometry, Bioenvironmental Engineering, Behavioral Health, Immunizations, Dental, Health/Nutritional Medicine, Audiology and an ambulance garage for Flight Line Emergency Response.

CURRENT SITUATION:
The existing troop clinic at Creech AFB was built to provide basic primary care and dental services. The facility is now grossly undersized to meet the Active-Duty operators' healthcare needs. Due to Creech's remote location, Airmen must travel 60 minutes each way, to and from Nellis AFB, to access many routine medical care services. This lost duty time negatively impacts Creech's unique 24/7 warfighting operations. The lack of accessible healthcare provides a significant barrier and/or deterrent for seeking critical preventive or corrective medical care (including Behavioral Health). The current situation is not in line with the Military Health System's objective of providing proximate basic ambulatory care close to where beneficiaries reside and/or work.

Many services are provided in inadequate/dysfunctional space or have no space at all at Creech. The Behavioral Health mission has no dedicated footprint. The embedded Behavioral Health provider in Primary Care consults with patients in a former closet. Optometry lacks a full-length eye lane (for the rated population) and a multi-diagnostic room. Immunizations functions are located in the only treatment room. Physical Therapy lacks adequate space for therapeutic/exercise modalities forcing significant travel to Nellis AFB. The lack of space for Nutritional Medicine services fails to integrate the "direct handoff" from providers. Bioenvironmental Engineering must respond from Nellis AFB for emergency responses which can lead to significant response delays.

IMPACT IF NOT PROVIDED:
Mission-critical Active-Duty personnel will continue to travel two hours roundtrip to receive basic ambulatory care. Airmen will continue to be medically underserved for routine services found at all other Air Force installations. Behavioral Health, Physical Therapy and other critical medical enablers, will be under-utilized due to lack of proximity and mission demands, slowing recovery and making operators less fit-to-fight. Healthcare providers at Creech will continue to operate out of significantly inadequate space.

ADDITIONAL:
This submission is supported by an economic analysis. The site is not within a 100 year flood plain.

JOINT USE CERTIFICATION:
The Chief, Defense Health Agency, Facilities Enterprise has reviewed this project for joint use potential. Joint use construction is recommended.

10. MISSION OR MAJOR FUNCTIONS

Installations support US Army, Europe and Seventh Army (USAREUR), a trained and ready force capable of rapid responding and operating jointly in support of US EUCOM theater strategy. Installations serve as bases for projecting power in and out of EUCOM areas of responsibility by providing facilities for training, maintaining, housing, and supporting subordinate and supporting units/organizations. These units consist of combat support, and combat service support tactical units as well as theater, mission, installation support, and quality of life organizations required to maintain a trained and ready force oversees.

10. Description of Proposed Construction:
Fund the thirteenth increment of a multi-story Medical Center to replace the Landstuhl Regional Medical Center and the 86th Medical Group (MDG) Clinic. The Hospital will provide inpatient services with contingency expansion, outpatient and specialty care clinics, Aero Medical Staging Facility (ASF), support functions, medical administration, and sub-basement zones. Ancillary facilities include ambulance garage, parking garage, central energy plant, helicopter pad, and road improvements. Supporting facilities include: contingency utilities and laydown area, site improvements, surface parking, access roads, Communications Building alteration, bridge and road improvements, access control point facilities, demolition and site clearance of former ordnance storage area and environmental protection and mitigation. The existing Landstuhl Regional Medical Center and the existing 86th MDG facilities will be returned to respective installations for other uses except for Blood Donor Center, contingency and bulk storage logistics will remain on Landstuhl. The project will be designed in accordance with the criteria prescribed in Unified Facilities Criteria UFC 4-510-01, DoW Minimum Antiterrorism Standards for Buildings UFC 4-010-01, barrier-free design in accordance with DoW, "ABA (Architectural Barriers Act) Accessibility Standard" and DEPSECDEF Memorandum "Access for People with Disabilities" dated 10/31/2008, Evidence Based Design principles, MHS World Class Checklist Requirements, Executive Order 13514, DoW Strategic Sustainability Performance Plan (SSPP), the Energy Policy Act of 2005 (EAPct05), and in accordance with the host nation Status of Forces Agreement (SOFA). The project will be LEED Healthcare Silver certifiable. Operation and Maintenance Manuals, Design During Construction, Enhanced Commissioning, and Comprehensive Interior Design will be provided.

11. REQ: 1,119,799 SF ADQT: 69,180 SF SUBSTD: 819,908 SF

PROJECT:
Construct a replacement Medical Center incorporating an 86th MDG Clinic replacement at Rhine Ordnance Barracks, Germany. (CURRENT MISSION)

REQUIREMENT:
A replacement Medical Center is required to provide direct medical services to 53,000 enrolled beneficiaries and tertiary referral support for more than 245,000 beneficiaries throughout EUCOM as well as contingency casualty evacuation support for up to an additional 250,000 soldiers, airmen & sailors deployed throughout the regions comprising the Areas of Responsibility (AOR) of EUCOM, CENTCOM and AFRICOM.

The mission requires the provision of medical, surgical, and intensive care services, as well as primary and specialty care, emergency/trauma care, dental services and medical proficiency training simulation capability. The current Medical Center provides the only DoW inpatient psychiatric, pediatric specialty care, and substance abuse rehabilitation unit in Europe.

Of equal - and in contingencies - greater importance, the mission requires that it serve as the primary medical facility for the evacuation hub for U.S. service members stationed throughout the EUCOM, CENTCOM and AFRICOM AORs. The medical facility must be strategically located in the immediate vicinity of Ramstein Air Base, to minimize travel times from the flight line to the facility and, therefore, the risks to air evacuated wounded and ill warriors. In support of the contingency mission, the existing Medical Center treats an average of 8,000 aero medical evacuation patients per year including 15% battle-related casualties.

CURRENT SITUATION:
The existing Medical Center is located approximately 13 km (8 miles) from Ramstein Air Base. Most of the route is on an unsecured civilian autobahn and public roads. The total time required to transport critically wounded troops from the airfield to treatment currently varies from 20 to 45 minutes depending on traffic and weather conditions. The existing Medical Center care areas are located in 22 cantonment "finger" buildings built between 1951 and 1953 and a critical care

1. Component DEF (DHA)	FY 2027 MILITARY CONSTRUCTION PROJECT DATA			2. Date APRIL 2026
3. Installation and Location/UIC: Rhine Ordnance Barracks, Germany		4. Project Title: Medical Center Replacement, Incr 13		
5. Program Element 87717DHA	6. Category Code 51010	7. Project Number 107329	8. Project Cost ($000) Approp: 95,002	

CURRENT SITUATION (Continued):

tower built in 1983. Additional activities, such as preventive medicine, logistics, the blood donor center, education and training, and the dental clinic are located in buildings external to the medical center. The multiple "finger" buildings and central circulation corridor are more than 50 years old. The current layout is inefficient, covers almost 3.5 miles of corridors and hallways, and is not capable of supporting modern medical practices. The current conditions pose concerns for patient and staff safety related to lack of single patient rooms, undersized operating rooms, infection control, patient privacy, and excessive travel distances between clinical activities. The buildings have significant deficiencies related to building systems, building integrity and code compliance.

Building infrastructure (electrical, mechanical, and communication) has exceeded ranges of useful life and is costly to sustain, restore, and modernize given the spans of distribution systems along the central spine. The floors in many of the cantonment buildings are failing.

The 86th Medical Group is in multiple aging facilities, some of which are modular structures. Serious life safety criteria and code deficiencies exist in these 50+ year old structures. Combustible construction, to include bamboo plaster substrate is located throughout the main clinic structure and the clinic does not have sprinklers. The permanent facilities have numerous load bearing walls, making renovation of the space unfeasible. The limited floor to floor height prohibits normal heating, ventilating and conditioning systems (HVAC) required to meet DoW criteria. The MDG campus is located in a congested area of Ramstein AB and does not come close to meeting the force protection requirements for setbacks from parking and roadways. There is inadequate space to add to and renovate the existing structures to provide a consolidated location for medical care.

IMPACT IF NOT PROVIDED:
Healthcare for warriors and their family members will be provided in inefficient, dysfunctional cantonment facilities that have exceeded their useful life and are currently in very poor condition. Accordingly, health care for the enrolled beneficiaries, the other beneficiaries in Europe and the deployed warriors in the EUCOM, CENTCOM and AFRICOM Areas of Responsibility will continue in an inadequate environment. Life support systems will be compromised; fire and life safety standards will only be met on the margins; and patient flow will continue to be dysfunctional. Failure to invest in this project will perpetuate a host of problems that put at risk the safety of both patients and staff, including: the shored-up cantonment buildings, presenting a real and increasing possibility of a catastrophic facility-related failure.

JOINT USE CERTIFICATION:
The Chief, Defense Health Agency, Facilities Enterprise has reviewed this project for joint use potential. Joint use construction is recommended.

10. Description of Proposed Construction:
Construct an Ambulatory Care Center with backup power to support personnel stationed and deployed to Kunsan Air Base (AB). The new facility will align with current clinical care standards and provide a safe and appropriate treatment environment to support the current and future workload.

Site improvements include utilities, walks, curbs, gutters, parking, signage, antiterrorism/force protection measures, low impact development, and environmental protection measures.

Buildings 407 (1,126 SF), 410 (9,086 SF), 422 (2,960 SF), and 425 (260 SF) will be demolished to provide the site of the new facility. Building 405 (22,325 SF), the existing main clinic, will be demolished, and Building 302 will be turned over to the installation after functions have been moved to the new facility.

Special costs include Operations & Maintenance Manuals, Comprehensive Interior Design, Post Construction Award Services, and Enhanced Commissioning.

The project will be designed in accordance with Unified Facilities Criteria (UFC) 4-510-01 Design: Military Medical Facilities, other facility requirements, and MHS World Class principles per World Class Checklist Requirements. Operations and Maintenance Manuals will be provided.

11. REQ: 41,914 SF ADQT: 36,699 SF SUBSTD: 37,083 SF

PROJECT:
Construct an Ambulatory Care Center at Kunsan Air Base. (CURRENT MISSION)

REQUIREMENT:
The new facility is required to provide primary care, physical therapy, pharmacy, laboratory, frozen blood storage, immunizations, and radiology services for Active-Duty personnel assigned to Kunsan AB. The new facility will consolidate clinical, administrative, and logistics functions currently housed in several buildings and will have a collective protection system for continued operations during a contingency or emergency event.

CURRENT SITUATION:
The 8th Medical Group operates out of 13 buildings on Kunsan AB. The main clinic was built in 1966, and electrical and mechanical systems are in poor condition and past their service life. Clinical spaces are undersized and inefficiently configured. The facility does not have a United States Indo-Pacific Command required system to protect occupants and operations against a potential chemical weapons attack by the Democratic People's Republic of North Korea.

IMPACT IF NOT PROVIDED:
If this project is not provided, services will continue to be provided in undersized and deteriorating facilities without a collective protection system.

ADDITIONAL:
This submission is supported by an economic analysis. The project is not in the 100-year floodplain.

JOINT USE CERTIFICATION:
The Chief, Defense Health Agency, Facilities Enterprise, has reviewed this project for joint use potential. Joint use construction is recommended.

10. MISSION OR MAJOR FUNCTIONS

Responsible for training, supporting, and employing a combat fighter wing that include F-15E and F-35A squadrons. The wing stands ready to provide responsive combat air power, support and services to meet our Nation's and allies international objectives-anytime, anywhere, whatever needs to be done. The Major Command is the United States Air Forces Europe (USAFE), which is a component command of the United States European Command (USEUCOM).

10. Description of Proposed Construction:
This is the second increment to construct a replacement hospital. This project is Phase 2 of a 3-phase project that together will complete the recapitalization of the RAF Lakenheath medical campus. This project will provide modern inpatient services, outpatient specialty care clinics, ancillary services, support, and some medical administrative functions. Related supporting facilities include replacing the central utility plant to service new and existing medical facilities, emergency generator, ambulance garage,-utilities, roads within the medical campus,

CATCODE 51010	274,500 SF	0 SF	181,364 SF

PROJECT:
Construct a replacement hospital, central utility plant, and ambulance garage. (CURRENT MISSION)

REQUIREMENT:
A hospital is required to meet the enduring RAF Lakenheath medical mission, in support of the European Infrastructure Consolidation. The current inpatient facilities require replacement due to infrastructure age and condition. The replacement hospital provides direct medical services to 16,558 enrolled beneficiaries (in 2024) at RAF Lakenheath and additional beneficiaries supported throughout the United Kingdom and Scandinavia. The healthcare mission requirements include medical-surgical inpatient beds, labor-delivery service, inpatient, and outpatient surgical services, as well as primary and specialty ambulatory care, emergency, and medical proficiency training simulation capability. The hospital serves as the Air Force hub for inpatient services, telemedicine and specialty and advance diagnostic testing for all DoW beneficiaries assigned to the United Kingdom and Scandinavia. The hospital also supports both local and remote geographically separated units for military medical specific requirements, tracking, and equipping.

PHASING PLAN:
Multiple phased projects will ultimately replace the inpatient services, modernize outpatient services, and modernize the medical administrative functions. Subsequent stand-alone phases include a final phase for the modernization of Building 922, construct a new parking garage, and construct covered/enclosed pedestrian connectors to the inpatient tower, site work, and demolition of nine facilities including the old inpatient tower.

CURRENT SITUATION:
The RAF Lakenheath medical campus consists of multiple clinical administrative, and logistical buildings. The current four-story hospital (Building 932) was constructed in 1964 and augmented by a hospital annex constructed in 1996 (Building 935) and a second annex constructed in 2001 (Building 922) for medical administration.

The facility has struggled to adapt to updated life safety and evidence-based DoW medical space planning requirements, emerging technologies, and multiple mission changes. The existing 9’-9” floor to floor height of

1. Component DEF (DHA)	FY 2027 MILITARY CONSTRUCTION PROJECT DATA	2. Date APRIL 2026

3. Installation and Location/UIC: Royal Air Force Lakenheath, United Kingdom	4. Project Title: Hospital Replacement, Phase 2 (INC)

5. Program Element	6. Category Code	7. Project Number	8. Project Cost ($000)
87717DHA	51010	107331	Approp: 78,000

CURRENT SITUATION (Continued):

hospital Building 932 does not allow for the installation of a fire sprinkler system, nor allow for the incorporation of modern surgical equipment. Current DoW hospital minimal standard for floor-to-floor height is 15 feet.

Space constraints impacting facility operations are progressively pushing functions into buildings of opportunity or constructing medical annexes. The 1996 hospital annex (Building 935) lacks a fire sprinkler system, and requires extensive renovation to add sprinklers, anti-terrorism/force protection, and seismic upgrades to accommodate new clinical capabilities which were determined uneconomical, and therefore, will be demolished. The 2001 administrative annex (Building 922) requires renovation to accommodate new functions. The existing steam plant (Building 931) built in 1964 suffers from utility system failures and will be replaced with a modern efficient electrical system. The ambulance shelter (Building 933) is in the footprint of the replacement hospital, was constructed in 1968.

IMPACT IF NOT PROVIDED:
The lack of a fire suppression system (sprinklers) in an inpatient facility and insufficient floor to floor height to accommodate modern surgical practices and equipment places patient and staff safety at risk and jeopardizes the hospital's accreditation. The hospital does not meet "World Class Facility" standards or the current healthcare requirements of the first of two U.S. based F-35A Squadrons in Europe.

ADDITIONAL:
This project supports the European Infrastructure Consolidation. This multi-phase project will ultimately replace the current main hospital inpatient facility and modernize the ambulatory care portions of the Lakenheath medical campus. A prior phase prepared a site to enable construction of the replacement hospital facility. A subsequent stand-alone phase will include the alteration of building 922, construction of campus building connectors, and a parking structure.

This submission is supported by an economic analysis. The site is not within a 100-year flood plain.

Project 2, Increment 2 provides funding for foreign currency rate adjustment, the balance of the design during construction fee, and an initial allocation of construction contingency and SIOH. Increment 3 will provide the balance of the construction contingency and SIOH. Increment 1 provided the British Government Defense Infrastructure Organization with the required full funding for the Works Contract, DIO fees, and one-half of the design during construction fee.

JOINT USE CERTIFICATION:
The Chief, Defense Health Agency, Facilities Enterprise has reviewed this project for joint use potential. Joint use construction is recommended.

10. MISSION OR MAJOR FUNCTIONS

Fort Carson's primary mission is to train and maintain combat-ready expeditionary forces, specifically the 4th Infantry Division, and to provide support to soldiers, civilians, and families. The post is also a key hub for operational and training deployments, with units regularly deploying to support geographic combatant commands and participating in exercises at training centers like the National Training Center and Joint Readiness Training Center.

10. DESCRIPTION OF PROPOSED CONSTRUCTION:
Construct a new General Purpose Warehouse (GPW) and outdoor storage area. The GPW will be a permanent, noncombustible facility that will include both warehouse and administrative functions. The warehouse portion of the building will have concrete floors, appropriate clear stacking height, canopy covered truck dock doors, and loading ramp. The administrative portion of the building will have standard office finishes, including carpeted floors, painted gypsum wallboard walls and acoustic tile ceilings. The spaces include reception area, offices, break room, conference/training rooms, restrooms, mechanical/electrical rooms, and fire riser facilities within the building envelope. Handicap accessible access to the building will be provided at the main entry and at required egress exits from the administrative area. The building will also include mezzanine storage and mechanical space above the administration space. Appropriate cybersecurity measures will be applied to the facility-related control systems in accordance with current DoW criteria.

A storage shed for material handling equipment will be constructed, along with outdoor storage adjacent to the warehouse building, and a scrapyard all within the fenced compound.

Supporting facilities include site preparation, site improvements, and utilities. Site preparation includes clearing the site, excavation and removal of unsuitable soils and replacing them with new soil as required. Site improvements include relocation of the existing contractor yard, paving of the new storage yard and parking areas, walks, fencing, truck scale, and stormwater management. Utilities include electrical, water, sewage, gas, fire protection, site telecommunication systems, and site lighting.

11. REQUIREMENT: 80,000 SF **ADEQUATE:** 0 SF **SUBSTANDARD:** 36,858 SF

PROJECT: The project will construct a modern General Purpose Warehouse and Material Handling Equipment shed along with a fenced open storage yard.

REQUIREMENT: DLA Disposition Services has an immediate and long-term requirement for modern warehousing space at Fort Carson, CO to replace facilities that have been lost from the Disposition Services facility inventory and to replace currently inadequate facilities. In 2017, the primary Disposition Services facility, Building 318, was condemned and demolished, leaving Disposition Services with an insufficient amount of enclosed building area in which to process and store materials. Per a requirement calculation performed in support of this facility, Disposition Services has a requirement for the reutilization, demilitarization (DEMIL) holding, transfer, and environmental disposal of materials, all of which will be provided by this project. A permanent, modern, state of the art warehouse is required to support the DLA Disposition Services mission to dispose of excess military property received from Fort Carson and from installations in Colorado, Wyoming, and New Mexico. Furthermore, DLA Disposition Services has a need to address environmental concerns that stem from metallic material that is stored outdoors and is exposed to weather conditions in the DLA scrapyard.

CURRENT SITUATION: The current operations occur in 1970s-era, utilitarian storage buildings and a cluster of temporary trailers that function as an administration area. The storage structures are metal-clad, steel-framed warehouses, with low ceilings and minimal amenities. General structural deficiencies include a lack of fire protection systems in all but one of the buildings The standards specifying a useful service life of 36 years for these structures has already been exceeded. Many of the Disposition Services operations, both receiving and shipping, are largely conducted outside due to lack of interior space and are subject to the elements. Once items such as electronics, exercise equipment, or appliances are stored outdoors, they are considered degraded, and the reuse or resale value is lost. Additionally, there is an insufficient amount of interior space available for bulk DEMIL holding or for other sensitive material. As a result, these items are often held outdoors in inadequately secured locations. Moreover, the existing site does not currently meet the Fort Carson standards for metal in stormwater discharge. These existing conditions lead to highly inefficient processing of material, and strain DLA Disposition Services' ability to meet customer demands and satisfy its mission.

In the longer term, large portions of the existing DLA Disposition Services site are anticipated to be critically impacted by an approved plan to reconfigure the Gate 3 commercial Access Control Point (ACP) into the installation. Implementation of this project would displace the Disposition Services scrapyard, vehicle scales, truck scanner, rolling stock yard, and Building 324. The revised traffic flow generated by the Gate 3 reconfiguration plans to place a high volume of heavy vehicles on the road that separate the current Disposition Services yards, presenting safety hazards and making the overall operation functionally far more difficult to accomplish.

IMPACT IF NOT PROVIDED: If this project is not provided, DLA Disposition Services Colorado Springs will continue to utilize the existing inefficient facilities at Fort Carson; it will require significant and increasing maintenance costs to maintain these inadequate structures; and it will be forced to support mission requirements without a replacement facility for demolished building 318. In the long term, additional facilities will be displaced after implementation of the Gate 3 ACP upgrades, resulting in unacceptable safety risks for pedestrians and material moves among storage areas, and further degradation of operation through inefficient workflows, inefficient and outmoded storage of material, and reduced quality of support to DLA customers.

ADDITIONAL: This project has been coordinated with the Fort Carson Directorate of Public Works for integration of utilities and the installation's long-range Master Plan. Coordination of the installation physical security plan and all required physical security measures are included. This project is the only feasible option to meet both DLA and the installation's requirements. Antiterrorism/Force Protection will be in accordance with the local threat assessment. Sustainable principles, to include Life Cycle cost-effective practices, will be integrated into the design, development, and construction of the project.

10. MISSION OR MAJOR FUNCTIONS

Wake Island is a vital strategic link in the Pacific region and serves as a trans-Pacific refueling stop for military aircraft. Several Department of War agencies also maintain programs and assets on the island; the Missile Defense Agency runs a set of launch sites and storage facilities for equipment such as the Army's Terminal High Altitude Area Defense missile launchers, the Defense Threat Reduction Agency monitors for atmospheric and seismic evidence of nuclear launch tests, and the National Oceanic and Atmospheric Agency monitors tidal patterns and sea levels.

10. DESCRIPTION OF PROPOSED CONSTRUCTION:
Expand bulk fuel storage operations by constructing a marine fuel terminal with a liquid fuel pier, trestle and mooring facility to support larger tanker ships and includes both load and offload capability, three above-ground jet fuel bulk fuel storage tanks with secondary containment, fuel transfer pumphouses, and associated piping. Each fuel transfer pumphouse includes pumps and filter separators, control systems, emergency generator power, fire protection, and a bridge crane.

1. COMPONENT DEFENSE (DLA)	**FY 2027 MILITARY CONSTRUCTION PROJECT DATA**	2. Date APRIL 2026

3. INSTALLATION AND LOCATION DEF FUEL SPT POINT WAKE ISLAND	4. PROJECT TITLE: PDI: FUELING FACILITIES

5. PROGRAM ELEMENT	6. CATEGORY CODE	7. PROJECT NUMBER	8. PROJECT COST ($000)
0702976S	411135	DESC2601	100,000

The project also constructs an airfield hydrant fueling system with a pumphouse, hydrant loop, aboveground operating tank with secondary containment, truck fillstands with hydrant hose truck checkout position and canopy, hydrant pits, and associated piping. The hydrant fuel pumphouse includes emergency generator power, control systems, pumps and filter separators, fire protection, and a bridge crane.

Facility-related control systems include cybersecurity features in accordance with current Department of War criteria and cybersecurity commissioning.

Demolition includes the removal of airfield ramp paving, an existing access road, three old facilities, pump pad, filtration pad, truck fill stand, refueler truck parking, hydrant outlet pits and associated piping. Site preparation includes site grading, preparation for building foundations.

Paving and site improvements include grading, roadways, landscaping, secondary containment for fuel storage tanks, airfield ramp paving, truck fill stands and refueler truck parking, and storm water management.

Electrical utilities include primary and secondary distribution systems, emergency power support, exterior lighting, transformers, emergency fuel system shut off controls, lightning protection and grounding, and telecommunications infrastructure.

Mechanical utilities include fuel distribution, sanitary sewer lines, storm water lines, potable water supply lines, and fire protection systems. The fire protection systems include the construction of two fire water storage tanks and fire water pump stations with water wells, water treatment systems, pumps, and associated piping.

Environmental mitigation includes archaeological monitoring, biological monitoring, and management of contaminated soils.

Operation & Maintenance Support Information (OMSI) are included.

Due to the remote location, shipping and special logistical considerations include shipping to and from Wake Island of construction materials, supplies, construction equipment, and waste generated during construction. It also includes the flights necessary to transport the workforce to and from the island for the duration of construction, construction and operation of lodging for the construction workforce, heavy construction vehicle and equipment transportation, temporary concrete batch plant, and temporary water and wastewater treatment systems to support the workforce.

Special Costs include engineering Post Construction Contract Award Services (PCAS), third party commissioning, permits, temporary breakwater for construction of the mooring facility, and commissioning of fuel system and pigging verification of pipeline.

Munitions and explosives of concern include the costs for surveys, removal, and mitigation of munitions and explosives.

11. REQUIREMENT: 719,000 BL **ADEQUATE:** 219,000 BL **SUBSTANDARD:** 0 BL

PROJECT: Increase fuel storage and distribution capability at Wake Island by constructing a new marine fuel terminal, three new bulk fuel storage tanks, a new airfield hydrant fuel system with operating tank, and associated supporting facilities.

REQUIREMENT: The joint force requires prepositioned aviation fuel stores at Wake Island Airfield to establish a connected and resilient fuel logistics network. This forward positioning is critical to supplying air and naval assets and enabling sustained power projection in response to contingencies throughout the first island chain and the South China Sea. Increased capacity at this strategic location will ensure a responsive and uninterrupted supply line, underpinning the operational readiness and strategic reach of U.S. Indo-Pacific Command (INDOPACOM) forces.

1. COMPONENT DEFENSE (DLA)	FY 2027 MILITARY CONSTRUCTION PROJECT DATA	2. Date APRIL 2026

3. INSTALLATION AND LOCATION	4. PROJECT TITLE:
DEF FUEL SPT POINT WAKE ISLAND	PDI: FUELING FACILITIES

5. PROGRAM ELEMENT	6. CATEGORY CODE	7. PROJECT NUMBER	8. PROJECT COST ($000)
0702976S	411135	DESC2601	100,000

CURRENT SITUATION: The existing aviation fuel storage capacity at Wake Island is sized only to support the airfield's immediate, day-to-day U.S. Air Force operations. These facilities are critically insufficient to meet the calculated fuel demands of joint force surge operations, sustained regional presence, or the logistical requirements necessary to support broader INDOPACOM contingency plans.

IMPACT IF NOT PROVIDED: Failure to provide adequate, prepositioned fuel storage at Wake Island introduces unacceptable operational risk and delays. In a crisis, logistics would be forced to divert and transport fuel from the U.S. West Coast across the International Date Line, delaying the delivery of essential fuel to the theater by several days and straining strategic lift capabilities. This reliance on trans-Pacific supply lines would constrain U.S. Transportation Command (USTRANSCOM) by the limited size of its available tanker fleet, creating a critical logistical bottleneck. Furthermore, the persistent lack of fuel reserves severely limits the realism and scale of joint training exercises in the region, directly hindering the combat readiness of the joint force.

ADDITIONAL: Antiterrorism Force Protection requirements were incorporated and the project complies with applicable DoW policies and directives. Facilities are designed to meet or exceed the useful service life specified in DoW policy and incorporate features that provide the lowest practical life cycle cost solutions Sustainable principles to include Life Cycle cost-effective practices and Low Impact Development were integrated into the development and design of the project as appropriate.

JOINT USE CERTIFICATION: This facility can be used by other components on an "as available" basis. The scope of this project is based on Air Force, Navy, and INDOPACOM requirements.

12. Supplemental Data:

A. Estimated Execution Data:

(1) Acquisition Strategy:	Design/Bid/Build
(2) Design Data:

10. MISSION OR MAJOR FUNCTIONS

Ramstein Air Base is located in the German state of Rhineland-Palatinate (aka Rheinland-Pfalz) and is part of the Kaiserslautern Military Community, the largest American community outside of the United States. The 86th Airlift Wing is the host wing at Ramstein Air Base, Germany. Ramstein is assigned to U.S. Air Forces in Europe. With its seven groups and 30 squadrons across four bases in Germany, Spain, Belgium and Portugal, the 86th conducts U.S. Air Forces in Europe's only airlift, airdrop, and aeromedical evacuation flying operations providing rapid mobility and expeditionary combat support for military operations. Ramstein is also home to two mission partners: the 435th Air Ground Operations Wing and the 521st Air Mobility Operations Wing.

10. DESCRIPTION OF PROPOSED CONSTRUCTION:

Construct a vehicle fueling facility on Ramstein Air Base. The facility will provide underground storage tanks for diesel and motor gasoline, fuel dispensers with vapor recovery, a canopy, a control building, and appurtenances for an automatic fuel tank gauging system. Appropriate cybersecurity measures will be applied to the facility-related control systems in accordance with current DoW criteria.

Supporting facilities include site preparation and clearing, pavement, security fencing and site lighting. Rigid pavement will be provided in fuel handling areas and flexible pavement will be used for site access. Utilities include a connection to underground electric service from the nearby power distribution system via a new pad-mounted transformer and an emergency generator. Stormwater lines and telecommunication infrastructure will be provided. Special costs include Post Construction Contract Award Services (PCAS).

11. REQUIREMENT: 84,535 GA (320 CM) **ADEQUATE:** 31,701 GA (120 CM) **SUBSTANDARD:** 0 CM

PROJECT: The project constructs a vehicle fueling facility on Ramstein Air Base.

REQUIREMENT: There are currently insufficient storage and pumping capacities to adequately support 24-hour diesel and automotive gasoline dispensing requirements for the installation, the surrounding 13 military installations, and approximately 57,000 U.S. personnel supporting the Ramstein AB critical mission as the "Gateway to Europe." This additional fueling station is considered necessary to rectify the shortfall originating from the transfer of the strategic airlift mission from former Rhein-Main AB to Ramstein AB in December 2005.

CURRENT SITUATION: The installation currently only has one government vehicle refueling station that was constructed in 1985 prior to the Rhein-Main AB closure and the transfer of the giant strategic airlift mission to Ramstein. That facility is in the compound of the Transportation Squadron and is inaccessible to many of the 2,500 vehicles assigned to the base. The existing fueling station only has two diesel dispensers and a single unleaded dispenser. Moreover, mobile refuelers must be positioned at the station routinely to refuel the fleet when any of these dispensers go out of service to provide fueling support or to satisfy peak demands during contingency operations. The island canopy is too low to accommodate high profile vehicles and has been hit several times, damaging both vehicles and the canopy due to this clearance restriction. During periods of elevated Force Protection conditions and after normal duty hours, access to the station is further restricted when the transportation compound is closed to meet governing security requirements for the compound.

IMPACT IF NOT PROVIDED: The current facility is unable to efficiently support the high level of demand and will deteriorate at an accelerated rate due to high utilization. Base fuels management will have no other option than to continue to provide inefficient mobile fuel servicing support due to the facility's limitations. This continued practice increases the potential for uncontrolled fuel releases, environmental damage, costly cleanup and hundreds of man-hours expended to deliver fuel to customers who cannot utilize the current station and must be refueled in areas not designed or equipped to support routine vehicle fueling operations.

ADDITIONAL: Sustainable engineering principles will be integrated into the design, development, and construction of the project.

JOINT USE CERTIFICATION: This facility can be used by other components on an "as available" basis; however, the scope of the project is based on Air Force requirements.

10. MISSION OR MAJOR FUNCTIONS

The primary mission of Marine Corps Air Station (MCAS) Futenma is to operate, maintain, and sustain the air station to support U.S. Marine Corps Forces Pacific and other forces by providing facilities, services, and support for training and combat readiness. It serves as a vital hub for force projection in the Indo-Asia-Pacific, helping to deter aggression and respond to contingencies and crises by ensuring the readiness of aviation forces for regional security.

10. DESCRIPTION OF PROPOSED CONSTRUCTION:

Construct commercial tank truck offload positions for a secondary aviation fuel resupply source at Marine Corps Air Station (MCAS) Futenma. The work will include new truck offload positions with equipment skids, a transfer pipeline, remote secondary containment basin, an upgraded power distribution system, and a diesel backup power generator with fuel supply tank. In addition, the project will include a parking area for six refueler trucks. The refueler parking area will be provided with concrete containment paving and a remote secondary containment basin. Appropriate cybersecurity measures will be applied to the facility-related control systems in accordance with current DoW criteria.

Supporting facilities include site preparation, site improvements, utilities, and environmental mitigation. Site preparation and improvements include demolition of existing pavement and utilities and providing new concrete and asphalt pavement, curbing, sidewalks, driveways, truck offload area canopies, bollards, emergency eyewash stations, and site lighting. Civil and Mechanical utilities include fuel distribution piping, stormwater lines, remote containment basin, and fire protection systems. Electrical utilities include exterior lighting, transformers, emergency fuel system shut off controls, lightning protection and grounding, and telecommunications infrastructure. Environmental mitigation provides for the handling and disposal of contaminated soils. Special costs include third party commissioning and performance testing.

1. COMPONENT DEFENSE (DLA)	**FY 2027 MILITARY CONSTRUCTION PROJECT DATA**		2. Date APRIL 2026
3. INSTALLATION AND LOCATION CAMP BUTLER, JAPAN		4. PROJECT TITLE: PDI: TRUCK OFFLOAD FACILITIES	
5. PROGRAM ELEMENT 0702976S	6. CATEGORY CODE 12640	7. PROJECT NUMBER DESC2701	8. PROJECT COST ($000) 37,900

11. REQUIREMENT: 4 OL **ADEQUATE:** 0 OL **SUBSTANDARD:** 0 OL

PROJECT: The project will provide new truck offload positions with offload skids, transfer pipeline, remote secondary containment basins, new site generator, and upgraded site power distribution. The project will also provide a new parking area to accommodate six refueler vehicles.

REQUIREMENT: MCAS Futenma does not currently meet the DoW standards for aviation facilities. DoW fuel facilities standards require aviation facilities maintain two methods for fuel delivery. Redundant aviation fuel supply via commercial transport tank trucks is needed in case the current transfer pipeline becomes inoperable or unavailable. A four-position truck offload system will satisfy the peak daily requirement.

CURRENT SITUATION: The existing bulk aviation fuel system consists of three aboveground storage tanks, truck fill stands, a filter/separator pad, and pump station. Tank 639 sits on a hill approximately 76 feet above the truck fill stands and is used as the primary bulk storage tank. The primary mode of aviation fuel resupply is by transfer pipeline. Commercial trucks can be loaded by the 505th QMB at Kuwae Tank Farm; however, the air station currently has no means of offloading fuel trucks. There is no secondary aviation fuel resupply capability. Runoff contamination from the containment for the truck loading rack and the four refueler parking positions are managed with an oil/water separator. The existing parking containments are sloped pads with curbs on two sides to direct drainage to the oil/water separator. The concrete pads and curbs are cracked. There is no lockable valve that controls drainage from the parking pads.

IMPACT IF NOT PROVIDED: The DLA fuel pipeline from Kuwae Tank Farm stretches for more than six miles with multiple exposed sections over water crossings. Should the pipeline become damaged or placed out of service for an extended period, MCAS Futenma would consume all of its existing bulk and operational stored fuel. While Kuwae Tank Farm has the capacity to load tanker trucks, MCAS Futenma lacks the ability to offload the fuel from tanker trucks. Without an alternate fuel delivery method to supplement the DLA pipeline, MCAS Futenma could run out of fuel, adversely affecting its ability to meet its aviation mission.

ADDITIONAL: Antiterrorism Force Protection requirements are incorporated and the project complies with applicable DoW policies and directives. Facilities are designed to meet or exceed the useful service life specified in DoW policy and incorporate features that provide the lowest practical life cycle cost solutions Sustainable principles to include Life Cycle cost-effective practices and Low Impact Development were integrated into the development and design of the project as appropriate.

JOINT USE CERTIFICATION: This facility can be used by other components on an “as available” basis. The scope of this project is based on Marine Corps requirements.

10. MISSION OR MAJOR FUNCTIONS

The 374th Airlift Wing at Yokota Air Base includes four groups: operations, mission support, maintenance and medical. Each group manages several squadrons to carry out the wing's mission. Yokota Air Base is also home to U.S. Forces Japan, a joint service headquarters coordinating matters affecting U.S. and Japanese defense relations, and Fifth Air Force, whose mission is to enhance the U.S. deterrent posture and, if necessary, provide fighter and military airlift support for offensive air operations. Yokota hosts several tenant units including the 515th Air Mobility Operations Group, which manages air mobility operations throughout the Western Pacific, and the Japanese Air Defense Command which controls Japan's air defense mission.

10. DESCRIPTION OF PROPOSED CONSTRUCTION:

Construct a cut-and-cover fuel storage tank. A pump house located on the top of the tank will contain vertical turbine pumps and a water draw-off vertical turbine pump. The pump house will be of reinforced concrete construction and site adapted to meet local conditions. The roof will be a low slope concrete roof with built-up roofing with overhangs over doorways. The new tank will include a high-level valve, independent level alarms, and the infrastructure necessary to support an automatic tank gauging system. The new tank will be of steel construction with a concrete outer wall. A rolling cover will be provided for access to tank mounted equipment and includes piping, valves, vaults and appurtenances connecting to an existing filter separator building that houses pump control systems. A product recovery system with product saver tank will return reclaimed fuel through receipt filtration to the bulk storage tanks. Appropriate cybersecurity measures will be applied to the facility-related control systems in accordance with current DoW criteria.

Site preparation and improvements include removal of abandoned fuel lines and vaults within the tank footprint and properly disposed off-site, site clearing and grubbing, earthwork, access roads, paving, fencing and gates, utility relocations, and landscaping and restoration of existing soil berms. Construction of the cut-and-cover tank will require significant excavation.

1. COMPONENT DEFENSE (DLA)	FY 2027 MILITARY CONSTRUCTION PROJECT DATA		2. Date APRIL 2026
3. INSTALLATION AND LOCATION YOKOTA AIR BASE, JAPAN		4. PROJECT TITLE: PDI: BULK STORAGE TANKS PH 2	
5. PROGRAM ELEMENT 0702976S	6. CATEGORY CODE 412135	7. PROJECT NUMBER DESC2103C	8. PROJECT COST ($000) 88,200

Electrical utility improvements include secondary power distribution automation and management, telecommunications, area lighting, grounding, lightning protection, controls, and related work. Other improvements include the installation of duct banks from the existing filter building to the cut-and-cover pump house and new duct banks for the primary electrical work as well as the outside plant telecommunications work.

Supporting civil and mechanical utility infrastructure for the fuel facilities includes the construction of a new water line and fire hydrants adjacent to the perimeter road to provide fire protection for the area. Special costs include pumphouse system commissioning and performance testing.

11. REQUIREMENT: 850,000 BL **ADEQUATE:** 550,000 BL **SUBSTANDARD:** 0 BL

PROJECT: Construct a cut-and-cover aviation fuel bulk storage tank. This phase of the project provides one-third of the remaining unmet total storage requirement.

REQUIREMENT: Yokota Air Base routinely services KC-135 Stratotankers, C-5 Galaxies, KC-10 Extenders, and various other aircraft. The 459th and 36th Airlift Squadrons perform multifaceted missions that include passenger transport, aeromedical evacuation, search and rescue, humanitarian relief, and service and support via airlift and airdrop operations. Additional fuel storage is needed to extend the capability of Yokota Air Base Pacific region airlift operations during contingency operations and to support humanitarian missions in the event fuel delivery systems are interrupted.

CURRENT SITUATION: Yokota Air Base does not have sufficient on-site fuel storage capacity. The Yokota fuel supply is supported by off-site fuel storage at Defense Fuel Support Point Tsurumi. Primary fuel receipt is performed by rail car and then pumped to the Main Base filter receipt building before transfer into storage. A truck offload facility exists to serve the existing rail fuel offload facility as a secondary receipt option. Fuel is stored at the Eastside Fueling Facility and at the Main Base. The Eastside Fueling Facility has three 100,000-BL tanks, of which one was constructed under Phase 1 of this effort, and the Main Base POL Facility has two 100,000-BL and one 50,000-BL aviation fuel bulk storage tanks. Phase 1 also provided a new filter building and a new truck fill stand which was provided next to the existing truck fill stand. The standard operation is to receive aviation fuel into three bulk storage tanks at the Main Base POL facility and then to the Eastside Fueling Facility storage tanks that supplies fuel to the hydrant system tanks. Fuel transfers between the three facilities keep the fuel circulated and prevent inventory stagnation.

IMPACT IF NOT PROVIDED: Yokota Air Base will remain less effective and unable to fully support airlift operations during contingency or humanitarian campaigns. If the project is not provided and the current supply is interrupted, based on the current operational rate of consumption, the Air Base does not have enough on-site fuel storage capacity available to support extended operational needs as required by United States Forces Japan. Without the increase in fuel storage, Yokota Air Base’s ability to provide sustainable airlift support in the event of contingency or humanitarian operations will be necessarily degraded.

ADDITIONAL: Sustainable engineering principles will be integrated into the design, development, and construction of the project. This project will include Anti-Terrorism/Force Protection (AT/FP) features and comply with AT/FP regulations and physical security mitigation.

JOINT USE CERTIFICATION: This facility can be used by other components on an “as available” basis; however, the scope of the project is based on Air Force requirements.

10. DESCRIPTION OF PROPOSED CONSTRUCTION:

Renovate existing undersized classrooms, provide restrooms and storage, and connect new building systems (life safety/HVAC) to existing as required for a fully functioning facility. Construct an addition for maintenance support, central storage, and receiving.

Special costs include installation of temporary classroom facilities to operate the elementary/middle school functions while the existing classrooms are being renovated.

The project includes related utility infrastructure such as water, sewer, electric, gas, and communications which include telephone, wired and wireless local area network.

Site preparation includes site clearing, grubbing, excavation, rough grading, and temporary erosion and sediment control.

Construct an access road for emergency vehicle and school bus access to the rear of the facility. Construct a bus drop-off loop and extend the existing parent drop-off. Construct sidewalks and covered walkways for safe access to the facility. Construct a staff parking lot and expand the existing visitor parking.

Construct a new service area and emergency vehicle access drive at the front of the facility.

Site improvements include signage, fencing, external AT/FP features, landscaping, exterior lighting, exterior accessible play areas, and storm water management. AT/FP features will comply with AT/FP regulations, and physical security mitigation in accordance with DoW Minimum Anti-Terrorism Standards for Buildings.

Environmental mitigation will be required for selective demolition. Asbestos containing materials and lead are both present in the existing facilities. U.S. Federal Environmental Laws and Regulations shall be followed. The site is known to have a chlordane risk at existing facilities foundations. Environmental mitigation will be required during construction to monitor, contain, and remediate the soils.

Facilities will be designed in accordance with Department criteria, DoWEA Education Facilities Specifications, and other applicable codes. Facilities will be designed to meet or exceed the useful service life in accordance with Department criteria. Facilities will incorporate features that provide the lowest practical life cycle cost solutions satisfying the facility requirements with the goal of maximizing energy efficiency.

11. REQUIREMENT: 128,000 SF ADQT: 70,200 SF SUBSTD: 55,000 SF

PROJECT:

This project constructs an addition and renovations to the existing elementary/middle school and associated support facilities.

REQUIREMENT:

The Maxwell Elementary/Middle School (EMS) provides academic facilities for 520 students in Prekindergarten through eighth grade (PK-8). School population is based on the projected enrollment for 2028/2029 school year. The Maxwell EMS Replacement/Renovation was funded in FY16 with this project providing additional instructional and support facilities.

This project is not within a flood hazard area.

CURRENT SITUATION:

After construction began on the FY16 project the Maxwell EMS experienced an increase in the special needs population along with an overall increase in student enrollment. Three of the five buildings that were identified for demolition were retained to accommodate the increased enrollment. This change displaced the bus drop-off and staff parking areas which were initially combined with the parent-drop off and visitor parking. This created substantial vehicular congestion due to the school being at the terminus of a dead-end road. A temporary bus loop and staff parking were established to separate the vehicular traffic. Subsequent to the completion of the FY16 project one of the retained buildings (538A) required demolition due to lead contamination where the source could not be identified. This eliminated a number of classrooms and also removed the maintenance support, central storage, and receiving/service drive functions from the existing facility. These functions have been temporarily moved to existing classrooms, reducing the number of classrooms that can be used for education. The existing classrooms in the remaining two buildings that were retained (538B1/B2) are significantly undersized and do not meet current standards.

3. INSTALLATION AND LOCATION	4. PROJECT TITLE:
MAXWELL AIR FORCE BASE, ALABAMA	MAXWELL ELEMENTARY/MIDDLE SCHOOL ADDITION

5. PROGRAM ELEMENT	6. CATEGORY CODE	7. PROJECT NUMBER	8. PROJECT COST ($000)
	730787	AMEMSAL1	$44,000

<u>IMPACT IF NOT PROVIDED:</u>

If the existing facility is not upgraded, the substandard environment will continue to hamper the educational process and the existing elementary/middle school will not be able to support the DoWEA curriculum and provide a safe facility for education. The substandard conditions will continue to impact the utilization of existing space. The continued use of substandard facilities will have a negative impact on the existing and incoming students and the learning environment.

<u>JOINT USE CERTIFICATION:</u>

This facility can be used by other components on an “as available” basis; however, the scope of the project is based on DoWEA requirements.

10. DESCRIPTION OF PROPOSED CONSTRUCTION:

Construct a middle school with functional areas containing neighborhood instructional spaces, special education spaces, staff collaboration spaces, commons area, performance space, information center, gymnasium, art room, music suite, science labs, career technical education labs, administrative suite, health suite, guidance counseling suite, special education suite, food service, maintenance support, central storage area, technology service center, and other required areas for a fully functioning middle school. The site is a known radon risk. Radon resistant construction shall be incorporated into new design.

Department of War (DoW) and Department of War Education Activity (DoWEA) principles for high performance and sustainable building requirements will be included in the design and construction of the project in accordance with federal laws and Executive Orders.

Facilities will be designed to provide cyber security engineering and validation as specified in DoW Unified Facilities Criteria.

The project includes related utility infrastructure such as water, sewer, electric, gas, and communications which include telephone, wired and wireless local area network.

Site work includes site preparation and site improvements, such as signage, fencing, paving, sidewalks, parking, external AT/FP features, landscaping, covered walkways, exterior lighting, exterior play areas, and storm water management.

AT/FP features will comply with AT/FP regulations, and physical security mitigation in accordance with DoW Minimum Anti-Terrorism Standards for Buildings.

Demolition includes approximately 66,000 SF of existing facilities. Hazardous material mitigation will be required for the buildings to be demolished. U.S. Federal Environmental Laws and Regulations shall be followed. Asbestos containing materials and lead are both present in the existing facilities.

Facilities will be designed in accordance with Department criteria, DoWEA Education Facilities Specifications, and other applicable codes. Facilities will be designed to meet or exceed the useful service life in accordance with Department criteria. Facilities will incorporate features that provide the lowest practical life cycle cost solutions satisfying the facility requirements with the goal of maximizing energy efficiency.

Disposal Actions:

Macdonald IS	Bldg. 7729	286697	65,654
Macdonald IS	Bldg. 7731	RELO	259

11. REQUIREMENT: 113,500 SF ADQT: 000,000 SF SUBSTD: 66,000 SF

PROJECT:

This project constructs a middle school by replacing the existing intermediate school and associated support facilities.

REQUIREMENT:

The middle school is required to provide adequate academic facilities for 460 students in grades 6-8. School population is based on the projected enrollment for school year 2030/2031.

This project is not within a flood hazard area.

CURRENT SITUATION:

The current intermediate school was originally constructed in 1957 and is in fair condition. The existing intermediate school had an addition in 1967, and portions of the facility were rebuilt in 1994-1997 due to fire damage. None of the facility's systems are currently failing or expired. The configuration of the spaces in the school are inadequate and do not meet current DoWEA Education Facilities Specifications. Many building systems are outdated, and in need of modernization. The existing school structures do not comply with current building codes, AT/FP standards, and sustainability standards. Heating, ventilation and air conditioning and electrical systems do not meet federally mandated energy performance standards. The building plumbing infrastructure is original, requiring repair/replacement of plumbing components. Due to overcrowding and capacity problems at Fort Knox Middle High School, enrollment at Ft Knox was shifted to Elementary (PK-4)/Intermediate (5-6)/Middle-High School (7-12). This project will enable a shift back to Elementary (PK-5)/Middle (6-8)/High (9-12) grade level structure.

IMPACT IF NOT PROVIDED:

If a new facility is not provided the substandard environment will continue to hamper the educational process and the existing intermediate school will not be able to support the DoWEA curriculum and provide a safe facility for education. The substandard conditions and the required maintenance and repair of expired systems will continue to strain

maintenance capabilities and budgets. The continued use of substandard facilities will have a negative impact on the existing and incoming students and the learning environment. The continuation of overcrowding in the middle high school will necessitate the continuation of the non-standard grade structure which affects all schools on Ft Knox.

JOINT USE CERTIFICATION:

This facility can be used by other components on an "as available" basis; however, the scope of the project is based on DoWEA requirements.

10. DESCRIPTION OF PROPOSED CONSTRUCTION:

Construct a school annex providing instructional space, gymnasium storage, and maintenance equipment storage. Construct a Parking Structure to provide dedicated staff parking and incorporate displaced tennis courts. Construct an exterior bearing wall, new entry, and extension of the roof at the existing Communications Center as required for a fully functioning freestanding structure when Building 80008 is demolished. Energy conservation and environmentally safe measures will be incorporated in the project wherever feasible, practical, or required by regulation but third-party certification is not required. Department of War (DoW) and Department of War Education Activity (DoWEA) principles for high performance and sustainable building requirements will be included in the design and construction of the project in accordance with federal laws and Executive Orders.

Facilities will be designed to provide cyber security engineering and validation as specified in DoW Unified Facilities Criteria.

The project includes related utility infrastructure such as water, sewer, gas, electric, and communications utilities which include telephone, local area network and provisions for interior and exterior campus wireless access.

Site preparation includes clearing and grubbing, erosion and sediment control, construction fencing, establishing haul routes and contractor material laydown. Temporary site features include roadways, staff parking and bus parking to facilitate operation of the existing school during construction.

	73046	EBUSBE01	33,000

Site improvements include signage, fencing, paving, traffic circle, pedestrian crossing, landscaping, exterior lighting, sidewalks, covered walkways, external Anti-Terrorism/Force Protection features, and storm water management.

Demolition includes approximately 11,000 SF of existing facilities. Hazardous material mitigation and disposal will be required. U.S. Federal Environmental Laws and Regulations and Host Nation Laws and Regulations shall be followed.

Facilities will be designed in accordance with Department criteria, DoWEA Education Facilities Specifications, and other applicable codes. Facilities will be designed to meet or exceed the useful service life in accordance with Department criteria. Facilities will incorporate features that provide the lowest practical life cycle cost solutions satisfying the facility requirements with the goal of maximizing energy efficiency.

Brussels US	Bldg. 80014 (transfer)	1078901	6,247

11. REQUIREMENT: 39,920 SF ADQT: 000,000 SF SUBSTD: 12,000 SF

PROJECT:

This project constructs a school annex and parking to consolidate school facilities at Sterrebeek Annex.

REQUIREMENT:

The Brussels Unit School provides academic facilities for 300 students in grades Prekindergarten thru Grade 12. School population is based on the projected enrollment for 2030/2031 school year. The new Brussels Unit School was funded in FY15 with this project providing consolidation of school functions at the new location.

This project is not within a flood hazard area.

CURRENT SITUATION:

The Sterrebeek Annex is part of USAG Benelux-Brussels. Current community support functions include the Brussels Unit School, Brussels Army Health Clinic, child & youth services, and infrastructure supporting military communications (satellite terminal). The FY15 project retained two of the existing school buildings with the remaining buildings being turned over to the installation. The 2015 European Infrastructure Consolidation (EIC) included the return of USAG Benelux's Brussels leased site which will require relocation of some garrison functions to Sterrebeek Annex. One of the retained existing school buildings is central to the building cluster for future garrison functions which creates an incompatible use. This building is also a 200 meter walk (approximately 5 minutes) from the new school creating operational challenges with transit time. The remote location also impacts drills, evacuations, notifications as well as line-of-sight supervision for instructors. In addition to this, the former pedestrian-only spine that separates the new and existing facilities is now the primary roadway on the annex which creates an additional safety hazard for students. Building 80008 is adjacent to the new school and was evaluated for renovation, but due to its condition was not suitable. Use of the Building 80008 site will allow consolidation of school functions. The existing Communications Center for the Sterrebeek Annex is at the corner of building 80008 and must be maintained throughout construction. In addition to the issues with the remote building, there is a lack of storage at both the existing Gym, athletic fields, and for maintenance equipment. There is also inadequate dedicated parking for school staff and a significant overall shortage of parking on the Sterrebeek Annex.

1. COMPONENT DEF (DoWEA)	**FY 2027 MILITARY CONSTRUCTION PROJECT DATA**		2. Date April 2026
3. INSTALLATION AND LOCATION STERREBEEK ANNEX, BRUSSELS, BELGIUM		4. PROJECT TITLE: BRUSSELS UNIT SCHOOL ANNEX	
5. PROGRAM ELEMENT	6. CATEGORY CODE 73046	7. PROJECT NUMBER EBUSBE01	8. PROJECT COST ($000) 33,000

IMPACT IF NOT PROVIDED:

If the new facilities are not provided the travel distance between the existing buildings and the need to cross the active roadway will create problems with the supervision and safety of students and increase transit time which will negatively impact instructional time for the students. The remote location of the existing building within a complex that will be used by the garrison will make visitor control and security of the facility more difficult. If the new facilities are not provided, the existing conditions will continue to hamper the educational process and create challenges with providing a safe facility for education.

JOINT USE CERTIFICATION:

This facility can be used by other components on an "as available" basis; however, the scope of the project is based on DoWEA requirements.

10. DESCRIPTION OF PROPOSED CONSTRUCTION:

Construct a middle/high school with functional areas containing neighborhood instructional spaces, special education spaces, staff collaboration spaces, commons area, performance space, information center, physical education, art room, music room, science labs, career technical education labs, JROTC, administration suite, health suite, guidance counseling suite, special education suite, food service, janitorial workroom, maintenance support, school supply/storage area, receiving room, technology service center, transportation office, field house, and other required areas for a fully functioning middle/high school. The site is a known radon risk. Radon resistant construction shall be incorporated into new design.

Department of War (DoW) and Department of War Education Activity (DoWEA) principles for high performance and sustainable building requirements will be included in the design and construction of the project in accordance with federal laws and Executive Orders.

Facilities will be designed to provide cyber security engineering and validation as specified in DoW Unified Facilities Criteria.

The project includes related utility infrastructure such as water, sewer, electrical and communications, which includes telephone, local area network, community access television systems, and provisions for interior and campus wireless access.

DD FORM 1391, JUL 1999

5. PROGRAM ELEMENT	6. CATEGORY CODE	7. PROJECT NUMBER	8. PROJECT COST ($000)
	73046	EBMHSGY1	140,000

Site preparation includes site clearing, grubbing, excavation, rough grading, and temporary erosion and sediment control, utility demolition and utility relocations.

Roads, sidewalks, and parking will include staff and visitor parking, POV and bus drop-off, service drive and emergency vehicle access. Ramps will be provided as required to navigate grade changes. Sidewalks and covered walkways will be provided for safe access to the facility.

Site improvements will be provided, such as signage, fencing, landscaping, retaining walls, external AT/FP features, exterior lighting, athletic fields, bleachers / press box, and storm water management. AT/FP features will comply with AT/FP regulations, and physical security mitigation in accordance with DoW Minimum Anti-Terrorism Standards for Buildings.

Demolition includes approximately 290,000 SF of existing facilities. Hazardous material mitigation will be required for the buildings to be demolished. U.S. Federal Environmental Laws and Regulations and German Laws and Regulations shall be followed. Asbestos containing materials, mercury, polychlorinated biphenyl, and lead based paint are present in the existing facilities.

Facilities will be designed in accordance with Department criteria, DoWEA Education Facilities Specifications, and other applicable codes. Facilities will be designed to meet or exceed the useful service life in accordance with Department criteria. Facilities will incorporate features that provide the lowest practical life cycle cost solutions satisfying the facility requirements with the goal of maximizing energy efficiency.

11. REQUIREMENT: 143,500 SF ADQT: 000,000 SF SUBSTD: 290,000 SF

PROJECT:

This project constructs a middle/high school by replacing the existing middle/high school and associated support facilities.

1. COMPONENT DEF (DoWEA)	**FY 2027 MILITARY CONSTRUCTION PROJECT DATA**	2. Date April 2026

3. INSTALLATION AND LOCATION	4. PROJECT TITLE:
BAUMHOLDER, GERMANY	BAUMHOLDER MIDDLE/HIGH SCHOOL

5. PROGRAM ELEMENT	6. CATEGORY CODE	7. PROJECT NUMBER	8. PROJECT COST ($000)
	73046	EBMHSGY1	140,000

REQUIREMENT:

The middle/high school is required to provide adequate academic facilities for 400 students in grades six through twelve (6-12). School population is based on the projected enrollment for 2031/2032 school year.

This project is not within a flood hazard area.

CURRENT SITUATION:

The current middle/high school was originally constructed in 1955 and is in poor condition. Additions were constructed in 1958, 1973, 1982 and 1990 and are in poor condition. The facility does not meet the DoWEA's Education Facilities Specifications to include program adjacencies, sizes, and functionality. Many building systems are outdated, failing, and in need of repair or replacement. The existing school structures do not comply with current building codes, ABA, NFPA and AT/FP standards, and sustainability mandates. Interior finishes are degraded. Heating, ventilation and air conditioning and electrical systems are not sufficient and do not meet federally mandated energy performance standards. The building plumbing infrastructure is original, requiring repair/replacement of plumbing components. Exterior walls and windows do not meet energy standards and need repair. Lack of athletic fields negatively impacts the school athletic and physical fitness programs. Portions of the existing facilities are within 45 meters of the base perimeter and do not meet AT/FP standards.

IMPACT IF NOT PROVIDED:

If a new facility is not provided or the existing facility is not upgraded, the substandard environment will continue to hamper the educational process, and the existing middle/high school will not be able to support the DoWEA curriculum and provide a safe facility. The required maintenance and repair of expired and failing systems will continue to strain maintenance capabilities and budgets. The continued use of substandard facilities will have a negative impact on the existing and incoming students and the learning environment.

JOINT USE CERTIFICATION:

This facility can be used by other components on an "as available" basis; however, the scope of the project is based on DoWEA requirements.

10. MISSION OR MAJOR FUNCTIONS

The mission of the Missile Defense Agency is to develop and deploy a layered Missile Defense System to defend the United States, its deployed forces, allies, and friends from missile attacks in all phases of flight. The Guam Defense System projects are required to support the deployment of a Pacific Deterrence Initiative Enhance Integrated Air and Missile Defense system to protect Guam from hypersonic, ballistic, and cruise missiles.

10. DESCRIPTION OF PROPOSED CONSTRUCTION:

The project constructs a Guam Defense System (GDS) Command Center (CC), power generation facility, switchgear building, fuel storage facility, entry control facility, and associated equipment. The CC will include functional areas to accommodate personnel, computing equipment, user interfaces, and communications needed for planning, controlling, and directing mission activities. The power generation facility will provide power via the switchgear facility for the command center and associated infrastructure with fuel from the storage facility consisting of above ground fuel tanks, fuel off-loading infrastructure, and associated containment. The CC facility and power generation facility will be designed for Risk Category IV to meet site specific ground motion and seismic requirements to include base isolation.

Security infrastructure includes real property features to support the installation of Security System Level-C and Integrated Electronic Security System (IESS), site security measures, and entry control.

Facilities will be designed to provide cyber security engineering and validation as specified in Unified Facilities Criteria (UFC). The cybersecurity commissioning cost is to cover the contractor's submittals, administrative actions and compliance with cybersecurity requirements as well as in-house costs to review contractor submittals and to implement steps necessary for obtaining Authority to Operate.

Department of War (DOW) principles for high performance and sustainable building requirements will be included in the design and construction of the project in accordance with federal laws and Executive Orders. Low Impact Development will be included in the design and construction of this project as appropriate.

Electrical distribution includes all on-site electrical infrastructure, electrical connection to local installation substations, exterior lighting, and lightning protection for mission equipment.

Utilities include extending water and sewer infrastructure to the site.

Site Preparation includes site clearing/ grubbing, rough grading, and finish grading and drainage.

Paving and Site improvements include asphalt roads, gravel-based patrol roads, parking, and fencing.

Communications infrastructure includes a communications tower, all onsite communications infrastructure, and connection to a point of demarcation to offsite communications.

Demolition includes up to 40 housing units and the associated mitigation/disposal of asbestos, lead contaminated materials, and pesticide contaminated soil.

Environmental mitigation in compliance with state and local law may include permitting, biological and archaeological monitoring, restoration, habitat conservation, in-lieu fee program, shoreline protection and restoration, and premiums for environmentally caused delays. The Missile Defense Agency (MDA) will address mitigations to include natural resources and cultural resources, including direct and programmatic mitigations as required by the Biological Opinion and Programmatic Agreement.

Facilities will be designed to meet or exceed the useful service life specified in DOW UFC. Facilities will incorporate features that provide the lowest practical life cycle cost solutions satisfying the facility requirements with the goal of maximizing energy efficiency.

11. REQUIREMENT: 57,000 SF **ADQT:** 0 SF **SUBSTD:** 0 SF

PROJECT: This project provides a Command Center (CC) facility to support the Guam Defense System (GDS).

REQUIREMENT: The Fiscal Year (FY) 2022 National Defense Authorization Act (NDAA) requires the Secretary of War, acting through the Director of the MDA, and in coordination with the Commander of the United States Indo-Pacific Command (INDOPACOM), to identify the architecture for a 360-degree enhanced integrated air and missile defense (EIAMD) capability to defend the people, infrastructure, and territory of Guam from the scope and scale of advanced cruise, ballistic, and hypersonic missile threats that are expected to be fielded during the 10-year period following the FY 2022 NDAA. The CC will provide the capability to support equipment from Army Integrated Battle Command System; Aegis Guam System; Command and Control, Battle Management, and Communications Mission Node; and Air Force Air Defense. The mission of the CC is to provide the functions required for planning, controlling, and directing launches and intercepts to include computing equipment, user interfaces, communications, and personnel. The CC is one of the first military construction projects of the GDS program. The CC and associated infrastructure are mission essential and requires N+2 power redundancy to support continuous operations. Military Construction Project MDA 694, also requested in FY 2025, provides the necessary infrastructure to place the first set of radars and launchers for the GDS EIAMD capability.

CURRENT SITUATION: The current defense systems in the region and on Guam provide limited capability and do not meet the requirement for a 360-degree EIAMD capability.

IMPACT IF NOT PROVIDED: The DOW missions supported on Guam will continue to be defended from missiles with existing systems that are not anticipated to be adequate for defending against advanced cruise, ballistic, and hypersonic missile threats expected to be fielded in the INDOPACOM theater of operations.

ADDITIONAL INFORMATION: This project is not within a flood hazard area.

As applicable, this project shall comply with UFC 1-200-01, “General Building Requirements”, providing model building codes and government-unique criteria for typical design disciplines and building systems, as well as for accessibility, antiterrorism, security, sustainability, and safety.

10. DESCRIPTION OF PROPOSED CONSTRUCTION:

The project constructs infrastructure necessary to support one radar site and one launcher site on Marine Corps Base Camp Blaz in support of the Guam Defense System (GDS), EIAMD program. Both sites require power generation facilities, fuel storage, switchgear buildings, fire pump buildings, water storage, and an entry control facility. The power generation facility will provide power via the switchgear facility for the radar and launcher infrastructure with fuel from the storage facility consisting of above ground fuel tanks, fuel off-loading infrastructure, and associated containment. These facilities will be designed for Risk Category (RC)-IV (wind) and RC-III (seismic) to meet site specific ground motion and seismic requirements.

1. COMPONENT MDA	FY 2027 MILITARY CONSTRUCTION PROJECT DATA	2. Date APRIL 2026

3. INSTALLATION AND LOCATION	4. PROJECT TITLE:
Joint Region Marianas, Guam	PDI: Guam Defense System, Enhanced Integrated Air and Missile Defense (EIAMD), PH 1 (Inc 3)

5. PROGRAM ELEMENT	6. CATEGORY CODE	7. PROJECT NUMBER	8. PROJECT COST ($000)
0604102C	81110	MDA 694B	75,113

Special construction features include unique asset foundations to support the radar equipment and radomes and to support the launchers and munitions loading and unloading activities.

Security infrastructure includes real property features to support the installation of Security System Level-C and Integrated Electronic Security System (IESS), site security measures, and entry control and security forces area.

Facilities will be designed to provide cyber security engineering and validation as specified in Unified Facility Criteria (UFC). The cybersecurity commissioning cost is to cover the contractor's submittals, administrative actions and compliance with cybersecurity requirements as well as in-house costs to review contractor submittals and to implement steps necessary for obtaining Authority to Operate.

The Department of War (DOW) principles for high performance and sustainable building requirements will be included in the design and construction of the project in accordance with federal laws and Executive Orders. Low Impact Development will be included in the design and construction of this project as appropriate.

Electrical distribution includes all on-site electrical infrastructure, exterior lighting, and lightning protection for mission equipment and facilities.

Utilities include extending water and sewer infrastructure to the site.

Site Preparation includes relocation of an existing communications tower and related support facilities, site clearing/ grubbing, rough grading, and finish grading and drainage.

Paving and Site improvements include asphalt roads, gravel-based patrol roads, parking, and fencing.

Communications distribution includes all onsite communications infrastructure and connection to a point of demarcation to offsite communications.

Environmental mitigation in compliance with state and local law may include permits, biological and archaeological monitoring, restoration, habitat conservation, in-lieu fee program, shoreline protection and restoration, and premiums for environmentally caused delays. The Missile Defense Agency (MDA) will address mitigations to include natural resources and cultural resources, including direct and programmatic mitigations as required by the Biological Opinion and Programmatic Agreement.

The Secretary of the Navy may acquire fee or lesser real property interests in land to address public safety considerations inherent to radar and launcher operations.

Facilities will be designed to meet or exceed the useful service life specified in DOW UFC. Facilities will incorporate features that provide the lowest practical life cycle cost solutions satisfying the facility requirements with the goal of maximizing energy efficiency.

11. REQUIREMENT: 20,500 KW **ADQT:** 0 KW **SUBSTD:** 0 KW

PROJECT: This project constructs initial radar and launcher sites with dedicated power generation supporting the Guam Defense System.

REQUIREMENT: The Fiscal Year (FY) 2022 National Defense Authorization Act (NDAA) requires the Secretary of War, acting through the Director of the Missile Defense Agency, and in coordination with the Commander of the United States Indo-Pacific Command (INDOPACOM), to identify the architecture for a 360-degree integrated air and missile defense capability to defend the people, infrastructure, and territory of Guam from the scope and scale of advanced cruise, ballistic, and hypersonic missile threats that are expected to be fielded during the 10-year period following the FY 2022 NDAA. The radar and launcher sites are mission essential and require power redundancy (N+2) to support continuous operations.

3. INSTALLATION AND LOCATION	4. PROJECT TITLE:
Joint Region Marianas, Guam	PDI: Guam Defense System, Enhanced Integrated Air and Missile Defense (EIAMD), PH 1 (Inc 3)

5. PROGRAM ELEMENT	6. CATEGORY CODE	7. PROJECT NUMBER	8. PROJECT COST ($000)
0604102C	81110	MDA 694B	75,113

Military Construction Project MDA 693, also requested in FY 2025, provides the command center for the GDS program with other phased projects providing the necessary infrastructure to support radars and launchers at distributed sites on Guam. This project provides Phase 1 and includes infrastructure for one radar and one launcher site. Future phases will address additional sites that will be included in future budget requests from the MDA and from the Army depending on the acquisition lead for the supported system.

CURRENT SITUATION: The current defense systems in the region and on Guam provide limited capability and do not meet the requirement for a 360-degree EIAMD capability.

IMPACT IF NOT PROVIDED: The DOW missions supported on Guam will continue to be defended from missiles with existing systems that are not anticipated to be adequate for defending against advanced cruise, ballistic, and hypersonic missile threats expected to be fielded in the INDOPACOM theater of operations.

ADDITIONAL INFORMATION: This project is not within a flood hazard area.

As applicable, this project shall comply with UFC 1-200-01, “General Building Requirements”, providing model building codes and government-unique criteria for typical design disciplines and building systems, as well as for accessibility, antiterrorism, security, sustainability, and safety. This project has been coordinated with the installation physical security plan, and all security measures will be included.

10. DESCRIPTION OF PROPOSED CONSTRUCTION:

Constructs infrastructure necessary to support one launcher site and one Sensor Augmentation System (SAS) site at Naval Base Guam, and one SAS site at Marine Corps Base Camp Blaz in support of the Guam Defense System (GDS) program. The three sites require fossil fuel power generation, fuel storage and off-loading infrastructure, special construction features, security infrastructure, and cybersecurity measures. The launcher site also requires a switchgear and communication building, water storage, a fire pump building, and access control points.

The power generation facility will provide power via the switchgear building for the launcher infrastructure with fuel from the storage facility consisting of above ground fuel tanks, fuel off-loading infrastructure, and associated containment. These facilities will be designed for Risk Category (RC)-IV (wind) and RC-III (seismic) to meet site specific ground motion and seismic requirements.

5. PROGRAM ELEMENT	6. CATEGORY CODE	7. PROJECT NUMBER	8. PROJECT COST ($000)
0604102C	81110	MDA 698	179,446

Special construction features include unique asset foundations to support the launchers, SAS assets, and munitions loading and unloading activities.

Security infrastructure includes installation of Security System Level-C and a restroom for the launcher site, Integrated Electronic Security System (IESS), and site security measures for all three sites.

Facilities will be designed to provide cybersecurity engineering and validation as specified in Unified Facility Criteria (UFC). The cybersecurity commissioning cost is to cover the contractor's submittals, administrative actions and compliance with cybersecurity requirements as well as in-house costs to review contractor submittals and to implement steps necessary for obtaining Authority to Operate.

The Department of War (DOW) principles for high performance and sustainable building requirements will be included in the design and construction of the project in accordance with federal laws and Executive Orders. Low Impact Development will be included in the design and construction of this project as appropriate.

Electrical distribution includes off-site extension and on-site electrical infrastructure, exterior lighting, and lightning protection for mission equipment and facilities.

Site Preparation includes demolition of existing infrastructure, site clearing, grubbing, rough grading, finish grading, and drainage.

Utilities include extending water and sewer infrastructure to the sites.

Roads, sidewalks, and parking include asphalt and gravel-based roads and parking.

Communications distribution includes all onsite communications infrastructure and connection to a point of demarcation to offsite communications.

Site improvements include retaining walls, wind walls, bollards, and landscaping.

Environmental compliance includes measures for protecting natural and cultural resources per regulatory consultation requirements and environmental controls.

Facilities will be designed to meet or exceed the useful service life specified in DOW UFC. Facilities will incorporate features that provide the lowest practical life cycle cost solutions satisfying the facility requirements with the goal of maximizing energy efficiency.

11. REQUIREMENT: 4,100 KW **ADQT:** 0 KW **SUBSTD:** 0 KW

PROJECT: Constructs a launcher site and two SAS sites with dedicated power generation supporting the Guam Defense System.

REQUIREMENT: The Fiscal Year (FY) 2022 National Defense Authorization Act (NDAA) requires the Secretary of War, acting through the Director of the Missile Defense Agency, and in coordination with the Commander of the United States Indo-Pacific Command (INDOPACOM), to identify the architecture for a 360-degree integrated air and missile defense capability to defend the people, infrastructure, and territory of Guam from the scope and scale of advanced cruise, ballistic, and hypersonic missile threats that are expected to be fielded during the 10-year period following the FY 2022 NDAA. The launcher site is mission essential and requires power redundancy (N+2) to support continuous operations. This project provides Phase 3 additional launcher site and two SAS sites. Phase 1 and 2 projects provided initial radars and launchers via MDA 694 in FY25 and Army 104219 in FY26, at distributed sites on Guam. Future phases will address additional sites included in future budget requests from the MDA and from the Army depending on the acquisition lead for the supported system.

The GDS sites are required to support the deployment of a GDS to protect the United States from hypersonic, ballistic, and cruise missiles. Each site is independent of the other but programmed collectively for purposes of efficiency and operational

security measures for deployment locations. The three sites will support the overall mission requirement; however, each site will be complete and useable independently within the deployed architecture.

CURRENT SITUATION: The current defense systems in the region and on Guam provide limited capability and do not meet the requirement for a 360-degree EIAMD capability.

IMPACT IF NOT PROVIDED: The DOW missions supported on Guam will continue to be defended with existing systems that are not anticipated to be adequate for defending against advanced cruise, ballistic, and hypersonic missile threats expected to be fielded in the INDOPACOM theater of operations.

ADDITIONAL INFORMATION: This project is not within a flood hazard area.

As applicable, this project shall comply with DOW Requirements, providing model building codes and government-unique criteria for typical design disciplines and building systems, as well as for accessibility, antiterrorism, security, sustainability, and safety. This project has been coordinated with the installation physical security plan, and all security measures will be included.

12. Supplemental Data:

A. Estimated Execution Data:

(1) Acquisition Strategy:	Design/Bid/Build
(2) Design Data:	
(a) Design or Request for Proposal (RFP) Started:	MAR 2023
(b) Percent of Design Completed as of September 2025:	35%
(c) Percent of Design Completed as of January 2026:	65%
(d) Design or RFP Complete:	AUG 2026
(e) Total Design Cost ($000):	21,500
(f) Energy Study and/or Life Cycle Analysis performed:	No
(g) Standard or definitive design used:	No
(3) Construction Data:	
(a) Contract Award:	MAR 2027
(b) Construction Start:	APR 2027
(c) Construction Complete:	AUG 2030

B. Equipment associated with this project which will be provided from other appropriations:

Equipment Nomenclature	Procuring Appropriation	FY Appropriated of Requested	Cost ($000)
Site Activation	RDT&E	2027 & 2028	12,100
Security Equipment/IESS	RDT&E	2028	2,000
Launcher Equipment	Procurement	2023,2024,2025	122,600
SAS Equipment	RDT&E	2026-2030	194,000
MEC Survey and Mitigations	RDT&E	2026	1,500
Environmental Surveys and Permitting	RDT&E	2025	600

Previous year RDT&E funds were used to provide Munitions and Explosives of Concern (MEC) mitigations in support of a clean construction site.

Procurement funds were programmed to procure launcher weapon systems equipment to be deployed to the launcher site. RDT&E funds are programmed to provide weapon system equipment, as well as communication and electrical enclosure equipment to be deployed at the SAS sites.

10. DESCRIPTION OF PROPOSED CONSTRUCTION: Construct a Command, Control, Communications, Computers, Intelligence (C4I) Operations Building and structured Parking Facility with all required supporting facilities, associated site work, and environmental measures. The Operations Building will provide operational office space, administrative and support office space, operations floor, infrastructure, equipment and communications space, and storage areas.

Operational and administrative areas include private offices and open flexible seating space, collaborative multi-discipline work spaces, support spaces, and conference areas. Amenity spaces include food service and dining area.

1. COMPONENT DEF (NSA/CSS)	**FY 2027 MILITARY CONSTRUCTION PROJECT DATA**	2. Date APRIL 2026

3. INSTALLATION AND LOCATION	4. PROJECT TITLE:
FORT MEADE, MARYLAND	NSAW EAST CAMPUS BUILDING #5, INC 4

5. PROGRAM ELEMENT	6. CATEGORY CODE	7. PROJECT NUMBER	8. PROJECT COST ($000)
	14190	41695	180,000

The Operations Building will be a multi-story structure with a full basement. The project consists of core, shell structure, and foundations; elevators; electrical/mechanical service and distribution components and systems; life safety generator, fire protection, alarm, and suppression systems; information technology infrastructure, communications, and security systems support infrastructure; exterior finishes and weatherproofing. The Operations Building includes a restricted–access internal garage on the first floor for up to 10 government vehicles. Interior build out will provide raised access floor systems, acoustically-rated interior partitions and ceilings, power, lighting, environmental controls, and communications. The entire structure will be built to Sensitive Compartmented Information Facility (SCIF) standards, with redundant primary power and Uninterruptable Power Supply (UPS) systems to ensure continuity of operations.

A structured parking facility will be constructed to provide privately-owned vehicle (POV) parking for staff and visitors. New road construction, widening, realignment, and modifications to existing roads including signals or other road improvements will be provided to connect to existing traffic infrastructure.

Special costs associated with construction on a secure site include clearances for personnel and labor inefficiencies associated with escort requirements. Escorts are required for positive control of access to utilities which service other critical facilities.

Facility physical security will conform to DoW Minimum Anti-Terrorism Standards for Buildings. Anti-Terrorism/Force Protection (ATFP) and include access control, setbacks, architectural shielding, Intrusion Detection Systems (IDS), progressive collapse requirements, and compliance with relevant ATFP regulations including fencing, bollards and protective planters, and electronic security systems to extend the secure perimeter. DOW standards for high performance and sustainable buildings will be included in design and construction of the facility, according to federal law and Executive Orders. Facilities will incorporate features that provide the lowest practical life cycle cost solutions satisfying the facility requirements with the goal of maximizing energy efficiency.

Supporting facilities include primary electrical service and distribution. Utility systems include water, sewer, reclaimed water, gas connection and service from utility providers, and storm drainage systems. Site work consists of curb and gutter, walkways, pedestrian plazas, landscaping, and low impact development including storm water management features. Roadway and intersection improvements are included to integrate new facilities with existing transportation networks. Demolition of one building (B9831), associated parking, support structures, and minor site structures, along with standard clearing, grubbing, cut, fill, grading, and environmental protection structures will be provided. Secure communications infrastructure and cabling will be provided.

11. REQUIREMENT: 760,000 SF **ADQT:** 0 SF **SUBSTD:** 0 SF

PROJECT: Construct multi-story operations facility and structured parking facility.

REQUIREMENT: These facilities are necessary to support mission operations and to further implement NSA's Recapitalization Plan. The NSA Recapitalization Plan calls for the phased replacement of aging facilities that have exceeded their service life and can no longer support the technology required for new missions. Additionally, this operations facility will provide the NSA with a flexible building that can provide the modern infrastructure necessary to support current and future technological requirements. The Operations Building will incorporate new technologies and processes that will generate valuable operational synergies through intra-agency coordination, integration, and collaboration. Using an open work environment that incorporates scalable, reconfigurable work spaces, missions will be able to achieve both actual and virtual collaboration while maintaining their functional discipline.

CURRENT SITUATION: Currently, mission critical activities that support the DoW and the nation are conducted individually in an NSA-centric structure. Network operations are prevented from realizing the full potential of the

1. COMPONENT DEF (NSA/CSS)	FY 2027 MILITARY CONSTRUCTION PROJECT DATA		2. Date APRIL 2026
3. INSTALLATION AND LOCATION FORT MEADE, MARYLAND		4. PROJECT TITLE: NSAW EAST CAMPUS BUILDING #5, INC 4	
5. PROGRAM ELEMENT	6. CATEGORY CODE 14190	7. PROJECT NUMBER 41695	8. PROJECT COST ($000) 180,000

collaborative, cohesive work environments required for this initiative. To meet the immediate need, existing facilities are being reconfigured and supplemented through leased space. However, these efforts are limited by the availability of facilities with suitable locations, inadequate ATFP profiles, and insufficient power and cooling infrastructure capable of supporting mission critical activities.

IMPACT IF NOT PROVIDED: If this project is not funded, NSA will continue to overburden existing facilities and infrastructure and continue to operate in a disjointed mission configuration in a mix of antiquated space on Fort Meade and transient leased space distributed across a wide area, impeding the ability to effectively operate and meet its mission.

ADDITIONAL: The project has been coordinated with the installation facilities master plan and physical security plan. All required and anticipated physical security and antiterrorism protection measures are included. An Environmental Impact Statement has been completed for the NSA East Campus, which includes the capacity and anticipated impacts of the ECB5 facilities.

Alternative methods of meeting requirements have been explored during the development of this project. An economic analysis has been prepared and utilized in evaluating this project. It has been determined that this project is the only viable option to satisfy the requirement.

This project is not within a flood hazard area.

JOINT USE CERTIFICATION: The Chief, Master Planning Office, National Security Agency certifies that this project has been considered for joint use. Unilateral construction is recommended. Mission requirements, operational considerations, and location are incompatible with use by other components.

10. DESCRIPTION OF PROPOSED CONSTRUCTION: Construct four-lane Venona Road from O'Brien Road to Canine Rd and realign Rockenbach Road from O'Brien Road to 3rd Cavalry Road. Venona Road will match existing four-lane road with grass median construction and realigned Rockenbach Road will be reduced from four lanes to two lanes.

1. COMPONENT DEF (NSA/CSS)	**FY 2027 MILITARY CONSTRUCTION PROJECT DATA**		2. Date APRIL 2026
3. INSTALLATION AND LOCATION FORT MEADE, MARYLAND		4. PROJECT TITLE: NSAW East Campus Site Infrastructure	
5. PROGRAM ELEMENT	6. CATEGORY CODE 85110	7. PROJECT NUMBER 45676	8. PROJECT COST ($000) 52,000

Supporting facilities include site improvements, telecommunications (telecom) distribution, electrical distribution, pedestrian improvements, and site utilities and traffic signals.

Demolition of existing Rockenbach Road, Vehicle Control Point 3 (VCP-3), pedestrian sallyports, and fencing.

Site improvements consists of a roadway upgrade, extension of secure campus by installing fencing, bollards, and barriers, stormwater management features, and landscaping.

Telecom distribution infrastructure includes connecting East Campus to West Campus under proposed Venona Road and existing Wray Road. Special Costs included in Supporting Facilities are to cover costs and fees associated with special escorts during construction and construction site security. Project has secure boundaries that will require escorts in various phases of the construction process.

Electrical distribution infrastructure is providing extension of power capacity from East Campus to Central Campus under proposed Venona Road.

Pedestrian improvements include circulation and replacement of pedestrian turnstile

Project is located on a secure campus. Anti-Terrorism/Force Protection measures will be included to comply with regulations and agency standards, where appropriate.

11. REQUIREMENT: 27,780 SY **ADQT:** 0 SY **SUBSTD:** 0 SY

PROJECT: Extend Venona Road and realign Rockenbach Road to support increased traffic flow to East Campus development, as well as completing electrical and telecommunication loop connections back to the existing West Campus.

REQUIREMENT: This project is required to upgrade the National Security Agency campus to support end state population of East Campus. NSA’s East Campus will host approximately 15,000 personnel and requires an east-west roadway between west campus and east campus to address increased traffic flow to support end-state population of East Campus Buildings 3, 4 &5. In addition, the project will complete electrical and telecommunication loop connections back to the existing West Campus.

CURRENT SITUATION: The existing road network within the NSAW campus does not provide adequate access between the established entry points and facilities on West Campus and the new development occurring on East Campus and can only support approximately half of the planned 15,000 end state occupancy. Current transportation networks are not large enough to support new development and will not meet the requirement for end-state of East Campus development. The NSAW Master Plan completed a traffic study that identified this requirement as essential to support the full buildout of East Campus.

IMPACT IF NOT PROVIDED: If this project is not funded, the NSA will continue to overburden existing roadways with insufficient access to the East Campus development, as well as inefficient access to, and travel within, the overall NSA Washington campus. In addition, NSA will lack a redundant electrical and communications loops, which are critical backbone services to all NSA mission capabilities.

1. COMPONENT DEF (NSA/CSS)	**FY 2027 MILITARY CONSTRUCTION PROJECT DATA**		2. Date APRIL 2026
3. INSTALLATION AND LOCATION FORT MEADE, MARYLAND		4. PROJECT TITLE: NSAW East Campus Site Infrastructure	
5. PROGRAM ELEMENT	6. CATEGORY CODE 85110	7. PROJECT NUMBER 45676	8. PROJECT COST ($000) 52,000

ADDITIONAL: The project has been coordinated with the installation facilities master plan and physical security plan. All required and anticipated physical security and antiterrorism protection measures are included.

Sustainable principles, to include life cycle cost effective practices, will be integrated into the design, development, and construction of the project in accordance with Department criteria and will comply with applicable laws and Executive Orders.

This project does not fall within or partly within the 100-year flood plain.

JOINT USE CERTIFICATION: The Chief, Master Planning Office, National Security Agency certifies that this project has been considered for joint use. Unilateral construction is recommended. Mission requirements, operational considerations, and location are incompatible with use by other components.

10. DESCRIPTION OF PROPOSED CONSTRUCTION: Construct a mission facility, commons facility, structured parking facility, and Access Control Facility (ACF). This project will include all required supporting facilities, associated site work, and environmental measures.

1. COMPONENT DEF (NSA/CSS)	FY 2027 MILITARY CONSTRUCTION PROJECT DATA		2. Date APRIL 2026
3. INSTALLATION AND LOCATION CAMP WILLIAMS, UTAH		4. PROJECT TITLE: NSAU CONSOLIDATION – MISSION FACILITY (INC)	
5. PROGRAM ELEMENT	6. CATEGORY CODE 14162	7. PROJECT NUMBER 44109	8. PROJECT COST ($000) 50,000

The Mission Facility will provide operational and administrative areas including private offices and open flexible seating space, collaborative multi-discipline work spaces, conference areas, and support spaces. The Mission Facility will be a multi-story structure with a full basement. The project consists of core, shell structure, and foundations; elevators; electrical/mechanical service and distribution components and systems; life safety generator, fire protection, alarm, and suppression systems; information technology infrastructure, communications, and security systems support infrastructure; exterior finishes and weatherproofing. Support space includes access control areas, waste disposal area, and loading dock. Interior build out will provide raised access floor systems, acoustically-rated interior partitions and ceilings, power, lighting, environmental controls, and communications. The entire structure will be built to Sensitive Compartmented Information Facility (SCIF) standards, with redundant primary power and Uninterruptable Power Supply (UPS) systems to ensure continuity of operations.

The Commons Facility will provide personnel support spaces, including full-service cafeteria, unclassified conference rooms, fitness center, and outdoor seating. The Commons Facility will include stair towers and elevators, as well as mechanical, electrical infrastructure and distribution, telecom and security systems infrastructure, and a loading dock. The Commons Facility will be constructed as a two-story building. The facility will be partially set into the hillside to make use of existing site grading.

A structured parking facility will be constructed to provide privately-owned vehicle (POV) parking for staff and visitors. The parking structure will include accessible parking, pedestrian stair towers and elevators, as well as electrical and mechanical service and distribution systems and spaces. Facilities systems include fire protection and alarm systems, mechanical and electrical infrastructure and distribution, parking guidance system infrastructure, communications and security systems infrastructure, and lighting. New road construction, widening, realignment, and modifications to existing roads including signals or other road improvements will be provided to connect to existing road infrastructure.

The ACF will consist of an overhead canopy with two guard booths, inbound and outbound roadway, overwatch booth, and rejection lane with rejection shelter. A new traffic circle will be constructed with point of connection to the NSA-U site access road. Existing parking and roadways will be modified to provide access to the new ACF, and maintain access to the existing Vehicle & Cargo Inspection Facility (VCIF) & existing Visitor Control Center (VCC).

Special costs include third-party enhanced commissioning, geospatial mapping, construction on a secure site, construction surveillance technicians, and labor inefficiencies associated with escort requirements. Escorts are required for positive control of access to utilities which service other critical facilities.

Facility physical security will conform to DoW Minimum Anti-Terrorism Standards for Buildings. Anti-Terrorism/Force Protection (ATFP) and include access control, setbacks, architectural shielding, Intrusion Detection Systems (IDS), progressive collapse requirements, and compliance with relevant ATFP regulations including fencing, bollards and protective planters, and electronic security systems to extend the secure perimeter. DoW standards for high performance and sustainable buildings will be included in design and construction of the facility, according to federal law and Executive Orders. Facilities will incorporate features that provide the lowest practical life cycle cost solutions satisfying the facility requirements with the goal of maximizing energy efficiency.

Supporting facilities include primary electrical service and distribution.

Utility systems include water, sewer, reclaimed water, connection and service from utility providers, and storm drainage systems.

This project will vacate and return Utah National Guard HQ spaces from Camp Williams (19,250 GSF Equivalent) and Draper (25,000 GSF Equivalent). Additionally, this project will allow for growth of 50+ personnel and de-compression of 190 personnel from within non-administrative spaces at the Utah Data Center that equates to approximately 60,000 GSF requirement.

5. PROGRAM ELEMENT	6. CATEGORY CODE 14162	7. PROJECT NUMBER 44109	8. PROJECT COST ($000) 50,000

Site work consists of curb and gutter, walkways, pedestrian plazas, lighting, landscaping, cut and fill and grading, erosion and sediment control measures, and low impact development including storm water management features. Roadway and intersection improvements are included to integrate new facilities with existing roadways and transportation network(s). Modification of existing visitor parking and roadways serving the existing to remain VCIF will be provided. Complex project phasing, including provision of temporary minor site structures, will be provided to maintain ongoing site operations. Standard clearing, grubbing, cut, fill, grading, and environmental protection structures will be provided. Secure communications pathways will be provided.

11. REQUIREMENT: 433,479 GSF	**ADQT:** 0 GSF	**SUBSTD:** 44,250 GSF
127,571 GSF (CC 14162)	0 GSF (CC 14162)	44,250 GSF (CC 14162)
33,427 GSF (CC 74034)	0 GSF (CC 74034)	0 GSF (CC 74034)
270,000 GSF (CC 85218)	0 GSF (CC 85218)	0 GSF (CC 85218)
2,481 GSF (CC 14113)	0 GSF (CC 14113)	0 GSF (CC 14113)

PROJECT: Construct multi-story, secure mission facility, commons facility, a structured parking facility, and Access Control Facility (ACF).

REQUIREMENT: Construction of new mission and support facilities at the NSA-Utah campus will enable consolidation of multiple mission elements currently located outside of the primary NSA-Utah campus. A new mission facility will provide the NSA with a flexible building that includes the technical infrastructure necessary to respond with agility to current and future mission requirements. Implementation of an open work environment that incorporates scalable, reconfigurable work spaces will aid mission sets by increasing efficiency of both actual and virtual collaboration while maintaining mission security. Workforce support amenities and a parking structure are required to accommodate the consolidation of regional personnel at the UDC site.

CURRENT SITUATION: Currently, NSA-Utah operations are located in multiple geographically-separated facilities spread throughout the greater Salt Lake metropolitan area, including the Utah Data Center (UDC), Camp Williams, and Draper. Current facilities at the UDC campus consist primarily of purpose-built, low occupancy data center space, and are unable to provide adequate operational or workforce support space to accommodate consolidating personnel at the UDC site. As a low-occupancy data center, UDC does not currently have POV vehicle inspection, or parking within the secured campus perimeter. Facilities located at Camp Williams and Draper are tenant facilities. These facilities lack adequate space and utility infrastructure for planned future growth and limit opportunities for collaboration due to their physical separation.

IMPACT IF NOT PROVIDED: If this project is not executed, the NSA will continue to maintain undersized, leased facilities that are non-compliant with current ATFP requirements and do not have the space or infrastructure to accommodate future mission. Operations will remain dispersed across a large geographic area, impeding efficient operations and mission collaboration. Mission capability and readiness will continue to be impacted due to the lack of purpose-built space.

ADDITIONAL: The project has been coordinated with the installation facilities master plan and physical security plan. All required and anticipated physical security and antiterrorism protection measures are included.

Alternative methods of meeting requirements have been explored during the development of this project. An economic analysis has been prepared and utilized in evaluating this project. It has been determined that this project is the only viable option to satisfy the requirement.

This project is not within a flood hazard area.

10. DESCRIPTION OF PROPOSED CONSTRUCTION: Construct a two-story, combined fire station and dormitory facility with all required supporting facilities, associated site work, and environmental measures. This facility will include apparatus bays and departmental support areas: residential areas; administration areas, training area, Emergency Control Center (ECC); and associated building infrastructure. Administrative support area will be provided to support administration of required physicals and other physical readiness/certification activities.

1. COMPONENT DEF (NSA/CSS)	**FY 2027 MILITARY CONSTRUCTION PROJECT DATA**		2. Date APRIL 2026
3. INSTALLATION AND LOCATION MENWITH HILL STATION, UNITED KINGDOM		4. PROJECT TITLE: FIRE STATION REPLACEMENT	
5. PROGRAM ELEMENT	6. CATEGORY CODE 730142	7. PROJECT NUMBER 40785	8. PROJECT COST ($000) 35,000

The project consists of core, shell structure, and foundations; elevators; electrical/mechanical service and distribution components and systems; fire protection, alarm, and suppression systems; information technology infrastructure; communications and security systems infrastructure; exterior finishes; and waterproofing. Supporting facilities include primary electrical service and distribution. Utility systems include water, sewer, connection and service from utility providers, and storm drainage systems. Site work consists of curb and gutter, walkways, lighting, landscaping, cut and fill and grading, erosion and sediment control measures, and low impact development including storm water management features. Roadway and parking lot improvements are included to integrate new facility with existing roadways and transportation network(s). Project phasing, including provision of temporary minor site structures, will be provided to maintain ongoing site operations. Standard clearing, grubbing, cut, fill, grading, and environmental protection structures will be provided. Secure communications infrastructure and cabling will be provided.

This project will demolish buildings 624 and 641 (1,425 SM) as the functions currently housed in these buildings will be consolidated into this project and no longer needed.

Facilities will be designed as permanent construction in accordance with Department & Host Nation criteria This project will comply with DoW Antiterrorism/Force Protection requirements per Department & Host Nation criteria. Facilities will incorporate features that provide the lowest practical life cycle cost solutions satisfying the facility requirements with the goal of maximizing energy efficiency.

11. REQUIREMENT:	**ADQT:**	**SUBSTD:**
2,090 GSM	0 GSM	1,424 GSM

PROJECT: Construct a Headquarters Fire Station and Dormitory, and demolish existing facility that has reached end of useful life.

REQUIREMENT: This project is required to replace the existing, substandard Fire Station located in Building 624 at RAF Menwith Hill. The new facility will be a Fire Station, to house the responding company on duty, as well as Fire Chief and the administrative functions of the station. The new station will provide emergency response services to the entire Installation. Compliance with Department & Host Nation criteria will implement operational efficiencies that mitigate current non-compliant Emergency Response Times, while also providing infrastructure to contain, control and mitigate contaminants and other hazards accumulated in the course of typical fire department response activities. Administrative space will be provided for administration of required physicals and other physical readiness/certification activities.

CURRENT SITUATION: The existing fire station functions are housed in two facilities. Building 624 houses the maintenance and apparatus area, Emergency Control Center (ECC), residential dorms, kitchen and day room. Building 624 does not have adequate space to house all necessary vehicles and equipment, resulting in outdoor storage. The remaining functions including training, administration, additional storage and equipment maintenance areas, as well as additional dormitories are located in Building 641, which is the former dorm building. These facilities are undersized, inhibit efficient operations due to existing layout, do not comply with current health and safety standards for modern fire stations, and are reaching the end of their useful life. Departmental personnel are currently required to travel for administration of required physicals and other physical readiness/certification activities, resulting in staffing shortfalls.

1. COMPONENT DEF (NSA/CSS)	**FY 2027 MILITARY CONSTRUCTION PROJECT DATA**			2. Date APRIL 2026
3. INSTALLATION AND LOCATION MENWITH HILL STATION, UNITED KINGDOM		4. PROJECT TITLE: FIRE STATION REPLACEMENT		
5. PROGRAM ELEMENT	6. CATEGORY CODE 730142	7. PROJECT NUMBER 40785	8. PROJECT COST ($000) 35,000	

IMPACT IF NOT PROVIDED: If this project is not provided, the current facilities will continue to have inadequate capacity to respond to emergencies on the installation within Emergency Reponses Times, established by applicable codes and standards. Firefighters will continue to be placed at risk due to health and safety concerns inherent to the outdated facility. Vehicles and equipment stored outside will face accelerated deterioration, due to exposure to the elements. Training and readiness functions will continue to be degraded due to lack of sufficient space and infrastructure. Departmental personnel will continue to be required to travel for required physicals and other physical readiness/certification activities, resulting in staffing shortfalls.

ADDITIONAL: The project has been coordinated with the installation facilities master plan and physical security plan. All required and anticipated physical security and antiterrorism protection measures are included.

A preliminary analysis of reasonable alternatives was performed comparing status quo, renovation, and new construction. New construction was determined to be the most cost-effective means to meet mission requirements.

This design shall conform to criteria established in the Air Force Corporate Facilities Standards (AFCFS), Installation Facilities Standards, Department criteria, Fire Stations for a Headquarters class station.

Sustainable principles, to include life-cycle cost-effective practices, will be integrated into the design, development, and construction of the project in accordance with Department criteria. This includes the preparation of a life-cycle cost analysis (LCCA) for energy consuming systems, or when life-cycle cost effective (LCCE) is selected as the reason any Departmental requirement is partially compliant or not applicable.

This project is not within a flood hazard area.

Facility is sited in accordance with the Installation Development Plan and is within a compatible land use area.

JOINT USE CERTIFICATION: The Chief, Master Planning Office, National Security Agency certifies that this project has been considered for joint use. Unilateral construction is recommended. Mission requirements, operational considerations, and location are incompatible with use by other components.

10. DESCRIPTION OF PROPOSED CONSTRUCTION:
This project is to construct a multi-story operations facility and expansion to an existing structured parking facility.

The CNMF Mission Operations Facility (MOF) will provide operational space, administrative/support space, infrastructure, equipment and communications space, and storage areas. Operational spaces include an operations floor, operations floor support spaces, private offices, command suite, and mission collaboration work areas. Administrative and support spaces include conference rooms, multi-purpose space, fitness center, full-service cafeteria, training areas, storage and testing areas, and a loading dock. The MOF will be a multi-story facility with full basement containing mechanical and electrical equipment. Building infrastructure will include fire protection alarm and suppression systems; information technology infrastructure, communications, and security systems. Interiors build out will provide raised access floor systems, acoustically-rated interior partitions and ceilings, power, lighting, environmental controls, and communications. The entire structure will be built to Sensitive Compartmented Information Facility (SCIF) standards, with redundant primary power and Uninterruptable Power Supply (UPS) systems to ensure continuity of operations.

Facility physical security will conform to DoW Minimum Anti-Terrorism Standards for Buildings, Anti-Terrorism/Force Protection (ATFP) and include access control, setbacks, architectural shielding, Intrusion Detection Systems (IDS), progressive collapse requirements, and compliance with relevant ATFP regulations including fencing, bollards and protective planters, and electronic security systems to extend the secure perimeter. DoW standards for high performance and sustainable buildings will be included in design and construction of the facility. Facilities will incorporate features that provide the lowest practical life cycle cost solutions satisfying the facility requirements with the goal of maximizing energy efficiency.

Special costs associated with cybersecurity commissioning, geospatial mapping, mechanical acceptance, construction on a secure site, clearances for personnel, and labor inefficiencies associated with escort requirements. Escorts are required for positive control of access to utilities which service other critical facilities.

An expansion of the East Campus Parking Structure 4 (ECPS4) will be constructed to provide privately-owned vehicle (POV) parking for staff and visitors. The ECPS4 expansion will include accessible parking, pedestrian stair towers and elevators, as well as mechanical and electrical spaces. Facility systems will consist of fire protection alarm and suppression, mechanical and electrical distribution infrastructure, parking guidance system infrastructure, communications and security systems support infrastructure, and lighting.

Supporting facilities include site improvements for both the MOF and Parking Facility expansions, as well as for infrastructure features such as general site circulation, storm water management, lighting, and landscaping. Improvements will include new or expansion of existing utility services and distribution systems, site security systems, and transportation network. Site preparation work will include standard clearing/grubbing, cut/fill and grading, and erosion and sediment control measures. Additional site work will provide walkways and courtyard areas, access roads, and other transportation improvements, and storm water management. Utility site construction will provide emergency backup power generation. Demolition of four buildings (B9899, B9801, B9802, B9823), associated parking, support structures, and minor site structures, along with standard clearing, grubbing, cut, fill, grading, and environmental protection measures will be provided.

11. REQUIREMENT: 747,600 SF **ADQT:** 0 SF **SUBSTD:** 0 SF

PROJECT: Construct multi-story operations facility and expansion to an existing structured parking facility.

REQUIREMENT: The Mission Operations Facility (MOF) is required to support current mission operations as well as planned future growth of the Cyber National Mission Force (CNMF). CNMF requires a new facility to accommodate a growing workforce of Cyber Warriors, consisting of personnel which currently occupy various facilities on the National Security Agency Washington (NSAW) Campus, plus additional personnel from off-campus locations and future growth. The Mission Operations Facility will allow for the consolidation of mission operations, headquarters, and key partners within a state-of-the-art operations environment. Expansion of ECPS4 is required in order to meet the minimum required parking capacity of the MOF population. This is the most feasible option due to the fixed number of spaces provided by the garage expansion modules configuration, as well as the limited developable land.

CURRENT SITUATION: Currently, CNMF mission critical operations are performed in multiple geographically separated facilities, some of which are leased.

These facilities are undersized for currently planned future growth and do not allow for rapid cyber responses and collaborative environments due to the separation. In addition, many of these facilities and their infrastructure are aging and close to reaching the end of their usable life. They have been reconfigured multiple times in order to meet advancements in mission requirements and are increasingly unable to support further modifications.

IMPACT IF NOT PROVIDED: If this project is not provided, CNMF will continue to occupy aging and undersized facilities that are incapable of supporting both current and future operations. Facilities will remain dispersed across a large geographic area, preventing seamless collaboration. Inadequate facility size will inhibit future growth. Mission capability and readiness will continue to be impacted due to the lack of purpose-built space.

ADDITIONAL: The project has been coordinated with the installation facilities master plan and physical security plan. All required and anticipated physical security and antiterrorism protection measures are included. The acquisition method for the ECPS4 expansion is anticipated to be Design-Bid-Build. The acquisition method for this contract will be Design-Build. Original Design Documents for ECPS 4 Expansion will be included as part of the Design Build RFP.

JOINT USE CERTIFICATION: The Director, J4, USCYBERCOM certifies that this project has been considered for joint use. Unilateral construction is recommended. Mission requirements, operational considerations, and location are incompatible with use by other components.

10. MISSION OR MAJOR FUNCTIONS

The Special Operations Command South plans and coordinates Special Operations to find and fix threats and enable the Interagency, Intelligence community and partner nations to counter threats to US interests, maintain region stability and compete in a complex environment.

Homestead Air Reserve Base mission is to provide combat ready Airmen and muti-purpose fighter aircraft for global power projection; while also serving as a strategic hub for homeland defense, hosting North American Aerospace Defense Command’s busiest air defense alert site, and supporting operations border protection, all focused on rapid development and safeguarding the nation.

10. DESCRIPTION OF PROPOSED CONSTRUCTION:

Project constructs a climate-controlled warehouse and issue spaces, troop assembly/orientation/queuing spaces, administration and training space. Warehouse floor is designed to support multiple tiered pallet racks, forklift operations, open high-bay equipment space, specialized and secure storage space, loading docks, and ramps. A standby generator (300 kW) is required for emergency power redundancy. Supporting facilities include environmental mitigation; site development; utilities and connections; common parking areas and access roads; paving for truck delivery access/loading and dumpster storage; lighting; storm drainage and retention systems; landscaping; walkways; signage, telecommunications and information systems. Electrical systems include primary power distribution, lighting, energy monitoring/control systems, intrusion detection system, telephone/data switch/server rooms, photovoltaic cells, electrical switch gear, transformers, circuits, and fire alarms. Mechanical systems include plumbing, fire protection, compressed air, dehumidification, air conditioning systems, energy management control systems, and digital controls. Information systems include

telephone, data, local area network, mass notification and intercom. Site work will include building utility systems, traffic control, parking, domestic water, fire protection water, sanitary sewer, sewage conveyance, gas networks, perimeter security fencing, gates, storm water management, fiber/copper communications, cable television, and area lighting. Department of War (DoW) principles for high performance and sustainable building requirements will be included in the design and construction of the project in accordance with Federal laws and Executive Orders. Low Impact Development features will be included in the design and construction of this project as appropriate. This project will provide Anti-Terrorism/Force Protection (AT/FP) features to comply with DoW Minimum Anti-Terrorism Standards for Buildings. Appropriate cybersecurity measures will be applied to the facility-related control systems in accordance with current DoW criteria. This project includes environmental mitigation for natural, cultural, and environmental resources and Geospatial Data Surveying/Mapping.

11. Requirement: 2,600 SM (28,000 SF)	**Adequate:** 0 SM	**Substandard:** 1,951 SM (21,000 SF)

PROJECT: Construct SOF Climate Controlled Tactical Storage Warehouse at Homestead, FL.

REQUIREMENT: This project is required to provide a permanent logistical support facility for Special Operations Command South (SOCSOUTH). The project will consolidate logistics support and improve material management, distribution, and security of operations while enhancing the command's ability to respond to operational requirements throughout the US Southern Command (USSOUTHCOM) Area of Responsibility (AOR). The project will also provide much needed space for USSOCOM and the Joint Interagency, Intergovernmental, Multilateral, and Commercial enterprise during crisis response events in the Western Hemisphere as Homestead Air base, one of the southernmost DoW CONUS airbases, is regularly used as a staging base. Consolidated functions include: USSOUTHCOM Situational Assessment Team and Special Operations Command Forward gear and equipment storage, expeditionary base camp life support equipment storage, space for the SOCSOUTH central receiving and shipping point, space for pre-deployment instruction, space for J2/J6 benchtop equipment repairs, sensitive electronic equipment storage, space for general purpose warehouse operations, and temporary bulk storage of MREs, Class-4 construction supplies, and other bulk items.

CURRENT SITUATION: SOCSOUTH logistical operations are currently dispersed between four existing facilities at Homestead Air Reserve Base (HARB). SOCSOUTH utilizes functional space within SOCSOUTH HQ (B600), a decommissioned hangar (B741), a small warehouse (B153) and a K-Span expeditionary facility (B7784). Both B153 and the K-Span are in deteriorated physical condition with functional space deficiencies in size and configuration inadequate to support SOCSOUTH warehouse requirements. Additionally, HARB leadership plans to demolish the K-Span. The dispersed locations of these four facilities on HARB significantly impact logistical support functionality. Logistical support is also degraded without a centralized location in proximity to operational activities along the HARB flight-line.

IMPACT IF NOT PROVIDED: Without this project, SOCSOUTH will not have a centralized, secure, climate-controlled warehouse capability to meet SOF mission requirements throughout the USSOUTHCOM AOR. Failure to provide the project will result in SOCSOUTH continuing to operate in an inefficient and degraded manner. During crisis events, such logistical limitations are a detriment to the mission.

10. MISSION OR MAJOR FUNCTIONS

The mission of Marine Corps Base Camp Lejeune is to operate a training base that promotes the combat readiness of the Operating Forces and the mission of other tenant commands by providing training opportunities, facilities, services, and support that are responsive to the needs of Marines, Sailors, and their families.

The mission of U.S. Marine Corps Forces Special Operations Command (MARSOC) is to recruit, organize, train, equip, educate, sustain, maintain combat readiness, and deploy task organized, scalable and responsive U.S. Marine Corps Special Operations Forces (MARSOF) worldwide to accomplish Special Operations (SO) missions assigned by CDR USSOCOM, and/or Geographic Combatant Commanders (GCC) employing Special Operations Forces (SOF).

10. DESCRIPTION OF PROPOSED CONSTRUCTION:

Construct SOF Marine Battalion Operations, Supply, Communications, and Intel facility; Company HQ and Team Facilities; Company Storage Buildings and miscellaneous supporting structures, utilities, parking, roadways, pedestrian ways, sidewalks, and site work. The structures will be single-story steel frame buildings with brick veneer over metal studs, standing seam metal roofs, metal soffits and translucent wall panels. Special construction features include pile foundations, surcharged sites, wetlands mitigation, and storm water best management practices. Electrical systems include primary power distribution, lighting, energy monitoring/control systems, intrusion detection system, telephone/data switch/server rooms, photovoltaic cells, electrical switch gear, transformers, circuits, and fire alarms. Mechanical systems include plumbing, fire protection, compressed air, dehumidification, air conditioning systems, energy management control systems, and digital controls. Site work includes building utility systems, traffic control, parking, domestic water, fire protection, sanitary sewer, gas networks, and perimeter security fencing. The project also includes a telecommunications duct bank extension from the project site to the Stone Bay telecommunications exchange building RR134. The proposed route will include approximately 300 LF of directional boring beneath wetlands. Department of War (DoW) principles for high performance and sustainable building requirements will be included in the design and construction of the project in accordance with Federal laws and Executive Orders. Low Impact Development features will be included in the design and construction of this project as appropriate. This project will provide Anti-Terrorism/Force Protection (AT/FP) features to comply with DoW Minimum Anti-Terrorism Standards for Buildings. Appropriate cybersecurity measures will be applied to the facility-related control systems in accordance with current DoW criteria. This project includes environmental mitigation for natural, cultural, and environmental resources and Geospatial Data Surveying/Mapping.

11. Requirement: 20,262 SM (218,000 SF)	**Adequate:** 0 SM	**Substandard:** 0 SM

PROJECT: Increment 2 to construct facilities for a Battalion Headquarters and four subordinate Companies that comprise the 2d Marine Raider Battalion (2d MRB) under Marine Forces Special Operations Command (MARSOC).

REQUIREMENT: MARSOC officially stood up in 2006. Obtaining adequate facilities co-located at Stone Bay with the remainder of the MARSOC Force Structure (HQ, Regiment, Battalion, ranges, medical, billeting, and combat support elements) is paramount to fully develop the Special Operations Forces (SOF) unique training and operational requirements. This project is part of the final phase of the MARSOC Battalion consolidation onto the Stone Bay Complex.

CURRENT SITUATION: 2d MRB is located in a temporary complex that is geographically separated and undersized that includes three 10,000 sf tension fabric shelters and a 1940's vintage squad bay barracks being utilized as an administrative building. These interim facilities are planned for demolition or reuse by other tenants aboard MCB Camp Lejeune. There are no Battalion or Company facilities at Stone Bay to support the migration of 2d MRB. 1st and 3d MRB facilities along with multiple projects to support the MARSOC Force Structure (billeting, ranges, academic, administrative, support elements) have previously been constructed at the Stone Bay Complex.

IMPACT IF NOT PROVIDED: MARSOC mission preparation and execution are jeopardized. MARSOC will be unable to adequately support operational Battalion and Company level units if they are forced to continue to use temporarily assigned, inadequate, and geographically separated facilities.

ADDITIONAL: Project construction is not within a designated 100-year floodplain. No flood mitigation measures are required.

JOINT USE CERTIFICATION: N/A. USSOCOM budgets only for those facilities, specifically for SOF use. Common support facilities are budgeted by the military departments. Reference Title 10, Section 165.

Description of Proposed Construction: Construct a secure Operational Support Facility that will be designed and constructed in accordance with Intelligence Community Directive 705, and miscellaneous supporting structures, utilities, parking, roadways, pedestrian ways/sidewalks, and site work. The structures will be single and two-story steel frame buildings with brick veneer over metal studs, standing seam metal roofs, metal soffits and translucent wall panels. Built-in equipment includes gear storage cages, mezzanine storage, and casework. Special construction features include pile foundations, surcharged sites, and storm water best management practices. Electrical systems include primary power distribution, lighting, energy monitoring/control systems, intrusion detection system, telephone/data switch/server rooms, photovoltaic cells, electrical switch gear, transformers, circuits, and fire alarms. Mechanical systems include plumbing, fire protection, compressed air, dehumidification, air conditioning systems, energy management control systems, and digital controls. Information systems include telephone, data, local area network, mass notification and intercom. Site work will include building utility systems, traffic control, parking, domestic water, fire protection water, sanitary sewer, sewage conveyance, gas networks, perimeter security fencing, gates, storm water management, fiber/copper communications, cable television, and area lighting.

Department of War (DoW) principles for high performance and sustainable building requirements will be included in the design and construction of the project in accordance with Federal laws and Executive Orders. Low Impact Development features will be included in the design and construction of this project as appropriate. This project will provide Anti-Terrorism/Force Protection (AT/FP) features to comply with DoW Minimum Anti-Terrorism Standards for Buildings. Appropriate cybersecurity measures will be applied to the facility-related control systems in accordance with current DoW criteria. This project includes environmental mitigation for natural, cultural, and environmental resources and Geospatial Data Surveying/Mapping.

11. Requirement: 5,416 SM (58,300 SF) Adequate: 0 SM Substandard: 0 SM

PROJECT: Construct an Operational Support Facility for Marine Forces Special Operations Command (MARSOC).

REQUIREMENT: TS/SCI networks are the conduit for MARSOC to leverage TS/SCI information. They also function as primary, and sometimes the only means to Process, Exploit, and Disseminate (PED) near real time intelligence collection, analysis, and reporting across several intelligence disciplines. Additional MARSOC SCIF facilities are required to support Command level TS/SCI missions.

CURRENT SITUATION: Current facilities are not adequate to support MARSOC’s approved 368 pax growth or able to support emerging requirements in the areas of expanded reach back PED capabilities and future MARSOC space capabilities.

IMPACT IF NOT PROVIDED: MARSOC mission preparation and execution are jeopardized. Elements of MARSOC HQ, General Staff, Special Staff, MOS producing School House, and Operational Units continue to operate in congested, ill-equipped TS/SCI spaces.

ADDITIONAL: Project construction is not within a designated 100-year floodplain. No flood mitigation measures are required.

JOINT USE CERTIFICATION: N/A. USSOCOM budgets only for those facilities, specifically for SOF use. Common support facilities are budgeted by the military departments. Reference Title 10, Section 165.

10. DESCRIPTION OF PROPOSED CONSTRUCTION:

Constructs a secure/controlled space containing two compartmentalized areas. Each of the two compartmentalized areas will contain a logistics room, a classroom space with adjoining practical area with VTC capability and multidirectional bridge cranes, two breakout rooms, an IT room, and access to a storage area, with each side of the storage area being dedicated to its associated compartmentalized area. The storage area has a centralized loading dock and staging area between the wings, containing a screened loading dock with large overhead door that can accommodate oversized vehicles and equipment. Centrally located within the building between the two compartmentalized wings are a secure/controlled conference room with VTC capability, a break room, a facility manager office with workstations, and a restroom with showers and locker area. Supporting facilities include site development, including access drives, and a POV parking area with 40 parking spaces.. Department of War (DoW) principles for high performance and sustainable building requirements will be included in the design and construction of the project in accordance with Federal laws and Executive Orders. Low Impact Development features will be included in the design and construction of this project as appropriate. This project will provide Anti-Terrorism/Force Protection (AT/FP) features to comply with DoW Minimum Anti-Terrorism Standards for Buildings. Appropriate cybersecurity measures will be applied to the facility-related control systems in accordance with current DoW criteria. This project includes environmental mitigation for natural, cultural, and environmental resources.

11.Requirement: 2,676 SM (28,800 SF) **Adequate:** 0 SM **Substandard:** 0 SM (0 SF)

PROJECT: Construct a Special Operations Forces (SOF) Operational Training Facility, containing secure classroom and training spaces to support mission training and programs related to high fidelity threats, at Fort Bragg, North Carolina.

REQUIREMENT: Joint Special Operations Command Special Operations Forces (JSOC-SOF) require a complete training and planning venue for users and associated DoW agencies. These spaces require classroom sizes no smaller than 24 PAX and need to be able to run concurrently in the same facility.

CURRENT SITUATION: Due to increased enrollment and mission requirements, the facility is needed to meet training demands. Due to the highly secure nature of the SOF missions, the facility will allow for multiple sensitive programs to operate in the facility at one time. Currently the user must move programs in and out of existing facilities which do not allow multiple compartmentalized areas. The current facility building O-9160 also limits class size to 15 people with only one Sensitive program at a time. The new facility would create additional classroom space to allow for multiple classes and multiple programs to be conducted at the same time, which will allow for more flexibility and higher output of mission training and functions.

IMPACT IF NOT PROVIDED: If this project is not provided, military personnel and soldiers will continue to use antiquated retrofitted existing buildings that limit class sizes and constrict functional capabilities of the training program. Partnering DoW agencies who utilize the facility may continue to look elsewhere for training options due to lack of capacity to support their missions. Demand for this unique training program is high, and if a new facility is not constructed, a larger training population cannot adequately be accommodated.

ADDITIONAL: Required assessments have been made for supporting facilities and the project is not in a 100-year floodplain in accordance with Executive Order 11988. This project has been coordinated with the installation physical security plan, and all physical security measures are included. All required antiterrorism protection measures are included. Sustainable principles, to include life cycle cost effective practices, will be integrated into the design, development and construction of the project and will follow the guidance detailed in the Army Sustainable Design and Development Policy - complying with applicable laws and executive orders.

JOINT USE CERTIFICATION: N/A. USSOCOM budgets only for those facilities specifically for SOF use. Common support facilities are budgeted by the military departments. Reference Title 10, Section 165.

10. DESCRIPTION OF PROPOSED CONSTRUCTION:

Constructs a Launch and Recovery Facility to support Combatant Craft Medium (CCM) and Combatant Craft Heavy (CCH) during all tides and conditions. The Launch and Recovery Facility will accommodate a Mobile Travel Lift (MTL). Project includes construction of a boat ramp and includes bulkhead improvements. Special construction features include two wave attenuators. Site preparation includes the removal of concrete decking, concrete bulkhead, concrete pavement, whaler and tie back assemblies, and excavation of filling material behind the bulkhead. Site utilities such as storm drain catch basin, storm drain manhole, sanitary sewer, and other existing utilities will be demolished or abandoned in place. Department of War (DoW) principles for high performance and sustainable building requirements will be included in the design and construction of the project in accordance with federal laws and Executive Orders. Low Impact Development features will be included in the design and construction of this project as appropriate. This project will provide Anti-Terrorism/Force Protection (AT/FP) features and comply with AT/FP regulations and physical security mitigation in accordance with DoW Minimum Anti-Terrorism Standards for Buildings.

1140494BB	155	P-568	36,000

11. Requirement: 1,096 SM (11,800 SF) **Adequate:** 0 SM (0 SF) **Substandard:** 0 SM (0 SF)

PROJECT: Constructs a Launch and Recovery Facility to support CCM and CCH during all tides and conditions. The Launch and Recovery Facility will accommodate an MTL. Project includes construction of a boat ramp and includes bulkhead improvements. Special construction features include two wave attenuators.

REQUIREMENT: Naval Special Warfare (NSW) Group FOUR is responsible to organize, train and equip assigned NSW personnel to deploy combat ready forces and maritime mobility systems in support of Fleet and Joint Commanders. Conduct Security Force Assistance to build foreign security force small craft capability and capacity in accordance with Commander, United States Special Operations Command Priorities. Deploy NSW Task Force/group levels battle staff for command and control of Naval Special Warfare Command (NSWC) forces as required. Special Boat Team TWENTY (SBT20) requires adequate facilities and infrastructure to support combatant craft training and test and evaluation in open ocean and the littoral environment. Accomplishing this mission requires SBT20 to be able to launch and recover combatant craft in all conditions and during all tides.

CURRENT SITUATION: SBT20 uses the Naval Facilities Engineering Command Crane Center to schedule a crane lift for every launch and recovery of the CCH or the CCM during low tide due to current existing boat ramp restrictions. The cost of each lift is $10,000 and requires advanced notice. SBT20 is subject to the Crane Center's schedule and often gets delayed for other Crane Center mission responsibilities, impacting SBT20 maintenance and training schedules.

IMPACT IF NOT PROVIDED: If this project is not provided, SBT20 will continue to be negatively impacted by the inability to launch and recover their combatant craft. Continued impact to time-critical recovery during inclement weather. Reduced combat craft training scheduling and compliance with recommended maintenance schedules. Reduced operations due to Crane Center scheduling reliance, craft lift constraints and an inadequate boat ramp.

ADDITIONAL: This project is in compliance with current seismic requirements. Flood vulnerability determination for NSWC projects has been accomplished by Joint Expeditionary Base Little Creek-Fort Story and is part of the project planning process.

JOINT USE CERTIFICATION: N/A. USSOCOM budgets only for those facilities, specifically for SOF use. Common support facilities are budgeted by the military departments. Reference Title 10, Section 165.

10. DESCRIPTION OF PROPOSED CONSTRUCTION:
Construct a Tactical Equipment Maintenance Facility, to include component storage building. The equipment maintenance facilities will include a bridge crane, maintenance bay pits and vehicle lifts, temporary weapons storage area, administrative space, and tool storage areas. Supporting facilities include organizational vehicle parking, utilities, lighting, sidewalks, curbs and gutters, and information systems. Site improvements include oil and hazardous materials storage structure, storm water management, landscaping, signage, paving, parking for privately owned vehicles, and passive force protection measures. Department of War (DoW) principles for high performance and sustainable building requirements will be included in the design and construction of the project in accordance with federal laws and Executive Orders. Low Impact Development features will be included in the design and construction of this project as appropriate. Appropriate cybersecurity measures will be applied to the facility-related control systems in accordance with DoW criteria.

3. INSTALLATION AND LOCATION	4. PROJECT TITLE:
JOINT BASE LEWIS-MCCHORD, WASHINGTON	SOF TACTICAL EQUIPMENT MAINTENANCE FACILITY

5. PROGRAM ELEMENT	6. CATEGORY CODE	7. PROJECT NUMBER	8. PROJECT COST ($000)
1140494BB	214	89186	35,000

11. Requirement: 2,063 SM (22,200 SF) **Adequate:** 0 SM (0 SF) **Substandard:** 0 SM (0 SF)

PROJECT:
Construct a Tactical Equipment Maintenance Facility for 3rd Battalion, 1st Special Forces Group (Airborne) at Joint-Base Lewis-McChord (JBLM), WA. (Current Mission)

REQUIREMENT:
Operational vehicle maintenance facilities are required for assigned equipment for the 1st Special Forces Group (Airborne). The construction of this facility will directly address critical shortages in maintenance, repair, and vehicle storage infrastructure required to support the assigned mission and force structure.

CURRENT SITUATION:
The current infrastructure is insufficient to support the maintenance needs of the unit's tactical vehicle fleet, which include specialized vehicles and equipment necessary for global contingency operations. Maintenance operations are currently conducted in overcrowded and undersized facilities, forcing two battalions to operate in spaces designed for a single battalion. This resulted in a reduction in maintenance capacity, delays in equipment repair cycles, and equipment downtime. Vehicle parking and equipment storage are critical shortages, further complicating maintenance operations.

IMPACT IF NOT PROVIDED:
If this project is not provided, the unit's ability to sustain the deployable tactical vehicle fleet in operational condition will be further compromised, and there will be increased likelihood of equipment failure during missions. Prolonged equipment downtime leads to cascading operational delays and risks, diminishing the unit's efficiency, mission effectiveness, and readiness for critical missions.

ADDITIONAL:
Project construction is not within a designated 100-year floodplain. No flood mitigation measures are required.

JOINT USE CERTIFICATION: N/A. USSOCOM budgets only for those facilities specifically for SOF use. Common support facilities are budgeted by the military departments. Reference Title 10, Section 165.

10. DESCRIPTION OF PROPOSED CONSTRUCTION:
Construct a microgrid at Redstone Arsenal (RSA) Army Airfield that will provide resilient power for critical loads. The project includes new natural gas (NG) generator(s) for emergency operations, a ground mounted solar array with solar tracking installed, and a Battery Energy Storage System (BESS). Project will also include a master controller, synchronization controllers, automatic transfer switches, transformers, reclosures, inverters, rectifiers, underground electrical with conduit, and information systems. Protective relay controls will be installed on the existing diesel backup generators so they can be incorporated into the microgrid. A switchgear facility to house medium and low voltage equipment is included. Project will also include an interconnect agreement with the commercial utility provider, commissioning and environmental and air permitting. Supporting facilities include site improvements, utilities, security and communication systems, environmental permits and engineering studies.

11. REQUIREMENT: N/A ADQT: N/A SUBSTD: N/A

PROJECT:
Construct a microgrid system at RSA Army Airfield providing resilient power for critical mission electrical loads. The microgrid will include new natural gas generators, solar arrays, and a BESS.

1. COMPONENT Defense Wide – Army/Active	**FY 2027 ENERGY RESILIENCE AND CONSERVATION MILITARY CONSTRUCTION PROJECT DATA**	2. DATE April 2026

3. INSTALLATION AND LOCATION	4. PROJECT TITLE:
Redstone Arsenal Alabama	Power Generation and Microgrid

5. PROGRAM ELEMENT	6. CATEGORY CODE	7. PROJECT NUMBER	8. PROJECT COST ($000)
0904903D	81122	103043	**90,000**

REQUIREMENT:
The RSA airfield mission is to support missile movement for multiple Department of War (DoW) agencies including Missile Defense Agency, Missile and Space Intelligence Center, Combat Capabilities Development Command, Redstone Flight Test Directorate and the Redstone Test Center (RTC). The airfield mission facilities support development flight test activities, including aircraft instrumentation and simulation in support of all Army and Aviation Missile assets, as well as DoW interoperability to ensure various weapon platforms and vehicles control software can communicate seamlessly. To maintain mission readiness, the critical missions identified must be operable during an extended grid outage. Long-term power disruptions of the utility grid would have a negative impact on the critical missions of testing and training of Army and DoW assets. The proposed project is identified in the RSA Energy and Water Plan (IEWP) as a solution to meet the Army Directive (AD) 2020-03 requirements and OSW Metrics and Standards for Energy Resilience at Military Installations guidance.

The PV and BESS systems will tie into the overhead lines between the substation and the airfield. During normal operations, the PV and BESS will provide power to the electrical distribution that feeds the airfield which subsequently will reduce reliance on utility company generated electricity. Any excess power generation not required for airfield operations will back-feed through the substation to other loads on the installation. In the event of an electrical outage, the PV and BESS will only feed the area of the microgrid. The microgrid will address known deficiencies documented in the IEWP and will enable all of the airfield facilities to continuously operate through extended duration outages. The microgrid will provide resilient power for 100% of the airfield electrical loads.

CURRENT SITUATION:
Power is distributed from the primary substations to local unit substations spread across the base via the electrical infrastructure. RSA owns the electrical grid and utilizes a specialized SCADA system for monitoring and adjusting the electrical system. During grid outages, the RSA airfield facilities utilize small building level standby diesel generators to provide emergency power. The existing standby generators are inadequate for providing resilient power during an extended utility outage.

IMPACT IF NOT PROVIDED:
During an extended power outage, RSA's critical mission of supporting missile movement for multiple DoW agencies and development of flight test activities for Army and Aviation Missile assets would be impacted.

(d) Design or RFP Complete:	JUL/2026
(e) Total Design Cost ($000)	
1. Production of plans and specifications	4,980
2. All other design costs.	8,370
3. Total	13,350
4. Contract	12,550
5. In-house	800
(f) Energy Study and/or Life Cycle Analysis performed?	Yes
(g) Standard or definitive design used?	No

(3) Construction Data:

(a) Contract Award:	MAR/2027
(b) Construction Start:	MAY/2027
(c) Construction Complete:	MAY/2030

B. Equipment associated with this project which will be provided from other appropriations: N/A

C. Project Type: ENERGY RESILIENCE

D. Rationale IAW 10 U.S.C. 2914: This project directly remediates disruption risks to critical missions and facilities and enhances installation energy security and reliability through the installation of natural gas generators, solar PV, and BESS, providing reliable, 24-hour per day power. This project will not only mitigate diesel backup generator failure risk but will cover critical facilities that currently do not have backup generation. The microgrid controls and automatic transfer switches will allow the airfield critical loads to be isolated and powered during a grid outage. The BESS will also optimize the operation of the generation assets and smooth the intermittence of the PV.

10. DESCRIPTION OF PROPOSED CONSTRUCTION:
Construct a microgrid capable of providing resilient power for the entire peak electrical load of the Camp Roberts United States Army Signal Activity (USASA) Presidio of Monterey (POM) Enclave (UPE). New construction will include both ground-mounted and carport-mounted Photovoltaic (PV) arrays along with new carports to mount the arrays, a Battery Energy Storage System (BESS), buildings to house the BESS, underground electric lines, microgrid, controls, switches, transformers, commissioning and testing, interconnection fees, cybersecurity, utilities, site improvements, environmental permitting, and communication infrastructure. The microgrid will integrate the existing generators for baseload power.

11. REQUIREMENT: N/A ADQT: N/A SUBSTD: N/A

PROJECT:
Construct a new microgrid that includes PV arrays and BESS and integrates with existing generators for the purpose of providing resilient power to the Camp Roberts UPE during a grid outage.

REQUIREMENT:
Camp Roberts provides essential communications for various federal government operations. The site serves as a major communication link between US National Command Authority and deployed military units. The microgrid will provide required

1. COMPONENT Defense Wide – Army/Active	FY 2027 ENERGY RESILIENCE AND CONSERVATION MILITARY CONSTRUCTION PROJECT DATA	2. DATE April 2026

0904903D	81122	102945	**79,000**

resilience for the critical loads during electrical grid outages. Normal microgrid operation will provide solar and battery power to meet facility peak loads during daylight hours and peak power pricing hours. The project will enable participation in the demand response program resulting in savings.

The proposed project is identified in the Camp Roberts Installation Energy and Water Plan (IEWP) as a solution to meet the Army Directive (AD) 2020-03 requirements for providing resilient power during a utility grid power outage, and the availability requirement IAW 10 USC 2920 and DoW Metrics and Standards guidance.

CURRENT SITUATION:
The site has diesel generators supplied by underground diesel tanks. The generators are connected to the main switchgear that supply backup power for the facility.

IMPACT IF NOT PROVIDED:
Without this project if an extended electrical utility outage occurs, Camp Roberts UPE will not be able to fulfill its mission for various federal government operations. The microgrid will also eliminate the risk of facility power outages during California Independent System Operator required demand reductions due to extreme heat in central California.

12. SUPPLEMENTAL DATA:

A. Estimated Execution Data:

(1) Acquisition Strategy: Design Bid Build

(2) Design Data:	
(a) Design or Request for Proposal (RFP) Started:	SEP/2024
(b) Percent of Design Completed as of Sep 2025: (BY-2)	35%
(c) Percent of Design Completed as of Jan 2026 (BY-1)	65%
(d) Design or RFP Complete:	SEP/2026
(e) Total Design Cost ($000)	
1. Production of plans and specifications	4,380
2. All other design costs.	7,335
3. Total	11,715
4. Contract	10,915
5. In-house	8,00
(f) Energy Study and/or Life Cycle Analysis performed?	Yes
(g) Standard or definitive design used?	No
(3) Construction Data:	
(a) Contract Award:	MAR/2027
(b) Construction Start:	MAY/2027
(c) Construction Complete:	MAY/2029

B. Equipment associated with this project which will be provided from other appropriations: N/A

C. Project Type: ENERGY RESILIENCE

1. COMPONENT Defense Wide – Army/Active	**FY 2027 ENERGY RESILIENCE AND CONSERVATION MILITARY CONSTRUCTION PROJECT DATA**	2. DATE April 2026

3. INSTALLATION AND LOCATION Camp Roberts California	4. PROJECT TITLE Power Generation and Microgrid

5. PROGRAM ELEMENT	6. CATEGORY CODE	7. PROJECT NUMBER	8. PROJECT COST ($000)
0904903D	81122	102945	**79,000**

D. Rationale IAW 10 U.S.C. 2914: The current utility provider rate structure charges the most for electricity (usage per kWh and kW demand charges) between 1600 and 2100. As the facility load is consistent, these charges are significant. These charges are about $35,000 per month in demand charges. The demand charges will be eliminated, and the usage charges will be minimized with a solar/battery system. This microgrid will also provide resilience to the backup generators and fuel supply, thus allowing the facility to operate indefinitely upon loss of grid power. This project will ensure UPE is aligned with the goals in the Army Installation Energy and Water Plan, and the availability requirement IAW 10 USC 2920 and DoW Metrics and Standards guidance.

10. DESCRIPTION OF PROPOSED CONSTRUCTION:
Project constructs a photovoltaic array, dual fueled electric generation plant (diesel and natural gas), battery energy storage alternative power sources and an Eglin microgrid which will allow islanding from two commercial power sources. Construction of a natural gas line as well and 7-days of on-site diesel fuel storage is part of this project. The microgrid control system (MCS) will seek the most stable power source and optimize photovoltaic with a battery energy storage source if commercial power is lost or unstable. The project will also include additional communication lines and equipment for a fully operable MCS.

11. REQUIREMENT: N/A ADQT: N/A SUBSTD: N/A

PROJECT:
Project constructs a photovoltaic array, dual fueled electric generation plant, battery energy storage alternative power sources and an Eglin microgrid which will allow islanding from two commercial power sources.

REQUIREMENT:
The project remedies stoppages resulting from electrical power disruptions. The project supports missions by reconfiguring the existing electrical distribution grid to allow islanding and providing diverse on-site power sources with at least 7-day capacity. The proposed project configuration will include 3 MW of ground-mounted PV, battery energy storage, and bi-fuel reciprocating internal combustion engine (RICE) generation, equipment housing, microgrid control system, and system commissioning.

1. COMPONENT Defense Wide – Air Force	**FY 2027 ENERGY RESILIENCE AND CONSERVATION MILITARY CONSTRUCTION PROJECT DATA**	2. DATE April 2026

3. INSTALLATION AND LOCATION Eglin Air Force Base Florida	4. PROJECT TITLE: Power Generation and Microgrid

5. PROGRAM ELEMENT	6. CATEGORY CODE	7. PROJECT NUMBER	8. PROJECT COST ($000)
0904903D	811147	FTFA233003	**43,000**

CURRENT SITUATION:
Eglin Air Force (AFB) is home to the 96th Test Group and 20th Space Surveillance Squadron (20 SPSS) which relies on site-specific support and other equipment. Mission owners are subject to requirements for 99.999% reliable power availability, as required by 10 U.S.C. §2920. Eglin AFB requires enhanced robustness and preparedness from natural disasters or manmade interference to meet this requirement. Given the site's mission criticality and regional vulnerability to extreme weather, backup generation along with the ability to island from the local grid is vital for mission continuity.

IMPACT IF NOT PROVIDED:
Mission owners at Eglin Air Force Base will continue to be impacted by the multiple Installation Energy Plan (IEP) identified resilience gaps and risks associated with increasingly extreme hurricanes, severe weather events, and manmade interference which threaten the regional and local grid.

12. SUPPLEMENTAL DATA:

A. Estimated Execution Data:

(1) Acquisition Strategy: Design Build RFP for sole source to UP system owner, IAW 10 U.S.C. §2688 (k)

(2) Design Data:

(a) Design or Request for Proposal (RFP) Started:	AUG/2025
(b) Percent of Design Completed as of Sep 2025: (BY-2)	3%
(c) Percent of Design Completed as of Jan 2026 (BY-1)	35%
(d) Design or RFP Complete:	NOV/2026
(e) Total Design Cost ($000)	
1. Production of plans and specifications	2,520
2. All other design costs.	1,680
3. Total	4,200
4. Contract	2,940
5. In-house	1,260
(f) Energy Study and/or Life Cycle Analysis performed?	Yes
(g) Standard or definitive design used?	Yes

(3) Construction Data:

(a) Contract Award:	APR/2027
(b) Construction Start:	NOV/2027
(c) Construction Complete:	NOV/2029

B. Equipment associated with this project which will be provided from other appropriations: *None*

C. Project Type: ENERGY RESILIENCE

1. COMPONENT Defense Wide – Air Force	**FY 2027 ENERGY RESILIENCE AND CONSERVATION MILITARY CONSTRUCTION PROJECT DATA**	2. DATE April 2026

10. DESCRIPTION OF PROPOSED CONSTRUCTION:
This project will provide a central backup generation plant with bi-fuel generators with fuel storage. Additionally, the project includes solar photovoltaic (PV) generation located on a 25-acre brownfield on the southern portion of the installation as a secondary form of distributed generation. The new generation will be tied to an island-capable microgrid including switchgear and controls. The solar PV component of the Microgrid will provide diverse power generation to enhance resilience while increasing generator run time. Project site improvements along with a direct transfer trip will also be included in the project.

11. REQUIREMENT: N/A ADQT: N/A SUBSTD: N/A

PROJECT:
The project will consist of an island-capable microgrid consisting of a central backup generation plant with bi-fuel generators with fuel storage and solar PV.

REQUIREMENT:
Defense Distribution Center Susquehanna serves as the Eastern strategic distribution platform for the Department of War (DoW) and is the primary distribution point for all branches of the U.S. Armed Services, Foreign Military Services, and other Federal agencies primarily in the eastern United States. The Eastern Distribution Center (EDC) - part of Defense Distribution Center Susquehanna - is the largest distribution processing facility in the DoW. The EDC is approximately 1.7 million square feet and handles up to 40% of DLA Distribution's total receipt, storage, and issue of materiel worldwide. The readiness and continuity of the DLA Distribution mission require reliable and continuous backup power to critical facilities so that the mission can continue during a multiday outage. The DLA Distribution mission is distributed across dozens of facilities with a wide range of operating conditions, requiring a holistic backup power solution that collectively addresses the mission needs and can be economically

1. COMPONENT Defense Wide – DLA	FY 2027 ENERGY RESILIENCE AND CONSERVATION MILITARY CONSTRUCTION PROJECT DATA	2. DATE April 2026

3. INSTALLATION AND LOCATION	4. PROJECT TITLE:
Defense Distribution Center, Susquehanna New Cumberland, PA	Microgrid

5. PROGRAM ELEMENT	6. CATEGORY CODE	7. PROJECT NUMBER	8. PROJECT COST ($000)
0904903D	81160	DLA2026-01	**58,000**

scaled to accommodate future load growth.

In consultation with a MIT Lincoln Laboratory resilience study conducted in 2023, multiple energy resilience gaps were identified, and it was recommended that Defense Distribution Center Susquehanna install diverse energy sources to provide redundant backup to 100% of mission critical facilities and enable flexibility in future load expansion. This recommendation builds on previous reports, including the Installation Energy Plan (2019).

CURRENT SITUATION:
Defense Distribution Center Susquehanna receives electricity from PPL Electric Utilities and natural gas from UGI Utilities, Inc. The current configuration of both electrical and natural gas distribution lacks adequate redundancy.

IMPACT IF NOT PROVIDED:
Without the multi-generation source microgrid, Defense Distribution Center Susquehanna will continue to rely on building-level generators that are currently providing backup power to critical buildings, and essential functions will lack N+1 backup power in the event of a long-duration power outage. As a result, Defense Distribution Center Susquehanna could lose capabilities or experience reduced efficiency/capability in delivering critical materiel and equipment to the warfighters. In addition, there may be delays in distributing supplies to local regions in the event of a natural disaster (e.g., hurricane, tornado, flooding, winter storm).

10. DESCRIPTION OF PROPOSED CONSTRUCTION:
Construct an emergency backup potable water system that utilizes the existing on-site La Casas Lake to provide a secure secondary source of potable water capable of providing water resilience for Fort Buchanan. Project includes a water treatment system, protective building structure for the water treatment system, and a lake water intake system. The project will also include commissioning and testing, cybersecurity, permitting, electric service, site improvements, building information systems, and funding to pay the Puerto Rico municipality tax.

11. REQUIREMENT: N/A ADQT: N/A SUBSTD: N/A

PROJECT:
Construct an emergency backup potable water system that includes a lake intake and water treatment system for the purpose of providing water resilience to Fort Buchanan during a water utility disruption.

REQUIREMENT:
U. S. Army Garrison Fort Buchanan, the “Sentinel of the Caribbean”, is an Army Materiel Command/Installation Management Command (AMC/IMCOM) Readiness Army garrison funded by the U.S. Army Reserve and is the center of U.S. military operations in the Caribbean. Fort Buchanan functions as a contingency inactive mobilization force generation installation (MFGI), providing fast and cost-effective support to missions in the Caribbean as well as Central and South America. Fort Buchanan is the Caribbean forward-based training and staging platform dedicated to enhancing unit readiness for rapid deployment in support of

1. COMPONENT Defense Wide – Army/Active	**FY 2027 ENERGY RESILIENCE AND CONSERVATION MILITARY CONSTRUCTION PROJECT DATA**	2. DATE April 2026

3. INSTALLATION AND LOCATION Fort Buchanan Puerto Rico	4. PROJECT TITLE: Emergency Water Treatment System

0904903D	84125	98709	**33,500**

Combatant Commanders and also serves as the primary mission command site for the Federal Emergency Management Agency (FEMA) in response and recovery for Puerto Rico in the wake of natural disasters such as Hurricanes Maria and Irma in 2017.

An emergency backup potable water system capable of producing potable water from La Casas Lake will enhance the installation's water security and resilience posture during normal and emergency operations. The project will pump up to 150 gallons per minute of water from Las Casas Lake and treat it to U.S. EPA Safe Drinking Water Standards (40 CFR 141 thru 143) for potable consumption. This will provide Fort Buchanan a reliable backup resource for drinking water, offsetting 100 percent of the daily water demand to supplement the onsite ground water well, further reducing reliance on the water utility provider, Puerto Rico Aqueduct and Sewer Authority (PRASA).

CURRENT SITUATION:
Fort Buchanan purchases most of the potable water used on post from PRASA and the installation owns and maintains the onsite potable distribution system. During normal operations the remaining of the potable water used is sourced from a potable underground water well located on the installation. Currently Fort Buchanan's access to a backup water supply for emergency operations during a water utility outage is the potable underground water well. Regional power outages impact the water supply from PRASA which means the installation lacks adequate potable water to meet the drinking water needs of critical mission tenants on Fort Buchanan.
Las Casas Lake was acquired in 2018 by Fort Buchanan and has a holding capacity of 50 million gallons of water which is fed from the shallow aquifer beneath. The purpose of the acquisition was to provide an alternative water supply for the installation.

The energy resilience project, FY24 PN 99144 Microgrid and Backup Power is scheduled for award in FY26 and will provide backup power for 100% of the critical missions during utility outages, including providing power for the Emergency Backup Potable Water System project. Both of these projects together will provide the required power and water for 100% of the critical missions on Fort Buchanan and thereby will mitigate risk and enable the installation to continue critical operations during an electrical and water utility outage resulting from severe storms or other causes.

IMPACT IF NOT PROVIDED:
The project is critical for the mission assurance of Fort Buchanan as the center of U.S. military operations in the Caribbean, providing potable water to the warfighters that provide fast and cost-effective support to missions in the Caribbean, Central and South American areas of responsibility. The project will significantly mitigate natural vulnerabilities, i.e., hurricanes, and man-made vulnerabilities such as cyberattacks or attacks against the physical infrastructure. The project will ensure sustainment of critical missions for at least 30 days during utility outages and can be used on an ongoing basis to reduce demand of purchased potable water from PRASA.

10. DESCRIPTION OF PROPOSED CONSTRUCTION:
Construction includes installing solar photovoltaic (PV) arrays in the BAMC & Taylor Burk Clinic parking lot areas, a battery storage system, advanced meters to connect and communicate to the BAS/DDC system, and upgrading existing motors with synchronous reluctance motors and compatible drives on various small heating, ventilation, and air conditioning (HVAC) and medical support systems. Project also provides modifications and upgrades to BAS/DDC wiring and commissioning of the retrofitted motors/drives serving the existing variable speed applications (reuse existing sensors and wiring), revises sequence of operation to maximize low energy parallel pumping operations, performs a retro-commissioning where upgrades were impacted to reduce operating costs and improve the performance and reliability of facility systems, and provides commercial disposal/recycling of the existing stock of motors/drives and branch wiring/conduits removed.

11. REQUIREMENT: N/A ADQT: N/A SUBSTD: N/A

PROJECT:
Install Electronically Commutated (EC) and Switched Reluctance (SR) Motors, install solar PV panels and a battery energy storage system.

1. COMPONENT Defense Wide – DHA	FY 2027 ENERGY RESILIENCE AND CONSERVATION MILITARY CONSTRUCTION PROJECT DATA		2. DATE April 2026
3. INSTALLATION AND LOCATION Brooke Army Medical Center (BAMC) Fort Sam Houston, TX		4. PROJECT TITLE: Power Generation and Energy Upgrades	
5. PROGRAM ELEMENT 0904903D	6. CATEGORY CODE 81114	7. PROJECT NUMBER DHA20231103	8. PROJECT COST ($000) **$55,500**

REQUIREMENT:
DHA is a joint, integrated Combat Support Agency that enables the Army, Navy, and Air Force medical services to provide a medically ready force and ready medical force to Combatant Commands in both peacetime and wartime. This project supports DHA in the delivery of integrated, affordable, and high-quality health services to Military Health System beneficiaries. Fan and pump motors are major contributors to the total facility energy consumption. Synchronous Reluctance Motor (SRMs) will provide improved efficiency and reliability over traditional premium motors essential to all areas of the clinics and hospital including patient-occupied areas, exam rooms, laboratories, operating rooms, pharmacies, and diagnostic areas as well as common spaces and waiting rooms. Improved air handling fan, exhaust fan and pump operations will trickle down energy savings on the air handling system and hydrodynamic systems. In emergency power situations, energy conservation measures will reduce critical load thereby increasing Emergency Power reserves. This will allow generators to sustain life-safety systems should any of the four emergency generators drop off-line.

CURRENT SITUATION:
The existing HVAC, refrigeration and medical support systems surveyed have general purpose asynchronous induction motors. Several existing electric motors use Variable Frequency Drives (VFDs) for speed modulation and operated inefficiently as evidenced by field surveys and thermal imaging. Field operating conditions also contributed to certain inefficiencies in electric motors and drive systems due to low or excess loading of these motors among other factors such as hot and humid rooms where some of these motors are located. Several other inefficiencies are due to electrical slip and other core losses inherent in these asynchronous induction motors. These operational and inherent characteristics also lead to lower power factor and other electrical quality issues in these mission critical hospital, research and clinic use facilities. The motors equipped with VFDs are also noted to not take full advantage of VFDs due to system and operational requirements or limiting conditions. Kitchen air distribution and exhaust system, laboratory exhaust systems, booster pump stations, and several other systems operated within pre-programmed range of speed or at full speed due to system design and other operational limitations. Medical support systems operated highly inefficiently, and in a staged ON/OFF manner against fixed parameters in lieu of optimized low energy operation. Large boilers' combustion air fans operated without VFDs using inlet vanes for combustion air modulation for required air-fuel ratios.
Existing asynchronous induction operates poorly in low load and overload conditions, and its part-load efficiencies drop significantly (60% to 80% efficiencies).

IMPACT IF NOT PROVIDED:
Mechanical systems will continue to operate at low efficiency and experience increased failure. Critical medical facilities will consume a significant amount of energy annually and occur increased maintenance burden and operations and maintenance costs.

10. DESCRIPTION OF PROPOSED CONSTRUCTION:
Construct a microgrid to include a Photovoltaic (PV) array, propane generator, Battery Energy Storage System (BESS), propane storage tank, microgrid, controls, switches, transformers, commissioning and testing, cybersecurity, and an interconnection agreement. The project will include construction of a new underground high voltage distribution system. Also included are utilities, site improvements, environmental permitting, and building information systems.

11. REQUIREMENT: N/A ADQT: N/A SUBSTD: N/A

PROJECT:
Construct a microgrid system providing resilient power for critical loads at the Digital Multipurpose Range Complex (DMPRC) during utility power outages that will include additional power generation and a Battery Energy Storage System.

REQUIREMENT:
The project will provide resilient power for 100% of the load on the electrical distribution circuit for the YTC DMPRC ranges and will meet the requirements of 10 USC 2920 and the OSW Metrics and Standards for Energy Resilience at Military Installations guidance, dated 20 May 2021. The diverse on-site generation provided by the propane generator and solar PV arrays, BESS and

1. COMPONENT Defense Wide – Army/Active	**FY 2027 ENERGY RESILIENCE AND CONSERVATION MILITARY CONSTRUCTION PROJECT DATA**	2. DATE April 2026

3. INSTALLATION AND LOCATION	4. PROJECT TITLE
Joint Base Lewis-McChord (Yakima Training Center) Washington	Power Generation and Microgrid

5. PROGRAM ELEMENT	6. CATEGORY CODE	7. PROJECT NUMBER	8. PROJECT COST ($000)
0904903D	81122	101472	**73,000**

combined with microgrid controls will enable islanded operation to provide continuous power to the range in the event of any power disruption. In the event utility grid power is lost, the microgrid will ensure that resilient power is provided ensuring training exercises and pre-deployment certifications from squad-level to battalion-level can continue without interruption. The proposed project is identified in the JBLM Installation Energy and Water Plan (IEWP) as a solution to meet the Army Directive (AD) 2020-03 requirements.

CURRENT SITUATION:
The existing electrical distribution circuit was direct buried without encasing in a concrete electrical duct bank resulting frequent breakages. An existing diesel-fired generator serves the DMPRC building complex. When power is lost, a manual transfer switch is used to disconnect from the utility line and connect the complex to the generator. However, the generator cannot power up if all loads are connected.

IMPACT IF NOT PROVIDED:
Joint Base Lewis-McChord (JBLM) routes all training units through this range for pre-deployment certification. Utility grid power outages risk disrupting the schedules for critical soldier training and certifications. Loss of power disrupts training operations and soldier readiness.

12. SUPPLEMENTAL DATA:

10. DESCRIPTION OF PROPOSED CONSTRUCTION:
Project will provide a permanent substation consisting of power transformers, emergency power generation, transmission/distribution system infrastructure, facility-related control systems that include cybersecurity features, and information systems that include telecommunication, intercommunication systems, and supervisory controls and data acquisition (SCADA) to support critical missions. Project includes Antiterrorism (AT) measures that include mass notification systems, emergency shutoffs for ventilation systems, laminated glazing, blast resistant window and door frames, and emergency lighting and signage. Special costs include Post Construction Contract Award Services (PCAS) and cybersecurity commissioning. Pavement facilities include equipment pads for emergency generators. Site preparation includes site clearing, tree removal, grading, excavation, and temporary erosion control, and above-ground site demolition. Paving and site improvements include roadways, parking lots, sidewalks, retaining walls, landscaping, and stormwater management. Storm water management facilities include Low Impact Development items. This project will provide new parking spaces for every existing parking space demolished. Physical Security includes high-security fencing and gates. Electrical utilities include underground electrical conductors, site lighting, smart grid, the grounding system, private utility connection fee and hazardous component abatement. Testing and commissioning of the substation and associated equipment is required. Mechanical utilities include fire protection water distribution, storm sewer piping, and storm

sewer structures. The substation and building will be demolished upon completion of this project as the functions they now house will be consolidated into this project, and they are no longer needed. Unit cost includes hazardous material removal and disposal.

11. REQUIREMENT: N/A ADQT: N/A SUBSTD: N/A

PROJECT:
This project revitalizes the main substation by replacing and upgrading the existing primary transformation and distribution systems at the substation, while adding backup power generation and microgrid controls.

REQUIREMENT:
NBK Public Works Department has a single transmission line. The backup power is insufficient to meet the power requirement for the NUWC industrial area. Backup power is only available on 2 feeders and provides resiliency for some of the critical facilities. This necessitates the construction of backup power resources to fully attain the directed energy goals. This project energy resilience and security by adding a secondary transmission line from the utility along with new microgrid technology to link a new emergency generator sized for all NBK Keyport critical loads to existing feeder generators to mitigate power disruptions. Adding a backup power and a secondary transmission line will ensure NUWC Keyport is compliant with near-term energy resilience requirements to assure critical mission operation during disruptions.

CURRENT SITUATION:
The substation provides power to the NUWC Keyport industrial area, which has a mission to provide advanced technical capabilities for test and evaluation, in service engineering, maintenance and industrial base support, fleet material readiness and obsolescence management for undersea warfare. The backup power available is insufficient to meet the power requirement for the industrial area or RDT&E Laboratory & Facilities, Ordinance/Weapons Operations/Ordnance Munitions Repair, Maintenance & Modification, Inter/Depot Level Maintenance/Missile Repair, Maintenance & Modification missions. for 23 facilities. An additional eight (8) locations have single facility backup generators. There are additional facilities in the industrial area that require backup power that were called out in the 2019 and 2022 mission assurance assessments. Additional facilities with strict temperature and humidity control requirements do not have backup power. Lift stations do not have backup power and are at risk of overflow for outages in excess of 1 hour. This necessitates the construction of backup power resources to fully attain the directed energy goals.

IMPACT IF NOT PROVIDED:
The normal service life of 25 years for this equipment has been exceeded, and system failures have already been experienced. Future system failure can be expected if corrections are not achieved under this project. Power disruptions will continue to impact NBK Keyport's ability to complete its missions. The continued use of degraded infrastructure creates higher costs, adverse effects to maintenance availability completion dates and will ultimately affect fleet readiness.

B. Equipment associated with this project which will be provided from other appropriations:

Equipment Nomenclature	Procuring Appropriation	Fiscal Year Appropriated or Requested	Cost ($000)
Portable Draw-out Breaker Hoist (N4)	OMN	2028	10.1

C. Project Type: ENERGY RESILIENCE

D. Rationale IAW 10 U.S.C. 2914: This project constructs a new main substation yard that provides multiple feeds entering the substation from the utility grid, installs cyber-secure microgrid controls to allow islanding Keyport annex from the electric grid, installs an emergency generator at the substation, modernizes transmission/distribution system infrastructure, control system and telecommunication infrastructure and cyber security commissioning, upgrades substation equipment from electro-mechanical relays to micro-processor relays to reduce the risk of brown outs (voltage sags) and cyber security threats, and improves energy reliability by replacing equipment that is at end of service life and failing.

10. DESCRIPTION OF PROPOSED CONSTRUCTION:
Construct a microgrid that includes a Solar Photovoltaic (PV) array, Battery Energy Storage System (BESS), and natural gas generators along with microgrid controls, switches, commissioning and testing, cybersecurity, utilities, site improvements and information systems. Two existing diesel backup generators will be integrated into the microgrid. This project will also include replacing existing heating and cooling systems with the installation of a vertical, closed loop geothermal system to meet the heating and cooling (HVAC) needs of all five buildings in the Cheyenne Complex.

11. REQUIREMENT: N/A ADQT: N/A SUBSTD: N/A

PROJECT:
Construct microgrid that includes a PV solar array, natural gas generators, and a geothermal field that will provide resilient and redundant electrical and HVAC loads for the Cheyenne Complex.

REQUIREMENT:
The Cheyenne Complex is the Headquarters for the Wyoming Army National Guard (WYARNG) and houses numerous mission essential functions and facilities including the WYARNG Headquarters, the Joint Operations Center (JOC), John F. Raper Armory, WYARNG Medical Detachment, a Field Maintenance Shop, the 115th Field Artillery Brigade headquarters, and the WYARNG Network Control Center. The WYARNG conducts its Defense Support to Civilian Authorities (DSCA) mission annually in response to flooding and wildfires in the state and provides aviation assets in support of search and rescue operations. Additionally,

1. COMPONENT Defense Wide – Army/National Guard	FY 2027 ENERGY RESILIENCE AND CONSERVATION MILITARY CONSTRUCTION PROJECT DATA	2. DATE April 2026

3. INSTALLATION AND LOCATION	4. PROJECT TITLE:
F.E. Warren Air Force Base Wyoming	Power Generation and Microgrid with Geothermal Heating and Cooling

5. PROGRAM ELEMENT	6. CATEGORY CODE	7. PROJECT NUMBER	8. PROJECT COST ($000)
0904903D	81122	99025	**51,717**

the WYARNG supports various overseas contingency operations, deploying countless times since the global war on terror began. The microgrid will provide required resilience for the critical loads during emergency operations. During emergency operations the microgrid will enable the generators to provide baseload power and also use the on-site power generated from the PV arrays to reduce the fuel usage by the generators. The BESS will capture excess energy generated by the PV arrays and will be used to provide supplemental power during times power from the PV arrays is not available, such as nighttime operations.

The proposed project is identified in the Cheyenne Complex Installation Energy and Water Plan (IEWP) as a solution to meet the Army Directive (AD) 2020-03 requirements and the availability requirement IAW 10 USC 2920 and DoW Metrics and Standards guidance.

CURRENT SITUATION:
The site of this project on the Cheyenne Enclave is owned by the Department of Air Force and licensed to and operated by the Wyoming Army National Guard. The facilities currently receive electricity and natural gas from Black Hills Energy. The facilities have existing backup diesel generators in place to supply power if necessary. The two existing generators will be integrated with the new generators that will feed the microgrid. This will provide redundancy and enhance the resilience of the electrical grid. The HVAC systems in the critical facilities within the Cheyenne Enclave are all past their useful life and in need of replacement. The new geothermal system provided by this project will provide resiliency by ensuring the heating and cooling needs of the critical facilities is met.

IMPACT IF NOT PROVIDED:
This project is critical for mission assurance of the WYARNG due to the increased demand in local infrastructure, increasing Operation Tempo (OPTEMPO), increasing cost of electricity and increased potential for electrical outages. Without this project, the WYARNG will be at significant risk for not being able to effectively perform mission critical functions including Defense Support to Civil Authorities, Civil Support or Contingency Operation missions during electrical outages that impact Wyoming. During the harsh winter months in this geographical operating location, this project will provide energy security and resilience allowing WYARNG to continue providing critical DSCA and mission command services even if a major power outage occurs. This project will directly impact mission assurance of the WYARNG by ensuring continuity of operations and mission command during planning, alert, assembly, preparation and deployments in support of federal overseas contingency operations.

10. DESCRIPTION OF PROPOSED CONSTRUCTION:

Construct a solar ground-mounted array with ballast mounted construction, installation of renewable energy solar panels, invertors, wiring of protective devices, grounding conductors, lightning protection, automatic metering system and battery storage. The energy storage system shall be connected to the installation's primary electrical distribution grid and shall be capable of functioning as a component of a microgrid subsystem which is connected with other distributed generation and critical loads. The project will include battery storage system and microgrid infrastructure.

Site preparations include site clearing, excavation, trenching, utilities, paving, site improvements, grading, leveling, compaction of existing undeveloped dirt land, and preparation for construction. Paving and site improvements include grading, roadways, curbs, sidewalks, landscaping, boundary fencing, lighting, signs, and fire department access roads. Storm water management facilities include Low Impact Development Items. Special foundation features include reinforced concrete foundations. The system must withstand the expected wind loads for the location. Electrical utilities include utility trenches, cabling, underground ducts and manholes, conduit, required cathodic protection, step-up transformers with primary and secondary over-current protection, and lighting. This project maximizes the use of all-electric technologies to leverage the Department's growing investment in microgrid technology to support mission assurance. Mechanical utilities include extension of base water system extension to provide service connections for maintenance, in addition to connections for firefighting purposes. Demolition includes the removal of an observation tower, buried electrical line, and associated support facilities. This is required to clear the site for this project. Facilities will be designated to meet or exceed the useful service life specified in the DoW Unified Facility Criteria. Facilities will incorporate features that provide the lowest practical life cycle cost solutions satisfying the facility requirements with the goal of maximizing energy efficiency.

0904903D	81150	P-183	**5,900**

Facility-related control systems include cybersecurity features in accordance with current DoW criteria. This project will provide Antiterrorism (AT) features and comply with applicable service and Geographic Combatant Commander policies and directive under United Facilities Criteria (UFC) for DoW Minimum antiterrorism Standards for Buildings. User Generated Unit Costs were used for this project and include the cost of features to meet the minimum DoW AT standards. Built-in equipment includes fire suppression systems in the battery storage system. Special costs include Post Construction Contract Award Services (PCAS) and cybersecurity commissioning. Department of War and Department of the Navy principles for high performance and sustainable building requires will be included in the design and construction of the project in accordance with federal laws and Executive Orders. Low Impact Development will be included in the design and construction of this project as appropriate. This project maximizes the use of all-electric technologies to leverage the Department's growing investment in microgrid technology to support mission assurance.

11. REQUIREMENT: N/A ADQT: N/A SUBSTD: N/A

PROJECT:
The project installs a ground mounted renewable energy system at Logistic Support Area (LSA), Isa Air Base to diversify the energy resource portfolio and decrease the dependence on a foreign nation's grid.

REQUIREMENT:
NSA Bahrain has ~350 sunny days per year, which is ideal for taking advantage of solar power generation opportunities. This project is critical to implementing distributed, energy alternatives (solar) and a microgrid to provide a sustainable form of support to the existing prime power for operations and reduces overall risk to meeting mission requirements. Renewable power, such as solar PV, alleviates the dependence on the generators by stretching the lifespan of the installation's diesel fuel supply. As a result, this project provides a reliable source of energy and will also reduce peak demand commercial power costs while generating additional energy savings.

CURRENT SITUATION:
The high cost of electricity is a result of exposure to peak commercial power costs. The generators use diesel fuel that is dependent on delivery. There have been multiple instances when the diesel fuel trucks were unable to deliver fuel due to Bahrain security restrictions, exposing the mission to fuel resupply insecurity. Complete dependence on the Bahrain grid and the unreliable ability of diesel fuel trucks to arrive on base introduce a resiliency gap that needs to be filled by an alternative and more reliable fuel source.

This project does not have scope elements above and beyond the UFC and Facilities Criteria regarding adverse long-term environmental effects.

IMPACT IF NOT PROVIDED:
Isa Air Base will experience mission delays caused by fuel delivery disruptions and the lack of backup power for the utility's facility.

(a) Contract Award:	JAN/2027
(b) Construction Start:	MAR/2027
(c) Construction Complete:	JUN/2029

B. Equipment associated with this project which will be provided from other appropriations: N/A

C. Project Type: ENERGY RESILIENCE

D. Rationale IAW 10 U.S.C. 2914: This project contributes to onsite generation infrastructure improvements, potential microgrid integration, modular generation capabilities, and the use of full-time installed energy sources to enhance energy resiliency and sustainability for the airbase. Isa Air Base is critical in supporting maritime patrol reconnaissance and other vital operations in the NAVCENT area of responsibility, with zero tolerance for disruptions negatively impacting the ability to support Combatant Commanders requirements.

10. DESCRIPTION OF PROPOSED CONSTRUCTION:
Construct a combination of ground, roof and carport mounted solar photovoltaic (PV) arrays, along with new carports, a diesel fuel generator, diesel fuel tank with an initial fill, a Battery Energy Storage System (BESS), a microgrid, controls, switches, transformers, commissioning and testing, interconnection fees, cyber security, utilities, site improvements and environmental permitting. All the necessary upgrades will be included to allow the existing government-owned electrical distribution system for the microgrid to connect and distribute power to critical missions during a power disruption.

11. REQUIREMENT: N/A ADQT: N/A SUBSTD: N/A

PROJECT:
Construct a microgrid system providing resilient power for critical loads during utility power outages. The microgrid will include new solar arrays, diesel generators and a BESS.

REQUIREMENT:
The requirement is to provide resilient power for 100% of the Katterbach and Bismarck Kasernes' electrical loads during an electrical grid outage. Critical facilities on the Katterbach and Bismarck Kasernes include the airfield operations, 12th Combat Aviation Brigade (CAB), garrison Emergency Operations Center (EOC), Network Enterprise Center (NEC), 52nd Signal Battalion,

1. COMPONENT Defense Wide – Army/Active	**FY 2027 ENERGY RESILIENCE AND CONSERVATION MILITARY CONSTRUCTION PROJECT DATA**	2. DATE April 2026

3. INSTALLATION AND LOCATION	4. PROJECT TITLE:
United States Army Garrison Ansbach (Katterbach/Bismark) Germany	Power Generation and Microgrid

5. PROGRAM ELEMENT	6. CATEGORY CODE	7. PROJECT NUMBER	8. PROJECT COST ($000)
0904903D	81160	102238	**72,000**

Regionally Aligned Forces (RAF), Defense Logistics Agency (DLA), and Directorate of Emergency Services (DES). The project supports USAG Ansbach as a training and mobilization center for the 12th CAB. USAG Ansbach is an OCONUS-based Army Power Projection Platform (PPP) and supports Noncombatant Evacuation Operation (NEO) missions in the state of Bavaria, Germany. Its primary missions include rotary aircraft operations and maintenance with the ability to conduct combat and humanitarian airlifts to any location in Western and Eastern Europe. USAG Ansbach needs resilient power at Katterbach and Bismarck Kasernes to support the transportation and other mission related infrastructure to ensure mission continuity.

The proposed project is identified in the USAG Ansbach Installation Energy and Water Plan (IEWP) as a solution to meet the Army Directive (AD) 2020-03 requirements for providing resilient power during a utility grid power outage and the availability requirement IAW 10 USC 2920 and OSW Metrics and Standards for Energy Resilience at Military Installations guidance.

CURRENT SITUATION:
Katterbach and Bismarck Kasernes remain at risk for an insufficient energy supply in cases of emergencies like a sustained external electrical grid outage or diesel fuel delivery disruption. The Katterbach and Bismarck Kasernes' critical facilities would be impacted by a long-duration power disruption to meet the long-term Critical Mission Sustainment requirement established by Army leadership.

IMPACT IF NOT PROVIDED:
USAG Ansbach Katterbach and Bismarck Kasernes must quickly deploy service members, equipment, and supplies to strategically significant areas of the world in support of National Defense and NATO Security. Multiple organizations will not be able to execute their respective critical missions during power outages without this project. It is critical that USAG Ansbach's transportation and support operations are functional and secure to conduct its mission. The Katterbach and Bismarck Kasernes are critical for deploying troops for National Defense and NATO missions. If USAG Ansbach is unable to execute any of its critical missions, America's response to a global situation that threatens our National or NATO Security will be compromised.

National Security Agency				(9,000)
U.S. Special Operations Command (USSOCOM)				(24,500)
USSOCOM Support to U.S. Indo-Pacific Command				(27,740)
Joint Chiefs of Staff				(13,328)
Defense-Wide				(3,000)

10. DESCRIPTION OF PROPOSED CONSTRUCTION:
Funds to be utilized for construction activities authorized under section 2805, Title 10 of United States Code, by the Defense Agencies and Secretary of War activities.

11. REQUIREMENT:

New and expanded facilities supporting Defense-wide missions with a cost up to $9,000,000 adjusted for location (not to exceed $14,000,000) within the U.S. and territories. The amount requested is considered a reasonable estimate to provide the numerous Defense Agencies and Activities flexibility in managing their construction programs.

The minor construction activities include the Joint Chiefs of Staff sponsored exercise related construction program.

U.S. Special Operations Command				(81,628)
Washington Headquarters Services				(5,000)
Defense-Wide				(81,129)

10. DESCRIPTION OF PROPOSED CONSTRUCTION:

Funds to be utilized under Title 10 USC 2807 by the Defense Agencies and Secretary of War activities for architectural and engineering services and construction design in connection with military construction projects including specified projects, standing authority construction (including unspecified minor construction) projects, land appraisals, and other projects as directed. Engineering investigations, such as field surveys and foundation exploration, will be undertaken as necessary.

11. REQUIREMENT:

All construction projects must be based on sound engineering and the best cost data available. These costs for architectural and engineering services and construction design are not provided for in the construction project cost estimates except in those where Design/Build contracting method is used.

Defense level activities covers planning and design for various defense activities, planning and design associated with exercise related construction, and covers efforts across the Department to standardize and distribute uniform design criteria.

Energy Resilience and Conservation Investment Program (ERCIP) Design requested within Defense-Wide activity provides the planning and design required to support ERCIP projects.

9. FUTURE PROJECTS

10. MISSION OR MAJOR FUNCTIONS

NORAD & NORTHOM requires long range early detection capability for low flying targets of interest approaching the borders of the continental United States. Solution: Land-based, 2-D high frequency (HF) bistatic ionospheric backscatter radar. Provides over-the-horizon detection and tracking of air and surface target sets over wide geographic areas; 100 times more sensitive than past and current OTHR systems. Focuses on low flying air target sets that are obscured from conventional line of-sight radar systems by the curvature of the earth. Permits long range early detection and response to land or sea launched targets of interest. Initial deployment: Network of (2) HLD OTHR CONUS transmitter and receiver site facilities for the northwest mission sector sites.

10. DESCRIPTION OF PROPOSED CONSTRUCTION

Acquisition of land, provide infrastructure support for antenna equipment, and construct multiple single-story buildings to include water supply, power generation, and fuel dispensing facilities to accommodate the mission of the Homeland Defense (HLD) Over-the-Horizon- Radar (OTHR) program. Construction will include concrete foundations for multiple pre-engineered buildings. The land procurement actions include the fee, or lesser real property interest, to include potential withdrawal of public domain land. OTHR sites will require approximately 2,622 acres for the Transmitter systems and 4,999 acres for the Receiver systems. The project consists of a single system. This system will be comprised of two sites, one transmitting and one receiving, and the support buildings areas for each array. This OTHR system array will include all necessary antenna support infrastructure, and communications cabling. Radiofrequency shielding will be utilized to mitigate interference as required. This project includes the reuse of three buildings for a total of 1,394 square meters. Project scope includes backup

power generators pursuant to Air Force Manual 32-1062 Electrical Systems, Power Plants and Generators. The Generator will be procured using Research Development Testing and Evaluation (RDT&E) funding and supplied to the contractor as Government Furnished Equipment. The project will include all necessary site improvements, site preparation, access roads, existing roadway improvements, supporting pavements, equipment pads, security fencing, utilities and utility connection fees, emergency/stand-by power, communications, and any other necessary supporting infrastructure to provide complete and usable facilities. This project will comply with Department of War antiterrorism/force protection requirements per United Facilities Criteria 4-010-01 Minimum Antiterrorism Standards for Buildings.

11. REQ: 2,368 EA ADQT: 0 SUBSTD: 0

PROJECT:
Acquire land, construct multiple facilities, and field Homeland Defense Over-the-Horizon Radar (HLD OTHR) supporting infrastructure.

REQUIREMENT:
United States adversaries continue to pursue weapon delivery platforms designed to evade detection and strike our homeland. HLD OTHR sensor supports long range, early detection and response to land or sea launched targets of interest. HLD OTHR compromises two major subsystems: the Transmitter, the Receiver. The proposed project will locate one Transmitter and one Receiver subsystem site at suitable locations in a critical mission sector region designated by North American Aerospace Defense Command and Northern Command. HLD-OTHR is a North American Aerospace Defense Command and Northern Command supported service requirement.

CURRENT SITUATION:
This capability does not currently exist anywhere in the United States. HLD OTHR is the number one air domain awareness priority for Commander, North American Aerospace Defense Command and Northern Command and is a critical component of potential adversary countries and Great Power Competition nations.

3. INSTALLATION AND LOCATION	4. PROJECT TITLE
MT HOME AFB, GEOGRAPHICALLY SEPARATED OREGON	HOMELAND DEFENSE OVER-THE-HORIZON RADAR, INC

5. PROGRAM ELEMENT	6. CATEGORY CODE	7. PROJECT NUMBER	8. PROJECT COST ($000)
12417F	132-134	QYZH253000	AUTH: 0 APPR: 217,000

IMPACT IF NOT PROVIDED:
The United States' adversaries continue to hold the homeland at risk. Timely and accurate threat detection, tracking, and assessment provides critical decision space and time to national leaders, while an inability to do so limits available response options. Lack of domain awareness may contribute to increased risk of miscalculation, unnecessary escalation, and potential for strategic deterrence failure.

ADDITIONAL:
The criteria/scope for the HLD-OTHR program is not specified in Air Force Manual 32-1084, Facility Requirements Standards; facility requirements are user and/or mission driven. This design will conform to criteria established in the Air Force Corporate Facilities Standards and Installation Facilities Standards but will not employ a standard facility design because there is no Air Force standard facility design for this project, and there is no applicable standard design to accommodate the facility's mission. All reasonable alternatives were considered during the development of this project; new construction is the only viable option to meet this requirement. A waiver to an economic analysis was approved on February 16, 2024. Sustainable principles, to include life-cycle cost-effective practices, will be integrated into the design, development, and construction of the project in accordance with Unified Facilities Criteria 1-200-02, High Performance and Sustainable Building Requirements. This includes preparation of a life-cycle cost analysis for energy consuming systems, renewable energy generating systems, whenever life cycle cost effective is selected as the reason any requirement of Unified Facilities Criteria 1-200-02 is partially compliant or not applicable. This project does not fall within or partly within a 100-year flood plain. This project was included in the Fiscal Year 2024 future year's defense plan for Fiscal Year 2025. Supporting facility costs exceed 25% of primary facility costs due to site dimensions, the likelihood of the sites being located on undeveloped land and the extensive infrastructure required to support the antenna arrays. The construction growth offset for this requirement is 37,905 square feet.

366 Wing Base Civil Engineer: 208-828-2831

APPROPRIATION LANGUAGE

FAMILY HOUSING OPERATION AND MAINTENANCE, DEFENSE-WIDE

For expenses of family housing for the activities and agencies of the Department of War (other than the military departments) for operation and maintenance, leasing, and minor construction, as authorized by law, $63,064,000.

DEPARTMENT OF WAR FAMILY HOUSING IMPROVEMENT FUND

For the Department of War Family Housing Improvement Fund, $8,412,000, to remain available until expended, for family housing initiatives undertaken pursuant to section 2883 of Title 10, United States Code, providing alternative means of acquiring and improving military family housing and supporting facilities.

DEPARTMENT OF WAR MILITARY UNACCOMPANIED HOUSING IMPROVEMENT FUND

For the Department of War Military Unaccompanied Housing Improvement Fund, $501,000 to remain available until expended, for unaccompanied housing initiatives undertaken pursuant to section 2883 of Title 10, United States Code, providing alternative means of acquiring and improving military unaccompanied housing and supporting facilities.

One of the missions of the Defense Intelligence Agency (DIA), in its role as single manager for Department of War (DoW) strategic Human Intelligence, is the direction, operations, and support (including housing support) for the Defense Attaché Service (DAS). The DAS is a critical component of Human Intelligence collection capabilities within DoW and is the only component wholly controlled by the DIA. The mission of the DAS is: (1) observe and report military and politico-military information; (2) advise the U.S. Ambassador on military and politico-military matters; (3) represent the DoW and the military services; and (4) administer military assistance programs and foreign military sales as directed. These missions are accomplished through the Defense Attaché Offices (DAO), which are organic elements of the U.S. Diplomatic Missions.

As the Single Real Property Manager, the Department of State (DoS) through the embassy Housing Board assigns housing for Attachés and their support staffs at a level of expense and square footage that is equivalent to their DoS and other tenant agency counterparts.

The DIA's Budget Submission for the FY 2027 Family Housing Program funds government leases (of which approximately 266 are high-cost leases) at DAOs worldwide. These funds provide for all lease costs which include utilities, residential protection services, custodial and fire protection services, furnishings and appliances (including maintenance, repair, and annual assessment fees), and administrative services performed by the DoS under the International Cooperative Administrative Support Services (ICASS) and Memoranda of Understanding.

DSCA's Family Housing Program funds embassy-leased housing costs associated with servicemembers accompanied by their families who are stationed at U.S. military groups (MILGPs) within embassies supporting the Defense Security Cooperation Service (DSCS). Accompanied MILGP servicemembers and their families must reside in embassy-leased housing when directed by the U.S. State Department to ensure their safety, security, and to avoid financial and legal risk in the absence of U.S. statutory protections associated with leasing housing in a foreign country.

* Family Housing Operation & Maintenance, Defense-Wide funding in the amount of **$8,545**, meant to support embassy-leased housing, was misaligned to Operation & Maintenance, Defense-Wide in the FY 2026 President's Budget request. After enactment, to remedy this misalignment the Department provided a funds transfer notification to Congress as part of military construction reprogramming request *"26-03_MC_December_2025"*. The Department subsequently transferred Military Construction, Defense-Wide funds to Family Housing Operation & Maintenance, Defense-Wide to support embassy-leased housing.

NSA's Family Housing Program provides the housing for NSA (civilian and military) employees working overseas. The majority of housing is leased. The total number of government-owned residential units will remain at 1 unit from the beginning to the end of FY 2027. This program summary displays a funding profile for the leasing of housing units as well as expenses for the government-owned unit, to include utilities, operations, and maintenance funding.

Defense Agencies leases are located exclusively overseas, in many cases at remote locations where housing comparable to western standards is scarce or nonexistent. Leasing in areas where suitable housing is in short supply is very expensive which accounts for the fact that the bulk of the high-cost leases are concentrated in the Defense Agencies. These lease units support both activities in classified locations and the DAS. Host government restrictions, security requirements, and safety and health improvements add additional costs to these leases in many locations. Detailed justification by agency is provided on the following pages.

DEPARTMENT OF WAR
FAMILY HOUSING IMPROVEMENT FUND
Fiscal Year (FY) 2027 Budget Estimates

The FY 2027 Department of War (DoW) Family Housing Improvement Fund (FHIF) Administrative request is $8,412,000 to support administration of privatized family housing under the Military Housing Privatization Initiative (MHPI) Program as prescribed by the Federal Credit Reform Act of 1990.

THIS PAGE LEFT INTENTIONALLY BLANK

DEPARTMENT OF WAR
FAMILY HOUSING IMPROVEMENT FUND
Fiscal Year (FY) 2027 Budget Estimates

PROGRAM SUMMARY
(Dollars in Thousands)

	FY 2025	FY 2026	FY 2027
FY 2027 Budget Request	**5,625**	**8,315**	**8,412**

Program and Scope

DoW has privatized 99 percent (more than 200,000 units) of its family housing inventory in the United States, with 79 current projects executed under the Military Housing Privatization Initiative (MHPI), a federal credit program authorized by Congress in 1996. Under the MHPI, Military Departments conveyed their existing government family housing units to competitively selected privatization entities (i.e., the MHPI projects). In return, the MHPI projects assumed responsibility for operation, maintenance, repair, construction, and replacement of the housing during the lease term, in accordance with the MHPI authorities as defined in Title 10, United States Code. The MHPI housing projects operate under long-term (typically 50-year) ground leases and associated legal agreements with a Military Department, with most having a one 25-year option period. Through the MHPI, DoW has achieved more than $32 billion in private development by leveraging just $4 billion in DoW investment. The resulting development eliminated nearly 142,000 inadequate homes and an associated $20 billion maintenance backlog.

DoW relies on the FHIF to accomplish MHPI family housing oversight and administration consistent with statutory requirements, congressional direction (e.g., the extensive new requirements set out in the FY 2020 – FY 2026 National Defense Authorization Acts [NDAAs] [Public Laws 116-92, 116-283, 117-81, 117-263, 118-31, and 119-60]) and OMB Circular A-129 "Policies for Federal Credit Programs and Non-Tax Receivables". In particular, the requested funds are necessary for Office of the Assistant Secretary of War for Energy, Installations, and Environment (OASW (EI&E)) MHPI realty/financial advisory and associated consultant support, which is vital for protecting the Government's interests through assessment of MHPI project financials and financial viability. The requested funds also provide critical support for the ASD (EI&E) to execute the statutorily defined Chief Housing Officer duties and responsibilities, including the statutorily required housing complaint database.

Program Summary

Congress authorized the MHPI in 1996 as a tool to help the DoW address the inadequate condition of on-base housing in the United States, as well as the shortage of quality, affordable community housing available to Service members and their families. Under the MHPI authorities, the Military Departments select private developers to enter into complex real estate agreements to own, operate, maintain and repair family housing or unaccompanied housing, including temporary lodging, in accordance with a long-term (typically 50-year) ground lease and associated legal agreements: and leverage private sector financing, expertise and innovation to revitalize and build new, quality on-base housing faster and more efficiently than the traditional Military Construction processes could allow. Privatized housing deals take advantage of the MHPI credit authorities (e.g., Federal direct loans, limited loan guarantees), necessitating continued and long-term DoW oversight and monitoring of the financial health (e.g., risk of loan default or financial restructuring) of each of the 79 family housing MHPI projects, to include periodic modifications dependent on military force structure, local housing market changes, or the need to aid in housing recovery following a disaster.

The FY 2027 FHIF budget maintains the Department’s commitment to its oversight role and supports our continued, long-term need for enhanced realty/financial advisory and associated consultant support and execution of statutorily required items such as the housing complaint database. The enhanced realty/financial advisory and associated consultant support includes the monitoring of the financial health, financing, and accounting aspects of 79 financially complex MHPI family housing projects deal structures (e.g., project debt structures frequently involve the bond market and credit swaps).

DEPARTMENT OF WAR
MILITARY UNACCOMPANIED HOUSING IMPROVEMENT FUND
Fiscal Year (FY) 2027 Budget Estimates

The FY 2027 Department of War (DoW) Military Unaccompanied Housing Improvement Fund (MUHIF) Administrative request is $501,000 to support enhanced oversight of unaccompanied housing (including temporary lodging) privatized under the MHPI Program as prescribed by the Federal Credit Reform Act of 1990.

THIS PAGE LEFT INTENTIONALLY BLANK

DEPARTMENT OF WAR
MILITARY UNACCOMPANIED HOUSING IMPROVEMENT FUND
Fiscal Year (FY) 2027 Budget Estimates

PROGRAM SUMMARY
(Dollars in Thousands)

	FY 2025	FY 2026	FY 2027
FY 2027 Budget Request	**502**	**497**	**501**

Program and Scope

DoW has privatized select unaccompanied housing units, including temporary lodging (i.e., hotels), on military installations in the United States under the Military Housing Privation Initiative (MHPI), a federal credit program authorized by Congress in 1996, entering legal agreements that transferred ownership, maintenance, and operations of these housing assets to private partners/developers via long-term (typically 50-year) ground leases (with 25-year option periods).

DoW relies on the MUHIF to accomplish oversight, assessment, and administration of MHPI unaccompanied housing (including temporary lodging) consistent with statutory requirements, congressional direction (e.g., the extensive new requirements set out in the FY 2020 - FY 2026 NDAAs [Public Laws 116-92, 116-283, 117-81, 117-263, 118-31, and 119-60]), and OMB Circular A-129 "Policies for Federal Credit Programs and Non-Tax Receivables". In particular, the requested funds are necessary for OASD (EI&E) realty/financial advisory and associated consultant support, which is vital for protecting the Government's interests through assessment of MHPI project financials and financial viability. The requested funds also provide critical support for the ASD (EI&E) to execute the statutorily defined Chief Housing Officer duties and responsibilities, including the statutorily required housing complaint database.

Program Summary

Congress authorized the MHPI in 1996 as a tool to help the DoW address the inadequate condition of on-base housing in the United States, as well as the shortage of quality, affordable community housing available to service members and their families. Under the MHPI authorities, the Military Departments select private developers to enter into complex real estate agreements to own, operate, maintain and repair family housing or unaccompanied housing, including temporary lodging, in accordance with a long-term (typically 50-year) ground lease and associated legal agreements; and leverage private sector financing, expertise and innovation to revitalize and build new, quality on-base housing faster and more efficiently than traditional Military Construction processes could allow. Privatized housing deals take advantage of MHPI credit authorities (e.g., Federal direct loans, limited loan guarantees), necessitating continued and long-term DoW oversight and monitoring of the financial health (e.g., risk of loan default or financial restructuring) of each of the 9 unaccompanied housing MHPI projects and 1 temporary lodging MHPI project, to include periodic modifications dependent on military force structure, local housing market changes, or the need to aid in housing recovery following a natural disaster.

The FY 2027 MUHIF budget maintains the Department's commitment to its oversight role and supports our need for enhanced realty/financial advisory and associated consultant support and execution of statutorily required items such as the housing complaint database. The enhanced realty/financial advisory and associated consultant support includes the monitoring of the financial and accounting aspects of 10 financially complex MHPI unaccompanied housing/temporary lodging project deal structures (e.g., project debt structures frequently involve the bond market and credit swaps).
