Fiscal Year (FY) 2026 Budget Estimates

Military Construction

Family Housing

Defense-Wide

Justification Data Submitted to Congress

June 2025

FY 2026 Summary
Discretionary and Mandatory Funding
(\$ in thousands)

	<u>Discretionary</u>	<u>Mandatory</u>	<u>Total</u>
Military Construction, Army	2,173,959	-	2,173,959
Military Construction, Navy	6,012,677	749,184	6,761,861
Military Construction, Air Force	3,721,473	102,100	3,823,573
Military Construction, Defense-Wide	3,792,301	35,000	3,827,301
NATO Security Investment Program	481,832	-	481,832
Military Construction, Army National Guard	151,880	-	151,880
Military Construction, Air National Guard	188,646	5,925	194,571
Military Construction, Army Reserve	42,239	-	42,239
Military Construction, Navy Reserve	2,255	-	2,255
Military Construction, Air Force Reserve	60,458	-	60,458
Base Realignment & Closure Account	410,161	-	410,161
Family Housing, Army	606,976	-	606,976
Family Housing, Navy	551,705	-	551,705
Family Housing, Air Force	633,995	-	633,995
Family Housing, Defense-Wide	53,374	-	53,374
Family Housing Improvement Fund	8,315	-	8,315
Military Unaccompanied Housing Improvement Fund	497	-	497
Homeowners Assistance Program (HAP)	-	-	-
Total	18,892,743	892,209	19,784,952

The FY 2026 request for Military Construction, Defense-Wide includes \$3,792,301 thousand of discretionary and \$35,000 thousand of mandatory (reconciliation) for a total of \$3,827,301 thousand. The mandatory request funds design requirements. Further information for this reconciliation request is provided at the end of the justification book.

FY 2026 Budget Estimates
Military Construction, Defense-Wide

(Including Transfer of Funds)

For acquisition, construction, installation, and equipment of temporary or permanent public works, installations, facilities, and real property for activities and agencies of the Department of Defense (other than the military departments), as currently authorized by law, \$3,792,301,000 to remain available until September 30, 2030: *Provided*, That such amounts of this appropriation as may be determined by the Secretary of Defense available for military construction or family housing as he may designate, to be merged with and to be available for the same purposes, and for the same time period, as the appropriation or fund to which transferred: *Provided further*, That of the amount appropriated, not to exceed \$211,001,000 shall be available for study, planning, design, architect and engineer services, as authorized by law, unless the Secretary of Defense determines that additional obligations are necessary for such purposes and notifies the Committees on Appropriations of both Houses of Congress of his determination and the reason therefore.

**FY 2026 Budget Estimates
Military Construction, Defense-Wide
Special Program Considerations**

ENERGY RESILIENCE AND CONSERVATION

The Energy Resilience and Conservation Investment Program (ERCIP) is a critical component of the DoD's strategy to improve the energy resilience of its fixed installations. ERCIP is the principal mechanism to execute high-priority, high-value projects that improve resilience and support mission readiness. ERCIP ensures mission readiness by improving utility infrastructure to enhance energy delivery, constructing microgrids to strengthen grid resilience and mitigate disturbances, leveraging diverse, on-site energy generation, and deploying technology that supports increased optionality.

The ERCIP funding request is \$722.9 million in FY 2026. The Department will ensure that the program produces high returns on this investment by providing installation resilience for mission assurance and readiness.

FLOODPLAIN MANAGEMENT AND WETLANDS PROTECTION

Proposed land acquisitions, disposals, and installation construction projects have been planned to allow the proper management of flood plains and the protection of wetlands by avoiding long-and short-term adverse impacts, reducing the risk of flood losses, and minimizing the loss or degradation of wetlands. Project planning is in accordance with the requirements of Executive Order Nos. 11988, Floodplain Management, and 11990, Protection of Wetlands, and the Floodplain Management Guidelines of the U.S. Water Resources Council. Projects have been sited to avoid or reduce the risk of flood loss, minimize the impact of floods on human safety, health and welfare, preserve and enhance the natural and beneficial values of wetlands and minimize the destruction, loss or degradation of wetlands.

DESIGN FOR ACCESSIBILITY OF PHYSICALLY HANDICAPPED PERSONNEL

In accordance with Public Law 90480 and the Americans with Disabilities Act Accessibility Guidelines, provisions for physically handicapped personnel will be provided for, where appropriate, in the design of facilities included in this program.

PLANNING IN THE NATIONAL CAPITAL REGION

Projects located in the National Capital Region are submitted to the National Capital Planning Commission for budgetary review and comment as part of the Commission's annual review of the Future Years Defense Plan (FYDP). Construction projects within the District of Columbia with the exception of the Bolling/Anacostia area are submitted to the commission for approval prior to the start of construction.

10. Description of Proposed Construction: Construct a high bay warehouse and administrative addition and make alterations to the existing Medical Consolidated Storage & Distribution Center (CSDC). Supporting facilities include utilities, communications, site improvements, parking, signage, antiterrorism/force protection measures, and environmental protection measures. The project will be designed in accordance with Unified Facilities Criteria (UFC) 4-510-01 Design: Military Medical Facilities, UFC 1-200-01 General Building Requirements, UFC 1-200-02 High Performance and Sustainable Building Requirements, UFC 4-010-01 DoD Minimum Antiterrorism Standards for Buildings, UFC 4-440-01 Warehouses and Storage Facilities barrier free design in accordance with Architectural Barriers Act (ABA) Accessibility Standard, DEPSECDEF Memorandum "Access for People with Disabilities" dated 10/31/2008 and MHS World Class principles per World Class Checklist Requirements. Operation and Maintenance Manuals, Post Construction Award Services and Enhanced Commissioning will be provided.					
11. REQ: 52,843 SF		ADQT: 18,000 SF		SUBSTD: 16,771 SF	
<u>PROJECT:</u> Construct an addition and make alterations to the existing Medical CSDC. (CURRENT MISSION)					
<u>REQUIREMENT:</u> Travis AFB requires additional CSDC space to provide CONUS-based War Reserve Materiel (WRM) assemblages and emergency Class VIIIA (medical supplies and pharmaceuticals) to medical units in the AFCENT Areas of Responsibility. The CSDC requires an environmentally controlled warehouse to sufficiently manage medical wartime supplies and logistics gear enabling immediate deployment to the airhead. Due to the high dollar value of the supplies					

1. Component DEF (DHA)	FY 2026 MILITARY CONSTRUCTION PROJECT DATA			2. Date JUN 2025
3. Installation and Location: Travis Air Force Base, California			4. Project Title: Medical Warehouse Addition	
5. Program Element 87717DHA	6. Category Code 53060	7. Project Number 89904	8. Project Cost (\$000) 49,980	

and the importance of the mission, the building should be protected on Travis AFB. The facility must have the ability to accept additional WRM assemblages to support the increases to the annual Air Force Production Plan and also to ensure continuity of operations from CSDC San Antonio, TX.

CURRENT SITUATION:

The Travis CSDC has reached its maximum logistical capacity and cannot accept additional WRM assemblages. This limits the amount of new assemblages that can be projected each year in the Air Force Medical WRM Production Plan. The current facilities consist of a Main Warehouse and two buildings of opportunity located on other areas of Travis AFB. The multiple locations of the facilities makes transport of material difficult during elevated Force Protection Conditions. The current Main Warehouse is not Anti-Terrorism Force Protection (AT/FP) compliant and one of the buildings is in a failing condition putting its contents at risk. Additionally, the CSDC buildings of opportunity do not have any climate controls and extreme heat during the summer degrades the efficacy of the bulk pharmaceuticals and other items contained in the facility. In the event that the CSDC San Antonio, TX is unable to continue operations, the Travis AFB CSDC is designated as an alternate location.

IMPACT IF NOT PROVIDED:

The mission will continue to be impeded by using two buildings of opportunity that are undersized and failing facilities that are not operationally appropriate. The facilities' conditions will negatively impact the Air Force's ability to maintain and deliver medical resources in a timely manner and in support of COCOM requirements.

ADDITIONAL:

This submission is supported by an economic analysis.

JOINT USE CERTIFICATION:

The Director, Defense Health Agency, Facilities Division has reviewed this project for joint use potential. Joint use construction is recommended.

10. Description of Proposed Construction: This is the ninth increment of the NAVSUPACT Bethesda MD, Medical Center Addition/Alteration (MCAA). The project will construct a new addition for in-patient and out-patient medical care, renovate the existing hospital Buildings 9 and 10, provide information systems, and provide appropriate antiterrorism measures. Deteriorated Buildings 2, 4, 6, 7, 8 and 100 of the main hospital complex will be demolished. Construction requires appropriate setbacks for access to natural light. Supporting facilities include utilities, paving, site improvements, special foundations, and environmental mitigation. The project will be designed in accordance with Unified Facilities Criteria (UFC) 4-510-01 Design: Military Medical Facilities, UFC 1-200-01 General Building Requirements, UFC 1-200-02 High Performance and Sustainable Building Requirements, UFC 4-010-01 DoD Minimum Antiterrorism Standards for Buildings, barrier free design in accordance with Architectural Barriers Act (ABA) Accessibility Standard and DEPSECDEF Memorandum "Access for People with Disabilities" dated 10/31/2008, and MHS World Class principles per World Class Checklist Requirements. The project will be designed to LEED Healthcare (HC) Silver certified. Operations and Maintenance Manuals, Enhanced Commissioning, and Comprehensive Interior Design will be provided.

11. REQ: 2,551,618 SF ADQT: 608,163 SUBSTD: 1,229,477 SF <u>PROJECT:</u> The using Activity for this project is: Walter Reed National Military Medical Center (WRNMMC). The project implements a comprehensive master plan to provide sufficient world-class military medical facilities and an integrated system of healthcare delivery for the National Capital Region. This renovation of, and addition to WRNMMC will provide wounded warriors, active duty military personnel, and other beneficiaries with world-class healthcare services based on the principles of evidence-based design. This project encompasses 124,050 SF of renovations to currently occupied space, demolition of approximately 332,000 SF of aged and deficient buildings, and the construction of a new 589,928 SF state-of-the-art medical services building that will address the facility and program deficiencies identified by the Defense Health Board in their 2009 report. Specific goals of the project include single-bed patient rooms, promotion of family-centered care, use of natural light, and establishing clear way finding for patients, families, visitors and staff. The project will right-size the facility, modernize architectural and engineering systems, improve clinical spaces to support adjacencies, provide functional areas for the Women's Center and Ambulatory Surgery suites. The project will also modernize the Graduate and Professional Medical Education facility and integrate the latest medical technologies throughout the medical center infrastructure. (CURRENT MISSION) <u>REQUIREMENT:</u> The new construction and renovations incorporate the 2010 Joint Task Force study findings and creates a new north-south and east-west axes of travel and will include a new major public entrance on the east side of the facility. Development of these direct pathways will facilitate way finding and improve connectivity among clinics, offices, and community facilities. <u>CURRENT SITUATION:</u> The current hospital configuration does not meet the needs of the military healthcare mission at this installation. The existing facility lacks flexibility, prohibits expansion, contains deficient electrical, mechanical and environmental engineering systems, and does not provide adequate space to meet health mission programs. <u>IMPACT IF NOT PROVIDED:</u> The concerns presented in the May 2009 report from the Defense Health Board will persist at this inefficient, outdated, and deficient facility without modernization and improvement to its infrastructure, and the Walter Reed National Military Medical Center will not be able to provide proper healthcare and medical treatment to our military personnel. <u>JOINT USE CERTIFICATION:</u> The Chief, Facilities Enterprise, Defense Health Agency has reviewed this project for Joint Use potential. Joint Use construction is recommended.				
12. Supplemental Data: A. Estimated Execution Data (1) Acquisition Strategy: Design Bid Build (2) Design Data: (a) Design Started: FEB/2013 (b) Percent of Design Completed as of Jan 2023 (BY-1): 100% (c) Design Complete: AUG/2017

9. FUTURE PROJECTS											
10. MISSION OR MAJOR FUNCTIONS Naval Base Guantanamo Bay is on the front lines of the battle for regional security and protection from drug trafficking and terrorism, and protection for those who attempt to make their way through regional seas in un-seaworthy craft. The base protects the ability of US Navy and Coast Guard ships to operate in the Caribbean area with supplies and support for their operational commitments. Naval Base Guantanamo Bay has become the host to the Detainee Mission of the War on Terrorism following the September 11, 2001 terrorist attacks. The base has a unique posture in the Western Hemisphere in that it is the oldest US base outside the continental U.S. and the only one in a country that does not enjoy an open political relationship with the United States. Base also maintains: U.S. treaty obligations, a naval base for refueling ships, the fence line surrounding the base and the international shipping channel through Guantanamo Bay. Additional missions include the maintenance of a forward presence near the Windward Passage to the Caribbean and port facilities, naval airfield and staging areas on the base in support of U.S. contingency operations in the Caribbean.

10. Description of Proposed Construction: This is the third increment to construct a replacement Ambulatory Care Center/Dental Clinic with primary care, specialty care, surgery capabilities, central utility plant, ambulance garage, and helipad with backup power. Supporting facilities include utilities, communications infrastructure improvements, site improvements, parking, signage, antiterrorism/force protection measures, and environmental protection measures. The existing hospital and support facilities will be demolished with operations and maintenance funds. The project will be designed in accordance with Unified Facilities Criteria (UFC) 4-510-01 Design: Military Medical Facilities, UFC 1-200-01 General Building Requirements, UFC 1-200-02 High Performance and Sustainable Building Requirements, UFC 4-010-01 DoD Minimum Antiterrorism Standards for Buildings, barrier free design in accordance with Architectural Barriers Act

<u>PROJECT:</u> Construct an Ambulatory Care Center with surgical capabilities (and Dental Clinic). (CURRENT MISSION) <u>REQUIREMENT:</u> Provide an Ambulatory Care Center with surgical capabilities to serve the population and support the mission of Naval Station Guantanamo Bay. Services provided will include Primary Care, Dental, Emergency/Trauma, Behavioral Health, General Surgery, Women's Health, Orthopedics, Optometry, Physical Therapy, Dental, Laboratory/Morgue, Pharmacy, Radiology, Operating Room/Surgery, Central Sterilization, administrative support, and logistical support. <u>CURRENT SITUATION:</u> The 65 year-old hospital building is the only source of healthcare for the population of the base. It is exhibiting many signs of wear from the harsh tropical environment and earthquake activity. The most critical problem is the compromised structural columns and beams from spalling, deterioration and corrosion. Temporary shoring measures have been employed. Several areas of the facility cannot be occupied due to failing structural support. The Operating Rooms (ORs) are insufficient to accommodate the necessary equipment; the mechanical system supporting the ORs is antiquated and unable to maintain the appropriate temperature and humidity. The configuration of the facility is incompatible to support modern outpatient healthcare. Some clinical functions have been decanted from the hospital building because of lack of available space. The Emergency Department lacks adequate space and does not have the required trauma capability. <u>IMPACT IF NOT PROVIDED:</u> The structural systems will continue to erode and the possibility of catastrophic failure of the structural columns in an earthquake will cause the loss of the hospital. The mechanical systems will continue to erode from corrosion due to the extreme environment, requiring replacement at an accelerated pace. <u>ADDITIONAL:</u> This submission is supported by an economic analysis. The project is not in the 100-year floodplain. <u>JOINT USE CERTIFICATION:</u> The Chief, Defense Health Agency, Facilities Enterprise has reviewed this project for joint use potential. Joint use construction is recommended.				
12. Supplemental Data:				
A. Design Data (Estimated):				
(1) Acquisition Strategy:			Design-Build	

1. Component DEF (DHA)	FY 2026 MILITARY CONSTRUCTION PROJECT DATA			2. Date JUN 2025

9. FUTURE PROJECTS											
10. MISSION OR MAJOR FUNCTIONS											
Installations support US Army, Europe and Seventh Army (USAREUR), a trained and ready force capable of rapid responding and operating jointly in support of US EUCOM theater strategy. Installations serve as bases for projecting power in and out of EUCOM areas of responsibility by providing facilities for training, maintaining, housing, and supporting subordinate and supporting units/organizations. These units consist of combat support, and combat service support tactical units as well as theater, mission, installation support, and quality of life organizations required to maintain a trained and ready force overseas.											
11. OUTSTANDING POLLUTION AND SAFETY DEFICIENCIES

10. Description of Proposed Construction: Fund the twelfth increment of a multi-story Medical Center to replace the Landstuhl Regional Medical Center and the 86th Medical Group (MDG) Clinic. The Hospital will provide inpatient services with contingency expansion, outpatient and specialty care clinics, Aero Medical Staging Facility (ASF), support functions, medical administration, and sub-basement				

1. Component DEF (DHA)	FY 2026 MILITARY CONSTRUCTION PROJECT DATA			2. Date JUN 2025
3. Installation and Location: Rhine Ordnance Barracks, Germany			4. Project Title: Medical Center Replacement, Incr 12	
5. Program Element 87717DHA	6. Category Code 51010	7. Project Number 107323	8. Project Cost (\$000) Auth: 1,829,913 Approp: 99,167	
10. Description of Proposed Construction (Continued): zones. Ancillary facilities include ambulance garage, parking garage, central energy plant, helicopter pad, and road improvements. Supporting facilities include: contingency utilities and laydown area, site improvements, surface parking, access roads, Communications Building alteration, bridge and road improvements, access control point facilities, demolition and site clearance of former ordnance storage area and environmental protection and mitigation. The existing Landstuhl Regional Medical Center and the existing 86th MDG facilities will be returned to respective installations for other uses except for Blood Donor Center, contingency and bulk storage logistics will remain on Landstuhl. The project will be designed in accordance with the criteria prescribed in Unified Facilities Criteria UFC 4-510-01, DoD Minimum Antiterrorism Standards for Buildings UFC 4-010-01, barrier-free design in accordance with DoD, "ABA (Architectural Barriers Act) Accessibility Standard" and DEPSECDEF Memorandum "Access for People with Disabilities" dated 10/31/2008, Evidence Based Design principles, MHS World Class Checklist Requirements, Executive Order 13514, DoD Strategic Sustainability Performance Plan (SSPP), the Energy Policy Act of 2005 (EAPct05), and in accordance with the host nation Status of Forces Agreement (SOFA). The project will be LEED Healthcare Silver certifiable. Operation and Maintenance Manuals, Design During Construction, Enhanced Commissioning, and Comprehensive Interior Design will be provided.				
11. REQ: 1,119,799 SF ADQT: 69,180 SF SUBSTD: 819,908 SF				
<u>PROJECT:</u> Construct a replacement Medical Center incorporating an 86th MDG Clinic replacement at Rhine Ordnance Barracks, Germany. (CURRENT MISSION)				
<u>REQUIREMENT:</u> A replacement Medical Center is required to provide direct medical services to 53,000 enrolled beneficiaries and tertiary referral support for more than 245,000 beneficiaries throughout EUCOM as well as contingency casualty evacuation support for up to an additional 250,000 soldiers, airmen & sailors deployed throughout the regions comprising the Areas of Responsibility (AOR) of EUCOM, CENTCOM and AFRICOM. The mission requires the provision of medical, surgical, and intensive care services, as well as primary and specialty care, emergency/trauma care, dental services and medical proficiency training simulation capability. The current Medical Center provides the only DoD inpatient psychiatric, pediatric specialty care, and substance abuse rehabilitation unit in Europe. Of equal - and in contingencies - greater importance, the mission requires that it serve as the primary medical facility for the evacuation hub for U.S. service members stationed throughout the EUCOM, CENTCOM and AFRICOM AORs. The medical facility must be strategically located in the immediate vicinity of Ramstein Air Base, to minimize travel times from the flight line to the facility and, therefore, the risks to air evacuated wounded and ill warriors. In support of the contingency mission, the existing Medical Center treats an average of 8,000 aero medical evacuation patients per year including 15% battle-related casualties.				
<u>CURRENT SITUATION:</u> The existing Medical Center is located approximately 13 km (8 miles) from Ramstein Air Base. Most of the route is on an unsecured civilian autobahn and public roads. The total time required to transport critically wounded troops from the airfield to treatment currently varies from 20 to 45 minutes depending on traffic and weather conditions. The existing Medical Center care areas are located in 22 cantonment "finger" buildings built between 1951 and 1953 and a critical care tower built in 1983. Additional activities, such as preventive medicine, logistics, the blood donor center, education and training, and the dental clinic are located in buildings external to the medical center. The multiple "finger" buildings and central circulation corridor are more than 50 years old. The current layout is inefficient, covers almost 3.5 miles of corridors and hallways, and is not capable of supporting modern medical practices. The current conditions pose concerns				

1. Component DEF (DHA)	FY 2026 MILITARY CONSTRUCTION PROJECT DATA			2. Date JUN 2025
3. Installation and Location: Rhine Ordnance Barracks, Germany			4. Project Title: Medical Center Replacement, Incr 12	
5. Program Element 87717DHA	6. Category Code 51010	7. Project Number 107323	8. Project Cost (\$000) Auth: 1,829,913 Approp: 99,167	
<u>CURRENT SITUATION (Continued):</u> for patient and staff safety related to lack of single patient rooms, undersized operating rooms, infection control, patient privacy, and excessive travel distances between clinical activities. The buildings have significant deficiencies related to building systems, building integrity and code compliance. Building infrastructure (electrical, mechanical, and communication) has exceeded ranges of useful life and is costly to sustain, restore, and modernize given the spans of distribution systems along the central spine. The floors in many of the cantonment buildings are failing. The 86th Medical Group is in multiple aging facilities, some of which are modular structures. Serious life safety criteria and code deficiencies exist in these 50+ year old structures. Combustible construction, to include bamboo plaster substrate is located throughout the main clinic structure and the clinic does not have sprinklers. The permanent facilities have numerous load bearing walls, making renovation of the space unfeasible. The limited floor to floor height prohibits normal heating, ventilating and conditioning systems (HVAC) required to meet DoD criteria. The MDG campus is located in a congested area of Ramstein AB and does not come close to meeting the force protection requirements for setbacks from parking and roadways. There is inadequate space to add to and renovate the existing structures to provide a consolidated location for medical care. <u>IMPACT IF NOT PROVIDED:</u> Healthcare for warriors and their family members will be provided in inefficient, dysfunctional cantonment facilities that have exceeded their useful life and are currently in very poor condition. Accordingly, health care for the enrolled beneficiaries, the other beneficiaries in Europe and the deployed warriors in the EUCOM, CENTCOM and AFRICOM Areas of Responsibility will continue in an inadequate environment. Life support systems will be compromised; fire and life safety standards will only be met on the margins; and patient flow will continue to be dysfunctional. Failure to invest in this project will perpetuate a host of problems that put at risk the safety of both patients and staff, including: the shored-up cantonment buildings, presenting a real and increasing possibility of a catastrophic facility-related failure. <u>JOINT USE CERTIFICATION:</u> The Director, Defense Health Agency, Facilities Division has reviewed this project for joint use potential. Joint use construction is recommended.

10. MISSION OR MAJOR FUNCTIONS											
Responsible for training, supporting, and employing a combat fighter wing that include F-15E and F-35A squadrons. The wing stands ready to provide responsive combat air power, support and services to meet our Nation's and allies international objectives-anytime, anywhere, whatever needs to be done. The Major Command is the United States Air Forces Europe (USAFE), which is a component command of the United States European Command (USEUCOM).

10. Description of Proposed Construction: This project is Phase 2 of a 3-phase project that together will complete the recapitalization of the RAF Lakenheath medical campus. This project will provide modern inpatient services, outpatient specialty care clinics, ancillary services, support, and some medical administrative functions. Related supporting facilities include replacing the central utility plant to service new and existing medical facilities, emergency generator, ambulance garage, utilities, roads within the medical campus, limited surface parking, Low Impact Development (LID), and commissioning with other medical campus facilities. Two kilometers of high voltage power service from the KVF-35 substation will cross the installation to feed this new all electric facility. Extensive utility diversions are required to develop the brownfield site on top of two previously demolished facilities in Phase 1, and the demolition of York Road and three parking lots. The project will be designed in accordance with both United Kingdom Building Regulations and Unified Facilities Criteria (UFC) 4-510-01

<u>PROJECT:</u> Construct a replacement hospital, central utility plant, and ambulance garage. (CURRENT MISSION)													
<u>REQUIREMENT:</u> A hospital is required to meet the enduring RAF Lakenheath medical mission, in support of the European Infrastructure Consolidation. The current inpatient facilities require replacement due to infrastructure age and condition. The replacement hospital provides direct medical services to 16,558 enrolled beneficiaries (in 2024) at RAF Lakenheath and additional beneficiaries supported throughout the United Kingdom and Scandinavia. The healthcare mission requirements include medical-surgical inpatient beds, labor-delivery service, inpatient and outpatient surgical services, as well as primary and specialty ambulatory care, emergency, and medical proficiency training simulation capability. The hospital serves as the Air Force hub for inpatient services, telemedicine and specialty and advance diagnostic testing for all DoD beneficiaries assigned to the United Kingdom and Scandinavia. The hospital also supports both local and remote geographically separated units for military medical specific requirements, tracking, and equipping.													
<u>PHASING PLAN:</u> Multiple phased projects will ultimately replace the inpatient services, modernize outpatient services, and modernize the medical administrative functions. Subsequent stand-alone phases include a final phase for the modernization of Building 922, construct a new parking garage, and construct covered/enclosed pedestrian connectors to the inpatient tower, site work, and demolition of nine facilities including the old inpatient tower.													
<u>CURRENT SITUATION:</u> The RAF Lakenheath medical campus consists of multiple clinical administrative, and logistical buildings. The current four story hospital (Building 932) was constructed in 1964 and augmented by a hospital annex constructed in 1996 (Building 935) and a second annex constructed in 2001 (Building 922) for medical administration. The facility has struggled to adapt to updated life safety and evidence-based DoD medical space planning requirements, emerging technologies and multiple mission changes. The existing 9'-9" floor to floor height of hospital Building 932 does not allow for the installation of a fire sprinkler system, nor allow for the incorporation of modern surgical equipment. Current DoD hospital minimal standard for floor to floor height is 15 feet. Space constraints impacting facility operations are progressively pushing functions into buildings of opportunity or constructing medical annexes. The 1996 hospital annex (Building 935) lacks a fire sprinkler system, and requires extensive renovation to add sprinklers, anti-terrorism/force protection, and seismic upgrades to accommodate new													

1. Component DEF (DHA)	FY 2026 MILITARY CONSTRUCTION PROJECT DATA			2. Date JUN 2025																								
3. Installation and Location: RAF Lakenheath, United Kingdom			4. Project Title: Hospital Replacement, Phase 2, Incr 1																									
5. Program Element 87717DHA	6. Category Code 51010	7. Project Number 91674	8. Project Cost (\$000) Auth: 397,500 Approp: 322,200																									
<u>CURRENT SITUATION (Continued):</u> clinical capabilities which were determined uneconomical, and therefore, will be demolished. The 2001 administrative annex (Building 922) requires renovation to accommodate new functions. The existing steam plant (Building 931) built in 1964 suffers from utility system failures and will be replaced with a modern efficient electrical system. The ambulance shelter (Building 933) is in the footprint of the replacement hospital, was constructed in 1968. <u>IMPACT IF NOT PROVIDED:</u> The lack of a fire suppression system (sprinklers) in an inpatient facility and insufficient floor to floor height to accommodate modern surgical practices and equipment places patient and staff safety at risk and jeopardizes the hospital's accreditation. The hospital does not meet "World Class Facility" standards or the current healthcare requirements of the first of two U.S. based F-35A Squadrons in Europe. <u>ADDITIONAL:</u> This project supports the European Infrastructure Consolidation. This multi-phase project will ultimately replace the current main hospital inpatient facility and modernize the ambulatory care portions of the Lakenheath medical campus. A prior phase prepared a site to enable construction of the replacement hospital facility. A subsequent stand-alone phase will include the alteration of building 922, construction of campus building connectors, and a parking structure. This submission is supported by an economic analysis. The site is not within a 100-year flood plain. <u>JOINT USE CERTIFICATION:</u> The Chief, Defense Health Agency, Facilities Enterprise has reviewed this project for joint use potential. Joint use construction is recommended.

10. DESCRIPTION OF PROPOSED CONSTRUCTION:

Construct a new permanent General-Purpose Warehouse (GPW), with administrative space, to replace 2 non-efficient buildings (60 and 61) which are to be demolished under this project. The primary facility is a permanent, noncombustible GPW with concrete floors (with epoxy sealed tops) and a 20-foot clear stacking height. An interior annex space consisting of administration offices, training/conference facility, bathrooms with lockers and showers, break room with kitchen, security office, fire suppression, mechanical, electrical and communications rooms. The break room will also act as tornado shelter for sever weather conditions. Additionally, installation of an intrusion detection system and connection to utility monitoring control systems will be provided. Administrative areas will be compliant for handicap accessibility. Interior annex space will be provided heat and air conditioning while the warehouse will be ventilated.

Supporting facilities include site development, all necessary water, sewer, electric, and communication lines and connections, including fire protection, storm drainage, lighting, paving (including access roadways, hardstand aprons, and parking), sidewalks, curbs and gutters, landscaping, and signage. A temporary office facility will be provided to maintain existing operations. General site clearing and leveling and install appropriate storm drainage infrastructure also included under supporting facilities.

1. COMPONENT DEFENSE (DLA)	FY 2026 MILITARY CONSTRUCTION PROJECT DATA		2. Date JUNE 2025
3. INSTALLATION AND LOCATION DLA DISTRIBUTION, ANNISTON ARMY DEPOT, ANNISTON, ALABAMA		4. PROJECT TITLE: GENERAL PURPOSE WAREHOUSE	
5. PROGRAM ELEMENT 0702976S	6. CATEGORY CODE 44110	7. PROJECT NUMBER DRMS2201	8. PROJECT COST (\$000) 32,000
11. Requirement: 79,858SF Adequate: 0 SF Substandard: 36,858 SF <u>PROJECT:</u> Construct a GPW facility in support of DLA's Disposition Services at Anniston Army Depot (ANAD) in Anniston, AL. <u>REQUIREMENT:</u> DLA Disposition Services at ANAD has three essential functions: demilitarizing serialized weapons along with a variety of other DoD materials; a cross-dock operation for unloading, sorting, and redistribution of material; and an environmental operation which manages the disposition of hazardous property. In order to achieve those functions, DLA Disposition Services has four primary programs: 1) a recycling control point program to process screening to reutilization of military materiel; 2) a reutilization, transfer, donation program for the conveyance of materiel and equipment to other civil, state, and federal organizations; 3) a management program of disposal of unusable scrap and hazardous property; and 4) a government liquidation program overseeing sales of surplus materiel and recyclables through its sales partner. A GPW warehouse is required to operate as a clearinghouse for damaged, used, or surplus government property. <u>CURRENT SITUATION:</u> The existing two warehouse facilities lack required storage height, have uneven floor slabs, weight restrictions, and do not support modern storage operations. Working conditions impact operations and safety with trip hazards, leaky roofs, intermittently operating heating, ventilating, and air conditioning, and the lack of or inferior condition of comfort spaces (restrooms, break rooms, etc.). The demand for protected storage of bulk materiel has exceeded the capacity of the available warehousing and items are continuously being disposed of as unserviceable because of exposure to the environment. <u>IMPACT IF NOT PROVIDED:</u> DLA Disposition Services will continue to operate aging, substandard, and inefficient warehouse facilities that require unacceptably high annual maintenance and sustainment costs while additionally not being able to meet the ever-increasing mission requirements. Renovations to the existing facilities would be required while not meeting the bay criteria for stacking height or lateral clearance between columns necessary to implement modern equipment and operational concepts. <u>ADDITIONAL:</u> Antiterrorism/Force Protection will be in accordance with the local threat assessment. Sustainable principles, to include Life Cycle cost-effective practices, will be integrated into the design, development, and construction of the project. Coordination of the installation physical security plan and all required physical security measures are included.

10. DESCRIPTION OF PROPOSED CONSTRUCTION:				
Construct a permanent, noncombustible General Purpose Warehouse (GPW) with concrete floors and 26-foot (7.92-meter) clear stacking height, weather-sealed truck doors, and loading/unloading docks with dock levelers; and a 2-level interior administrative area with restrooms, a locker area, an employee lunch/ break room; and a utility annex to support all utility functions. Access for the handicapped will be provided in administrative areas. Site utilities will include fire protection, storm drainage, site information systems, site lighting, paving (access roadways, hardstand aprons, parking), walks, and related site improvements. Sustainable design and development is included. Demolition as necessary of previous site improvements is included. Anti-Terrorism/Force Protection (AT/FP) features will comply with AT/FP regulations and physical security mitigation in accordance with DoD Minimum Anti-Terrorism Standards for Buildings. Facilities will be designed to provide cyber security engineering and validation as specified in DoD Unified Facilities Criteria.				

1. COMPONENT DEFENSE (DLA)	FY 2026 MILITARY CONSTRUCTION PROJECT DATA			2. Date JUNE 2025
3. INSTALLATION AND LOCATION DLA DEFENSE DISTRIBUTION CENTER SUSQUEHANNA, NEW CUMBERLAND, PA		4. PROJECT TITLE: GENERAL PURPOSE WAREHOUSE		
5. PROGRAM ELEMENT 0702976S	6. CATEGORY CODE 44110	7. PROJECT NUMBER DDCX2001	8. PROJECT COST (\$000) 90,000	
11. REQUIREMENT: 5,055,025 SF ADQT: 1,298,203 SF SUBSTD: 2,972,134 SF PROJECT: Construct a GPW facility in support of the distribution mission at Defense Distribution Center Susquehanna, PA. REQUIREMENT: DDSP has an immediate and long-term requirement for additional warehousing space to store palletized, less than full pallet, and bulk materiel. The near-term goal is to replace outdated World War II-era warehouses at the New Cumberland site with more efficient, high-capacity warehouses that will allow for the consolidation of operations and the reduction of the DLA footprint. This project is necessary to begin implementation of the DDSP Modernization Plan and begins to address the lack of warehousing required by DDSP operations. The GPW is designed to incorporate bulk storage, Very Narrow Aisle (VNA) racking for high density storage, less than full pallet storage, cantilever racking, and designated areas for receiving, packing, and shipping. The GPW will be the site of the new “Hub” for East Bulk early-in-the-day shipping, as a way to speed outbound order turnaround for high priority orders rather than consolidating all outbound orders at the Eastern Distribution Center. The Hub is currently located in a World War II era warehouse that limits materiel throughput and storage capacity due to the arrangement of the building. The size and clear height of the new GPW will be capable of storing more than double the combined cubic capacity of storage in two of the existing warehouses currently used for this mission. The consolidation of storage within the new GPW, along with material realignment in other warehouses, allows for the storage space available within existing buildings to increase considerably bringing in critical DDSP functions currently spread out across DDSP and NSA Mechanicsburg into a single facility. In addition, the consolidation enables DLA to empty 3 of the old warehouses, paving the way for the replacement of these aging facilities with a new, modern warehouse when appropriate for the future missions of DDSP and the DLA overall. CURRENT SITUATION: DDSP is the largest distribution operation for DLA and serves as the Eastern DLA Strategic Distribution center. DDSP provides military and commercial repair parts, medical supplies, industrial and electronic components, and other required materiel to military customers throughout the United States and world, with focused hub responsibility for the Central and South America, Europe, Middle East, and Africa theaters. DDSP requires additional modern warehousing to store palletized and bulk materials to meet current operational requirements. Warehouse space at Defense Distribution Center Susquehanna is substandard in size, arrangement, and age. The majority of warehouses at DDSP were constructed during World War II and the Korean War and are inefficiently laid out for modern operations and require an increasing cost of repairs as they continue to age. The inefficient layout of the warehouses increases the labor requirements and results in slower processing times for normal operations of DDSP. This increased labor comes from limitations of the warehouses and mix of storage space types, materiel storage locations across multiple warehouses, movement of materiel between warehouses to manage inventory and to free up required storage spaces, and reliance on off-site storage at NSA Mechanicsburg, PA adding additional time and complexity to process and ship orders to DLA’s customers worldwide. DDSP has developed a modernization plan to assess and address the operational inefficiencies at the depot and looks to shift operations into new purpose-built warehousing, remodeling and optimizing existing warehousing, and away from reliance on off-site storage at NSA Mechanicsburg, PA.				

1. COMPONENT DEFENSE (DLA)	FY 2026 MILITARY CONSTRUCTION PROJECT DATA			2. Date JUNE 2025
3. INSTALLATION AND LOCATION DLA DEFENSE DISTRIBUTION CENTER SUSQUEHANNA, NEW CUMBERLAND, PA		4. PROJECT TITLE: GENERAL PURPOSE WAREHOUSE		
5. PROGRAM ELEMENT 0702976S	6. CATEGORY CODE 44110	7. PROJECT NUMBER DDCX2001	8. PROJECT COST (\$000) 90,000	

IMPACT IF NOT PROVIDED: Defense Distribution Center Susquehanna will continue to operate aging, substandard, and inefficient warehouse facilities that incur high and increasing annual maintenance and sustainment costs while not being able to meet the increasing mission requirements of the depot. Failure to construct the GPW will prevent the implementation of the Depot's Modernization plan impacting materiel storage and flow strategy for primary operations of receipt, put away, storage, retrieval for distribution, replenishment, order picking, and order assembly for DDSP resulting in continued increased labor requirements, continued reliance on re-warehousing between buildings at DDSP, and continued reliance on off site storage in NSA Mechanicsburg.

ADDITIONAL: Coordination of the installation physical security plan and all required physical security measures are included. All required antiterrorism and force protection measures are included. Alternative methods of meeting this requirement were explored during project development and are either not operationally viable or are cost prohibitive. Sustainable principles, to include life cycle cost-effective practices and Low-Impact Development (LID), will be integrated into the development, design, and construction of the project.

10. DESCRIPTION OF PROPOSED CONSTRUCTION:				
Construct a new hydrant loop that will consist of hydrant pits, fuel piping, fuel equipment, and the removal and replacement of airfield pavement as necessary. The loop will connect to a new pumphouse, which will include all necessary equipment including pumps, filter separators, fuel equipment control systems, product recovery tank, generator, and a leak detection system. Provide operational fuel storage tanks with all associated appurtenances including secondary containment. Construct truck offloading stations for fuel receipt and truck fill stands for fuel loading along with associated equipment canopies. Cybersecurity measures will be applied to facility related control systems in accordance with current DoD criteria. Construct site fuel piping to connect the pumphouse to the operational fuel storage tanks, truck offload stations, and truck fill stands. Provide a transfer fuel line to connect the new hydrant loop site to the existing bulk fuel storage facilities. Environmental mitigation addresses the excavation, handling, and disposal of soil contaminated with per- and polyfluoroalkyl substances as well as the treatment and filtering of similarly contaminated groundwater, all only to the extent necessary to accomplish construction work. Site improvements include truck refueler parking, general pavement, fences, gates, fire protection, and lighting. Construct all necessary water, sewer, electric, and communication utility lines and connections. Site development includes general site clearing, leveling, and appropriate storm drainage infrastructure.

11. REQUIREMENT: 4,700 LF ADQT: 0 LF SUBSTD: 0 LF <u>PROJECT:</u> Construct a new hydrant fueling system and operational fueling facility. (C) <u>REQUIREMENT:</u> The Air National Guard 141st Air Refueling Wing conducts the planning and execution of various aerial refueling missions for the U.S. Armed Forces and its allies. The Air Defense, Strategic Deterrence, and Global Strike mission sets are designed to originate from the U.S. and all three have the potential of executing near-simultaneously, therefore driving large home station storage and servicing requirements. In addition to the federal missions, the 141st Air Refueling Wing also provides support to state civil authorities for domestic operations and all-hazards responses. The proposed construction project greatly enhances national defense by enabling greater efficiency in handling simultaneous execution of multiple mission sets, faster alert force generation, and faster alert force reaction time. These upgraded capabilities would result in greatly increased combat readiness and responsiveness to combatant command tasking for the world's largest air refueling enterprise. <u>CURRENT SITUATION:</u> The 141st Air Refueling Wing has been located on Fairchild Air Force Base since 1976 and is based on property licensed to the Washington Air National Guard for the purposes of training airmen to respond to state and federal missions during peace and wartime, adjacent to the airfield ramp known as Area C. Existing fueling facilities at Fairchild Air Force Base consist of a bulk storage site, Hydrant Area A, Hydrant Area B, and associated infrastructure. As no hydrant loop or other fuel infrastructure exists at Area C, current operations require refueling trucks to travel approximately one mile from Hydrant Areas A or B to deliver fuel and then return. It takes approximately five R-11 refueling trucks to refuel a KC-135 aircraft. With a drive time of approximately 15 minutes, a fill time of 20 minutes, and a download time of 20 minutes, it takes approximately 5 man-hours to refuel a single plane. Given the potential for multiple missions executing simultaneously, this refueling timeframe can negatively impact sortie generation. <u>IMPACT IF NOT PROVIDED:</u> Refueling operations will continue to be slower, less responsive, and less efficient in delivering the large fuel quantities required by the KC-135 aircraft. <u>ADDITIONAL:</u> Antiterrorism/Force Protection will be in accordance with the local threat assessment. Sustainable principles, to include Life Cycle cost-effective practices, will be integrated into the design, development, and construction of the project.

10. DESCRIPTION OF PROPOSED CONSTRUCTION:

This project is the third phase of a three-phase project and will construct above ground multi-product capable bulk fuel storage tanks with secondary containment including connection to remote impoundment, and pipelines to connect to the existing marine diesel fuel (F-76) and naval jet fuel (JP-5) piping system. The bulk tanks meet DoD standards and include all required appurtenances and provide above ground manifold piping to allow storage of either JP-5 or F-76 fuel types with connection to the existing pipelines and pumphouse. The bulk tank foundations incorporate soil stabilization to support the weight of the tanks. The project provides a covered truck offload station with spill containment for as an alternative means of receipt of F-76 or JP-5 fuel into the bulk storage tanks with product separated outlets, pumps, and piping to prevent comingling of fuel types.

The project also constructs a day tank facility for the existing Jet A aviation fuel (F-24) storage system that includes above ground operating storage tanks, spill containment, pumps, and associated piping.

Supporting facilities include site preparation and site work, the closure and demolition of one aged cut and cover storage tank, oil water separators, permanent paved access roadways around this tank area and

1. COMPONENT DEFENSE (DLA)	FY 2026 MILITARY CONSTRUCTION PROJECT DATA		2. Date JUNE 2025
3. INSTALLATION AND LOCATION DEFENSE FUEL SUPPLY POINT, MANCHESTER, WASHINGTON		4. PROJECT TITLE: BULK STORAGE TANKS PH 3	
5. PROGRAM ELEMENT 0702976S	6. CATEGORY CODE 84152	7. PROJECT NUMBER DESC2002C	8. PROJECT COST (\$000) 71,000
connections to existing access roads. These roadways provide access to the tanks and continue access to existing access roadways that service existing cut-and-cover tanks that are to remain, fire suppression utility upgrades, electrical utilities upgrades, and site lighting. Site preparation includes extensive site work required to construct the tanks and the containment. Special Costs include the purchase and disposal of water required for testing of the bulk fuel tanks. Operations and maintenance support information (OMSI) is included in this project.			
11. REQUIREMENT: 850,000 Barrel (BL) ADQT: 600,000 BL SUBSTD: 0 BL <u>PROJECT:</u> Construct above ground fuel storage tanks (ASTs) and associated piping, compliant with environmental laws to replace aged, existing underground fuel storage tanks. (C) <u>REQUIREMENT:</u> This project is the third phase of a three-phase project constructing a total of six new 125,000-barrel ASTs and associated site improvements to replace outdated concrete cut and cover underground storage tanks at Fleet Logistics Center Puget Sound (FLCPS). Across the planned phases, the project demolishes a total of eight existing cut-and-cover bulk tanks. This project was phased to keep the FLCPS fuel facility operational throughout the project construction and will extend the service life period by over 50 years. <u>CURRENT SITUATION:</u> The existing site consists of single-wall cut-and-cover tanks built in the 1940s and 1950s. Fuel transfer and distribution occurs over 11 miles of either underground piping via tunnel or aboveground piping. Each tunnel contains tank issue, receipt, and sump piping. Given the current regulatory criteria for underground storage tanks (USTs), the vintage design of single-walled cut-and-cover tanks is causing increased environmental scrutiny from federal, state, and regional regulatory agencies. Prior to 2015, the bulk field-constructed USTs were deferred from compliance with 40 CFR 280 (Federal UST Regulations). Deferred status was removed in 2015, and as of 2018, the facility must comply with new Environmental Protection Agency (EPA) UST regulations. To comply with the new UST Regulations, FLCPS must conduct annual tank tightness testing on all the tanks. Testing each tank takes approximately one week to complete, and the tanks must be static during testing causing operational disruption. If a tank fails the test, additional testing and inspection is required, further impacting operations. For six tanks, the current tank cleaning, inspection, and repair process takes a four-year cycle to complete. Historically, the Navy employs a ten-year periodicity for concrete tank inspection and repairs, driving individual tank out-of-service rates to 30 percent and the facility full mission capable rate to less than 75 percent. Mandatory repairs include drain line repairs, sleeving the issue and receipt lines, tank coating repairs, etc. Currently, the drain line represents an unprotected single point of failure. The existing fire protection system supporting the project site meets neither the current DoD Unified Facilities Criteria (UFC) nor the National Fire Protection Association (NFPA) fire protection code requirements. The six-inch diameter water mains are over 70 years old and are beyond their useful service life. The water mains are undersized per NFPA criteria. The existing pump system does not provide an			

1. COMPONENT DEFENSE (DLA)	FY 2026 MILITARY CONSTRUCTION PROJECT DATA		2. Date JUNE 2025
3. INSTALLATION AND LOCATION DEFENSE FUEL SUPPLY POINT, MANCHESTER, WASHINGTON		4. PROJECT TITLE: BULK STORAGE TANKS PH 3	
5. PROGRAM ELEMENT 0702976S	6. CATEGORY CODE 84152	7. PROJECT NUMBER DESC2002C	8. PROJECT COST (\$000) 71,000

automatic fire water supply as required by codes and pressures are not sufficient to meet current UFC requirements.

Six of the existing cut and cover tanks and portions of the tunnel piping system are located within an seismic active fault zone. Failure of either tanks or piping increases the risk of product loss to the surrounding environment.

IMPACT IF NOT PROVIDED: The facility is at risk of not meeting its useable fuel storage capacity and economic resupply volume requirements for both JP-5 and F-76. In addition, environmental compliance requirements will increase tank out-of-service times if a tank fails its annual tightness testing. Maintenance costs will continue to increase.

ADDITIONAL: Design will comply with UFC 3-460-01: Petroleum Fuel Facilities. Sustainable principles including life cycle cost effective practices will be integrated into design and construction in accordance with applicable laws and Executive Orders. This project will meet all applicable DoD criteria to include cyber-security. Mission requirements, operational considerations and location are incompatible with use by other components. Per DoD standards, secondary containment around the new aboveground storage tanks, including the remote impoundment, must be sized for the complete and catastrophic failure of the largest tank. This site is not located in a floodplain.

10. DESCRIPTION OF PROPOSED CONSTRUCTION:

Construct an elementary school with functional areas containing neighborhood instructional spaces, special education spaces, staff collaboration spaces, commons area, multipurpose room, information center, gymnasium, art room, music room, administrative suite, health suite, guidance counseling suite, special education suite, food service, maintenance support, central storage area, technology service center, and other required areas for a fully functioning elementary school.

Department of Defense (DoD) and Department of Defense Education Activity (DoDEA) principles for high performance and sustainable building requirements will be included in the design and construction of the project in accordance with federal laws and Executive Orders.

Facilities will be designed to provide cyber security engineering and validation as specified in DoD Unified Facilities Criteria.

The project includes related infrastructure such as electric, communications (which includes telephone, local area network, and provisions for interior and campus wireless access), water, and sewer distribution systems.

DD FORM 1391, JUL 1999

1. COMPONENT DEF (DoDEA)	FY 2026 MILITARY CONSTRUCTION PROJECT DATA		2. Date June 2025
3. INSTALLATION AND LOCATION FORT BENNING, GEORGIA		4. PROJECT TITLE: DEXTER ELEMENTARY SCHOOL	
5. PROGRAM ELEMENT	6. CATEGORY CODE 73046	7. PROJECT NUMBER ADXESGA1	8. PROJECT COST (\$000) 127,375
The project will provide paving for roadways, bus loading/unloading, parent drop-off, staff and visitor parking, service and delivery area, associated sidewalks with covered walkways/canopies, signage, and crosswalks. The project includes storm drainage and storm water management. Low Impact Development will be included in the design and construction of this project as appropriate. Site improvements include work such as fencing, external AT/FP features, landscaping, relocation of an existing dog park, exterior lighting, exterior play structures and outdoor learning areas. AT/FP features will comply with AT/FP regulations, and physical security mitigation in accordance with DoD Minimum Anti-Terrorism Standards for Buildings. Facilities will be designed in accordance with DoDEA Education Facilities Specifications, DoD Unified Facilities Criteria and other applicable codes. Facilities will be designed to meet or exceed the useful service life specified in DoD Unified Facilities Criteria. Facilities will incorporate features that provide the lowest practical life cycle cost solutions satisfying the facility requirements with the goal of maximizing energy efficiency.			
11. REQUIREMENT: 117,000 SF ADQT: 000,000 SF SUBSTD: 000,000 SF <u>PROJECT:</u> This project constructs an elementary school by replacing the existing elementary school and associated support facilities. <u>REQUIREMENT:</u> The elementary school is required to provide adequate academic facilities for 600 students in grades Prekindergarten – Grade 5. School population is based on the projected enrollment for the 2030/2031 school year. This project is not within a flood hazard area. <u>CURRENT SITUATION:</u> The current elementary school was originally constructed in 1968. Additions include a greenhouse constructed in 2005 and a gymnasium building completed in 2010. The capacity of the existing school is 390 and it has been close to capacity for several years. Additional instruction space is needed to accommodate prekindergarten students. The new school has been sized with similar capacity as the two newest schools on Fort Benning to allow for redistricting and better distribution of students in relation to existing housing areas. <u>IMPACT IF NOT PROVIDED:</u> If a new facility is not provided the capacity shortfall will continue to hamper the educational process and the existing elementary school will not be able to support the DoDEA curriculum and provide a safe facility for education.

10. DESCRIPTION OF PROPOSED CONSTRUCTION:

Construct a unit school (PK-12) with functional areas containing neighborhood instructional spaces, special education spaces, staff collaboration spaces, commons area, performance space, information center, gymnasium, art room, music suite, science labs, career technical education labs, administrative suite, health suite, guidance counseling suite, special education suite, food service, maintenance support, central storage area, technology service center, field house, and other required areas for a fully functioning unit school. The project is in a high wind and high humidity area and will be designed to meet appropriate codes and standards. The project is in a seismic zone and will require special construction features to meet the seismic design requirements.

1. COMPONENT DEF (DoDEA)	FY 2026 MILITARY CONSTRUCTION PROJECT DATA		2. Date June 2025
3. INSTALLATION AND LOCATION PUNTA BORINQUEN, PUERTO RICO		4. PROJECT TITLE: RAMEY UNIT SCHOOL	
5. PROGRAM ELEMENT	6. CATEGORY CODE 73046	7. PROJECT NUMBER ARUSPR01	8. PROJECT COST (\$000) 155,000
Department of Defense (DoD) and Department of Defense Education Activity (DoDEA) principles for high performance and sustainable building requirements will be included in the design and construction of the project in accordance with federal laws and Executive Orders. Facilities will be designed to provide cyber security engineering and validation as specified in DoD Unified Facilities Criteria. Electrical utilities include relocation of overhead lines to underground where the existing lines interfere with construction of the school. A transfer switch will be utilized to manage power from two separate utility circuits during partial outages. An emergency generator is required to provide a back-up power source for life-safety, information technology, and other critical systems during power outages. Communication utilities include inside plant and outside plant infrastructure required for both wired and wireless capabilities within the facility. Water/sewer utilities include both potable and non-potable water distribution and gravity sewer systems. A looped water system will assist in maintaining adequate pressures and flows. Site preparation includes work such as clearing and grubbing, erosion and sediment control, construction fencing, establishing haul routes and contractor material laydown. A temporary access gate, roadway, staff parking and bus parking will be provided to facilitate operation of the existing school during construction. Site improvements include work such as signage, fencing, paving, landscaping, exterior lighting, sidewalks, external Anti-Terrorism/Force Protection features, storm water management, covered walkways, athletic fields, playgrounds, and play areas. This project will also require two access control points, each consisting of a guard house, canopy, automated drop arm and automated entry gate. Low Impact Development will be included in the design and construction of this project as appropriate. Demolition includes approximately 123,000sf of existing facilities. Asbestos containing materials and lead based paint are present in the existing facilities. Hazardous material mitigation will be required for the buildings to be demolished. Facilities will be designed in accordance with DoDEA Education Facilities Specifications, DoD Unified Facilities Criteria and other applicable codes. Facilities will be designed to meet or exceed the useful service life specified in DoD Unified Facilities Criteria. Facilities will incorporate features that provide the lowest practical life cycle cost solutions satisfying the facility requirements with the goal of maximizing energy efficiency.			
11. REQUIREMENT: 127,000 SF ADQT: 000,000 SF SUBSTD: 123,000 SF <u>PROJECT:</u> This project constructs a new unit school (PK-G12) by replacing the existing unit school and associated support facilities.			

1. COMPONENT DEF (DoDEA)	FY 2026 MILITARY CONSTRUCTION PROJECT DATA		2. Date June 2025
3. INSTALLATION AND LOCATION PUNTA BORINQUEN, PUERTO RICO		4. PROJECT TITLE: RAMEY UNIT SCHOOL	
5. PROGRAM ELEMENT	6. CATEGORY CODE 73046	7. PROJECT NUMBER ARUSPR01	8. PROJECT COST (\$000) 155,000
<u>REQUIREMENT:</u> The unit school is required to provide adequate academic facilities for 450 students in grades Prekindergarten – Grade 12. School population is based on the projected enrollment for the 2030/2031 school year. This project is not within a flood hazard area. <u>CURRENT SITUATION:</u> The current Ramey Unit School was constructed in 1969. Minor additions include a new guard house which was constructed in 2001 and a cart storage building completed in 2009. The facility is in poor condition. The following systems are expired or are failing; branch circuits, electrical service distribution, exterior doors, exterior windows, fire alarm system, air conditioning equipment, electrical distribution, hydronic system, intercom system, PA system, LAN, lighting, roof coverings, wall finishes, casework, ceiling finishes, exit lights, exterior finishes, floor finishes, plumbing fixtures & piping, security system, elevator and toilet partitions. The current Ramey Unit School and the proposed site for the new school are located on Department of Homeland Security land that is permitted at no cost to the Department of the Army; the permit allows for the provision of school facilities for an educational program run by DoDEA. The school supports a student population mixture from the Department of Defense, the Department of Homeland Security and other federal agencies. <u>IMPACT IF NOT PROVIDED:</u> If a new facility is not provided, the substandard environment will continue to hamper the educational process and the existing unit school will not be able to support the DoDEA curriculum and provide a safe facility for education. The substandard conditions and the required maintenance and repair of expired and failing systems will continue to strain maintenance capabilities and budgets. The continued use of substandard facilities will have a negative impact on the existing and incoming students and the learning environment. <u>JOINT USE CERTIFICATION:</u> This facility can be used by other components on an “as available” basis; however, the scope of the project is based on DoDEA requirements.

9. FUTURE PROJECTS											
10. MISSION OR MAJOR FUNCTIONS											
The mission of the Missile Defense Agency is to develop and deploy a layered Missile Defense System to defend the United States, its deployed forces, allies, and friends from missile attacks in all phases of flight. The Guam Defense System projects are required to support the deployment of a Pacific Deterrence Initiative Enhance Integrated Air and Missile Defense system to protect Guam from hypersonic, ballistic, and cruise missiles.											
11. OUTSTANDING POLLUTION AND SAFETY DEFICIENCIES											
										(\$000)

10. DESCRIPTION OF PROPOSED CONSTRUCTION:					
The project constructs a Guam Defense System (GDS) Command Center (CC), power generation facility, switchgear building, fuel storage facility, entry control facility, and associated equipment. The CC will include functional areas to accommodate personnel, computing equipment, user interfaces, and communications needed for planning, controlling, and directing mission activities. The power generation facility will provide power via the switchgear facility for the command center and associated infrastructure with fuel from the storage facility consisting of above ground fuel tanks, fuel off-loading infrastructure, and associated containment. The CC facility and power generation facility will be designed for Risk Category IV to meet site specific ground motion and seismic requirements to include base isolation. Security infrastructure includes real property features to support the installation of Security System Level-C and Integrated Electronic Security System (IESS), site security measures, and entry control.					

1. COMPONENT MDA	FY 2026 MILITARY CONSTRUCTION PROJECT DATA		2. Date JUNE 2025
3. INSTALLATION AND LOCATION Joint Region Marianas, Guam		4. PROJECT TITLE: PDI: Guam Defense System, Command Center (Inc)	
5. PROGRAM ELEMENT 0604102C	6. CATEGORY CODE 14380	7. PROJECT NUMBER MDA 693A	8. PROJECT COST (\$000) 183,900
Facilities will be designed to provide cyber security engineering and validation as specified in Unified Facilities Criteria (UFC). The cybersecurity commissioning cost is to cover the contractor's submittals, administrative actions and compliance with cybersecurity requirements as well as in-house costs to review contractor submittals and to implement steps necessary for obtaining Authority to Operate. Department of Defense (DoD) principles for high performance and sustainable building requirements will be included in the design and construction of the project in accordance with federal laws and Executive Orders. Low Impact Development will be included in the design and construction of this project as appropriate. Electrical distribution includes all on-site electrical infrastructure, electrical connection to local installation substations, exterior lighting, and lightning protection for mission equipment. Utilities include extending water and sewer infrastructure to the site. Site Preparation includes site clearing/ grubbing, rough grading, and finish grading and drainage. Paving and Site improvements include asphalt roads, gravel-based patrol roads, parking, and fencing. Communications infrastructure includes a communications tower, all onsite communications infrastructure, and connection to a point of demarcation to offsite communications. Demolition includes up to 40 housing units and the associated mitigation/disposal of asbestos, lead contaminated materials, and pesticide contaminated soil. Environmental mitigation in compliance with state and local law may include permitting, biological and archaeological monitoring, restoration, habitat conservation, in-lieu fee program, shoreline protection and restoration, and premiums for environmentally caused delays. Missile Defense Agency (MDA) will address mitigations to include natural resources and cultural resources, including direct and programmatic mitigations as required by the Biological Opinion and Programmatic Agreement. Facilities will be designed to meet or exceed the useful service life specified in DoD UFC. Facilities will incorporate features that provide the lowest practical life cycle cost solutions satisfying the facility requirements with the goal of maximizing energy efficiency.			

1. COMPONENT MDA	FY 2026 MILITARY CONSTRUCTION PROJECT DATA		2. Date JUNE 2025																										
3. INSTALLATION AND LOCATION Joint Region Marianas, Guam		4. PROJECT TITLE: PDI: Guam Defense System, Command Center (Inc)																											
5. PROGRAM ELEMENT 0604102C	6. CATEGORY CODE 14380	7. PROJECT NUMBER MDA 693A	8. PROJECT COST (\$000) 183,900																										
11. REQUIREMENT: 57,000 SF ADQT: 0 SF SUBSTD: 0 SF <u>PROJECT:</u> This project provides a Command Center (CC) facility to support the Guam Defense System (GDS). <u>REQUIREMENT:</u> The Fiscal Year (FY) 2022 National Defense Authorization Act (NDAA) requires the Secretary of Defense, acting through the Director of the MDA, and in coordination with the Commander of the United States Indo-Pacific Command (INDOPACOM), to identify the architecture for a 360-degree enhanced integrated air and missile defense (EIAMD) capability to defend the people, infrastructure, and territory of Guam from the scope and scale of advanced cruise, ballistic, and hypersonic missile threats that are expected to be fielded during the 10-year period following the FY 2022 NDAA. The CC will provide the capability to support equipment from Army Integrated Battle Command System; Aegis Guam System; Command and Control, Battle Management, and Communications Mission Node; and Air Force Air Defense. The mission of the CC is to provide the functions required for planning, controlling, and directing launches and intercepts to include computing equipment, user interfaces, communications, and personnel. The CC is one of the first military construction projects of the GDS program. The CC and associated infrastructure are mission essential and requires N+2 power redundancy to support continuous operations. Military Construction Project MDA 694, also requested in FY 2025, provides the necessary infrastructure to place the first set of radars and launchers for the GDS EIAMD capability. <u>CURRENT SITUATION:</u> The current defense systems in the region and on Guam provide limited capability and do not meet the requirement for a 360-degree EIAMD capability. <u>IMPACT IF NOT PROVIDED:</u> The DoD missions supported on Guam will continue to be defended from missiles with existing systems that are not anticipated to be adequate for defending against advanced cruise, ballistic, and hypersonic missile threats expected to be fielded in the INDOPACOM theater of operations. <u>ADDITIONAL INFORMATION:</u> This project is not within a flood hazard area. As applicable, this project shall comply with UFC 1-200-01, "General Building Requirements", providing model building codes and government-unique criteria for typical design disciplines and building systems, as well as for accessibility, antiterrorism, security, sustainability, and safety.

B. Equipment associated with this project which will be provided from other appropriations:

<u>Equipment Nomenclature</u>	<u>Procuring Appropriation</u>	<u>FY Appropriated of Requested</u>	<u>Cost (\$000)</u>
Site Activation	RDT&E	2024 & Future Requests	6,700
Security Equipment/IESS	RDT&E	2026	600
Radar /Launcher Support Equipment	Procurement	2024 - 2025	22,700
Furniture, Fixtures, and Equipment	RDT&E	2026 & Future Requests	15,300
Mobile Loadbank	RDT&E	2025	2,200
MEC Survey and Mitigations	RDT&E	2023 - 2025	1,900
Environmental Surveys and Permitting	RDT&E	2025 & Future Requests	1,800

Research, Development, Test & Evaluation (RDT&E) funds are programmed to provide security support equipment to include IESS equipment. Previous year RDT&E funds were used to provide Munitions and Explosives of Concern (MEC) mitigations in support of a clean construction site.

10. DESCRIPTION OF PROPOSED CONSTRUCTION:					
The project constructs infrastructure necessary to support one radar site and one launcher site on Marine Corps Base Camp Blaz in support of the Guam Defense System (GDS), EIAMD program. Both sites require power generation facilities, fuel storage, switchgear buildings, fire pump buildings, water storage, and an entry control facility. The power generation facility will provide power via the switchgear facility for the radar and launcher infrastructure with fuel from the storage facility consisting of above ground fuel tanks, fuel off-loading infrastructure, and associated containment. These facilities will be designed for Risk Category (RC)-IV (wind) and RC-III (seismic) to meet site specific ground motion and seismic requirements.					

1. COMPONENT MDA	FY 2026 MILITARY CONSTRUCTION PROJECT DATA		2. Date JUNE 2025
3. INSTALLATION AND LOCATION Joint Region Marianas, Guam		4. PROJECT TITLE: PDI: Guam Defense System, Enhanced Integrated Air and Missile Defense (EIAMD), PH 1 (Inc)	
5. PROGRAM ELEMENT 0604102C	6. CATEGORY CODE 81110	7. PROJECT NUMBER MDA 694A	8. PROJECT COST (\$000) 61,903
Special construction features include unique asset foundations to support the radar equipment and radomes and to support the launchers and munitions loading and unloading activities. Security infrastructure includes real property features to support the installation of Security System Level-C and Integrated Electronic Security System (IESS), site security measures, and entry control and security forces area. Facilities will be designed to provide cyber security engineering and validation as specified in Unified Facility Criteria (UFC). The cybersecurity commissioning cost is to cover the contractor's submittals, administrative actions and compliance with cybersecurity requirements as well as in-house costs to review contractor submittals and to implement steps necessary for obtaining Authority to Operate. The Department of Defense (DoD) principles for high performance and sustainable building requirements will be included in the design and construction of the project in accordance with federal laws and Executive Orders. Low Impact Development will be included in the design and construction of this project as appropriate. Electrical distribution includes all on-site electrical infrastructure, exterior lighting, and lightning protection for mission equipment and facilities. Utilities include extending water and sewer infrastructure to the site. Site Preparation includes relocation of an existing communications tower and related support facilities, site clearing/grubbing, rough grading, and finish grading and drainage. Paving and Site improvements include asphalt roads, gravel-based patrol roads, parking, and fencing. Communications distribution includes all onsite communications infrastructure and connection to a point of demarcation to offsite communications. Environmental mitigation in compliance with state and local law may include permits, biological and archaeological monitoring, restoration, habitat conservation, in-lieu fee program, shoreline protection and restoration, and premiums for environmentally caused delays. The Missile Defense Agency (MDA) will address mitigations to include natural resources and cultural resources, including direct and programmatic mitigations as required by the Biological Opinion and Programmatic Agreement. The Secretary of the Navy may acquire fee or lesser real property interests in land to address public safety considerations inherent to radar and launcher operations. Facilities will be designed to meet or exceed the useful service life specified in DoD UFC. Facilities will incorporate features that provide the lowest practical life cycle cost solutions satisfying the facility requirements with the goal of maximizing energy efficiency.			
11. REQUIREMENT: 20,500 KW ADQT: 0 KW SUBSTD: 0 KW <u>PROJECT:</u> This project constructs initial radar and launcher sites with dedicated power generation supporting the Guam Defense System. <u>REQUIREMENT:</u> The Fiscal Year (FY) 2022 National Defense Authorization Act (NDAA) requires the Secretary of Defense, acting through the Director of the Missile Defense Agency, and in coordination with the Commander of the United States Indo-Pacific Command (INDOPACOM), to identify the architecture for a 360-degree integrated air and missile defense capability to defend the people, infrastructure, and territory of Guam from the scope and scale of advanced cruise, ballistic, and hypersonic missile threats that are expected to be fielded during the 10-year period following the FY 2022 NDAA. The radar and launcher sites are mission essential and require power redundancy (N+2) to support continuous			

1. COMPONENT MDA	FY 2026 MILITARY CONSTRUCTION PROJECT DATA		2. Date JUNE 2025
3. INSTALLATION AND LOCATION Joint Region Marianas, Guam		4. PROJECT TITLE: PDI: Guam Defense System, Enhanced Integrated Air and Missile Defense (EIAMD), PH 1 (Inc)

operations. Military Construction Project MDA 693, also requested in FY 2025, provides the command center for the GDS program with other phased projects providing the necessary infrastructure to support radars and launchers at distributed sites on Guam. This project provides Phase 1 and includes infrastructure for one radar and one launcher site. Future phases will address additional sites that will be included in future budget requests from the MDA and from the Army depending on the acquisition lead for the supported system.

CURRENT SITUATION: The current defense systems in the region and on Guam provide limited capability and do not meet the requirement for a 360-degree EIAMD capability.

IMPACT IF NOT PROVIDED: The DoD missions supported on Guam will continue to be defended from missiles with existing systems that are not anticipated to be adequate for defending against advanced cruise, ballistic, and hypersonic missile threats expected to be fielded in the INDOPACOM theater of operations.

ADDITIONAL INFORMATION: This project is not within a flood hazard area.

As applicable, this project shall comply with UFC 1-200-01, "General Building Requirements", providing model building codes and government-unique criteria for typical design disciplines and building systems, as well as for accessibility, antiterrorism, security, sustainability, and safety. This project has been coordinated with the installation physical security plan, and all security measures will be included.

5. PROGRAM ELEMENT	6. CATEGORY CODE 14190	7. PROJECT NUMBER 41695	8. PROJECT COST (\$000) 455,000
10. DESCRIPTION OF PROPOSED CONSTRUCTION: Construct a Command, Control, Communications, Computers, Intelligence (C4I) Operations Building and structured Parking Facility with all required supporting facilities, associated site work, and environmental measures. The Operations Building will provide operational office space, administrative and support office space, operations floor, infrastructure, equipment and communications space, and storage areas. Operational and administrative areas include private offices and open flexible seating space, collaborative multidiscipline work spaces, support spaces, and conference areas. Amenity spaces include food service and dining area. The Operations Building will be a multi-story structure with a full basement. The project consists of core, shell structure, and foundations; elevators; electrical/mechanical service and distribution components and systems; life safety generator, fire protection, alarm, and suppression systems; information technology infrastructure, communications, and security systems support infrastructure; exterior finishes and weatherproofing. The Operations Building includes a restricted-access internal garage on the first floor for up to 10 government vehicles. Interior build out will provide raised access floor systems, acoustically-rated interior partitions and ceilings, power, lighting, environmental controls, and communications. The entire structure will be built to Sensitive Compartmented Information Facility (SCIF) standards, with redundant primary power and Uninterruptable Power Supply (UPS) systems to ensure continuity of operations. A structured parking facility will be constructed to provide privately-owned vehicle (POV) parking for staff and visitors. New road construction, widening, realignment, and modifications to existing roads including signals or other road improvements will be provided to connect to existing traffic infrastructure. Special costs associated with construction on a secure site include clearances for personnel and labor inefficiencies associated with escort requirements. Escorts are required for positive control of access to utilities which service other critical facilities. Facility physical security will conform to DOD Minimum Anti-Terrorism Standards for Buildings. Anti-Terrorism/Force Protection (ATFP) and include access control, setbacks, architectural shielding, Intrusion Detection Systems (IDS), progressive collapse requirements, and compliance with relevant ATFP regulations including fencing, bollards and protective planters, and electronic security systems to extend the secure perimeter. DOD standards for high performance and sustainable buildings will be included in design and construction of the facility, according to federal law and Executive Orders. Facilities will incorporate features that provide the lowest practical life cycle cost solutions satisfying the facility requirements with the goal of maximizing energy efficiency. Supporting facilities include primary electrical service and distribution. Utility systems include water, sewer, reclaimed water, gas connection and service from utility providers, and storm drainage systems. Site work consists of curb and gutter, walkways, pedestrian plazas, landscaping, and low impact development including storm water management features. Roadway and intersection improvements are included to integrate new facilities with existing transportation networks. Demolition of one building (B9831), associated parking, support structures, and minor site structures, along with standard clearing, grubbing, cut, fill, grading, and environmental protection structures will be provided. Secure communications infrastructure and cabling will be provided. 11. REQUIREMENT: 760,000 SF ADQT: 0 SF SUBSTD: 0 SF <u>PROJECT:</u> Construct multi-story operations facility and structured parking facility.			

1. COMPONENT DEF (NSA/CSS)	FY 2026 MILITARY CONSTRUCTION PROJECT DATA		2. Date JUNE 2025
3. INSTALLATION AND LOCATION FORT GEORGE G. MEADE, MARYLAND		4. PROJECT TITLE: NSAW EAST CAMPUS BUILDING #5, INCREMENT 3	
5. PROGRAM ELEMENT	6. CATEGORY CODE 14190	7. PROJECT NUMBER 41695	8. PROJECT COST (\$000) 455,000

REQUIREMENT: These facilities are necessary to support mission operations and to further implement NSA's Recapitalization Plan. The NSA Recapitalization Plan calls for the phased replacement of aging facilities that have exceeded their service life and can no longer support the technology required for new missions. Additionally, this operations facility will provide the NSA with a flexible building that can provide the modern infrastructure necessary to support current and future technological requirements. The Operations Building will incorporate new technologies and processes that will generate valuable operational synergies through intra-agency coordination, integration, and collaboration. Using an open work environment that incorporates scalable, reconfigurable work spaces, missions will be able to achieve both actual and virtual collaboration while maintaining their functional discipline.

CURRENT SITUATION: Currently, mission critical activities that support the DoD and the nation are conducted individually in an NSA-centric structure. Network operations are prevented from realizing the full potential of the collaborative, cohesive work environments required for this initiative. To meet the immediate need, existing facilities are being reconfigured and supplemented through leased space. However, these efforts are limited by the availability of facilities with suitable locations, inadequate ATRP profiles, and insufficient power and cooling infrastructure capable of supporting mission critical activities.

IMPACT IF NOT PROVIDED: If this project is not funded, NSA will continue to overburden existing facilities and infrastructure and continue to operate in a disjointed mission configuration in a mix of antiquated space on Fort Meade and transient leased space distributed across a wide area, impeding the ability to effectively operate and meet its mission.

ADDITIONAL: The project has been coordinated with the installation facilities master plan and physical security plan. All required and anticipated physical security and antiterrorism protection measures are included. An Environmental Impact Statement has been completed for the NSA East Campus, which includes the capacity and anticipated impacts of the ECB5 facilities.

Alternative methods of meeting requirements have been explored during the development of this project. An economic analysis has been prepared and utilized in evaluating this project. It has been determined that this project is the only viable option to satisfy the requirement.

This project is not within a flood hazard area.

JOINT USE CERTIFICATION: The Chief, Master Planning Office, National Security Agency certifies that this project has been considered for joint use. Unilateral construction is recommended. Mission requirements, operational considerations, and location are incompatible with use by other components.

1. COMPONENT DEF (NSA/CSS)	FY 2026 MILITARY CONSTRUCTION PROJECT DATA		2. Date JUNE 2025
3. INSTALLATION AND LOCATION FORT GEORGE G. MEADE, MARYLAND		4. PROJECT TITLE: VENONA ROAD WIDENING	
5. PROGRAM ELEMENT	6. CATEGORY CODE 85110	7. PROJECT NUMBER 42485	8. PROJECT COST (\$000) 26,600
10. DESCRIPTION OF PROPOSED CONSTRUCTION: Widen Venona Road to a four-lane roadway from O'Brien Road eastward and northward to south of Ultra Avenue. The road will be widened southward, with a grass median and access lanes through the median at various points. Supporting facilities include site preparation and infrastructure improvements. Utilities include primary electrical service and distribution and storm drainage systems. Includes associated traffic signaling, signage, hardscape painting, and other measures to ensure efficient and safe operation of the roadway, intersection, and approaches. Site preparation includes clearing grubbing, cut, fill, grading, and environmental structures. Additional site work consists of curbs and gutters, walkways, fencing, landscaping, relocation of utilities and upgrades to existing manholes, and storm water management features. Demolition includes milling and overlay of existing roadway, demolition of roadway, curbing, abandoned utilities, and fencing. Special costs associated with construction on a secure site include site access for personnel and labor inefficiencies associated with escort requirements. Escorts are required for positive control of access to utilities which service other critical facilities. Supporting facilities constitute a large part of the project work for infrastructure and roadway improvement projects and exceed 25% of the primary facility cost. Contingency is set at 10% pending final design, to address unforeseen conditions related to underground utility work and similar project elements that may increase costs. There are no buildings associated with this project, so UFC 4-010-01 (DoD Minimum Anti-Terrorism Standards for Buildings) does not apply. Project is located on a secure campus. Anti-Terrorism/Force Protection measures will be included to comply with regulations and agency standards, where appropriate. Roadways and roadway lighting, structures, and amenities will be designed and constructed to support the latest sustainability standards, including energy efficient light emitting diode (LED) fixtures, efficient signaling systems, and storm water management features. Additional safety measures will include fencing, bollards, barriers, and guardrails. 11. REQUIREMENT: 12,008 SY ADQT: 0 SF SUBSTD: 0 SF PROJECT: Reconfigure and expand the capacity of Venona Road. (Current Mission) REQUIREMENT: This project is required to make the National Security Agency an integrated campus and is necessary to support mission operations and to further implement the National Security Agency's Recapitalization Plan. NSAW East Campus continues to grow tremendously and requires expanded infrastructure to sufficiently support the resulting increase of personnel and vehicular traffic. This roadway improvement project will provide efficient and safe movement of staff with minimum disruption to current operations or support activities. CURRENT SITUATION: Current transportation networks were constructed for previous development but will not meet the need of a modern, safe, and efficient transportation system needed to support work population increases on campus. To support implementation of the NSAW Master Plan, the agency conducted a range of traffic studies to ensure campus roadway networks support efficient movement of personnel and material. The 2021 study indicated that this roadway project is essential to maintain an efficient level of service on this section of road.			

1. COMPONENT DEF (NSA/CSS)	FY 2026 MILITARY CONSTRUCTION PROJECT DATA		2. Date JUNE 2025
3. INSTALLATION AND LOCATION FORT GEORGE G. MEADE, MARYLAND		4. PROJECT TITLE: VENONA ROAD WIDENING	
5. PROGRAM ELEMENT	6. CATEGORY CODE 85110	7. PROJECT NUMBER 42485	8. PROJECT COST (\$000) 26,600

IMPACT IF NOT PROVIDED: The NSA will continue to overburden existing road infrastructure, resulting in significant delays in moving to/from operational locations, decreased staff/vehicle safety, and adverse impacts on the staff's ability to effectively operate and meet agency mission requirements.

ADDITIONAL: This project complies with the installation master plan and is located in a compatible land use area. This project has been coordinated with the installation physical security plan, and all physical security measures are included.

This project is the only feasible option to meet the requirement. Sustainable principles, to include life-cycle cost effective practices, will be integrated into the design, development and construction of the project in accordance with UFC 1-200-02 and will comply with applicable laws and Executive Orders.

This project does not fall within or partly within the 100-year flood plain.

12. Supplemental Data:

A. Estimated Execution Data:

(1) Acquisition Strategy: Design – Bid – Build

(2) Design Data:

(a) Design or Request for Proposal (RFP) Started:	JAN 2024
(b) Percent Complete as of September 2024:	35%
(c) Percent Complete as of January 2025:	65%
(d) Design or RFP Complete:	JUL 2025
(e) Total Design Cost (\$000):	\$2,863
(f) Energy Study and/or Life Cycle Analysis performed:	No
(g) Standard or definitive design used?	No

(3) Construction Data:

(a) Contract Award:	FEB 2026
(b) Construction Start:	MAR 2026
(c) Construction Complete:	SEP 2027

TOTAL PROJECT COST					499,858
TOTAL PROJECT COST (ROUNDED)					500,000
10. DESCRIPTION OF PROPOSED WORK: Acquisition of approximately 100 acres of land, approximately 953,000 square feet of facilities and ancillary support infrastructure currently in use by the National Security Agency as a leased Texas Cryptologic Center campus. The Secretary of the Army may acquire fee or lesser real property interests to meet mission requirements. Acquisition of the campus is consistent with the goal of reducing the Government's reliance on leased facilities in favor of government-owned facilities. If the requirement for property is enduring, then the strong preference is to own the property. Furthermore, government ownership of the campus neutralizes the risk of it being under future foreign ownership, control, or influence. These facilities are not within a flood hazard area.					
11. REQUIREMENT: 952,713 SF ADQT: 952,713 SF SUBSTD: 0 NSA is responsible for classified space supporting Signals Intelligence and Cybersecurity activities to meet current and future mission requirements levied on it by the Department of Defense (DoD) and by the Office of the Direction of National Intelligence. <u>CURRENT SITUATION:</u> NSA currently leases a campus in San Antonio, Texas, consisting of six facilities including a data center, office buildings, a warehouse, and a visitor control center on approximately 100 acres of land. Continued presence in these facilities is based on the lessor's willingness to continue to lease the facilities to the Government. Mission at this site is enduring, making the acquisition and conversion of the leased facilities to Government-owned facilities in the best interest of U.S. taxpayers.					

1. COMPONENT DEF (NSA/CSS)	FY 2026 MILITARY CONSTRUCTION PROJECT DATA		2. Date JUNE 2025
3. INSTALLATION AND LOCATION JOINT BASE SAN ANTONIO-LACKLAND, SAN ANTONIO, TEXAS		4. PROJECT TITLE: NSA/CSS TEXAS CRYPTOLOGIC CENTER (INC)	
5. PROGRAM ELEMENT .	6. CATEGORY CODE 91110	7. PROJECT NUMBER 46347	8. PROJECT COST (\$000) 500,000
<u>IMPACT IF NOT PROVIDED:</u> NSA would continue to operate out of the leased facilities with uncertainty of continued use at the end of each lease period. Failure to fund this acquisition of land and leased facilities would jeopardize NSA's compliance with Presidential Executive Order 14222 and SECDEF Memo "Rationalizing Real Property Leasing to support Rebuilding the Military", dated 11 APR 2025, that mandates a 30% reduction to leased administrative and warehousing costs over the next three years. 12. 10. MISSION OR MAJOR FUNCTIONS										
The mission of Marine Corps Base Camp Lejeune is to operate a training base that promotes the combat readiness of the Operating Forces and the mission of other tenant commands by providing training opportunities, facilities, services, and support that are responsive to the needs of Marines, Sailors, and their families. The mission of U.S. Marine Corps Forces Special Operations Command is to recruit, organize, train, equip, educate, sustain, maintain combat readiness, and deploy task organized, scalable and responsive U.S. Marine Corps Special Operations Forces worldwide to accomplish Special Operations missions assigned by CDR USSOCOM, and/or Geographic Combatant Commanders employing Special Operations Forces.

compressed air, dehumidification, air conditioning systems, energy management control systems, and digital controls. Site work includes building utility systems, traffic control, parking, domestic water, fire protection, sanitary sewer, gas networks, and perimeter security fencing. The project also includes a telecommunications duct bank extension from the project site to the Stone Bay telecommunications exchange building RR134. The proposed route will include directional boring beneath wetlands. This project will provide Anti-Terrorism/Force Protection (AT/FP) features and comply with AT/FP regulations and physical security mitigation in accordance with DoD Minimum Anti-Terrorism Standards for Buildings. Appropriate cybersecurity measures will be applied to the facility-related control systems in accordance with current DoD criteria.					
11. Requirement: 20,262 SM (218,200 SF)		Adequate: 0 SM		Substandard: 0 SM	
PROJECT: Construct facilities for a Battalion Headquarters and four subordinate Companies that comprise the 2d Marine Raider Battalion (2d MRB) under Marine Forces Special Operations Command (MARSOC). REQUIREMENT: MARSOC officially stood up in 2006. Obtaining adequate facilities co-located at Stone Bay with the remainder of the MARSOC Force Structure (HQ, Regiment, Battalion, ranges, medical, billeting, and combat support elements) is paramount to fully develop the Special Operations Forces (SOF) unique training and operational requirements. This project is part of the final phase of the MARSOC Battalion consolidation onto the Stone Bay Complex. CURRENT SITUATION: 2d MRB is located in a temporary complex that is geographically separated and undersized that includes three 10,000 SF fabric tension shelters and a 1940's vintage squad bay barracks being utilized as an administrative building. These interim facilities are planned for demolition or reuse by other tenants at Marine Corps Base Camp Lejeune. There are no Battalion or Company facilities at Stone Bay to support the migration of 2d MRB. 1st and 3d MRB facilities along with multiple projects to support the MARSOC Force Structure (billeting, ranges, academic, administrative, support elements) have previously been constructed at the Stone Bay Complex. IMPACT IF NOT PROVIDED: MARSOC mission preparation and execution are jeopardized. MARSOC will be unable to adequately support operational Battalion and Company level units if they are forced to continue to use temporarily assigned, inadequate, and geographically separated facilities. ADDITIONAL: Project construction is not within a designated 100-year floodplain. JOINT USE CERTIFICATION: N/A. USSOCOM budgets only for those facilities specifically for SOF use. Common support facilities are budgeted by the military departments. Reference Title 10, Section 165.

10. DESCRIPTION OF PROPOSED CONSTRUCTION: Construct a Special Operations Forces (SOF) Mission Command Center (MCC) at the Joint Special Operations Command (JSOC) Main Compound, Fort Bragg, NC. The building will be multi-story, permanent construction built to sensitive compartmented information facilities standards and connected to the existing Building 3-2147. Built-in building systems will include fire alarm/mass notification, fire suppression, energy management control, telephone and advanced unclassified and classified communications networks, cable TV, intrusion detection, closed circuit surveillance, and electronic access control systems, a hardened protected distribution system, a built-in automated parachute storage and retrieval system, and cyber security measures. Department of Defense (DoD) principles for high performance and sustainable building requirements will be included in the design and construction of the project in accordance with federal laws and Executive Orders. Low Impact Development features will be included in the design and construction of

5. PROGRAM ELEMENT 1140415BB	6. CATEGORY CODE 141	PROJECT NUMBER 92107	8. PROJECT COST (\$000) 130,000	
this project as appropriate. Supporting facilities include site preparation, utilities (electrical, water, gas, sanitary sewer, chilled water, and information systems distribution), lighting, vehicle parking, access drives, curb and gutter, sidewalks, storm drainage, landscaping, roads, and other site improvements. Appropriate cybersecurity measures will be applied to the facility-related control systems in accordance with current DoD criteria. Access for persons with disabilities will be provided. Comprehensive interior design and audio-visual services are included.				
11.Requirement: 9,281 SM (99,900 SF) Adequate: 0 SM Substandard: 4,171 SM (44,900 SF)				
PROJECT: Construct a new, permanent SOF MCC facility connected to existing Building 3-2147 on the JSOC Main Compound, Fort Bragg, NC. (Current Mission)				
REQUIREMENT: The SOF MCC project will consolidate the JSOC operational functions into a two-building complex (one existing facility (Building 3-2147) and one new facility), increase efficiency and collaboration, accommodate expanding mission capabilities, meet current security requirements, and address ongoing utility issues associated with the existing headquarters facility (Building 3-2245), which will be demolished. The MCC facility will collocate functions that are currently scattered among multiple facilities and temporary structures that are beyond their useful life expectancy and do not meet the JSOC security and utility requirements. The vacated facilities will be demolished, removed, or re-purposed for other uses. The SOF MCC is the first project of many outlined in the JSOC Master Plan that will enhance mission efficiency and capabilities, improve land use, and address existing facility issues within the Main Compound at Fort Bragg, NC.				
CURRENT SITUATION: The JSOC was founded in 1980 and is headquartered at Fort Bragg, NC. Since that time, the JSOC experienced significant growth, which necessitated placing people and functions in the space that was open and available at that time, including the use of temporary facilities (i.e., trailers). Personnel and functions are scattered throughout the JSOC compound in inadequate and outdated buildings, trailers, and temporary structures. This lack of intentional placement hinders collaboration and efficiency. Existing facilities do not meet the JSOC security and utility requirements and are at capacity. They cannot accommodate the JSOC current requirements and expanding mission capabilities. Many of the operational functions that would move into the new SOF MCC are currently located in the JSOC headquarters building (Building 3-2245), which will be demolished as part of this project. Building 3-2245 was originally constructed in 1981 and received additions. These piecemeal improvements caused significant issues with the electrical, HVAC, and communications infrastructure. The secure spaces do not meet current code, creating risk of interference by foreign adversaries at a time when security requirements are getting more stringent. Senior leaders in this building do not have convenient access to appropriate, secure briefing and meetings rooms, forcing them to regularly move between buildings to hold meetings. Building 3-2245 required significant renovation, maintenance, and utility system repairs over the past 10 years.				
IMPACT IF NOT PROVIDED: The JSOC operational functions will continue to operate out of scattered, inadequate, and over-capacity facilities that negatively impact readiness. The JSOC will continue to perform highly classified work in facilities that do not meet current standards, creating unnecessary risk. The JSOC will not realize the benefits of increased efficiency and collaboration or have adequate secure space and

3. INSTALLATION AND LOCATION: FORT BRAGG, NORTH CAROLINA		4. PROJECT TITLE: SOF MISSION COMMAND CENTER		
5. PROGRAM ELEMENT 1140415BB	6. CATEGORY CODE 141	PROJECT NUMBER 92107	8. PROJECT COST (\$000) 130,000	

utility capacity for their expanding mission capabilities.

ADDITIONAL: Alternative methods of meeting this requirement have been explored during project development and this project is the only feasible option. This project will provide Anti-Terrorism/Force Protection (AT/FP) features and comply with AT/FP regulations and physical security mitigation in accordance with DoD Minimum AT Standards for Buildings. The project site flood vulnerability determination has been accomplished by the installation and will be part of the project planning process. The project site is located above the 100-year flood plain.

JOINT USE CERTIFICATION: N/A. USSOCOM budgets only for those facilities specifically for SOF use. Common support facilities are budgeted by the military departments. Reference Title 10, Section 165.

10. DESCRIPTION OF PROPOSED CONSTRUCTION: Construct the first phase of an Operational Ammunition Supply Point (ASP) to provide safe storage and assembly areas for ammunition. Primary facilities of Phase 1 will include Ammunition Storage and Small Arms Warehouse. Supporting facilities include Covered/Open Storage Pads, Fire Suppression Facility, Gatehouse, Access Road, Perimeter Road Hardening, loading docks, lighting and cameras on all security fencing required for perimeter roads and access roads, lightning protection on all concrete pads and structures and tank trail for realignment around ASP.							
11.Requirement: 38,057 SM (410,000 SF) Adequate: 0 SM (0 SF) Substandard: 0 SM (0 SF)							

1. COMPONENT USSOCOM		FY 2026 MILITARY CONSTRUCTION PROJECT DATA		2. DATE JUNE 2025	
3. INSTALLATION AND LOCATION: FORT BRAGG, NORTH CAROLINA			4. PROJECT TITLE: SOF OPERATIONAL AMMUNITION SUPPLY POINT		
5. PROGRAM ELEMENT 1140415BB	6. CATEGORY CODE 421	PROJECT NUMBER 94023	8. PROJECT COST (\$000) 80,000		

PROJECT: Construct the first phase of an Operational ASP at Fort Bragg, NC.

REQUIREMENT: The increased demand for non-standard ordnance to support directed missions and a dramatic three-fold increase in customer base necessitates the construction of an Operational ASP to accommodate 500,000 lbs. Net Explosive Weight (NEW) of HD 1.1 and associated facilities to support the organization's 2,000 customers. Personnel requirements consist of 20 Pax total; 10 existing staff and 10 additional personnel incomings for ordnance handling. This facility is required to enable Special Operations warfighting capability, and Special Operations Enterprise training to empower flexible responses in a complicated and constantly evolving global environment

CURRENT SITUATION: The ammunition supply point degrades operational capabilities, increases mission response times, incurs annual lease costs, and poses a risk to the force due to the inability to meet required Quantity Distance (QD) Arcs. The existing capacity of the ammunition storage facilities only accommodate 14,500 lbs. NEW. Off post leases for the remaining requirement cost \$800K annually and are only able to accommodate 250k lbs. NEW.

IMPACT IF NOT PROVIDED: The deficit in the required facilities poses substantial risk to the mission. The packages currently stored at offsite locations create excessive deployment timelines; the ASP exceeds licensed NEW with each Ammo shipment and major training events forcing the Commander to assume the risk of non-compliance with AR 385-64. Additionally, the existing SOTF Operational ASP QD Arcs pose loss of life/ injury risk to personnel and risk to military assets.

ADDITIONAL: Required assessments have been made for supporting facilities and the project is not in a 100-year floodplain. This project has been coordinated with the installation physical security plan, and all physical security measures are included. All required antiterrorism protection measures are included. Alternative methods of meeting this requirement have been explored during project development. This project is the only feasible option to meet the requirement. The Deputy Assistant Secretary of the Army (Installations, Housing and Partnerships) certifies that this project has been considered for joint use potential. Mission requirements, operational considerations, and location are incompatible with use by other components. Sustainable principles, to include life cycle cost effective practices, will be integrated into the design, development and construction of the project and will follow the guidance detailed in the Army Sustainable Design and Development Policy - complying with applicable laws and executive orders.

JOINT USE CERTIFICATION: N/A. USSOCOM budgets only for those facilities specifically for SOF use. Common support facilities are budgeted by the military departments. Reference Title 10, Section 165.

10. MISSION OR MAJOR FUNCTIONS											
The 193rd Special Operations Wing's primary mission is to fly and maintain the MC-130J Commando II, flying clandestine, or low visibility, single or multi-ship, low-level infiltration, exfiltration, and resupply of special operations forces, by airdrop or airland and air refueling missions for special operations helicopters and tiltrotor aircraft, intruding politically sensitive or hostile territories. The MC-130J primarily flies' missions at night to reduce probability of visual acquisition and intercept by airborne threats. Its secondary mission includes the airdrop of leaflets.

10. DESCRIPTION OF PROPOSED CONSTRUCTION: Project constructs a MC-130J flight simulator facility. Functional areas include: Weapon System Trainer (WST) high bay with overhead crane, Visual Threat Recognition and Avoidance Trainer, Night Vision Goggle room, Load Master Partial Task Trainer, Digital Radar Land Mass Simulator, Multi-function Training Assembly, and Specialized Automated Mission Suite-enhanced Situational Awareness, Formal Training Unit (FTU), Air Commando Training Support, offices, computer room, maintenance area, supply/spares room, brief/debrief rooms, break rooms, communications, and secure communications rooms. Supporting facilities include utilities, pavements, site improvements, communications, and all necessary support. Department of Defense (DoD) principles for high performance and sustainable building requirements will be included in the design and construction of the project in accordance with federal laws and Executive Orders. Low Impact Development features will be included in the design and construction of this project as appropriate. This project will provide Anti-Terrorism/Force Protection (AT/FP) features and comply with AT/FP regulations and physical security mitigation in accordance with DoD Minimum Anti-Terrorism Standards for Buildings. Appropriate cybersecurity measures will be applied to the facility-related control systems in accordance with current DoD criteria.

PROJECT: Construct Simulator Facility at Harrisburg, ANG, PA

REQUIREMENT: The 193 Special Operations Wing (SOW) requires a properly configured facility to support centralized special operations aircrew training with space for a flight training unit, upgrade to MC-130J WST, and other accompanying training devices. The WST and other devices support aircraft currency, continuation, upgrade, and refresher training, as well as specific mission rehearsals. The WST will allow the squadron to log currency events in the simulator (up to 50%) versus in the aircraft, accomplish emergency procedures, and participate in live and virtual exercises. The WST and other FTU training support crew readiness and provides the opportunity to practice high risk maneuvers in a low threat environment. Development of the crew members increases special operations mobility capacity with the primary mission of insertion, extraction, and re-supply of unconventional warfare forces and equipment into hostile or enemy-controlled territory using airland or airdrop procedures.

CURRENT SITUATION: The wing is transitioning from its legacy EC-130J Commando Solo aircraft to the MC-130J Commando II. It is key that the 158 aircrew members efficiently and safely transition to their new weapon system. Training in the smaller aircrew devices has historically been dispersed throughout three current facilities. The WST procured in FY20 is in a fourth interim location (Building 82) with reduced space that limits its full motion which results in less realistic training. The FTU staff and training devices dispersal in four buildings creates a highly inefficient training environment. This situation requires additional time to maintain and coordinate staff and students among multiple training locations. The less than optimized WST space creates additional use of actual aircraft for some training events. The device when capable of full mobility creates an optimized training environment for performing 30-50 percent of aircrew currency requirements which is 500-1,000 flying hours. Additionally, utilizing the WST with limitations does not allow for proper maintenance of the WST and requires more equipment maintenance downtime. Lastly, the WST interim location has an end state requirement to serve as the unit engine maintenance shop. Existing engine maintenance will continue to be performed in a substandard facility that does not fully meet the requirements.

IMPACT IF NOT PROVIDED: All aircrew training will remain inefficiently dispersed. Using aircraft for training adds undue hours and strain to the aircraft, reducing the overall lifespan of the aircraft that is required for executing the actual mission. Use of the future engine maintenance facility (Building 82) prevents implementation of Installation Development Plan to relocate Aerospace Ground Equipment shop and staging area directly across from the aircraft ramp, creating operational flightline inefficiencies. Overall, combat readiness of special operations aircrews will not be optimized, inhibiting the unit's federal mission to maintain well-trained and equipped units that are available for prompt mobilization during war. Specifically, for the 193 SOW, this current method of operation is impacting its preparation to perform its primary mission to perform specialized and contingency operations using advanced aircraft, highly trained operators, tactics, and air refueling techniques to infiltrate/exfiltrate, resupply, and perform information operations for Special Operations Forces.

ADDITIONAL: Alternative methods of meeting this requirement have been explored during project development. The economic analysis found this project to be the most economical solution. Project is not sited in a 100-year floodplain.

10. DESCRIPTION OF PROPOSED CONSTRUCTION: Construct a new Human Performance Training Center (HPTC) to provide the full range of Preservation of the Force and Family (POTFF) and Human Performance of Special Forces troops. Facility will include the following primary functions: 1) Recovery and Rehabilitation; 2) Strength/Cardio/Multi-Purpose Conditioning; 3) Cognitive Performance; 4) Social and Family; and 5) Spiritual. In support of the primary functions, the HPTC will also provide injury prevention, testing and evaluation, nutrition, research and development, and sports psychology. Supporting facilities include all pertinent site preparations and site improvements, mechanical and electrical utilities, telecommunications, landscaping, drainage, parking, and exterior lighting. Environmental mitigation includes soil testing and exchange, and tree cutting and restoration per German laws. Department of Defense (DoD) principles for high performance and sustainable building requirements will be included in the design and construction of the project in accordance with federal laws and Executive Orders. Low Impact Development features will be included in the design and construction of this project as appropriate. This project will provide anti-terrorism/force protection (AT/FP) features and comply with AT/FP						

1. COMPONENT USSOCOM		FY 2026 MILITARY CONSTRUCTION PROJECT DATA		2. DATE JUNE 2025	
3. INSTALLATION AND LOCATION BAUMHOLDER, GERMANY			4. PROJECT TITLE: HUMAN PERFORMANCE TRAINING CENTER

regulations and physical security mitigation in accordance with DoD Minimum AT Standards for Buildings.					
11. Requirement: 2,105 SM (22,700 SF) Adequate: 0 SM (0 SF) Substandard: 0 SM (0 SF)					
<u>PROJECT:</u> Construct a new HPTC at Baumholder, Germany. (New Mission) <u>REQUIREMENT:</u> This project is required to provide rapid recovery therapy and full-spectrum POTFF for the SOF at Baumholder. The project will support the unit's physical and mental health, strength, agility, and operational skills, ensuring the units are capable of maintaining fitness, and operational combat readiness. Elements of support include improvement of Strength and Conditioning, Recovery and Rehabilitation, Performance Nutrition and Mental Performance. <u>CURRENT SITUATION:</u> The new facility will provide a critical need which does not exist at Baumholder. The facilities in Stuttgart are temporary fabric facilities that have out-lived the 5-year plan and cannot be moved to Baumholder for reuse. Until this facility is built, troops will use temporary mitigations for limited effects. Existing medical clinic facilities will be used for assessments and testing when available on a case-by-case basis. Existing fitness facilities will be used for strength and conditioning during limited scheduled periods to avoid base population peak periods. <u>IMPACT IF NOT PROVIDED:</u> If this project is not provided, it will directly impact the implementation of the current capital improvements plan that corrects the overcrowding at USAG Stuttgart. This plan has been approved by Office of the Secretary of Defense and Vice Chief of Staff of the Army. If not provided, the units will remain severely hindered in preserving physical, mental, and spiritual conditions needed to optimize the units' capability to meet urgent national security missions. Organizational effectiveness, operational efficiency, and unit morale will risk degradation by continued use of substandard, severely undersized, and poorly configured buildings. <u>ADDITIONAL:</u> Alternative methods of meeting this requirement have been explored during project development and this project is the only feasible option. This project will comply with International Building Code, Fire and Life Safety Codes, and with U.S. Army's Military Construction Transformation Principles. The site is not within a flood zone. <u>JOINT USE CERTIFICATION:</u> N/A. USSOCOM budgets only for those facilities specifically for SOF use. Common support facilities are budgeted by the military departments. Reference Title 10, Section 165.

10. MISSION OR MAJOR FUNCTIONS										
100 Air Refueling Wing (ARW) is Royal Airforce Mildenhall's host wing and the only permanent strategic forward installation in the European theater providing air refueling capabilities. The 100 ARW conducts air refueling and combat support operations throughout the European and African area of responsibilities. The 352 Special Operations Wing (SOW) is the only Air Force Special Operations unit in the European Theater, it operates the MC-130J Commando II and CV-22B Osprey. 352 SOW plan and execute specialized and contingency operations using advanced aircraft, tactics and air refueling techniques to infiltrate, exfiltrate and resupply special operations forces, performing long-range missions in austere, hostile, denied and/or politically sensitive territories. Mission is to project force and enable access, placement, and influence with allies and partners through specialized airpower across all domains to respond to crisis and counter Russian aggression in support of U.S. European Command.

10. DESCRIPTION OF PROPOSED CONSTRUCTION: Construct a Mobility Readiness Spares Package (MRSP) and Parts Storage facility with functional areas that include private and open offices, breakroom, MRSP and parts internal high bay storage, covered and uncovered storage, and restrooms. Supporting facilities include utilities, site improvements, pavements (paving, walks, curbs, and gutters) to include an access road and parking, communications and all necessary support. Project shall include future proof technologies and capability to hook up to a micro grid, without invalidating any warranties. Project also includes demolition and reprovision of a Warehouse High Bay, Building 1785 within the new construction footprint. All work associated with this project shall comply with United States Air Force and Host Nation regulations and agreements. Environmental mitigation addresses the

Host Nation Biodiversity Net Gain regulation to improve wildlife habitats by 10 percent. The country-to-country agreement precludes the use of International Competitive Bidding proceedings in the United Kingdom. Department of Defense (DOD) principles for high performance and sustainable building requirements will be included in the design and construction of the project in accordance with federal laws and Executive Orders. Low Impact Development features will be included in the design and construction of this project as appropriate. This project will provide Anti-Terrorism/Force Protection (AT/FP) features and comply with AT/FP regulations and physical security mitigation in accordance with DoD Minimum Anti-Terrorism Standards for Buildings. Appropriate cybersecurity measures will be applied to the facility-related control systems in accordance with current DoD criteria.			
11. Requirement: 2,590 SM (27,900 SF) Adequate: 1,879 SM (20,200 SF) Substandard: 0 SM (0 SF)			
<u>PROJECT:</u> MRSP and Parts Storage at Royal Air Force (RAF) Mildenhall, UK <u>REQUIREMENT:</u> Provide the 352 Special Operations Wing (SOW) with a MRSP and Parts Storage facility in support of meeting the Secretary of Defense's 29 July 2020 announcement stating that the Special Operations Wing will remain at RAF Mildenhall. Project initiates final homing of the CV-22 unit that has twice had the unit's projects cancelled due to changes during the implementation of the European Infrastructure Consolidation initiative. A purpose-built, right sized, and properly configured warehouse is required to enable the collocation and consolidation of both CV-22 and MC-130J Special Operations aircraft related supply capabilities and support a unified, synergistic, and mission focused campus to plan to support special operations activities. Specifically, development of the special operations mobility capacity supports the primary mission of insertion, extraction, and resupply of unconventional warfare forces and equipment into hostile or enemy-controlled territory using airland and airdrop procedures. The inefficiencies caused by dispersed and lack of purpose-built facilities results in overall degraded readiness and ability to rapidly respond to time sensitive European and Africa Commands taskings. <u>CURRENT SITUATION:</u> Storage is dispersed in three geographically separated locations (B719, B768, B1785). The 352 SOW has repurposed portions of their Aerial Delivery facility, building 768, and an exterior staging yard to support storage of the additional aircraft parts and MRSP and Parts Storage kits on an interim basis. This puts that unit in a deficit situation in providing Aerial Delivery support until this facility is complete. Additionally, the cross-installation movement of aircraft MRSP and Parts Storage kits and parts creates lost man hours due to travel between the geographically separated facilities. Project also demolishes a small inefficient single story storage space to support a larger high bay consolidated warehouse collocated with the main base warehouse. <u>IMPACT IF NOT PROVIDED:</u> Day to day operations will continue to be inefficient with aircraft parts and MRSP and Parts Storage kits spread out at separate locations. Lack of adequate supply facilities adversely impact the supply efficiency in support of the 352 SOW by both driving additional manpower to man multiple facilities and requiring existing manpower to repeatedly travel between facilities securing and un-securing each facility potentially multiple times each day and making equipment accountability during receipt, marshalling, staging, storage, and return of required items very difficult. Lastly, lack of adequate aircraft parts and kits supply activities will directly impact the ability to improve efficiency related to all

special operations aircraft movement and maintenance resulting in an overall negative impact to 352 SOW in support of USSOCOM and Special Operations Europe missions.

ADDITIONAL: Alternative methods of meeting this requirement have been explored during project development. The economic analysis found this project to be the preferred alternative. Project is not sited in a 100-year floodplain. NATO eligibility for this project has not yet been established, however, a precautionary prefinance statement has been filed in the event eligibility is established.

JOINT USE CERTIFICATION: N/A. USSOCOM budgets only for those facilities specifically for SOF use. Common support facilities are budgeted by the military departments. Reference Title 10, Section 165.

10. DESCRIPTION OF PROPOSED CONSTRUCTION:					
Construct new addition and renovate existing to include all requirements for mission essential support functions. Building will consist of offices, kitchen, gym, lockers, berthing and storage.					
Building information systems include energy monitoring control systems, cyber security systems, and related systems.					
Site preparation includes standard clearing and grubbing, cut and fill, grading, and boulder removal.					
Electrical services include primary and secondary service connections, transformer, automatic switchgear, site lighting, power factor correction, emergency power connections and new covered fuel storage that will store, filter, and circulate fuel.					
Construct water services to include potable water main connections and lines for use with distribution and fire suppression, a water storage tank is included to meet fire code requirements. System will include water treatment including chemical treatment with filtration to maintain potability. Replace and upgrade existing sewer services to include pumping and leach field. Existing system requires life cycle replacement and does not have suitable capacity to support building addition.					
Site improvements include paving of roads and parking area, sidewalks, concrete equipment pads, retaining structures, and landscaping.

3. INSTALLATION AND LOCATION Pentagon Reservation (Raven Rock Mountain Complex)		4. PROJECT TITLE: Operations Facility																																					
5. PROGRAM ELEMENT 0304099D8W	6. CATEGORY CODE 61050	7. PROJECT NUMBER 92583	8. PROJECT COST (\$000) 34,000																																				
Demolition is for two buildings that are within the project boundary. Storm water management includes retention structures, drain boxes, piping, drainage basins, and outfalls as needed to meet existing code requirements. Facility will incorporate features that provide the lowest practical life cycle cost solutions satisfying the facility requirements with the goal of maximizing energy efficiency.																																							
11. REQUIREMENT: 15,320 SF ADQT: 0 SF SUBSTD: 8,303 SF <u>PROJECT:</u> Construct new addition and renovate existing building to better meet requirements for size and function of mission needs. Addition includes office space, berthing, kitchen, gym, equipment storage, water supply and storage, sanitary sewer system, and fuel system. <u>REQUIREMENT:</u> Command and Control Facility requires additional support space that is consolidated under one roof for improved operational efficiency and easy access in any type of threat scenario. <u>CURRENT SITUATION:</u> Site support facilities are undersized and located in numerous separate small modular buildings without protected access for personnel. These facilities were hastily constructed as operations required over the years and are not conducive to efficient operations. This facility is not located in a 100-year flood plain. <u>IMPACT IF NOT PROVIDED:</u> Personnel will continue to operate from dispersed locations without protected access to essential functions and supplies. During emergency scenarios access to essential support functions could be limited. Facility will continue to not meet requirements for mission related Command and Control Facilities.

10. DESCRIPTION OF PROPOSED CONSTRUCTION: Construct a resilient microgrid system at the SGT James Witkowski Armed Forces Reserve Center (AFRC) that will have full islanding capability and include a diesel backup generation system, ground-mounted photovoltaic (PV) solar array, and a Battery Energy Storage System (BESS). The microgrid system will include a master microgrid controller and automatic smart switches controlling the generation resources within the AFRC. Microgrid will be installed on a closed restricted network (CRN). Supporting systems include a new electric service and information systems.					
11. REQUIREMENT: N/A ADQT: N/A SUBSTD: N/A					
PROJECT: Construct a new microgrid that includes a PV array, BESS. and generators.					

1. COMPONENT Defense Wide – Army/Reserve	FY 2026 ENERGY RESILIENCE AND CONSERVATION MILITARY CONSTRUCTION PROJECT DATA		2. Date JUNE 2025
3. Installation and Location Armed Forces Reserve Center, Mountain View California		4. Project Title: Power Generation and Microgrid	
5. PROGRAM ELEMENT 0904903D	6. CATEGORY CODE 81122	7. PROJECT NUMBER 105531	8. PROJECT COST (\$000) 20,600

REQUIREMENT:

The 63rd Readiness Division provides base operations support enabling the operating force to optimize resources towards focus on readiness, training, mobilizing, deploying America's Soldiers to fight, survive, and win our Nation's wars; and to exercise command and control of assigned units. The microgrid will provide resilient power for the 63rd Readiness Division (RD) headquarters, the Defense Innovation Unit (DIU), and the California National Guard which occupy the SGT James Witkowski AFRC. Critical missions include supporting intelligence, medical, emergency, and defense support to civil authorities' operations. The DIU's mission to accelerate commercial innovation to the war fighter by engaging with Silicon Valley, aligning with the technology industry's faster pace, and bringing emerging commercial technologies to the military. The Army Reserve shares the Organizational Maintenance Shop (OMS) with the California National Guard. The OMS is critical to the California National Guard, as it provides support to numerous units in the area. This microgrid project would significantly improve security, resilience, and continuity to the critical operations, will save energy costs for the installation, and will comply with requirements to meet energy security for a minimum of 14 days.

CURRENT SITUATION:

The SGT James Witkowski AFRC currently does not have on-site energy generation capability and is fully reliant on the local utility grid. Historically the SGT James Witkowski AFRC has experienced an average of 8 hours of electrical outages per year. The risk of long duration outages at this site are high due to high potential of earthquakes and wildfires. This location is their only maintenance shop in Silicon Valley.

IMPACT IF NOT PROVIDED:

During an emergency or disaster response, the 63rd Readiness Division's response to provide federal support to Defense Support of Civil Authorities (DSCA) could impact essential operations. The lack of reliable power timely delays to critical functions such as aviation lift, search and rescue or extraction, quartermaster (food, shelter, potable water, heated tents, etc.), civil affairs and public information as well as a significant portion of full-spectrum engineer capability. The lack of a rapid response from the California National Guard would impact any emergencies from San Jose to San Francisco. It will also negatively impact the operations of the 24/7 Emergency Operations Center.

1. COMPONENT Defense Wide – Army/Reserve	FY 2026 ENERGY RESILIENCE AND CONSERVATION MILITARY CONSTRUCTION PROJECT DATA		2. Date JUNE 2025
3. Installation and Location Armed Forces Reserve Center, Mountain View California		4. Project Title: Power Generation and Microgrid	
5. PROGRAM ELEMENT 0904903D	6. CATEGORY CODE 81122	7. PROJECT NUMBER 105531	8. PROJECT COST (\$000) 20,600
12. SUPPLEMENTAL DATA: A. Estimated Execution Data: (1) Acquisition Strategy: Design Bid Build (2) Design Data: (a) Design or Request for Proposal (RFP) Started: (b) Percent of Design Completed as of Sep 2024: (c) Percent of Design Completed as of Jan 2025: (d) Design or RFP Complete: (e) Total Design Cost (\$000) (f) Energy Study and/or Life Cycle Analysis performed? (g) Standard or definitive design used? (3) Construction Data: (a) Contract Award: (b) Construction Start: (c) Construction Complete: B. Equipment associated with this project which will be provided from other appropriations: N/A C. Project Type: ENERGY RESILIENCE D. Rationale IAW 10 USC 2914: Currently there is no critical peak power coverage or ability to provide power quality during an outage. This project will provide complete critical peak power coverage for the 63rd RD headquarters facility including DIU and California Guard, along with energy storage to provide power quality improvements during islanding. 10. DESCRIPTION OF PROPOSED CONSTRUCTION: Construct a resilient microgrid with diverse energy sources to include an Electric Power Generation plant using natural gas, Photovoltaic Array (PV) canopy, and Battery Energy Storage System (BESS). The project includes installing electrical infrastructure upgrades on the airfield side of the Passenger Terminal.						
11. REQUIREMENT: N/A ADQT: N/A SUBSTD: N/A						

1. COMPONENT Defense Wide – Air Force	FY 2026 ENERGY RESILIENCE AND CONSERVATION MILITARY CONSTRUCTION PROJECT DATA			2. Date JUNE 2025
3. INSTALLATION AND LOCATION Travis Air Force Base Travis site #1, California			4. PROJECT TITLE: Power Generation and Microgrid	
5. PROGRAM ELEMENT 0904903D	6. CATEGORY CODE 811145	7. PROJECT NUMBER XDAT233002	8. PROJECT COST (\$000) 25,120	
PROJECT: This project includes photovoltaic power generation, a battery energy storage system, natural gas emergency generation, a microgrid control system, and all necessary distribution and switchgear infrastructure. REQUIREMENT: Travis Air Force Base requires uninterrupted power to support its airfield operations which supports the largest operations group in the Air Mobility Command in providing strategic airlift and air refueling missions across the globe. Critical missions supported by the airfield include missions that support the 6 Air Refueling Squadron (ARS), 9 ARS, 21st Airlift Squadron, 22 AS, 60th Aeromedical Evacuation Squadron, and 60th Operations Support Squadron (OSS). Microgrid controls allow immediate detection of a loss of commercial power and isolation from the installation's distribution system. Islanded operation to provide electrical power to the airfield will be sustained over long periods of time by the microgrid controller, which will balance the battery's state of charge, PV generation, load, and generator. CURRENT SITUATION: The substation that supports the five critical buildings on the airfield do not have a redundant power supply. These five facilities are supplied by the installation's distribution system without adequate backout power leaving them susceptible to prolonged power outages and mission interruption. IMPACT IF NOT PROVIDED: The generators that provide backup power to critical airfield operations require refueling which could become an issue in a long duration outage with limited fuel storage and potential refueling disruptions. The lack of power to the airfield would delay operations.				
12. SUPPLEMENTAL DATA: A. Estimated Execution Data: (1) Acquisition Strategy: Design Bid Build

10. DESCRIPTION OF PROPOSED CONSTRUCTION: Constructs dual fuel generators, ground- and roof-mount solar photovoltaic (PV) systems, battery energy storage systems, and with associated connections and transfer switches. Convert four existing diesel-fired generators to dual fuel (diesel and natural gas), upgrade electrical infrastructure and install electric and gas meter systems. Additional work includes cybersecurity, commissioning, and OMSI. Supporting facility work includes pavements and site preparation.				
11. REQUIREMENT: N/A ADQT: N/A SUBSTD: N/A				

1. Component Defense Wide – USMC	FY 2026 ENERGY RESILIENCE AND CONSERVATION MILITARY CONSTRUCTION PROJECT DATA			2. Date JUNE 2025
3. INSTALLATION AND LOCATION Marine Corps Support Facility Blount Island Jacksonville, Florida		4. PROJECT TITLE: Power Generation and Electrical Infrastructure Resilience		
5. PROGRAM ELEMENT 0904903D	6. CATEGORY CODE 81150	7. PROJECT NUMBER P-035	8. PROJECT COST (\$000) 30,500	
<u>PROJECT:</u> This project provides on-site energy generation and the conversion of existing diesel generators to dual-fuel generators to support the electrical infrastructure to critical missions. <u>REQUIREMENT:</u> The Marine Corps Support Facility Blount Island (MCSF-BI) mission is to support the Blount Island Command's Maritime Preposition Force (MPF) and growing Global Positioning Network program whose mission is to support worldwide military operations through planning, coordinating, and executing the logistics efforts of the MPF program. This includes the loading and offloading of munitions, material, and combat equipment from Military Sealift Command ships while moored in the slipway, and maintenance, replacement, and tracking of those items. This project is required to improve energy availability and its ability to operate energy systems during normal and contingency operations and deliver on its mission to support Fleet Marine Forces by providing Marine warfighters worldwide with the best combat-ready equipment and supplies in the world to enable the rapid arrival and assembly of Marine Air Ground Task Forces. <u>CURRENT SITUATION:</u> The installation is vulnerable to hurricanes and flooding as an island in the Jacksonville, Florida waterway. There are electrical system deficiencies that could impede readiness and the ability to sustain mission during normal and contingency operations. <u>IMPACT IF NOT PROVIDED:</u> MCSF-BI will continue to rely primarily on the grid power supply and electrical distribution system for operations. Power outages will continue to have a significant impact on mission critical facilities needed to support and execute crisis response, global reach and forward presence. This is a cause for concern given the installation's vulnerability to natural hazards (e.g., river-line and coastal flooding, hurricanes, hurricane winds, hurricane precipitation, and tornadoes). Outages (both short and extended) will delay equipment production. Backup power generators at critical facilities will be restricted to the availability of diesel fuel, which will be limited in a regional or long-term power disruption without making them dual fuel.				
12. SUPPLEMENTAL DATA: A. Estimated Execution Data: (1) Acquisition Strategy: Design Build				

1. Component Defense Wide – USMC	FY 2026 ENERGY RESILIENCE AND CONSERVATION MILITARY CONSTRUCTION PROJECT DATA			2. Date JUNE 2025
3. INSTALLATION AND LOCATION Marine Corps Support Facility Blount Island Jacksonville, Florida			4. PROJECT TITLE: Power Generation and Electrical Infrastructure Resilience

Equipment associated with this project which will be provided from other appropriations: N/A C. Project Type: ENERGY RESILIENCE D. Rationale IAW 10 USC 2914: This project supports mission assurance and mission critical functions by providing more reliable, resilient, and efficient power to critical facilities to support the mission to provide warfighters with the best combat-ready equipment and supplies to enable the rapid arrival and assembly of Marine Air Ground Task Forces. This is accomplished by installing solar PV generation and battery storage, adding new dual fuel generators, and converting generators to dual fuel to ensure fuel availability. This project also addresses known energy security requirements including energy reliability, resilience, and efficiency by installing and cybersecure onsite power generation and storage assets. 10. DESCRIPTION OF PROPOSED CONSTRUCTION: Construct a resilient microgrid with diverse energy sources to include a power generation plant, battery energy storage system, underground electrical distribution lines, and switchgear. This project includes new transformers, underground electrical distribution, diesel generators, Supervisory Control and Data Acquisition controls, and a microgrid control system to interconnect with the existing on-site wind generation turbine. This project includes all associated electrical cables, communications fiber optic cables, duct banks, transformers, metering, and equipment for power generation, and load management functions to support the power generation, distribution, and communications systems. It also includes all necessary modifications to the power station building facility enclosure to support new equipment configuration and emplacement.					

1. COMPONENT Defense Wide – Space Force	FY 2026 ENERGY RESILIENCE AND CONSERVATION MILITARY CONSTRUCTION PROJECT DATA		2. Date JUNE 2025
3. INSTALLATION AND LOCATION Cape Cod Space Force Station Cape Cod Site #1 Massachusetts		4. PROJECT TITLE: Power Generation and Microgrid	
5. PROGRAM ELEMENT 0904903D	6. CATEGORY CODE 811147	7. PROJECT NUMBER DBHQ211077	8. PROJECT COST (\$000) 124,000
11. REQUIREMENT: N/A ADQT: N/A SUBSTD: N/A			
<u>PROJECT:</u> This project will install additional power generation, battery energy storage system, uninterrupted power source, electrical primary distribution and switchgear with microgrid controls for system interconnection with existing renewable generation. <u>REQUIREMENT:</u> Space Force requires PAVE Phased Array Warning System (PAVE PAWS) radar facility to be in accordance with the Uptime Institute's requirements for a Tier IV facility. Fundamentally, a Tier IV facility provides two isolated paths of power to every piece of equipment or its redundant. This project will provide multiple levels of redundancy for power supply to all critical mission facilities, as well address weakness in the existing on base power distribution grid and create redundancy in the power supplied. <u>CURRENT SITUATION:</u> The existing electrical components are maintained by government contractor. Parts for the equipment are no longer available due to the age of the equipment. Switchgears and breaker models have been discontinued by manufacturer. Spare parts cannot be ordered. Maintenance teams must cannibalize existing equipment to provide functional components. Phasing issues and ground fault conditions exist; lowering the quality and efficiency of power supplied to the radar, computer, and associated systems. Design is paramount in the determination of compatibility, dependability, and efficiency. Several failures have already occurred resulting in damage to the uninterrupted power source circuit board, transformers, breakers, and power distribution components. <u>IMPACT IF NOT PROVIDED:</u> Unplanned or reactive response to loss of power switching equipment (vital to commercial and generator power sources) will remove services provided by PAVE PAWS radar to the United States east coast.

10. DESCRIPTION OF PROPOSED CONSTRUCTION: Construct a resilient microgrid with diverse energy sources to include propane generators, a solar photovoltaic (PV) array mounted on new carports, and a BESS. The PV carport solar array will require new electrical distribution lines and a fiber connection to the microgrid. An existing fence at the proposed location of the microgrid equipment yard will be extended. The PV carport solar system and BESS will include solar panels, racking system, inverters, distribution lines, transformers, controls and communication, AC/DC wiring with conduit, wind breakers/deflectors as necessary and security measures. The PV carport solar array shall have exterior lighting attached so that the parking area is illuminated at night. The project will also require replacement of the Reverse Osmosis (RO)

line starter control panels with reduced voltage soft starters and variable frequency drives for the RO pumps.				
11. REQUIREMENT: N/A ADQT: N/A SUBSTD: N/A <u>PROJECT:</u> This project will construct a secure integrated feeder level microgrid including a smart grid control system, carport mounted PV solar array, propane generators, and a BESS. <u>REQUIREMENT:</u> White Sands Missile Range (WSMR) is a Test and Evaluation Command Installation operated primarily for the support of research, development, testing, and evaluation of weapon and space systems, subsystems, and components. WSMR is almost 3,200 square miles (8,300 km ²) in area and is the largest Army installation in the United States. The requirement is to construct a microgrid system capable of islanding key facilities in the Stallion Range area, which is approximately 100 miles north of the main installation campus, to support 12 facilities. Four of the 12 facilities in the Stallion area are mission critical. The microgrid system will be on a government-owned electrical distribution line, downstream from the electrical distribution line owned by Socorro Electric Cooperative. This project will reduce downtime from power outages, improve energy security, and enhance resilience for the Stallion Range area. As a voltage drop is detected on the main Socorro Electric Cooperative power line, the microgrid controller will direct the isolation breaker switches to activate (close and/or open according to the control algorithms). The microgrid controller will manage the power sources and supply power to critical facilities using the propane generators and/or PV array, and/or battery energy storage system (BESS), as available and required. The PV will operate whenever conditions are appropriate to generate power, especially during high peak times to reduce demand charges. <u>CURRENT SITUATION:</u> The Stallion main cantonment area is fed power from Socorro Electric Cooperative's electrical power line. Over the years the area has had poor power quality and reliability problems. The utility has reported 41 outages in the past 5 years, averaging 8.2 annual outages. The average duration of the reported outages was 5 hours and 32 minutes. Some of the reasons for the outages have included wind, broken poles, snow/ice, and lightning damage. The Installation Energy Plan indicated that a short-term need for Stallion was more power and capital investments to improve the assured access of resource supply, resource usage and cost, and infrastructure condition. In addition, it noted that along

10. DESCRIPTION OF PROPOSED CONSTRUCTION: Construct a resilient microgrid with diverse energy sources to include diesel generator(s) for emergency operations with fuel storage and fuel polishing system, a fixed-tilt ground mounted photovoltaic (PV) solar array along with a Battery Energy Storage System (BESS). The microgrid system will be capable of islanding the Security Operations Training Facility (SOTF) compound from the Fort Bragg distribution system and providing resilient power to critical loads with new generation sources. The microgrid system will include a master controller, synchronization controllers, automatic

3. INSTALLATION AND LOCATION Fort Bragg North Carolina			4. PROJECT TITLE: Power Generation and Microgrid	
5. PROGRAM ELEMENT 0904903D	6. CATEGORY CODE 81122	7. PROJECT NUMBER 100873	8. PROJECT COST (\$000) 80,000	
transfer switches, transformers, reclosers, inverters, rectifiers, underground electrical with conduit, and information systems. Protective relay controls will be added to the existing diesel generator so that it may be incorporated into the microgrid. The existing uninterruptable power supply systems will also be incorporated into the new microgrid. The microgrid will be installed on a closed restricted network. The isolating switches will isolate a portion of the grid by interfacing with an existing Supervisory Control and Data Acquisition system. Project will also include an interconnect agreement with the Privatized Utility Provider Sandhills Utility Services, Limited Liability Corporation (LLC) (Sandhills).				
11. REQUIREMENT: N/A ADQT: N/A SUBSTD: N/A <u>PROJECT:</u> Construct on-site power generation with a microgrid system capable of islanding the SOTF compound from the Fort Bragg distribution system and providing resilient power for critical loads during utility outages. <u>REQUIREMENT:</u> SOTF mission is to develop and employ the world's finest Special Operation Forces (SOF) to conduct global special operations and activities as part of the Joint Force, in concert with the U.S Government Interagency, Allies, and Partners, to support persistent, networked, and distributed combatant command operations and campaigns against state and non-state actors all to protect and advance U.S policies and objectives. To maintain mission readiness, the critical mission identified must be operable during an extended grid outage. Any power disruption of the utility grid lasting longer than two to four days would have a negative impact on the critical missions of study, development, training, and execution of special operations missions worldwide. The microgrid will provide power to critical missions within the SOTF compound during an electrical outage for a command center, data facilities, headquarters facility, critical unit facilities, and logistics facilities. The microgrid supports 100% of mission critical load for SOTF. <u>CURRENT SITUATION:</u> SOTF existing power is provided by two separate substation circuits via electrical infrastructure. The electrical infrastructure has been privatized to Sandhills. Sandhills owns, operates, and maintains the electrical infrastructure on the SOTF compound. During grid outages, building level backup diesel generators provide temporary power. The existing generators are not designed to run full load during a prolonged outage event. An independent power source is required to reduce the potential risk to SOTF from electrical interruptions. The project addresses existing deficiencies in the electrical system and

will reduce the total amount of greenhouse gas output. The project will ensure continuity of operations and mission command during manmade and natural emergencies resulting from an extended grid outage and will support SOTF's ability to recover and execute its direct support to the Army and DoD missions. <u>IMPACT IF NOT PROVIDED:</u> The lack of an independent power source from the grid will inhibit SOTF's ability to recover after known natural and man-made vulnerabilities such as cyber-attacks on the power grid and will not be able to sustain mission critical facilities for at least 14 days during grid outages.

10. DESCRIPTION OF PROPOSED CONSTRUCTION: Construct a secure, integrated, feeder-level Water Microgrid (WMG) capable of islanding the water and electrical service of the Camp Swift's TA-1 cantonment area in support of 3,000 Texas Army National Guard (TXANG) soldiers for 14 days of operations. The water microgrid will harvest, purify, and distribute water across Camp Swift under its own power. The water microgrid system will include a natural gas generator, a photovoltaic (PV) solar array, and a Battery Energy Storage System (BESS). The microgrid system will include a master microgrid controller, synchronization controllers, and automatic transfer switches controlling the generation resources within Camp Swift. The water distribution infrastructure will integrate into the existing water distribution piping infrastructure behind

3. INSTALLATION AND LOCATION Camp Swift Texas		4. PROJECT TITLE: Smart Water Grid		
5. PROGRAM ELEMENT 0904903D	6. CATEGORY CODE 81122	7. PROJECT NUMBER 100354	8. PROJECT COST (\$000) 19,800	
the existing municipal owned/managed water meters. The water for the water microgrid will be sourced and stored from a single water well, and a storage tank is proposed to be located in the southwest corner of the cantonment area of TA-1.				
11. REQUIREMENT: N/A ADQT: N/A SUBSTD: N/A				
<u>PROJECT:</u> Construct a secure, integrated, feeder-level WMG using an intelligent grid control system that will allow the WMG to dynamically manage onsite water resources and match electricity generation to meet critical load requirements of Camp Swift. <u>REQUIREMENT:</u> Camp Swift is the primary capability projection platform for both overseas contingency operations and defense support to civil authorities (DSCA) operations for the TXARNG. It supports numerous mission-critical functions, including pre-mission preparation, pre-deployment training, reception, staging, onward integration (RSOI), mission command, logistical support activities, and life support functions. Besides supporting numerous mission critical functions, Camp Swift hosts several high operational tempo (OPTEMPO) units and capabilities, including the 272nd Engineer Vertical Construction Company. The Water Microgrid will integrate with the microgrid and Building Automation and Controls/Utility Monitoring and Controls System Program to increase the overall resilience and enhance the readiness of the TXARNG through improved mission assurance. <u>CURRENT SITUATION:</u> The site of this project on Camp Swift is owned by the Department of Army and operated by the TXARNG. Camp Swift currently purchases its water from Aqua Water Supply Corporation. According to the TXARNG Installation Energy and Water Plan (IEWP), the installation has multiple water utility connection points at each cantonment area. TA-1 has suffered from sewage and water pressure challenges. Water pressure has reduced over time in the area and has therefore led to issues with backed-up sewers. Camp Swift received a failing rating for having the ability, technology, equipment, and energy source available on-site to supply the potable water needed to support critical missions for a minimum of 14 days. Camp Swift does not have access to a contingency water supply and received a failing rating when assessing the installation's ratio of water demand compared to it available primary municipal provided supply. The current water management infrastructure supporting Camp Swift does not incorporate/utilize any cybersecurity in the controls of the system. The overall condition of the installation's water main received a failing rating that imposes an "unacceptable risk" to the water security of the installation.				

1. COMPONENT Defense Wide – Army National Guard	FY 2026 ENERGY RESILIENCE AND CONSERVATION MILITARY CONSTRUCTION PROJECT DATA			2. Date JUNE 2025
3. INSTALLATION AND LOCATION Camp Swift Texas		4. PROJECT TITLE: Smart Water Grid		
5. PROGRAM ELEMENT 0904903D	6. CATEGORY CODE 81122	7. PROJECT NUMBER 100354	8. PROJECT COST (\$000) 19,800	
IMPACT IF NOT PROVIDED: The increased frequency of drought, forest fires, higher average temperatures, increased intensity and duration of freezing weather, and the increased potential for electrical outages in the future require immediate action. Without this project, the TXARNG will be at significant risk for not effectively performing mission-critical functions to support Defense Support to Civil Authorities, Civil Support, or Contingency Operation missions during municipal water and electrical service outages that impact Camp Swift. The water security and resilience of the Water Microgrid will significantly mitigate known vulnerabilities. The Water Microgrid will ensure mission-critical functions can be performed during power or water utility outage.				
12. SUPPLEMENTAL DATA: A. Estimated Execution Data: (1) Acquisition Strategy: Design Bid Build (2) Design Data: (a) Design or Request for Proposal (RFP) Started: (b) Percent of Design Completed as of Jan 2024 (BY-2) (c) Percent of Design Completed as of Jan 2025 (BY-1): (d) Design or RFP Complete: (e) Total Design Cost (\$000) (f) Energy Study and/or Life Cycle Analysis performed? and signage. Special foundations are required due to expansive and rocky soils in the area. Heating will be provided from a self-contained system.				
11. REQUIREMENT: N/A ADQT: N/A SUBSTD: N/A				
<u>PROJECT:</u> Construct a Central Energy Plant for Fort Cavazos Phantom East District. <u>REQUIREMENT:</u> The Army has undertaken an effort to have Army mission owners rate all Army real property, with “tier one” facilities being the most critical to current operational requirements. The project will support 24 facilities performing critical power projection and mobilization mission functions at Fort Cavazos, including barracks and multiple brigade and company headquarters buildings. This project will reduce Fort Cavazos’ energy use and increase energy resilience by providing service to several tier one facilities from one central location. This project would result in a significant energy savings and help alleviate the reliability and assured access challenges of maintaining 24 separate mechanical systems. The cold-water piping distribution system and centralized equipment will be sized to accommodate the 24 buildings and will also account for future expansion as 6 additional buildings could be added after building upgrades are made in the future. <u>CURRENT SITUATION:</u> Currently there are 24 air-cooled chillers designated to serve one facility each. The current air-cooled chillers are past or nearing their useful design life and subject to failure. Although a chilled water central energy plant will consist of larger equipment, this project will distribute the redundancy requirement for thermal energy equipment over larger number of users, providing increased redundancy, reliability, and efficiency at a fraction of the cost. The existing 24 sites lack redundancy and increase the preventative maintenance requirement on the installation. Currently, preventative maintenance is required on 24 separate pieces of equipment scattered in different locations. When a piece of equipment fails, an emergency repair is necessary due to the lack of redundancy in the systems. A CEP would require preventative maintenance on 6 separate pieces of equipment in a consolidated location and would allow a more reasonable response time to equipment failures due to the added redundancy. <u>IMPACT IF NOT PROVIDED:</u> Fort Cavazos continues to experience reliability and maintenance issues in meeting the thermal energy requirements to mission essential critical facilities supporting Power Projection and Mobilization missions.

<u>PROJECT:</u> Install a new microgrid system at Camp Williams that will provide resilient power for critical loads by constructing a new wind turbine, natural gas generators and BESS and incorporating existing power generating assets. <u>REQUIREMENT:</u> Camp Williams is the single Emergency Operations Center for the State of Utah for Defense Support of Civil Authorities Contingency Operations along the Wasatch Front. In the event of a grid power outage the Camp Williams Contingency Plan calls for up to 100 critical buildings to receive microgrid islanded power. Buildings include the Joint Operations Center, armories, administrative buildings, and barracks. This project is a key element in the Utah Army National Guard (UTARNG) strategic energy security and resilience masterplan. It will allow the UTARNG to support domestic emergencies, training and operations, and required critical missions during extreme times of power failure or catastrophe. The energy produced will support critical mission facilities' requirements and add surety to electrical supply. It also aids in preventing Camp Williams from being affected by power issues that plague the current grid system. The project implements Federal and state mandates for clean energy, clean air and delivering secure and long-term saving in utility costs. The microgrid, generators and renewable energy will also be used to shave peak demand as well as give Camp Williams assured access to the reliable energy sources it needs to meet contingency and mission essential requirements. <u>CURRENT SITUATION:</u> The site of this project on Camp Williams is owned by the Utah State Armory Board and operated by the Utah Army National Guard and federally supported. Upon completion of construction, the improvements will become State property. The current system does not provide any backup redundancy. Camp Williams relies almost solely on the local power grid for supply. <u>IMPACT IF NOT PROVIDED:</u> If not provided, Camp Williams will have no electrical security in case of failure of local grid system. Camp Williams is the major emergency site for Utah and the Wasatch Front. Without this project, Camp Williams will face critical deficiencies and cannot operate in times of emergency.

10. DESCRIPTION OF PROPOSED CONSTRUCTION: Construct a resilient microgrid with diverse energy sources to include two diesel fuel generators with additional fuel storage, a battery energy storage system (BESS), and a solar photovoltaic (PV) to provide daily onsite renewable energy generation to offset incoming power from the local utility. Additionally, this project will also include, and a microgrid controller to control all energy generation assets and manage electrical loads. This project upgrades of the medium voltage switchgear at Storck Barrack that is required for microgrid operation and installation of solar PV power production, BESS, and generator power output. This microgrid system will connect and distribute power on a government-owned electrical distribution system within the fence line of the installation by

connecting to the existing electrical distribution loop, thereby providing resilient power to 100% of the critical facilities at Storck Barracks. The solar PV system will include ground mount solar array(s), rooftop solar, and/or multiple semi-permanent carport/canopy type solar (PV) systems. These solar PV systems shall include all necessary mounting structures, solar panels, racking systems, inverters, transformers, controls, all necessary electrical and communication wiring, as well as any other minor equipment to allow proper functionality as part of a robust microgrid. This microgrid will have the ability to charge the BESS from utility power, the solar PV system, or the diesel fuel power generators. As part of the solar PV assemblies, lighting will be included with photocell controls to provide additional lighting in those areas. Due to the upcoming stationing actions at the installation along with the space limitations, any PV carport/canopy structures should be capable of being relocated, if necessary.				
11. REQUIREMENT: N/A ADQT: N/A SUBSTD: N/A <u>PROJECT:</u> Construct two prime power rated, substation-level generators with fuel storage, multiple photovoltaic systems, a BESS and a microgrid control system. <u>REQUIREMENT:</u> USAG Ansbach functions as an Army Power Projection Platform (PPP) and Noncombatant Evacuation Operation (NEO) in the state of Bavaria, Germany. As a PPP and NEO, USAG Ansbach Storck Barracks must quickly deploy service members, equipment, and supplies to strategically significant areas of the world in support of National Defense. It is critical that USAG Ansbach's transportation and support operations are functional and secure to conduct its mission. Its primary missions include rotary aircraft operations and maintenance with the ability to conduct combat and humanitarian airlifts to any location in Europe. Through implementation of this project, multiple technologies will be integrated to provide resilient on-site, renewable power generations, with storage, and controlled distribution while adding redundancy and flexibility with diesel power generators. The BESS will provide power the installation during a utility outage while generators start, load, and supply buildings for baseload electricity needs for extended periods. The microgrid controls will have the capability to allow the BESS to provide any additional power requirements not provided by the generators. The microgrid will also be capable of charging the BESS via the utility electrical feed, generators, or solar PV sources. The BESS can also assist with correcting power quality during solar PV production periods. All equipment and the system will undergo commissioning and pass all performance verification testing including a black start exercise.				

1. COMPONENT Defense Wide – Army Active		FY 2026 ENERGY RESILIENCE AND CONSERVATION MILITARY CONSTRUCTION PROJECT DATA		2. Date JUNE 2025
3. INSTALLATION AND LOCATION United States Army Garrison Ansbach (Storck Barracks)			4. Project Title: Power Generation and Microgrid	
5. PROGRAM ELEMENT 0904903D	6. CATEGORY CODE 81122	7. PROJECT NUMBER 102287	8. PROJECT COST (\$000) 73,000	
<u>CURRENT SITUATION:</u> In an electrical outage, critical facilities either have no backup power system or rely on diesel generators or uninterruptable power supplies (UPSs), which can only sustain those facilities for several hours to a few days before refueling is required. All current backup generators are configured to operate solely on diesel fuel. There is limited bulk diesel fuel storage onsite that are dedicated to generators during an extended outage. Refueling is limited therefore, during an extended outage, many critical facilities would eventually lose power. All the existing generators and UPSs are building level only; none are grid-tied to the installation's internal electrical distribution system. Therefore, power produced by these sources cannot be distributed around the installation. Further, the generators that are in place currently are rated for short-term backup duty and not sustained operation. <u>IMPACT IF NOT PROVIDED:</u> If USAG Ansbach is unable to execute any of its critical missions, America's response to a global situation that threatens our National Security will be compromised. Therefore, this project is critical for mission assurance at Storck Barracks and will reduce the risk and consequences of electrical interruptions by providing improved energy resilience.				
12. SUPPLEMENTAL DATA: A. appropriations: N/A C. Project Type: ENERGY RESILIENCE D. Rationale IAW 10 USC 2914: The project will provide energy resilience to USAG Ansbach’s critical mission operations at the Storck Barracks campus for a minimum of 14 days. The project directly supports USAG Ansbach as a training and mobilization center for the rotational RAF. USAG Ansbach functions as an Army PPP and supports NEO missions in the state of Bavaria, Germany. Its primary missions include rotary aircraft operations and maintenance with the ability to conduct combat and humanitarian airlift to any location in Europe. USAG Ansbach has a continuing need to secure sufficient resilient power at the Storck Barracks campus to support the transportation and other mission related infrastructure to ensure mission continuity. Without resilient power for the critical-to-flight safety, or without coordinated and powered instrument landing systems, rotary aircraft would be unable to safely approach and land at Storck Barracks.

and Geographic Combatant Commander policies and directive per Unified Facilities Criteria (UFC) for DoD Minimum Antiterrorism Standards for Buildings. Built in equipment includes BESS, transformer, switchgear for PV/BESS, isolation switches, diesel storage tank, and generator automatic transfer switch and switchgear. Special costs include Post Construction Contract Award Services (PCAS) and cybersecurity commissioning. The cybersecurity commissioning cost is to cover the Department of Navy's (DON) cybersecurity requirements as well as DON's in-house costs to review contractor submittals and to implement steps necessary for obtaining Authority to Operate. Operations and maintenance support information is included in this project. Site preparations include site work, concrete slab, chain link fence and gate. Unexploded ordnance and Munitions and Explosives of Concern (MEC) clearance is required for this project. Ground intrusion activities or excavation work will adhere to Joint Region Marianas Explosive Safety Submission.				
11. REQUIREMENT: N/A ADQT: N/A SUBSTD: N/A <u>PROJECT:</u> This project shall construct a microgrid consisting of on-site power generation and energy storage for Naval Magazine's (NAVMAG) critical assets. <u>REQUIREMENT:</u> Provide a reliable, resilient, efficient, and renewable energy backup power generation for critical assets within NAVMAG and to minimize security risks. The new microgrid will provide power to the installation during contingency events by operating in island mode and will improve the energy security and resilience of the base. <u>CURRENT SITUATION:</u> The facilities are fed by various feeders branching off from the main distribution feeder. Existing configuration of the distribution power system does not allow for reliable back-up power generation from Orote Power Plant. Security risks due to the lack of backup power, perimeter fencing, and illumination at NAVMAG require personnel to conduct roving foot patrols. <u>IMPACT IF NOT PROVIDED:</u> Unexpected power outages and/or power quality issues, will continue to effect NAVMAG resulting in an immediate stoppage of mission critical activities and high security risks to the critical facilities. Failure to provide this project would be inconsistent with DoD policy, which states, components shall take necessary steps to ensure energy resilience on military installations.

10. DESCRIPTION OF PROPOSED CONSTRUCTION: Construct a resilient microgrid with diverse energy sources to include natural gas and diesel generators to maximize resilience, a solar photovoltaic (PV) system, and a battery energy storage system (BESS). This project will also include to include associated mechanical and electrical work, utility interconnections, microgrid and other controls, commissioning, and cybersecurity. Supporting work includes site preparation, utilities (e.g., fuel piping and storage to new generation assets), communications infrastructure, associated shipping/offloading costs for the equipment in Japan, and other general requirements (e.g., project management, quality control, safety officer, office trailers, utilities, site cleanup, post construction award services).					
11. REQUIREMENT: N/A		ADQT: N/A		SUBSTD: N/A	

1. COMPONENT Defense Wide – USMC	FY 2026 ENERGY RESILIENCE AND CONSERVATION MILITARY CONSTRUCTION PROJECT DATA			2. Date JUNE 2025
3. INSTALLATION AND LOCATION Marine Corps Air Station (MCAS) Iwakuni Japan			4. PROJECT TITLE: Power Generation and Microgrid	
5. PROGRAM ELEMENT 0904903D	6. CATEGORY CODE 81145	7. PROJECT NUMBER P-1016	8. PROJECT COST (\$000) \$146,800	
<u>PROJECT:</u> This project will install additional power generation, battery energy storage system, utility interconnects, and microgrid controls for system interconnection with existing utilities. <u>REQUIREMENT:</u> As Pacific Air Force's only Contingency Response Group (CRG), the mission of the 36th CRG is to prepare Indo-Pacific Command (INDOPACOM) to rapidly respond to contingencies and establish airbases as directed by the INDOPACOM Commander. MCAS Iwakuni is an air station whose primary mission is to launch and recover aircraft. MCAS Iwakuni is responsible for managing the only Marine Corps operated Air Mobility Command terminal in the Department of Defense. Marines stationed at Iwakuni are expected to be the “First to Fight” in the “First Island Chain.” This level of aviation readiness hinges greatly on having a robust, reliable, and resilient energy supply to provide 24/7 power to critical missions. This project is required to enhance energy efficiency, reliability, and resilience. Additionally, the project will improve cybersecurity in accordance with the Department of Defense and other Marine Corps cybersecurity certification and accreditation requirements. <u>CURRENT SITUATION:</u> MCAS Iwakuni, Japan is located on southeastern tip of Honshu, 427 nautical miles from Pyongyang North Korea. The station receives power generated and delivered by Chugoku Electric Power Company. The installation is vulnerable to natural disasters as an island in the Nishiki river delta within the city of Iwakuni, Yamaguchi Prefecture, Japan. This location is a major cause for concern given ongoing security threats from adversaries and the potential for extreme impacts from typhoons, earthquakes, and other natural events. This project will improve energy security and reliability for critical missions on the flightline. <u>IMPACT IF NOT PROVIDED:</u> MCAS Iwakuni will not be able to ensure extended energy availability to the warfighter in the event of a power disruption without this project. This may result in a temporary shutdown of airfield operations until power is restored.

12. SUPPLEMENTAL DATA: A. Estimated Execution Data: (1) Acquisition Strategy: Design Bid Build (2) Design Data: (a) Design or Request for Proposal (RFP) Started: (b) Percent of Design Completed as of Sep 2024 (c) Percent of Design Completed as of Jan 2025 (d) Design or RFP Complete: (e) Total Design Cost (\$000): (f) Energy Study and/or Life Cycle Analysis performed? (g) Standard or definitive design used? (3) Construction Data: (a) Contract Award: (b) Construction Start: (c) Construction Complete: B. Equipment associated with this project which will be provided from other appropriations: N/A C. Project Type: ENERGY RESILIENCE D. Rationale IAW 10 USC 2914: MCAS Iwakuni's mission is to launch and recover aircraft for two air wings: Carrier Air Wing Five (CVW-5) and Marine Aircraft Group 12 (MAG-12). The Station's flight line has multiple critical functions and must remain operational 24/7. This project will enhance mission assurance by providing of onsite generation for the flight line as well as a reliable, resilient, efficient, and cyber secure microgrid. This project, in conjunction with other programmed projects, will provide the Station the capability to operate 100% of the flight line's critical facilities for 14+ days without commercial power. 3. INSTALLATION AND LOCATION VARIOUS		4. PROJECT TITLE: UNSPECIFIED MINOR CONSTRUCTION		
5. PROGRAM ELEMENT N/A	6. CATEGORY CODE N/A	7. PROJECT NUMBER N/A	8. PROJECT COST (\$000) 122,951	
9. COST ESTIMATES				
ITEM	U/M	QUANTITY	UNIT COST	COST (\$000)
<u>Unspecified Minor Construction</u>				122,951
Defense Logistics Agency				(3,084)
Missile Defense Agency				(4,140)
National Security Agency				(6,000)
Joint Chiefs of Staff				(4,727)
U.S. Special Operations Command (USSOCOM)				(25,000)
USSOCOM Support to U.S. Indo-Pacific Command				(77,000)
Defense-Wide				(3,000)
10. DESCRIPTION OF PROPOSED CONSTRUCTION: Funds to be utilized for construction activities authorized under section 2805, Title 10 of United States Code, by the Defense Agencies and Secretary of Defense activities.				
11. REQUIREMENT: New and expanded facilities supporting Defense-wide missions with a cost up to \$9,000,000 adjusted for location (not to exceed \$14,000,000) within the U.S. and territories. The amount requested is considered a reasonable estimate to provide the numerous Defense Agencies and Activities flexibility in managing their construction programs. The minor construction activities include the Joint Chiefs of Staff sponsored exercise related construction program.				
12. Supplemental Data: N/A

Joint Chiefs of Staff				(2,000)
Washington Headquarters Services				(14,851)
Defense-Wide				(65,240)
10. DESCRIPTION OF PROPOSED CONSTRUCTION: Funds to be utilized under Title 10 USC 2807 by the Defense Agencies and Secretary of Defense activities for architectural and engineering services and construction design in connection with military construction projects including specified projects, standing authority construction (including unspecified minor construction) projects, land appraisals, and other projects as directed. Engineering investigations, such as field surveys and foundation exploration, will be undertaken as necessary.				
11. REQUIREMENT: All construction projects must be based on sound engineering and the best cost data available. These costs for architectural and engineering services and construction design are not provided for in the construction project cost estimates except in those where Design/Build contracting method is used. Defense level activities covers design for various defense activities, design associated with exercise related construction, and covers efforts across the Department to standardize and distribute uniform design criteria. Energy Resilience and Conservation Investment Program (ERCIP) Design requested within Defense-Wide activity provides the planning and design required to support ERCIP projects.
