A. Mission Description and Budget Item Justification

This program is executed via the Joint Directed Energy Transition Office (JDETO) in alignment with the Department of Defense Directed Energy Roadmap, as well as other strategic guidance. Section 219 of the 2017 National Defense Authorization Act designated a senior official for directed energy and redesignated a legacy office as the JDETO with reporting to the senior official. Currently, the Principal Director for Directed Energy serves as this senior official and updates the Department of Defense Directed Energy Roadmap on an annual basis. The goal of this program, in turn, is to support the Department's initiatives in directed energy to build a sustainable and long-term advantage, in addition to a resilient Joint force and defense ecosystem.

This program funds basic research in directed energy to enable game-changing high energy laser and high power microwave technologies. These efforts provide fundamental scientific knowledge to support future Department of Defense directed energy weapon systems. In practice, directed energy weapon systems have many potential advantages, including speed-of-light time-to-target, high precision, low incremental cost per kill, and a magazine that is recharged through on-board, fuel-based power and thermal management systems that reduce logistics requirements in contrast to stocks of munitions or warheads. As a result, directed energy weapon systems have the potential to perform a wide variety of military missions. Activities conducted under this program are generally chosen for their potential to grow the directed energy workforce with next-generation scientists and engineers.

This program is part of an overall Department of Defense strategy in Joint directed energy basic research. Efforts within this program will leverage multi-disciplinary university research institutes (both domestic and international) to stimulate student interest in directed energy and encourage research in topics related to high energy laser and high power microwave technologies. This program builds upon other investments in directed energy basic research by the Services and Agencies to harmonize Department efforts and eliminate duplication. In support, efforts in this program have been coordinated with the Department of Defense Directed Energy and Non-Lethal Weapons Science and Technology Community of Interest.

This program is executed via a technical program within the JDETO referred to as the Directed Energy Center of Excellence Program, which enables (1) basic research in directed energy technology that supports workforce development with university partners and (2) international collaboration between universities in the United States and partner countries. Note that (1) and (2) are in alignment with the near-, mid-, and long-term goals of Department of Defense Directed Energy Roadmap and encourage transition.

C. Accomplishments/Planned Programs (\$ in Millions)				FY 2024	FY 2025	FY 2026
Title: Directed Energy Foundational Research				15.848	16.518	-
Description: Improve the fundamental understanding and modeling of high energy laser and high power microwave sources and devices. Improve the fundamental understanding and modeling of beam control technologies as they relate to high energy laser applications and high power microwaves. Conduct research in atmospheric characterization, metrology, control systems, algorithms, waveguides, antennas and beam control component technology.						
FY 2025 Plans:						
- Investigate innovative laser technologies that show potential in power scalability for high energy laser applications. Monitor national and international efforts to leverage technology advancements. Conduct foundational research on laser technologies to gain more understanding on scalability and utility.						
- Investigate innovative microwave technologies that show potential in power scalability for high power microwave applications. Monitor national and international efforts to leverage technology advancements. Conduct foundational research on microwave technologies to gain more understanding on scalability and utility.						
- Investigate innovative beam control phenomenology and methods of measuring, modeling, and manipulating laser and microwave beam propagation. Investigate high energy laser and high power microwave architectures with the potential to revolutionize performance. Leverage international research developments and technology advancements where possible.						
FY 2025 to FY 2026 Increase/Decrease Statement:

Exhibit R-2, RDT&E Budget Item Justification: PB 2026 Office of the Secretary Of Defense		Date: June 2025		
Appropriation/Budget Activity 0400: <i>Research, Development, Test & Evaluation, Defense-Wide / BA 1: Basic Research</i>		R-1 Program Element (Number/Name) PE 0601108D8Z / <i>High Energy Laser Research Initiatives</i>		
C. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025	FY 2026
The decrease of \$16.518 million from FY 2025 to FY 2026 is a realignment of funding from Directed Energy Foundational Research to a technical program within the JDETO referred to as the Directed Energy Center of Excellence Program in the amount of \$16.867 million, as well as minor budget fluctuations in the amount of \$0.349 million. This realignment leverages and builds upon previous and current efforts and supports the near-, mid-, and long-term goals of the Department of Defense Directed Energy Roadmap.				
Title: Directed Energy Center of Excellence Program Description: The Directed Energy Center of Excellence Program is a technical program within the JDETO that enables (1) basic research in directed energy technology that supports workforce development with university partners and (2) international collaboration between universities in the United States and partner countries. Note that (1) and (2) are in alignment with the near-, mid-, and long-term goals of the Department of Defense Directed Energy Roadmap. FY 2026 Plans: - Workforce development: Investigate innovative high energy laser and high power microwave technologies that show potential in scalability for military applications. Monitor national and international efforts to leverage technology advancements. Conduct basic research on these technologies to gain more understanding on scalability. Complete a workforce development study to determine the long-term needs with respect to the directed energy workforce. Leverage a new Joint Directed Energy Consortium to build a sense of community and award new university efforts with an emphasis on educating next-generation scientists and engineers. Also leverage and refine a due-diligence process to assess and mitigate the risk associated with performing basic research towards a critical technology with university performers. - International collaboration: Team with external organizations like the European Office of Aerospace R&D or Asia Office of Aerospace R&D of the Air Force Office of Scientific Research to fund university grants. These grants will emphasize collaboration between national and international universities to obtain synergy in basic research between partner nations. These grants will also emphasize foundational research in directed energy. FY 2025 to FY 2026 Increase/Decrease Statement: The decrease of \$0.05 million is due to an Economic Adjustment from FY 2025 to FY 2026.		0.000	-	16.817

A. Mission Description and Budget Item Justification

Basic research is a process of exploration and discovery, yielding disruptive, non-incremental advances that can improve or radically change military capabilities, strategy, and operations, towards realizing overwhelming technology advantage against competitors. It is a mission-oriented activity that provides the Department of Defense (DoD) with a deep and broad awareness of research areas to explore and invest in. These areas span a wide range of fundamental physical sciences (e.g., chemistry, biology, materials, mathematics, computer science, etc.) as well as fundamental research in engineering sciences that can catalyze the emergence of new technologies at scale (e.g., new materials or information systems). Basic research generates the critical technical knowledge that enables the ideation, design and realization of future DoD capabilities, including the exploration of new concepts of warfare. Basic research also sustains the scientific and engineering communities and creates new generations of a talented workforce that can support the DoD for the next decades. The Basic Research Initiatives Program includes programs and pilots designed to accomplish these objectives.

A. Mission Description and Budget Item Justification

The Basic Research Initiatives Project supports oversight of basic research throughout the Department, as well as initiatives and pilot programs, in order to create conditions for defense basic research investments to produce high-payoff, transformative scientific breakthroughs for the Department. The project supports the five Basic Research Office (BRO) strategic goals: (1) support the technology priorities set by the Department of Defense (OSD); (2) coordinate and conduct oversight of DoD-wide basic research programs; (3) improve the science and engineering workforce via tailored programs and public outreach; (4) enhance university-industry and university-government collaboration; and (5) engage with the academic research community and international partners. This Project includes Strategic Support for Basic Research (SSBR), which sustains the operations of the BRO and creates conditions for research policies and initiatives to be formulated and instantiated. It also includes several pilot programs and initiatives, including the Defense Established Program to Stimulate Competitive Research (DEPSCoR), international research collaboration, and cross-agency joint programs.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Strategic Support for Basic Research (SSBR)	8.385	20.398	11.551
Description: SSBR is the core of the Basic Research Initiatives Project. It supports the operations of the Basic Research Office in the oversight of basic research, implementation of policies, and other activities to create and optimize the necessary conditions for defense basic research investments to produce high-payoff, transformative scientific breakthroughs for the Department. It provides essential support to accomplish the priorities of the BRO.			
FY 2025 Plans: Continues the scope of activities performed during FY 2024 in support of basic research (SSBR), and extends them to include: 1) the Bilateral Academic Research Initiative (BARI) program to leverage intellectual and laboratory capabilities in allied and partner nations and enhance the breadth and depth of selected basic research directions in areas of high importance for future DoD missions; 2) a program on computational Modeling, Artificial Intelligence, and wargaming for Decision Support (MAIDS), designed to discover and develop revolutionary and fundamental approaches to the understanding and prediction of security-relevant scenarios at multiple scales; 3) Other pilot programs aimed at enhancing discovery of scientific breakthroughs, workforce development and university-government or university-industry engagements, or fundamental research toward the creation of revolutionary manufacturing capabilities and infrastructure. These pilot programs lay down the foundations for knowledge creation and exploration of new S&T strategic directions and capabilities. The BARI program will start four new strategic projects in FY 2025: one with Finland on future wireless communication technology and architecture; one with South Korea (ROK) on autonomous soft robotics with new, enabling materials and sensors; two on quantum algorithms, respectively with the UK and Australia, the first joint academic research projects for AUKUS-Pillar 2. Other BARI projects will be investigated and negotiated

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
in FY 2025. Starting in FY 2025, the MAIDS program will broaden research in mathematical, computer and technical sciences to enable the development of future analytical and predictive tools to support asymmetric and irregular warfare. FY 2026 Plans: Continue the Bilateral Academic Research Initiative (BARI) with South Korea on advanced robotics, and build an academia-industry network to accelerate technology development, for new generations of humanoid and other robots to counter China's lead. Continue the BARI program with Finland on future wireless/IoT technology that could support JADC2. Continue AUKUS-coordinated research efforts based on a BARI-like framework. Start university-government-industry collaboration program on selected research topics (current targets: quantum computing, analytical and AI-supported wargaming, optical meta-computing), leveraging BFRST program of code 060 to create knowledge base of military operations and challenges from the COCOMS and define and execute research topics that need deep exploration by university researchers. SSBR includes a broad scope of continued activities to support DoD mission-oriented basic research, explore pilot programs aimed at accelerating the discovery and transition of scientific breakthroughs, and develop strategies for S&T workforce development. These activities include research programs, technical exchanges and workshops. FY 2025 to FY 2026 Increase/Decrease Statement: The decrease of \$8.847 million between FY 2025 and FY 2026 reflects \$5 million of support to DEPSCoR and \$3.847 million to meet DoD overall funding reductions.			
Title: Defense Experimental Program to Stimulate Competitive Research (DEPSCoR) Description: The DEPSCoR objectives are to enhance the participation in the DoD-funded scientific research activities, by institutions of higher education (IHE) from States and Territories that are under-represented in that DoD research ecosystem. The DEPSCoR program aims to support IHEs in eligible States/Territories to: 1) develop, plan, and execute competitively-based science and engineering (S&E) research that is relevant to the DoD mission; 2) to increase the number of university researchers in eligible States/Territories capable of performing this research; 3) increase the probability of long-term growth in S&E capability in the eligible States/Territories. The current DEPSCoR program has three components: 1) a Research Collaboration competition for individual researcher development; 2) a Capacity Building DEPSCoR competition for long-term growth; 3) outreach events to explain the program and encourage FY 2026 Plans: Execution of the three program components and extend the outreach activities, including program reviews and activities for extending the collaboration network. FY 2025 to FY 2026 Increase/Decrease Statement:		0.000	-
			5.000

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2026 Office of the Secretary Of Defense			Date: June 2025

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026
The decrease of \$5.000 million between FY 2025 and FY 2026 reflects the stabilization into a new component of the project. This will allow planning, more efficient use of resources, and greater collaboration opportunities between selected IHEs and the rest of the DoD-funded eco-system.					
Accomplishments/Planned Programs Subtotals			8.385	20.398	16.551
			FY 2024	FY 2025	
<i>Congressional Add:</i> Defense Experimental Program to Stimulate Competitive Research (DEPSCoR)			20.000	-	
<i>FY 2024 Accomplishments:</i> Continue and expand efforts to connect academic researchers in underrepresented states to DoD research problems. The increased funding for DEPSCoR will allow the Department to reach more universities and researchers capable of performing DoD research, and allow for more awards for both research collaborations and capacity building opportunities. In FY 2024, 38 states/territories are eligible to participate in DEPSCoR based on congressionally directed criteria, with New Jersey eligible to participate in DEPSCoR for the first time. On April 16, 2024, the DEPSCoR program held an informational webinar to educate the academic research community about the fiscal year 2024 Defense Established Program to Stimulate Competitive Research (DEPSCoR) funding opportunity announcements. DEPSCoR in FY 2024 has solicited for two FY 2024 programs: a Research Collaboration competition to integrate new researchers from DEPSCoR-eligible States/Territories into the DoD Research Enterprise through mentoring and collaboration with researchers that have previously worked within the unique DoD research ecosystem, and a Capacity Building competition focused on supporting the strategic objectives of Institutes of Higher Education in DEPSCoR States/Territories to achieve basic research excellence in areas of high relevance to the DoD.					
<i>Congressional Add:</i> Global Competition Analysis Net Assessment			10.000	-	
<i>FY 2024 Accomplishments:</i> The OUSD(R&E) Basic Research Office established the Global Competitive Analysis Teams (GCAT) program in late FY 2024 as a consortium led by the RAND Corporation. In FY 2025, the GCAT program has been provided with three topics, one on U.S.-China technology competition, one on connected and autonomous vehicles, and one on security in food systems. These topics were developed with input from the White House Office of Science and Technology Policy (OSTP) and the Office of the Director of National Intelligence. The GCAT program provided white paper after a 60 day sprint on connected and autonomous vehicles for OSTP and has made good progress on their other two topics. The Basic Research Office is also coordinating GCAT activities with the Office of Strategic Intelligence and Analysis within OUSD(R&E).

	FY 2024	FY 2025
<i>FY 2024 Accomplishments:</i> This funding will support a new project awarded to a Consortium for DoD Research and STEM Graduate Pathways in Advancing STEM Careers through Education, Networking, and Development (ASCEND). ASCEND is a merit-based, multi-institutional framework model designed to maximize the successful academic and professional progression of students in STEM fields. This multi-pronged approach will include the following components: (1) cohort-based, STEM graduate student application submission and fellowship advising, (2) graduate student fellowships, (3) faculty leadership and DOD-focused leadership programming (4) competitive DOD funded research opportunities focused on critical technology areas in support of national security, and research-informed science practices and interventions. It will focus on key touchpoints in the graduate student educational pathway, where students are geared towards attaining a PhD, pursuing scientific careers and/or the professoriate. All opportunities embedded in each component are available to all students and/or faculty in the participating institutions and based on competition and merit. ASCEND's four-pronged approach will enable critical contributions to current and long-term national security needs.

A. Mission Description and Budget Item Justification

The Minerva Research Initiative supported social science research aimed at improving our basic understanding of security, broadly defined. All supported projects were university-based and unclassified. The goal was to improve DoD's basic understanding of the social, cultural, behavioral, and political forces that shape regions of the world of strategic importance to the U.S.

B. Accomplishments/Planned Programs (\$ in Millions)	FY 2024	FY 2025	FY 2026
Title: Minerva Research Initiative (MRI) Description: The Minerva Research Initiative included three primary components: (1) a university-based social science basic research grant program, funded in partnership with Air Force, Army, and Navy University Research Initiatives; (2) the Defense Education and Civilian University Research (DECUR) Partnership program for professional military education (PME) institutions; (3) a collaboration with the Congressionally-established USIP to award research support to advanced graduate students and early career scholars working on security and peace. Pursuant leadership guidance, the program was terminated for no longer effectuating agency priorities as found in 2 CFR 200.340(a)(4) as incorporated into the DoD Research and Development General Terms and Conditions. FY 2025 Plans: Pursuant leadership guidance, the program was terminated for no longer effectuating agency priorities as found in 2 CFR 200.340(a)(4) as incorporated into the DoD Research and Development General Terms and Conditions. FY 2026 Plans: Pursuant leadership guidance, the program was terminated for no longer effectuating agency priorities as found in 2 CFR 200.340(a)(4) as incorporated into the DoD Research and Development General Terms and Conditions. FY 2025 to FY 2026 Increase/Decrease Statement: The increase of \$0.146 million between FY 2025 and FY 2026 reflects minor budget fluctuations.	15.610	17.053	17.199

A. Mission Description and Budget Item Justification

The Vannevar Bush Faculty Fellowship (VBFF) program supports world-class researchers in scientific areas of critical importance to the DoD and ensures the cultivation of exceptional talent. Fellows' research spans a broad set of emerging scientific areas with transformative potential, including quantum information science, novel engineered materials, cognitive neuroscience and human-machine interfaces, engineering biology, applied and computational mathematics, networks, machine learning and artificial intelligence, manufacturing science, and others. The prestigious research program delivers the most innovative and transformational scientific ideas of relevance to the DoD, from the top scientists in the Nation. The program fosters close connections between academia and the defense science and engineering (S&E) enterprise, a primary goal of Strategic Support for Basic Research (SSBR) efforts. Fellows provide the Department the deep scientific expertise from today's leading research universities and collaborate with defense scientists and engineers. This program actively engages and coordinates basic research across the Department.

The project includes support for the Laboratory-University Collaboration Initiative (LUCI) program, which is designed to team scientists in the DoD laboratories with top academic researchers from the programs sponsored or overseen by the Office of the Secretary of Defense (in particular, the VBFF fellows), in order to collaboratively perform research on a topic of their choice and explore early adoption of the scientific discoveries for military applications, platforms and systems, operations, and strategic roadmaps. Three-year grants allow a deep exchange of ideas between academic and DoD research communities, bring the most recent scientific breakthroughs closer to DoD relevance, and greatly expand the skills and knowledge of the S&E workforce within the laboratories.

The project also supports the Bush Fellows Research Study Team (BRFST) program, designed to allow selected leaders in the academic research community to engage with the DoD at high levels, including briefings from MAJCOMs and site visits to military installations. This program brings deeper understanding of military operations and strategic vision to selected US academic researchers, in order to enhance the creation of out-of-the-box, innovative solutions and the growth of intellectual talent attuned to DoD mission needs. Extension of this program will enhance relevance of university-based research to the military mission.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Vannevar Bush Faculty Fellowship (VBFF) Program	37.137	39.681	48.514
Description: The Vannevar Bush Faculty Fellowship (VBFF) Program ensures the DoD has a research portfolio that supports highly creative, innovative, and productive university researchers. The objectives of the program are to: (1) support scientific research that may lead to extraordinary outcomes of relevance to the DoD; (2) educate and train students and post-doctoral researchers for the defense and national security workforce; (3) foster long-term relationships between university researchers and the Department; (4) familiarize select university researchers and their students with DoD's current and future challenges through research and engagement with DoD-employed scientists; and (5) increase the number of exceptionally talented technical experts contributing to the DoD's mission.

Appropriation/Budget Activity 0400 / 1	R-1 Program Element (Number/Name) PE 0601110D8Z / Basic Research Initiatives	Project (Number/Name) 060 / Vannevar Bush Faculty Fellowship		
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025	FY 2026
The Laboratory-University Collaboration Initiative (LUCI) program incentivizes DoD laboratory researchers to explore fundamentally new areas of research by leveraging the ground-breaking scientific discoveries achieved by the best DoD academic research programs: the VBFF and the Multi-disciplinary University Research Initiative (MURI). Both provide the DoD laboratory scientists with radially new ideas, knowledge and expertise, and the collaboration ensures: a) transfer of such ideas and knowledge to the DoD eco-system; b) exploration of potential transition to the DoD mission; c) training and recruitment of DoD S&T workforce. Typical execution of the VBFF and LUCI programs include the following. Support of 46 Vannevar Bush Fellows and collaborative research efforts with 35 Laboratory-University Collaboration Initiative (LUCI) Fellows from DoD Service Laboratories. Regular review and update of research topic areas with input from DoD S&T community. Executing a competition to select new classes of Vannevar Bush and LUCI Fellows. Organizing and executing the Vannevar Bush annual meeting, along with science communication training. Organizing and conducting site visits to establish communication with new Vannevar Bush Fellows and explain the program objectives and opportunities. Conducting review of LUCI projects in DoD laboratories and evaluating the scientific progress and impacts. FY 2025 Plans: Continue selection and funding of classes for the Vannevar Bush Faculty Fellowship (VBFF) program and the Laboratory University Collaboration Initiative (LUCI) program. FY 2026 Plans: Continue to 1) select and fund classes of the Vannevar Bush Faculty Fellowship (VBFF) program and the Laboratory University Collaboration Initiative (LUCI) program; 2) adjust the awards to correct for inflation; 3) investigate and implement updating the reach of VBFF and LUCI programs to additional fields and service research institutions. Expand the BFRST program to create a systematic exchange of information under secure environment and procedures, to increase leverage of the VBFF Fellow scientific exploration for new technology solutions to DoD challenges, from near-term to far-term. Plans will also explore pilots and prioritize other mechanisms to accelerate the transition of high-impact research into DoD applications through earlier integration with service laboratories and expanded cross-program collaboration. FY 2025 to FY 2026 Increase/Decrease Statement: The increase of \$8.833 million between FY 2025 and FY 2026 reflects a commitment to support the programs and compensate for the loss of purchasing power, and develop new directions and collaborations that can augment DoD workforce development, and accelerate innovation. This includes the \$5.000 million that was transferred at program level.

A. Mission Description and Budget Item Justification

This program supports the Department's strategy to Build Sustainable and Long-Term Advantage and Cultivate the Workforce that the DoD needs.

The National Defense Education Program (NDEP) supports the National Defense Science & Technology Strategy in ensuring the foundations for research and development have the workforce it needs now and into the future, through investments at every level of education. NDEP: (1) Fosters and enhances the Department of Defense's (DoD) ability to develop and access high-quality science, technology, engineering, and mathematics (STEM) talent vital to national defense; (2) Is executed by the Office of the Under Secretary of Defense for Research and Engineering (OUSD(R&E)); (3) Aligns to the Federal STEM Strategy, and addresses critical STEM education and talent development challenges across the PreK-20 education continuum through evidence-based approaches; (4) Activities align with the Department's vision of a diverse STEM talent pool readily accessible to serve our Nation and evolve the Department's competitive edge; (5) Activities engage in assessment and evaluation practices as outlined by the Office of Management and Budget and the Government Accountability Office; and (6) Aligns to the DoD STEM Strategic Plan in support of the National Defense Strategy and the DoD science and technology (S&T) critical technology areas.

NDEP is part of the broader Department-wide effort under DoD STEM, which works collectively with partners from academia, industry non-profit organizations, defense research laboratories and engineering centers, and other government entities to: (1) build strong foundations for STEM literacy; (2) increase inclusion, diversity, and equity in STEM; and (3) prepare the STEM workforce of the future.

NDEP activities provide authentic learning experiences through a variety of education and outreach initiatives in the form of scholarships, internships, enrichment activities, project/research-based competitions, and mentorships through strategic partnerships. The NDEP programs span across all age groups, including Pre-kindergarten through twelfth grade (PreK-12) students and teachers, and postsecondary, undergraduate, and graduate students. The NDEP's portfolio includes: the Science, Mathematics, and Research for Transformation (SMART) scholarship-for-service program; STEM Education and Outreach (E&O) efforts including the Defense STEM Education Consortium (DSEC); and specific Congressionally directed programs, to include the Manufacturing Engineering Education Program (MEEP) per 10 U.S. Code 4843 and broader NDEP funding opportunities in STEM education and workforce development.

The SMART Program enables the Department to transform its STEM workforce while addressing near-term workforce demands. Per 10 U.S. Code 4093, the SMART program awards highly competitive scholarships to undergraduate and graduate students in any of the 24 STEM academic disciplines critical to national security, and

UNCLASSIFIED

Exhibit R-2, RDT&E Budget Item Justification: PB 2026 Office of the Secretary Of Defense		Date: June 2025

hires the students, upon graduation, into DoD's civilian workforce. As part of the SMART experience, scholars engage in internships that allow for relevant hands-on research and work experiences in DoD facilities and international partner research institutions, thereby enhancing their educational experience. The SMART program ensures the Department has a steady infusion of high-quality technical talent, prepared in areas of critical importance, and ready to apply their technical knowledge, skills, and abilities to fulfill the DoD mission. Through an annual competitive SEED grant, SMART offers transitioning Ph.D. scholars an opportunity to establish a foundational research and engineering effort in their area of expertise aligned with a DoD mission or critical technology area and supporting their development into subject matter experts. Additionally, per FY 2021 NDAA Sec. 250, SMART also offers a competitive funding opportunity through the Creative Research & Engineering Advancing Technical Equity in STEM (CREATES) Grant to expand and enhance connections and opportunities between the SMART program, SMART scholars, SMART sponsoring facilities, and students and faculty at Historically Black Colleges and Universities (HBCU), Minority Institutions (MI), Minority Service Institutions (MSI), Tribal Colleges and Universities (TCU) and Women's Colleges (WC). Since its inception in FY 2005, SMART has awarded approximately 5,200 scholarships to students pursuing undergraduate and graduate STEM degrees. To date, over 3,400 scholars have completed their academic pursuit and transitioned into DoD employment. More than 1,300 scholars are currently pursuing their SMART-funded degrees. Over 2,000 participants have successfully completed the program through their DoD Service commitment. NDEP's STEM E&O activities will continue to engage military-connected students in collaboration with the Department of Defense Education Activity (DoDEA), external partners, and other stakeholders to support the preparation of dependents of members of the armed forces for careers in STEM as enacted under 10 U.S. Code 2192(b). Additionally, where feasible, NDEP activities will also support the Supporting Veterans in STEM Careers Act, enacted in FY 2020. Per 10 U.S. Code 2192, NDEP's STEM E&O activities support a cohesive and coordinated approach by providing a continuum of preK to career opportunities for students, educators (formal and informal), administrators, and schools, especially for military-connected students. The primary effort under NDEP STEM E&O is the Defense STEM Education Consortium (DSEC), which is a consortium-model approach, leveraging a collaborative ecosystem of partners that aims to develop America's STEM workforce of the future ready to support the national security mission and the Warfighter. The DSEC is a multi-year investment through a cooperative agreement award comprised of a consortium of program partners that have a national reach, as well as regionally focused activities leveraging evidence-based approaches. In FY2025, about 40% of SMART Scholarship recipients previously participated in preK-12 programs such as those funded under DSEC. DSEC is designed to evolve over time, enabling the Department and the consortium the flexibility to bring in new strategic partners to address emerging issues in STEM education and talent development, and to align to DoD's priorities. The Biotechnology Education and Workforce Development (BIOTECH) efforts will be consolidated into the STEM E&O beginning in FY 2026 and establishes new educational programs that align with biotechnology priorities through competitive grants and internal call for proposals.

C. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025	FY 2026
degree completion. Students fulfill a one-for-one service commitment to the Department as a civilian employee for every year of scholarship provided. The disciplines awarded to align with the Department's Science and Technology (S&T) priorities and emerging scientific research areas, such as: Aeronautical and Astronautical Engineering; Biomedical Engineering; Biosciences; Chemical Engineering; Chemistry; Civil Engineering; Cognitive, Neural, and Behavioral Sciences; Computer Science and Engineering; Cybersecurity; Data Science; Electrical Engineering; Environmental Sciences; Geosciences; Industrial and Systems Engineering; Information Sciences; Materials Science and Engineering; Mathematics; Mechanical Engineering; Naval Architecture and Ocean Engineering; Nuclear Engineering; Oceanography; Operations Research; Physics; and Software Engineering. Currently, over 1,300 SMART scholars are in academic pursuit and will transition into the civilian workforce in the next few years at more than 100 sponsoring facilities across the Department, including the military departments of the Army, Navy, Air Force, and other Defense Agencies. Over 90% of the participants have successfully completed, or are on track to complete, both their SMART- funded degree pursuit and their DoD employment agreement. Oversight of the SMART program falls under the purview of Office of the Under Secretary of Defense for Research and Engineering (OUSD(R&E)) with execution at the Component level. There are two participant categories in the program: (1) retention scholars who are current DoD employees; and (2) recruitment scholars who are students enrolled in undergraduate and graduate programs and represent new technical expertise for the Department. Internships provide Science, Mathematics, and Research for Transformation (SMART) scholars with the opportunity to engage in the DoD science and technology enterprise through research and work experiences in defense laboratories, thereby enhancing their educational experience and understanding the relevance of DoD research priority areas. SMART internships ensure that scholars are ready to support the national security mission and the Warfighter upon transition into the DoD workforce. The SMART program is executed through an existing five-year cooperative agreement awarded in FY 2022. FY 2025 Plans: • Continue FY 2024 efforts. • Continue expansion of the SMART Diversity Initiative per the Sections 242 and 250 of the National Defense Authorization Act (NDAA) for FY 2021 by expanding strategic recruiting partnerships with affinity groups, non-profits, and academic institutions focused on serving underrepresented students in Science, Technology, Engineering, and Mathematics (STEM). • Increase Awards to 525-575 to meet DoD sponsoring facility demand.

C. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025	FY 2026
• Increase the number of awards for the SMART SEED grant. • Expand the SMART Creative Research and Engineering Advancing Technical Equity in STEM (CREATES) grant to support SMART scholar graduates of and collaborations with historically Black colleges and universities, minority institutions, or minority serving institutions in alignment with the SMART Diversity Initiative and Sections 242 and 250 of the NDAA for FY 2021. FY 2026 Plans: • Continue FY 2025 efforts. • Continue enhancement of the SMART Diversity Initiative per the Sections 242 and 250 of the National Defense Authorization Act (NDAA) for FY 2021 by broadening strategic recruiting partnerships with affinity groups, non-profits, and academic institutions focused on serving underrepresented students in Science, Technology, Engineering, and Mathematics (STEM). • Award up to 450-500 new scholarships to meet DoD sponsoring facility demand. • Maintain the number of awards for the SMART SEED grant. • Expand the SMART Creative Research and Engineering Advancing Technical Equity in STEM (CREATES) grant to support SMART scholar graduates of and collaborations with historically Black colleges and universities, minority institutions, or minority serving institutions in alignment with the SMART Diversity Initiative and Sections 242 and 250 of the NDAA for FY 2021. FY 2025 to FY 2026 Increase/Decrease Statement: The decrease between FY 2025 and FY 2026 of -\$10.904 reduces the number of SMART scholarships for service awards to future civilian personnel full-time equivalents and funding to optimize the workforce in compliance with Executive Order 14210, "Implementing the President's Department of Government Efficiency Workforce Optimization Initiative."				
Title: Science, Technology, Engineering, and Mathematics (STEM) Education and Outreach Description: The STEM Education and Outreach activities provides learners and educators across the pre-K to 16+ continuum unique experiences aimed to inspire, cultivate, and develop exceptional STEM talent poised to tackle evolving defense technological challenges. In order to build a workforce that solves national defense needs and challenges, the DoD recognizes the necessity for increased participation of underserved groups in STEM activities and education programs, to include military-connected students. NDEP's DSEC effort reaches close to 60,000 students and more than 5,000 educators across the PreK-16 grade levels, and spanning the 50 states and U.S. Territories.		24.561	24.409	23.340

C. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025	FY 2026
Investments are made to promote participation in national-level STEM programs and initiatives and provide authentic learning experiences for students and teachers across the globe. STEM E&O activities are primarily executed through a 10-year DSEC cooperative agreement awarded in FY 2024. Other activities are executed through internal call for proposals and/or external Notice of Funding Opportunity. FY 2025 Plans: • Continue strategic partnerships and collaboration under the Defense STEM Education Consortium to inspire and develop talent as early as K-12 and empower educators to provide meaningful STEM learning experiences. • Continue to cultivate and incentivize Components' innovative approaches to STEM talent development through intramural activities. FY 2026 Plans: • Continue strategic partnerships and collaboration under the Defense STEM Education Consortium to inspire and develop talent as early as preK-12 and empower educators to provide meaningful STEM learning experiences. • Continue to cultivate and incentivize Components' innovative approaches to STEM talent development through intramural activities. FY 2025 to FY 2026 Increase/Decrease Statement: The decrease between FY 2025 and FY 2026 of - \$1.069 reduces the number of STEM education activities to future civilian personnel full-time equivalents and funding to optimize the workforce in compliance with Executive Order 14210, "Implementing the President's Department of Government Efficiency Workforce Optimization Initiative."				
Title: Biotechnology (BIOTECH) Education Program Description: In order to build a Biotechnology Education Program (BIOTECH) workforce that solves national defense needs and challenges, the DoD recognizes the importance of supporting domestic programs that motivate young people to pursue education and career opportunities in biotechnology. FY 2025 Plans: Continue to support DoD and Federal STEM Education Strategy and Department's BIOTECH Roadmap in building biotechnology literacy, diversity and inclusion in developing the future biotech workforce. A. Mission Description and Budget Item Justification

The Historically Black Colleges and Universities and Minority-Serving Institutions (HBCU/MI) program provides support in fields of science and engineering that are important to national defense. The Department of Defense (DoD) HBCU/MI Program encourages participation of eligible research institutions. The program is authorized by 10 U.S.C. § 4144. This competitive program provides support through grants, cooperative agreements, or contracts for research, education assistance, and instrumentation purchases.

Work in this program provides a foundation to enhance participation of HBCUs/MIs in DoD research. Programs are structured to: build infrastructure; strengthen research and educational opportunities at HBCUs/MIs and increase the number of graduates in the science, technology, engineering, and mathematics (STEM) disciplines; and expand the pool of scientists and engineers to meet future workforce needs.

The DoD HBCU/MI Program aligns with the Secretary of Defense priority to rebuild the military. The DoD HBCU/MI Program aligns with the Department's technology vision through establishing Centers of Excellence and awarding research grants in critical technology areas. The HBCU/MI Program aligns with the Secretary of Defense "Message to the Force" memorandum through its contributions to the defense industrial base and its role in the development of emerging technologies. The DoD HBCU/MI Program helps to increase the workforce required for DoD through providing internships and fellowships to students and faculty from HBCUs/MIs.

A. Mission Description and Budget Item Justification

The Historically Black Colleges and Universities and Minority-Serving Institutions (HBCU/MI) program provides support in fields of science and engineering that are important to national defense. The Department of Defense (DoD) HBCU/MI Program encourages participation of eligible research institutions. The program is authorized by 10 U.S.C. § 4144. This competitive program provides support through grants or contracts for research, education assistance, instrumentation purchases, and technical assistance as described below.

- **Research:** The research grants further knowledge in the basic scientific disciplines through theoretical and experimental activities. Collaborative research allows university professors to work directly with military laboratories or other universities.
- **Education:** Education assistance funds are used by eligible institutions to strengthen their academic programs in science, technology, engineering, and mathematics (STEM), thereby increasing the number of students obtaining undergraduate and graduate degrees in these fields. These grants provide equipment, scholarships, cooperative work/study opportunities, visiting faculty programs, summer internship programs, and a variety of other enhancements designed to encourage students to pursue careers in STEM.
- **Instrumentation purchases:** The program allows universities to purchase basic laboratory equipment, such as lasers and spectrometers, for enhancements to the basic research efforts.
- **Technical assistance:** The funds are used to design programs that expose institutions to DoD funding opportunities to successfully compete for future Defense funding by assisting in areas such as proposal writing and administration of grants and contracts.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Conduct annual merit-based competition of the HBCU/MI program for basic research, and/or equipment/instrumentation. Continue research and educational collaboration with the DoD laboratories. Continue the summer internship and faculty fellowship programs. Continue Centers of Excellence in support of the Under Secretary of Defense for Research and Engineering (USD(R&E)) critical technology areas and the National Defense Strategy in the areas needed to expand Science, Technology, Engineering, and Mathematics (STEM) opportunities for STEM scholars. Conduct annual review of the Centers. Conduct outreach activities, to include one webinar and two technical assistance workshops to expose Historically Black Colleges and Minority-Serving Institutions (HBCU/MIs) to funding opportunities in the DoD. Continue to examine and implement recommendations provided by the National Academies of Sciences, Engineering, and Medicine (NASEM) in the report to Congress on defense research at HBCUs and other MIs as required by Section 262 of the NDAA for FY 2020. Support efforts for R-2 HBCUs/MIs with high potential to elevate research activity in science and engineering disciplines critical to the national security functions of DoD and attain R-1 status on the Carnegie Classification scale. Continue collaboration with the Air Force for the sustainment of the first HBCU university affiliated research center at Howard University in tactical autonomy. Collaborate with the Office of Naval Research (ONR) on STEM, education, and workforce programs to increase the number of scientists and engineers available to DoD in critical technology areas. Team with ONR to expand fellowship programs that engage HBCU/MI faculty in DoD research, including both the 10-week summer Fellows program and the Distinguished Fellows Program supporting appointments ranging from one semester to one year. Issue two discrete funding opportunities for basic research awards and equipment awards to increase research and educational capability of HBCUs/MIs. Expand the HBCU/MI internship program to increase basic research ecosystem of additional scholars pursuing STEM disciplines important to national defense. FY 2026 Plans: Conduct annual merit-based competitions of the HBCU/MI program for basic research and equipment/instrumentation grants that align with the NDS and the Secretary of Defense "Message to the Force" memorandum. Continue research and education collaboration with the DoD laboratories to prepare future DoD scientists to conduct research that will match threats to capabilities. Continue to fund Centers of Excellence that conduct foundational research of critical technologies for the future deployment of emerging technology to maintain U.S. deterrence. Continue the summer internship and faculty fellowship programs to encourage interest in STEM fields and increase domestic talent at DoD. Conduct outreach activities to include webinars and one technical assistance workshop to expose HBCUs/MIs to DoD funding opportunities to conduct research to address/solve Defense science and technology challenges. Continue to implement recommendations provided by the National Academies of Science, Engineering, and Medicine in the report to Congress on defense research at HBCUs and other MIs as required by Section 262 of the NDAA for FY 2020. Establish pilot programs and activities required by Section 223 of the FY 2023 National Defense Authorization Act to increase the capacity and capability of eligible institutions. Continue collaboration with the Air Force for the sustainment of the tactical autonomy university affiliated research center at Howard University. Establish a portal to serve

A. Mission Description and Budget Item Justification

This program supports the Department's priorities to reestablish deterrence by building munitions technology advantages that solve operational and mission-focused challenges.

The Joint Enhanced Munitions Technology Program (JEMTP), within the Office of the Under Secretary of Defense for Research and Engineering (OUSD(R&E)) was established to develop and demonstrate joint munitions enhancing technologies (energetics, warheads, propulsion systems, advanced lethality mechanisms, fuzes and fuze components, and target detection) to provide future kinetic fires capabilities and ensure advantage for U.S. warfighters. The program's plans and investments are informed by threat-opportunity based analyses from Joint Force campaign scenarios. The JEMTP activities within Program Element 0602000D8Z are executed under two Project Codes: 076 - Enhanced Munitions and 355 – Energetics Technologies. These advancements through JEMTP provide foundational capabilities that impact a wide range of munitions including One-Way Attack, Counter-small UAS technologies, and munitions that may be utilized for Homeland Missile Defense. The JEMTP program also provides technologies that support munitions and energetics organic Industrial Base resiliency and increased production rates.

Project Code 076 - The Enhanced Munitions Project focuses on investments of novel fuzing, power sources, target detection sensing technologies, and counter-countermeasure technologies that are enablers for enhancing future munition lethality and survivability. Alternative Positioning, Navigation, & Timing (Alt-PNT) is a new project focus starting in FY26. Alt-PNT technology investments will enable munitions to maintain effective operations in contested scenarios.

Project Code 355 - This program executes the Energetics Technology project focused on investigation and research of energetic materials (ingredients and formulations) to enhance munitions capability and address supply chain resilience. The Energetics Technology Project supports and enables DoD Service strategies and roadmaps for advanced energetics material synthesis and formulation development; to accelerate the application and transition of advanced energetics materials into DoD munitions and the energetics manufacturing base; and to apply modern, agile energetics processing and manufacturing technologies.

Change Summary Explanation

The FY 2026 request includes decrease \$19.792 million of discretionary, economic assumption reduction of - \$.058 million, and \$5.940 million of mandatory (reconciliation) for a total of \$25.674. The mandatory funds Munitions & Supply Chain - Alternative Positioning, Navigation, and Timing (PNT) for Weapons. Investments are operationally informed and will address Department munitions and PNT S&T strategies, which will accelerate Modular Open Systems Approach (MOSA)-compliant PNT technologies optimized for munitions lethality and form factors, enabling technology development with transition into operational systems. Technologies will consider fusing PNT sensor data from multiple non-GPS sources to assure munition performance in all conditions. Further information for this reconciliation request is provided in Chapter 2 of the Reconciliation Exhibit.

Appropriation/Budget Activity 0400 / 2					R-1 Program Element (Number/Name) PE 0602000D8Z / Joint Munitions Technology				Project (Number/Name) 076 / Enhanced Munitions				
COST (\$ in Millions)		Prior Years	FY 2024	FY 2025	FY 2026 Base	FY 2026 OOC	FY 2026 Total	FY 2027	FY 2028	FY 2029	FY 2030	Cost To Complete	Total Cost
076: Enhanced Munitions		22.665	17.025	5.812	5.920	-	5.920	-	-	-	-	Continuing	Continuing

A. Mission Description and Budget Item Justification

The Enhanced Munitions project develops cross-cutting, enabling munitions technologies that are broadly applicable across service munitions. The project invests in sensors, sensor data fusion for navigation, propulsion, warheads, and fuzing that enable enhanced performance of U.S. munitions in both permissive and denied environments.

The Enhanced Munitions project continues to address other critical munitions technologies outside of advanced energetics that enable the Energetics Technology project investments to be effectively incorporated into munitions systems. Lethality increases are not only dependent on advanced energetics, but also depend on optimized munitions placement and burst point optimization. Munitions investments in survivability against harsh environments and adversary countermeasures are necessary to allow the munition to reach and prosecute its intended target.

Starting in FY 2026, the Alternative Positioning, Navigation, and Timing (PNT) project will accelerate critical PNT technologies and PNT data needs to ensure munitions are accurate and lethal in GPS-denied or contested environments. Investments in munitions-specific PNT will be leveraging a modular open systems approach, which will increase technology development and flexibility to have specific PNT solutions for any given munition.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Enhanced Munitions	17.025	5.812	5.920
Description: Project investments are derived from the operationally informed, Department of Defense Munitions S&T Strategic Priorities, focused on developing enabling technologies to enhance warhead lethality, propulsion performance, target detection and burst point control, and weapon survivability. Technologies under investigation apply machine learning and artificial intelligence for terminal target sensing and recognition that enable the next generation of kinetic weapons capabilities.			
FY 2025 Plans: - Conduct development of Fast-Running Blast-on-Structure Lethality Models that reduce the uncertainty of lethality assessments and thus reduce over allocation of munitions in DoD weaponeering tools. - Complete testing of machine learning based target detection device to enhance missile lethality against maritime targets. - Conduct flight testing of dynamic trigger fuzing that optimizes warhead detonation point to optimize target defeat lethality.			
FY 2026 Plans: - Conduct proof of concept tests of Adaptable Proximity Fuzing capability to more accurately detect moving targets at engagement terminal velocities.

A. Mission Description and Budget Item Justification

U.S. weapons systems still largely rely on decades-old explosive and propellant technologies that limit Joint Force options to deter, and if necessary, defeat adversaries in conflict. The Energetics Technology project was established to expedite investigation, research, and transition of novel energetics materials, chemicals, and processes that enable improvements to existing and future munitions performance. The investments and efforts under this project enable modern manufacturing and processing while helping to bolster U.S. energetics supply chain resiliency.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Energetics Technology	-	13.561	13.814
Description: Energetics Technology project investments are focused on advanced energetics ingredient development and formulation research focused on improving munitions propulsion and warhead performance. The project collaborates with the energetics systems development and manufacturing base to facilitate and accelerate munitions technology development, demonstration, and transition. Technology efforts include energetics development for high efficiency propellants, high performance explosives (e.g. enhanced blast and fragmentation, target penetration, and underwater effects), use of efficient, flexible, and adaptable processes, and application of bio-technology developed critical energetics chemicals. Funded efforts are driven by program office, service, and operational needs as outlined and planned within the DoD Munitions S&T Strategic Priorities and cross-cutting technology gaps identified through rigorous threat assessment and operational evaluation. FY 2025 Plans: Continue and expand development of advanced energetics for enhanced munition capability and improved industrial base capacity through novel processes and formulations through the following activities: - Develop advanced underwater explosive formulation (UNDEX) and validate performance using optimized modeling and small-scale experimentation methodologies. - Develop high performance advanced energetics formulations, including CL-20 for high performance propellants and explosives. - Develop novel synthesized energetics materials required for advanced formulations. - Develop advanced energetics materials using bio-technology and bio-industry derived sources. FY 2026 Plans: - Conduct scale up process development of printable minimum smoke propellants which will deliver printed propellants for validation testing.

A. Mission Description and Budget Item Justification

The Promotion and Protection Strategies program executes activities providing visibility, fostering partnerships, incentivizing industry transition partners, and supporting a developmental network that serves as a nucleus of the defense industrial base for biotechnology.

The program centralizes transition planning efforts for the Distributed Bio industrial Manufacturing Program (DBIMP) by coordinating the Acquisition (e.g., Program Executive Officers, Program Managers, technology warrant officers, etc.), Policy, and Research and Engineering communities, including the Tri-Service Biotechnology for a Resilient Supply Chain (T-BRSC) program. This efforts streamlines acquisition for transition of non-pharmaceutical biomanufactured materials and chemicals by integrating innovative biomanufactured products into DoD's systems and platforms through holistic informed investment, research & development, and acquisition strategies.

The effort represents the Department's first coordinated effort to centralize acquisition efforts for biotechnology. By providing visibility, fostering partnerships across DoD, and incentivizing industry transition partners, this work will support a developmental network in which new technologies are not only pushed to higher budget activities from lower ones, but where personnel and industry partners at higher budget activities pull on technologies being developed at lower ones. This will serve as the nucleus of a defense industrial base for biotechnology that delivers innovative biomanufactured products into DoD's systems and platforms.

This directly supports the rebuilding of our military by providing capabilities matched with the threat, reviving our defense industrial base, and rapidly fielding emerging technologies. It also reestablishes deterrence by providing capabilities closer to the threat other logistically advantageous locations. Activities focus on efforts to supply DoD priority systems with critical chemicals and materials in support of production of materiel including munitions, hypersonics, and UASs, as well as point-on-need biomanufacturing in the INDOPACOM theater.

Promotion and Protection Strategies executes landscape and subject matter assessments to facilitate transition, align acquisition, policy, and research and engineering communities, to inform DBIMP investments to ensure integration of innovative Bioindustrial manufactured products into DoD's systems and platforms through current and holistic investment, research and development, and acquisition strategies.

A. Mission Description and Budget Item Justification

The Promotion and Protection Strategies program executes activities providing visibility, fostering partnerships, incentivizing industry transition partners, and supporting developmental network that serves as a nucleus of the defense industrial base for biotechnology.

The program centralizes transition planning efforts for the Distributed Bioindustrial Manufacturing Program (DBIMP) by coordinating the Acquisition (e.g., Program Executive Officers, Program Managers, technology warrant officers, etc.), Policy, and Research and Engineering communities, including the Tri-Service Biotechnology for a Resilient Supply Chain (T-BRSC) program. The programs plans for transition of non-pharmaceutical biomanufactured materials and chemicals by integrating innovative biomanufactured products into DoD's systems and platforms through holistic acquisition and investment strategies.

Promotion and Protection Strategies presents the Department's first coordinated effort to centralize acquisition efforts for biotechnology. By providing visibility, fostering partnerships across DoD, and incentivizing industry transition partners, the program will support a developmental network in which new technologies are not only pushed to higher budget activities from lower ones, but where personnel and industry partners at higher budget activities pull on technologies being developed at lower ones. This will serve as the nucleus of a defense industrial base for biotechnology that delivers innovative biomanufactured products into DoD's systems and platforms.

This directly supports the rebuilding of our military by providing capabilities matched with the threat, reviving our defense industrial base, and rapidly fielding emerging technologies. It also reestablishes deterrence by providing capabilities closer to the threat or other logistically advantageous locations. Activities focus on efforts to supply DoD priority systems with critical chemicals and materials in support of production of material including munitions, hypersonics, and UASs, as well as point-of-need biomanufacturing in the INDOPACOM theater.

Promotion and Protection Strategies executes landscape and subject matter assessments to facilitate transition, align acquisition, policy, and research and engineering communities, to inform The Promotion and Protection Strategies program executes activities providing visibility, fostering partnerships, incentivizing industry transition partners, and supporting a developmental network that serves as a nucleus of the defense industrial base for biotechnology.

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025	FY 2026
Title: Biotechnology Acquisition and Investment Coordination Effort (BAICE)		3.199	3.191	3.166
Description: Transition planning to integrate non-pharmaceutical biomanufactured materials and chemicals into DoD’s systems and platforms through holistic informed investment, research and development and acquisition strategies.				
FY 2025 Plans:				
• Test and identify pathways to increase domestic availability of critical cellulose for a more resilient energetics supply chain for DoD.				
• Engage and collaborate with United States Department of Agriculture (USDA)on agriculturally derived cellulose sources.				
• Assess vulnerabilities in Biomanufacturing of critical chemicals that present logistical challenges in contested regions and austere environments.				
• Continue to sustain DoD Biotechnology subject matter experts that shape and manage Request for proposal(s)(RFPs) for a 5 year \$1B+ DoD investment in modernizing non-pharmaceutical Biotechnology infrastructure, products, and services for the benefit of the warfighter.				
• Propose solutions to key identified barriers preventing wider adaptation of bioproducts (e.g., sustainable aviation fuels, feedstocks) within the DoD, and examine the logistical implications associated with adapting more bioproducts into DoD systems.				
• Map domestic and foreign biomanufacturing ecosystem and the changes that occur over time for identification and tracking of metrics to support future implementation and refinement of the DoD Biomanufacutring Strategy.				
FY 2026 Plans:

A. Mission Description and Budget Item Justification

This program supports the Department's priorities to rebuild our military by matching capabilities to threats, and to reestablish deterrence by defending the Homeland.

Today's mobile and tactical communications are stove-piped and limit the force from fully executing Combined Joint All-Domain Command and Control (CJADC2) concepts of tomorrow. Warfighters require integrated network mission solutions utilizing 5G/FutureG technologies to support the future battle. Beyond 5G delivers unified solutions in mobile and tactical networks to give U.S. DoD an asymmetric advantage. Through strategically architected lines of effort in Resilient and Open Commercial Solutions (ROCS), Integrated Sensing and Communications (ISAC), Expeditionary and Tactical Use (ETU), and Ubiquitous, Secure and Instant Access (USIA), this PE enables DoD to keep pace with warfighter capability requirements. The net benefit will be a reduction in the technical and tactical burden on DoD network operators via implementations of high performing mission solutions which are situationally aware and can rapidly and autonomously adapt to changing battlefield conditions. By maximizing the use of dual-use technologies as the foundation of more capable military solutions, this research and development enables a force to fight and win with agile spectrum operations where novel and asymmetric capabilities are matched to threats.

To protect the Homeland, this PE continues critical research activities which enable the utilization of existing wireless infrastructure as a sensor for low flying threats to the Homeland. When integrated, this detection network becomes a key component of the Golden Dome for America initiative.

<u>B. Program Change Summary (\$ in Millions)</u>	<u>FY 2024</u>	<u>FY 2025</u>	<u>FY 2026 Base</u>	<u>FY 2026 OOC</u>	<u>FY 2026 Total</u>

A. Mission Description and Budget Item Justification												
The Defense Technology Innovation (Beyond 5G) effort builds upon the technology foundation that underpins fifth-generation / future generation (5G/FutureG) cellular network systems as a basis to create the next generation of wireless cellular network and security technologies for military applications. Working in concert with other U.S. Government science and technology agencies, Beyond 5G is successfully conducting applied research to adopt, adapt, advance, and integrate technologies to create asymmetric advantages. Our approach is to replace cost-prohibitive, single-function stovepipes that limit the force from fully executing the Combined Joint All-Domain Command and Control (CJADC2) concepts of tomorrow.												
B. Accomplishments/Planned Programs (\$ in Millions)									FY 2024	FY 2025	FY 2026	
Title: Beyond 5G									19.379	28.515	46.261	
Description: In the domain of fifth generation / future generation (5G/FutureG) wireless networks, the warfighter requires complex system-of-systems solutions equipped with features and attributes unique to battlefield challenges. These solutions must be developed with DoD mission-level capability requirements at the foundation of the developmental process.												
To address this need, Beyond 5G is: • Collaborating with wireless industry on dual-use solutions and driving the adoption of Open Radio Access Network (ORAN) interfaces and open software and standards. • Developing uses of spatially distributed and intelligent radio systems to complement and supplement essential DoD missions. • Identifying and developing methods, tools, and policies for military operations in complex spectral environments • Delivering high availability wireless systems with security assurance in all DoD operational settings												
Beyond 5G is driving targeted wireless innovations in open-source software, hardware, and standards to provide our soldiers a fully programmable network architecture. The resulting holistic end-to-end mission solution includes mobile end points, telecom base stations, tactical radios, network infrastructure and compute fabric for zero-touch deployments of fully automated DoD network systems. Under this approach, we enable the U.S. to regain leadership in future wireless technologies including sixth generation (6G) and beyond.												
FY 2025 Plans: Complete and continue research projects initiated in FY 2023 and FY 2024 with focus on technology transfer and transition commensurate with their technical progress. This includes projects that will establish the following capabilities: 1) Resilient and

Appropriation/Budget Activity 0400 / 2	R-1 Program Element (Number/Name) PE 0602230D8Z / <i>Defense Technology Innovation (Beyond 5G)</i>	Project (Number/Name) 230 / <i>Defense Technology Innovation (Beyond 5G)</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
Open Commercial Solutions (Open 6G Development Environment Open Centralized Unit/Distributed Unit) 2) Ubiquitous, Secure and Instant Access 3) Expeditionary and Tactical Military Use and 4) Integrated Sensing and Communications. Projects to be added to the portfolio support developments in the following technology focus areas: 1. Securing 5G/FutureG for Decision Advantage produces open-source software(OSS), such as the Open Radio Access Network (ORAN) Software Community and the Linux Foundation 5G Super Blueprint (SB), that will gain momentum and transition 5G mobile wireless networks to OSS alternatives. University-led Open 6G experimentation and development is a key innovation and standards enabler. Beyond 5G's Open Centralized Unit Distributed Unit (OCUDU) initiative will develop solutions across Software, Hardware and Management domains which will: (1) provide a secure 5G OSS baseline to maintain information and decision advantage in a contested environment, and (2) provide an economically viable alternative for U.S. Allies and partners across the globe to proprietary technology. 2. Multi-site FutureG Experimentation enables an environment to: (1) foster the development of FutureG wireless communications technology for increased battlefield interoperability and ensure a skilled workforce, (2) support the development of new multi-domain operating concepts commensurate with emerging commercial spectrum requirements, and (3) build coalitions to influence the development of international wireless communications standards to U.S. advantage. FY 2026 Plans: The Open Centralized Unit Distributed Unit (OCUDU) initiative will continue to be a primary focus in FY 2026. This will be a seminal year for OCUDU and is the first full year of a three-year program. The OCUDU Software award in FY 2025 drives into feature development for software components of the Open Radio Access Network. These features will build on security, reliability, and mobility of the network to be open-sourced, resulting in open architecture CU/DU with an expanded DoD feature set. DoD unique capabilities will be built on top of the open-source infrastructure and will be available through the FutureG.mil portal for use across the force. In FY 2026, OCUDU software will demonstrate an open-source, interoperable CU/DU set. The OCUDU hardware program develops high-performance, virtualized RAN hardware which utilizes OCUDU software capabilities. The hardware study completed in FY 2025 transitions to chip and software design in collaboration with an appropriate Microelectronics Commons hub for production, helping to secure a U.S. manufacturing pipeline to our force. The OCUDU Hardware and Software programs are brought together under the OCUDU Management program, which acts as a systems integrator to create a DoD Open RAN/open-source reference architecture for use as a base for multiple deployment scenarios. This forms the reference program for integration of DoD unique capabilities for spectrum management and artificial intelligence (AI) components for security, mobility, and access management. Preliminary demonstrations of the OCUDU architecture are planned to support Combined Joint All-Domain Command and Control (CJADC2) scenarios.			
			FY 2026

Appropriation/Budget Activity 0400 / 2		R-1 Program Element (Number/Name) PE 0602230D8Z / <i>Defense Technology Innovation (Beyond 5G)</i>		Project (Number/Name) 230 / <i>Defense Technology Innovation (Beyond 5G)</i>	
B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026
Integrated Sensing and Communications (ISAC) programs will launch around major topic areas. These topic areas are selected through extensive collaboration with both industry and academia to understand the current state of technology. Generally, those areas are built around sensing systems with the ability to communicate, and communications systems with the ability to sense. Research continues into capabilities utilizing ambient signals for object and event detection, and how to apply the capability at network and enterprise levels. Lab-based fundamental research demonstrations are planned to assess ISAC utility within DoD. Capabilities developed under the ISAC portfolio can directly support emerging requirements around Golden Dome for America. Research continues into spectrum sharing and management. Demonstrations are planned for two efforts: 1) Mobile Distributed Multiple Input Multiple Output (dMIMO), which correlates user equipment into groups acting as phased array antennas for low probability of detect/low probability of intercept/anti-jam capabilities, while also avoiding interfered spectrum; 2) Novel interference cancelling capabilities. FY 2025 to FY 2026 Increase/Decrease Statement: Beyond 5G is using a defined strategic plan to develop and execute a portfolio of applied research projects which are urgently required to meet short-term and long-term warfighter needs and to maintain or outpace the capabilities and strategic resolve of our adversaries. The \$17.746 million increase from FY 2025 to FY 2026 supports a realignment of the program's technical schedule and scale-up of the Beyond 5G portfolio to expand scope and execute the established strategic roadmap which structures our operational plan. The roadmap supports applied research across four major lines of effort: Resilient and Open Solutions (ROCS), Ubiquitous, Secure and Instant Access (USIA), Expeditionary and Tactical Use, and Integrated Sensing and Communications (ISAC). Particularly within the ROCS and USIA portfolios, applied research is a critical component which implements basic research for such activities as Dynamic Spectrum Sharing and Management (DSS/M), Low Probability of Intercept (LPI), Low Probability of Detect (LPD) and Anti-Jam (AJ). These technologies integrate into the Open Centralized Unit/Distributed Unit (OCUDU) initiative, as the core component of DoDs emerging 5G/6G reference architecture. Building on an open-source commercial base and integrating DoD unique capabilities presents the U.S. Government with opportunities for more rapid and affordable mobile wireless acquisitions, while significantly increasing the pace of innovation to secure both tactical and operational advantages for our warfighters. Investment in OCUDU began with the initial funding in FY 2025 and the requested budget in FY 2026 represents the necessary investment in the technology to meet 6G timelines set out by industry. Without the appropriate and planned funding, OCUDU will not be able to execute on developments quickly, which will reduce the probability to successful transition to industry and U.S. Government adoption in future networks and platforms. The increased budget in FY 2026 and beyond also represents necessary investments in ISAC, which is becoming a competitive topic for 6G. The U.S. has an opportunity to lead, and so increased investments in key research projects starting in FY 2026 and ramping up in subsequent years is necessary to keep the

New Start (Y/N): No

A. Mission Description and Budget Item Justification

This program supports the Department's initiative to Build Sustainable and Long-Term Advantage.

The MIT Lincoln Laboratory (MIT LL) research program element is focused on advanced technology research and development effort conducted through a cost reimbursable contract with the Massachusetts Institute of Technology (MIT). The MIT LL project supports innovative, multi-disciplined research that addresses critical national security problems. The project funds innovations that directly lead to the development of new system concepts, technologies, components, and materials in support of Department of Defense (DoD) missions.

As of FY 2023, the program element funds nine technology areas. Of the nine areas, five are core-technology areas, three are emerging-technology initiatives and one Integrated Systems technology area. The four core-technology areas are Advanced Devices; Optical Systems and Technology; Information, Computation and Exploitation Sciences, Radio-Frequency (RF) Systems and Technologies, and Cyber Security Science and Engineering. The three emerging-technology areas are Advanced Materials and Processes; Quantum System Sciences; and Autonomous Systems. The one Integrated Systems technology area focuses on combining novel component-level technologies to create system-level technology solutions for important DoD problems. These technology areas provide critical capabilities that support all DoD mission areas pursued at the Laboratory. The categories are selected in consultation with the Office of the Under Secretary of Defense for Research and Engineering (OUSD(R&E)) aligned with the DoD Communities of Interest (ColS), and with guidance from other DoD agencies to address technology as well as system needs. The research in these categories adapts to solve emerging DoD problems as well as long-standing problems to which new technology advances can be applied. The individual efforts in each area are selected with the goal of enhancing DoD capabilities significantly, rather than incrementally.

A. Mission Description and Budget Item Justification

This project supports the long-term strategic technology capabilities within the DoD in established and emerging mission areas. Each year, MIT LL in coordination with the Office of the Under Secretary of Defense for Research and Engineering (OUSD(R&E)) reviews and selects projects focusing on addressing technology gaps in critical problems facing national security. Factors considered in the selection include ability to accelerate development, have impact, and provide innovation in the DoD critical technology areas. Selection of projects derives from an annual, highly selective proposal process in which demand for funding exceeds supply by nearly a factor of three. Successful projects often result in advanced capabilities that lead to further sponsored-program development.

The Lincoln Laboratory (LL) research areas that comprise this overall research and development portfolio are described below.

Core-technology areas:

- Advanced Devices emphasizes the development of devices and subsystems utilizing microelectronic, photonic, biological, and chemical technologies to enable new approaches to DoD systems.

Efforts include technologies for high power Radio Frequency (RF) devices; multi-function, highly integrated lasers; fast and sensitive imagers; and mechanical microsystems for autonomous systems.

- Optical Systems and Technology focuses on developing optical technologies for visible, infrared, and wide band spectroscopic sensing as well as communications systems.

The efforts include high energy lasers; scalable focal plane imaging technology; photonic integrated circuits; optical system prototypes; and associated phenomenology measurements.

- Information, Computation and Exploitation Sciences develops novel architectures, tools, and techniques for the processing, fusion, interpretation, computation, and exploitation of multi-sensor, multi-intelligence data.

Efforts include innovative hardware and software technologies for graph processors and cloud computing; artificial intelligence (AI) and graph algorithms for analytics, including deep learning algorithms; multi-intelligence analytics, including open-source data processing techniques; and human-machine interfacing and automation technologies to enhance warfighter effectiveness and ability to work with advanced computing systems.

Appropriation/Budget Activity 0400 / 2	R-1 Program Element (Number/Name) PE 0602234D8Z / Lincoln Laboratory Research Program	Project (Number/Name) 534 / Lincoln Laboratory
• Radio Frequency (RF) Systems and Technology focuses on RF technologies to enhance warfighting capabilities in radars, electronic warfare (EW), and communications. Efforts include development of next generation phased arrays; ultra-wideband RF systems; compact RF systems; small satellite RF payload; and advanced algorithms for jammer mitigation and EW. Emerging-technology areas: • Advanced Materials and Processes emphasizes research in new materials for additive manufacturing and emerging nanoscale materials. Efforts include research in understanding and controlling diamond chemical vapor deposition to support emerging and future applications; novel growth and transfer strategies for low-defect III-V devices; microwave circuits built with 3D printing; programmable shape change materials; and microsystems using metamaterials. • Quantum System Sciences focuses on the development of quantum-based technologies that support sensing, communication, computation, and algorithms using quantum information. Efforts include the demonstration of scalable computation platforms, magnetic field sensing using highly-compact, atomic-like defects in diamond, prototyping revolutionary quantum networking systems and technology, and research into advanced quantum algorithms and their applications. • Autonomous Systems has the objective of developing mobile, autonomous, robotic platforms, as well as sensors and algorithms that support key capabilities needed for a wide range of DoD applications. Efforts span advanced artificial intelligence (AI) and processing; sensors and communications for unmanned platforms; platform designs and energy systems; human-machine interactions; and verification and validation of autonomous systems. Systems technology area: • Integrated Systems technology efforts use multiple new technologies to solve important national problems. Efforts selected for funding have an applied research component focused on integrated technology capability or technologies that facilitate greater levels of integrated capability. Projects target key DoD warfare domains, including space, air, land, sea surface, and undersea. Beginning in FY 2026 the program element will be adjusted to focus on consolidated, core technologies in Intelligent Systems; Microelectronics; Quantum Computing and Interconnects; and Sensing and Communication. The system level technology area of Integrated Systems will remain as before

Appropriation/Budget Activity 0400 / 2	R-1 Program Element (Number/Name) PE 0602234D8Z / <i>Lincoln Laboratory Research Program</i>	Project (Number/Name) 534 / <i>Lincoln Laboratory</i>		
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025	FY 2026
Title: Advanced Devices Description: The Advanced Devices project targets the research and development of unique and innovative components, subsystems, and sensing concepts or methodologies that will enable new solutions to important DoD problems. Activities under this technology area include revolutionary imaging technologies, specialized silicon and compound semiconductor-based devices for radio frequency (RF), analog, mixed-signal, and digital electronics; photonics, optoelectronics and laser technologies; microsystems; components and subsystems enabling advanced computing; and novel devices and concepts for chemical, biological, and radiation sensing. FY 2025 Plans: The Advanced Devices program will continue ongoing efforts in Multi-GHz Lasers for Quantum Networks, Midwave Infrared Integrated Photonics, and Enabling Technologies for Free-Space Optical Communications with the goal of advancing this applied research to a stage where it can be transitioned to other programs. FY 2026 Plans: Advanced Devices will change to Microelectronics and invest efforts in: - Radiation Hardened Electronics for high-sensitivity space-based sensing and communications - High Temperature Electronics for Hypersonics - Ultra-Low Power Electronics for AI Edge Computing with superconducting memory - Physics-informed AI for Material Engineering to accelerate materials design, and develop novel materials that enable advanced structures FY 2025 to FY 2026 Increase/Decrease Statement: The \$2.2 million funding reduction between FY 2025 and FY 2026 promotes efficiencies and advances the policies of the Administration in alignment with Executive Order 14222, "Implementing the President's Department of Government Efficiency Cost Efficiency Initiative."		5.838	5.677	3.479
Title: Optical Systems and Technologies Description: This project area conducts research through the development, analysis, and demonstration of novel concepts, technology, and systems for the next-generation of optical systems for the DoD. This area invests in RF, optical and quantum systems technologies to address critical needs in the intelligence, surveillance, and reconnaissance (ISR), space control, communications, and ballistic missile defense. FY 2025 Plans:		5.000	5.237	1.781

Exhibit R-2A, RDT&E Project Justification: PB 2026 Office of the Secretary Of Defense		Date: June 2025	
Appropriation/Budget Activity 0400 / 2	R-1 Program Element (Number/Name) PE 0602234D8Z / <i>Lincoln Laboratory Research Program</i>	Project (Number/Name) 534 / <i>Lincoln Laboratory</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
The Optical Systems Technology program will continue progress in next generation passive imaging components, new laser technology, and advanced optical communications. Continue proof of concept testing for long range X ray sensing concept. FY 2026 Plans: Optical Systems and Technologies will be changed to Sensing and Communications Invest efforts in: - Directed-energy technology including beam-directors, high-power, low-cost light sources and atmospheric compensation - Quantum sensors for navigation and electromagnetic field sensing - Novel optical systems for mass and volume constrained platforms - RF and optical sensor concepts for detecting difficult targets in congested environments - Phenomenology measurements in supported of new sensing concepts FY 2025 to FY 2026 Increase/Decrease Statement: The \$3.456 million funding reduction between FY 2025 and FY 2026 promotes efficiencies and advances the policies of the Administration in alignment with Executive Order 14222, "Implementing the President's Department of Government Efficiency Cost Efficiency Initiative."			
Title: Radio Frequency (RF) Systems and Technologies Description: : The Radio Frequency (RF) Systems and Technologies project area focuses on research, development, and evaluation of innovative RF technologies and concepts in anticipation of DoD and intelligence community requirements for radar, signals intelligence (SIGINT), communications, and electronic-warfare (EW) applications. Key RF challenges include a rapidly expanding threat spectrum, platforms with severely constrained payloads, operations in strong clutter and interference environments, detection of difficult targets, and robustness against sophisticated electronic attack. RF technologies of interest include antennas, filters, transmit/receive modules (high-power amplifier, low-noise amplifier, phase shifter, time domain up-sampling), beamformers (analog, digital, photonic), receivers/exciters (local oscillator, mixers, filters, analog-to-digital converter, digital-to-analog converter), and novel RF packaging concepts. RF systems concepts that address novel analog/digital/photonic architectures and signal processing techniques for improved RF performance are also of interest. FY 2025 Plans:		4.622	5.237

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
The RF Systems program will continue progress in advanced RF signal processing, indoor RF networking, and novel front end component technologies. FY 2026 Plans: Pursuant to implementing the Presidents Department of Government Efficiency cost Efficiency Initiative and agency priorities this area will be eliminated in FY 2026 FY 2025 to FY 2026 Increase/Decrease Statement: The \$5.237 million funding reduction between FY 2025 and FY 2026 promotes efficiencies and advances the policies of the Administration in alignment with Executive Order 14222, "Implementing the President's Department of Government Efficiency Cost Efficiency Initiative."			
Title: Information, Computation, and Exploitation Sciences Description: This project area achieves significant technical gains in artificial intelligence, data processing, computation, and autonomous systems control, optimization, learning and adaptation for unique DoD mission needs. Emerging artificial intelligence (AI)/machine learning (ML)-based technologies have the potential to significantly improve military capabilities in traditional domains such as Intelligence, Surveillance, and Reconnaissance (ISR), Command and Control (C2) and Space Situation Awareness (SSA), Air and Missile Defense and Undersea Dominance. To address mission needs in these domains, Intelligent Systems research leverages unique sensors and data sets generated through Lincoln research and experimentation in broader Laboratory programs. The project area is structured around a canonical AI-based decision support architecture that addresses the end-to-end processing chain, which includes data conditioning, algorithms, and human-machine teaming to determine courses of action, as well as the advanced heterogeneous computing required to convert raw data into insight. Research is also aimed at multimodal AI at the tactical edge given compute and environmental constraints. Technology areas include perception and world modeling, safe-by-construction vehicle planning and tasking algorithms to ensure resilient large-scale operations, as well as advanced guidance, navigation and control for SSA, Counter-UAS and Missile Defense applications. Research goals include prototyping on industry platforms and field demonstration in mission-relevant scenarios to facilitate technology transfer and rapid adoption for operational use. FY 2025 Plans: The Information, Computation, and Exploitation Sciences program will continue applied research and development along several key technical thrusts, including predictive and prescriptive analytics, automated Processing, Exploitation and Dissemination		6.255	1.781

(PED), advanced computing technologies, and human-machine teaming, all within the context of the AI oriented decision support architecture. Continue progress in AI and exploitation algorithms for DoD missions. Continue to develop computational architectures for AI and big data applications. Apply advanced AI algorithms within select mission applications areas (material discovery, cyber, etc.). FY 2026 Plans: Information, Computation and Exploitation Sciences will be changed to Intelligent Systems in FY 2026. Invest efforts in the following technical areas - Distributed Tactical Edge AI to build novel hardware and algorithms enabling tactical advantage in deploying AI at the edge - Human-Machine Teaming to create hybrid cognitive architectures to enable effective and rapidly adaptable team and evaluation of team effectiveness in mission scenarios - Autonomy Applications to extend autonomy solutions into space-based proximity operations and electronic warfare sensing applications - Interceptors to bridge the gap between interceptor planning and execution by solving a faster control loop FY 2025 to FY 2026 Increase/Decrease Statement: The \$5.205 million funding reduction between FY 2025 and FY 2026 promotes efficiencies and advances the policies of the Administration in alignment with Executive Order 14222, "Implementing the President's Department of Government Efficiency Cost Efficiency Initiative."				
Title: Autonomous Systems Description: The Autonomous Systems project area performs applied research in autonomous robotics to address current and anticipated national security needs. One project area goal is to enable unmanned systems to perform useful tasks in uncertain environments as trusted, capable agents without continuous human operator control. Project elements include the development of autonomy algorithms and technologies, and of infrastructure to quickly develop autonomous systems. Lincoln Laboratory also collaborates with research universities to transfer promising autonomy concepts from academia into prototype systems.		5.108	4.472	0.000

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025	FY 2026
Technology areas include perception and world modeling, planning, human-robot interaction, manipulation, learning and adaptation, and robotic platforms. Efforts range in scope from simulation-based seedlings to prototype efforts demonstrating autonomous system capabilities in relevant environments. FY 2025 Plans: Continue progress in artificial intelligence (AI) for robotics, platform technology, multi agent systems, and trusted and resilient autonomy. Continue to develop multi agent autonomous space technology for mission planning and satellite coordination. FY 2026 Plans: Pursuant to implementing the Presidents Department of Government Efficiency Cost Efficiency Initiative and agency priorities this area will be eliminated in FY 2026. FY 2025 to FY 2026 Increase/Decrease Statement: The \$4.472 million funding reduction between FY 2025 and FY 2026 promotes efficiencies and advances the policies of the Administration in alignment with Executive Order 14222, "Implementing the President's Department of Government Efficiency Cost Efficiency Initiative."				
Title: Quantum System Sciences Description: This project area develops methods for computing and interconnecting using quantum mechanical manipulation, that is not possible with classical techniques. This area invests in advanced testbeds to help DoD assess and validate technology developed by university and industrial performers, as well as to provide unique component technologies that support a number of large national quantum computing initiatives information. FY 2025 Plans: Future work in the program will focus on the underlying scientific and engineering issues of quantum system science. Continue development of trapped-ion and superconducting computing, quantum sensing technologies, and quantum networks. FY 2026 Plans: In FY 2026 Quantum Systems will be changed to Quantum Computing and Interconnects Invest efforts in: - Quantum Error Correction to increase operational utility and permit interoperability across multiple commercial quantum hardware.		4.514	5.573	1.781

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025	FY 2026
- Quantum Interconnects to enable scaling quantum systems to larger qubits and processor sizes. In parallel, analyze computing architectures for different quantum processing modalities (e.g. superconducting qubits, photonic qubits, trapped ions) to identify regimes where interconnected approaches offer performance and implementation advantages. - Quantum Clocks for Next-Generation PNT to leverage quantum computing platforms for developing fieldable, liter-scale optical clock for month-long GPS-denied operations. FY 2025 to FY 2026 Increase/Decrease Statement: The \$3.792 million funding reduction between FY 2025 and FY 2026 promotes efficiencies and advances the policies of the Administration in alignment with Executive Order 14222, "Implementing the President's Department of Government Efficiency Cost Efficiency Initiative."				
Title: Advanced Materials and Processes Description: The Advanced Materials and Processes project area develops materials and processes that make a transformative impact on enduring national challenges. Areas of strategic focus are material property customization and material enablers for highly-integrated, miniature platform. FY 2025 Plans: The Advanced Materials and Process program will continue to conduct research on all forms of data-enhanced, computationally accelerated materials development, alongside a focus on advanced materials technologies that underpin small platforms. Continue focus on the following areas: beyond complementary metal-oxide semiconductor (CMOS) electronics, materials for advanced sensors, integrated microstructures, and other advanced structures. FY 2026 Plans: Advanced Materials will be eliminated in FY 2026 and consolidated into Microelectronics FY 2025 to FY 2026 Increase/Decrease Statement: The \$4.370 million funding reduction between FY 2025 and FY 2026 promotes efficiencies and advances the policies of the Administration in alignment with Executive Order 14222, "Implementing the President's Department of Government Efficiency Cost Efficiency Initiative."		5.162	4.370	0.000
Title: Integrated Systems Description: This project area combines multiple new technologies to solve important national needs. This is in the form of mission-driven Moonshots and challenge problems that bring together Laboratory experts to tackle interdisciplinary programs that span multiple groups, Divisions and expertise areas.		4.973	6.348	1.781

A. Mission Description and Budget Item Justification

The Cyber Security, Science and Engineering research project focuses on the development of technologies and new techniques for the protection of systems against cyber- attack and exploitation.

Efforts include research into technologies for cyber situational awareness, command and control; technology to improve resilience of systems to cyber-attack; and technologies for system exploitation research.

The Cyber Security, Science and Engineering research project, 815, supports innovative research that addresses critical national security problems in cyber. The project funds innovations that directly lead to the development of new system concepts, technologies, and algorithms in support of DoD missions. Funding supports high-risk, high-payoff research, which provides unique and specialized capabilities for the current and emerging needs of the Department.

Description: The Cyber Security, Science and Engineering project conducts research and development, including design, analysis, evaluation, and deployment, of prototype systems to improve the security of computer hardware, software, and networks.			
Its goal is to assure the resilience of Department of Defense (DoD) missions against cyber-attack and cyber-exploitation, with particular emphasis on the overlap between traditional Laboratory mission areas and the cyber domain.			
Ongoing efforts and areas of concentration include: foundational approaches for integrating traditional and cyber domains, tools and methods to compute threat-based cyber metrics, artificial intelligence (AI) and machine learning-based capabilities supporting cyber analysis and decision making, building trustworthy and resilient mission systems even with untrustworthy components, new cryptographic systems and prototypes, side-channel prevention and exploitation techniques in cyber and cyber-physical systems, and techniques for exploit repurposing.			
Integral to these efforts are demonstrations of the impact of cyber effects on traditional kinetic systems, the quantitative and repeatable evaluation of prototypes, and deployment of prototype technology to national-level exercises.

A. Mission Description and Budget Item Justification

The Applied Research for the Advancement of Science and Technology (S&T) Priorities (ARAP) Program directly supports the Interim National Defense Strategy and aligns with DoD critical science and technology priorities, strengthening broadly applicable technical capabilities and fostering emerging technologies within the Department of Defense laboratories to enhance warfighter advantages. By funding foundational enabling technologies, the ARAP Program facilitates the design, development, advancement and transition of early-stage technologies and novel ideas, translating promising research into solutions for critical military needs that directly improve situational awareness through advanced sensors, enhanced lethality with precision weaponry, and more effective communication and coordination. Continuous infusion of new technology ensures our forces maintain a decisive edge and have the flexibility needed to adapt to diverse and rapidly changing operational environments. Furthermore, the ARAP Program fosters increased collaboration and partnership among science and engineering teams of subject matter experts across the DoD enterprise, providing funding to recruit top national talent from universities, and bolsters the in-house scientific and technical research capabilities of DoD laboratories, ultimately accelerating the delivery of advanced capabilities to our warfighters.

The ARAP Program funds the activities of the DoD Reliance 21 collaborative framework. This framework's core strength lies in its strategic planning and the DoD Science & Technology (S&T) Executive Committee's (EXCOM) robust leadership, comprised of senior-level executives from across the Department. The S&T EXCOM ensures coordinated resource allocation by convening regularly to align resources and proactively address emerging challenges. For example, the S&T EXCOM recently awarded funding to accelerate the development of long-range strike capabilities that pushes the boundaries of several technological domains in response to evolving battlefield threats, and strategically prioritized investments in Quantum technology to enhance decision-making speed. This leadership is powered by a robust ecosystem of 16 S&T Communities of Interest (COIs). These COIs, spanning cross-cutting topics like advanced materials, cyber warfare, biomedical and biotech, energy and power, warfighter and space platforms, and other critical technology areas, maintain a global perspective on technological advancements. They strategically guide investment through detailed technology roadmaps that inform and identify candidate ARAP projects, ensuring resources are directed towards the most promising and impactful areas.

The Applied Research for the Advancement of Science and Technology (S&T) Priorities program strategically implements and executes Department-wide technology development portfolios, ensuring the timely availability of emerging capabilities that will transition and enhance the effectiveness of both near- and far-term weapon systems. Collaboration across multiple technical and technology areas is essential for increasingly complex modern weapons systems development. For example, a next-generation fighter jet might require advancements in materials science, artificial intelligence, sensor technology, propulsion, and cyber security. Progress in one area can be heavily dependent on breakthroughs in others. Collaboration across the DoD scientific and engineering communities allows subject matter experts from

A. Mission Description and Budget Item Justification

The Applied Research for the Advancement of Science and Technology (S&T) Priorities program was established to implement Department-wide technology development portfolios and foster tri-Service research areas of common interest within cross-cutting S&T efforts. The program has three investment areas: (1) three-year applied research projects selected by the S&T Executive Committee (EXCOM); (2) two-year technology projects nominated by the S&T Communities of Interest (Cols) to address technology gaps or opportunities; and (3) technology assessment and study support to the Cols. The execution of the ARAP Program by the Office of the Secretary of Defense and the support it provides to the Cols inspires and ensures joint strategic S&T oversight and multi-Service, multi-agency collaboration and coordination. The Applied Research for the Advancement of Science and Technology (S&T) Priorities (ARAP) Program directly supports the National Defense Strategy and aligns with DoD critical science and technology priorities, strengthening broadly applicable technical capabilities and fostering emerging technologies within the Department of Defense laboratories to enhance warfighter advantages. By funding foundational enabling technologies, the ARAP Program facilitates the design, development, advancement and transition of early-stage technologies and novel ideas, translating promising research into solutions for critical military needs that directly improve situational awareness through advanced sensors, enhanced lethality with precision weaponry, and more effective communication and coordination. Continuous infusion of new technology ensures our forces maintain a decisive edge and have the flexibility needed to adapt to diverse and rapidly changing operational environments. Furthermore, the ARAP Program fosters increased collaboration and partnership among science and engineering teams of subject matter experts across the DoD enterprise, providing funding to recruit top national talent from universities, and bolsters the in-house scientific and technical research capabilities of DoD laboratories, ultimately accelerating the delivery of advanced capabilities to our warfighters.

The ARAP Program funds the activities of the DoD Reliance 21 collaborative framework. This framework's core strength lies in its strategic planning and the DoD Science & Technology (S&T) Executive Committee's (EXCOM) robust leadership, comprised of senior-level executives from across the Department. The S&T EXCOM ensures coordinated resource allocation by convening regularly to align resources and proactively address emerging challenges. For example, the S&T EXCOM recently awarded funding to accelerate the development of long-range strike capabilities that pushes the boundaries of several technological domains in response to evolving battlefield threats, and strategically prioritized investments in Quantum technology to enhance decision-making speed. This leadership is powered by a robust ecosystem of 16 S&T Communities of Interest (COIs). These COIs, spanning cross-cutting topics like advanced materials, cyber warfare, biomedical and biotech, energy and power, warfighter and space platforms, and other critical technology areas, maintain a global perspective on technological advancements. They strategically guide investment through detailed technology roadmaps that inform and identify candidate ARAP projects, ensuring resources are directed towards the most promising and impactful areas.

The Applied Research for the Advancement of Science and Technology (S&T) Priorities program strategically implements and executes Department-wide technology development portfolios, ensuring the timely availability of emerging capabilities that will transition and enhance the effectiveness of both near- and far-term weapon systems. Collaboration across multiple technical and technology areas is essential for increasingly complex modern weapons systems development. For example, a next-generation fighter jet might require advancements in materials science, artificial intelligence, sensor technology, propulsion, and cyber security. Progress in one

area can be heavily dependent on breakthroughs in others. Collaboration across the DoD scientific and engineering communities allows subject matter experts from these fields to share knowledge, identify synergies, and overcome integration issues. The ARAP Program provides the platform to facilitate this collaboration through three investment areas:(1) three-year, multi-Service, applied research projects selected by the S&T Executive Committee (EXCOM); (2) two-year, multi-discipline, technology projects nominated by the S&T Communities of Interest (COI) Leaders to address technology gaps or opportunities; and (3) technology assessment and study support to the COIs. The execution of the ARAP Program by the Office of the Undersecretary of Defense and the support it provides to the S&T COIs inspire and ensure joint strategic S&T oversight and multi-Service, multi-agency, collaboration and coordination.				
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025	FY 2026
Title: Applied Research for the Advancement of S&T Priorities (ARAP)		49.676	48.055	50.483
Description: The program focuses on cross-cutting S&T efforts that foster multi-service agency research areas of common interest that give the joint warfighter a technological advantage. It focuses on emerging areas of science, building expertise within the DoD laboratories, including investment in laboratory infrastructure and people, and on research areas that are a foundation for further investments by the Services following the completion of the projects.				
Cross-cutting efforts are aligned with DoD S&T Priorities, such as Electromagnetic Warfare, Human Systems, Autonomy, Space, Kinetic Weapons, Directed Energy and Non-Lethal Weapons, Cyber, Sensors and Processing, Command, Control, Communications, Computers and Intelligence, Air Platforms, Ground and Sea Platforms, as well other focus areas, such as Materials and Manufacturing Processes.				
FY 2025 Plans: Complete Advanced Power Electronics and Extreme-Radio Frequency (APEX) (Year 3 of 3) a Tri-service, multi-laboratory development of a robust, solid-state, high-power Radio Frequency device technology required to meet the future needs of the warfighter and counter emerging threats from our adversaries. Investigation of higher power RF transmitter chip sets improved thermal management and establish US capabilities in ultra-wide bandgap materials.				
Continue Applied Research for the Advancement of Science and Technology Priorities (ARAP) project selected in FY 2023 and initiated in FY 2024, Classical-quantum Hybrid constructs to Advance Weapons Systems (CLAWS) (Year 2 of 3). CLAWS is a Tri-service, multi-laboratory effort that will develop and demonstrate novel phenomena such as new phases in 2D materials and heterostructures, and long scale atomic coherence, to create disruptive DoD- capabilities in Infrared imaging, Positioning, Navigation and Timing (PNT), and nanophotonic devices, that will provide advanced capabilities to many military systems, particularly missiles and weapons platforms.

Exhibit R-2A, RDT&E Project Justification: PB 2026 Office of the Secretary Of Defense			Date: June 2025		
Appropriation/Budget Activity 0400 / 2		R-1 Program Element (Number/Name) PE 0602251D8Z / <i>Applied Research for the Advancement of S&T Priorities</i>		Project (Number/Name) 227 / <i>Applied Research for the Advancement of S&T Priorities</i>	
B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026
Funding reductions will require the ARAP program to accept additional risk in on-going efforts as well as to reduce flexibility in the breadth of activities that can be supported. Specifically, the scope of the new ARAP project to be selected in third quarter FY 2024 must be reduced to accommodate the funding adjustments. FY 2026 Plans: To ensure continued progress on critically relevant, high-priority long-term hard problems identified on the DoD Services and Agencies research and engineering technology roadmaps, sustained funding is essential for the ARAP program's four ongoing projects. These projects were jointly selected due to their direct impact on closing key technological gaps, making their continued support a strategic imperative for future advancements. Rapidly evolving global threats demand that our forces possess the most advanced technology to outpace adversaries. Investing in new technologies (high-temperature materials; sophisticated guidance and control systems; scramjets and dual-mode ramjets; quantum hybrid constructs) is not just about modernization; it's about equipping our warfighters with the critical tools they need to deter threats, succeed in their mission, and return home safely. The four high-priority ARAP projects supported in FY 2026 are vital steps in this direction, directly addressing identified gaps and ensuring our warfighters have the technological superiority they need. • Provide Funding for High-Priority ARAP Projects: Classical-quantum Hybrid constructs to Advance Weapons Systems (CLAWS)ARAP Project. CLAWS is a tri-service, multi-laboratory effort that will develop and demonstrate novel phenomena such as new phases in 2D materials and heterostructures, and long scale atomic coherence, to create disruptive DoD- capabilities in Infrared imaging, Positioning, Navigation and Timing (PNT), and nanophotonic devices, that will provide advanced capabilities to many military systems. • Hypersonic Infrared Target Sensing (HITS). HITS is a tri-service, multi-laboratory effort that will develop the transformational sensing solutions needed to place an infrared (IR) seeker on a hot hypersonic interceptor. • Implement a new FY2026 high-priority ARAP Project. • Solicit ARAP proposals and award a new FY2027 ARAP project. • Fund FY 2026 Emerging Research Opportunities (EROs). EROs accelerate BA 2, cross-cutting technologies that are enabled through multi-Service and multi-discipline collaborations. • Solicit White Papers for FY 2027 EROs. FY 2025 to FY 2026 Increase/Decrease Statement:

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026
The increase of \$2.428 million between FY 2025 and FY 2026 reflects continuation of CLAWS, HITS, and newly awarded ARAP Projects.					
Title: Science & Technology (S&T) Communities of Interest (Cols)			5.000	3.500	3.500
Description: S&T COIs facilitate coordination and collaboration across DoD Services and Agencies to reduce unnecessary duplication and optimize the development of critical S&T technology development efforts across the DoD enterprise. Their efforts include the development of joint S&T roadmaps and the planning of technology integration and transition. The S&T COIs assess and address capability gaps and their multi-domain operational impact.					
The S&T COIs include Advanced Electronics; Air Platforms; Autonomy; Biomed; Biotechnology; Command, Control, Communications, Computers, and Intelligence (C4I); Cyber; Directed Energy - Non-Lethal Weapons; Electronic Warfare; Energy and Power; Ground and Sea Platforms; Human Systems; Kinetic Weapons; Materials and Manufacturing Processes; Sensors and Processing; and Space.					
FY 2025 Plans: Provide funding and subject matter expert to the Communities of Interest, allowing them to refresh existing integrated technology roadmaps, conduct limited technology trade studies and coordinate with OSD Critical Technology Area leaders.					
FY 2026 Plans: Provide funding and subject matter expert support to the S&T Communities of Interest to develop integrated technology roadmaps, conducting limited technology trade studies, and facilitates coordination with OUSD(R&E) Critical Technology Areas Leaders.					
Title: Research Opportunities (EROs)			5.000	-	-
Description: Emerging Research Opportunities (EROs) initiative focuses on identifying a single technology gap or problem and establishing multi-service laboratory teams to solve the problem in 12–24-months. Solutions have the potential to develop the foundation for future research, to form long-standing collaborative teams across the Department, and to increase the maturity level of critical technologies.

A. Mission Description and Budget Item Justification

This Program Element supports the Department's interim National Defense Strategy priorities to Defend the Homeland, Deter Strategic Attacks against the United States, Deterring Aggression, and Building a resilient Joint Force and defense ecosystem.

The Cyber Security Applied Research program promotes innovative higher risk cyber research to meet joint force challenges in full spectrum cyber operations. The program addresses joint Service science and technology (S&T) gaps that influence DoD cyber research priorities and shapes the direction of the wider cyber community by integrating both defensive and offensive cyber research to develop interchangeable, defense-wide technology options to meet Combatant Command (CCMD) needs and requirements. To better align itself to the interim National Defense Strategy (NDS), Department of Defense (DoD) Cyber Strategy, and Office of Under Secretary of Defense for Research and Engineering (OUSD(R&E)) strategic cyber capability goals, the effort recognizes the role of electromagnetic spectrum operations (EMSO) and artificial intelligence as key enablers for cyber power projection mass, maneuver, and unity of command for dominance. The research thrusts areas are: Augmented Cognition, Dominant Cyber Operations, Dependable Systems and Networks, and Cyber Foundations.

A. Mission Description and Budget Item Justification

This Program Element supports the Department's Interim National Defense Strategic Guidance priorities to Defend the U.S. Homeland including America's skies and borders, and Deterring China in the Indo-Pacific. It does so by developing cyber capabilities that integrate functionally with electromagnetic spectrum operations to increase readiness and deterrence, particularly in priority areas such as USINDOPACOM.

This PE explores technical and scientific concepts to overcome challenges in the Joint Warfighting Environment with cyber effects and integrated non-kinetic options through applied research for an asymmetric advantage across all domains (maritime, land, air, cyberspace, and space).

It applies the Joint Publication (JP) 3-0 principles of Mass, Maneuver, and Unity of Command to achieve specific outcomes with minimal collateral damage and unforeseen consequences for integrated non-kinetic effects development

Efforts are focused to support the Joint Warfighting Environment through intended cyber effects execution without perturbing the unintended kinetic and non-kinetic entities through disruptive integration of cyberspace operations with electromagnetic spectrum operations (EMSO) and sensing.

The PE accelerates cyber S&T capability development to directly address INDSG priorities to defend the homeland and deter aggression/prepared to prevail in U.S. Indo-Pacific Command (USINDOPACOM) area of responsibility against China.

Adversaries are increasingly leveraging asymmetric tactics in the Joint Warfighting Environment. The Department of Defense (DoD) needs to evolve its approach to warfare, integrating cyber and non-kinetic effects to maintain a decisive advantage across all domains.

The Non-Kinetic Advantage (NKA) project is a collaborative effort aimed at revolutionizing how the Joint Force employs non-kinetic capabilities. By focusing on four key pillars – Protect, Process, Visualize, and Align & Shape – NKA will deliver a decisive advantage in the information battlespace.

Payoff: NKA will enable the Joint Force to conduct faster, more effective operations across all domains, even in contested environments. Will provide Asymmetric Advantage by mastering the information battlespace, NKA will provide a decisive edge against adversaries, deterring aggression and ensuring US dominance. Will enable Rapid Decision Making by NKA empowering commanders with the information and tools needed to make rapid, well-informed decisions in complex, dynamic environments.

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026
Description: Integrates both defensive and offensive innovative cyber research within the DoD cyber science and technology enterprise to develop interoperable, defense-wide technology options that address joint force challenges in full spectrum integrated sensing and cyber operations. FY 2025 Plans: - Augmented Cognition: Develop capabilities that enhance USCYBERCOM and Service Cyber Components' ability to increase the scale and scale of human operators in comprehending, planning executing, and assessing operations. - Dependable Systems and Networks: Develop secure hardware and software co-design that will enable development of provably secure systems at scale, design, and architecture. Cyber-physical digital-twins systems can be used to develop secure hardware/ software co-design standards with full stack visibility enabled by supply chain analysis. - Dominant Cyber Operations: Develop cyber warfighting concepts and demonstrable capabilities that integrate with electromagnetic warfare, intelligence, and kinetic operational planning and execution. Demonstrate concepts integrated within a cyber-flag or red-flag level exercise to illustrate potential/impact. - Cyber Foundations: Explore formal methods for rigorous mathematical specification and verification of cyber hardware and software systems. Industrial scale formal methods and related techniques have the potential for greatly reducing the uncertainty in the software used in military systems. - Manipulate spatial beam qualities to demonstrate laser system propagation in outdoor atmospheric environments to achieve desired effects on sensors. FY 2026 Plans: - Non-Kinetic Effects Gap Analysis and Investment Plan. This activity will apply the FY 2025 NKE Decision Support Framework in a fully-informed manner across the DoD NKE investments and identify priority gaps for investment and acceleration of capability. Investments to address priority gaps will complement Service Cyber investment lines and seek to focus them to meet and influence early concepts. - Rapid Prototyping and Maturation of Non-traditional At-scale Cyber Engagement. Leverage FY 2025 design and prototyping efforts to rapidly accelerate development, integration, and capability assessment to hold non-traditional targets persistently at risk at strategic levels of engagement. Conduct initial planning of demonstration, targeted for late FY 2026. FY 2025 to FY 2026 Increase/Decrease Statement: The increase of \$0.336 million between FY 2025 and FY 2026 reflects minor budget fluctuations.

Note

New Start (Y/N): No

Beginning in FY26, funding from Project 827:Workforce Development is reallocated into Project 825:Microelectronics Research Maturation-Development as a result of the workforce development initiatives being integrated and tracked as part of the research activities.

FY24 program funding is transferred from the Creating Helpful Incentives to Produce Semiconductors (CHIPS) for America Defense Fund to the FY Research, Development, Test and Evaluation, Defense-Wide appropriation for proper execution. Funding from FY2023 through 2027 were appropriated by, and are transferred using special transfer authority provided by, section 102(b) of the CHIPS Act of 2022, division A of Public Law 117-167.

A. Mission Description and Budget Item Justification

This Program supports the Department's initiatives to Build Sustainable and Long-Term Advantage, Defend the Homeland, and Deter Aggression.

The Office of the Under Secretary of Defense for Research and Engineering (OUSD(R&E)) is executing the Microelectronics Commons (the Commons) activity pursuant to the Fiscal Year (FY) 2021 National Defense Authorization Act (NDAA) (Pub. L. 116-283), including the CHIPS for America Act, and funded through the CHIPS for America Defense Fund established by the CHIPS Act of 2022. The FY 2021 NDAA legislation significantly emphasizes solutions that promote the domestic on-shoring of capabilities to address economic and technology security concerns. Under FY 2021 NDAA Sec. 9903(b), the DOD is directed to establish a National Network for Microelectronics Research and Development (NNMRD) to enable the laboratory-to-fabrication transition of microelectronics innovations in the United States and to expand the global leadership in microelectronics of the United States. Specifically, the DOD is addressing a component of the NNMRD, the Commons, through a public-private partnership consisting of regional innovation hubs distributed across the U.S. to foster a pipeline of innovative ideas and talent residing in, for example, university labs and small business R&D teams.

Background

U.S. technological dominance in microelectronics materials, processes, devices, and architectural designs can only be sustained through the development of a robust domestic innovation ecosystem that fosters the rapid development and transition of novel concepts into commercially viable manufacturing processes. The U.S. innovation ecosystem has long been the driver of our nation's technology leadership throughout the world. U.S. R&D kick-started the enormous semiconductor industry and continues to lead the world in developing the next generation of disruptive technologies including new materials, devices, circuits, architectures, and design tools.

UNCLASSIFIED

Exhibit R-2, RDT&E Budget Item Justification: PB 2026 Office of the Secretary Of Defense		Date: June 2025
Appropriation/Budget Activity 0400: <i>Research, Development, Test & Evaluation, Defense-Wide I BA 2: Applied Research</i>	R-1 Program Element (Number/Name) PE 0602669D8Z I <i>Microelectronics Commons - 0400D</i>	

In recent years, the efficient domestic adoption of U.S. chip innovation has been threatened as emerging hardware technologies have become increasingly reliant on offshore sources for State of the Art (SOTA) manufacturing, prototyping, and investment. There are several significant hurdles that hardware startups face, including limited or expensive access to necessary facilities and design infrastructure, high costs of design intellectual property, limited expertise with hardware engineering, and high costs of prototyping. As a result, the number of U.S. hardware startups has dropped significantly and foreign investment in U.S.-based technology startups has enabled offshore fabrication and maturation of emerging technologies.

To address these needs, OUSD(R&E) is standing up the Commons as a public private partnership, consisting of regional innovation hubs distributed across the U.S. to foster a pipeline of innovative ideas and talent residing in university labs and small business R&D teams. The partnership will provide resources for and access to specialized lab equipment, technical expertise, and connections to existing or upgraded prototyping facilities. Fabrication facilities (fabs) will help mature promising technologies and demonstrate the manufacturing and economic benefits of these innovations for dual-use application for defense and commercial sectors.

The Commons will focus on critical, on-shore prototyping to transition innovation from universities, start-ups, and small companies to fabrication facilities (lab-to-fab transition). Key features are:

- Creates and connects “Lab-to-Fab” testing/prototyping hubs to form a network focused on maturing emerging microelectronics technologies
- Provides broad access to these prototyping hubs, potentially by augmenting facilities and enabling access to facilities within local semiconductor companies or FFRDCs.
- Facilitates microelectronics education and training of students at local colleges and universities and grows a talent pipeline to bolster local semiconductor economies and contribute more broadly to the growth of a domestic semiconductor workforce.

This program element focuses on the applied research activities of the Commons, including staffing at Commons hub facilities, early technology identification, preliminary microelectronics prototyping planning, and experimental tools.

A. Mission Description and Budget Item Justification

This project focuses on the applied research activities of the Commons including the early research and development of new microelectronics materials, processes, devices, and architectural designs. It seeks to answer how new models, science, and technology can be leveraged to create a different manufacturing paradigm based on proven process tools in agile microelectronics fabrication facilities (fabs). The project also supports the establishment of the Commons Hubs, which will be networks of regional capabilities organized in collaboration with the Commons Consortium Manager (CM) to address DOD and commercial needs and requirements. The Hubs may include existing facilities augmented to enhance intrinsic specializations in emerging areas of microelectronics. Each Hub will concentrate on one of six technical areas including: Secure Edge Computing, 5G/6G Technology, Artificial Intelligence Hardware, Quantum Technology, Electromagnetic Warfare, and Commercial Leap Ahead Technologies. Core Facilities (i.e., fabs) are integral parts of the Hubs network that will provide key fabrication capabilities that are required to demonstrate prototypes with the volume and characteristics required to ensure reduced risk for full manufacturing production. This effort also includes early workforce development activities through the Commons network. Activities may span K-12, undergraduate, graduate and continuing education and may include, for example, establishment of PhD internships and post-doc training at Hub facilities and internships with Hub members.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Microelectronics Research Maturation – Development	65.062	-	-
Description: This effort focuses on the identification of promising new microelectronics materials, processes, devices, and architectural designs with potential DoD applications, and early, applied research into these technologies. It will also support operation of regional Commons Hubs and initial selection and execution of Commons Projects in conjunction with activities funded by PEs 0603669D8Z and 0604669D8Z.			
Accomplishments • Awarded 8 Innovation Hubs • Hub Operations Investments: Approximately \$374M • \$38M in Electronic Design Automation (EDA) investments. • Hub Membership includes more than 1,300 hub members from 45 states, FY24 QTR4 • Hub Projects:34 projects awarded in FY24 QTR4 totaling \$226M in funding across the 8 Microelectronics Commons Hubs

A. Mission Description and Budget Item Justification

This program supports the Department's initiative to Build Sustainable and Long-Term Advantage.

This program funds Department of Defense (DoD) physical climate and social science applied research. Climate and environmental change will impact the full range of U.S. military operating environments. DoD capabilities, until recently, have been aligned toward the historical environmental and geopolitical record; failure to anticipate and plan for the security effects of climate and environmental change holds significant potential to not only degrade DoD readiness and effectiveness but also compound the frequency and scope of novel geostrategic risks and surprises. Efforts under this program will focus on interdisciplinary science and technology that spans physical climate modeling and forecasting and social sciences capable of yielding tangible decision support tools that empower operational planners to prepare for and adapt to the complicated, interconnected security and stability challenges of climate and environmental change. Insights derived from this program will enable Combatant Commands to better engage key partners and allies in efforts to plan for and mitigate risks and promote global peace and stability.

The program includes studies, investigations, and non-system specific technology efforts directed toward general military needs with a view toward developing and evaluating the feasibility and practicality of proposed solutions and determining their parameters.

A. Mission Description and Budget Item Justification

This program will leverage and integrate expertise from operational end users, physical climate scientists and models, tools, and datasets, and social scientists with deep understanding of designated regional and local communities to anticipate and respond more quickly and precisely to climate and environmental change risks and opportunities. The program aims to explore how specific environmental and social indicators might inform strategic reviews to adapt warfighter training and planning in anticipation of climate global trends. The research program will build upon the products of the 6.1 Minerva Research Initiative (program element 0601110D8Z) with a focus on end-user defined mission, geographic, and timescale priorities to forecast local and regional climate and environmental change effects, assess and predict likely societal impacts and responses, and ultimately provide operations planners technically-relevant and operationally precise scenarios to incorporate into Contingency Plans (CONPLANS) and Operational Plans (OPLANS) and Intelligence, Surveillance, and Reconnaissance (ISR) requirements related to climate change.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Providing Research and End-user Products to Accelerate Readiness and Environmental Security (PREPARES)	3.100	4.910	0.000
Description: PREPARES will leverage and build upon Minerva products by incorporating their findings into operationally-relevant planning scenarios that accelerate the Department's understanding of the social, cultural, behavioral, and political dynamics most likely to be affected by climate and environmental change in strategically important areas of the world. By aligning research objectives with the priorities of operational end users who can apply the tools and knowledge products to their areas of responsibility, the proposed enhancement would translate and integrate results from 6.1 strategic and global-centric analyses to provide operational and tactical assessments to inform CONPLAN and OPLAN, focusing on specific regions and detailed scenarios for the warfighter. PREPARES uniquely applies research to integrate physical climate and social sciences and accelerate "research to operations", directly impacting military operational planning and preparations to mitigate the security risks from climate and environmental change. This effort also will rapidly produce the tools and products the end-users need to sustain data-informed planning and analysis for operations and engagements with partners and allies.			
FY 2025 Plans: Pursuant to leadership guidance, the program was terminated for no longer effectuating agency priorities.

Note

New Start (Y/N): No

The Software Engineering Institute (SEI) Applied Research Program Element (PE) develops and evaluates the feasibility and practicality of software and computer science concepts at the applied research level, with the potential to improve future DoD systems through research, development, and application in the SEI Advanced Technology Development Program Element (PE) 0603781D8Z. Promising projects proceed into advanced technology development through this PE.

A. Mission Description and Budget Item Justification

This program supports the Department's initiative to Build Sustainable and Long-Term Advantage.

The Carnegie Mellon University Software Engineering Institute (SEI) Federally Funded Research and Development Center (FFRDC) was established in 1984 as an integral part of the DoD's initiative to identify, evaluate, and transition software engineering technologies and practices. The mission of the SEI is to provide the DoD with technical leadership and innovation through research and development to advance the practice of software engineering and technology. The SEI works across government, industry, and academia to improve the state of software engineering from the technical, acquisition, and management perspectives. The SEI engages in research and development of critical software technologies and tools and collaborates with the larger software engineering research community. It facilitates the rapid transition of software engineering technologies into practice and evaluates emerging software engineering technologies to determine their potential for improving software-intensive Department of Defense (DoD) systems. Since its inception, the SEI has helped to transform the fields of software engineering and acquisition, network security, real-time systems, software architectures, and software-engineering process management.

Software is critical to meeting the Department of Defense's (DoD) increasing demand for national defense systems that are high quality, affordable, and deployed in a timely way. With growing global parity in software engineering, the DoD must maintain leadership in all aspects of software-based system development, operation, defense, and evolution to avoid strategic surprise. To assist the DoD in retaining a long-term differential advantage over potential adversaries, the Software Engineering Institute (SEI) Applied Research program element (PE) develops and evaluates the feasibility and practicality of software and computer science concepts, with the potential to improve future DoD systems. The research conducted by this PE directly benefits the technical domains Autonomous Systems and Artificial Intelligence (AI), Cyber, and Engineered Resilient Systems.

Appropriation/Budget Activity 0400 / 2					R-1 Program Element (Number/Name) PE 0602751D8Z / Software Engineering Ins titute (SEI) Applied Research				Project (Number/Name) 278 / Software Engineering Institute (SEI) Applied Research			
COST (\$ in Millions)	Prior Years	FY 2024	FY 2025	FY 2026 Base	FY 2026 OOC	FY 2026 Total	FY 2027	FY 2028	FY 2029	FY 2030	Cost To Complete	Total Cost
278: Software Engineering Institute (SEI) Applied Research	9.788	10.535	10.368	8.883	-	8.883	-	-	-	-	Continuing	Continuing
A. Mission Description and Budget Item Justification												
Work conducted under this Program Element (PE) will enable resilient mission assurance in heterogeneous and contested environments through the verification and validation of system performance and architecture. The program will also assist the Department of Defense (DoD) in retaining a long-term advantage in the areas of software-intensive systems and cyber security by enhancing assurance, exploiting automation and Artificial Intelligence (AI), and understanding human-computer interaction.												
The Software Engineering Institute (SEI) Applied Research PE has two main research thrusts with known military applications: (1) Software Engineering, Systems Verification and Validation, and Mission Assurance (formerly Mission Assurance); and (2) Information Assurance. This area is increasingly being applied to AI and autonomous systems.												
B. Accomplishments/Planned Programs (\$ in Millions)									FY 2024	FY 2025	FY 2026	
Title: SEI Applied Research in the Area of Software Engineering, Systems Verification and Validation, and Mission Assurance									8.007	7.677	5.882	
Description: Increasingly complex and (Artificial Intelligence) AI-enabled systems will require a commensurate increase in sophistication of verification and validation mechanisms. This thrust seeks to develop verification techniques for requirements identification, systems of systems architectures, and virtual integration of components. Additionally, research in this area will enable requirements verification for software assurance, analysis and control of unverified code, and automated repair of damaged code. Software production and code analysis methods developed through this program will also improve the accuracy of behavior prediction of complex software, including AI-enabled systems, in untested environments.												
FY 2025 Plans:												
Innovate new methods for artificial intelligence (AI) generated software which enable integrated verification and validation methods for correctness of code. Hybridize different AI models including but not limited to graph neural networks, Bayesian convolutional networks, and transformers to enable validated software output. Leverage as many commercial and open-source approaches as possible.												
FY 2026 Plans:												
Leverage AI generated software methods to assess feasibility for systems composition. Enable extensions of verification and validation methods for code composition to system composition.												
FY 2025 to FY 2026 Increase/Decrease Statement:

B. Accomplishments/Planned Programs (\$ in Millions)									FY 2024	FY 2025	FY 2026
The decrease of \$1.795 million between FY 2025 and FY 2026 reflects FFRDC reductions and economic assumptions. The funds will further develop methods and tools for software assurance, augmenting machine learning.											
Title: Software Engineering Institute (SEI) Applied Research in the areas of Information Assurance (IA)									2.528	2.691	3.001
Description: To gain full advantage from data and information generated by software for use in missions, DoD needs to assure its software is free of vulnerabilities. In its complex systems, DoD may use software developed from an unknown supply chain that may include intentionally or unintentionally introduced vulnerabilities. This thrust seeks to develop scalable automated methods to locate, understand, and mitigate the effects of these vulnerabilities. Automated solutions developed through this thrust will be used to discover vulnerabilities in system software source code and to generate proofs of correctness or fault. Additionally, these solutions will be used to model and simulate operational environments to support software and cyber tactics, techniques, and procedures testing.											
FY 2025 Plans: Assess how training methods in AI generated code and cyber vulnerability analysis can themselves by compromised with poor software examples or training data.											
FY 2026 Plans: Develop methodologies to safeguard training data for automated code generation and vulnerability analysis and identify how such training sets can lower overall risk of errors and security vulnerabilities in software.											
FY 2025 to FY 2026 Increase/Decrease Statement: The increase of \$0.310 million between FY 2025 and FY 2026 reflects minor budget fluctuations.											
Accomplishments/Planned Programs Subtotals									10.535	10.368	8.883
C. Other Program Funding Summary (\$ in Millions)											
Line Item	FY 2024	FY 2025	FY 2026 Base	FY 2026 OOC	FY 2026 Total	FY 2027	FY 2028	FY 2029	FY 2030	Cost To Complete	Total Cost
• RDT&E, BA 3, PE 0603781D8Z: Software Engineering Institute	15.747	16.982	12.972	-	12.972	-	-	-	-	Continuing	Continuing
Remarks											
The SEI Applied Research PE represents a pivot toward more fundamental research that enables the DoD to address longer-term challenges in software technology and engineering. The SEI Applied Research PE bolsters the organic research at the SEI Federally Funded Research and Development Center (FFRDC), enables stronger collaborations between the SEI FFRDC and academia, attracts top researchers to the SEI, and gives the DoD access to top experts in information science, which generally enhances the DoD's ability to benefit from the military applications of research in software and computer science.

A. Mission Description and Budget Item Justification

Work conducted under this project will enable resilient mission assurance in heterogeneous and contested environments through the verification and validation of system performance and architecture. The program will also assist the DoD in retaining a long-term advantage in the area of cybersecurity by enhancing assurance, exploiting automation, and understanding human-computer interaction.

B. Accomplishments/Planned Programs (\$ in Millions)	FY 2024	FY 2025	FY 2026
Title: Cyber Security Description: Warfighting in the cyber domain often operates at sub-second timescales and across multiple domains of authority. Methods used to accomplish many tasks (e.g., malware analysis, coordinating multiple agents) demand large amounts of time, attention, and special skills and are not scalable. This thrust seeks to develop and increase the use of automation to simplify the completion of these tasks. Example activities include automation of moving target defenses, code artifact reverse engineering, analysis of network flows at enterprise scale, assessing the operating boundaries for Artificial Intelligence (AI) and Machine Learning (ML) algorithms, and development and assessment of workforce skills. FY 2025 Plans: Develop hybridized AI methods for code vulnerability analysis. Apply AI software verification and validation methodologies to assess vulnerabilities in automatically generated code. FY 2026 Plans: Assess how the risk of automated code and information service composition will introduce cybersecurity vulnerabilities. Enable methodologies to identify how integrated code generation can remove inherent vulnerabilities during the automated code generation process. FY 2025 to FY 2026 Increase/Decrease Statement: The decrease of \$0.942 million between FY 2025 to FY 2026 reflects realignment to Project 278.	0.000	0.942	0.000
Accomplishments/Planned Programs Subtotals	0.000	0.942	0.000

A. Mission Description and Budget Item Justification

This program is executed via the Joint Directed Energy Transition Office (JDETO) in alignment the Department of Defense Directed Energy Roadmap, as well as other strategic guidance. Section 219 of the 2017 National Defense Authorization Act designated a senior official for directed energy and redesignated a legacy office as the JDETO with reporting to the senior official. Currently, the Principal Director for Directed Energy serves as this senior official and updates the Department of Defense Directed Energy Roadmap on an annual basis. The goal of this program, in turn, is to support the Department's initiatives in directed energy to build a sustainable and long-term advantage, as well as a resilient Joint force and defense ecosystem.

This program funds applied research in directed energy to enable future defense capabilities realized by the Services and Agencies. These efforts include studies, investigations, and component and subsystem design and development to further the knowledge base of high energy laser and high power microwave technologies. In practice, directed energy weapon systems have many potential advantages, including speed-of-light time-to-target, high precision, low incremental cost per kill, and a magazine that is recharged through on-board, fuel-based power and thermal management systems that reduce logistics requirements in contrast to stocks of munitions or warheads. As a result, directed energy weapon systems have the potential to perform a wide variety of military missions. Activities conducted under this program are generally chosen for their potential to have an impact on multiple directed energy weapon systems and multiple military missions while complementing specific Service and Agency needs.

A. Mission Description and Budget Item Justification

This project is part of an overall Department of Defense strategy in Joint directed energy applied research. Efforts within this project will focus on the advanced technologies necessary to increase lethality, expand the mission set, and counter future adversaries. Advancements provided by this project are essential to improve the performance of existing and new directed energy weapon systems. This project builds upon other investments in directed energy applied research by the Services and Agencies to harmonize Department efforts and eliminate duplication. In support, efforts in this project have been coordinated with the Department of Defense Directed Energy and Non-Lethal Weapons Science and Technology Community of Interest.

This project is executed via a technical program within the JDETO referred to as the Directed Energy Enabling Tech Program, which enables (1) applied research in high energy laser and high power microwave technologies that support eventual system-level integration and (2) proof of concept tech demonstrations in a laboratory environment with Joint-international participation. Note that (1) and (2) are in alignment with the near-, mid-, and long-term goals of Department of Defense Directed Energy Roadmap and encourage transition.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Directed Energy Applied Research	46.507	48.640	-
Description: Mature technologies that improve component-level performance and enable fieldable directed energy weapon systems. Develop technologies that support improving beam control and beam propagation for directed energy weapon systems. Conduct directed energy vulnerability experiments on materials, components, and targets. Develop lethality databases and integrate technologies into system-level architectures.			
FY 2025 Plans: - Modernize antenna designs with an emphasis on bandwidth agility throughput. Transition government-laboratory research efforts in pulsed power to industry. Decrease the size, weight, and power requirements for future high power microwave weapon systems and increase the vendor base for these critical technologies. -Conduct trade studies to determine the most effective directed energy weapon system parameters. Collaborate with the national and international directed-energy community on progress in the development and FY 2024 Plans. - Conduct analyses and trades studies to determine the most effective laser and microwave source parameters. Collaborate with the national and international directed energy community on progress in the development and application of high energy laser and high power microwave technologies for military missions.

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
- Explore advanced concepts for technologies that will improve efficiency and decrease size and weight for future laser sources. Evaluate materials for high energy laser applications. Improve understanding of laser technologies to include material interaction and propagation. Scale electrically driven lasers to higher kilowatt-class power levels. - Develop beam control technologies for high energy laser weapon use across all domains of the Department. Develop technologies to improve the beam director throughput efficiency, optimize size and weight, and improve/automate tracking and compensation through the atmosphere. Invest in atmospheric sensor innovation, field test evaluations, and next-generation models. - Characterize and understand the physics of high energy laser atmospheric propagation in adverse environmental conditions such as fog, rain, smoke and dust. Improve cameras and track illuminators to enable target engagement at longer ranges and enable improvements to shorten engagement timelines. Evaluate effectiveness of digital holography for wavefront compensation with improved deformable mirrors for high energy laser propagation through severe turbulence. - Collaborate with the national and international directed energy community on progress in the development and application of high energy laser technologies for military missions. Validate predictive models through analysis of atmospheric propagation data and measurements. - Provide maintenance, verification, validation, and accreditation for updated system level atmospheric propagation and high energy laser system models. Collaborate with Service-sponsored field-test planning to correlate model predictions with measured data for surface, maritime, and aerospace environments. Incorporate atmospheric data into theater models to support performance characterization tables. Continue the development of a predictive avoidance fire control system for use on multiple platforms. - Develop theoretical physical models describing the propagation of a high power microwave pulse through the atmosphere to understand the reflection characteristics of the high power microwave propagation. Study and understand the dynamic behavior of the propagation of high power microwave pulses and the effects on the intensity, frequency, and width of the pulse and the physical processes occurring during the interaction of the pulse with the air. - Characterize and understand the physics of high power microwave propagation in adverse environmental conditions. Collaborate with the national and international directed energy community on progress in the development and application of high power directed energy weapon technologies for military missions.

Note

New Start (Y/N): No.

The FY 2026 request for FSRM Modeling includes \$0.994 million of discretionary and \$5.000 million of mandatory (reconciliation) for a total of \$5.994 million. The mandatory funds Golden Dome Cyber Resilience and Readiness Exercises . Further information for this reconciliation request is provided in Section 20003 Missile Defense of the Reconciliation Exhibit.

A. Mission Description and Budget Item Justification

The FY 2026 request for FSRM Modeling PE includes \$0.994 million of discretionary and \$5.000 million of mandatory (reconciliation) for a total of \$5.994 million. The mandatory funds Golden Dome Cyber Resilience and Readiness Exercises . Further information for this reconciliation request is provided in Section 20003 Missile Defense of the Reconciliation Exhibit.

FSRM Mission Description and Budget Justification: The Facilities Sustainment, Restoration, and Modernization (FSRM) Modeling requirement is inclusive of the development of a computer system, development of software, development of standards for the FSRM prioritization. This will aid in the establishment metrics for adjudicating FSRM funding sufficiency for use in future program and budget reviews.

Golden Dome Mission Description and Budget Justification: Golden Dome Cyber Resilience and Readiness Exercises funding of \$5.000 million supports the assessment of the control systems which allow for the Golden Dome mission execution. The allocated \$5.000 million will be used to develop "live fire" cyber resilience exercises to assess the readiness and resilience of the control systems at Golden Dome installations. These live exercises will afford the system owners and operators hands on experience in detecting and providing defense against APT- actor cyber-attacks and the physical disruptions that can result.

A. Mission Description and Budget Item Justification

This program supports the Department's priority to reestablish deterrence through developing and demonstrating munitions technologies that deliver crosscutting capabilities to the Services to solve operational and mission-focused challenges.

The Joint Enhanced Munitions Technology Program (JEMTP), within the Office of the Under Secretary of Defense for Research and Engineering (OUSD(R&E)), was established to develop and demonstrate munitions enhancing technologies (energetics, warheads, propulsion systems, advanced lethality mechanisms, fuzes and fuze components, and target detection), to transition future kinetic fires capabilities and ensure lethality advantage for U.S. warfighters. The JEMTP concentrates on cross-cutting, all-domain munitions technology needs that benefit multiple services. JEMTP investments focus on increasing and improving the performance, lethality, range, and survivability of existing and future weapons systems. The program's technology investment and munitions application strategy are informed by threat-opportunity based analysis from Joint Force campaign scenarios. The advancements through JEMTP provide capabilities that impact a wide range of munitions including One-Way Attack, Counter-small UAS technologies, and munitions that may be utilized for Homeland Missile Defense. The JEMTP program also delivers technologies that support munitions and energetics organic industrial base resiliency and increased production rates of critical weapon systems.

The JEMTP activities within Program Element 0603000D8Z are executed under two Project Codes: 077 - Enhanced Advanced Munitions Technology and 356 – Energetics Advanced Technologies.

Project Code 077 - The Enhanced Munitions Advanced Technology Project demonstrates critical munitions technologies including advanced fuzing, power sources, seeker technologies, and counter-countermeasure technologies that combine with Energetics Advanced Technologies to provide increases to munitions performance and survivability.

Project Code 356 – The Energetics Advanced Technology Project supports DoD strategies for advanced energetics and enables the transition of higher performance explosives and propellants for U.S. munitions and delivers new technologies supporting a resilient manufacturing base. The project delivers weapon capabilities through highly lethal warheads and propulsion systems with greater range and speed. The project starts investments in FY 2026 of CL-20 advanced energetic

A. Mission Description and Budget Item Justification

The Enhanced Munitions Advanced Technology project demonstrates advanced technologies that improve the performance, range, and lethality of existing and future weapons systems. This effort takes promising technologies demonstrated at the laboratory scale and matures them into demonstration programs with a focus on operationally relevant key munitions. Enhanced Munitions technologies that are matured and demonstrated at Technology Readiness Level 5 inform service requirements and transition into operational use, thereby decreasing program executive office program cost and risk. In FY 2026, the project continues the development of critical munitions technologies, such as advanced materials and designs, fuzing, power sources, seeker technologies, and counter countermeasure technologies that, when combined with advanced energetics, provide significant performance enhancements in range, speed, and target damage effects.

This project applies machine learning, artificial intelligence, and advanced material technologies to inform and refine research efforts and enable next-generation kinetic weapons capabilities, including advances in propulsion, warhead effects, fuze technologies, and targeting technologies.

In FY 2026, the Munitions Advanced Technology project continues to address the critical munitions technologies that are necessary for realizing weapon performance improvements particularly for low-cost alternative munitions and defensive munitions. Increases in weapon range and run time require higher energy density power sources for guidance, seekers, and other subsystems. Lethality increases are not only dependent on advanced energetics, but also depend on optimized munitions placement, burst point control, and survivable fuzing. Operations in highly contested scenarios also require technical resiliency, with systems capable of defeating adversary kinetic and non-kinetic countermeasures.

In FY 2026, the Munitions Advanced Technology project will continue to address the critical munitions technologies that are necessary for realizing performance improvements from Energetics Advanced Technology investments. Increases in weapon range and run time require higher energy density power sources for guidance, seekers, and other subsystems. Lethality increases are not only dependent on advanced energetics, but also depend on optimized munitions placement, burst point control, and survivable fuzing. Operations in contested environments requires technical resiliency, with systems capable of defeating adversary kinetic and non-kinetic countermeasures.

A. Mission Description and Budget Item Justification

U.S. weapons systems still largely rely on decades-old explosive and propellant technologies that limit Joint Force options to deter, and if necessary, defeat adversaries in conflict. The Energetics Technology project was established to expedite investigation, research, and transition of novel energetics materials, chemicals, and processes that enable improvements to existing and future munitions performance. The investments and efforts under this project enable modern manufacturing and processing while helping to bolster U.S. energetics supply chain resiliency. The Joint Enhanced Munitions Technology Program, Services, and OUSD(R&E) munitions stakeholders collaborate to generate technology roadmaps for advanced energetic research and development that include high-energy materials, such as CL-20, and missile delivered submunitions and payloads.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Energetics Advanced Technology	-	30.713	30.230
Description: Funded efforts are driven by program office, service, and operational needs as outlined and planned within the DoD Munitions S&T Strategic Priorities and technology gaps identified through rigorous threat assessment and operational evaluation. The project investments are focused in advanced energetics formulation, material scale-up, and demonstration of enhanced performance of propulsion and warhead systems. The project is partnered with the energetics industry and manufacturing base to accelerate new high energy explosives and propellant demonstration and transition. Efforts include advanced energetics formulation maturation using efficient, flexible, and adaptable processes; manufacturing at pilot-scale to deliver quantities for prototype scale testing and demonstration; and targeted munitions demonstrations using advanced energetics to quantify performance. FY 2025 Plans: The project executes its mission by strategically expanding development of advanced energetics capability and improved industrial base capacity through novel processes and formulations: The project initiatives include: - Begin development of production methods for advance energetic ingredients and formulations with a focus on CL-20 compound production capacity, cost reduction, and formulation development. - Develop processing technologies using biomanufacturing byproducts streams and synthesize two energetics ingredients of interest at laboratory scale.

Appropriation/Budget Activity 0400 / 3	R-1 Program Element (Number/Name) PE 0603000D8Z / <i>Joint Munitions Advanced Technology</i>	Project (Number/Name) 356 / <i>Energetics Advanced Technology</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
- Develop advanced energetics material using end to end laboratory and pilot scale manufacturing through modern, continuous methods that use digital feedback and quality by design/control. - Conduct laboratory and subscale testing by combining advanced energetics with novel propulsion and warhead designs and demonstrate increased performance – target lethality, range and speed. - Begin development of machine learning modeling and simulation tools to allow optimization of energetics material formulation and processing. - Apply advanced energetics formulations, including CL-20, for missile delivered submunitions payload development that provide enhanced area effects and target defeat capabilities. - Begin testing and demonstration of missile submunitions advanced energetics payloads with precision targeting and effector technologies. FY 2026 Plans: - Demonstrate and deliver, for scale-up production, advanced energetic materials for munitions evaluation testing using end to end laboratory and pilot scale manufacturing through modern, continuous methods. - Conduct validation testing of advanced energetics combined with novel propulsion and warhead designs and demonstrate increased performance in lethality, range and speed. - Develop and test multiple effects explosives and warhead design to enhance overall weapon to target lethality. - Develop and test topology-optimized additively manufactured propellants that reduces rocket motor volume by 30% while maintaining performance. - Develop and conduct sub-scale testing of novel pulsed motors that enhance missile range and speed. - Begin to develop advanced energetics filled, minimum signature propellants for extended range tactical missiles. - Conduct in-water testing of survivable anti-maritime missile ordnance packages. - Complete lethality validation testing of submunitions with advanced energetics and CL-20 explosives. FY 2025 to FY 2026 Increase/Decrease Statement: The decrease of \$0.483 million between FY 2025 and FY 2026 reflects minor budget fluctuations.			
Title: CL-20 Development, Production, and Integration Description: Compared to current energetics/explosive ingredients used in U.S. munitions, CL-20 is a higher energy, more powerful explosive ingredient. CL-20 presents opportunities for U.S. Weapon designers to create more lethal, longer-reaching munitions that out-pace adversary capabilities. Efforts under this activity will close the knowledge gaps and mature CL-20 explosive and propellant formulations through material qualification for transition to munitions prototyping, demonstration and manufacturing. FY 2026 Plans:		0.000	-
			12.000

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
- Provide weapon designers the most capable, safe, and reliable CL-20 material as a critical component and the technical data and material models to support its incorporation into systems. Conduct the chemistry and materials science of CL-20, which requires a planned effort to fully determine basic physical properties and to mature propellant and explosive formulations using CL-20. - Develop U.S. Military Specifications for CL-20 that meets broader Department of Defense requirements and defines the necessary parameters to produce high quality, low sensitivity CL-20 feedstocks for reproducible explosive and propellant formulations at production scales. - Mature CL-20-based formulations for qualification in preparation for their incorporation into munitions. Conduct assessments of the most promising formulations to inform focused efforts and scale up for development. FY 2025 to FY 2026 Increase/Decrease Statement: The FY 2026 \$12.000 increase for CL-20 Development, Production, and Integration is consistent with Department priorities.			
Title: High Reliability Cluster Munitions (HRCM) Development and Prototype Demonstration Description: FY 2026, the project conducts technology maturation and applies advanced energetics submunitions payloads concepts in High Reliability Cluster Munitions (HRCM) for transition into advanced missile prototype demonstration. The effort incorporates modular architecture and expulsion design capable of delivering and dispensing multiple munitions against various targets from a single missile. FY 2026 Plans: - Develop missile delivered submunitions by integrating fuzing, warhead, and payload technologies into ordnance package and validate lethality and effectiveness. - Mature dispensed submunition vehicle design and validate through flight test evaluation to support transition into missile demonstrations. - Mature and evaluate missile delivered submunition expulsion and dispersion designs to validate survivability and delivery of the submunitions. FY 2025 to FY 2026 Increase/Decrease Statement: The FY 2026 increase of \$5.000 million for High Reliability Cluster Munitions development and Demonstration in Precision Strike Missile is consistent with Department priorities.		0.000	-

A. Mission Description and Budget Item Justification

This program supports the Department's initiatives to Build Sustainable and Long-Term Advantage and Build a Resilient Joint Force Defense Ecosystem. This effort also supports Title 10 USC, Section 4811, requiring the Secretary of Defense to develop a national security strategy for the National Technology and Industrial Base (NTIB) that "reflects a prioritized assessment of the risks and challenges to the defense supply chain."

The mission of National Security Innovation Capital (NSIC) is to accelerate the development of dual-use hardware technologies critical to our national security and economic competitiveness. It is an initiative that enables dual-use hardware startups to advance key milestones in their product development by addressing the shortfall of private investment from trusted sources. NSIC's support enables companies to develop their technologies and products more rapidly. The resulting reductions in technical risk, along with the signaling of DoD interest in such dual-use companies, attracts trusted private investment that might otherwise sit on the sidelines. The overall result is more rapid and robust development of hardware in the U.S., the expansion of the defense industrial base and reduction of technology flow to adversaries.

Areas of focus are autonomy, communications, power, sensors, and space.

Note

New Start (Y/N): Yes

This is a new PE number for the OECI Program, PE 0603055D8Z. Congressional professional staff members requested an update to the PE to better reflect alignment with the BA-3 budget activity, and improve differentiation from the Operational Energy Prototyping program, PE 0604555D8Z, which handles BA-4 workload. OECI updates for accomplishments and past work appear in the budget exhibit for PE 0604055D8Z (the old PE).

Additionally, in FY 2026, the project code names are updated improving alignment to the Department's interim NDS priorities of achieving peace through strength. The new project codes include: (1) P459 Operational Energy Dominance. P459 is erroneously reflected in this document and the system was not able to correct for this cycle. The correct code is 455 for Operational Energy Dominance. This code will be corrected in the next budget cycle; (2) P456 Operational Energy Surety; (3) P457 Operational Energy and Power Projection; and (4) P458 Nuclear Power.

A. Mission Description and Budget Item Justification

The mission of this program element (PE) is to fund innovation to improve the Department of Defense's (DOD) operational effectiveness via targeted operational energy science and technology (S&T) investments. The Operational Energy Capability Improvement Fund (OECIF) incentivizes S&T to promote long term change in DOD capabilities, so they are better aligned with the DOD's and National Strategy. OECIF fosters Joint, not Service specific, innovation that improves operational energy performance and has two key mission aspects: first, to develop operational energy technologies and practices that improve DOD military capabilities and possibly reduce costs; and second, to establish within and among the military Services institutional momentum to transition those innovations.

OECIF funds serve as "seed money" to start or consolidate promising first-of-a-kind operational energy innovation. OECIF investments also lead in areas of Departmental level interest. The overall aim is to improve the operational effectiveness of the Joint Force.

Exhibit R-2, RDT&E Budget Item Justification: PB 2026 Office of the Secretary Of Defense		Date: June 2025
Appropriation/Budget Activity 0400: <i>Research, Development, Test & Evaluation, Defense-Wide / BA 3: Advanced Technology Development (ATD)</i>		R-1 Program Element (Number/Name) PE 0603055D8Z / <i>Operational Energy Capability Improvement</i>
OECI powers this future by investing in early-stage energy innovation for military capabilities, incentivizing the Components to achieve energy superiority for U.S. Joint Forces and missions. The OECI program accelerates the transition of pre-commercial, military-unique technologies, promoting rapid fielding to warfighters. OECI is innovating today for energy superiority tomorrow, delivering unmatched value to the DOD warfighter by: • Boosting lethality and supportability • Enhancing operational readiness and responsiveness • Extending operational capabilities and endurance for advanced platforms and weapons OECI's technical thrust areas are: • Operational Energy Dominance: Providing energy capability and battlespace awareness technologies to collect, camouflage, and control power and energy data. These investments leverage AI and machine learning to integrate U.S., allied, and adversary energy information into the combined joint all-domain command and control (CJADC2) architecture. • Operational Energy Surety: Ensuring U.S. forces, capabilities, and missions assured, robust, and resilient access to energy, including powering energy magazines (missile defense, Golden Dome, and counter-UAS) and data centers in the homeland and abroad. Technical areas include fuel fabrication processes, energy conversion, novel power generation, and energy storage and distribution technologies. • Operational Energy and Power Projection: Giving U.S. forces operational flexibility, freedom to operate at will, and a qualitative edge in all domains (including space and cyber), through implementation of advanced energy technologies. Investments include novel platform structures and power plant solutions for extended duration and enabling and enhancing maneuver without regret (including next-generation power and energy delivery (power beaming)). • Nuclear Innovation: Developing power and energy solutions for the battlespace including assured power for critical missions at home, underway, and abroad. Nuclear innovations do not overlap efforts covered by the Chief of Naval Reactors (CNR) but are broadly applicable in all domains from sub-sea to space. The OECI program demonstrates its commitment to innovation by maturing first-of-their-kind advanced OE technologies across warfighting platforms and domains. OECI's competitive execution approach, which funds DOD laboratories, not only strengthens technical depth within the DOD and secures government purpose rights but also drives down acquisition costs and fosters academic and initial industry engagement. Furthermore, it expedites technology development and capability delivery to warfighters through the implementation of other transaction and rapid acquisition authorities. Current/ongoing OECI investments focus on providing agile OE solutions that address insights from current operations. Technical advancements include: • Advanced Algorithms & Analytics: Developing AI/ML algorithms for anomaly detection, predictive power analysis, energy optimization, and pattern-of-life analysis • Joint All Domain Command and Control (JADC2) Integration: Developing data models, user interfaces, and communication protocols to integrate OE assets and data into the JADC2 architecture • Power Electronics & Microgrids: Designing high-efficiency power converters, inverters, and microgrid controllers for tactical applications, with a focus on vehicle-centric microgrids and integration with Joint and Coalition energy sources • Energy Storage & Generation: Developing advanced battery chemistries (Li-ion, Lithium Sulfur, Americium), fuel cells (hydrogen), and waste-to-energy systems for mobile and expeditionary power • Wireless Power Transfer Technologies: Advancing RF, mm-Wave and laser power beaming systems, including rectenna design, beam steering, and integration with UAVs and other platforms

• Space-Based Solar Power: Developing low-cost, high-efficiency solar cells and arrays for space applications, including perovskite and III-V materials • Nuclear Reactor Technology: Developing small modular reactors (SMRs), TRISO fuel, and advanced shielding materials for both space and terrestrial applications • Fuel Efficiency & Hybridization: Developing hybrid-electric architectures for tactical vehicles, aircraft, and naval vessels to improve fuel efficiency and enable new capabilities Looking ahead to FY 2026 and beyond, the President's mission to the DOD is clear: achieve peace through strength and remain the World's greatest military. Fulfilling this mission, the DOD prioritizes investments that revive the warrior ethos, rebuild the military, and reestablish deterrence. Aligning with these priorities, OEI investments focus on technology advancements that increase OE Readiness: • Power and Energy Sensing for Command and Control: Investments providing Red, Green, and Blue (abroad) information for warfighter decision making and increased battlespace awareness and impact • Nuclear Power – Focused investments advancing resilient, long-lived, and low-profile spaceflight radioisotope power system (RPS) technologies available for national security needs • DE Weapon Advancement: Prototyping of first of kind power and thermal hardened system solutions, suitable for transport and utilization in varied locations, including populated, austere, and arctic conditions • UxV Advancements: Innovating power and energy solutions enabling advanced maneuver, extended reach, and increased endurance for UxV's across warfighting domains • Space Superiority – Advancing space maneuver and survivability through focused investment in energy generation, storage, refueling distribution, transmission, and data analytics • Energy Surety – Secure power advancements, increasing energy efficiency, and developing isolated power and energy solutions at operational installations (and data centers) - enabling critical missions at home and abroad The OEI program has a long history of successfully transitioning emerging OE capabilities (greater than 80%). As the department rebuilds the military, OEI continues accelerating technology development for critical OE capabilities required for defense of the homeland and deterring Chinese aggression in the Indo-Pacific theater.

Change Summary Explanation

New Start (Y/N): Yes

This is a new PE number for the OECI Program, PE 0603055D8Z. Congressional professional staff members requested an update to the PE to better reflect alignment with the BA-3 budget activity, and improve differentiation from the Operational Energy Prototyping program, PE 0604555D8Z, which handles BA-4 workload. OECI updates for accomplishments and past work appear in the budget exhibit for PE 0604055D8Z (the old PE).

A. Mission Description and Budget Item Justification												
The Operational Energy Dominance (OED) project enhances DOD operational effectiveness through targeted Science & Technology (S&T) investments, transforming energy data into a battlefield advantage. By embedding energy situational awareness into command and control (C2) architectures, OED enables warfighters to outpace adversaries with smarter, faster decisions in contested environments. The OED portfolio achieves this mission through three strategic thrusts: Collect, Camouflage, and Control.												
• Collect: OED digitizes legacy power systems (generators, batteries, and distribution nodes), integrating them into the operational data environment to eliminate blind spots and enhance situational awareness. Simultaneously, this thrust develops and deploys first-of-a-kind sensing capabilities to the front lines.												
• Camouflage: OED leverages power intelligence products from the Collect thrust to locate and mitigate threat surfaces within the power systems of critical military systems.												
• Control: OED exploits both power intelligence products and identified threat surfaces to create TTPs that expose the pacing threat's vulnerabilities, providing overmatch opportunities for US Forces in INDOPACOM.												
OED portfolio investments yield:												
1. Enhanced mission-planning tools with integrated energy analytics.												
2. Increased operational control of energy assets at every echelon.												
3. Advanced metering and monitoring across modern and legacy platforms.												
4. Modeling and simulation tools translating energy impacts into operational outcomes.												
5. Actionable energy insights informing acquisition, sustainment, and budget decisions.												
6. Foundational training embedding energy innovation across warfighters and the S&T community.												
All focus areas align with the DOD's OE Strategy, ensuring energy data informs operations, logistics, and readiness. Program-wide efforts prioritize transparency tools, warfighter inclusion, and subject matter expertise to accelerate the adoption and impact of OEI investments.												
There is a classified addendum to this PE.

Title: Operational Energy Dominance									-	-	51.421	

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2026 Office of the Secretary Of Defense		Date: June 2025	
Appropriation/Budget Activity 0400 / 3	R-1 Program Element (Number/Name) PE 0603055D8Z / <i>Operational Energy Cap ability Improvement</i>	Project (Number/Name) 459 / <i>Operational Energy Dominance</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
Description: Operational Energy Dominance advances joint capabilities and improved warfighter battlespace awareness through key initiatives: 1) Deployed advanced sensing to capture real-time power and energy data at the tactical edge. 2) Digitized legacy power systems, connecting previously isolated assets to the operational picture. 3) Captured end-to-end Class IIIB (fuel, batteries, generators) energy data to support decision-making. 4) Integrated environmental data to optimize UAV energy planning and endurance. FY 2026 Plans: In FY 2026, the OED portfolio culminates critical multi-year development efforts, delivering a suite of capabilities that transform operational energy management. Key deliverables include: 1. A fully integrated energy data ecosystem, providing advanced sensing, metering, real-time analytics, and cyber-secure data integration across all echelons. 2. Actionable insights derived from analytical studies identifying innovative energy solutions and critical cybersecurity needs. 3. Predictive energy management through modeling and simulation tools that standardize energy data, enhance UI/UX, and provide predictive insights for consumption and resupply. 4. Complete energy asset visibility by scaling digitization of legacy power infrastructure, ensuring total situational awareness. 5. Enhanced force protection via power system mitigation TTPs tailored for critical military infrastructure in INDOPACOM. 6. Proactive threat identification through the identification of an initial attack surface in power systems deployed in INDOPACOM, paving the way for exploitation evaluation. Building upon these foundational capabilities, FY 2026 efforts will significantly expand: 1. The reach of Enterprise-Wide Energy Visibility (EWEV), integrating energy intelligence directly into ISR workflows to sharpen situational awareness. 2. Power ISR activities, fusing operational energy data with real-time situational awareness to optimize maneuver, targeting, and sustainment decisions. 3. The fidelity of energy-focused wargaming tools, enabling more accurate logistics and operational planning. 4. Standardized command and control of power systems across the DOD, ensuring scalable and interoperable solutions. Finally, FY 2026 marks the launch of new projects focused on enhancing OE readiness and resilience by: 1. Establishing enterprise-wide energy visibility to empower real-time decision-making at every level. 2. Maturing an interoperable OE data layer within JADC2, fostering seamless data exchange across the joint force. 3. Ensuring cyber-secure data aggregation from the edge to the enterprise, safeguarding critical information. FY 2025 to FY 2026 Increase/Decrease Statement:

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
The \$12.8M programmatic increase from FY25 to FY26 fuels critical operational energy innovation, directly empowering warfighters with enhanced lethality and battlefield dominance. This vital funding will: 1. Empower the Tactical Edge: Extend sensing, computing, and decision-making capabilities to the tactical edge, providing warfighters with real-time, actionable intelligence for faster, more effective responses. 2. Sharpen Situational Awareness: Scale Enterprise-Wide Energy Visibility (EWEV) efforts, seamlessly integrating energy ISR into operational workflows to create a comprehensive, real-time view of the energy battlespace. 3. Maximize Operational Agility: Expand Power ISR capabilities, delivering unprecedented battlespace awareness and operational agility, enabling faster, more decisive maneuver and targeting. 4. Unleash the Power of Legacy Assets: Digitize legacy systems, closing critical situational awareness gaps and transforming every asset into a contributor to the fight. 5. Dominate the Converged Battlespace: Drive the integration of operational energy data with Electromagnetic Warfare (EW) efforts, creating a holistic battlespace understanding where power, spectrum, and maneuver converge, providing a decisive advantage. These transformative efforts will forge energy-informed operations, ensuring unmatched lethality, survivability, and mission success for U.S. forces in every contested environment. <i>FY 2025 to FY 2026 Increase/Decrease Statement:</i> This is a new PE number for the OECI Program, PE 0603055D8Z. A. Mission Description and Budget Item Justification												
This project secures U.S. warfighting advantages by driving innovations in operational energy surety, guaranteeing reliable and resilient access to energy and power for critical missions. Operational Energy Surety (OES) delivers critical enablers for operational flexibility, expanding freedom of maneuver through: • Autonomous delivery systems for assured energy resupply. • Silent watch-capable manned platforms for enhanced stealth and endurance. • Power and energy solutions enabling advanced maneuver and mobility concepts in contested environments. To achieve these goals, OES focuses on: • Agile Combat Employment (ACE): Developing energy surety options based on readily available, unique hybrid technologies; expanding energy options through innovative production methods; and generating power and heat from waste resources. • Interoperability and Standardization: Investing in tactical micro-gridding, electrical and communication standardization, and energy component commonality for multiplatform applications, ensuring seamless integration across the joint force. • Next-Generation Capabilities: Maturing high-power weapons enablers, advanced power and thermal management technologies, domestically manufactured advanced energy storage optimized for arctic and austere operations, and innovative, recoverable, offensive, effects-based energy disruption systems to deter adversaries.												
B. Accomplishments/Planned Programs (\$ in Millions)									FY 2024	FY 2025	FY 2026	
Title: Operational Energy Surety									-	-	40.261	
Description: OES is fortifying the Joint and coalition forces' operational advantage by delivering innovative energy solutions that ensure reliable power at the point of need.												
OES is continuing development of 13 projects from the previous FY while initiating new projects in FY 2026. OES is committed to driving state-of-the-art near-term innovations that support combat and command operations, especially in challenging environments like the Arctic, and revolutionize resilient energy delivery for a more agile and lethal force.												
FY 2026 Plans:												
OES is committed to guaranteeing uninterrupted operational capabilities for the DOD, even in the face of energy supply disruptions. This commitment is achieved through the development and integration of innovative energy solutions across all platform types – fixed, mobile, autonomous, and manned. OES strengthens operational readiness, secures strategic advantages in complex conflict scenarios, and empowers personnel to successfully execute missions by: • Extending mission endurance and standoff ranges.

• Expanding capabilities in extreme weather conditions. • Accelerating Joint innovative technologies to increase interoperability. • Minimizing logistical dependencies. • Supporting Golden Dome capabilities through innovative energy storage, power controls and distribution, and thermal management for radars and directed energy weapons. To achieve these objectives, OES is advancing operational energy surety through vehicle hybridization, focusing on: 1. Autonomous Refueling: Guaranteeing personnel survivability and safety through autonomous refueling capabilities. 2. Hybrid-Electric Platforms: Enhancing maneuverability with improved self-sustaining hybrid-electric platforms. 3. Advanced Power Management: Increasing operability through improved battery types and architectures with significantly increased power and storage; advancing energy-dense exportable power from crewed-uncrewed teaming; and optimizing power sharing between vehicle-to-vehicle and vehicle-to-grid technologies. 4. Directed Energy Weapon Support: Bolstering lethality with energy-dense power inverters and storage that support directed energy weapons. <i>FY 2025 to FY 2026 Increase/Decrease Statement:</i> This is a new PE number for the OECI Program, PE 0603055D8Z. A. Mission Description and Budget Item Justification

The Operational Energy and Power Projection (OE&PP) project powers the future of the DOD by delivering energy where it's needed most, enabling mission success anywhere on Earth and in space. The portfolio strategically invests in three critical areas: Aviation, Power Beaming, and Space.

- **Aviation: Extending the Reach of Uncrewed Aircraft:** This area is revolutionizing uncrewed aircraft endurance by demonstrating innovative airframes, paving the way for more efficient on-board power generation with oil-less turbogenerators, and reducing weight through novel aircraft power electronics.
- **Power Beaming: Projecting Energy Across the Battlespace:** This area is pushing energy forward with high-efficiency wireless power technology, including transmitters, relays, and receivers, and providing on-demand power to remote locations.
- **Space: Unleashing the Power of Space-Based Energy:** This area is developing state-of-the-art solar cells and battery technology for maximizing energy generation and storage capabilities in space. It also leverages robotics for assembling large solar arrays and refueling satellites, dramatically increasing the availability of energy in the space domain.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Operational Energy & Power Projection	-	-	46.457
Description: OE&PP is set to revolutionize power projection, delivering critical capabilities that will reshape the future battlespace. OE&PP competitively awarded 15 new efforts in the previous FY across the space, aviation, power beaming, and energy sensing focus areas. Fourteen of these transformative projects continue their work, while 19 are expected to close out, delivering tangible capabilities to the warfighter.			
FY 2026 Plans: In FY 2026, OE&PP will continue to revolutionize power projection by: 1. Revolutionizing Power Delivery: Advancing power beaming technologies that efficiently deliver energy across the battlespace, enabling on-demand power for a more agile and resilient force.

A. Mission Description and Budget Item Justification

This project is revolutionizing DOD operations by spearheading innovations in nuclear power (fission reactors and radioisotope power systems) for Joint operations across all domains. As a strategic priority for the Administration, nuclear power is poised to transform energy surety by:

- **Unleashing Unprecedented Energy Density:** Increasing the energy density of existing power systems by approximately 1,000,000x, enabling longer mission durations and reduced logistical dependencies.
- **Extending Power Lifetimes in Extreme Environments:** Dramatically extending power system lifetime in remote and austere locations, ensuring reliable power for critical operations in challenging environments.
- **Reducing the Burden on Personnel:** Decreasing operational burden on personnel compared to traditional power systems (e.g., chemical batteries and fossil fuels), freeing up resources for other mission-critical tasks.

The nuclear power portfolio's investments are focused on making nuclear technologies safer, lighter, more secure, more efficient, more economical, and more operational for the DOD.

To achieve these goals, this project is driving technology improvements in the supply chain and power conversion efficiency of both small and large RPS and fission subsystems and components, as well as de-risking complete fission mobile nuclear reactor systems. These technology development efforts include investments in cutting-edge materials like smart carbon/carbon, shielding optimizations, betavoltaics, alphavoltaics, alpha photovoltaics, Stirling energy conversion technology, and supercritical CO2 energy conversion loops (sCO2). The nuclear power portfolio also funds studies ensuring the safety and security of these transformative technology investments.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Nuclear Power	-	-	30.114
Description: The nuclear power portfolio spearheads DOD innovations in nuclear power (fission reactors and radioisotope power systems) for joint operations across all domains, paving the way for a new era of energy dominance.			
FY 2026 Plans:			

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2026 Office of the Secretary Of Defense		Date: June 2025	
Appropriation/Budget Activity 0400 / 3	R-1 Program Element (Number/Name) PE 0603055D8Z / <i>Operational Energy Cap ability Improvement</i>	Project (Number/Name) 458 / <i>Nuclear Power</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
In FY 2026, the nuclear power portfolio is undergoing a strategic transformation and delivering game-changing capabilities for the DOD. By concentrating resources on fewer, higher-impact projects directly aligned with critical military operations, the portfolio is poised to accelerate the development and deployment of transformative nuclear energy solutions. This includes streamlining the proposal process and prioritizing urgent nuclear technology needs: • Operational Radioisotope Power Systems (RPS): Enabling long-duration, reliable power for remote and autonomous systems. • Operational Fission Systems: Providing scalable and resilient power for forward operating bases and other critical infrastructure. • Subsystems and Components for Small Modular Reactors (SMRs), Microreactors, and “Nano” Reactors: Driving innovation in reactor design and performance. • Safety and Security Studies: Ensuring the responsible and secure deployment of nuclear technologies. A key focus area for FY26 is developing resilient, long-lived, and low-profile spaceflight RPS for defense use cases, enabling persistent situational awareness and communications in the contested space domain. Building upon previous successes, the nuclear power portfolio is continuing projects that improve the supply chain and power conversion efficiency of both small and large RPS and fission subsystems and components, as well as de-risking complete fission mobile nuclear reactor systems. These critical technology development efforts include investments in advanced materials like smart carbon/carbon and Stirling energy conversion technology, driving innovation and enhancing performance. To ensure the safe, secure, and effective integration of nuclear power into military operations, the portfolio is also overseeing the completion of studies into: • Multipurpose small modular reactors. • Regulatory and technology gaps for DOD nuclear applications. • Cybersecurity of nuclear microgrids. • Transportation and logistics of defense reactors in all domains. • Training and education for the nuclear battlefield of the future, driven by lessons learned from current conflicts. This strategic realignment ensures that the nuclear power portfolio is delivering the most impactful and relevant capabilities to meet the evolving needs of the DOD. <i>FY 2025 to FY 2026 Increase/Decrease Statement:</i> This is a new PE number for the OECI Program, PE 0603055D8Z. A. Mission Description and Budget Item Justification

FY26 SO/LIC Advanced Development has been realigned into the CTTS 122. No funds in FY26 and out.

This program supports the Department's initiatives to Deter Aggression, Defend the Homeland, and Build Sustainable and Long-Term Advantage.

The Advanced Development (AD) subgroup within IWTSD built on lessons learned from more than a decade of developing, managing, and overseeing the Secure Unclassified Network (SUNet) and is now developing, testing, and delivering advanced tools and capabilities for the Department of Defense (DoD) to campaign in and through cyberspace, maximize cyber capabilities in support of integrated deterrence, and effectively use cyber operations to generate asymmetric advantages. The AD subgroup streamlines the implementation and validation of Artificial Intelligence and cybersecurity requirements across IWTSD's project portfolio as well as develops novel tools and capabilities in collaboration with our partners across the cyber domain.

B. Program Change Summary (\$ in Millions)	FY 2024	FY 2025	FY 2026 Base	FY 2026 OOC	FY 2026 Total

Exhibit R-2, RDT&E Budget Item Justification: PB 2026 Office of the Secretary Of Defense		Date: June 2025		
Appropriation/Budget Activity 0400: Research, Development, Test & Evaluation, Defense-Wide I BA 3: Advanced Technology Development (ATD)		R-1 Program Element (Number/Name) PE 0603121D8Z I SO/LIC Advanced Development		
Change Summary Explanation In FY2026, funds will be returned to the source portfolio from which it originally came_PE0603122D8Z. IWTSD uses this RDT&E funding in PE 0603122D8Z to execute its charter and rapidly develop, deliver, and transition secure and resilient irregular warfare capabilities for USSOCOM, the broader Department of Defense, its International Partners, and deliver operational capabilities in support of the National Defense Strategy. This reprogramming action will enable IWTSD to retain critical knowledge and continue to support enhanced cyber hardening and information assurance across IWTSD's portfolio, as well as develop and deploy new tools and capabilities to protect, support, and enhance DoD and joint operations in the cyber domain. The new subgroup created in PE0603122D8Z is the Advanced Development subgroup.				
C. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025	FY 2026
Title: Advanced Development		1.951	5.176	0.000
Description: Develop, test, and deploy tools, concepts, and capabilities to protect, support, and enhance DoD and joint operations resiliency in the cyber domain; conduct research, analysis, and development to understand, integrate, and mitigate impacts of emerging and disruptive technologies on digital infrastructures; and support integration, testing, hardening, accreditation, and transition of IWTSD sponsored tools and capabilities to end user systems and production environments.				
FY 2025 Plans: In FY 2025, the AD subgroup plans to initiate funding one (1) project in the area focused on developing our warfighting capabilities with Allies and partner. This project includes: • An unintrusive vulnerability and anomaly detection tool for operational technology in air-gapped environments. In FY 2025, the AD subgroup plans to continue funding four (4) projects in areas focused on 1) building resilience in the cyber domain; 2) developing our warfighting capabilities with Allies and partner; and 3) developing key enabling capabilities and deepening interoperability. These projects include: • A secure development, testing, and assessment environment to facilitate enhanced cyber hardening of IWTSD sponsored capabilities. • A security analysis and reliability evaluation tool that virtualizes target hardware systems and emulates embedded software systems to facilitate penetration testing and vulnerability detection. • A cyber range that simulates advanced persistent threat (APT) communications to facilitate the development and testing of detection algorithms. • Technical and cybersecurity support for IWTSD capability development to enable accelerated testing, fielding, integration, accreditation, and transition of secure prototypes and systems to end users.

A. Mission Description and Budget Item Justification

The Irregular Warfare Technical Support Directorate (IWTSD) conducts rapid research and development (R&D) in support of the Interim National Defense Strategic Guidance (INDSG) to provide leap-ahead technologies focused on surpassing current and expected levels of technology used and developed by our adversaries, with China as the pacing threat. IWTSD is mandated and structured to rapidly fill capability gaps, to include increasing lethal capability of U.S. forces at the squad and small unit level; developing lethal drones; countering small uncrewed aerial systems (drones); subterranean detection and operations; novel body and vehicle armor; detecting, protecting against, and mitigating novel and wartime CBRNE threats; telematics; covert communications; and of special interest, the use of machine learning and artificial intelligence to enhance the capability of systems used by the military and lessen the workload on the individual users.

During FY 2025 and into FY 2026, IWTSD will continue to focus its R&D activities to rapidly fill the immediate, emerging, and critical capability gaps for those at the tactical edge to include our nation's special operations forces, other military operators, intelligence analysts, and first responders.

The number of capability gaps IWTSD can address are reduced due to the increased cost of incorporating artificial intelligence, machine learning, cyber hardening, and DoD safety testing of prototype systems prior to operational test and evaluation (OT&E). For instance, the focus on increased lethality has driven up costs to meet Defense safety and testing requirements.

From a broader perspective, projects remain distributed among 11 mission subgroups:

- Advanced Analytics
- Advanced Development
- Chemical, Biological, Radiological, Nuclear, and Explosives
- Expeditionary Force Protection
- Explosive Ordnance Disposal and Explosive Operations
- Human Performance and Training
- Indirect Influence and Competition
- Innovation
- Protection, Survivability, and Recovery
- Surveillance, Collection, and Operations Support
- Tactical Offensive Support

UNCLASSIFIED

Exhibit R-2, RDT&E Budget Item Justification: PB 2026 Office of the Secretary Of Defense	Date: June 2025
---	------------------------

Appropriation/Budget Activity 0400: <i>Research, Development, Test & Evaluation, Defense-Wide I BA 3: Advanced Technology Development (ATD)</i>	R-1 Program Element (Number/Name) PE 0603122D8Z I <i>Combating Terrorism Technology Support</i>
---	---

To accommodate shifting emphasis in mission while still operating within budget, IWTSD eliminated the Forensics, Exploitation and Identity Management subgroup and added the Advanced Development subgroup. To place greater emphasis on the Congressionally directed joint RDT&E programs with Israel, 100% of the staff in the Expeditionary Force Protection and the Protection, Survivability, and Recovery subgroups are supporting the subterranean detection and operations and countering unmanned aerial vehicles joint programs. Lastly, the Innovation subgroup was created in anticipation of the Congressionally directed joint RDT&E Emerging Technology program with Israel.

Each of the 11 subgroups have enduring R&D partnerships with USSOCOM and its components, the Services, and many Defense agencies. During FY 2024, IWTSD partnered with USSOCOM, the Services, and Defense agencies to transition or commit to transition over 12 products to a Program of Record, provided 42 prototypes to users for OT&E; commercialized 5 products, placed 2 products on a GSA/DLA catalogue, and 13 products are advancing future scientific research. IWTSD's International R&D program has helped other DoD Components and organizations initiate task plans, which support execution of over about \$60 million dollars to rapidly develop and prototype new technology and innovation through collaboration and cost sharing with Israel.

While supporting the INDSG by filling capability gaps to address our adversaries, the IWTSD program will continue to identify capabilities to combat terrorism and irregular adversaries, and quickly deliver these capabilities to U.S. Defense, interagency, and international partners through rapid research and development, advanced studies, and technical innovation. IWTSD is unique in its approach, annually obtaining joint requirements directly from major Commands, Services, military operators, intelligence analysts, and first responders, and discussing those requirements with industry before the requirements are released in Broad Agency Announcements (BAA).

The FY 2026 Program Requirements Meetings took place in January 2025 and contract awards will begin in early FY 2026. The IWTSD manages approximately 250 new and continuing projects, 170 of which are tied to international task plans, while also reviewing proposals and negotiating contracts for another 40 requirements for the next fiscal year.

The IWTSD program, justified in the R-2 exhibit, identifies the projects that are fully or partially funded by Congressional appropriations for the IWTSD program. However, IWTSD also develops technology and provides support using external funds provided by other DoD, federal departments and international partnerships. These external funds are not reflected in this R-2 justification. However, the number of activities does reflect positively on the trust and competence that IWTSD has earned throughout the Department of Defense, its international partners, and other federal organizations to rapidly conduct critical RDT&E and provide innovative products to fill their capability gaps.

B. Program Change Summary (\$ in Millions)	FY 2024	FY 2025	FY 2026 Base	FY 2026 OOC	FY 2026 Total

Congressional Add Totals for all Projects

FY 2024	FY 2025
97.500	122.500
97.500	122.500
97.500	122.500

Change Summary Explanation

FY 2026 increase of (\$3.245) million for Discretionary spending.

The FY 2026 request for IWTSD includes (\$3.245) millions of discretionary and (\$0) millions of mandatory (reconciliation) for a total of (\$3.245) million.

Change Summary Explanation:

The FY 2026 request increase of \$3.245 millions includes Irregular Warfare Technical Support Directorate (IWTSD) Capability Initiatives. Overall increase of \$3.245 is a result of: realignment of \$5.204 millions of funds from PE0603121D8Z to PE0603122D8Z in FY 2026; reduction of -\$1.710 million due to Program Decision Memorandum (PDM1) addressing Fourth Estate Discretionary Innovation & Industrial Base, Science and Technology (S&T) Funding; reduction of -\$0.249 million due to adjustments addressing Inflation Rates for Non-Pay and Non-Fuel Purchases.

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025	FY 2026
Title: Advanced Analytic (AA)		7.450	8.572	8.063
Description: The Advanced Analytics (AA) subgroup's objective is to develop and deploy integrated analytic capabilities; enabling commanders, warfighters, and mission partners to share information and make better/faster decisions at the strategic, operational, and tactical levels. AA projects improve sense-making, decision-making, and data management across a range of mission areas.				
FY 2025 Plans: In FY 2025, the AA subgroup plans to initiate funding for five (5) projects in areas focused on 1) developing key enabling capabilities and deepen interoperability, 2) trusted artificial intelligence (AI) and autonomy, integrated network system-of-systems, microelectronics, and human-machine interfaces and 3) develop our warfighting capabilities together with those of our Allies and partners. An example includes, but is not limited to:

Appropriation/Budget Activity 0400 / 3		R-1 Program Element (Number/Name) PE 0603122D8Z / <i>Combating Terrorism Technology Support</i>		Project (Number/Name) 484 / <i>Combating Terrorism Technology Support (CTTS)</i>	
B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026
• An AI-based solution that will detect and plug firewall breaches, and search for compromised data including identification of relevant threat surfaces and dark web sources; automated scanning of identified sources; analysis techniques to identify data dump locations; alerting tools for new or likely data dumps; potential methods for data dump removal; consideration of additional techniques providing advanced warning of data breaches. In FY 2025, the AA subgroup plans to continue funding two (2) projects in areas focused on 1) developing our warfighting capabilities together with those of our Allies and partners, and 2) trusted artificial intelligence (AI) and autonomy, integrated network system-of-systems, microelectronics, and human-machine interfaces. These projects are: • An analytical tool to improve the detection and geolocation of unknown radio frequency (RF) signals. Currently, Adversarial Covert Communications Detection lack the fluidity required across different environments and post-mission reporting and analysis. This requires an enhanced version of the STORM/EWST/MELIAN Electronic Warfare Support System. • A GIS-based terrain analytics module which employs AI / ML tools to automate mission planning and provides a first level analysis on terrain for the commander based on information from a data management and fusion engine. In FY 2025, the AA Subgroup plans to complete funding of five (5) projects in areas focused on 1) developing our warfighting capabilities with Allies and partners, and 2) trusted artificial intelligence and autonomy, integrated network system-of-systems, microelectronics, and human-machine interfaces. Examples include, but are not limited to: • Exploit Advertising Technology (AdTech) data (e.g. acquiring appropriate data sets; ingesting, processing and storing data; filtering and visualizing the data in a meaningful way) to produce key insights, and augment AdTech data insights through intelligence fusion (e.g. Domain Name Systems (DNS) exploitation, satellite imagery, radio frequency spectrum analysis, etc.). • A modeling software to understand non-linear and non-kinetic impacts of irregular warfare activities following the correlation of forces and means (COFM) framework for kinetic effects and attrition of enemy forces. • An analytical tool that will generate synthetic libraries improving Computed Tomography (CT) and Advanced Imaging Technology (AIT) in screening baggage and passengers. This project is in conjunction with the Transportation Security Administration (TSA). • An integrated operational planning and decision aid tool that leverages modern AI/Machine Learning (ML) to provide advance operational planning and decision aid (e.g., near-real-time route planning, engagement strategies, targeting recommendations, fires coordination, sensor fusion, and courses of action). FY 2026 Plans:

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026
In FY 2026, the AA Subgroup plans to continue funding two (2) projects in areas focused on 1) project in areas focused on developing key enabling capabilities and deepen interoperability and 2) Trusted artificial intelligence and autonomy, integrated network system-of-systems, microelectronics, space, renewable energy generation and storage, and human-machine interfaces. Examples include, but are not limited to: • An enterprise tool for the Joint Force to develop competitive strategies and plans supporting on-going, integrated campaigns designed to deter aggression and provide the United States with influence, advantage, and leverage to secure strategic objectives. In FY 2026, the AA Subgroup plans to complete funding four (4) projects in areas focused on 1) developing our warfighting capabilities with Allies and partners, and 2) trusted artificial intelligence and autonomy, integrated network system-of-systems, microelectronics, and human-machine interfaces. Examples include, but are not limited to: • A GIS-based terrain analytics module which employs AI / ML tools to automate mission planning and provides a first level analysis on terrain for the commander based on information from a data management and fusion engine. • A forward deployed threat detection system to support detection of enemy RF targeting and tracking capabilities. Special Forces detachments require distributed RF sensors to provide ubiquitous electronic warfare/electronic intelligence (EW/ELINT) sensing and geo-location. FY 2025 to FY 2026 Increase/Decrease Statement: The decrease is reflective of budgetary adjustments. There is no significant impact to the mission.					
Title: Advanced Development (AD) Description: The Advanced Development (AD) Subgroup's objective is to protect, support, and enhance the Department of Defense (DoD) and joint operations resiliency in the cyber domain. The AD subgroup focuses on cybersecurity and not only develops, tests, and delivers emerging technology to enhance defensive cyber operations, but also provides technical advice and security assessment support to the other IWTSD subgroups. Nearly every capability that IWTSD develops has an information technology component to it, which means nearly every capability also has a cybersecurity aspect to it as well. The AD subgroup works across IWTSD to iteratively integrate cybersecurity throughout capability development, facilitating delivery of hardened and resilient systems to our end users. FY 2025 Plans: Executed under PE0603121D8Z. FY 2026 Plans:			0.000	0.000	6.680

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
In FY 2026, the AD subgroup plans to continue funding five (5) projects focused on 1) building resilience in the cyber domain; 2) developing our warfighting capabilities with Allies and partners; and 3) developing key enabling capabilities and deepening interoperability. These projects include: • A secure development, testing, and assessment environment to facilitate enhanced cyber hardening of IWTSD sponsored capabilities. • A security analysis and reliability evaluation tool that virtualizes target hardware systems and emulates embedded software systems to facilitate penetration testing and vulnerability detection. • A cyber range that simulates advanced persistent threat (APT) communications to facilitate the development and testing of detection algorithms. • An unintrusive vulnerability and anomaly detection tool for operational technology in air-gapped environments. • Technical and cybersecurity support for IWTSD capability development to enable accelerated testing, fielding, integration, accreditation, and transition of secure prototypes and systems to end users. FY 2025 to FY 2026 Increase/Decrease Statement: Realignment of funds from PE0603121D8Z to PE0603122D8Z starting in FY 2026.			
Title: CHEMICAL, BIOLOGICAL, RADIOLOGICAL, NUCLEAR, AND EXPLOSIVES (CBRNE) Description: The CBRNE Subgroup's objective is to improve defense capabilities to meet tomorrow's CBRNE threats. The subgroup focuses on threat characterization; materials attribution; personal protective equipment; detection of CBRNE materials at trace and bulk levels at point, proximity and stand-off distances; development of information resources and decision support tools to assist response elements with risk-based decision making; and consequence management for post-event activities. FY 2025 Plans: For FY 2025, the CBRNE Subgroup is currently evaluating requirements and proposals and plans to initiate funding 6 new projects focused on: 1) Integrated deterrence in close collaboration with our counterparts across the U.S. Government and with Allies and partners; 2) Developing key enabling capabilities, and deepening interoperability; 3) Contributing to a future force that must be lethal, sustainable, resilient, survivable, agile, and responsive; and 4) Rapid experimentation, acquisition, and fielding. Examples include, but are not limited to: • Development of a field-portable instrument for non-contact vapor detection of trace levels of explosives and drugs, at ambient temperature and pressure, in concentrations of 9 parts-per-trillion or lower. • Development of a system to rapidly decontaminate aviation platforms and allow for a quick return to service. • Development of a tactical respirator that provides ergonomic ocular and respiratory protection for warfighters during live-fire and open air exothermic cutting operations and dense, urban, and subterranean environments.		9.132	9.599

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026
- Integration of the Chemical, Biological, Radiological, Nuclear, Explosive - Semantic Framework (CBRNE-SF) in a Controlled Unclassified Information (CUI) environment to allow access to mission-critical information on weapons of mass destruction (WMD) pathways and observables in a field environment. - Investigation of novel swab materials for use in a broad range of explosives detection technologies. In FY 2025, the CBRNE Subgroup plans to continue funding 24 projects in areas focused on: 1) Integrated deterrence in close collaboration with our counterparts across the U.S. Government and with Allies and partners; 2) Developing key enabling capabilities, and deepening interoperability; 3) Contributing to a future force that must be lethal, sustainable, resilient, survivable, agile, and responsive; 4) Rapid experimentation, acquisition, and fielding; and 5) Seeding opportunities in biotechnology, quantum science, advanced materials, and clean-energy technology. Examples include, but are not limited to: - Develop, validate, and/or share microbial assays and techniques for attribution of bioterrorist agents. - Adaption of existing antibody reagents into a system capable of explosive trace detection with a weight and logistics burden like a colorimetric kit. - Develop a disposable, low size, weight, power and cost, ruggedized chemical hazard sensor network to provide advance hazard information and situational awareness to the warfighter. - Develop a microfluidic device based on a CRISPR- Cas detection mechanism to provide a cost-effective, sensitive, and rapid point-of-need testing platform that is field-forward and capable of generating on-site results quickly without needing costly equipment. - Develop a Combined Unit Respirator for Subterranean Operational Environments (CRUSOE) in order to provide a respiratory life support system specifically designed for prolonged underground use. In FY 2025, the CBRNE Subgroup plans to complete funding 25 projects in areas focused on: 1) Integrated deterrence in close collaboration with our counterparts across the U.S. Government and with Allies and partners; 2) Developing key enabling capabilities, and deepening interoperability; 3) Contributing to a future force that must be lethal, sustainable, resilient, survivable, agile, and responsive; 4) Rapid experimentation, acquisition, and fielding; and 5) Seeding opportunities in biotechnology, quantum science, advanced materials, and clean-energy technology and 6) Developing new capabilities, including long-range strike, undersea, hypersonic, and autonomous systems, and improving intelligence and information sharing. Examples include, but are not limited to: - Development of a pocket-sized Raman system capable of identifying unknown dark/colored materials, in addition to current detectable threats through non-metallic barriers. - Development of a low-cost universal chemical agent detection (UCAD) paper for rapidly indicating the presence of A, G, H, L and V-series chemical warfare agents.

Exhibit R-2A, RDT&E Project Justification: PB 2026 Office of the Secretary Of Defense			Date: June 2025		
Appropriation/Budget Activity 0400 / 3		R-1 Program Element (Number/Name) PE 0603122D8Z / <i>Combating Terrorism Technology Support</i>		Project (Number/Name) 484 / <i>Combating Terrorism Technology Support (CTTS)</i>	
B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026
• Design, development, test, validation and delivery of a device for cutting the tips of buccal swabs and automatically placing the cut tips into a pre-designated 96-well plate. • Development of an advanced analytical database of improvised CB agent and homemade explosive production methods. • Development of a low-cost detect-to-identify wearable sensing technology to inform chemical-specialist first responders and warfighters of the presence of a broad range of toxic industrial chemicals (TICs) and chemical warfare agents (CWAs) vapors. FY 2026 Plans: In FY 2026, the CBRNE Subgroup plans to continue funding 13 projects in areas focused on: 1) Integrated deterrence in close collaboration with our counterparts across the U.S. Government and with Allies and partners; 2) Developing key enabling capabilities, and deepening interoperability; 3) Contributing to a future force that must be lethal, sustainable, resilient, survivable, agile, and responsive; 4) Seeding opportunities in biotechnology, quantum science, advanced materials, and clean-energy; 5) Rapid experimentation, acquisition, and fielding. Examples include, but are not limited to: • A multi-year test and evaluation program for the identification and rapid laboratory and field evaluation of emerging commercial and near-commercial explosive detection technologies to facilitate the acceleration, improvement, and fielding of promising capabilities. • Development of a system to rapidly decontaminate aviation platforms and allow for a quick return to service. • Development of a highly mobile Self-Contained Breathing Apparatus (SCBA) breathing air refill station for use in forward-deployed locations and austere operating environments that is capable of rapidly refilling compressed air cylinders without regard to inclement weather or uneven terrain. • Characterization of CBRNE threats and assessment of mitigation tools and techniques. • Testing and evaluation of next generation sensors for use in trace, bulk, proximity, and stand-off detection of explosives-based threats. In FY 2026, the CBRNE Subgroup plans to complete funding 17 projects in areas focused on: 1) Integrated deterrence in close collaboration with our counterparts across the U.S. Government and with Allies and partners; 2) Developing key enabling capabilities, and deepening interoperability; 3) Contributing to a future force that must be lethal, sustainable, resilient, survivable, agile, and responsive; 4) Rapid experimentation, acquisition, and fielding; and 5) Seeding opportunities in biotechnology, quantum science, advanced materials, and clean-energy technology. Examples include, but are not limited to: • Identification of an inexpensive, rapidly deployable, COTS solution to reduce RN material resuspension and contamination spread. • Development of a handheld non-contact sampler capable of collecting trace amounts of threat material onto media that is compatible with COTS detectors to enable rapid sample analysis in the field and successful sampling from porous surfaces.

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
• Development of a system that monitors changes in canine behavior, task engagement, and physical distress and provides easy-to-interpret feedback to the dog handler via a wearable signal reader. • Characterization of the aerial dispersion, the effects of dynamic meteorological conditions, and the impacts of hard-kill countermeasures on CBR-carrying UAS. • Development of a microfluidic device based on a CRISPR- Cas detection mechanism to provide a cost-effective, sensitive, and rapid point-of-need testing platform that is field-forward and capable of generating on-site results quickly without needing costly equipment. FY 2025 to FY 2026 Increase/Decrease Statement: The slight decrease in funding is reflective of Departmental Priorities and budgetary adjustments. There is no significant impact to the mission.			
Title: Expeditionary Force Protection (EFP) Description: The Expeditionary Force Protection (EFP) Subgroup's objective is to rapidly develop and transition expeditionary force protection capabilities and technologies to support forward deployed and domestic military, international partners, interagency and first responders for Blast Effects and Mitigation; Maritime Security; Screening, Observation, Detection, and Protection; and Subterranean Environments. EFP projects focus these technology development efforts for expeditionary advance based operations, forward operating bases, subterranean operations, counter-tunnel, and maritime port and littoral environments. FY 2025 Plans: In FY 2025, the EFP Subgroup plans to initiate funding eight (8) projects in areas focused on 1) Gaining and sustaining military advantages, 2) Developing warfighting capabilities together with those of our Allies and partners, 3) Sharpening the Joint Force's technological edge, 4) Develop key enabling capabilities, and deepen interoperability, and 5) Integrated deterrence with counterparts across USG and Allies and Partners. Examples include, but are not limited to: • Classified study on geotechnical data. • Development of a subterranean tactical room clearing marker with additional sensors and communications reach back for force protection. • Development of a nest of attacking drone systems triggered by seismic signals in a subterranean environment. • Development of a classified functional defeat task for subterranean categories 1, 2, and 3. • Integration of Human Injury Prediction (HIP) for Vulnerability Assessment and Protection Option (VAPO) 7 to effectively and accurately model the effects of an explosive event. These effects include air blast propagation, fragmentation effects and patterns, human injury models, etc.		7.216	6.882

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026
In FY 2025, the EFP Subgroup plans to continue funding sixteen (16) projects in areas focused on 1) Integrated deterrence with counterparts across USG and Allies and Partners, 2) Gaining and sustaining military advantages, 3) Developing our warfighting capabilities together with those of our Allies and partners, 4) Sharpening the Joint Force's technological edge, 5) Developing key enabling capabilities, and deepen interoperability, 6) Developing new capabilities, including long-range strike, undersea, hypersonic, and autonomous systems, and improving intelligence and information sharing, and the integration of non-kinetic tools, 7) Improving the speed and accuracy of detection and 8) Integrate data, software, and artificial intelligence efforts and speed their delivery to the warfighter. Examples include, but are not limited to: • Joint demonstration of Passive Acoustic systems for detecting and identifying underwater (UW) threats (e.g., Unmanned Underwater Vehicles (UUVs) to vessels in ports and harbors. • A Subterranean Operations Planning and Considerations (SOP-C) exercise event that provides the Department of Defense and Interagency a holistic overview of the operational level considerations for planning and executing missions. • Development of classified drilling capability. • Modification of the current GMV 1.1 Flyer vehicle's power train to an electrification vehicle achieving an operational range, under load, of 300 miles to support hard target defeat. For FY 2025, the EFP Subgroup plans to complete funding forty-one (41) projects in areas focused on 1) Integrated deterrence with counterparts across USG and Allies and Partners, 2) Gaining and sustaining military advantages, 3) Developing our warfighting capabilities together with those of our Allies and partners, 4) Sharpening the Joint Force's technological edge, 5) Developing key enabling capabilities, and deepening interoperability, 6) Developing new capabilities, including long-range strike, undersea, hypersonic, and autonomous systems, and improving intelligence and information sharing, and the integration of non-kinetic tools, and 7) Improving the speed and accuracy of detection and targeting. Examples include, but are not limited to: • Development and testing of a miniature/tactical version of the Tunnel 3D mapping capability for subterranean environments, which creates unique 2D and 3D maps in real time. • Development of a testing and training fixture that will closely replicate subterranean and hard and deeply buried targets to allow for Units of Action to research and develop technological solutions. • Integration of Human Injury Prediction (HIP) for Vulnerability Assessment and Protection Option (VAPO) 7 to effectively and accurately model the effects of an explosive event. These effects include air blast propagation, fragmentation effects and patterns, human injury models, etc. • Development of a covert underwater (UW) night vision capability to support remote operations at night in shallow, turbid water environments.

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
The decrease of Core funding allows for an increased focus on the Congressionally directed and funded Counter Tunnel RDT&E program with Israel.			
Title: Explosive Ordnance Disposal / Explosive Operations (EOD/EXO) Description: The EOD/EXO Subgroup's objective is to deliver capabilities to defeat or neutralize the continuum of improvised weapons and explosive devices. EOD/EXO improves the operational capabilities of the bomb disposal and explosive operations community, consisting of military EOD, combat engineers, as well as special operations forces by developing and delivering advanced tool technologies and decision support tools to defeat improvised devices. The EOD/EXO Subgroup identifies and prioritizes multi-agency end-user requirements in collaboration with military units. EOD/EXO actively works with vendors and end-users to deliver advanced prototype systems that provide greater efficiency and increased safety for Bomb Technicians who investigate, access, evaluate, and if needed, render safe or dispose of suspect devices. FY 2025 Plans: For FY 2025, the EOD/EXO Subgroup plans to initiate funding for three (3) projects focused on integrating data, software, and artificial intelligence (AI) efforts and speed their delivery to the warfighter. • Development of an EOD/EXO Heads Up Display (HUD) that provides the EOD technician with an efficient and effective means for conducting post-conflict, wide area remediation and clearance of landmines, unexploded ordnance, bulk explosives, improvised explosive devices (IED)s, and other explosive remnants of war (ERW). The HUD provides the EOD technician the ability to receive information on UXOs, ordnance items, and ERW while operating down range. • Development of an AI software tool to reverse engineer a printed circuit board (PCB) to exploit the IED. The tool enhances the EOD technician decision making process when faced with an unknown PCBs and provides the ability to understand unknown PCBs and circuit functionality in an IED before attempting a render-safe procedure (RSP). • Development of an AI hardware tool to assist EOD technicians in analyzing, rendering-safe, storing, replicating, and manipulating conventional ordnance and IED circuits through hardware-in-the-loop connections. In FY 2025, the EOD/EXO Subgroup plans to continue funding five (5) projects in areas focused on: 1) Developing our warfighting capabilities together with those of our Allies and partners; 2) Integrating data, software, and artificial intelligence efforts and speed their delivery to the warfighter; and 3) Developing key enabling capabilities and deepening interoperability. • Bilateral information exchange between U.S.-based bomb technicians and members of the Israel National Police Bomb Disposal Division. • Development of a collection of 2-D images and 3-D scans of inert or inerted military ordnance, IED and IED-related components. These scans will help train AI to identify ordnance items in different orientations, as well as provide trainers with a collection of accurate, well documented graphics for training EOD and UXO personnel.		5.820	7.029

These scans helped train AI and ML algorithms to identify ordnance items in different orientations, as well as providing trainers with a collection of accurate and well documented graphics for training EOD/EXO personnel. • A comprehensive and shareable dataset that includes multi-angle photographs and x-ray images of IEDs, IED components, and PCBs in various configurations and orientations. • Development of a Siri/ChatGPT-like capability for Joint Service EOD technicians that provides a virtual reach-back capability to ask questions of operational relevance without an internet connection. FY 2025 to FY 2026 Increase/Decrease Statement: The decrease is reflective of budgetary adjustments. There is no significant impact to the mission.			
Title: Human Performance and Training (HPT) Description: The Human Performance and Training (HPT) subgroup's objective is to provide Special Operations Forces (SOF), Department of Defense, and interagency partners with agile, rapid response, research and development capabilities for optimizing performance in the operational environment and increasing readiness for tomorrow's threats. To meet this objective, the subgroup develops human-centered technologies that are performance outcome focused in the areas of immersive learning technology, human performance optimization, and innovative training and educational concepts. HPT's capabilities are implemented globally to prepare for critical missions in any operational environment to identify, disrupt, and defeat threats. FY 2025 Plans: In FY 2025, the HPT subgroup plans to initiate funding five (5) projects in areas focused on 1) gaining and sustaining military advantages, 2) building resilience in cyber and space domains, 3) developing our warfighting capabilities together with those of our Allies and partners, and 4) trusted artificial intelligence and autonomy, integrated network system-of-systems,		7.244	8.067

microelectronics, space, renewable energy generation and storage, and human-machine interfaces. Examples include, but are not limited to: • A toolkit to support Tactical Information Operations (TIO) that would allow government operators to demonstrate and practice the full cyber kill chain using non-open-source tools. • A specialized tactical counter-uncrewed aerial systems (cUAS) training program that provides a variety of training courses on original equipment, non-original equipment, and foreign mobile and dismounted cUAS equipment within a realistic and genuine tactical setting. In FY 2025, the HPT subgroup plans to continue funding two (2) projects in areas focused on gaining and sustaining military advantages. Examples include: • An augmented reality system for increased training realism of high-risk scenarios through the mixing of real-world environments and virtual objects/entities. • A program of instruction (POI) to teach basic jungle tactics and provide a common-core institutional knowledge base regarding the type of warfare encountered against peer threats in SOUTHCOM and INDOPACOM. In FY 2025, the HPT subgroup also plans to complete funding eleven (11) projects in areas focused on 1) sharpening the joint force's technological edge, 2) gaining and sustaining military advantages, 3) developing our warfighting capabilities together with those of our allies and partners, 4) building resilience in cyber and space domains, and 5) enhancing the future force to be lethal, sustainable, resilient, survivable, agile, and responsive. Examples include, but are not limited to: • Techniques for developing accurate and realistic 3D virtual cites for immersive, virtual reality-based pre-deployment operations training, mission planning, and mission rehearsal. • An AC-130J Virtual Reality Combat Mission Trainer to enable operational crews to engage in mission tasks within a simulated environment that replicates sensory information of real-world mission performance found in joint mission essential task (JMET) environments. • A multi-sensory (e.g., visual, auditory, tactile) and immersive military freefall jump master simulator to enhance classroom training and rehearsal of spotting techniques and aircraft procedures over virtual drop zones (DZ) modeled after real world DZs prior to going up in the air. • A series of three (3) courses focused on SF operational and tactical core activities in space. FY 2026 Plans:

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
In FY 2026, the HPT subgroup plans to initiate funding five (5) projects in areas focused on 1) gaining and sustaining military advantages, 2) seed opportunities in biotechnology, quantum science, advanced materials, and clean-energy technology, and 3) developing our warfighting capabilities together with those of our allies and partners. Examples include, but are not limited to: • A virtual reality environment that allows personnel to immerse themselves in an accurate and realistic digital twin of any environment and move naturally for improved mission planning and rehearsal. • Developing of a mechanism to capture and analyze cognitive performance of individuals during training and simulated missions. In FY 2026, the HPT subgroup plans to continue funding four (4) projects in areas focused on 1) gaining and sustaining military advantages, 2) building resilience in cyber and space domains, and 3) developing our warfighting capabilities together with those of our Allies and partners. Examples include: • A program of instruction (POI) comprised of two (2) instructor-led courses of instruction (COIs) to educate and analysis of gaps in current training to support operators on SOF-centric communications. • A study of the effects of arctic conditions on a MWD's ability to locate a target odor in extreme temperatures to identify ways to maximize MWD's performance in both detection and patrol capabilities. In FY 2026, the HPT subgroup plans to complete funding three (3) projects in areas focused on 1) gaining and sustaining military advantages, 2) building resilience in cyber and space domains, 3) developing our warfighting capabilities together with those of our Allies and partners, and 4) trusted artificial intelligence and autonomy, integrated network system-of-systems, microelectronics, space, renewable energy generation and storage, and human-machine interfaces. Examples include, but are not limited to: • Developing a system to manage and analyze large amounts of mobile device data to support training to move from human analysis to an artificial intelligence/machine learning system. • A program of instruction (POI) to teach basic jungle tactics and provide a common-core institutional knowledge base regarding the type of warfare encountered against peer threats in SOUTHCOM and INDOPACOM. FY 2025 to FY 2026 Increase/Decrease Statement: The slight decrease is reflective of budgetary adjustments. There is no significant impact to the mission.			
Title: Influence and Information Capabilities (I2C) Description: The Influence and Information Capabilities (I2C) subgroup's objective is to develop new concepts and capabilities for warfighters and interagency partners. defeat adversaries, including great powers' proxies and irregular surrogates, and succeed in a wide range of contingencies in both physical and informational domains. To establish and reinforce irregular warfare (IW) as a core competency, I2C will pursue innovative projects to enhance information forces' abilities to assess, monitor and evaluate influence activities, deliver information and influence, and integrate information and influence activities from the tactical to the strategic levels. FY 2025 Plans: In FY 2025, the I2C subgroup plans to initiate funding five (5) projects in areas focused on 1) integrating data, software, and artificial intelligence (AI) efforts and speed their delivery to the warfighter, and 2) sharpening the Joint Force's technological edge. Examples include, but are not limited to: • Developing large-scale online video collection, processing, exploitation and analysis to rapidly characterize and locate video content for identification and understanding of narrative emergence and change. • Developing, enhancing and leveraging an AI tool that transforms the DoD's Psychological Operations (PSYOP) process by increasing the precision, scale, and speed of Operations in the Information Environment (OIE) campaign planning. In FY 2025, the I2C subgroup plans to complete funding five (5) projects in areas focused on 1) integrating data, software, and AI efforts and speed their delivery to the warfighter, 2) the future force must be lethal, sustainable, resilient, survivable, agile, and responsive, 3) sharpening the Joint Force's technological edge, 4) sustaining and strengthening U.S. deterrence, with China as the pacing challenge, and 5) developing new capabilities, including long-range strike, undersea, hypersonic, and autonomous systems, and improve intelligence and information sharing, and the integration of non-kinetic tools. These projects include: • New capabilities for the modern PSYOP enterprise that are ready for integration into PSYOP curriculum and doctrine. • Leveraging data science and machine learning research to apply prompting approaches for conversing with large language models (LLMs) in non-English languages to support pre-testing and target audience analysis during influence operations. • An independent, third-party review of the current state of generative AI acquisition, development, gaps and opportunities across the DoD relevant to information. • A system consisting of cameras, communications equipment and other low-cost sensors that can be used at scale by commercial fishing fleets to enable maritime domain awareness to counter illegal, unreported and unregulated fishing (IUUF). • Operational testing of a low-cost multi-role platform to enable influence, surveillance and kinetic strike in grey zone and denied area operations. FY 2026 Plans:

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
In FY 2026, the I2C subgroup plans to complete funding five (5) projects in areas focused on 1) integrating data, software, and artificial intelligence (AI) efforts and speed their delivery to the warfighter, and 2) sharpening the Joint Force's technological edge. These projects include: • Developing a prototype system that enables the generation of highly targeted, effective, and adaptable content at unprecedented speed and scale • Evaluating the effectiveness and efficiency of AI-powered content creation and survey development tools, compared to traditional human-developed content and surveys FY 2025 to FY 2026 Increase/Decrease Statement: The increase in funding is reflective of Departmental priorities.			
Title: Innovation Description: The objective of the Innovation and Emerging Technology program area is to identify and incubate emerging technologies and disruptive innovations that are mutually beneficial and of interest to both the United States and Israeli, to address the challenges of irregular warfare (IW) across multiple disciplines. Emerging technologies represent the forefront of innovation, encompassing a wide array of advancements that have the potential to revolutionize IW and allow IWTSD to guide nascent and/or novel technologies at lower technology readiness levels in ways that will enable follow on rapid prototyping for expedited operational use. FY 2025 Plans: In FY 2025, IWTSD plans to initiate funding for eleven (11) projects in areas focused on advanced analytics and novel surveillance and collection capabilities. Specific projects include the development of: • An edge artificial intelligence (AI) platform that processes data directly at the source under low bandwidth and low power sensor processing, eliminating latency and reducing reliance on centralized systems. The solution will ensure real-time insights, operational resilience, and cost savings, even in disconnected environments. • Advanced AI technologies specializing in voice cloning to enable near real-time voice conversion with low-resource languages in reasonable delay (up to 150ms). The solution will enhance the cloning capabilities while reducing the required knowledge of the cloned voice such as speaker characteristics (e.g. gender, tone, velocity, accent). • Algorithmic solutions to analyze multi-spectral data and perform detections and classifications autonomously based on Multi-Model Vision-large language models (LLM) technology. The solution enables accurate, fully automatic, and calibration-free		0.000	0.000

analysis and extraction by incorporating a combination of vision neural networks with lightweight LLMs designed specifically to run on edge AI devices. FY 2026 Plans: In FY 2026, IWTSD plans to continue funding the projects initiated in FY 2025 to capitalize on successes and begin development in the following new emerging technology fields such as: • Flexible Navigable Environment Generation for Mission Planning • Synthetic Intelligence for Tactical Environments: Fusion, Analysis & Integration • High-Edge Compute Unmanned Aerial Surveillance (UAS) for Open-Architecture Autonomy • AI-driven Understanding and Reconstruction of Obfuscated Reasoning Architecture • High-Performance Drone Batteries using Next-Gen Silicon Anodes and Battery Components • Low-Altitude Long Endurance Attritable Solar-Powered Drone • Disruptive, Pulsed Directed Energy for Drone Swarms and Beyond FY 2025 to FY 2026 Increase/Decrease Statement: The decrease is reflective of Congressionally added funding first appearing in FY 2025 and not part of the current President's Budget.				
Title: Protection, Survivability, and Recovery (PSR) Description: The Protection, Survivability, and Recovery (PSR) subgroup's objective is to develop new equipment, standards, reference tools, and emerging counter-uncrewed system (C-UxS) technologies, to improve the protection of personnel and critical infrastructure. Projects focus on leveraging innovative technologies such as automated information management systems, communication devices, tagging, tracking, and locating devices, mobile surveillance systems, personal and vehicle protection equipment, as well as UxS detection and mitigation systems included directed energy (DE) to enhance protection and survivability of personnel. FY 2025 Plans: For FY 2025, the PSR Subgroup plans to initiate funding nine (9) projects in areas focused on 1) developing our warfighting capabilities together with those of our Allies and partners, 2) developing key enabling capabilities, and deepen interoperability, 3) fueling research and development for advanced capabilities, including directed energy, hypersonics, integrated sensing, and cyber, and 4) trusted artificial intelligence and autonomy, integrated network system-of-systems, microelectronics, space, renewable energy generation and storage, and human-machine interfaces. Examples include, but are not limited to: • Developing a radar lock-and-track dual-capability combined with a remote weapon system platform for hard-kill defeat.		6.323	5.383	5.827

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026
• Developing artificial intelligence (AI) algorithms for achieving spectrum superiority with unknown UAS communication. • Developing a system designed for detection and visual localization of radio-frequency (RF) emitters observed by an optical camera (visual and/or infrared (IR)). • Developing an organic, low size, weight, power and cost (SWAP-C) capability that counters UAS regardless of communication and navigation modality by degrading or destroying the immutable characteristic of all robotic systems. For FY 2025, the PSR subgroup plans to initiate funding twelve (12) projects in areas focused on 1) developing our warfighting capabilities together with those of our Allies and partners, 2) developing key enabling capabilities, and deepen interoperability, 3) fueling research and development for advanced capabilities, including DE, hypersonics, integrated sensing, and cyber, and 4) trusted artificial intelligence and autonomy, integrated network system-of-systems, microelectronics, space, renewable energy generation and storage, and human-machine interfaces. Examples include, but are not limited to: • Develop a C-UAS mission planning and decision support tool for tactical units in various operational environments. • Developing artificial intelligence (AI) algorithms for achieving spectrum superiority with unknown UAS communication. • Developing a system designed for detection and visual localization of radio-frequency (RF) emitters observed by an optical camera (visual and/or infrared (IR)). • Developing an organic, low size, weight, power and cost (SWAP-C) capability that counters UAS regardless of communication and navigation modality by degrading or destroying the immutable characteristic of all robotic systems. In FY 2025, the PSR subgroup plans to continue funding eight (8) projects in areas focused on 1) integrated deterrence means using every tool at the Department's disposal, in close collaboration with our counterparts across the U.S. Government and with Allies and partners, 2) gaining and sustaining military advantages, and 3) sharpening the Joint Force's technological edge. Examples include, but are not limited to: • Adapting, testing and evaluating an active thermal signature management/control solution for vehicles. • Developing a radar lock-and-track dual-capability combined with a remote weapon system platform for hard-kill defeat. • Testing and evaluating a ground-based drone interception system that uses unique denial techniques. • Developing a versatile and effective testing range with infrastructure for use in evaluating performance of UAS and C-UAS systems overseas. • Integrate a detection system with an autonomous sUAS platform canister and launch system. For FY 2025, the PSR subgroup plans to complete funding eighteen (18) projects in areas focused on 1) gaining and sustaining military advantages, 2) developing our warfighting capabilities together with those of our Allies and partners, 3) sharpening the Joint Force's technological edge, 4) improving the speed and accuracy of detection and targeting, 5) the future force must

• Developing of multi-mission UAS that could perform counter-improvised explosive device (C-IED) and C-UAS missions on top of ISR missions.					
FY 2025 to FY 2026 Increase/Decrease Statement: The increase in funding is reflective of departmental priorities.					
Title: SURVEILLANCE, COLLECTION AND OPERATIONS SUPPORT (SCOS)			10.102	11.918	11.634
Description: The Surveillance, Collection, and Operations Support (SCOS) Subgroup’s objective is to identify high-priority user requirements and special technology initiatives. SCOS projects enhance U.S. intelligence capabilities to conduct retaliatory or preemptive operations and reduce the capabilities and support available to our adversaries with China as the Pacing Threat, Russia as the Acute Threat, and Violent Extremist Organizations.					
FY 2025 Plans: In FY 2025, the SCOS Subgroup plans to initiate thirteen (13) projects in areas focused on: 1. Command, Control, Communications and Computer Systems; 2. Information and Decision Advantage; 3. Key Operational Problems; and 4. Integrated Electronic Warfare and Directed Energy. Examples include, but are not limited to:					
• A classified project to improve the ability to detect and locate integrated air defense systems.					
• A classified project to develop methods to develop microchips that determine geographic location, navigation, and timing with using GPS.					
• A classified project to develop technology to mitigate and misattribute the identification and use of human signatures.					
• A classified project to generate one-time waveforms					
In FY 2025, the SCOS Subgroup plans to continue funding thirteen (13) projects in areas focused on: 1. Command, Control, Communications and Computer Systems; 2. Information and Decision Advantage; and 3. Key Operational Problems. Examples include, but are not limited to:					
• A classified project to develop a system for exposing tunnel openings in various terrains using cutting edge LiDAR scanners.					
• A classified project to develop new facial recognition risk reduction capabilities.					
• A project to develop a next generation software defined radio.					
• A classified intelligence community working group that focuses on communications, access and surveillance requirements that can be solved in 3-12 months.

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
• A classified project to develop an opto-acoustic system for detecting subterranean activity. • A classified project that develops communications systems which are compatible with host nations communications systems and are secure and have low detection capability. • A classified project to allow US and United Kingdom special forces to partner to develop iterative script, code, tools, programs, and software for common activities. • A classified project to test and evaluate special communications from stratospheric vehicles FY 2025 to FY 2026 Increase/Decrease Statement: The slight decrease is reflective of budgetary adjustments. There is no significant impact to the mission.			
Title: Tactical Offensive Support (TOS) Description: The Tactical Offensive Support (TOS) Subgroup's mission is to execute rapid research and development projects and deliver superior capabilities with training to DoD and Interagency special operations tactical teams. The development focus is enabling small tactical units by providing state of the art overmatch capabilities in: Offensive Systems; Tactical Communications; Tactical Reconnaissance, Surveillance, and Target Acquisition Systems; and Specialized Infiltration, Access and Exfiltration Systems. FY 2025 Plans: In FY 2025, the TOS Subgroup plans to initiate funding for three (3) projects in areas focused on increasing lethality by: 1. Development of key enabling capabilities and deepening interoperability; 2. Contributing to a future force that must be lethal, sustainable, resilient, survivable, agile, and responsive. • A next-generation lightweight machine gun tripod that facilitates rapid emplacement, increased accuracy with improved traverse and elevation, reduces overall operational load and is compatible with all current and future weapons platforms. • Initiate development of a lightweight, multi-barrel electric machine gun capable of gaining immediate local fire superiority with variable rates of fire from 1,000 to 4,000 rpm. Lighter for small unit vehicle platforms, plus maintainable by unit-trained operators, this weapon bridges a gap in small unit immediate firepower superiority for IW against great power competitors. • Initiate development of a next generation ammunition for extreme long range with improved penetration and pyrophoric performance for a Program of Record weapon system. In FY 2025, the TOS Subgroup plans to continue funding ten (10) projects in areas focused on increasing lethality by: 1. Trusted artificial intelligence and autonomy, integrated network system-of-systems, microelectronics, space, renewable energy generation and storage, and human-machine interfaces; 2. Gaining and sustaining military advantages; 3. Developing our warfighting capabilities together with those of our Allies and partners; 4. Improving the speed and accuracy of detection and targeting; 5. cyber; 6. Sustaining and strengthening U.S. deterrence, with China as the pacing challenge; 6. Improving the speed and accuracy of detection and targeting. Examples include, but are not limited to: • An unmanned ground quadrupedal system integrated with weapon platforms and advanced external optics to provide remote ground reconnaissance, surveillance, close to medium-range target acquisition, and small arms direct action capability with 40mm and 12-gauge weapons. • A hybrid flash hider, suppressor, and muzzle brake contained in one easy-to-install device, for multiple calibers of weapons, that overall reduces the weapons' signature and lessens recoil impulse. • An advanced clip-on lens that attaches to existing Improved Night/Day Observation Device (INOD) thermal weapon sights and allows substantial improvements to a sniper's extreme range target engagement capability, while maintaining a full field of view in their day and night optics. • A tactical deployment and recovery capability for US and UK Navy SOF surface and subsurface assets that increases environmental protection and improved signature reduction while ensuring direct interoperability between US and UK forces. • A low cost, hand-launched and recovered, fast Vertical Take-off and Landing (VTOL) loitering munition that employs Electro-Optical and Infrared sensors for both day and night operations to improve SOF force protection and rapid attack capability. • A tailored, portable laser with an internal power source and cooling system, optimized for weight and accurate target engagement, capable of multiple aimed energy pulses at varying strengths that create damaging or disorienting effects on specified materials or infrastructure nodes and systems at close, medium and long ranges, without the threat of being detected by the enemy. In FY 2025, the TOS Subgroup plans to complete funding twelve (12) projects in areas focused on increasing lethality by: 1. Developing our warfighting capabilities together with those of our Allies and partners; 2. Improving the speed and accuracy of detection and targeting; 3. Integrating data, software, and artificial intelligence efforts and speed their delivery to the warfighter; 4. Sustaining and strengthening U.S. deterrence, with China as the pacing challenge; 5. Gaining and sustaining military advantages; 6. Sharpening the Joint Force's technological edge; 7. Developing key enabling capabilities, and deepening interoperability. Examples include, but are not limited to: • A weapon system, including supermatch, subsonic, and armor piercing ammunition, to increase hit potential by 50%, and lethal effects at extreme distances. • An improved, multi-purpose type cartridge with increased muzzle velocities that demonstrates consistent accuracy to defeat current barriers at extended ranges. • An overmatch optic that can be mounted on currently fielded small arms weapons, providing instant range, tracking and firing solution, for both ground and small Unmanned Aerial System (sUAS), during day and night operations at extended ranges.

A. Mission Description and Budget Item Justification

This program supports the Department of Defense (DoD) initiatives to Defend the Homeland, Deter Strategic and Regional Aggression, and Build a Resilient Joint Force and Defense Ecosystem.

The FCT program supports the Department's initiatives by testing mature equipment, munitions, and technologies of U.S. allies and partners to determine the ability of such to satisfy U.S. military requirements or to correct operational deficiencies. By leveraging the Research & Development (R&D) investments of international allies and partners, FCT avoids the additional financial cost and time of redundant research and engineering activities. FCT procures technologies and prototypes produced by allied and partner nations, and formally evaluates them against the capability requirements of the Services and Agencies, thereby determining their suitability to deliver capability and counter emerging threats. The results of comparing test results against requirements informs, and often accelerates, the Services' and Agencies' acquisition decisions. Additionally, participation in the FCT program conveys the legal authority (Title 10, U.S. Code, Section 2350a(g)) for the Service or Agency to move immediately to procurement where appropriate, which further speeds the DoD acquisition process.

FCT strengthens alliances by promoting technologies that increase military interoperability, as well as serving as a catalyst for teaming between the militaries and business sectors of the U.S. and each participating partner nation. Many FCT projects have resulted in the licensed production of a qualified foreign item in the United States, in addition to creating jobs and contributing to local economies. To date, companies from 34 states have benefited from FCT projects.

International Collaboration and International Experimentation, initiated in FY2025 as an expansion of the FCT program, extends the evaluation of innovative foreign capabilities into operationally relevant environments. The focus and intent of these cooperative/collaborative efforts is to develop flexible deterrent options that prioritize interoperability while increasing resiliency in the defense ecosystem by working even more closely with our network of allies and partners around the globe. The FCT Program's broad reach across our allies and friendly foreign countries enables development of innovative, cost effective, and interoperable solutions to meet the needs communicated by the Joint Chiefs of Staff and the Combatant Commanders.

Measurable Outcomes: Over its 44-year history, FCT has a transition rate of 52 percent (403 out of 778) for completed projects. Of the 403 projects that tested successful, 310 or 77 percent resulted in follow-on procurements of over \$14.124 billion.

Exhibit R-2, RDT&E Budget Item Justification: PB 2026 Office of the Secretary Of Defense		Date: June 2025
Appropriation/Budget Activity 0400: Research, Development, Test & Evaluation, Defense-Wide / BA 3: Advanced Technology Development (ATD)	R-1 Program Element (Number/Name) PE 0603133D8Z / Foreign Comparative Testing	
In FY26, FCT organized sub-projects by focus areas aligned to specific, persistent capability gaps. Aligning investments by focus areas allows Prototyping and Experimentation (P&E) to rapidly respond to urgent and emergent requirements at the speed of relevance. Focus areas include: - Kill Web Interoperability: The processes by which Joint Force Commanders plan, direct, coordinate, and control forces to accomplish assigned missions and enable Joint kill webs. - Resilient Communications: The ability to maintain hardened mission-capable systems that allow for secure freedom of communications in contested electromagnetic spectrum environments. This includes alternate position, navigation, and timing. - Sensors and Data Analytics: Networks of sensors and data collection assets, data analysis, and dissemination resources used to provide information to the Joint force about strategic and tactical threats. - Collaborative Multi-Domain Autonomy: The use of multi-domain uncrewed systems and autonomy to increase warfighting capabilities and to mitigate/negate risk to warfighters. - Contested Logistics / Sustainment: The coordinated use, synchronization, and often sharing of logistics resources to deploy, support, and sustain highly dispersed Joint forces in highly contested environments. This also includes other sustainment areas such as supply chain reduction efforts; additive manufacturing; operational/tactical water purification; and sustainment and transportation innovations. - Weapons Kinetic/Non-Kinetic Effects: The delivery of weapon systems and long-range kinetic and non-kinetic effects in support of Joint offensive and defensive tasks to create specific lethal effects on a target. This area includes counter position, navigation, and timing; and techniques designed to deceive enemy observers and/or mitigate, disrupt, or negate adversary capabilities. Emerging Prototypes and Enablers: Supports the acceleration of DoD, CCMD, and Service priority efforts which provide unique capability and/or address critical gaps. This focus area incorporates Combat Support/Combat Enablers; Special Forces Capabilities; Medical Technologies/Devices; Special Access Program assimilation and operational management; prototyping through small business and non-traditional pathways; and the rapid development of technologies for inclusion in experimentation venues.

• Program Adjustments	-	-	-23.839	-	-3.851
Change Summary Explanation					
FY 2024 reduction of (-\$0.494) million for SIBR/STTR.					
Other Reprograming:					
FY 2024 reduction of (-\$0.003) million for canceled accounts.					
FY 2024 reduction of (-\$0.003) million due to Mission Capabilities internal realignment of priorities.					
FY 2026 reduction of (-\$0.094) million for Inflation Rates for Non-Pay / Non-Fuel Purchases					
FY 2026 reduction of (-\$0.028) million for Travel Reduction					
FY 2026 reduction of (-\$3.823) million for Discretionary spending.					
FY 2026 request for Foreign Comparative Testing (FCT) includes (-\$3,823) thousands of discretionary.					
FY 2026 reduction of (- \$19.988) million was applied as follows:					
Adjustment of (-\$2.188) million due to internal realignment of priorities.					
Transfer of (-\$8.8M) for Technology Modernization Transition Reviews (TMTR) in PE 0604791D8Z Multi Domain Joint Operations (MDJO).					
Transfer of (-\$9.0M) to 0604331D8Z to maintain level of effort across the Rapid Prototyping Program (RPP) investment portfolio.

A. Mission Description and Budget Item Justification												
The Foreign Comparative Testing (FCT) Program Element funding supports projects that test and evaluate innovative technologies already developed by Partner Nations, and in doing so, directly aligns to the interim National Defense Strategy through increasing joint lethality in contested environments, strengthening partnerships, and fostering reform through delivery of capability at the speed of relevance. FCT individual projects typically average less than \$1.000 million each and complete within 12-36 months. Projects are proposed by the Military Services and U.S. Special Operations Command (USSOCOM) and are selected using a merit-based process that identifies the most promising, innovative, and cost-effective solutions to validate warfighter requirements, with an emphasis on transitioning technologies into current or future programs of record. Project selection is based on potential to yield cost, schedule, or performance improvements over the existing capabilities.												
B. Accomplishments/Planned Programs (\$ in Millions)									FY 2024	FY 2025	FY 2026	
Title: Bridge Connector (Army) (Contested Logistics/Sustainment) Description: This project evaluates an adapter that allows a floating bridge used by the U.S. Army to be used by German and British amphibious bridging systems. This technology enables enhanced joint multinational bridge operations in the European theatre to maximize limited resources. If successful, this technology will be transferred to U.S. Multi-Role Bridging Companies in Europe for immediate operational use as needed and will be available for additional follow-on procurements to support future operational needs.									0.080	-	-	
Title: M213 Fuze / Insensitive Munitions (IM) Hand Grenade (Army) (Weapons Kinetic/Non-Kinetic Effects) Description: This project comparatively tests off-the-shelf foreign fuzes for the M67 fragmentation hand grenade that exhibit reduced sensitivity to IM stimuli to increase warfighter safety. The legacy M67 was originally developed in the 1960s' and does not meet today's IM safety requirements. If successful, this technology will transition to the Army's Program Executive Office (PEO) Ammunition for follow-on procurement and fielding.									0.026	-	-	
Title: 6T Lithium-Ion Batteries (Army) (Contested Logistics/Sustainment) Description: This project comparatively tests foreign lithium-ion 6T batteries with increased energy capacity and longer cycle life against similar domestic products. This technology improves the mission capabilities and availability of military ground vehicles.									0.499	-	-

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
If successful, this technology will be available as an option for procurement through the Defense Logistics Agency.			FY 2026
Title: Dual Mode Precision Guided 120-Millimeter Mortar (USSOCOM) (Weapons Kinetic/Non-Kinetic Effects) Description: This project evaluates a precision mortar round with both laser and GPS guidance capabilities. This technology provides a tactical indirect fires system to defeat material and armored vehicles with pinpoint accuracy in contested environments. If successful, this technology will transition to USSOCOM's Program manager for Special Operations Forces Lethality as well as service guided mortar programs for follow-on procurement and fielding.		0.500	-
Title: Low-Cost Vertical Take-Off and Landing Precision Strike System (USSOCOM) (Collaborative Multi-Domain Autonomy) Description: This project evaluates a small, agile loitering munition that can serve as both an Intelligence, Surveillance, and Reconnaissance (ISR) asset and a highly lethal munition, improving operational flexibility and effectiveness. If successful, this technology will transition to USSOCOM's Precision Strike Systems Program of Record for follow-on procurement and fielding.		0.425	-
Title: Enhanced Integrated Fire Control System for M3E1 (Army) (Weapons Kinetic/Non-Kinetic Effects) Description: This project comparatively tests advanced fire control systems for the 84-millimeter shoulder fired reloadable recoilless M3E1 Multi-purpose Anti-armor Anti-personnel Weapon System. This technology provides enhanced targeting in both day and night operations at extended ranges. If successful, this technology will transition to the Army's Program Manager for Soldier Lethality for follow-on procurement and fielding. Army looking to determine from data collected here if system can be utilized on M2 and MK19 in future system upgrades allowing for one Fire control System for multiple weapon systems saving cost and increasing unit level lethality. FY 2025 Plans: FY 2025 funding supports phase 3 and phase 4 testing, data evaluation's and project closeout. FY 2025 to FY 2026 Increase/Decrease Statement: Funding decreases to zero in FY 2026 as project closes out.		1.120	0.814
Title: Anti-Submarine Warfare Sensor (ASW) for Unmanned Surface Vehicles (USVs) (Navy/USMC) (Sensors and Data Analytics)		0.126	0.076
			-

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2026 Office of the Secretary Of Defense		Date: June 2025	
Appropriation/Budget Activity 0400 / 3	R-1 Program Element (Number/Name) PE 0603133D8Z / <i>Foreign Comparative Testing</i>	Project (Number/Name) 313 / <i>Foreign Comparative Testing</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
Description: This project tests compact sonar sensors (towed and hull mounted sensors) for potential application on U.S. Navy Unmanned Surface Vehicles (USVs). This project provides new capabilities for USVs to conduct ASW operations which are currently conducted by manned platforms. This project addresses the Autonomous Systems Critical Technology Area. A Successful demonstration of the towed sensor was completed at NATO's REPMUS annual military exercise in Portugal during 4Q FY 2022. The Hull mounted sensor test article contract was awarded in 1Q FY 2023, test planning occurred in 2/3Q FY 2023, and the test report is expected to be delivered in 4Q FY 2024. If successful, this technology transitions to the Navy's Unmanned Maritime Systems Program Office for follow on acquisition and fielding. FY 2025 Plans: FY 2025 funding supports data evaluation's and project closeout. FY 2025 to FY 2026 Increase/Decrease Statement: Funding decreases to zero in FY 2026 as project closes out.			
Title: Lightweight Expeditionary Airfield-Surfacing System (Navy/USMC) (Contested Logistics/Sustainment) Description: This project will evaluate a lightweight aircraft landing mat to replace legacy matting. This technology reduces the logistical footprint and increases installation efficiency for rapid deployment in austere locations. if Successful, this technology will transition to the Navy and Marine Corps Expeditionary Airfields Program Office for follow on procurement and fielding. FY 2025 Plans: FY 2025 funding supports phase 3 and phase 4 testing, data evaluation's and project closeout. FY 2025 to FY 2026 Increase/Decrease Statement: Funding decreases to zero in FY 2026 as project closes out.		0.320	0.480
Title: High Power Electrical Isolation (Navy/USMC) (Emerging Prototypes and Enablers) Description: This project tests high power electrical disconnect switches to isolate next generation electronic carrier-based aircraft launch and recovery equipment for maintenance and repairs. This technology increases readiness by enabling concurrent operations and maintenance on complex mission critical systems.		0.205	0.498

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2026 Office of the Secretary Of Defense		Date: June 2025	
Appropriation/Budget Activity 0400 / 3	R-1 Program Element (Number/Name) PE 0603133D8Z / <i>Foreign Comparative Testing</i>	Project (Number/Name) 313 / <i>Foreign Comparative Testing</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
If successful, this technology will transition to the Navy's Aircraft Launch and Recovery Equipment program office for follow-on procurement and fielding through an Engineering Change Proposal to the Electromagnetic Aircraft Launch System and Advanced Arresting Gear programs of record. FY 2025 Plans: FY 2025 funding supports phase 2 and phase 3 testing, data evaluation's and project closeout. FY 2025 to FY 2026 Increase/Decrease Statement: Funding decreases to zero in FY 2026 as project closes out.			
Title: 84MM SMOKE 469C Round (Army) (Weapons Kinetic/Non-Kinetic Effects) Description: The project evaluates improvements to the legacy 469B smoke round fired from Carl-Gustaf M3A1 recoilless rifle (MAAWS) to provide screening, blinding, and obscuration of personnel, equipment, and structures during tactical situations and kinetic maneuvers. The \$69C round incorporates a proven dual-safe fuze design which improves safety and increases operational reliability, and as importantly, the 469C will fulfill a predicted capability gap for MAAWS operators as the 469B is currently phasing out of production and no other 84mm rounds are available that can meet its unique requirements. If successful, this technology will be incorporated into the MAWS Program of Record allowed munitions list and be available to military units under normal munitions procurement processes. FY 2025 Plans: FY 2025 funding supports phase 3 and phase 4 testing, data evaluation's and project closeout. FY 2025 to FY 2026 Increase/Decrease Statement: Funding decreases to zero in FY 2026 as project closes out.		0.555	0.521
Title: Direct Support Artillery Rocket (Army) (Weapons Kinetic/Non-Kinetic Effects) Description: This project evaluates cost effective 122MM operational and reduced range training rockets for mobile launching systems for the US ARMY. USMC, as well as Allied and Partner Nations. Project will demonstrate/evaluate the warfighting capability of the 122mm ACCULAR Rocket from an Israeli Defense Force (IDF) M270 launch platform by the end of FY24. Demonstrate/evaluate the 122mm ACCULAR Training Rocket from an IDF M270 and, based on funding availability, from the U.S. HIMARS launch platform by the end of FY26 in the U.S., as a possible solution to the Joint Reduced Range Rocket (JR3) A-CDD Requirement If successful, the data and evaluation will be transitioned to two organizations: Warfighting Round (122mm ACCULAR Rocket): Results will be transitioned to the Fires Center of Excellence's (FCoE) Capabilities Development and Integration Directorate		0.820	0.500

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026
(CDID) to assist in the development of any potential Capabilities Development Documents in support of addressing the capability need for a Direct Support capability that resides in the Rocket and Missile formation.					
Training Round: Results will be transitioned to PM STORM in support of their Acquisition Strategy to develop and field an updated Training Rocket. The PM plans to solicit proposals for the JR3 Development contract.					
FY 2025 Plans: FY 2025 funding supports the demonstration evaluation of the training rocked from Israeli and US launchers. Supports data collection and evaluation of test results.					
FY 2025 to FY 2026 Increase/Decrease Statement: Funding decreases to zero in FY 2026 as project closes out.					
Title: Next Gen -Explosive Reactive Armor (Army) (Emerging Prototype and Enablers Focus Area)			0.780	0.450	-
Description: This project evaluates next-generation explosive reactive armor designed to reduce collateral hazard to platform and crew after defeating the incoming threats, and have low collateral effects to the host platform, dismounted Soldiers, and the operating environment. The project will evaluate foreign produced reactive armor that utilizes advanced materials in multiple elements of the design. This project directly supports the US Army's and Optionally Manned Fighting Vehicle (M2 Bradley replacement) program.					
If successful the technology will transition with a host platform into a PEO GCS program of record to be initially managed by the PdM OMFV and transitioned to PL-CTPI for enduring item management.					
FY 2025 Plans: FY24 Funding will complete phase 2 thru 4 testing, support data collection, evaluation , assessment reports and project closeout					
FY 2025 to FY 2026 Increase/Decrease Statement: Funding decreases to zero in FY 2026 as project closes out.					
Title: Next Gen -Signature Management (Emerging Prototype and Enablers Focus Area)			0.920	0.450	-
Description: This project evaluates next generation multi-spectral camouflage technologies for ground and maritime platforms that employ advanced textiles and coating materials to provide concealment from visual, infrared, and electromagnetic detection while on-the-move. Project translates to Next Generation Combat Vehicle development.					
if successful, these technologies have the potential to be incorporated by OMFV Platform offerors Phase 4: Prototype Build and Test. If the host platform which these technologies reside is selected for contract ward, they will transition with that host platform

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
into a PEO GCS program of record to be initially managed by the PdM OMFV and transitioned to PL-CTPI for enduring item management. After fully characterization testing all materials will be available for transition into protecting US military hardware, both Army hardware as well as US Navy fleet. his FCT will provide critical insight into these technologies' performance and the delivered products will reduce program risk nd accelerate the program schedule through the application of empirical design and integration data. Additionally key cceptance testing will be initiated two years in advance of current planned receipt of the technology under existing OMFV ontract and acquisition program plans. After fully characterization testing all materials will be available for transition into protecting US military hardware, both Army ardware as well as US Navy fleet. FY 2025 Plans: FY 2025 Funding will support testing of materials for phases Phase 2: Installed Operational Performance testing and evaluation and conduct Phase 3 generation of Test Reports and maternal performance assessment reports. FY 2025 to FY 2026 Increase/Decrease Statement: Funding decreases to zero in FY 2026 as project closes out.			
Title: Expeditionary 360° Situational Awareness (Sensors and Data Analytics) Description: This project evaluates the integration of multiple partner nation technologies into a ground combat vehicle sensor suite that fuses multispectral 360° targeting sensors, AI-based aided target recognition (AiTR), threat warning sensors, and soft kill countermeasures to provide a complete SA picture to the crew via ultra-low latency AR headsets. This 360-degree SA capability will address multiple requirements for both the Army and Marine Corps and will support the development of the Army's Optionally Manned Fighting Vehicle (OMFV) and the USMC's Advanced Reconnaissance Vehicle (ARV), both of which are intended to meet service requirements for future combat vehicles. If successful, these technologies may transition as spiral development via additional systems integration and testing funded under the Army and Marine Corps PoRs for the Optionally Manned Fighting Vehicle (OMFV) and Advanced Reconnaissance Vehicle (ARV), FY 2025 Plans:		0.655	0.915
			-

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026
FY 2025 Funding supports Phase II vehicle integration and testing, operationally relevant systems and threat testing and assessment, evaluation and final test reports.					
FY 2025 to FY 2026 Increase/Decrease Statement: Funding decreases to zero in FY 2026 as project closes out.					
Title: Passive Radar for Air Surveillance (Sensors and Data Analytics) Description: This project will conduct a comparison of expeditionary passive radar systems that use external, non-cooperative illuminators of opportunity to locate and track airborne targets and provide a common 360-degree air-space operating picture. Future Joint force operations require the capability to operate in highly contested environments. Survivability in these environments will require threat detection systems that can operate in Emissions Control (EMCON) and contested (i.e. jamming) electromagnetic environments. If successful, the selected technologies could transition as a spiral development to current US Army and USMC passive radar RDT&E programs. Both programs have a direct transition path to service Programs of Record. FY 2025 Plans: FY2025 funding supports Phase 2 US based testing and capability down select. Additionally, the funding will support down selected capability acquisition for Phase 3 operationally relevant testing, evaluation and assessment reports. FY 2025 to FY 2026 Increase/Decrease Statement: Funding will decrease to zero in FY 2026 as project closes out.			0.910	1.765	-
Title: Reliable and Low Maintenance Autonomous Systems Power Generation (Emerging Prototype and Enablers Focus Area) Description: This project will comparatively test a TRL9 Stirling power system designed for unmanned platforms with high reliability, low noise, and operates independent of an air source. These platforms will be required to perform multiple mission operations and play a primary role in deployment of modular payloads and an increasing factor supporting the Navy's Distributed Maritime Operations (DMO) concept, being able to forward deploy and operate both independent and attached with Surface Action Groups (SAG), Carrier Strike Groups (CSGs), and Expeditionary Strike Groups (ESG). If successful, this technology PMS406, will transition to the Orca Extra Large Unmanned Undersea Vehicle (XLUUV) Program Office. FY 2025 Plans:			0.350	1.250	-

UNCLASSIFIED

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026
FY 2025 funding supports instillation of Sterling engine on test platform, Battery systems and low voltage DC buss, supports 720 hours of run time with varying operational loads simulating mission profiles, data collection and analysis, and test report production.					
FY 2025 to FY 2026 Increase/Decrease Statement: Funding decreases to zero in FY 2026 as project closes out.					
Title: Stern Landing Vessel (Contested Logistics/Sustainment) Description: This project will evaluate a 236' foot stern landing vessel capabilities for beaching and on/off loading military vehicles and equipment in varying conditions in the INDPPACOM AOR. The vessel will be co-leased between the Marine Corps and the Australian Army to provide an evaluation platform for both services (an organic capability) to evaluate littoral maneuver concepts and provide data for design of Marine Littoral Regiments (MLR) and the concept of Stand in Forces (SIF) future support capability requirements. If successful, this capability may transition to US acquisition if the vender opened a U.S. based company or created a joint venture with a US manufacture. FY 2025 Plans: FY 2025 funding will support Phase 1 acceptance testing and Phase 2 limited dynamic operational testing events. Funding will also support each phase evaluation, data collection and assessment, and planning for follow-on testing. FY 2025 to FY 2026 Increase/Decrease Statement: Funding continues into FY 2026 to support Phase 3 testing events occurring in FY2026.			0.950	1.000	-
Title: Alternate at Sea Refueling (Navy) (Contested Logistics/Sustainment) Description: This project will comparatively test a dual hose (two diameters) modular reel at sea refueling system that allows for astern refueling operations. Current US Navy refueling systems are designed for along side refueling only and operations can only occur with specifically designed ships. This technology will allow for operations from maritime platforms of opportunity e.g. Offshore Support Vessels (OSV) and other platforms. If successful, the testing results and data will be incorporated into future Combat Logistics Force(CLF) Requirements documents for modular refueling systems. FY 2025 Plans: FY 2025 funding will support Phase 1 thru Phase 3 testing and evaluation, support production of the final evaluation and test reports and procurement recommendation documents. FY 2025 to FY 2026 Increase/Decrease Statement:			0.067	0.388	-

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026
Funding decreases to zero in FY 2026 as the project closes out and final reports are delivered.					
Title: Automated Special Forces Mortar System (Weapons Kinetic/Non-Kinetic Effects) Description: This project comparatively tests modern mobile mortar systems that automates the mortar setup and aiming to reduce mortar crew size, improve accuracy, eliminate error, and improve speed, survivability of mortar crew and expedites deploying and redeploying of mortar systems. The technology from both systems reduces employment/redeployment time for a fire mission by 80 percent (30 seconds vice 3 minutes). This reduces the time at a firing location by 72 percent to conduct a 15 round fire mission (2 minutes vice 7 minutes), greatly improving the survivability. of the mortar crew while improving accuracy and fire support for SOF ODA commanders. If successful, as non-standard hardware by PEO SOF in advance of a program of record. Should capability be desired by other services both vendors have US partners who may be able to support US production quantities. FY 2025 Plans: FY 2025 funding will support Phase 2 Engineering Test events, Limited User Safety Release evaluations, and the final Test and Evaluation reports. FY 2025 to FY 2026 Increase/Decrease Statement: Funding in FY 2025 will decrease to zero as testing completes and final evaluation and test reports are produced.			0.525	0.500	-
Title: EW payload for UAS (Army) (Weapons Kinetic/Non-Kinetic Effects) Description: This project evaluates two mature foreign EW systems against threat radar systems. The project will conduct testing of two digital radar frequency memory payload modules (DRFM) integrated into the US Army Launched Effects Module air launched unmanned system. If successful, this technology will provide manned vertical lift platforms an onboard capability to detect and counter threat Integrated Air Defense Systems (IADS) RF detection. Technology will also provide decoy and disruption capability at standoff ranges. FY 2025 Plans: FY 2025 funding will support test article acquisition, lab and bench testing, and UAS integration. FY 2026 Plans: Fy2026 funding will support operational testing, final test evaluations and production of final evaluation and test reports. FY 2025 to FY 2026 Increase/Decrease Statement:			-	0.905	0.700

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
Funding in FY 2026 will decrease as operational testing completes and final evaluation and test reports are produced.			FY 2026
Title: PNT Sensor Soldier Integration (Army) (Resilient Communications) Description: This project evaluates a wearable Position Navigation Timing (PNT) sensor, providing inertial measurement data to the DEVCOM C5ISR Soldier integrated Positioning system. If successful, this technology will provide dismounted soldiers position information in GPS degraded/denied environments. FY 2025 Plans: FY 2025 funding will support test article acquisition, lab and bench testing, component verification and integration FY 2026 Plans: Fy2026 funding will support operational testing and production final evaluation and test reports. FY 2025 to FY 2026 Increase/Decrease Statement: Funding in FY 2026 will decrease as operational testing completes and final evaluation and test reports are produced.		-	0.730
Title: Carrier Seal Tactical Delivery Vehicle for Maritime Littoral Exploitation Description: This project evaluates an 8-person low vis low profile over the horizon submersible craft for tactical insertion/ extraction of Combat divers/Naval Special Warfare Operators in the littoral environment. Capability can accommodate sensors, radio equipment, ammunition & explosives, survival equipment, and supplies. Additional fuel and battery capability can provide additional range and duration with reduced passenger numbers. If successful, this technology will generate further CONOP/CONEMP and TTP development. Requirements generation may lead to a transition to LRIP & procurement to meet validated requirements. FY 2025 Plans: FY 2025 funding will support initial testing, maintenance reliability verification, performance validation, and initial operational evaluation FY 2026 Plans: Funding in FY 2026 will support operational testing and production of final evaluation and test reports. FY 2025 to FY 2026 Increase/Decrease Statement: Funding in FY 2026 will decrease as operational testing completes and final evaluation and test reports are produced.		-	0.650

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026
Description: Evaluate the capability of the HERO 400 Long Range Aerial Loitering Munition (LRALM) to provide small tactical teams with an organic advanced pneumatically launched Loitering Munition capable of 150km range, with high, medium, and low attack angles; 120-minute endurance with integrated anti-armor HEAT-BF warhead, advanced optics, and optimized Height of Burst (HOB) sensor package enabling 1-meter precision strike accuracy. If successful, this technology would transition to USSOCOM PEO SW PM Lethality Ground Organic Precision Strike Systems (GOPSS) Program of Record for Special Operations forces and potentially USMC and US Army maneuver units. FY 2025 Plans: FY 2025 funding will support test article acquisition, lab and bench testing, initial flight performance testing, limited safety release approval. FY 2026 Plans: Funding in FY 2026 will support operational testing and production final evaluation and test reports. FY 2025 to FY 2026 Increase/Decrease Statement: Funding in FY 2026 will decrease as operational testing completes and final evaluation and test reports are produced.					
Title: Low Cost Innovative Projects - (Projects less Than One Million Dollars Each) Description: The OUSD R&E International Prototypes and Experiments (IP&E) Office, FCT Program selects multiple low-cost projects in the areas of Force Protections, Force Support, Logistics, Artificial Intelligence and Machine learning, Robotics and Autonomous Systems, Interoperability, and countering unmanned systems. These projects were selected to deliver prototypes for evaluation, assessment, and for Service Adoption within 12 to 36 months. Artificial Intelligence for Off-Road Autonomy (Army) (Collaborative Multi-Domain Autonomy): This project evaluates artificial intelligence capabilities through a series of operational challenges, utilizing vision and proprioceptive sensing, machine learning, and intelligence navigation to increase survivability and readiness of current systems. This technology enables navigation in complex military scenarios, providing increased tactical advantage through terrain sensing and increased mobility. If successful, this technology will transition to the Army's Next Generation Combat Vehicle Cross Functional Team for integration into the XM30 Mechanized Infantry Combat Vehicle and Robotic Combat Vehicle programs. Warfighter Water Purification (Army) (Emerging Prototypes and Enablers): This project evaluates a man-portable water purification unit that relies on low-temperature plasma to eliminate all microbiological threats from indigenous water to provide potable drinking water at a rate of 5 thousand liters per day. There are currently no fielded devices at this small scale that can destroy all microbiological threats in water. If successful, this technology will transition to the Army's Product Manager for Soldier Clothing			8.549	1.258	-

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
and Individual Equipment for follow-on procurement and fielding through the Individual Water Treatment Device Program of Record. Vehicle Filtration Systems (Army) (Contested Logistics/Sustainment): This project comparatively tests modern NATO approved air filtration systems with unique design attributes against inefficient legacy domestic filters. This technology provides enhanced protection from damaging particles associated with chemical, biological, radiological, and nuclear (CBRN) weapons for military vehicles. If successful, this technology will transition to the Army's XM30 Mechanized Infantry Combat Vehicle Program of Record for follow-on procurement and fielding. Additionally, this technology has applicability to several existing and future planned DoD vehicle programs. Joint Light Tactical Vehicle (JLTV) Force Protection (Army) (Emerging Prototypes and Enablers): This project evaluates a novel, medium-hardness steel alloy underbody armor add-on kit for the JLTV. This technology provides a relatively lightweight force protection capability to counter anti-vehicle mines and improvised explosive threats. If successful, this technology will transition to the JLTV Joint Program Office for follow-on procurement and fielding. Ration Heater (Army) (Contested Logistics/Sustainment): This project comparatively tests foreign exothermic ration heater performance, shelf life and safety characteristics. This technology provides a heat source without generation of hydrogen by-product that is potentially flammable or explosive if used in confined spaces. If successful, this technology will transition to Army's Combat Feeding Directorate for follow-on procurement and fielding through the Meal, Ready-to-Eat Improvement program. Additional Competition for Mortar Turret (Army) (Weapons Kinetic/Non-Kinetic Effects): This project comparatively evaluates a foreign produced, low-cost alternative turret for the Army's Turreted Mortar system. The system selected has significant capabilities, meeting most of the threshold requirements for the Program of Record for Turreted Mortar system requirements document. This effort gathers and analyzes information about the system relative to the US requirements and evaluates the compatibility with US platforms and ammunition. If successful, this technology will transition to the Program Executive Office Ground Combat Systems (PEO-GCS) for potential incorporation on the competitively selected platform. Dual ATGM and UAS Defeat (Army) (Weapons Kinetic/Non-Kinetic Effects): This project comparatively evaluates a high speed (over 100 mph) fly out drone to engage both Anti-Tank Guided Missiles (ATGMs) and Unmanned Aerial Systems (UAS) threats at long standoff ranges from vehicles. System eliminates the threat and reduces collateral hazard to the platform and crew after intercept. These low weight systems (under 100kg) can be used on multiple combat and support platforms. If successful, this capability will transition would occur as a field modification applied to select US Army Brigades (Armored, Stryker, Infantry, Support), and selected USMC platforms.

Exhibit R-2A, RDT&E Project Justification: PB 2026 Office of the Secretary Of Defense		Date: June 2025	
Appropriation/Budget Activity 0400 / 3	R-1 Program Element (Number/Name) PE 0603133D8Z / <i>Foreign Comparative Test ing</i>	Project (Number/Name) 313 / <i>Foreign Comparative Testing</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
Next Generation – Explosive Reactive Armor (Army) (Weapons Kinetic/Non-Kinetic Effects): The project comparatively evaluates a foreign produced composite/frangible material for threat defeat. New technology is lighter weight, increased vehicle survival, reduces collateral damage and fratricide effects, and improves vehicle mobility. If successful, this capability will transition as a replacement kit to current add on explosive reactive armor on US Army and USMC ground vehicles. M2A1 Blank Firing Adapter (Army) (Emerging Prototypes and Enablers): This project evaluates a 50-caliber modular, quick change blank firing adaptor for the operation, safety, durability, maintainability, and ease of use. FCT project is relatively low-cost effort to expand engagement with Estonia, opening the door to further work with other Baltic Nations. Additionally, the Vendor willing to provide CONUS training at no cost to USG. If successful, the technology will be qualified and receive a NSN and be available in the DLA supply system for unit purchase as a replacement adaptor. Enhanced Unmanned Military Vehicle Mobility in Arctic Environments (Army) (Collaborative Multi-Domain Autonomy): This project evaluates the mobility of a foreign Unmanned Ground Vehicle (UGV) for use on common Arctic surfaces such as snow, packed snow, and ice. This vehicle addresses Arctic mobility needs as described in the U.S. Army's 2021 Arctic Strategy. If successful, this technology will transition to the Army's Robotic Combat Vehicle Program of Record for follow-on procurement and fielding. 66mm Vehicle Launched Smoke Grenade (Army) (Weapons Kinetic/Non-Kinetic Effects): This project evaluates two vehicle launched smoke grenades and compare their reliability and performance to the current Army procured equivalents (M76 IR-screening grenade and the M81 MM-wavelength screening grenade). If the munitions demonstrate improved reliability and robustness in adverse functioning environments, Army DEVCOM Armaments Center and PM CCS will collaborate to license the foreign TDP and integrate subsystem improvements into the Army's 66mm vehicle launched smoke grenade portfolio. Mask for Improved Soldier Lethality (Army) (Emerging Prototypes and Enablers): Evaluate a lightweight Full Face Chem BIO protective mask for breathing resistance, field of view, thermal load increases, and physical space as compared to current issue mask. Additionally, the testing will evaluate soldier lethality while wearing a chemical mask, to provide a baseline, identify gaps in current mask requirements, and improve the acquisition process. If successful, this mask will transition to the allowed military equipment list and be available for acquisition as a replacement item for the current issued mask. Next - Generation Counter UAS (Army/USSOCOM (co-funded with IWTSD)) (Weapons Kinetic/Non-Kinetic Effects): Evaluate a man portable Electronic Warfare Counter UAS system employing a universally effective Global Navigation Satellite System (GNSS) / Global Positioning System (GPS) manipulation to stop single or swarm UAS threats. The project will evaluate deployed (TRL 9), and prototype components (TRL5) linked and integrated with an active radar in an operationally realistic scenarios. Evaluation will identify effective operational capability and minimal training requirements. If successful, this technology could transition to the Army and USSOCOM for deployment to high UAS threat locations.			

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2026 Office of the Secretary Of Defense		Date: June 2025	
Appropriation/Budget Activity 0400 / 3	R-1 Program Element (Number/Name) PE 0603133D8Z / <i>Foreign Comparative Test ing</i>	Project (Number/Name) 313 / <i>Foreign Comparative Testing</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
Air Launched small Unmanned Aerial System (sUAS) for Kinetic Engagement (Air Force/Space Force) (Collaborative Multi-Domain Autonomy): This project evaluates the performance of new low-cost, air launched sUAS for multiple, simultaneous kinetic engagements. The air launched sUAS will be integrated into a Common Launch Tube (CLT) (found on numerous AFSOC and USSOCOM platforms) and equipped with Electro-Optic (EO) and kinetic payloads for target acquisition and engagement. This technology provides an affordable precision standoff strike capability with minimal risk to large conventional aircraft or ground forces. If successful, this technology will transition to Air Force Special Operations Command MQ-9 Reaper Medium Altitude Long Endurance-Tactical Unmanned Aerial Vehicle Program of Record through the Air Force Life Cycle Management Center. FG-1 Mini Flare Evaluation (USAF) (Weapons Kinetic/Non-Kinetic Effects): This project will evaluate a foreign designed IR defensive flare system for use on various non -standard aviation platforms. Testing will evaluate the ease of integration, modifications required to effectively deploy the flares and effectiveness in countering IR seeker missiles. If successful, this capability would transition under a current JNT STAFF Urgent Needs Requirements Document for fielding in high threat operational environments. Target Detection Modernization for Mines (Navy) (Weapons Kinetic/Non-Kinetic Effects): This project evaluates a modern target detection capability for naval mines. This technology may provide improved mine actuation against modern quiet targets and includes better rejection for non-targets and performance against adversary Mine Countermeasures. If successful, this technology will transition as an engineering change proposal for the Quickstrike family of modular mine systems Minimizing Electromagnetic Emissions Switched Beam Antenna (Navy/USMC) (Resilient Communications): This project evaluates a novel antenna design that combines both omnidirectional and electronically steerable directional beamforms in a single system. This provides increased range and throughput for line-of-sight communications while decreasing risk of detection. If successful, this technology will transition to the Navy's Amphibious Tactical Communication System as well as other applicable service communications programs of record for follow-on procurement and fielding. Foreign Object Damage Barrier (Navy/USMC) (Contested Logistics/Sustainment): This project evaluates an innovative barrier system to prevent Foreign Object Debris from (FOD) entering paved runways and airfields. This technology reduces FOD incidents by up to 80% which reduces the likelihood of damage to aircraft engines and increases readiness. If successful, this technology will transition to the Navy and Marine Corps Common Aviation Support Equipment program office for follow-on procurement and fielding at tactical land-based airfields. Green Pulsed Lasers for Optical Communications (Navy/USMC) (Resilient Communications): This project comparatively tests compact, high-energy, air-cooled pulsed green lasers to increase the performance of air-to-underwater optical communications.

Exhibit R-2A, RDT&E Project Justification: PB 2026 Office of the Secretary Of Defense			Date: June 2025		
Appropriation/Budget Activity 0400 / 3		R-1 Program Element (Number/Name) PE 0603133D8Z / Foreign Comparative Testing		Project (Number/Name) 313 / Foreign Comparative Testing	
B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026
This technology enables secure communications from aircraft to underwater vessels at operationally relevant depths with data rates 100 times higher than existing radio frequency communications. If successful, this technology will transition to the Navy's Undersea Communications and Integration Program Office for insertion into future optical communications programs of record. High Durability Armor Steel (Navy/USMC) (Emerging Prototypes and Enablers): This project comparatively tests the environmental toughness of foreign high hard steels used for ballistic protection in armored vehicle applications. This effort addresses domestic supply chain deficiencies and significantly reduces sustainment costs by providing better quality, more durable, and longer lasting materials. If successful, the Army Research Laboratory will modify existing armor steel specifications, and this technology will be adopted by vehicle manufacturers. Intelligent Unmanned Ground Vehicle (UGV) for Contested Environments (Navy/USMC) (Contested Logistics/Sustainment): This project will demonstrate the expeditionary utility of an advanced logistics UGV that leverages Artificial Intelligence and Machine Learning to integrate and fuse sensor inputs. This technology provides fully autonomous navigation capabilities during operations in contested environments. If successful, the results of this effort will inform future UGV acquisition requirements including the Marine Corps' Expeditionary Modular Autonomous Vehicle and Army's Robotic Combat Vehicle-Light development programs. Naval Enhanced Global Positioning System (GPS) Antenna System (Navy/USMC) (Resilient Communications): This project comparatively tests foreign GPS Anti-Jam antennas against existing domestic systems. Foreign technology provides new capabilities such as GPS interference signal direction finding and reduces procurement costs by over eighty percent. If successful, this technology will transition to the GPS Based Positioning Navigation and Timing Service Program of Record for follow-on procurement and fielding on various DoD vehicle platforms. FASST: Fast-Mover Airborne Low Signature Services Transport (Navy/USMC): Evaluate Free Space Optics (FSO) air to ground link to assess future implementation on tactical aircraft. Objective of demonstration will be to assess throughput, latency, link stability under maneuvers to understand design trades on a surrogate aircraft (NAVAIR or NRL test Aircraft). Capability may provide low probability of intercept/low probability detection (LPI/LPD) in a high RF or Jamming environment for tactical aircraft or weapon in support of Long-Range Fires (LRF). If successful, this technology could transition via engineering change proposals for various tactical aircraft types. Maritime Threat Neutralizer Payload (Navy) (Weapons Kinetic/Non-Kinetic Effects): This project evaluates and characterize attachable neutralizer payloads, including attachment, disruptor and firing subsystems performance and suitability for ROV delivery, attachment, and neutralization of underwater threats. Additionally, this project will evaluate performance of the technology in varying depths/sea states to assess operational capability and utility for the fleet. If successful, this capability will transition as an Engineering Change Proposal (ECP) to integrate the VMDS as a MESR Increment III Payload update.

Exhibit R-2A, RDT&E Project Justification: PB 2026 Office of the Secretary Of Defense		Date: June 2025	
Appropriation/Budget Activity 0400 / 3	R-1 Program Element (Number/Name) PE 0603133D8Z / <i>Foreign Comparative Test ing</i>	Project (Number/Name) 313 / <i>Foreign Comparative Testing</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
Autonomous Vessel Weapon Launch Demo (Navy) (Weapons Kinetic/Non-Kinetic Effects): This project evaluates the launch, target detection, interception, and warhead effects of a shallow launch Light Weight Torpedo (LWT) from high-speed medium to large uncrewed surface vessels. Evaluation will conduct underway engagements during operational scenarios against representative surface targets and evaluate operational effectiveness, suitability, and performance LWT. Additionally, Modeling and simulation lethality assessments will be conducted against other significant multiple AOR threats. If successful, Combatant Commander Staffs will write an Operational Needs Statement (ONS) for US Fleet Forces Command (USFFC) recommendation for OPNAV requirement statements for this capability. Anti-Ship Missile Countermeasure Test (US Navy) (Weapons Kinetic/Non-Kinetic Effects): This project evaluates a foreign produced countermeasure against Anti-Ship Missiles. Project will conduct test/demonstration of the MASS countermeasures during RIMPAC 24 from a participating Canadian Navy vessel. If successful, the technology will be fielded as life cycle replacement of current systems on US Naval vessels. Deep Purple-Compact Optical Communications for the Undersea warrior (Navy) (Resilient Communications): Evaluate a Commercial off the shelf low power handheld underwater optical communications transceiver with specific filters. If successful, this project will provide high speed/ bandwidth data transfer with low latency, and low probability of detection in the field. Mining Advanced Development for Operational Gains (Navy) (Weapons Kinetic/Non-Kinetic Effects): Evaluate the performance, and develop new algorithms, and simulated mine engagement results between a notional surface vessel and the proposed mine. The project will test the final algorithm in an operationally relevant environment, and asses the safety posture of this mine. The results will be compared to existing Quickstrike ORD performance requirements. A successful outcome will be if the mine, using the developed algorithm, can meet or exceed ORD performance requirements. Novel Cannula Device with Unambiguous Visual Indication (Navy) (Emerging Prototypes and Enablers): Evaluate a battery powered Commercial Off the shelf (COTS) device which indicates when a cannula/catheter needle tip is within a vein. The rapid delivery of blood plasma, fluids or medications via IV is critical in treating casualties in the field. PIVC is the single most common invasive procedure with up to 2 billion performed globally per annum. The procedure has a high 30-70% failure rate. Cannulight can reduce the failure rate and negative consequences that follow. The Cannulight can assist both trained medics and untrained combatants with PIVC for life saving IV and blood plasma infusions under difficult field conditions. Qualification of Low-Pressure Cold Spray System (Navy) (Contested Logistics/Sustainment): Evaluate a backpack sized low pressure cold spray metal depositing technology to give the Navy, other Services, and our allies a deployable repair capability as an alternative to the current qualified system. The new technology will undergo a series of mechanical tests, and then be

B. Accomplishments/Planned Programs (\$ in Millions)								
validated in a fleet exercise for forward deployed capability, such as RIMPAC. If successful, this capability will transition to the allowed military equipment list and be available for acquisition by Military units. Rapid Molten Metal Deposition (Navy) (Contested Logistics/Sustainment): Evaluate a Molten Metal Deposition (MMD) additive manufacturing technology that will allow rapid manufacturing of near-net shape metal parts at the tactical point of need. This technology doesn't require the use of powder material or use of debinding or sintering support equipment. Laser free technology translates to low power consumption and utilizes available standardized welding wire as feedstock material, allowing use in deployed and expeditionary settings. If successful, this capability will transition to the allowed military equipment list and be available for acquisition by expeditionary forces. Vertical Launch System Reloading (Navy) (Contested Logistics/Sustainment): Evaluate the Missile Canister Loading Equipment (MCLE) capability to conduct VLS reload at austere ports and piers for U.S. Naval surface vessels. The MCLE facilitates a safer VLS reload in elevated environmental conditions (up to sea state 4) by receiving the VLS canister horizontally, up righting independently of a crane, and presenting the canister to the launch cell for reload. The capability is compatible with any U.S. Mk-41 VLS equipped ship, providing minimal impact to the ship other than 4 bolting pads which use existing bolt holts on the launcher. If successful, this capability would be deployed to strategic forward ports and ships would receive the required modifications as via engineering change proposals. Water/Land Sensing Aerial Disconnect (USSOCOM) (Contested Logistics/Sustainment): Evaluate a Water Initiated Sensing Aerial Disconnect (WISAD) and Land Initiated Sensing Aerial Disconnect (LISAD) system that releases the parachute suspension slings upon water or ground impact of the airdrop platform. Capability results in a cleaner payload upon landing, with a safer landing site and reduced risk of sling entanglement for boats, ground vehicles, and unmanned systems. W/LISAD can increase capabilities of any service/unit that conducts airdrops and is a joint need. It has direct application to aerial delivery of unmanned systems to enable fully autonomous delivery and derigging in a multi-Domain Operations environment, a capability anticipated to be employed by multiple services. IF successful, this capability would transition to the Defense Logistics agency and an allowed purchase item for operation units. Elemental Water Response (USSOCOM) (Contested Logistics/Sustainment): This project comparatively evaluates technology capable of producing 50 liters per hour of potable water from any water source, including seawater. Unit has a solar-power add-on available, making it power source independent. Size weigh and performance make it valuable as a tactical, dispersed, water source. The technology will be evaluated against us standards for removal of salt, contaminants, microbes, and other harmful substances found in many water sources. If successful, this technology would become available for direct purchase under FCT authorities, providing foreign suppliers/vendors opportunity to form a US joint venture or subsidiary.		<table border="1"> <thead> <tr> <th>FY 2024</th><th>FY 2025</th><th>FY 2026</th></tr> </thead> <tbody> <tr> <td></td><td></td><td></td></tr> </tbody> </table>	FY 2024	FY 2025	FY 2026			
FY 2024	FY 2025	FY 2026						

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2026 Office of the Secretary Of Defense			Date: June 2025		
Appropriation/Budget Activity 0400 / 3		R-1 Program Element (Number/Name) PE 0603133D8Z / <i>Foreign Comparative Test ing</i>		Project (Number/Name) 313 / <i>Foreign Comparative Testing</i>	
B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026
Parachute Dereefer (USSOCOM) (Emerging Prototypes and Enablers): This project comparatively evaluates of a non-pyrotechnic dereefer (controlled opening for cargo parachutes) to replace M21 Pyrotechnic Cutter which is no longer viable due to cost and lack of industrial base. The capability will be evaluated for use with the Army's Advanced Low Velocity Airdrop System - Light/ Heavy (ALVADS-L/H). If successful, the technology/capability will be available for direct procurement by units via DLA and transitioned into ALVADS Program of Record. Mobility Over Snow Terrain (USSOCOM) (Emerging Prototypes and Enablers): This project will enable a quick reaction evaluation for an interoperable snowmobile with coalition and joint forces within the northern European Areas of Operations. Market research has been conducted and Joint Force working groups have identified the Norwegian SOF have a snowmobile capability worth being assessed by US SOF. If successful, transition to the Program of Record for further development and qualification, this system could be manufactured in the United States. Improved Airdrop Rigging Kit (USSOCOM) (Contested Logistics/Sustainment): Evaluate an improved airdrop rigging capability that takes advantage of new hardware and materials to decrease both rigging and derigging time and increase flexibility for securing payloads, including non-standard payloads. Capability minimizes potential impact damage and payload weight when compared to metal clevises. The combination of modern ratchets and improved strength textiles may reduce the number of lashings that need to be applied to properly secure a payload. The minimal stretch characteristics of the textiles will also reduce or eliminate the need to retighten the lashings in flight after takeoff, which is common when using current lashing equipment. Most importantly, the quick disconnects, reduced lashing numbers, and easier to use components make derigging on the drop zone faster. This is a critical operational benefit as immediately after landing is a vulnerable time for the operators. The faster derigging can occur, the less threat exposure they face and the faster they can start their mission. Next Generation Body Armor (USSOCOM) (Emerging Prototypes and Enablers): Evaluate a TRL 7 body armor for improved ballistic protection compared to US legacy body and vehicle armor at lighter weight by employing commercial components and novel thermo-mechanical processing that encases the ceramic strike face. Evaluation is to determine if this new technology provides improved soldier mobility (30% to 50%) weight reduction while matching ballistic performance of legacy body armor and vehicle protection systems. Additionally, the technology will be evaluated on ability to be tailored to meet and exceed 5.56 to 7.62 mm protection levels: e.g., NIJ level RF3, SOCOM pattern, ESAPI, XSAPI protection levels, STANAG 2-3 Technology currently in use by Special Forces units in Israel Defense Force. Transparent Wideband Antennas (USSOCOM) (Resilient Communications): Evaluate the integration of wideband transparent antennas into the windshield/mirrors of tactical platforms. The goal of the proposed effort is to reduce the visual signature of antennas on tactical vehicles, thereby reducing soldier vulnerability and minimizing the risk of the vehicles being geolocated, intercepted or jammed. Currently, primary communication vehicles can be easily identified due to multiple identifiable antennas

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026
integrated on top of the vehicle platforms. These high-profile antennas pose a risk of being geolocated, intercepted or jammed leaving the soldiers vulnerable. Multiple antennas on vehicles allow for easy profiling of high-profile assets such as command vehicles. Transparent antennas can be integrated on vehicles leaving the primary communications vehicle unidentified by physical signature. Visually undetectable antennas could be used by the Army and its partners for covert operations where it becomes necessary to have low profile antennas. Transparent antennas enable integration on spaces that were previously unavailable such as windows and windshields therefore increasing the available Size, Weight and Power (SWaP) for other systems on the vehicle platforms. FY 2025 Plans: Funding in FY 2025 supports project execution, testing, and project close out. FY 2025 to FY 2026 Increase/Decrease Statement: Funding decreased to zero in FY2026 as projects close out. Beginning in FY 2026, all funding for emerging international requirements will be budgeted out of the appropriate sub-project.					
Title: International Collaboration and Experimentation (ICE) (formerly ICE Focus Areas) Description: The FCT program continues the campaign of cooperative and collaborative experimentation with allies and partners to evaluate applications of innovative foreign capabilities in response to changes in the global security environment. The focus and intent of these efforts are to develop flexible deterrent options and increase resiliency in the defense ecosystem by working even more closely with our network of allies and partners around the globe. The ICE effort will extend FCT testing into operational relevant environments to evaluate allied/partner nation technologies that address emerging DoD capability gaps and provide substantial cost, schedule, and/or performance benefit to the warfighter. Cooperative and collaborative experimentation will be aligned to the interim National Defense Strategy (NDS) and the OUSD R&E technology focus areas. ICE engagement efforts will concentrate on the NDS and Combatant Command priority nations. FY 2025 Plans: The ICE anticipates supporting one or two new projects spread across the OUSD R&E focus areas and Service readiness requirements in support of Joint Warfighting Concepts in FY2025. Deliverables will include integrated products and software that enhance warfighting capabilities across multi-domain battlefield environments. This will be accomplished through test and evaluation of prototypes, demonstrations, and concept experimentation in coordination with the Services, United States Special Operations Command, Combatant Commands, and other DoD Agencies. FY 2025 to FY 2026 Increase/Decrease Statement: In FY 2026 funding realigned to support Emerging Prototypes and Enablers Focus Area.			-	2.395	-
Title: Foreign Comparative Testing Prototyping & Experimentation Focus Areas			8.196	12.962	-

Exhibit R-2A, RDT&E Project Justification: PB 2026 Office of the Secretary Of Defense		Date: June 2025	
Appropriation/Budget Activity 0400 / 3	R-1 Program Element (Number/Name) PE 0603133D8Z / <i>Foreign Comparative Testing</i>	Project (Number/Name) 313 / <i>Foreign Comparative Testing</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
Description: Continuously funded effort. FCT will select new projects to evaluate allied/partner nation technologies that address emerging DoD capability gaps, and typically provide substantial cost, schedule, and/or performance benefit to the warfighter. Beginning in FY2026 as projects are selected, they will be aligned to the P&E focus areas and be reported individually. Evaluation will be aligned to the interim National Defense Strategy (NDS) and OUSD R&E focus areas, including but not limited to: Kill Web Interoperability; Resilient Communications; Sensors and Data Analytics; Collaborative Multi-Domain Autonomy; Contested Logistics/Sustainment; Weapons Kinetic/Non-Kinetic Effects; Emerging Prototypes and Enablers. These projects will deliver prototypes for evaluation, assessment, and Service implementation. Projects are selected to deliver increased readiness and a more lethal Joint Force while strengthening alliances, attracting new partners, and achieving greater performance and affordability. FY 2025 Plans: The FCT Program anticipates supporting eight to fifteen new projects spread across the Office of the Under Secretary of Defense, Research and Engineering (OUSD R&E) Critical Technology Areas and Service readiness requirements in support of Joint Warfighting Concepts in FY 2025. FCT will provide continued support to active FY 2023 and FY 2024 projects. Deliverables will include integrated products and software that enhance warfighting capabilities across multi-domain battlefield environments. This will be accomplished through test and evaluation of prototypes in coordination with the Services and United States Special Operations Command and other DoD Agencies. FY 2025 to FY 2026 Increase/Decrease Statement: The FY 2026 FCT sub-projects were restructured to address capability gaps. The decrease from FY 2025 to FY 2026 is the result of the restructuring. Beginning in FY 2026, all funding for emerging international requirements will be budgeted out of the appropriate sub-project.			
Title: Kill Web Interoperability Focus Area Description: Kill Web Interoperability Focus Area explores the process by which Joint Force Commanders plan, direct, coordinate, and control forces to accomplish assigned missions and enable Joint kill webs. Individual efforts are identified and refined throughout the year of execution through interactions with international partners, industry, academia, Service representatives, and CCMDs. Prospective efforts are closely coordinated with the CCMDs and Services to deconflict, improve jointness, and increase transition to Service acquisition programs. Candidate prototype projects undergo a selection process that assesses joint warfighter impact, transition potential, and technical merit/feasibility. Selected sub-projects target key capabilities that enable leap-ahead improvements in Kill Web Interoperability. FY 2026 Plans:		-	0.000

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
Kill Web Interoperability will continue to support the execution of efforts selected in previous fiscal years and initially funded by the Foreign Comparative Testing Prototyping & Experimentation Focus Areas sub-project. As new projects are selected, they will be aligned to the P&E focus areas and be reported by focus area.			
FY 2025 to FY 2026 Increase/Decrease Statement: Funding for Kill Web Interoperability efforts have been zeroed due to budget re-alignment of -\$3.945 million			
Title: Resilient Communications Focus Area Description: Resilient Communications explores the ability to maintain hardened mission-capable systems that allow for secure freedom of communications in contested electromagnetic spectrum environments. This includes alternate positioning, navigation, and timing. Individual efforts are identified and refined throughout the year of execution through interactions with international partners, industry, academia, Service representatives, and CCMDs. Prospective efforts are closely coordinated with the CCMDs and Services to deconflict, improve jointness, and increase transition to Service acquisition programs. Candidate prototype projects undergo a selection process that assesses joint warfighter impact, transition potential, and technical merit/feasibility. Selected sub-projects target key capabilities that enable leap-ahead improvements in Resilient Communications. FY 2026 Plans: Resilient Communications will continue to support the execution of efforts selected in previous fiscal years and initially funded by the Foreign Comparative Testing Prototyping & Experimentation Focus Areas sub-project. As new projects are selected, they will be aligned to the P&E focus areas and be reported by focus area. FY 2025 to FY 2026 Increase/Decrease Statement: The increase from FY2025 to FY2026 is to provide funding for Resilient Communications efforts.		-	-
			5.126
Title: Sensors and Data Analytics Focus Area Description: Sensors and Data Analytics explores networks of sensors and data collection assets, data analysis, and dissemination resources used to provide information to the Joint force about strategic and tactical threats. Individual efforts are identified and refined throughout the year of execution through interactions with international partners, industry, academia, Service representatives, and CCMDs. Prospective efforts are closely coordinated with the CCMDs and Services to deconflict, improve jointness, and increase transition to Service acquisition programs. Candidate prototype projects undergo a selection process that assesses joint warfighter impact, transition potential, and technical merit/feasibility. Selected sub-projects target key capabilities that enable leap-ahead improvements in sensors and data analytics. FY 2026 Plans:		-	-

D. Acquisition Strategy			
Successful FCT projects support capability acquisition in several ways. Technology upgrade insertion into a current platform or program providing greater capability or prolonging the life of the weapon system. Informed/refined requirements for future planned systems, direct transition/procurement. FCT leverages the Services' and Defense Agencies' most efficient and effective acquisition approaches for rapid prototyping. This includes using Other Transaction Authorities and new or existing contract vehicles using the middle-tier acquisition strategy. The FCT Program supports the Service Executive Acquisition strategies and works with each Service, U.S. Special Operation Command, and Combatant Commands to enhance the speed of new technology infusion to maintain overmatch on tomorrow's battlefield.

A. Mission Description and Budget Item Justification

Mission Engineering and Integration is a strategically driven, mission-focused DoD framework to synchronize resources and integrate cross-service capabilities to achieve timely and accurate mission effects. It fulfills responsibilities outlined in the National Defense Authorization Act (NDAA) for FY17, Section 855 by prioritizing investments in capabilities that address warfighting needs, interoperability, and capability gaps through rigorous mission engineering activities and Joint Force Integration studies.

To achieve its goals, ME&I conducts Joint Force Integration Mission Engineering studies that align with the National Defense Strategic Guidance, Defense Planning Scenarios, and Key Operational Problems. These studies assess the impact of integrating new technologies and capabilities into critical warfighter missions. Furthermore, ME&I utilizes advanced modeling and simulation tools to develop and analyze Joint Mission Engineering Threads (METs), also known as "Kill Webs," in operational scenarios, ultimately informing technology investment decisions by DoD leadership. This integrated approach ensures the effective incorporation of new technologies and capabilities to address current and future warfighting demands.

New Start (Y/N): N

A. Mission Description and Budget Item Justification
Mission Engineering and Integration Management is a strategically driven, mission-focused framework to synchronize concepts, requirements, research and engineering, budget, and programs across the DoD to integrate cross-Service capabilities to deliver timely and accurate end-to-end mission effects.
• Carry out responsibilities described in the National Defense Authorization Act for FY 2017, Section 855, (Mission Integration Management) by conducting rigorous mission engineering activities to identify and prioritize investments in capabilities with the greatest potential to meet current and future warfighting needs, close warfighting gaps, and enable Joint Force interoperability and integration.
• Execute a variety of Joint Force Integration Mission Engineering studies in support of the Interim National Defense Strategic Guidance, aligned with Defense Planning Scenarios and Key Operational Problems, that evaluate mission impacts of integrating new technologies and capabilities into critical warfighter missions.
• Harness modeling and simulation (M&S) tools and advanced techniques to develop and analyze critical Joint Mission Engineering Threads (METs) / “Kill Webs” in operational scenarios, enabling DoD leaders to make informed technology investment decisions.
• Develop digital, reusable, enterprise-level Joint METs that are used to assess and evaluate system-of-systems dependencies and risks in executing end-to-end missions.
• Continue to maintain the Mission Engineering Guide and related guidance; and lead the Mission Engineering Practitioners Forum to share lessons learned, pain points, and advance the state of practice of Mission Engineering.
• Increase collaboration with industry, utilizing technical information exchange agreements to share sensitive data. These efforts will identify material solutions that address operational gaps and mission requirements; building public-private partnerships that inform technology, modernization, research, and applied engineering investments.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Mission Engineering and Integration	0.000	17.209	15.835

Description: Conduct Mission Engineering studies to analyze recommended technologies that eliminate or disrupt adversary kill chains, or deliver superior Blue Force kill chains. Leverage modeling and simulation to identify and evaluate current and emerging systems, systems of systems, technologies, capabilities, and warfighting concepts.

Prior Accomplishments:

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2026 Office of the Secretary Of Defense		Date: June 2025	
Appropriation/Budget Activity 0400 / 3	R-1 Program Element (Number/Name) PE 0603142D8Z / <i>Mission Engineering and Integration (ME&I)</i>	Project (Number/Name) 123 / <i>Mission Engineering and Integration</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
- Decomposed missions to develop digital representations of Mission Engineering Threads (Critical Kill Webs), focused on missions within the USINDOPACOM Area of Responsibility to inform data collection, promote cross-service interoperability, joint warfighting concept design, and inform enterprise-level joint experimentation. - Completed a variety of Mission Engineering studies focused on Joint Force Integration and assessment of allied/partner capabilities; this includes mission areas such as Maritime Strike, Air Superiority, and Space Control, and technology areas such as autonomy, assured positioning, navigation and timing (APNT), hypersonic, and directed energy. - These studies have been used to inform Joint prototyping/experimentation, investment decisions throughout capability portfolio management, program budget reviews, and joint concept development (e.g. Joint Warfighting Concept). - Executed complex and robust Mission Engineering analyses that identified warfighter capability gaps and assessed mission impacts of innovative technology and capabilities in countering our adversarial threats. Delivered results that supported DoD leadership funding and transition decisions. - Established Information Exchange Agreements, through a Broad Other Transaction Announcement (BOTA), and hosted classified Mission Engineering Forums with industry partners that promoted and enabled sharing of information to address warfighter “mission” hard problems and inform R&D decisions. - Advanced the state of practice of Mission Engineering through the Mission Engineering Practitioners Forum comprised of key DoD organizations by promoting awareness and sharing best practices for implementation of the ME methodology, development of mission architectures, training and competency, and executing of ME analytics. Continue to mature and release updated version of the Mission Engineering Guide which serves a vital document for practitioners across the DoD. FY 2025 Plans: - Increase Mission Engineering analyses and studies that explore a variety of critical scenarios and KOPs across different geographical regions and domains to identify technologies and capabilities that close capability gaps, and inform requirements, prototypes, design of experiments, and transition of concepts. Focus areas include Joint Force Integration for Counter-C5ISR, APNT focused in USEUCOM Area of Operation (Burden Sharing), Joint Force Integration for Unmanned Systems, and Defense of the Homeland (Golden Dome for America). - Continue to develop digital and reusable Joint Mission Engineering Threads (METs)/ “Kill Webs” to analyze system-of-systems within an operational scenario and produce results that inform capability and technology design and integration considerations. - Continue to engage with the Analytic Community to advance the state of practice of Mission Engineering; and foster relationships across the community to share data and results that inform leadership decisions on identification, resourcing, and transitioning of technologies and capabilities that close capability gaps.

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
• Continue to increase collaboration with industry partners through establishment of unfunded Memorandums of Agreement through a Broad Other Transaction Announcement to share information on relevant scenarios and missions for analytical purposes that lead to the identification and evaluation of R&D initiatives that address operational gaps. <i>FY 2026 Plans:</i> • Continue implementation of Mission Engineering analyses to guide the Under Secretary of Defense for Research and Engineering's portfolio of investments, and inform execution of the upcoming joint experimentation series. Scenarios will explore a variety of mission areas across different geographical regions and domains to identify technologies that close capability gaps, and inform requirements, prototypes, design of experiments, and the transition of concepts. Areas of focus for these studies will include: Battlespace Management, Joint Command and Control, counter-C5ISR, counter-unmanned systems, Sensors and Non-Kinetic Effects, Joint Fires, and Unmanned/Multi-Domain Autonomous operations. • Maintain and develop new Joint Mission Engineering Threads (METs)/ "Kill Webs" to inform broad, Joint-level capability, concept, and technology design; as well as guide broader force-level systems integration. • Engage with the Analytic Community to advance the state of practice of Mission Engineering, and emphasize information sharing, and collaboration with industry partners; leveraging commercial/private research initiatives that address extant operational gaps. <i>FY 2025 to FY 2026 Increase/Decrease Statement:</i> Horizontal decrease of \$1.274M to RDTE, DW due to economic assumptions, program adjustments, and reductions to the discretionary travel budget and A&AS contracts.

Note

New Start (Y/N): N

In FY2026, the Advanced Analysis and Capability Development effort continues work transitioned in FY25 from the Defense Advanced Research Project Agency's (DARPA) Assault Breaker II program to support efforts to integrate data, tools, and techniques accelerating delivery of capabilities to the warfighter, which addresses a key NDS goal – Building on our Enduring Advantages. Assault Breaker II (ABII) renamed Joint Lethality Engineering (JLE) to mark the transition from DARPA to OUSD(R&E).

A. Mission Description and Budget Item Justification

Advanced Analysis and Capability Development (A2CD): Continues the execution of advanced analysis under the JLE initiative and development and use of an advanced hardware, software, and TS/SCI/SAP network architecture to conduct fully informed analysis, experimentation, and process improvement to accelerate the Department's capability development and fielding efforts.

Effort focuses on two areas.

1. JLE (formerly designated as Advanced Concept Development): Research and analysis efforts to solve specific critical military challenges and drive Department investment decisions that enhance the effectiveness of systems against adversarial threats. Activities span across all security levels, domains, and Service warfighting architectures. Additional classified information available upon request.

2. Joint Capability Development Environment (JCDE): Independent FY2025 activities - Advanced Modeling and Simulation (M&S) Technology and Tool Development and Modeling and Simulation Big Play – have been consolidated into an effort entitled Joint Capability Development Environment (JCDE) to provide a more unified and efficient development approach, afforded by previous accomplishments; advances in fully informed, all domain modeling and simulation (M&S) capabilities; and improved analysis and experimentation methods.

JCDE provides a hardware, software, and TS/SCI/SAP network architecture designed to accelerate the Department's ability to conduct rapid capability development and fielding. The JCDE provides industry, the DoD, FFRDC/UARCs, and international partners access to advanced modeling and simulation (M&S) tools and a multi-level security (MLS) enabled data/knowledge repository to enable rigorous, rapid analysis and experimentation in support of capability development and military utility analysis and experimentation. The JCDE also includes a development environment that enables the continuous creation and improvement of advanced M&S tools and corresponding analysis/experimentation processes.

These activities will accomplish the following: • Continue work established under the Assault Breaker II initiative to conduct all-security level, all-domain, and all-Service advanced analysis to explore new warfighting architectures, alternative operational concepts, and inform rapid prototyping activities and capability investment decisions. Additional classified information available upon request. • Significantly advance the Department's ability to conduct fully informed analysis and experimentation in support of capability development. • Sustain and operate the necessary infrastructure, hardware, and software processes to ensure the continued development of advanced M&S tools to support evolving defense challenges. • Extend and sustain an existing knowledge repository that enables cooperative analysis and sharing of data at all security levels, dramatically improving analysis efficiency throughout the Department. • Continue development of new analytic processes through experimentation that leverage new and existing M&S tools, provide user support for new and existing tools and processes, and integrate user feedback to inform the continued development of advanced M&S tools. • Continue providing an enduring analytic support capability that can be used by the DoD, FFRDC/UARCs, industry, and partner nations at all classification levels, from UNCLASSIFIED to Top Secret, Sensitive Compartmented Information, Special Access Program (TS/SCI/SAP).		
B. Accomplishments/Planned Programs (\$ in Millions)		
Title: Joint Lethality Engineering (formerly designated as Advanced Concept Development)		FY 2024
Description: Realigns key elements of the Joint Lethality Engineering program to enable the continued all security level, all domain advanced Joint concept development effort centered on new warfighting concepts:		FY 2025
• Produce strategically informed technical analysis that supports the development of future warfighting concepts and identify opportunities for investment in key enabling technologies that enhance the lethality of systems against adversarial threats. • Produce investment recommendations in capabilities oriented toward increasing warfighter effectiveness.		FY 2026
FY 2025 Plans: Joint Lethality Engineering Development activities support the following:		
• Analytic Team: Team of government, Federally Funded Research and Development Centers (FFRDCs) / University-Affiliated Research Centers (UARCs), industry, and Systems Engineering and Technical Assistance (SETA) personnel will perform analysis

that informs near, mid, and far term Joint warfighting concepts that inform capability development recommendations which guide investment strategies. The team is focused on a distinct, relevant military problem and results feed into Technology Modernization Transition Reviews (TMTRs). Additional classified information available upon request.			
Eloquent Omen: A strategically informed campaign of analysis that explores the combined use of Joint non-kinetic effects in the period prior to the initiation of armed conflict that is intended to preserve decision space and allow for de-escalation. It will conduct several studies and wargames on an annual basis to inform capability development, process changes, and force structure changes. Additional classified information available upon request.			
FY 2026 Plans:			
Continue JLE initiative focusing on distinct military challenges related to advanced warfighting architectures, operational concepts, and associated capability development. Additional classified information available upon request.			
Continue executing the Eloquent Omen (EO) analytic campaign to inform the development of non-kinetic capabilities in a strategically informed way, focused on de-escalation and preserving decision space. Additional classified information available upon request.			
Continue fully informed, all-security level, faster-than-real time, theater-wide, multi-domain, sea floor to space mission level analysis to enable the exploration of adaptive Joint warfighting concepts.			
FY 2025 to FY 2026 Increase/Decrease Statement:			
The decrease in requested funds reflects a change in source funding for JLE's Track Team (formerly Track House). Track Team will remain a JLE mission, but funding will now be provided by the Joint Fires Network (JFN) Integrated Program Office (IPO).			
Title: Advanced Modeling and Simulation (M&S) Technology and Tool Development		-	48.753
Description: Enhances the Top Secret, Sensitive Compartmented Information, Special Access Program (TS/SCI/SAP) Modeling and Simulation (M&S) software and hardware development environment established by the Secure Advanced Framework for Simulation and Modeling (SAFE-SiM) program. Focus areas includes the Continuous Integration / Continuous Delivery (CI/CD) software pipeline infrastructure and Multi-Level Security (MLS). This work matures the Secure Advanced Framework for Simulation and Modeling (SAFE-SiM) modeling and simulation (M&S) program and suite of analytic tools to continually deliver new capabilities, based on user feedback, and transition new modeling and simulation (M&S) tools for defense analysis.			0.000
FY 2025 Plans:			
Advanced Modeling and Simulation (M&S) Technology and Tool Development supports the following:			

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2026 Office of the Secretary Of Defense		Date: June 2025	
Appropriation/Budget Activity 0400 / 3	R-1 Program Element (Number/Name) PE 0603142D8Z / <i>Mission Engineering and Integration (ME&I)</i>	Project (Number/Name) 124 / <i>Advanced Analysis and Capability Development</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
• Modeling and Simulation Integration Environment (MSIE): This hardware, software, and personnel infrastructure enables the TS/ SCI/SAP Development Security Operations (DevSecOps) environment for creating advanced M&S tools. It includes Sensitive Compartmented Information Facilities (SCIF) / Special Access Program Facilities (SAPF), a TS/SCI/SAP compute hardware environment, and a team of software developers as well as necessary security personnel. • Secure Advanced Framework for Simulation and Modeling (SAFE-SiM): This provides Continuous Integration / Continuous Delivery (CI/CD) support for fielding the SAFE-SiM program, which is the core of the program's M&S tool set, and accomplishes three objectives: 1) Meets the need for an integrated architecture that enables all security level, faster-than-real time, theaterwide, multi-domain, seafloor to space mission level analysis to enable the exploration of adaptive Joint warfighting architectures; 2) Supports the rapid conduct of concept development, acquisition trade space exploration, and force structure evaluation in a TS/SCI/SAP environment; 3) Delivers advanced analytic and visualization tools that will support senior-level decision makers, technology developers, and acquisition professionals. The SAFE-SiM tools will transition to the defense analytic community. • Multi-Level Security (MLS): This provides hardware and software solutions that enable the appropriate data protection and access from the UNCLASSIFIED to Top Secret, Sensitive Compartmented Information, Special Access Program (TS/SCI/SAP) levels. This capability is both necessary and integral for SAFE-SiM as well as the Modeling and Simulation Big Play for Defense Research and Engineering (R&E). FY 2026 Plans: In FY2026, the Advanced Modeling and Simulation (M&S) Technology and Tool Development subproject will be consolidated with the Modeling and Simulation Big Play subproject to support an integrated effort entitled Joint Capability Development Environment (JCDE)subproject. FY2026 funding budgeted to Advanced Modeling and Simulation (M&S) Technology and Tool Development will be applied to the FY2026 JCDE subproject. FY 2025 to FY 2026 Increase/Decrease Statement: Not applicable.			
Title: Modeling and Simulation Big Play Description: Delivers and sustains a Multi-Level Security (MLS) enabled, modeling and simulation (M&S) ecosystem to support both local and distributed collaborative analysis via networks that can be accessed by U.S. government, Department of Defense, Academic, and Industry stakeholders; results of this work include: • Top Secret, Sensitive Compartmented Information, Special Access Program (TS/SCI/SAP), MLS-enabled compute infrastructure that can run multiple M&S tools.		-	15.870

Title: Joint Capability Development Environment (JCDE)		-	0.000
Description: A hardware, software, and TS/SCI/SAP network architecture designed to accelerate the Department's ability to conduct rapid capability development and fielding. The JCDE provides industry, the DoD, FFRDC/UARCs, and international partners access to advanced modeling and simulation (M&S) tools and a multi-level security (MLS) enabled data/knowledge repository to enable rigorous, rapid analysis and experimentation in support of capability development and military utility analysis and experimentation. The JCDE also includes a development environment that enables the continuous creation and improvement of advanced M&S tools and analysis / experimentation processes. The JCDE provides the following benefits:			71.532
• Enables advancements in analytic processing, capability development, and experimentation, accelerating incubation, development, and evaluation processes that transition joint capabilities. • Enhances industry, UARC, and FFRDC ability to partner with the DoD to ensure that the US military retains its technological advantage. • Enhances and expands upon the Top Secret, Sensitive Compartmented Information, Special Access Program (TS/SCI/ SAP) Modeling and Simulation (M&S) software and hardware development environment established by the Secure Advanced Framework for Simulation and Modeling (SAFE-SiM) program. Matures the SAFE-SiM modeling and simulation (M&S) program and suite of analytic tools to continually deliver new capabilities, based on user feedback, and transition new modeling and simulation (M&S) tools for defense analysis. • Delivers and sustains a Multi-Level Security (MLS) enabled, modeling and simulation (M&S) ecosystem to support both local and distributed collaborative analysis via networks that can be accessed by U.S. government, Department of Defense, Academic, and

A. Mission Description and Budget Item Justification

This program supports the Department's initiatives to Build Sustainable and Long-Term Advantage, and Build a Resilient Joint Force and Defense Ecosystem.

The Joint Hypersonics Transition Office (JHTO), within the Office of the Assistant Secretary of Defense for Science and Technology (ASD(S&T)), was created to establish a university consortium for hypersonics research; support workforce development; expedite testing, evaluation, and acquisition of hypersonic technologies to meet the stated needs of the warfighter; ensure that prototyping demonstration programs on hypersonic systems integrate advanced technologies to speed the maturation and deployment of future hypersonic systems; develop strategies, roadmaps, and technology protection measures for hypersonics to enable the transition of such technologies to future operational capabilities for the warfighter; and develop and implement a strategy for enhancing the current and future hypersonics workforce.

Change Summary Explanation			
FY 2024 change of \$0.856 million is the net result of increases for Congressional Adds (\$2.000 million) and decreases for SBIR/STTR (-\$1.130 million) and Cancelled Accounts (-\$0.014 million) reductions.			
FY 2025 change of \$5.000 million reflects increases for Congressional Add (\$5.000 million).			
FY 2026 change of -\$1.006 million is due to Economic Assumptions (-\$0.151 million) and Program Adjustments (-\$0.855 million).			
The FY 2026 request for Joint Hypersonic Transition Office (JHTO) includes \$50.998 million discretionary and \$600.000 million of mandatory (reconciliation) for a total of \$650.998 million. The mandatory (reconciliation) funds Munitions & Supply Chain, Defense Industrial Base. Further information for this reconciliation request is provided in Chapter 2 of the Reconciliation Exhibit.

A. Mission Description and Budget Item Justification

This program supports the Department's initiatives to Build Sustainable and Long-Term Advantage and Build a Resilient Joint Force and Defense Ecosystem.

The Joint Hypersonics Transition Office (JHTO), within the Office of the Assistant Secretary of Defense for Science and Technology (ASD(S&T)), was created to establish a university consortium for hypersonics research; support workforce development; expedite testing, evaluation, and acquisition of hypersonic technologies to meet the stated needs of the warfighter; ensure that prototyping demonstration programs on hypersonic systems integrate advanced technologies to speed the maturation and deployment of future hypersonic systems; develop strategies, roadmaps, and technology protection measures for hypersonics to enable the transition of such technologies to future operational capabilities for the warfighter; and develop and implement a strategy for enhancing the current and future hypersonics workforce.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: University Consortium for Applied Hypersonics (UCAH)	26.679	27.107	27.416
Description: The Joint Hypersonics Transition Office (JHTO) established the University Consortium for Applied Hypersonics and solicits research projects through the Consortium that address hypersonic priorities and challenges that were identified by the hypersonics community. The JHTO Science and Technology (S&T) team prepares multiple topics for solicitation each year across materials, propulsion, navigation, guidance, control, modeling & simulation, aerodynamics, ground testing, algorithms, and planning. These research projects are typically 1-3 years in duration. The UCAH hosts Consortium Industry Days, Project Industry Days, and participates in career/internship fairs to cross-level information and enhance workforce development. The JHTO leverages the Consortium to fund summer research internships for undergraduate and graduate students who are focusing on key hypersonic development areas.			
FY 2025 Plans: FY 2025 base plans for the UCAH are a continuation of the path identified in the S&T roadmap for FY 2024. UCAH will continue to execute research projects through the Consortium; in addition, the scope of the projects will be increased to focus more on workforce development and applied research as identified by the S&T roadmap.			
FY 2026 Plans: FY 2026 base plans for the UCAH continues the path identified in the S&T roadmap and pursues flight experimentation for promising technologies. Projects include continuation of those started in FY 2023 and FY 2024, as well as new projects selected			

UNCLASSIFIED

Appropriation/Budget Activity 0400 / 3	R-1 Program Element (Number/Name) PE 0603183D8Z / <i>Joint Hypersonic Technology Development & Transition</i>	Project (Number/Name) 066 / <i>Joint Hypersonic Transition Office (JHTO)</i>		
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025	FY 2026
in FY 2025 through the annual UCAH S&T project solicitation. In FY26, new research will explore advanced aerodynamics, novel propulsion systems, integration materials, high-speed aero-optics and non-kinetic interactions. FY 2025 to FY 2026 Increase/Decrease Statement: An additional increase of \$0.507 million reflects minor budget fluctuations. An Economic Assumptions decrease of \$0.151 million reflects a reduction in non-pay, non-fuel purchases based on revised inflation rates and a decrease of \$0.047 million reflects a reduction of discretionary travel funding to align with Executive Order 14222, "Implementing the President's Department of Government Efficiency Cost Efficiency Initiative."				
Title: Navigation, Guidance and Controls (NGC) Science and Technology (S&T) Development Description: In alignment with the jointly developed Hypersonics Science and Technology (S&T) Roadmap, the Joint Hypersonics Transition Office (JHTO) funds NGC S&T projects to improve the operational capabilities of both offensive and defensive hypersonic systems. These projects focus on navigation in contested environments, on-vehicle trajectory generation, communications risk reduction, guidance electronics, and conformal antenna development. Additional details regarding these projects are sensitive and/or classified and can be provided upon request. FY 2025 Plans: Continue activities from FY 2024. Additional details regarding FY 2025 NGC projects are sensitive and/or classified. FY 2025 to FY 2026 Increase/Decrease Statement: The decrease of \$4.786 million between FY 2025 and FY 2026 reflects a realignment to Science & Technology Acceleration Projects for consolidation of Science & Technology system development.		4.721	4.786	-
Title: Propulsion Science and Technology (S&T) Development Description: In alignment with the jointly-developed Hypersonics S&T Roadmap, the Joint Hypersonics Transition Office (JHTO) funds propulsion S&T projects designed to enhance propulsion capabilities for both offensive and defensive hypersonic systems. These efforts will close critical gaps in the development of hypersonic cruise missiles and enhance range and/or payload capacity of boost-glide systems. Focus areas for these projects include solid rocket motor component technologies, expanding the operating envelope of Dual-Mode Ramjet/Scramjet propulsion systems, developing new actuator technologies for axial thrusters, and establishing a proof-of-principle for an improved endothermic fuel for hypersonic applications. Additional details regarding these projects are sensitive and/or classified and can be provided upon request. FY 2025 Plans: Continue activities from FY 2024. Additional details regarding FY 2025 propulsion projects are sensitive and/or classified. FY 2025 to FY 2026 Increase/Decrease Statement:		3.004	3.104	-

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2026 Office of the Secretary Of Defense		Date: June 2025		
Appropriation/Budget Activity 0400 / 3	R-1 Program Element (Number/Name) PE 0603183D8Z / Joint Hypersonic Technol ogy Development & Transition	Project (Number/Name) 066 / Joint Hypersonic Transition Office (JHTO)		
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025	FY 2026
The decrease of \$3.104 million between FY 2025 and FY 2026 reflects a realignment to Science & Technology Acceleration Projects for consolidation of Science & Technology system development.				
Title: Systems Engineering, Design and Analysis (SEDA) Science and Technology (S&T) Development Description: In alignment with the Hypersonics S&T Roadmap continue to improve the modeling and prediction of hypersonic vehicle plumes, wakes, and signatures in addition to providing performance baselines for offensive and defensive systems. Additional details regarding SEDA projects are sensitive and/or classified. FY 2025 Plans: Continue activities from FY 2024. Additional details regarding FY 2025 SEDA projects are sensitive and/or classified. FY 2025 to FY 2026 Increase/Decrease Statement: The decrease of \$1.832 million between FY 2025 and FY 2026 reflects a realignment of funds to Workforce Development Projects. The realignment consolidates hypersonic workforce development activities, research, course development and manufacturing methods for hypersonic structural components.		1.796	1.832	-
Title: Materials, Structures and Manufacturing (MSM) Science and Technology (S&T) Development Description: In alignment with the jointly-developed Hypersonics S&T Roadmap, the Joint Hypersonic Transition Office (JHTO) funds MSM S&T projects essential to develop new high-temperature materials for hypersonic applications and to design more efficient and effective manufacturing methods for hypersonic structural components. Specific projects seek to characterize alternative ceramic matrix composites for hypersonics, improve the ability to produce multi-phase monolithic ceramic dielectric materials, test and characterize the performance of leading edge coatings, and improve manufacturing processes to build cruiser fins. Additional details regarding these projects are sensitive and/or classified and can be provided upon request. FY 2025 Plans: Continue activities from FY 2024. Additional details regarding FY 2025 MSM projects are sensitive and/or classified. FY 2025 to FY 2026 Increase/Decrease Statement: A decrease of \$1.577 million between FY 2025 and FY 2026 reflects the realignment of \$1.019 million to Workforce Development Projects and a decrease of \$0.558 million reflects the realignment to Science & Technology Acceleration Projects. The realignments consolidate hypersonic workforce development activities, research, course development and manufacturing methods for hypersonic structural components and Science & Technology system development.		1.546	1.577	-
Title: Ordnance Science and Technology (S&T) Development Description: In alignment with the jointly-developed Hypersonics S&T Roadmap, the Joint Hypersonics Transition Office (JHTO) funds ordnance S&T projects to better understand hypersonic ordnance effects and improve those effects across a broad range		4.760	4.645	-

of target sets. Projects will develop and demonstrate a survivable fuze system designed to function under extreme hypersonic terminal conditions, model shock loads associated with a multi-mission warhead, and conduct high-fidelity modeling to analyze and optimize the effects of hypersonic munitions. Additional details regarding these projects are sensitive and/or classified.					
FY 2025 Plans: Continue activities from FY 2024. Additional details regarding FY 2025 Ordinance projects are sensitive and/or classified.					
FY 2025 to FY 2026 Increase/Decrease Statement: The decrease of \$4.645 million between FY 2025 and FY 2026 reflects a realignment to Science & Technology Acceleration Projects for consolidation of Science & Technology system development.					
Title: Aerodynamics and Aerothermodynamics Science and Technology (S&T) Development			3.957	4.036	-
Description: In alignment with the jointly-developed Hypersonics S&T Roadmap, the Joint Hypersonics Transition Office (JHTO) funds aerodynamics and aerothermal S&T projects to enhance aero optics modeling and simulation testing. This project seeks to increase the fidelity of infrared aero optics modeling and simulation data while driving down man-hours through creation/validation of a more useful and collaborative collection format. Additional details are sensitive and/or classified.					
FY 2025 Plans: Continue activities from FY 2024. Additional details regarding FY 2025 aerodynamics and aerothermal projects are sensitive and/or classified.					
FY 2025 to FY 2026 Increase/Decrease Statement: The decrease of \$4.036 million between FY 2025 and FY 2026 reflects a realignment to Science & Technology Acceleration Projects for consolidation of Science & Technology system development.					
Title: Joint Hypersonics Transition Office (JHTO) Systems Engineering Field Activity at Naval Surface Warfare Center Crane Division (NSWC Crane)			4.685	4.854	-
Description: Supports systems engineering and integration for hypersonics development to generate efficiencies and facilitate technology transition. Support will include coordinating with systems engineering teams across the Services and programs; negotiating more modular Government Reference Architectures to support individual programs; define and execute system on-ramping plans, and guide accelerated development plans. Additionally, the activity will represent the Joint Hypersonics Transition Office (JHTO) as a technical execution area co-lead for workforce development.					
FY 2025 Plans:

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026
Continue cross-service systems engineering, technology transition, and workforce development initiatives. Continue to develop and transition advanced technologies to services and agencies; Performers in services/agencies, FFRDCs, and industry.					
FY 2025 to FY 2026 Increase/Decrease Statement: The decrease of \$4.854 million between FY 2025 and FY 2026 reflects a realignment to Science & Technology Acceleration Projects for consolidation of Science & Technology system development.					
Title: Workforce Development Projects			0.000	-	2.851
Description: The Joint Hypersonics Transition Office (JHTO) will invest in undergraduate and graduate internships directly working with ongoing hypersonic research at national labs, service academies, and universities. JHTO will create opportunities to connect with mid-career and executive, such as training and veteran career opportunities, technician and community college partnerships, and hypersonics-specific STEM outreach.					
FY 2026 Plans: Continue activities from FY 2025. Expansion of workforce development actions and activities will include furthering undergraduate research internships, reaching additional universities and community colleges, and their students, who are not yet fully immersed in hypersonic research and courses. In addition, increase the number of national labs internship partners as well as number of intern opportunities funded per location. This will include expansion to states not yet involved in DoD hypersonics and expanding relationships with our international partners. Increase the number and reach of training and veteran events to extend impact and accessibility to the workforce.					
FY 2025 to FY 2026 Increase/Decrease Statement: An increase of \$2.851 million reflects a realignment of \$1.832 million from Systems Engineering, Design and Analysis (SEDA) Science and Technology (S&T) Development and \$1.019 million from Materials, Structures and Manufacturing (MSM) Science and Technology (S&T) Development to consolidate hypersonic workforce development activities, research, course development and manufacturing methods for hypersonic structural components.					
Title: Science & Technology Acceleration Projects			0.000	-	20.731
Description: The JHTO-developed Hypersonics S&T Roadmap guides JHTO-internal investments and informs external hypersonics S&T investments. Internal investments include science and technology projects to improve capabilities of both offensive strike, defense against hypersonics and reusable hypersonic systems. Capability themes across the three operational systems include piloting to the target, range and maneuverability increases through novel aerodynamics and propulsion, increased effectiveness of hypersonic systems, and improvements to mission planning and implementation of hypersonic weapons. These projects focus on technological gaps critical to the technological realization, manufacture, and cost-effectiveness

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026
of systems in development. These projects have strong transition potential and may include direct insertion, risk reduction technologies, or informing future requirements.					
FY 2026 Plans: These funds will support projects selected from the FY 2025 JHTO S&T solicitation and those identified through the FY 2025 technology demonstration plans developed by JHTO cross-service Capability Area Working Groups. Technologies will be matured and demonstrated in the areas of robust navigation (to ensure that hypersonic systems arrive at the target), target seeking and target recognition (to increase the hit probability), thermal management and power generation (to reduce hypersonic system size and weight), highly manufacturable heat shields and structures (to improve hypersonic system affordability), scramjet propulsion technologies and design tools (to decrease the development timelines of novel propulsion systems), enhanced weapon effects and warhead system design (to enhance the lethality of hypersonic weapons), and kill chain analysis and demonstration (to better support warfighting objectives).					
FY 2025 to FY 2026 Increase/Decrease Statement: A net change of \$20.731 million between FY 2025 and FY 2026 reflects an increase of \$21.983 million and a decrease of \$1.252 million for programmatic adjustments. The increase of \$20.929 million reflects the realignment of \$4.786 million from Navigation, Guidance and Controls (NGC) Science and Technology (S&T) Development, \$3.104 million from Propulsion Science and Technology (S&T) Development, \$0.558 million from Materials, Structures and Manufacturing (MSM) Science and Technology (S&T) Development, \$4.645 million from Ordnance Science and Technology (S&T) Development, \$4.036 million from Aerodynamics and Aerothermodynamics Science and Technology (S&T) Development, and \$4.854 million from Joint Hypersonics Transition Office (JHTO) Systems Engineering Field Activity at Naval Surface Warfare Center Crane Division (NSWC Crane). The realignments consolidate Science & Technology system development and the decrease results in reduce contracts primarily due to inflation.					
Accomplishments/Planned Programs Subtotals			51.148	51.941	50.998
			FY 2024	FY 2025	
Congressional Add: Additive Hypersonic Components			2.000	-	
FY 2024 Accomplishments: JHTO identified promising research opportunities in developing additively manufactured thermo-structural insulators. Additive manufacturing allows unique design geometries that are impossible to accomplish with conventional fabrication methods and can provide optimized designs and reduce overall costs. JHTO is partnering with NSWC Crane for execution of these funds. NSWC Crane has awarded a contract to execute this effort.

A. Mission Description and Budget Item Justification

This program supports the Department's initiatives to Reestablish Deterrence, Prevail in Conflict, Defend the Homeland, and Build Sustainable and Long-Term Advantages.

The mission of the Joint DoD/DOE Munitions Technology Development Program (JMP) is to develop new and innovative science and technology (S&T) to enable significant advancements in the state-of-the-art for conventional munitions. The JMP portfolio comprises essential, cross-cutting, and foundational S&T investments that enable future force operational capabilities in the near, mid, and far term. Additionally, JMP's efforts form the foundation of DoD munitions research design, testing, and manufacturing.

A memorandum of understanding between the Department of Defense and the Department of Energy provides the basis for the cooperative effort and for cost sharing the mutually beneficial technology munitions advancements. The funding budgeted by the DoD to this program are matched, at a minimum, dollar for dollar by the DOE. Through this interdepartmental cooperation, the DoD leverages DOE's substantial investments in intellectual capital, highly specialized skills, advanced scientific equipment and facilities, and computational tools not available within the DoD. This includes developing computational tools, which leverage AI technologies to aid munitions designers in developing novel high entropy alloys, advanced energetics, and fast running damage models for improved assessment of maritime lethality. These advancements through JMP provide foundational capabilities that impact a wide range of munitions including One-Way Attack, counter-small UAS technologies, and munitions that may be utilized for Homeland Missile Defense. The integration of DOE technologies with DoD Joint Services' needs has provided major advances in munition capabilities over many years and continues to play a crucial role in the exploration, development, and transition of new technologies needed by the services.

The JMP has established a successful collaborative munitions community of DoD and DOE scientists and engineers that develop technologies of interest to both Departments. A structured cadence of threat informed requirements development, Joint Service informed portfolio development, and bi-annual technical reviews ensure that the JMP's investments address high-priority DoD gaps, needs, and challenges. The JMP portfolio is organized into four Technology Coordination Groups (TCG), led by DoD Service laboratory subject matter experts, which evaluate each project's technical progress and continued relevance to the mission.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Joint DoD/DOE Munitions Technology Development	18.553	19.826	20.205
Description: Joint DoD/DOE Munitions Technology Development focuses on the following key areas: - Decision tools, diagnostics, and datasets for munition design and evaluation. - Munition delivery technology enabling advanced weapon bodies, propulsion systems, and survivability to extreme conditions. - Munition controls for fuzing, microelectronics, power, sensors, kill chains, and survivable components. - Lethal effects innovations enabling novel explosive materials, formulations, warhead designs, and target damage advancements.			
FY 2025 Plans:

Exhibit R-2A, RDT&E Project Justification: PB 2026 Office of the Secretary Of Defense		Date: June 2025	
Appropriation/Budget Activity 0400 / 3	R-1 Program Element (Number/Name) PE 0603225D8Z / <i>Joint DoD-DoE Munitions Technology Development</i>	Project (Number/Name) 225 / <i>Joint DOD DOE Munitions</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
• Develop high fidelity simulations of combined effects explosive (CEX) warheads using recently validated main charge reactive burn models. • Develop macroscale reduced-order failure model for metals with documentation for transition to DoD. • Develop and evaluate prototype low temperature-compatible supercapacitor technology with 10x energy density over the state-of-the-art. • Demonstrate a new modeling and simulation capability for ship defeat in support of maritime lethality efforts. • Demonstrate capability to measure surface chemistry of thermal protection system (TPS) materials in hot, hypersonic flow representative of the aerodynamic shear and extreme heating rates found in hypersonic flight. • Demonstrate a suit of machine learning algorithms for a counter-unmanned aircraft system (CUAS) platform capable of autonomous detection, classification, tracking, and intercept of next generation UAS threats. • Deliver next generation shock-hydro-structure modeling and simulation (M&S) capability enabling blast loading of structures with complex internal components, blast induced material failure, and munition response during impact and penetration events. FY 2026 Plans: • Develop physics-based models enabled by machine learning technology against hard and deeply buried targets. • Develop optical fragment measurement techniques with higher-fidelity, lower cost, higher throughput for DoD munition design and testing • Improve advanced reactive flow modeling capabilities to capture physics critical to assessing munition survivability and performance in extreme conditions. • Develop AI-informed additive manufactured Multi-Principal Element Alloys (MPEAs) possessing enhanced material and functional properties for munition structure performance under extreme conditions. • Improve material models and codes applicable for metallic materials for reliable simulations and warhead performance and lethality assessment. • Design multi-fidelity aerodynamics capability that uses techniques to construct an aerodynamics database that concentrates on calculations that will significantly speed up design work. • Demonstrate the use of X-Ray Diffraction to measure the thermodynamic behavior and late time burn of combined effect explosives to enable optimization of munitions with advanced energetics warheads. • Simplify the process to build robust fast-running models for lethality of emerging targets, munitions, and engagement scenarios and enable the rapid assessment of munition & target effects. • Develop a rapid, computation-driven capability to accelerate discovery and development of alloys that satisfy performance and manufacturing scale-up needs. • Design and fabricate supercapacitors with significantly improved performance and boost power available to munitions' electronics, freeing up space for other advances in munitions function. A. Mission Description and Budget Item Justification

This PE supports the Department's initiatives to Revive the Warrior Ethos, Rebuild Our Military, and Reestablish Deterrence.

This program directly supports the Office of Strategic Intelligence and Analysis (OSI&A) for the Office of the Under Secretary of Defense, Research and Engineering (OUSD(R&E)). OSI&A's campaign of analysis approach integrates intelligence reporting and independent technical expertise to execute comparative assessments. These assessments inform investment decisions and shape the development of innovative capabilities to address emerging threats and opportunities from a diverse range of state and non-state actors as outlined in the Interim National Defense Strategy Guidance (INDSG) and as reported through the Intelligence Community (IC). The complexity of capability gaps in the future operating environment combined with the speed of emerging threat development requires a broadly scoped "red vs blue" approach. This approach provides integrated baselines for OUSD(R&E) analyses and investment decisions that are reflective of cross-cutting Joint Force plans, missions, and concepts. Trends and potential impacts related to global critical and emerging technology developments are analyzed and assessed, and findings are integrated with IC reporting to enable decision advantage in OUSD(R&E) and inform strategies for maintaining technological superiority and modernizing key capabilities for the Joint Force.

Analysis and assessments are focused on challenges related to INDSG objectives and competitors' research and development trends. Two lines of effort accomplish this mission:

- 1) Science and Technology (S&T) Analytic Assessments integrate information from the acquisition, intelligence, operational, and S&T communities to quantify key attributes of emerging critical challenges and assess counter technology opportunities. The framework includes execution of the following activities:
 - Net Technical Assessments (NTA). OSI&A partners with Federally Funded Research and Development Centers, University Affiliated Research Centers, industry, and academia to conduct comparative assessments of critical technologies to determine technological advantage and inform investment decisions across the Department of Defense (DoD) S&T Enterprise. Critical technologies of interest to the DoD and strategic context drawn from the NDS, NDSTS, and DoD planning efforts set the bounds for the assessment of technological applications that could deliver operational advantage to the Joint Force along future development and deployment timelines.
 - Operational and Technical Assessments. Evaluations of DoD operational scenarios and warfighting concepts that identify operational gaps, incorporating IC-derived adversary threat trends and the technical demands of the future operational environment to determine challenges that could be mitigated or eliminated through the application of emerging and disruptive technologies.

UNCLASSIFIED

Exhibit R-2, RDT&E Budget Item Justification: PB 2026 Office of the Secretary Of Defense		Date: June 2025
Appropriation/Budget Activity 0400: <i>Research, Development, Test & Evaluation, Defense-Wide / BA 3: Advanced Technology Development (ATD)</i>		R-1 Program Element (Number/Name) PE 0603288D8Z / <i>Science and Technology (S&T) Analytic Assessments</i>
- Technology-based Wargames. Execution of an array of purpose-built games and workshops that integrate the operational, technology, and intelligence communities to characterize emerging technologies in the context of the future operational environment, evaluate their disruptive potential, and identify opportunities and challenges. Insights from these efforts inform programmatic and policy decisions related to the development of operational concepts across the Department. 2) Technology Watch and Horizon Scanning combines analysis of complex, unstructured, open-source data sets with intelligence reporting to enable monitoring and analysis of global research and development activities, underpinning characterization of the global technology environment and informing portfolio investment decisions across the DoD S&T Enterprise. These characterizations enable Global Research Watch activities and establish the global technology landscape that informs OSI&A S&T analytic assessment efforts and frames the larger campaign of analysis. The framework includes the following activities: - Technology Watch. Analysis of global open-source science, technology, research, and development efforts and in-person conference, symposium, and workshop attendance to characterize the global landscape of known science, technology, and concepts and to identify trends that can provide indicators and warnings of disruptive technology advances. Integrating the methodologies and findings from technology forecasting, maturation assessments, and NTA efforts to identify technological development areas for research and investment. - Horizon Scanning. Systematic execution of analytic techniques applied to large, complex open-source data for the identification of emerging science and technology capable of altering the future operating environment. - Intelligence Integration. Structured execution of recurring technical exchanges between the OUSD(R&E) stakeholders and S&T intelligence subject matter experts. These engagements enable the direct exchange of OUSD(R&E) intelligence needs and IC finished intelligence products to complement open-source findings and establish a comprehensive understanding of the global technology landscape. Additionally, OUSD(R&E) level input and perspectives support IC scientific and technical intelligence initiatives and inform intelligence community priorities, investment decisions, and strategic direction. - International Partner Collaboration. Cooperative identification and early-stage investigation of emerging technologies that generate opportunities and solve critical challenges common to the national security of the U.S. and our international partners. Due to the emergent nature of challenges and threats, specific analytic foci are unlikely to be identified beyond the current budget year. The process for developing and executing assessments can span fiscal years and may have multiple phases as trends progress and new information arises through open-source technology trend analysis and intelligence reporting.

Change Summary Explanation

FY 2026 changes are result of a Discretionary add of \$5.000 million for the Transition Tracking Action Group (TTAG), a decrease of \$0.091 million for internal adjustments/FFRDC, and an increase of \$4.977 million program adjustment resulting in a net increase of \$9.886 million.

The FY 2026 request for Science and Technology Analytic Assessments includes \$5.000 million of discretionary funds to administer the Transition Tracking Action Group (TTAG) OUSD R&E transferred to OSI&A in FY2025. TTAG is enhancing enterprise-wide visibility into the Department's technology investments by developing systemic approaches to enable decision makers in the DoD and Congress to have better insight and oversight into technology research, development, and acquisitions. Consistent with the DepSecDef-signed TTAG Implementation Plan, OSI&A works to identify relevant data sets and develop a common data lexicon across the DoD, enabling the tagging, tracking and analysis of data associated with technology investments across the defense enterprise. This enables leaders in DoD and Congress to monitor technology investments as they transition to new or existing acquisition programs. Insights derived from TTAG enable the Department to expedite the pace of transitioning technology to the warfighter while enabling the DoD to be more responsive to Congress.

A. Mission Description and Budget Item Justification

The Science and Technology (S&T) Analytic Assessments Project funds comparative assessments that integrate intelligence community insights and independent technical analysis to shape the development of innovative capabilities and address emerging threats from a diverse range of state and non-state actors as outlined in the Interim National Defense Strategy Guidance(INDSG) and as reported through the Intelligence Community (IC).

Engineering and technology analysis is performed by Federally Funded Research and Development Centers, University Affiliated Research Centers, industry, and academia partners focused on analysis of critical Department of Defense (DoD) S&T investments and breakthroughs by U.S. strategic competitors. These assessments compare global science, technology, research and development efforts, and current state-of-the-science, and identify technology development strategies. Main lines of effort include:

- Net technical assessments that characterize the technical state-of-the-art, measure relative national standing, and identify and assess technology applications for accomplishing strategically important military objectives to inform the Office of the Under Secretary of Defense, Research and Engineering (OUSD(R&E)) technology development and investment decisions.
- Quantitative, engineering-level analyses of novel technologies and concepts that identify potential areas of future technology overmatch.
- Independent assessments of critical technology research and development efforts that compare U.S. and competitor nations.

Operational and technical assessments identify prioritized operational issues and associated technology focus areas through comprehensive kill chain analysis across all domains through the year 2040. Characterizations of future operating environments and associated challenges inform the scoping and design efforts of S&T and engineering analyses for DoD. Main lines of effort include:

- Technology-based Wargames that integrate information from the intelligence, technology, and operational communities to identify opportunities stemming from emerging technologies and evaluate the demands of the future operational environment. The outputs inform future concept and capability development, prototyping and experimentation activities, threat forecasting, and DoD S&T investments.
- Operational Analyses focused on the dynamic interaction of U.S., ally and partner, and adversary military capabilities in a future operating environment. This analysis fuses IC assessments of future threats and operational impacts to the Joint Force, to enable technology-specific analysis in areas of critical challenge or opportunity.

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
- Continue to conduct independent assessments of U.S. and strategic competitors' critical capabilities and technology development. Operational and Technical Assessment: - Continue to update foundational data of U.S., ally and partner, and adversary capabilities to enable mission-oriented analysis of emerging threats. - Continue to assess anticipated U.S., ally and partner, and adversary capability solutions in the context of DoD-approved operational scenarios and associated timelines to illustrate areas of potential operational overmatch. - Continue to produce comparative assessments of existing and planned U.S. capabilities and weapons systems characterizing emerging threat systems and capabilities in future operating environments. - Continue to design and execute technology-based wargames to inform and align DoD modernization activities with joint concept and capability requirements and threat forecasting. Net Technical Assessments: - Assess technological state-of-the art and trends to capture relative national standing for focal technologies. - Explore military operational implications to understand operational relevance, technology timeline, and uncertainties associated with the applications of the focal technologies. - Integrate key competitor perspectives through intelligence community engagement OUSD(R&E) transferred the responsibility of administering the Transition Tracking Action Group (TTAG) to OSI&A in FY2025. TTAG is enhancing enterprise-wide visibility into the Department's technology investments by developing systemic approaches to enable decision makers in the DoD and Congress to have better insight and oversight into technology research, development, and acquisitions. Consistent with the DepSecDef-signed TTAG Implementation Plan, OSI&A works to identify relevant data sets and develop a common data lexicon across the DoD, enabling the tagging, tracking and analysis of data associated with technology investments across the defense enterprise. This enables leaders in DoD and Congress to monitor technology investments as they transition to new or existing acquisition programs. Insights derived from TTAG enable the Department to expedite the pace of transitioning technology to the warfighter while enabling the DoD to be more responsive to Congress. FY 2025 to FY 2026 Increase/Decrease Statement: FY 2025 to FY 2026 changes are result of a Discretionary add of \$5.000 million for the Transition Tracking Action Group (TTAG) and a decrease of \$0.408 million for internal adjustments resulting in a net increase of \$4.592 million. The FY 2026 request for Science and Technology Analytic Assessments includes \$5.000 million of discretionary funds to administer the Transition Tracking Action Group (TTAG) OUSD R&E transferred to OSI&A in FY2025. TTAG is enhancing

			FY 2024	FY 2025	
Congressional Add: Strategic Multilayer Assessment Cell			8.000	-	
FY 2024 Accomplishments: Strategic Multilayer Assessments (SMA) are framed during the year of execution in response to specific tasking from senior leadership in the CCMDs or Services. As a result, they are almost exclusively focused on critical, urgent, and emerging national security challenges. SMA projects typically include perspectives and participants from across the U.S. Government, foreign partners, academia, and the private sector. - SMA completed a major study supporting USSTRATCOM and USEUCOM entitled "21st Century Strategic Deterrence Frameworks." The USSTRATCOM Deputy Commander asked SMA to evaluate existing strategic deterrence frameworks, their shortfalls in today's environment, and potential alternative deterrence constructs to address the growing number of challenges to effective deterrence, particularly in the context of three-peer competitors. Subsequently, the USEUCOM Deputy Commander added a new study task: How does EUCOM/ NATO conduct more effective integrated deterrence with and through allies and partners in the context of deterring both China and Russia. The study involved 20 nations, over 150 contributors, and produced 40 reports. The project produced many creative ideas and concepts that were briefed to the CJCS and FVEY CHODs and European Chiefs of Mission conference. Among these is the Defense Analysis and Planning Support Environment 2.0 tool that supports campaign planning in complex, multi-actor competitive environments below the level of armed conflict. DAPSE 2.0 will be transitioned into an automated, collaborative software package in FY25. - Extended a two-phase study supporting USAFRICOM entitled "Anticipating the Future Operational Environment – Modeling Exploitable Conditions." In this third phase, SMA further refined its system of systems Africa Global Exploitable Conditions Model (AECM) to emphasize the security effects of climate change across

the AFRICOM AOR. Additionally, SMA conducted on-site training on the model and supporting analytical techniques to members of the AFRICOM headquarters and its components. Work is now underway to execute further drill downs to the regional and country levels of analysis to be completed this fiscal year.		
- SMA completed a pioneering, year-long speaker series entitled “Mind-Tech” where leading experts discussed the convergence of cognition and technology that form the foundation of an ongoing revolution in military affairs defined by human-machine teaming. The series speakers contributed 17-chapters to a book to be published in early 2025 with a final, concluding chapter written entirely by an AI large language model (LLM). - SMA executed its 14th annual national security conference entitled, “Managing Chaos: Competitive Strategies in a Disordered World.” 210 people attended the two-day conference that featured seven panels and three keynotes including the Vice Chairman.

A. Mission Description and Budget Item Justification

The Technology Watch/Horizon Scanning (TW/HS) Project Code supports Global Research Watch activities through the identification of technology research trends and the forecasting of concepts and technology maturation with the potential for military application through 2040. TW/HS activities inform the Department's investment decisions to achieve global competitive advantage. The program provides tailored technical assessments that identify the military relevance, research opportunities, and investment targets for emerging S&T. The Office of Strategic Intelligence and Analysis (OSI&A) enables intelligence-informed decision advantage across the S&T enterprise portfolio and informs the U.S. S&T intelligence posture by establishing linkages across the Office of the Under Secretary of Defense, Research and Engineering (OUSD(R&E)) and the Intelligence Community (IC) entities.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Technology Watch/Horizon Scanning	6.657	6.866	8.082
Description: The program utilizes multiple analytic methodologies to identify nascent technologies and characterize the future global S&T landscape. This characterization, in combination with other technical analysis performed by OSI&A, will inform strategic technology development decisions across the OUSD(R&E) Enterprise. OSI&A works in collaboration with international allies and partners to further the field of critical and emerging technology research and analysis.			
FY 2025 Plans: Technology Watch and Forecasting: - Continue to conduct systematic analysis of scientific research databases to identify emerging science, technology, and concepts. - Continue to characterize the global landscape of known science, technology, and concepts to identify trends that can provide indicators and warnings of disruptive technology advances. - Continue to integrate methodologies and findings from technology scanning and forecasting, maturation assessments, data analysis, and net technical assessment efforts to characterize global developments in science and technology research. - Advance the established U.S. – UK S&T Futures bilateral strategy through the continued discovery and early-stage exploitation of scientific breakthroughs to inform research and investment decisions that capitalize on burden sharing. - Collaborate with FVEY partner nations through The Technical Cooperation Program to advance the science, methodologies, and tools of technology foresight analysis, model Defense systems, and explore the operational implications of technology application at the strategic, joint all domain level.

A. Mission Description and Budget Item Justification

This program supports the Department's initiatives to Deter Aggression and Prevail in Conflict, Defend the Homeland, Build Sustainable and Long-Term Advantage, and Build a Resilient Joint Force and Defense Ecosystem.

The Strategic Capabilities Office (SCO) conducts analysis to identify and accelerate the development, demonstration, and transition of operationally impactful capabilities to shape and counter emerging threats and increase the lethality of the Joint Force in contested environments. In a partnership endeavor across the Office of the Secretary of Defense (OSD), Joint Staff, Combatant Commands (CCMDs), the Services, the Intelligence Community (IC), and other U.S. Government agencies, the SCO combines capability innovation with new concepts for warfighting that leverage new technology areas, including autonomy, artificial intelligence, and machine learning. SCO conducts projects on accelerated timelines, in all warfighting domains, at any classification or access level.

The Advanced Innovative Analysis and Concepts program supports development, study, and analysis of integrated concepts and prototypes, analysis in support of ongoing efforts to shape and counter emerging threats, cross-Service and cross-Defense/Intelligence concepts, and red-teaming. Projects focus on proving component and subsystem maturity prior to integration in major systems, and may involve risk reduction initiatives. This program also supports the development of concept proposals for assessment by the Technical and Transition Cross Functional Teams established in accordance with the National Defense Authorization Act (NDAA) for FY 2020 for development under the Advanced Innovative Technologies Program Element. Due to the nature of these projects, specific applications and detailed plans are available at a higher classification level.

A. Mission Description and Budget Item Justification

The Strategic Capabilities Office (SCO) conducts analysis in support of ongoing efforts to shape and counter emerging threats, with special emphasis on: innovative and architecture-level concepts, cross-Service and cross-Defense/Intelligence concepts, red-teaming, and on a case-by-case basis, research and development projects to demonstrate new concepts. SCO identifies, analyzes, and accelerates the development, demonstration, and transition of selected capabilities to shape and counter emerging threats, and to improve U.S. security posture. In a partnership endeavor across the Office of the Secretary of Defense (OSD), Joint Staff, Combatant Commands (CCMDs), the Services, the Intelligence Community (IC), and other U.S. Government agencies, SCO combines capability innovation with concepts of operation to develop novel, high-leverage approaches to address pressing national security challenges. SCO conducts projects on accelerated timelines, at any classification or access level.

The Advanced Innovative Analysis and Concepts program supports development, study, and analysis of integrated concepts and prototypes, analysis in support of ongoing efforts to shape and counter emerging threats, cross-Service and cross-Defense/Intelligence concepts, and red-teaming. Projects focus on proving component and subsystem maturity prior to integration in major systems, and may involve risk reduction initiatives. Due to the nature of these projects, specific applications and detailed plans are available at a higher classification level.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Innovative Analysis and Concept Generation	31.195	29.003	32.007
Description: The Strategic Capabilities Office conducts analysis, studies, demonstrations of integrated concepts and prototypes, component and subsystem maturation, and risk-reduction demonstrations in support of ongoing efforts to shape and counter emerging threats, and develops project proposals for prototyping under the Advanced Innovative Technologies program. Due to the nature of these projects, specific applications and detailed plans are available at a higher classification level.			
FY 2025 Plans: Continue to innovate in partnership with Services Program Offices and CCMDs to identify game-changing uses of existing and mature systems and technologies to prepare for presentation to the Cross Functional Teams.			
FY 2026 Plans: Continue to innovate in partnership with Services Program Offices and CCMDs to identify game-changing uses of existing and mature systems and technologies to prepare for presentation to the Cross Functional Teams.

A. Mission Description and Budget Item Justification

This program supports the Department's initiative to Build Sustainable and Long-Term Advantage.

Quantum technology has reached a tipping point where current investments will determine its future impact. If the United States can stay on pace, many important outcomes for the DoD will be realized. Quantum PNT sensor technology will create robust position, navigation, and timing (PNT) for the freedom of operations having precision-strike capabilities even within contested spectrum, space, or cyber operations. Quantum radio frequency (RF) sensors will greatly enhance capabilities in the spectrum giving the DoD significant advantages for electronic warfare; command, control, and communications and intelligence, surveillance, and reconnaissance (C3ISR). Quantum computing (QC) may revolutionize DoD's ability to develop advanced materials and potentially other computational problems. However, the transition of laboratory innovations to devices that are competitive with existing ones is hampered by immature quantum component technology and the need for specialized fabrication, integration, and packaging processes to manufacture quantum devices.

This funding will identify detailed component requirements develop the most critical technology solutions. This effort will be coordinated with non-defense U.S. Government (USG) agencies to ensure their commercial viability. The resulting component supply chain will enable defense and dual-use applications of quantum technology leveraging existing resources in academic institutions, national laboratories, private industries; and other DoD programs such as Manufacturing Innovation Institutes (DoD MIIs) and the Microelectronics Commons.

PNT and RF sensor technologies demonstrate substantial improvements in technical performance against their current fielded, classical counterparts. However, sustained research and development is needed to mature these technologies at the quantum system level as well as to mature the component supply chain for them. All these technologies require refinement of the concepts of operation to maximize impact to the DoD and accelerate the timelines to such impacts. Required research and development efforts are guided by OUSD(R&E) with input from the services for their technical requirements as a DoD-wide effort. These sensors are not yet at a maturity level for system integration by the services. The relative cost and workforce barrier is too high for one service or agency alone to transition this complex and emerging technology for a single mission. DoD agencies working together, however, guided by OUSD(R&E), can overcome these barriers and impact all DoD Service Departments. Initial funding to develop quantum sensor maturity was undertaken in FY2024 by the Defense Innovation Unit (DIU) through a \$55M transfer from Quantum Transition Acceleration. OUSD(R&E) will continue to work with DIU as well as the services to optimize execution of the projects in the program.

---	--

Finally, QC will likely allow rapid advances in critical DoD areas such as materials and chemistry for advanced energetics, propulsion, and platform coatings, and machine learning, but significant work is required to understand which QC application will be most relevant and available the soonest. This program will develop that application knowledge and facilitate future large impacts.

A. Mission Description and Budget Item Justification

The Department has pioneered and advanced classical sensor technology for decades. Over the past years, quantum sensing technology has shown the ability to meet program-level metrics throughout DoD R&D programs. Sustained development to create the specialized manufacturing requirements, workforce, and operation outside the laboratory is critical to bring these sensors to a maturity level at which the services can continue transition to programs of record. OUSD (R&E) centralized management and direction of this development will ensure that redundancy and a piecemeal approach is avoided, and that overall progress is accelerated. In addition to quantum sensing applications, the Department will continue to track progress in the use of quantum computing for game-changing opportunities for DoD use through interaction with industry, Quantum centers, Service laboratory experts, and Defense Advanced Research Project Agency (DARPA), as well as others. Through this effort, the DoD will be better prepared to leverage any strategic surprise opportunities arising as quantum computers develop.

This funding will allow OUSD(R&E) oversight of a multi-service program designed to develop quantum sensing technology capable of integration into multiple DoD applications in each of the Army (USA), Navy (USN), and Air Force (USAF). As structured, the program will be able to maximize the utilization of the military department's distributed technical expertise and capabilities. OUSD(R&E) will contribute connections to program of record and the joint force strategic goals, connectivity and integration between organizations. OUSD (R&E) will reduce risks to individual projects through coordinated work on technology challenges, and connectivity to other R&E capabilities including the other critical technology areas, basic science office, manufacturing innovation, and the Microelectronics Commons. OUSD(R&E) will confirm all developed quantum technology meets specified requirements ensuring a more diverse use case for all developed technology with an industry base that can sustain DoD needs. Projects will include testing and evaluation, device integration, and application analysis to aid in future acquisition and sustainment of innovative technologies developed in DoD research programs.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Quantum Technologies	19.268	24.290	59.521
Description: The DoD's research and development of quantum technologies is critical to maintaining the Nation's technological superiority. Part of this effort will focus on maturing, demonstrating, and transitioning quantum inertial sensors, gravity sensors, atomic clocks, and quantum electro-magnetic sensors. The specific quantum technologies efforts are: - Transitioning low-noise near-infrared (NIR) lasers for quantum sensors. - Multi-project wafer (MPW) service runs at AIM Photonics for novel quantum-specific component devices. - Joint (USAF/USN) Magnetic Navigation program led by the USAF using quantum magnetic sensors and magnetic maps to navigate aerial platforms without GPS. - Joint (USAF/USN) Inertial Sensing program utilizing accelerometer and gyroscopes to track position, orientation and velocity of a moving object in a non-jammable mode of operations: important for strategic platforms in multiple domains.

Exhibit R-2A, RDT&E Project Justification: PB 2026 Office of the Secretary Of Defense			Date: June 2025		
Appropriation/Budget Activity 0400 / 3		R-1 Program Element (Number/Name) PE 0603330D8Z / <i>Quantum Application</i>		Project (Number/Name) 444 / <i>Quantum Transition Acceleration</i>	
B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026
- Joint (USN/USA) Magnetometer program led by the Office of Naval Research (ONR) to enable a new generation of unmanned vehicles to create magnetic anomaly detection capabilities for both land and sea. - Quantum accelerometer program led by ONR to calibrate guidance accelerometers at sea without having to come back to port. - Joint (USA/USN) Atomic Clock program led by Army Research Lab (ARL) providing the next generation of strategic atomic clocks. The DoD needs to harness the potential of QC and mitigate its dangers. Part of this effort will continue to track progress in the use of quantum computing for game-changing opportunities for DoD use through interaction with industry, Quantum centers, Service laboratory experts, and Defense Advanced Research Project Agency (DARPA), as well as others. Through this effort, the DoD will be better prepared to leverage any strategic surprise opportunities arising as quantum computers develop. FY 2025 Plans: -FY 2025 Plans: - Oversee atomic clock demonstrations, showcasing current Australia-United Kingdom-United States (AUKUS) technology. - Conduct initial systems requirement review, originally in FY24, with industry contractors outlining integration plan for quantum sensors into specified applications. - Finalize SwaP redesign of quantum sensors (magnetometers, accelerometers and gravimeters), ensuring the transitioning quantum sensors are compatible with current/future military applications. - Conduct preliminary design reviews with industry contractors validating the redesign and system requirements meet military application specifications. - Initiate planning for FY26 OUSD-led quantum sensing demonstration. - Measure quantum magnetometer sensor environmental capabilities (originally in FY24) FY 2026 Plans: - Utilizing technology developed within this effort, initiate planning for future joint Australia-United Kingdom-United States (AUKUS) PNT demonstrations (delayed from FY25). - Leverage data received from analysis of critical component needs and initiate development of prioritized components to assist the development of quantum sensors. - Initiate multi-project wafer (MPW) service runs at AIM Photonics for novel quantum-specific component devices. - Initiate transition of low-noise NIR lasers from Quantum Transition Acceleration to address supply chain gaps faced during development of quantum sensing technology. - Conduct verification and validation of quantum sensing technology by government team led by military service department subject matter experts. - Complete Joint Concept Design Review for quantum-enabled PNT, introducing future acquisition strategies for possible programs of records.

Exhibit R-2, RDT&E Budget Item Justification: PB 2026 Office of the Secretary Of Defense		Date: June 2025
Appropriation/Budget Activity 0400: Research, Development, Test & Evaluation, Defense-Wide / BA 3: Advanced Technology Development (ATD)	R-1 Program Element (Number/Name) PE 0603342D8Z / Defense Innovation Unit (DIU)	
A. Mission Description and Budget Item Justification On April 4, 2023, the Secretary of Defense elevated DIU as a direct report, placing the Defense Innovation Unit (DIU) under the Secretary's authority, direction and control and provided guidance on DIU's reporting and management structure. This change significantly increased the scope and scale of DIU's responsibilities and authorities as reflected in the DIU 3.0 strategy. In the National Defense Authorization Act of Fiscal Year 2026, Congress elevated DIU as a Principal Staff Assistant (PSA) to the Secretary of Defense, codifying DIU as the DoD's innovation organization and advisor to the SECDEF and DEPSECDEF, and supports the Department's initiatives to build enduring advantages across the defense ecosystem - the Department of Defense, the defense industrial base, and the array of private sector enterprises and academia that create and sharpen the Joint Force's technological edge, with a focus on innovation and rapid adjustment to new strategic demands. The DIU mission is to strengthen U.S. national security by accelerating the adoption of commercial technology throughout the military and growing the national security innovation base. DIU partners with organizations across the DoD and the interagency to rapidly prototype, field, and scale commercially derived solutions to meet the most critical operational capability gaps identified by the Department with the focus, speed, and scale required to help deter major conflict and win if forced to fight. With offices in Silicon Valley, Boston, Austin, Chicago, and the Pentagon, DIU is able to attract the best and brightest talent and cutting-edge solutions. For the Department of Defense (DoD) to effectively implement the NDS and counter the pacing challenge of China while simultaneously addressing the other strategic threats facing the nation, it must leverage commercial technology with the focus, speed, and scale necessary to deter major conflict and win if forced to fight. The Secretary of Defense's decision to realign DIU as a direct report and empower it to provide leadership, namely through serving as the Advisor to the Secretary on commercial technology innovation and chairing the Deputy's Innovation Working Group is a reflection of this imperative. Spurred by trillions of dollars of private investment, innovation in many critical areas of technology central to military power is proceeding at a much faster rate in the private sector than in the traditional defense sector. Progress in 11 of the 14 critical technology areas identified by the Undersecretary of Defense for Research and Engineering (R&E) is primarily led by the commercial sector, with the most cutting-edge technology more likely to occur in its research and development pathways, tested and refined through its relentless market-driven requirements. DIU strengthens the Department's ability to rapidly prototype, acquire and field commercial technology at a pace that effectively deters our adversaries and helps ensure victory if we are forced to fight. Working across the country, and in collaboration with our allies and partners, DIU is developing new ways of doing business, growing our national security innovation base to include more "non-traditional" companies that had previously not collaborated with the military, working with traditional vendors in novel ways to increase efficiency and efficacy, and challenging innovators to share their knowledge and expertise in support of our nation's defense. Through a competitive prototype process, DIU identifies and provides access to technology companies and products on behalf of DoD partners. Additionally, DIU executes projects to leverage commercial sector technology analogous to military applications thereby increasing dual-use technology agility for the DoD. DIU funds facilitate the award of projects that can augment commercial technologies, existing government-owned capabilities, or concepts for defense application. DIU focuses on seven technology areas where commercial industry is the lead: • Artificial Intelligence (AI)/ Machine Learning (ML) – Applying AI/ML learning to accelerate critical decision making and operational impact.

• Congressional Adds		113.860	90.102			
• Congressional Directed Transfers		-	-			
• Reprogrammings		-	-			
• SBIR/STTR Transfer		-	-			
Change Summary Explanation						
- There is a programmatic increase of \$39.6 million is to increase efforts in facilitating additional follow-on prototype contract awards. The FY 2026 increase of \$515.000M over the previous budget reflects new program growth and additional baseline funding requirements. This increase is not attributed to congressional adds, reductions, or reprogramming actions and therefore is not entered under adjustment categories.

A. Mission Description and Budget Item Justification

DIU increases the Department's access to commercial technologies and talent, with the ultimate goal of fielding technology at a pace that effectively deters our adversaries and helps ensure victory if we are forced to fight. Consistent with the Administration's 2026 interim National Defense Strategy and the National Defense Science and Technology Strategy, this new era of competition requires technological superiority to ensure the United States' ability to project power, maintain international norms and rule of law, provide credible deterrence, and prevail in conflict.

FY 2025 to FY 2026 Increase/Decrease Statement: FY 2026 increase from RDT&E project code realignment. The programmatic increase provides project management support to the portfolio directorates as well as continued funding to execute projects in line with the expanded mission set outlined in DIU 3.0 Strategy.

A. Mission Description and Budget Item Justification

Problem: DoD is vulnerable to an adversarial battery supply chain, as China dominates the market for active electrode materials and most high-volume Li-ion cell manufacturing today.

Solution:

Leverage commercial energy storage technology to maximize DoD energy resilience.

Standardize battery form-factors with regard to use-case and platform performance reqs to lower qualification, procurement and sustainment costs.

Onshore and scale domestic/Allied battery cell production in the 10s-100s of MWh/yr, aligning baseline performance profiles of unmanned systems with commercial market

Partners: OASD (A&S) IBAS,DEVCOM GVSC,NAVSEA05 Battery Safety,DEVCON - GVSC, AVMC,NAWCAD,AFMC,OSC,DON-OE/OPNAV N94,PEO Ships,PMS 500

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Defense Advanced Battery Supply Chain	41.766	-	-
Description: DoD's low-demand signal and complex specifications for batteries make it difficult to engage with high-volume automotive battery suppliers. This typically results in the use of bespoke, inferior, and expensive batteries for military applications. The Defense Advanced Battery Supply Chain program currently encompasses both the Jumpstart for Advanced Battery Standardization (JABS) project and Family of Advanced Standard Battery (FAStBat) projects. The JABS project is advancing and assessing battery modules using novel commercial technology in various DoD platforms to achieve standardization of commercial EV batteries. This will allow for a more resilient supply as well as state-of-the-art battery systems for DoD platforms. The FAStBat project will prototype, test, and transition standardized battery families with completed Performance Specifications (MIL-PRFs) into their respective active Programs of Record. Both projects emphasize domestic onshoring while scaling battery production in the United States and reducing dependency on China and other foreign sources. These prototypes will assess and strengthen the manufacturing and supply chain resiliency of advanced batteries from domestic producers; accelerate efforts to partner with domestic battery producers targeting the commercial market for standardization and certification; align defense and Defense Industrial Base to commercial advanced battery development and production; address supply chain challenges for the use of commercial batteries. This funding supports the onshoring of domestic manufacturing, production, and standardization of advanced batteries at the raw material, battery cell, and module levels.

A. Mission Description and Budget Item Justification

Objective:
 TVH is a non-propulsive system that utilizes standard 6TE batteries to store 'excess' energy from the vehicle's diesel engine to power vital combat systems. It directly enables greater operational reach by extending the time and distance tactical vehicles can operate; saving lives and money by reducing fuel use (~40%) and reducing resupply convoys. In combat scenarios the Return On Investment is estimated to be less than 1 month.

Approach:
 FMTV (Family of Medium Tactical Vehicles) vehicle platform
 Developed by Shyft Group subsidiary Blue Arc EV, this kit uses an upgraded alternator to harvest energy from the rotating engine, to power native vehicle functions as usual, while also directing energy to 3x 6T li-ion batteries for use when the engine is off.
 LVSR (Logistics Vehicle System Replacement) vehicle platform
 Developed by Blackburn Energy, this kit adds a belt to the driveline to harvest the kinetic energy of the spinning shaft, thereby taking advantage of the efficiency gain behind the transmission. Energy is then directed towards up to 6x 6T li-ion batteries.

<u>B. Accomplishments/Planned Programs (\$ in Millions)</u>	FY 2024	FY 2025	FY 2026
<i>Title:</i> Tactical_Veh_Hybridization	8.708	-	-
<i>Description:</i> Liquid fuels create battlefield logistics challenges and do not inherently support future operational requirements. However, fully electric tactical vehicles present their own battlefield logistics challenges, making quick conversion to pure-electric impractical. Further hybridizing vehicles is a critical step in the transition to an all-electric tactical fleet. By integrating commercial technologies on hybrid power systems, battery integration, and auxiliary power units, the DoD can speed up transition to electric by years. This funding will expand on the Tactical Vehicle Hybridization project launched by DIU in FY 2022 on behalf of the Army and the Marines. This funding will enable the commercial vendors to expand capabilities to the powertrain, allowing full hybrid options and expand the capabilities to the remaining variants of Tactical Vehicles.

A. Mission Description and Budget Item Justification

Problem: Defense fuel / operational energy logistics are reliant on the global energy supply chain, which is easily disruptible. Current transport means are costly, inefficient, slow, and vulnerable to attack.

Solution: Obtain ASTM and TRIPOL certified synthetic diesel and jet fuels and mass produce them in both installation and mobile systems

Partners: AFRL & TCO , DOE, OECIF, US Army OCE (SMR Integration), USA Corps of Engineers, NORTHCOM / SOUTHCOM / CENTCOM / TRANSCOM, PEO CS&CSS, PEO SOFSA

B. Accomplishments/Planned Programs (\$ in Millions)	FY 2024	FY 2025	FY 2026
Title: Syn_Fuels_Contested_Env Description: The DoD lacks an ability to generate liquid fuel on-site. Defense fuel logistics are reliant on the global energy supply chain, which is easily disrupted. Current transport means are costly, inefficient, slow, and vulnerable to attack. Simultaneously, our fuel source is dependent on carbon-intense commercially procured fuel market. By creating a highly-agile, rapidly-deployable synthetic fuel production system (leave-behind or onboard) that could be dispersed throughout any area of responsibility (AOR) to produce just-in-time fuel at the edge, the DoD can mitigate the impact of fuel logistics disruption.	4.354	-	-

A. Mission Description and Budget Item Justification

DIU increases the Department's access to commercial technologies and talent, with the ultimate goal of fielding technology at a pace that effectively deters our adversaries and helps ensure victory if we are forced to fight. Consistent with the Administration's 2026 interim National Defense Strategy and the National Defense Science and Technology Strategy, this new era of competition requires technological superiority to ensure the United States' ability to project power, maintain international norms and rule of law, provide credible deterrence, and prevail in conflict.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Hydrogen at the Tactical Edge of Contested-Logistics (HyTEC)	4.354	-	-
Description: Fuel supply chains are vulnerable to disruption and an energy dense alternative fuel is necessary to sustain operational capabilities and improve energy resilience. The DoD anticipates operating in austere, remote locations where efficient storage and use of energy will play a vital role in military operations. The Joint Force requires the capability to preposition, create, and distribute Operational Energy to the last tactical mile above and beyond the current inventory of legacy energy delivery platforms. Additionally, DoD lacks a systems-integrated solution that can provide energy generation and storage untethered from the larger logistics supply chain. The HyTEC program represents a solution to those DoD problems. Hydrogen technologies are commercially available in every stage of the hydrogen supply chain at high TRL, which would allow for onsite fuel production thereby reducing the demand for complex fuel logistics supply chains, particularly in contested environments.

A. Mission Description and Budget Item Justification
 DIU increases the Department's access to commercial technologies and talent, with the ultimate goal of fielding technology at a pace that effectively deters our adversaries and helps ensure victory if we are forced to fight. Consistent with the Administration's 2026 interim National Defense Strategy and the National Defense Science and Technology Strategy, this new era of competition requires technological superiority to ensure the United States' ability to project power, maintain international norms and rule of law, provide credible deterrence, and prevail in conflict.

B. Accomplishments/Planned Programs (\$ in Millions)	FY 2024	FY 2025	FY 2026
Title: <i>Industrial_foreign_influence</i>	6.966	-	-
Description: DIU is the lead execution arm for this effort, which could lead to multiple transition partners across the inter-agency, the Services, Combatant Commands, OSD, and intelligence community. DIU plans to increase and renew licenses, logins, subscriptions for commercial intelligence platforms and tools via existing contracts.

A. Mission Description and Budget Item Justification

This program supports the Department's initiatives to Deter Strategic Attacks, Defend the Homeland, and Build a Resilient Joint Force and Defense Ecosystem.

In order to sustain technological superiority, the Department must take immediate advantage of the rapid evolution of emerging technologies that will be a source of battlefield advantage, when integrated with military systems and novel concepts of operation. This program focuses on rapidly moving these technologies to a Technology Readiness Level where they would then be ready to demonstrate in a prototyping or demonstration acceleration program to support warfighter needs. This funding is focused on supporting efforts within the Department's Critical Technology Areas that contribute to the broader joint mission needs.

Leveraging these technologies from both defense and commercial sources, to include non-traditional sources such as startup companies, has the potential to rapidly address warfighter problem sets in areas where commercial innovation outstrips government investment in the same technology areas.

A. Mission Description and Budget Item Justification
 The program focuses on research and development to determine the cause of anomalous health incidents (AHI) affecting government personnel at locations around the world and developing protective countermeasures to safeguard the force. The National Security Council led efforts include multi-Service/multi-Agency Laboratory collaboration to assess bioeffects and causes of AHI.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: AHI	44.190	58.729	-
Description: The National Security Council led multi-Service/multi-Agency Laboratory collaboration will conduct research and development to determine the cause of AHI, in-depth bioeffects, and countermeasures.			
FY 2025 Plans: Using equipment and instrumentation purchased and the research capabilities developed in FY 2024, perform novel research and evaluate the scientific and physics basis for certain hypotheses related to plausible mechanisms associated with the AHI phenomenon. Develop enhanced bioeffects testing and continue development and testing of countermeasures.			
FY 2025 to FY 2026 Increase/Decrease Statement: The decrease of \$58.729 million between FY 2025 and FY 2026 is due to realignment of programs and strategy focus.

A. Mission Description and Budget Item Justification

The Electromagnetic Operating Environment (EMOE) spans the terrestrial and space domains. It is the largest and most complex warfighting environment because it is universally pervasive, largely unseen, and can only be perceived through the use of advanced electronic technologies. Understanding and addressing warfighting challenges in the EMOE is essential to all military operations because it is through the use of Electromagnetic Spectrum (EMS) technologies that we perceive operational realities - the state and disposition of all military and nonmilitary forces and groups within operational environments - and coordinate all actions of our military forces. And it is through Electromagnetic Spectrum Operations (EMSO) that adversarial use of the EMOE can be impacted and potentially denied.

EMS-enabled cyber capabilities have linked the cyber and EMOE domains in such a way that the two domains often enable each other. Independently, and sometimes in concert with each other, they will be used to deliver or enable non-kinetic effects. It is important that the two domains be considered in terms of their many potential synergies and not in isolation of one another. Cyberspace and the EMOE can and will overlap in operationally significant ways.

Adversary radars are evolving from fixed analog systems to programmable digital variants with agile waveforms and unknown behaviors making preprogrammed electronic countermeasure less effective. Cognitive, adaptive, and passive technologies figure prominently. Foreign developments include new generations of challenging threats ranging from small, unmanned air systems and easily transportable Man-Portable Air Defense Systems (MANPADS) to dedicated anti-access area denial (A2/AD) military systems including integrated air defense systems and increasingly capable cruise and ballistic missiles that have incorporated the most advanced sensors, communication and electromagnetic warfare (EW) technologies. Non-kinetic exploits against the Command and Control (C2) networks in the cyber domain or at an EMS/cyber interface are also relevant.

The Joint Electromagnetic Advanced Technology (JEAT) Program was established to address these challenges through efforts designed to substantially accelerate the development and maturing of innovative technologies to (1) address new EW and EW/Cyber warfighting challenges and (2) provide new, leap ahead EMSO warfighting capabilities to ensure U.S. warfighters will always have decisive EW and EW/Cyber overmatch capabilities. The JEAT program focuses on emerging EW and EW/Cyber-related technologies that fall outside the Services' purviews, technologies that can be influenced with a joint (multi-Service) interest or technologies that are not being developed rapidly enough. JEAT investment influences all of these.

A. Mission Description and Budget Item Justification

Electronic Warfare (EW) Exploration and Innovation (E&I) research efforts focus on the Electromagnetic Spectrum Operations (EMSO) capabilities of electronic warfare (EW), sensing, communications; cyber capabilities, and the delivery platforms that are associated with them. The scope of the EW E&I research efforts is from a joint, multi-domain perspective over the broad range of potential non-kinetic effects. The non-kinetic effects can overlap into the Electro-Optical and Infrared (EO/IR) phenomenologies and potentially, integration with directed energy subsystems.

New EW-related and EW/Cyber-related technologies are identified relative to current and projected EMSO challenges informed by the most current threat intelligence and from a joint and multi-domain perspective. Service operational perspectives are obtained through participation or facilitation of joint Communities of Interest (COIs). Potential solutions and technological synergies are explored through interaction with the research and practitioner communities. Considerable efforts are expended to avoid the potential for redundant efforts.

The Joint Electronic Advanced Technology program element (JEAT) supports large-scale, operationally-relevant scenario driven multi-domain experimentation events focused on early development EMSO capabilities that are employed on small unmanned systems (UxS) across multiple operational domains. The events are structured for technology developers to experiment within an operationally relevant environment and includes wide participation by DoD operational and technical subject matter experts. Focus Areas include Distributed Electronic Attack, Deception, Digital Payload Delivery, Distributed Electronic Support and Electronic Protect with an emphasis on Swarming Algorithms, Artificial Intelligence, Machine Learning and Resilient Communications. These events started including AUKUS integration in FY-23. The purpose of the events is to observe and highlight the most current and promising capabilities available – or under development by- the commercial, academic, federal, and defense sectors of the U.S. and select international partners. The experiments provide the Defense Industrial Base (DIB), non-traditional and emerging Industry, Government and Academic based Labs opportunities to meet with Department of Defense (DoD) experts to refine their technologies on a test-fix-test basis. The experiments allow the system developers to prepare for technology transition. Typically, the Technology Readiness level (TRL) is advanced which improves commercial viability and the potential for transition. The experiment also offers a venue to demonstrate capabilities to potential transition partners.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: EW Enterprise Exploration and Innovation (EW E&I)	16.584	17.177	20.575
Description: EW E&I research efforts identify, explore and accelerate the maturation and demonstration of new EW- and EW/Cyber-related technologies. Current EW E&I initiatives research thrusts include Passive Sensor Detection and Defeat (PSDD),			

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2026 Office of the Secretary Of Defense		Date: June 2025	
Appropriation/Budget Activity 0400 / 3	R-1 Program Element (Number/Name) PE 0603618D8Z / <i>Joint Electronic Advanced Technology</i>	Project (Number/Name) 245 / <i>EW Enterprise Exploration and Innovation</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
Platform Self-Protection (PS-P), RF/Photonic applications, EW Technology Enablers (EW Tech), EW/Cyber Interface (EWCI) and EW Collaboration and Cognizance capabilities. Passive Sensor Detection and Defeat (PSDD): Modern integrated air defense systems (IADS) employ a variety of radar sensing technologies to detect, classify, track, target and engage adversary aircraft. Classic IADS radars are active and emit RF radiation and collect the component of their radiation that reflects off of their targets. Radar Warning Receivers (RWRs) can readily detect the radiation of active radars and pilots can take mitigating measures to avoid potential threats. Platform Self-Protection (PS-P): A wide variety of RF and Electrical Optical (EO) technologies are employed by modern militaries to detect, track, and engage attacking military systems. RF sensor systems including IADS radars, radars on ships, aircraft, ground, and naval vessels, and seekers on ballistic, cruise, air-to-air, surface-to-air missile are used to detect and provide targeting and engagement solutions to counter adversarial military systems. EO systems have been incorporated into missile seekers and are associated with high energy laser engagement systems for the same reasons. To ensure successful U.S. military actions, technologies that protect U.S. platforms and facilities against these new generations of more capable RF and EO detection/targeting/engagement sensors and seekers are essential. This thrust identifies, explores, and accelerates the maturation and demonstration of new non-kinetic approaches and technologies to counter adversarial advanced Radio Frequency (RF) and EO sensor and seeker threats. Electromagnetic Warfare Technology Enablers (EW Tech): Significant advances in materials, electronics (including photonics, plasmonics, spintronics, magnetronics, quantum technology, etc.) in the context of RF and communications sciences, optical and laser sciences, and information and computational sciences are enabling new generations of extremely powerful applications in a wide variety of fields. For example, artificial intelligence and machine learning (AI/ML) technologies have great relevance in EMSO. They can be used to enhance signal classification accuracy, determine optimal non-kinetic effects through adaptive waveform selection, enhance data fusion of very large datasets, control autonomous systems and make optimal use of dynamic spectrum access capabilities. In order to maintain capability and function of spectrum-dependent systems within the EMOE, U.S. Forces need to be able to rely on AI/ML or cognitive systems to respond as fast or faster than threat cognitive and adaptive systems can decide or maneuver spectrally within the EMOE. EW Cyber Interface (EWCI): The ability to impact system logic through utilizing EW and other RF systems provides powerful new options for EW application. EWCI research efforts identify, explore, and accelerate the maturation and demonstration of new EW/Cyber-related technologies. Significant advances in the application of digital EW have resulted in new generations of threat systems that are challenging the U.S.'s traditional dominance in these areas. As Internet of Things (IoT) technologies become more widely adopted, in particular, for networked sensing systems, the technology space shared by RF and cyber will gain importance. EW E&I efforts address emerging cyber-enabled threat systems and work towards developing new technologies

and approaches that will ensure that all relevant avenues of attack, sensing or protection are considered and potentially exploited on behalf U.S. warfighters.				
EW E&I efforts specifically focus on areas where Service investments are lagging to accelerate the development and transition of multi-Service multi-mission EW technologies. EW E&I thrusts include Passive Sensor Detection and Defeat, Platform Self-Protection, RF/Photonic applications, EW Technology Enablers, EW/Cyber Interface (EWCI), and EW Collaboration and Cognizance capabilities.				
FY 2025 Plans: Passive Sensor Detection and Defeat (PSDD):				
• SILENT SWARM 24 (SS-24): Complete assessment and reports for SS-24. • SILENT SWARM 25 (SS-25): Begin planning and development of the SS-25 field experimentation venue.				
Platform Self-Protection (PS-P):				
• Joint Aircraft Survivability-Electro-optical/Infrared (JAS-EO/IR) Study. Investigation into EO & IR countermeasures and protections.				
Electronic warfare Cyber Interface (EWCI):				
• Continue Electronic warfare & Cyber (EW&C) efforts to find synergistic relationships between cyber and Electronic warfare (EW), including EW-enabled cyber effects non-kinetic approaches. • EW Collaboration and Coordination (EW C&C): Continue OUSD(R&E) Electronic warfare & Cyber (EW&C) work to guide, shepherd and oversee all EW and EW/Cyber technology development across DOD.				
FY 2026 Plans:				
• Silent Chaos: Leverages lessons learned from Silent Swarm framework and transitions technologies for operational use. Increases participation within the Defense Industrial Base to 75 participants with more robust Electromagnetic Spectrum Operations (EMSO) contested environments. • Generative Artificial Intelligence (AI) for Non-Kinetic Operations (GAOPS) – Leverages significant DOD investment in Machine Learning techniques across multi-service and multi-disciplinary use cases.

A. Mission Description and Budget Item Justification

The Networked Communications Capability (NCC) plays a vital role in supporting the Department of Defense (DoD) and Defense Industrial Base (DIB) ecosystem. NCC focuses on maturing and demonstrating technologies that foster interoperable, resilient, and capable strategic and Joint Force communications capabilities. Given the critical reliance of DoD missions on command, control, and communications (C3) infrastructure, the NCC addresses challenges faced by the DoD's existing C3 infrastructure, including internal system-centric design approaches, as opposed to network- and data-centric ones, and external threats from aggressive adversary actions. The integration of both DoD and commercial embedded, virtualized, and cloud-hosted hybrid systems and networks underscores the increasing importance of the DoD's ability to rapidly reconfigure and reconstitute this infrastructure.

The NCC strategy employs secure and rapidly reconfigurable software-defined/hardware-supported solutions across the layers of the DoD communications stack (physical, network, information, and application layers). The technology integrates these layers to establish a highly agile, adaptable, and resilient C3 infrastructure. This approach ensures the DoD's ability to maintain critical communications in diverse mission domains such as terrestrial, maritime, air, space, and cyberspace. Additionally, it operates effectively in degraded, contested, or denied environments, supporting both tactical edge and strategic contexts. Building upon previous work with Software Defined Radios (SDRs), the NCC utilizes adaptive methods to dynamically analyze the operating environment. This includes considering parameter changes within individual waveforms and switching between high-data rate, low probability of detection techniques, and leveraging tunable waveforms for C3 across various scenarios. The integration of Software Defined Network (SDN) protocols facilitates routing the right information to the right users at the optimal speed and quality, aligning with the requirements of diverse warfighting missions. These advancements will leverage commercially available software and hardware where possible.

The NCC works in collaboration with the Joint Staff and Military Services in collaborative partnership to advocate for the proper testing, evaluation, verification and validation, and certification of all relevant solutions from DIB partners for the purpose of ensuring enduring interoperability / compatibility, resiliency, and capability advancement for the positive benefit of US DoD warfighters and as well those of Allied Nations.

A. Mission Description and Budget Item Justification

Threats to communication systems emanate from a variety of sources, encompassing electromagnetic, cyber, and kinetic elements, among others. The central objective of research and development in network communications is to guide the Services, partners, and industry towards the creation of fully networked and integrated capabilities that exhibit interoperability, resilience, and security. This involves the strategic identification and acceleration of critical technologies, leading to their transition to both strategic and tactical forces. The ultimate goal is to ensure that C3 systems are trusted, accessible, and reliable anywhere, anytime, and under any conditions for tactical to strategic missions, thereby enhancing the lethality of the warfighting force. In the face of peer aggressors armed with advanced kinetic and non-kinetic threats, the imperative for trusted and reliable C3 becomes even more pronounced. This capability is viewed not only as a critical deterrence measure but also as essential for providing a decisive and lethal response when required, spanning tactical to strategic missions.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: NCC	3.122	23.034	19.937
Description: Modern nuclear threats from nuclear peer adversaries drastically shorten the U.S. decision-making timeline required to counter these threats, and specifically, threats that hinder timely execution of Presidential nuclear command and control.			
The NC3 Tech Accelerator aims to achieve technological advantage against these modern threats to assure Presidential nuclear command and control.			
Provides technical leadership and oversight, establishes strategic priorities, and issues guidance relating to the supervision of all NC3 Tech Accelerator related programs and activities across DoD.			
FY 2024 Accomplishments: Integrated Broadcast System (IBS) Operating over MUOS ULX Demonstration \$0.000 million: Results of Deputy Secretary of Defense directed FY 2024 IBS Common Waveform demonstration and report to Cost Assessment and Program Evaluation (CAPE). Demonstration and Project completion in FY 2024.			
Accelerated Networked C3 Technologies Research and Development. \$3.319 million:

New Start (Y/N): No

FY24 program funding is transferred from the Creating Helpful Incentives to Produce Semiconductors (CHIPS) for America Defense Fund to the FY Research, Development, Test and Evaluation, Defense-Wide appropriation for proper execution. Funding from FY2023 through 2027 were appropriated by, and are transferred using special transfer authority provided by, section 102(b) of the CHIPS Act of 2022, division A of Public Law 117–167.

A. Mission Description and Budget Item Justification

This Program Element supports the Department's initiatives to Build Sustainable and Long-Term Advantage, Defend the Homeland, and Deter Aggression.

The Office of the Under Secretary of Defense for Research and Engineering (OUSD(R&E)) is executing the Microelectronics Commons (the Commons) activity pursuant to the Fiscal Year (FY) 2021 National Defense Authorization Act (NDAA) (Pub. L. 116-283), including the CHIPS for America Act, and funded through the CHIPS for America Defense Fund established by the CHIPS Act of 2022. The FY 2021 NDAA legislation significantly emphasizes solutions that promote the domestic on-shoring of capabilities to address economic and technology security concerns. Under FY 2021 NDAA Sec. 9903(b), the DOD is directed to establish a National Network for Microelectronics Research and Development (NNMRD) to enable the laboratory-to-fabrication transition of microelectronics innovations in the United States and to expand the global leadership in microelectronics of the United States. Specifically, the DOD is addressing a component of the NNMRD, the Commons, through a public-private partnership consisting of regional innovation hubs distributed across the U.S. to foster a pipeline of innovative ideas and talent residing in, for example, university labs and small business R&D teams.

Background

U.S. technological dominance in microelectronics materials, processes, devices, and architectural designs can only be sustained through the development of a robust domestic innovation ecosystem that fosters the rapid development and transition of novel concepts into commercially viable manufacturing processes. The U.S. innovation ecosystem has long been the driver of our nation's technology leadership throughout the world. U.S. R&D kick-started the enormous semiconductor industry and continues to lead the world in developing the next generation of disruptive technologies including new materials, devices, circuits, architectures, and design tools.

In recent years, the efficient domestic adoption of U.S. chip innovation has been threatened as emerging hardware technologies have become increasingly reliant on offshore sources for State of the Art (SOTA) manufacturing, prototyping, and investment. There are several significant hurdles that hardware startups face, including limited or expensive access to necessary facilities and design infrastructure, high costs of design intellectual property, limited expertise with hardware engineering, and

UNCLASSIFIED

high costs of prototyping. As a result, the number of U.S. hardware startups has dropped significantly and foreign investment in U.S.-based technology startups has enabled offshore fabrication and maturation of emerging technologies.						
To address these needs, OUSD(R&E) is standing up the Commons as a public private partnership, consisting of regional innovation hubs distributed across the U.S. to foster a pipeline of innovative ideas and talent residing in university labs and small business R&D teams. The partnership will provide resources for and access to specialized lab equipment, technical expertise, and connections to existing or upgraded prototyping facilities. Fabrication facilities (fabs) will help mature promising technologies and demonstrate the manufacturing and economic benefits of these innovations for dual-use application for defense and commercial sectors.						
The Commons will focus on critical, on-shore prototyping to transition innovation from universities, start-ups, and small companies to fabrication facilities (lab-to-fab transition). Key features are:						
• Creates and connects “Lab-to-Fab” testing/prototyping hubs to form a network focused on maturing emerging microelectronics technologies • Provides broad access to these prototyping hubs, potentially by augmenting facilities and enabling access to facilities within local semiconductor companies or FFRDCs. • Facilitates microelectronics education and training of students at local colleges and universities and grows a talent pipeline to bolster local semiconductor economies and contribute more broadly to the growth of a domestic semiconductor workforce.						
This program element focuses on the technology development activities of the Commons, including staffing at Commons hub facilities, advanced technology development, and significant prototyping activity. In addition, it provides for the establishment, staffing, and operation of the Microelectronics Commons Consortium Manager (CM), the overall management of the Commons, and will support the required physical, digital, and human infrastructure of the hubs.

New Start (Y/N): No

FY24 program funding is transferred from the Creating Helpful Incentives to Produce Semiconductors (CHIPS) for America Defense Fund to the FY Research, Development, Test and Evaluation, Defense-Wide appropriation for proper execution. The funds were appropriated by, and are transferred using special transfer authority provided by, section 102(b) of the CHIPS Act of 2022, division A of Public Law 117–167.

A. Mission Description and Budget Item Justification

This project focuses on the advanced technology development activities of the Commons including prototyping of devices or components using new microelectronics materials, processes, device designs, and architectural designs. It will also enable the establishment and operation of a Commons Consortium Manager (CM), which will provide efficient coordination and administration of regional innovation hubs. The CM is tasked with operating the Commons network, in alignment with the OUSD(R&E) Commons vision to ensure DoD access to and benefit from resulting technologies. The project also supports the establishment of the Commons Hubs, which will be networks of regional capabilities organized in collaboration with the CM to address DoD and commercial needs and requirements. The Hubs may include existing facilities augmented to enhance intrinsic specializations in emerging areas of microelectronics. Each Hub will concentrate on one of six technical areas including: Secure Edge Computing, 5G/6G Technology, Artificial Intelligence Hardware, Quantum Technology, Electromagnetic Warfare, and Commercial Leap Ahead Technologies. Core Facilities (i.e., fabs) are integral parts of the Hubs network that will provide key fabrication capabilities that are required to demonstrate prototypes with the volume and characteristics required to ensure reduced risk for full manufacturing production. Additionally, the project will directly support early workforce development activities through the Commons network. Activities may span K-12, undergraduate, graduate and continuing education and may include, for example, establishment of PhD internships and post-doc training at Hub facilities and internships with Hub members.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Microelectronics Research Maturation – Prototyping	269.504	-	-
Description: This effort focuses on the development and prototyping of promising new microelectronics materials, processes, devices, and architectural designs with potential DoD applications, development of these technologies, and operation of the CM. It will also support operation of regional Commons Hubs and initial selection and execution of Commons Projects in conjunction with activities funded by PEs 0602669D8Z and 0604669D8Z.

A. Mission Description and Budget Item Justification

This program supports the Department's initiatives to Build Sustainable and Long-Term Advantage and Build a Resilient Joint Force Defense Ecosystem.

The Defense-wide Manufacturing Science and Technology (DMS&T) program is the joint, defense-wide component of the Department of Defense (DoD) Manufacturing Technology (ManTech) Program directed in Title 10 U.S.C. Section 2521. DMS&T addresses joint, cross-cutting, and high-risk/high payoff technologies; manufacturing challenges within the DoD critical technology areas; and many of the recommendations in the Executive Order Report "Assessing and Strengthening the Manufacturing and Defense Industrial Base and Supply Chain Resiliency of the United States" September 2018.

The DMS&T program objective is to increase the speed at which innovation, inventions, and scientific discoveries are turned into equipment and capabilities through advances in manufacturing technologies and processes.

A. Mission Description and Budget Item Justification

This project supports nine Department of Defense (DoD) led Manufacturing Innovation Institutes (MIIs) within the national Manufacturing USA network. The MIIs are an essential component of the DoD ManTech mission and unique resource to address DoD challenges through public/private partnerships with members from industry, academia, and federal and state governments - including small and medium as well as large manufacturers - that address both commercial and defense manufacturing needs within specific, defense-relevant technology areas to mature manufacturing processes, build out a supporting ecosystem, and provide for manufacturing education and workforce development. The MIIs' flexible business models and strong focus on enabling highly collaborative research and development (R&D) are catalyzing important new organizational relationships across government, industry, and academia. MIIs bring together both traditional defense and non-traditional sectors to accelerate key innovation cycles, expand U.S. industrial capability, and assist in creating resilient supply chains that will support innovative defense products. Each MII consortium attracts partner funding to match DoD investments at a one-to-one ratio (or greater) and some offer state-of-the-art pilot facilities. MIIs receive active participation and support from the military departments and defense agencies and their members. The nine MII technology domain focus areas are: (1) Additive Manufacturing Innovation; (2) Manufacturing Digital Innovation; (3) Materials Innovation; (4) Photonic Foundry and Packaging Innovation (6) Revolutionary Fabric and Textiles Innovation); (7) Medical Cell, Tissue, and Organ Manufacturing Innovation; (8) Robotic Automation Innovation; and (9) Bioindustrial Manufacturing Innovation. MII funding is focused on:

- Developing and implementing education, training, and workforce recruitment courses, materials, and programs.
- Developing innovative methodologies and practices for supply chain integration and introduction of new technologies into supply chains.
- Engaging with small and mid-sized manufacturers, including women and minority-owned manufacturing enterprises, and larger-sized manufacturing firms.
- Providing DoD programs of records with access to advanced manufacturing technologies for demonstration, prototyping, and transition to production through MII ecosystems. Each MII has a different model, with the following core tenets:
 - Each MII is a public/private partnership with representatives from industry, academia, state and local governments, and the DoD that co-invest in world-leading technologies and capabilities.
 - Each MII provides facilities to allow collaborative, precompetitive development of promising technologies and to promote the creation of stable and sustainable innovation ecosystems for advanced manufacturing.
 - The partnership forming the MII must commit non-federal resources that equal or exceed the federal commitment.
 - Each institute participates in the national Manufacturing USA network.

Appropriation/Budget Activity 0400 / 3	R-1 Program Element (Number/Name) PE 0603680D8Z / Defense Wide Manufacturing Science and Technology Program	Project (Number/Name) 350 / Manufacturing Innovation Institutes		
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025	FY 2026
Description: To improve quality and point-of-need availability of additive manufactured and adaptive manufactured parts for defense applications, the DoD has partnered with the America Makes Manufacturing Innovation Institute. Additive manufacturing (AM) (i.e., 3D printing) is a process of joining materials to make objects from 3D model data, usually layer upon layer, as opposed to subtractive manufacturing methodologies such as traditional machining. AM benefits the DoD by enabling lifecycle cost savings and enhanced capabilities including: distributing supply chains to enable the right part in the right place at the right time; improving mission readiness by producing work aids for DoD depots; replacing long-lead time and out of production spares and enhancing lethality through production of lighter weight and higher performing parts than could otherwise be achieved with traditional manufacturing. FY 2025 Plans: Expand application of additive manufacturing methods and standards to address critical defense advanced manufacturing requirements and expand the additive manufacturing workforce. Fill previously identified technology gaps to continue to support the castings and forgings industrial supply base. FY 2026 Plans: Continue application of AM methods and standards for critical defense advanced manufacturing requirements and expand the AM workforce. Execute projects to fill previously identified technology gaps in the castings and forgings industrial supply base. Facilitate AM integration across DoD to improve force readiness, posture, and logistics capabilities. Fund an online learning portal as a foundational enabler. To expand qualification, certification and production options, the program will increase the workbench of materials allowable (including polymers), conduct quality control monitoring research, and support the Joint Additive Qualification for Sustainment (JAQS) project FY 2025 to FY 2026 Increase/Decrease Statement: A decrease of \$1.669 million reduces contracts for Advisory and Assistance Services to promote efficiencies and advance the policies of the Administration in alignment with Executive Order 14222, “Implementing the President’s Department of Government Efficiency Cost Efficiency Initiative.”				
Title: Manufacturing Digital Innovation Description: To improve the quality and quantity of suppliers within the DoD supply chain, a digital interface must exist between the DoD and its vendors. The DoD has partnered with the Manufacturing times Digital, Design and Cybersecurity (MxD) Manufacturing Innovation Institute to make available a defense. Digital Thread -- the unencumbered flow of data across the lifecycle of a manufactured product encompassing data from design, production, supply, sourcing, inventory, assembly, quality, maintenance, and sustainment. It includes analysis of data to reduce the time and cost of bringing new products to market. MxD		8.352	10.125	12.563

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025	FY 2026
eliminates barriers between design, manufacturing, and sustainment by using both product data and process data in a way that is seamless and transparent. FY 2025 Plans: Continue R&D projects to support the adoption and application of advanced digital and cybersecurity manufacturing solutions across the defense industrial base and grow the digital manufacturing workforce. MxD will translate FY25 planning efforts into specific projects for digital and cybersecurity solutions for the castings and forging supply chain. FY 2026 Plans: Continue R&D projects to support the adoption and application of advanced digital and cybersecurity manufacturing solutions across the defense industrial base and grow the digital manufacturing workforce. MxD will translate FY25 planning efforts into specific projects for digital and cybersecurity solutions for the castings and forging supply chain. FY 2025 to FY 2026 Increase/Decrease Statement: The increase of \$2.438 million between FY 2025 and FY 2026 reflects a new Cyber Infrastructure project to address casting and forgings (C&F) supply.				
Title: Materials Innovation Description: To improve supply chain and hasten the adoption of emerging materials, the DoD has partnered with LIFT – the Advanced Materials Manufacturing Innovation Institute (for advanced materials development, processing, integration, and talent development). LIFT advances American materials manufacturing technology at the intersection of materials research, manufacturing processes, systems engineering, and talent development. LIFT’s technology pillars include Integrated Computational Materials Engineering (ICME) and Computational Engineering, Agile and Smarter Manufacturing, Advanced alloy and Process Development, and Multi-materials Joining. In addition, LIFT is filling the advanced manufacturing workforce pipeline with capable talent ready and willing to work in today’s in-demand jobs. LIFT is working across the education continuum to create robust pathways for the future materials workforce with the knowledge, skills, and abilities necessary to use the advanced technologies emerging from the LIFT institute. FY 2025 Plans: Continue advanced materials and materials manufacturing R&D and workforce development efforts. Support defense, commercial, and dual-use technology development through strategic and technology roadmaps for the Integrated Computational Materials Engineering (ICME) and Computational Engineering, Advanced Materials and Process Development, Agile and Smarter Manufacturing, and Multi-material Joining technology pillars. Conduct member and institute led technology projects and maintain a collaborative ecosystem. Examples of specific activities include hypersonic materials, powder alloy, and cold spray development. Sustain LIFT’s Learning/Talent development Lab, and continue workforce development efforts targeting K-12, university and		8.643	9.064	10.512

community college students, current workforce, and separating military personnel. LIFT will apply materials development and processing expertise through Integrated Computational Materials Engineering and materials development to improve the casting and forging supply chain.			
FY 2026 Plans: Continue advanced materials and materials manufacturing R&D and workforce development efforts. Support Defense, commercial and dual-use technology development through strategic and technology roadmaps for the ICME and Computational Engineering, Advanced Materials and Process Development, Agile and Smarter Manufacturing, and Multi-material Joining technology pillars, member and institute led technology projects, and maintaining and convening a collaborative ecosystem. Examples of specific activities include engaging their ICME expertise for hypersonic materials development and testing, domestic titanium source research and development, bespoke metal powder and wire alloy development for cold spray and additive manufacturing applications, and roadmap-driven projects to support the evolution of casting and forging materials, drop-in replacements, and integration of new material advancements. Sustain LIFT's Learning/Talent Development Lab, and continuing workforce development efforts targeting K-12, university and community college students, current workforce, and separating military personnel with targeted applications for the DoD's organic industrial base, primes, and small/medium manufacturers.			
FY 2025 to FY 2026 Increase/Decrease Statement: The increase of \$1.448 million between FY 2025 and FY 2026 supports the expansion of strategic and technology roadmap development and implementation efforts that will support key technologies enabled through ICME and advanced materials development.			
Title: Photonic Foundry and Packaging Innovation Description: To hasten the availability of integrated photonic circuits – chips that move information faster and more efficiently than traditional electronic circuits while using less power – the DoD has partnered with the American Institute for Manufacturing Integrated Photonics (AIM) Manufacturing Innovation Institute and the electronic photonic design automation (EPDA) industry. Integrated photonic circuit manufacturing advances the promise of unprecedented interconnection between electronics and photonics that will deliver world-class performance in speed, density, and power consumption. Photonics provides differentiating benefits for defense applications such as high-speed signal processing; electronic warfare; position, navigation, and timing; information transport and computation; sensing; imaging; and targeting. AIM Photonics has established an end-to-end U.S. 'ecosystem' for advancing domestic integrated photonics manufacturing, including access to a responsive integrated photonic circuit fabrication foundry. AIM Photonics provides the world's most accessible 300 mm silicon photonics multi-project wafer service, state-of-the-art process design, and a highly advanced test, assembly, and packaging (TAP), facility.		16.818	15.542
FY 2025 Plans:

Exhibit R-2A, RDT&E Project Justification: PB 2026 Office of the Secretary Of Defense			Date: June 2025		
Appropriation/Budget Activity 0400 / 3		R-1 Program Element (Number/Name) PE 0603680D8Z / <i>Defense Wide Manufacturing Science and Technology Program</i>		Project (Number/Name) 350 / <i>Manufacturing Innovation Institutes</i>	
B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026
Continue to develop and offer next generation integrated photonic circuit fabrication and test, assembly, and packaging (TAP) capabilities to the U.S. ecosystem. Extend design and training opportunities to continue to grow the overall integrated photonic circuit ecosystem. Perform targeted work to improve the variety and performance of laser solutions and expand accessibility to low-loss platforms for sensing and quantum applications.					
FY 2026 Plans: Continue to develop and offer next generation integrated photonic circuit fabrication and test, assembly, and packaging (TAP) capabilities to the U.S. ecosystem. Extend design and training opportunities to continue to grow the overall integrated photonic circuit ecosystem. Perform targeted work to explore solutions for long-haul and short-haul photonic data networks with reduced power consumption, improve the variety and performance of laser solutions, target heterogeneous integration opportunities, and expand accessibility to low-loss platforms for sensing and quantum applications.					
Title: Hybrid Electronics Innovation			9.301	9.416	9.416
Description: To increase electronic packing density and meet the demands of hazardous environments, the DoD has partnered with the NextFlex Manufacturing Innovation Institute (for flexible hybrid electronics (FHE) circuitry innovation. FHE manufacturing involves highly tailorable devices on non-traditional, compliant substrates that combine thinned components manufactured from traditional processes with components added via “printing” processes. NextFlex invests in prototyping and scale-up of manufacturing processes for high-speed pick-and-place, printed circuits, and hybrid fabrication to enable defense and commercial applications in wearable electronics, unattended sensors, integrated array antennas, medical devices, and soft robotics devices. NextFlex is also committed to continuous improvement in SWAPC (Size, Weight and Power plus Cost) for electronic systems.					
FY 2025 Plans: Expand advanced manufacturing for flexible hybrid electronics to align yield and reliability with standards and to meet critical technology areas and grow semiconductor workforce. NextFlex will address next roadmap gaps to deliver prototypes for DoD applications, improve flexible hybrid electronics manufacturing to refine standards, and expand workforce programs supporting military industries.					
FY 2026 Plans: Support the development FHE capabilities including higher complexity and density circuits, qualifications of new materials and processes through manufacturing demonstrations of advanced components and prototypes. Facilitate the transition of mature capabilities, programs and prototypes into DoD applications to support improved SWAP-C performance and/or provide unique electronics capabilities and formfactors. Encourage the development of an FHE and broader electronics manufacturing talent pool through continued expansion of the EWD student programs while also developing new programs to support the development of FHE manufacturing skills through both upskilling workers and training of post-secondary students.					
Title: Advanced Fiber and Fabric			6.932	6.288	6.288

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026
Description: To modernize and increase innovation in the U.S. domestic fiber and textile industry, the DoD is partnering with industry to advance the state of the art for manufacturing of traditional fibers, yarns, and woven textiles. It is working to connect the domestic textile industry to emerging fiber and weaving technologies and improve producibility through automation and digital connection. FY 2025 Plans: Continue to improve manufacturing methods for highly functional fabrics that benefit the warfighter and expand training opportunities for an advanced fiber and textile manufacturing workforce. Continue to enable DoD and DIB partners' increased access to AFFOA's organic prototyping and advanced textile FY 2025 Plans: Continue to improve manufacturing methods for highly functional fabrics that benefit the warfighter and expand training opportunities for an advanced fiber and textile manufacturing workforce. Continue to enable DoD and DIB partners' increased access to AFFOA's organic prototyping and advanced textile system integration capabilities to de-risk technologies and increase manufacturing readiness. Technology projects and ecosystem development will focus on manufacturing modernization through digital engineering, prototype manufacturing of Warfighter enhancement and protective systems, and developing and scaling of sustainable materials and processes. Maintain and grow the ecosystem and advanced fibers and fabric (AFF) supply chain to support DoD capability needs. Expand EWD programs through development of AFF manufacturing curriculum across the educational continuum, including workforce training. FY 2026 Plans: Increase the value proposition to the Service acquisition offices and R&D centers through the targeting of OSD strategic investment funds towards technology transition and manufacturing scaling activities. These efforts will focus on projects that directly contribute to Programs of Record and/or DOD modernization efforts that align with the competencies of AFFOA and their members. Preserve and expand DoD access to ecosystem capabilities and technologies as a continuing priority. Technology projects and ecosystem development will focus on manufacturing modernization through digital engineering, prototype manufacturing of Warfighter enhancement and protective systems, and developing and scaling sustainable materials and processes. Develop, align, and certify EWD programs according to national education standards, and increase the AFFOA EWD national footprint.					
Title: Medical Cell, Tissue, and Organ Manufacturing Innovation Description: To make practical the scalable, consistent, and cost-effective manufacturing of cells, tissues, and organs and develop the trained and ready workforce necessary for regenerative tissue manufacturing, the DoD has partnered with the BioFabUSA Manufacturing Innovation Institute. BioFabUSA advances human tissue manufacturing innovations in cell and biomaterial processing, bioprinting, automation, and non-destructive testing technologies. BioFabUSA is establishing a collaboration to mature tissue-related technology across manufacturing readiness levels (MRL) 4-7, enabling post-delivery			9.685	11.723	10.775

assurance of tissue identity, viability, function, and efficacy. This MII is assembling a diverse and currently fragmented collection of industry practices and institutional knowledge across many disciplines (e.g., cell biology, bioengineering, materials science, analytical chemistry, robotics, and quality assurance).				
FY 2025 Plans: Continue to enhance manufacturing methods and capabilities for tissue engineered medical products and expand certification and credentialing programs for the biomedical manufacturing workforce. BioFabUSA will increase automation and data collection of manufacturing processes, allowing enhanced abilities to evaluate the safety and efficacy of tissue engineered medical products. BioFabUSA will increase engagements with the Food & Drug Administration (FDA) to speed the transition of critical medical technologies to the clinic and commercial marketplace.				
FY 2026 Plans: Continue to improve manufacturing methods and capabilities for tissue engineered medical products and expand certification and credentialing programs for the biomedical manufacturing workforce. Build on successful automation and data collection efforts to improve advanced manufacturing processes and enhance process engineering abilities to evaluate the safety and efficacy of tissue engineered medical products. Expand and leverage BioFabUSA ecosystem engagement with the FDA to accelerate transition of critical medical technologies to the marketplace.				
FY 2025 to FY 2026 Increase/Decrease Statement: A decrease of \$0.948 million reduces contracts for Advisory and Assistance Services to promote efficiencies and advance the policies of the Administration in alignment with Executive Order 14222, “Implementing the President’s Department of Government Efficiency Cost Efficiency Initiative.”				
Title: Robotic Automation Innovation		8.688	8.804	10.820
Description: To improve the capabilities and producibility of smart, collaborative robotics for defense manufacturing requirements within a more competitive U.S. manufacturing base, enable artificial intelligence utilization, and increase robotics autonomy, the DoD has partnered with the Advanced Robotics for Manufacturing (ARM) Manufacturing Innovation Institute. ARM is focusing on technologies enabling human robot interaction, and perfecting robotic adaption, learning, manipulation, autonomy, mobility, and perception.				
FY 2025 Plans: Continue R&D investments in advanced robotics and associated artificial intelligence (AI) technologies for manufacturing that support defense critical technology areas and develop/sustain a competent robotics workforce. Technology projects and ecosystem development will focus in the DoD modernization areas of AI, Autonomy, Hypersonics, and Space. Additional planned technology projects target implementation of advanced robotics for casting and forging, and energetics manufacturing for both the

Defense Industrial Base (DIB) and the Organic Industrial Base (OIB). Education and workforce development projects will further enhance the roboticscareer.org virtual toolset and conduct analytical studies to address the needs of the DIB and the OIB. FY 2026 Plans: Continue R&D investments in advanced robotics and associated artificial intelligence (AI) technologies for manufacturing that support defense critical technology areas and develop/sustain a competent robotics and AI workforce. Planned technology projects to enhance casting and forging with combined AI and robotics technologies, and modernization (prototyping and integration) of energetics/munitions manufacturing. Additional planned technology projects in automation of manufacturing processes for Space systems/sub-systems, automotive and aerospace sustainment projects supporting the OIB. Enhance education and workforce development offerings via the roboticscareer.org virtual toolset with associated AI competencies, and the advance analytical studies to address the needs of the DIB and OIB. FY 2025 to FY 2026 Increase/Decrease Statement: The increase of \$2.016 million supports investments in advanced robotics and associated artificial intelligence (AI) technologies for manufacturing that support defense critical technology areas and develop/sustain a competent robotics and AI workforce.			
Title: Bioindustrial Manufacturing Innovation Description: To develop bioindustrial manufacturing technologies that harness the power of biology to help create and domestically source manufactured goods for warfighter requirements, the DoD has partnered with the BioMADE Manufacturing Innovation Institute. BioMADE is hastening the adoption of bio-manufactured goods within the U.S. supply chain, bridging the gap between lab-scale research and at-scale manufacturing of biotechnology products, and will deliver a new class of manufacturing using domestic resources and capabilities to bio-manufacture critical products at scale with increased supply chain security. Bioindustrial manufacturing also has the potential to create entirely new classes of products with primary defense applications, such as chemicals and materials with advanced properties for use in austere environments. Bioindustrial manufacturing addresses defense priorities and offers commercial potential for innovations in fuels, industrial chemicals, fibers, and other chemical components of commercial and defense supply chains that will create new opportunities for U.S. manufacturers and reshore domestic production of critical materials. FY 2025 Plans: Continue progress on infrastructure investments for bioindustrial manufacturing, conduct project calls to address bioindustrial technical challenges as well as workforce development and biosafety, biosecurity, sustainability, and social responsibility. Execute Bioindustrial Innovations to Secure Critical Supply Chains and conduct Distributed Manufacturing. Enabled by Modular Bioindustrial & Reusable (MEMBR) Assets - Piloting, Analysis, and Challenge projects. FY 2026 Plans:		20.157	22.816

		FY 2024	FY 2025
• BioFabUSA digitized its manufacturing operations, enabling efficient, effective delivery of technical capabilities for Members. Next Steps: • Implement in-line sensor technologies and test AI-driven actuation (enabling predictive, adaptive, distributed manufacturing closer to the Warfighter). • Scale production and advance automated manufacturing platforms that will enable AI-driven, high-quality, consistent, cost-effective production closer to the Warfighter. • Cross-Institute collaboration (with MxD) to implement a data framework that fuels development, scaled production, and distribution of products to meet defense and national security needs.			
Congressional Add: Biotechnology Manufacturing Institutes FY 2024 Accomplishments: Overall strategic vision for the pilot plant network has been developed and implementation has begun.		96.570	-
Congressional Add: Data Analytics and Visualization FY 2024 Accomplishments: Funding was provided to the Mississippi State University to continue development of a 3D High Performance Computing (HPC)-enabled multi-physics simulation software framework supporting Advanced and Additive Manufacturing (AAM) and Advanced Maintenance Technologies (AMT). Final deliverables/reports will be provided SEP 2025 (no cost time extension)		5.794	-
Congressional Add: Digital Manufacturing Accelerator FY 2024 Accomplishments: MxD was awarded a \$5.3M CII titled Organic Industrial Base (OIB) Digital Modernization Accelerator Program (OMAP). OMAP was the first Government Directed Project (GDP) submitted through MxD's new core contract, through ACC-RTP, on the Other Transaction – Research (OT-R). The OMAP program consists of multiple digital modernization projects including digital twins of select processes at Picatinny Arsenal, an intrinsically safe sensor kit to provide real-time monitoring of equipment in energetic environments, support for Rock Island Arsenal castings and forgings work, and three OIB site modernization evaluations including recommendations for increased efficiency and capacity. Nearly all projects are in execution with the exception of the modernization evaluations at three OIB sites, which will launch next month.		5.794	-

		FY 2024	FY 2025
We are in the process of installing sensors at Picatinny for the melt pour process to gather critical data. The sensors selected were a result of an MxD led workshop between academia, industry, and DoD. Also, at Picatinny, we have downselected the team for the digital twin implementation at the melt pour process using the sensor data from the first project. This will eliminate human error and result in more consistent quality of this critical process. At Rock Island, a preliminary assessment has been completed, and the process mapping of the foundry and casting area is currently in progress. RFQs for data acquisition of the casting process will be released next month. Regulatory and system requirements are being gathered with DoD for intrinsically safe Sensor Kit design. System architecture will be done at the end of July with prototypes in September. This will allow the OIB to gather critical process data in energetic environments. The next step, in coordination with Army Materiel Command, is to begin work with select sites to understand unique capabilities and production capacity, and the opportunities to modernize those capabilities.			
Congressional Add: Domestic Flexible Factory for Footwear Manufacturing FY 2024 Accomplishments: The investments in a Future Flexible Footwear Factory made through the Revolutionary Fibers and Textiles Institute will lead to both technology innovation in the footwear manufacturing space, and also validation of the technology within a large-scale production line. Technology developments are focused on robotic technologies for materials handling that could be broadly applied within the textiles manufacturing sector. Initial validation will occur on production lines manufacturing commercial footwear in the development of a fully Berry compliant manufacturing facility able to meet DOD and commercial customers.		9.657	-
Congressional Add: Flexible Hybrid Electronics FY 2024 Accomplishments: NextFlex will execute additional projects to significantly advanced domestic advanced packaging capabilities in Hybrid Electronics – including flexible power solutions, enhanced dielectrics, dense sensing (including actuation for haptic feedback and wearable sensors – while simultaneously strengthening the national manufacturing base through expanded regional node support (in New York, Massachusetts, and Missouri), technology transfer to the Defense Industrial Base (to include multi-layer		9.657	-

device and interconnect fabrication, and accelerated workforce development via collaboration efforts with new university-backed curriculum and workshops.			
Congressional Add: Integrated Silicon Based Lasers FY 2024 Accomplishments: Under this effort AIM Photonics has continued to develop technologies to provide the U.S.-based photonic integrated circuit (PIC) community with access to on-chip lasers for silicon PICs. Work on heteroepitaxially grown lasers has started to focus on a U.S.-only fabrication flow while also seeking to resolve thermal issues and provide access to these lasers via an internal multi-project wafer run. Work on the 2.5D integration of lasers has also resulted in the creation of functional test coupons demonstrating the utility of the laser bonding approach. Based on the work performed to date as a result of this effort, it is anticipated that AIM Photonics will be in the position to begin offering access to these laser solutions to the U.S.-based PIC community in late CY25.		3.863	-
Congressional Add: Operational Technology (OT) & Internet of Things (IoT) Asset Identification & Management FY 2024 Accomplishments: Funding was provided to the University of Tulsa to conduct R&D that develops tools and techniques that enable asset owners to identify operational technology and (OT) and Industrial Internet of Things (IIoT) assets that are connected to their networks thus providing “ground truth” of the network and allowing cyber threat mitigation strategies to be implemented, and to develop self-generating digital twins to overcome shortcomings manifested as loss of fidelity in mimicking real OT environments as they continue to change over time. The Smart Environment Instrumentation expansion and initial IT Asset Classification efforts were completed. FY 2025 Plans: Funding will be provided to the University of Tulsa to complete a prototype fingerprint and identification tool (FITT) that works with a smart environment monitored by an autonomous system. The tool will inventory assets connected to the system; classify assets based on their observed signatures; and incorporate attack graph construction and risk-based decision making into the identification and critical/not-critical estimates of security vulnerabilities.		4.828	3.500
Congressional Add: Rapid Additive Manufacturing FY 2024 Accomplishments: One of the main challenges hindering the adoption of additive manufacturing (AM) in the traditional castings and forgings (C&F) supply chain is a misalignment between the Government's identification of specific problem components and the industrial base's AM capabilities. This effort, executed through the America Makes Manufacturing Innovation Institute (MII), aims to address this issue by examining the additive manufacturability of critical C&F components across a major USAF platform, the F-16 Falcon. The study's analytical tools will be applicable to other critical USAF and DoD programs in future phases, with the goal		3.380	-

C. Other Program Funding Summary (\$ in Millions) N/A Remarks								
D. Acquisition Strategy Each Manufacturing USA institute is established through a competitive selection process. The executing military department or agency, in close and continuous coordination with Office of the Under Secretary of Defense for Research and Engineering Manufacturing Technology Office (ManTech), publishes a formal solicitation (funding opportunity announcement) for proposals describing the scope of required activities and extensive proposal evaluation criteria. Non-Profit Organizations (including universities) are eligible to bid, and each bidder forms a broad consortium of industry and academic partners. The executing military department or agency, in close coordination with the Office of the Secretary of Defense (OSD), uses a team of government experts to evaluate each proposal against the evaluation criteria and selects a winning consortium. The final terms of the cooperative agreement/technology investment agreement between the selectee and the federal government are then negotiated and the Cooperative Agreement (CA) or Technology Investment Agreement (TIA) is signed. Throughout and after completion of this process, the federal government makes clear that members of non-selected teams are encouraged to join the selected consortium as conditions permit.

A. Mission Description and Budget Item Justification												
Manufacturing Education and Workforce Development (M-EWD) provides strategic leadership of advanced manufacturing talent development within the Defense Industrial Base (DIB) with three mission objectives: (1) invest in strategic education and workforce development capabilities, (2) expand the talent acquisition pool, (3) modernize manufacturing EWD by driving action within DIB-critical regional economies with a focus on Career & Technical Education (CTE). The M-EWD project drives regional action to modernize manufacturing CTE for the U.S. and organic DIB, invests in strategic education and workforce development capabilities, and expands strategic leadership of advanced manufacturing human capital development.												
B. Accomplishments/Planned Programs (\$ in Millions)									FY 2024	FY 2025	FY 2026	
Title: Manufacturing Education and Workforce Development									4.830	5.739	4.911	
Description: The Manufacturing Education and Workforce Development (M-EWD) project provides a strategic framework for DoD leadership of advanced manufacturing talent development and includes MII-led regional initiatives informed by labor market data profiles of regional economies, a pilot effort to develop an automated real-time labor market data portal, and launch of ManufacturingWorkforce.org, a dual-use digital learning platform with advanced manufacturing course offerings.												
FY 2025 Plans: Continue whole-of-government solutions in partnership with Interagency partners to tailor curricula for defense manufacturing, identify project successes within the Manufacturing Innovation Institutes (MII) ecosystems for replication and scale across the Manufacturing USA network, and establish ecosystem structures to meet defense manufacturing Career Technical Education (CTE) needs and scale to adjacent sectors.												
FY 2026 Plans: Design and implement structured workflow processes to streamline identification, integration, replication, and scaling of M-EWD solutions originating from MIIs, internal M-EWD projects, and/or novel external opportunities. Continue to strengthen and grow M-EWD ecosystem structures. Incorporate advanced data and knowledge management tools to enable the program to operate as a knowledge and propagation hub and systematically capture, catalyze, and communicate project impacts across the M-EWD ecosystem. Implement strategic communications (internal/external), strengthen existing and establish new partnerships/connections (internal DoD, cross-agency, industry, academia) to capitalize on synergies and existing resources. A key FY2026 focus area will be coordinating with DMS&T 681/Technology Industrial Innovation Base (TIIB), 961/Tech Transfer (T2), and 549/

FY 2024 Accomplishments: RoboticsCareer.org is powered by the ARM (Advanced Robotics for Manufacturing) Institute, a Department of Defense sponsored Manufacturing USA MII. This national resource was created with funding from the U.S. Department of Defense and a generous grant from the U.S. Department of Labor. RoboticsCareer.org was created in collaboration with government, industry, and academia to connect civilians and military personnel with the industry-vetted training needed for high-value robotics careers in manufacturing. Using our SkillsMatcher SM technology, we connect education seekers with vetted training for careers in robotics for manufacturing, as well as enable education providers to showcase their training and apply for national ARM Endorsement, and provide employers with resources to upskill their workforce.			
In FY2024, RoboticsCareer.org added new capabilities that provide much needed guidance to understand opportunities in advanced manufacturing, which enables students and workers to plan their careers, and connect directly to jobs or robotics training. The redesign also aims to increase interest in manufacturing careers by illustrating the importance of these roles to the nation.

A. Mission Description and Budget Item Justification

The Office of the Secretary Defense (OSD) Manufacturing Science and Technology Program (MSTP) concentrates on cross-cutting defense manufacturing needs that are beyond the ability of a single service to address. MSTP projects focus on cross-cutting defense manufacturing advancements and stimulate early development of manufacturing processes and enterprise business practices. The MSTP invests in broad technology initiatives within Advanced Electronics and Optics, Advanced Materials and Composites, Advanced and Emerging Manufacturing Processes, and Advanced Energetics Manufacturing.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Advanced Electronics and Optics	9.301	21.589	14.774
Description: Advanced Electronics and Optics is a series of efforts addressing advanced manufacturing technologies for a wide range of applications such as sensors, radars, power generation, switches, and optics for defense applications. Focal points are productivity and efficiency gains in the defense manufacturing base to accelerate delivery of technical capabilities to impact current warfighting operations, and manufacturing technologies to reduce the cost, acquisition time and risk to our major defense acquisition programs. Future efforts will focus on advances in fuel cells, lasers, enhanced acuity micro-displays, and transparent ceramics for opto-mechanical and armor applications.			
FY 2025 Plans: Fund year 4 of 5 for Transmit/Receive Integrated System on a Chip (TRISoC) and Direct-Write Manufacturing for Conformal Antennas, Year 3 of 3 for CEPSIS, High Voltage Materials for Thermal Batteries, CMOS Signal for Hypersonic Platforms, BLADE, Year 2 of 2 for Focal Plane Array Output, Year 2 of 3 for Advanced Pulse Power Solutions, and Year 1 of 3 for Optically Based Enhancements for Accurate Mechanical Sensors (O-Beams) and Automated Manufacturing of Small Format Liquid Reserve Batteries.			
FY 2026 Plans: Fund year 5 of 5 for Transmit/Receive Integrated System on a Chip (TRISoC) and Direct-write Manufacturing for Conformal Antennas, Year 3 of 3 for Advanced Pulse Power Solutions, Year 2 of 3 for Optically Based Enhancements for Accurate Mechanical Sensors (O-Beams) and Automated Manufacturing of Small Format Liquid Reserve Batteries.			
FY 2025 to FY 2026 Increase/Decrease Statement: A decrease of \$5.894 million between FY 2025 and FY 2026 reflects the allocation of additive manufacturing integration project funding from P680 to the America Makes MII and minor budget fluctuations. A decrease of \$-.820 million reduces contracts

for Advisory and Assistance Services to promote efficiencies and advance the policies of the Administration in alignment with Executive Order 14222, “Implementing the President’s Department of Government Efficiency Cost Efficiency Initiative.” An Economic Assumptions decrease of \$0.101 million reflects a reduction in non-pay, non-fuel purchases based on revised inflation rates.					
Title: Advanced Materials and Composites Description: Advanced Materials and Composites is a series of efforts addressing advanced manufacturing technologies for a wide range of materials such as composites, metals, ceramics, nanomaterials, and metamaterials. Through productivity and efficiency gains, these manufacturing technologies will accelerate delivery of technical capabilities to impact current warfighting operations, while reducing the cost, acquisition time and risk of our major defense acquisition programs. Advanced materials manufacturing technologies undergoing development include materials for ballistic survivability and ballistic protection, survivability and rapid fabrication of structural components. FY 2025 Plans: Fund Year 3 of 3 for Self-Damping Structural Materials, Lightweight Hydrogen Fuel Cell Separator Plate Manufacturing, Year 3 of 4 for Mobile Fabrication and Repair, and Year 1 of 2 for Carbon Nanotube Fiber Cathodes for High Power Microwave Weapons for DoD. FY 2026 Plans: Fund Year 4 of 4 for Mobile Fabrication and Repair, Year 2 of 2 for Carbon Nanotube Fiber Cathodes for High Power Microwave Weapons. FY 2025 to FY 2026 Increase/Decrease Statement: The decrease of \$-0.840 million between FY 2025 and FY 2026 reflects the allocation of additive manufacturing integration project funding from P680 to the America Makes MII and minor budget fluctuations.			109.308	9.029	8.189
Title: Advanced and Emerging Manufacturing Processes Description: Advanced and Emerging Manufacturing addresses advanced manufacturing technologies and business practices for defense applications. Key focus areas include direct digital (or additive) manufacturing, advanced manufacturing enterprise, machining, robotics, assembly, and joining. Projects selected will accelerate delivery of technical capabilities to impact current warfighting operations while reducing cost, acquisition time, and risk of major defense acquisition programs. FY 2025 Plans:			4.973	8.325	8.871

Fund Year 3 of 3 for Joint Clothing and Textile Manufacturing Initiative, Year 2 of 3 for Nutritionally Tailored Food at the Point of Need, Precision Optical Wind Sensor, and Year 1 of 5 for Harnessing Microbe-Sourced Cellulose for Advanced Fiber Manufacturing. FY 2026 Plans: Fund Year 3 of 3 for Nutritionally Tailored Food at the Point of Need, Precision Optical Wind Sensor, Year 2 of 5 for Harnessing Microbe-Sourced Cellulose for Advanced Fiber Manufacturing and continued development of Beacon CONNEX software for DoD ManTech. FY 2025 to FY 2026 Increase/Decrease Statement: The increase of \$0.546 million between FY 2025 and FY 2026 reflects a small increase in the level of effort across all FY 2026 projects in this technical area.					
Title: Advanced Energetics Manufacturing Description: Advanced Energetics Manufacturing develops improved manufacturing capabilities for safer, low-cost, high-quality production of existing and newly developed ingredients and composites used in energetic materials production. Develops techniques such as additive manufacturing, microfluidics, continuous processing, resonant acoustic mixing, robotics, etc. for production of critical energetics and supporting ingredients to ensure Department access to these materials and enable development of new, highly advanced energetic systems for improved range and performance. FY 2025 Plans: No planned efforts for Advanced Energetics Manufacturing in FY 2025. New proposals demonstrating technical merit may be considered in future subject to budget availability. FY 2026 Plans: Fund Year 1 of 3 for Robotics and Automation for Munitions Production. FY 2025 to FY 2026 Increase/Decrease Statement: The increase of \$1.365 million between FY 2025 and FY 2026 reflects selection and initiation of the Robotics and Automation for Munitions Production project.			2.970	0.000	1.365

Appropriation/Budget Activity 0400 / 3	R-1 Program Element (Number/Name) PE 0603680D8Z / <i>Defense Wide Manufacturing Science and Technology Program</i>	Project (Number/Name) 680 / <i>Manufacturing Science and Technology Program</i>	
		FY 2024	FY 2025
FY 2024 Accomplishments: Under the Additive Manufacturing Casting effort, the team drafted and distributed a Printed Sand Standard for review/comments at the standards committee within the American Foundry Society. AFS is expected to release it for general use in 2025. The Standard is expected to be a catalyst for further use of printed sand throughout DoD and US industry. The project team continues to develop advanced printed sand technologies, including a sand binder that is environmentally friendly, design tools to aid foundry personnel in the use of printed sand, methods to reduce the amount of sand required to make metal castings, novel mold designs that take full advantage of the sand printing process and a tool to allow foundry personnel to predict the cost and associated breakeven point for printed sand molds versus traditional molding technology. Critical printed sand properties are being measured for inclusion in a comprehensive printed sand properties handbook. A demonstration casting is planned at a DoD site is being designed to showcase the technology there and at other sites.			
Congressional Add: Aluminum Castings Performance Initiative FY 2024 Accomplishments: The Aluminum Castings Performance Initiative contract was awarded April 29, 2025. Sub-contracts have been award for the three projects proposed: Machine Learning and Artificial Intelligence Algorithm for Defect Characterization and Diagnosis; Metallic Materials Properties Development and Standardization (MMPDS) of Alloy into Casting Alloy Database Search (CADS); and Assessment and Model Development of Investment Casting Shell Cracking.		3.863	-
Congressional Add: HPC-Enabled Large Scale Manufacturing FY 2024 Accomplishments: Version 1 of the computational framework for smart manufacturing analysis and control was completed o Includes ROS based in-situ monitoring framework and Model Process Properties, Data Warehouse (MPPW)software o Jupyter notebook extensions were completed as module to MPPW for analytics o Software posted and available free for download to DoD, MIIIs, and America Makes partners https://material-process-warehouse-guide-8d5b46.gitlab.io/ o Computational Framework currently being installed at LIFT for plasma arc welding effort Ongoing Research Initiatives o New code base developed for real-time in-situ sensing visualization and post processing playback though FoxGlove interfaces o Development of Thermal Management strategies through active heating and cooling equipment to mitigate and remediate warpage.		24.142	-

		FY 2024	FY 2025
- o Developed strategies for print restart to increase bond interfaces and mitigate strength deficiencies through on extruder mounted reheat modules capable of resuming a stopped print for both intentional and unintentional print interruptions - o Process, Structure, Properties Optimization model developed to reduce weight and manufacturing time, and increase reliability - o Integrated fiber reinforced composite materials experiments and tests - Investigate and test methods for reducing weight and fabrication time of large scale AM parts by members. - o Workforce Development & Training			
Congressional Add: Advanced Composites for Hypersonics (Aided by Dig Eng) FY 2024 Accomplishments: • Design of the hypersonic materials manufacturing testbed has matured • Continued progress of physics-based and data driven modeling, simulation and process control development. ATA Engineering now on contract to assist • Developed initial digital engineering framework to include the MACH-ADE Software Tool (MAST) which integrates all evaluation and predictive tools that track the state of materials and structures through the planned testbed • Began developing material processing procedures • Produced several panels of various material systems and sizes. Began initial data collection including imaging and density • Identified testing plan to include nondestructive techniques that will be used to validate and refine simulation models and eventually be used to inform the testbed process control system • Purchase requisitions for all major equipment and analytical instruments (pilot scale furnace, Automated Fiber Placement (AFP) machine and Nondestructive Evaluation (NDE) instruments) have been issued and are all on track to be delivered in 2025 or Q1 2026 • Task Area 2.1 Report submitted		15.451	-
Congressional Add: High Temperature Composite Material Mfg FY 2024 Accomplishments: • Awarded Demonstration of Aeroshell Structures for Hypersonics – Manufacturing Optimization and Testing (DASH-MOT) contract with \$35M ceiling • Automated needle maker prototype machine completed and report documenting initial runs submitted • Control surface demonstration articles completed • Unitary preform trial runs completed • Integration test samples were fabricated • Environmental Barrier Coating for C/C-SiC developed		9.657	-

Note

Realignment from PE 0605797D8Z P043 effective FY 2025

A. Mission Description and Budget Item Justification

Technology Industrial Base (TIB) provides support to technology leaders in identifying industrial innovation base needs; characterizing and assessing priority technology investments, identifying and mitigating issues and risks impacting the industrial innovation base, and exploiting opportunities to advance technology development, testing, and manufacturing. TIB efforts develop near- and long-term strategies and employ mechanisms to retain the U.S. advantage in current and emerging modernization technology priorities by addressing the capabilities of the industrial innovation base to develop, test, manufacture, and sustain them. One of TIB's main objectives is to create balance between promotion of the industrial innovation base while protecting the technology from interference or exploitation by competitors. This balance will aid the Department's advancing critical and emergent technologies ahead of competitor nations and actors while sustaining a healthy, resilient, and globally competitive industrial innovation base. This portfolio of activity extends efforts initiated in response to FY 2019 National Defense Authorization Act (NDAA) Section 1793.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Technology Industrial Innovation Base (TIB)	0.000	6.997	6.095
Description: This project uses a three-step approach: (1) Assess, (2) Protect/Promote; and (3) Monitor. In the first step, TIB uses emerging technology assessments to translate technology needs to manufacturing and industrial innovation base requirements to identify industrial innovation base issues, risks, and opportunities. TIB created an assessment methodology that incorporates four types of studies to provide a full overview of the technology from a manufacturing and industrial innovation base point of view. The results of the assessments are used to generate industrial-innovation-base inputs to technology roadmaps, develop an investment plan addressing the needs of the industrial innovation base, and create technology and industrial innovation base protection and promotion strategies (second step of the approach). TIB leverages DoD and Federal Government tools and initiatives to implement the strategies. In the third step, TIB uses data analytics to measure the success of mitigation and exploitation strategies, establish trends in the markets, and identify the need for additional assessments or changes in investments and strategies.			
FY 2025 Plans:

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
Continue to identify and execute industrial base assessments in support of priority technology areas across the DoD, ensuring industrial base support of next-generation capabilities. Assessments will identify opportunities for additional Research and Engineering investments to ensure a robust industrial base in advanced manufacturing for critical technology areas. <i>FY 2026 Plans:</i> Continue to identify and address new, emerging manufacturing capabilities and technology base gaps that are vital to fielding critical technology areas and other key stakeholder priorities; manage ongoing technology innovation base assessments; and conduct deep dive assessments to identify and address national security innovation base risks, issues, and opportunities related to the DoD. <i>FY 2025 to FY 2026 Increase/Decrease Statement:</i> The decrease of \$0.884 million between FY 2025 and FY 2026 reflects the reallocation of additive manufacturing integration project funding from P680 to the America Makes MII. An Economic Assumptions decrease of \$0.018 million reflects a reduction in non-pay, non-fuel purchases based on revised inflation rates.

A. Mission Description and Budget Item Justification												
Advanced manufacturing demonstrations of biomanufactured products for critical defense applications. This project addresses the necessary activities to rapidly mature biomanufactured products and establish the necessary production capacity.												
B. Accomplishments/Planned Programs (\$ in Millions)										FY 2024	FY 2025	FY 2026
Title: Rapid Maturation of Biomanufactured Defense Products										0.000	-	123.085
Description: Biomanufactured products will be rapidly matured with coordinated DoD activities to validate if the product is capable of meeting DoD requirements. Activities include: formulation studies, early prototyping efforts, qualification testing, and initial relevant environment testing.												
FY 2026 Plans:												
Bioindustrial manufacturing products will be assessed for suitability to DoD requirements. Promising candidates for rapid maturation will be chosen in coordination with the relevant program office for the end application. Design product maturation plans, coordinated with all relevant stakeholders, to inform product scale-up and infrastructure investments necessary to meet DoD requirements.												
FY 2025 to FY 2026 Increase/Decrease Statement:												
The increase of \$124.644 million in FY 2026 is due to a reprogramming and realignment from Defense Production Act (DPA)/ Title III PE 0902199D8Z to add P549 for the rapid maturation of biomanufactured defense products. A decrease of \$0.884 million reduces contracts for Advisory and Assistance Services to promote efficiencies and advance the policies of the Administration in alignment with Executive Order 14222, “Implementing the President’s Department of Government Efficiency Cost Efficiency Initiative.” An Economic Assumptions decrease of \$0.675 million reflects a reduction in non-pay, non-fuel purchases based on revised inflation rates.												
Title: Establish Critical Bioindustrial Manufacturing Capacity										0.000	-	102.356
Description: Activities to establish capacity for critical bioindustrial products include initial production runs at a significantly higher scale (example: production batch size increasing from 1,000L to 10,000L), purchase of necessary equipment to increase production capacity, or design studies of additional production lines and/or capacity to increase product availability for defense specific requirements.

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
<i>FY 2026 Plans:</i> Continue efforts to address bioindustrial manufacturing capacity shortfalls in the domestic bioindustrial base. Key areas of interest are DoD relevant critical chemicals, hypersonic applications, energetic material precursors, alternatives to petroleum or petroleum-derived products, and DoD relevant materials for forward operating missions. Starting in FY26, initiate at least two promising technology maturation projects emerging from planning analysis of candidate molecules, Tri-Service Biotechnology for a Resilient Supply Chain (T-BRSC) efforts, or biotechnology MII developed technologies. Successful outcome of these projects will lead to at least one capacity expansion project. <i>FY 2025 to FY 2026 Increase/Decrease Statement:</i> The increase of \$102.356 million in FY 2026 is due to a reprogramming and realignment from Defense Production Act (DPA)/Title III PE 0902199D8Z to add P549 to establish critical bioindustrial manufacturing capacity.

A. Mission Description and Budget Item Justification

The Strategic Environmental Research and Development Program (SERDP) invests in applied research to secure Department of Defense installations, while its sister program, the Environmental Security Technology Certification Program (ESTCP), demonstrates and validates these technologies in operational settings.

SERDP tackles key challenges facing military bases and training areas, creating innovative approaches that strengthen mission capabilities where they're needed most across more than 800 DoD locations worldwide. The program focuses on cross-Service requirements and pursues solutions to the Department's most pressing installation challenges.

SERDP issues solicitations for proposals from government, academia, and industry and employs a competitive selection process to ensure the highest quality research. Through these partnerships, SERDP identifies promising technologies that transition to ESTCP for field demonstration. This coordination helps reduce duplicative efforts and maximizes research impact.

Established by Congress in 1990, SERDP serves as a catalyst for cooperation and collaboration across the Armed Services. The development and application of innovative technologies reduces the costs, risks, and time required to resolve installation challenges while advancing military readiness. These investments ensure military installations can withstand operational threats and environmental hazards both inside and outside the fence line, providing a distinct advantage to our warfighters while ensuring military forces remain combat-ready to deter adversaries and defend the nation.

• Program Growth	-	-	10.400	-	10.400

Change Summary Explanation

The FY26 request reflects a net increase of \$0.480 million, resulting from the following actions:

- The FY 2026 request reflects an increase of \$10.400 million for the Closed Treatment Technologies for Demilitarizing Energetic Materials and Resilient Alternatives to PFAS-Containing DoD Materiel.
- The FY 2026 request was reduced by \$9.741 million for Advisory and Assistance Services to promote efficiencies and advance the policies of the Administration in alignment with Executive Order 14222, "Implementing the President's Department of Government Efficiency Cost Efficiency Initiative," reduction of \$0.179 million for inflation.

A. Mission Description and Budget Item Justification

The Strategic Environmental Research and Development Program (SERDP) invests in basic and applied research to secure Department of Defense installations, while its sister program, the Environmental Security Technology Certification Program (ESTCP), demonstrates and validates these technologies in operational settings.

SERDP addresses cross-Service requirements and pursues solutions to installation challenges, strengthening America's defense posture and military readiness. By tackling critical issues affecting military bases and training grounds, SERDP develops innovative approaches that enhance resilience, sustainability, and operational capability.

Through partnerships with researchers across DoD, federal agencies, academia, and industry, SERDP identifies promising technologies that transition to ESTCP for field demonstration. These innovations reduce costs, risks, and time required to resolve installation challenges while advancing combat readiness.

SERDP's investments ensure military installations can withstand operational threats and environmental hazards. By focusing on practical solutions that enhance warfighting capabilities, SERDP helps maintain installations that are resilient, mission-focused, and prepared to support forces as they train to deter adversaries and defend the nation.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Environmental Restoration (ER)	17.621	17.652	15.996
Description: Investments in Environmental Restoration strengthen military readiness by efficiently addressing the Department of Defense's environmental challenges through practical technologies. By developing better methods to detect, assess, and clean up harmful chemicals in training and operational areas, these investments keep military installations ready for use.			
SERDP has made addressing PFAS chemicals at DoD installations a priority to support military operations. The program's research ensures bases can maintain full operational capacity while effectively managing these substances. Through hundreds of targeted projects, SERDP has quickly improved DoD's ability to evaluate and address PFAS with minimal impact on military activities. These efforts protect training grounds, ranges, and other critical facilities, ensuring forces can prepare effectively and deploy when needed to defend the nation.			

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2026 Office of the Secretary Of Defense		Date: June 2025	
Appropriation/Budget Activity 0400 / 3	R-1 Program Element (Number/Name) PE 0603716D8Z / <i>Strategic Environmental Research and Development Program (SERDP)</i>	Project (Number/Name) 470 / <i>Strategic Environmental Research and Development Program (SERDP)</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
FY 2024 Accomplishments: SERDP coordinated efforts on assessing thermal treatment processes for destruction of PFAS. Significant efforts continued on treatment of PFAS in stormwater, mitigation and treatment of PFAS in concrete and asphalt, and development of new methods to analyze PFAS in concentrated firefighting formulations. In addition, SERDP held a workshop on ecological impacts of PFAS to assess remaining data gaps in this area. FY 2025 Plans: Development of PFAS destruction technologies, both thermal and non-thermal, will continue, with an increased emphasis on technologies for in situ destruction of PFAS and aqueous film-forming foam (AFFF) residue that avoided the expense of pump-and-treat methods. Studies of the ecological impacts of PFAS mixtures initiated in FY 2022 continued. New projects will be initiated to better understand the underlying science of PFAS fate and destruction and to detect and treat PFAS-impacted microplastics in stormwater and groundwater. FY 2026 Plans: New projects will develop rapid, on-site sensors for detecting PFAS in soils and water. Additional projects will address ecological toxicity data gaps identified during the SERDP & ESTCP 2024 Ecotoxicity Workshop. Development will continue on PFAS destruction technologies that avoid the costs of pump-and-treat methods or off-site disposal. Ongoing studies will improve understanding of PFAS transport and treatment in concrete and asphalt, advance the science of PFAS fate and destruction, and develop methods for treating PFAS-impacted microplastics in stormwater and groundwater. FY 2025 to FY 2026 Increase/Decrease Statement: The FY 2025 to FY 2026 decrease of \$1.656 million reflects adjustments to promote Government efficiencies from efficiency in alignment with Executive Order 14222, "Implementing the President's Department of Government Efficiency Cost Efficiency Initiative and other inflation adjustments to the program. As a result the program budget efforts will scale back PFAS treatment development projects.			
Title: Munitions Response (MR) Description: Investments in Munitions Response ensure safe access to training grounds and operational areas by improving detection and removal of unexploded ordnance (UXO) at underwater sites across military installations and Formerly Used Defense Sites. These efforts maintain readiness by clearing hazards that restrict training and deployment activities. SERDP has developed advanced technologies to address UXO in marine environments including ponds, lakes, rivers, estuaries, and coastal areas where traditional detection methods face significant challenges. Following years of targeted research, the		1.636	4.650
			1.710

Appropriation/Budget Activity 0400 / 3	R-1 Program Element (Number/Name) PE 0603716D8Z / <i>Strategic Environmental Research and Development Program (SERDP)</i>	Project (Number/Name) 470 / <i>Strategic Environmental Research and Development Program (SERDP)</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
program has created effective solutions for detecting, classifying, and removing underwater munitions ranging from small projectiles to large bombs that show no visible evidence of their presence. These innovations dramatically reduce the personnel hours required for remediation while improving safety for military personnel and surrounding communities. By efficiently clearing UXO from underwater environments, SERDP ensures these areas remain available for training and operations, directly supporting the warfighter's ability to prepare for deployment. The program's technologies are now being transitioned from test sites to actual locations where UXO are present, delivering practical solutions that enhance military readiness and protect defense assets. FY 2024 Accomplishments: Multiple munitions burial and mobility projects completed their penultimate tasks, including exploration of cone-penetrometer testing coupled with finite element codes to predict UXO depth of burial. Several acoustic technologies reached maturity levels appropriate for ESTCP transition, including the Sediment Volume Search Sonar system and the Bluefin 21 AUV sonar system, both of which use acoustic frequencies to penetrate water and sediment to image targets. A SERDP-funded multi-sensor electromagnetic induction system for detecting buried metal has also reached appropriate maturity for ESTCP transition. SERDP formed an underwater munitions response technology workgroup with DoD Services and state representatives to guide technology commercialization and develop guidance for site managers. These technologies have generated time savings up to 90% at certain stages of the underwater UXO investigation process, accelerating remediation decisions by approximately one year per site. FY 2025 Plans: The program will facilitate transition to live site environments under ESTCP, further develop acoustic, electromagnetic, and optical sensor systems for UXO detection and classification. Research will continue on improving discrimination between UXO and inert debris and validating established munitions burial and mobility models through ESTCP-funded test sites. A comprehensive summary report of prior research will be developed for distribution to relevant stakeholders. FY 2026 Plans: Research funding needs are decreasing as investigations in munitions burial and mobility conclude, which have significantly advanced site characterization knowledge in dynamic underwater environments. Detection, classification, and localization technologies that achieved success have been transitioned to ESTCP for demonstration and validation. FY 2025 to FY 2026 Increase/Decrease Statement: The FY 2025 to FY 2026 decrease of \$2.940 million reflects program adjustments to promote Government efficiencies from efficiency in alignment with Executive Order 14222 and inflation. The program requirements reflect adjustments concluding munitions burial and mobility research and transitioning mature technologies to the ESTCP program.			
Title: Natural Hazards and Installation Resilience (NHIR)		22.154	22.193
			19.597

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2026 Office of the Secretary Of Defense		Date: June 2025
Appropriation/Budget Activity 0400 / 3	R-1 Program Element (Number/Name) PE 0603716D8Z / <i>Strategic Environmental Research and Development Program (SERDP)</i>	Project (Number/Name) 470 / <i>Strategic Environmental Research and Development Program (SERDP)</i>

B. Accomplishments/Planned Programs (\$ in Millions)	FY 2024	FY 2025	FY 2026
Description: Investments in Natural Hazards and Installation Resilience (formerly Resource Conservation and Resilience) protect the 28 million acres of land essential for military training and testing operations across more than 800 global DoD locations. The program area was renamed to better reflect its strategic realignment that integrates management of DoD's natural and built infrastructure with hazard resilience efforts, creating a more comprehensive approach to installation readiness. By developing technologies to mitigate wildfires, contain invasive species, and manage natural resources, SERDP ensures training grounds remain available for realistic combat preparation directly supporting mission readiness. The program now addresses both environmental management challenges affecting training lands and the technologies needed to mitigate natural disasters that have caused billions in infrastructure damage. SERDP's research provides DoD with practical tools to maintain the contiguous, unencumbered spaces needed to replicate operational environments. These lands must support numerous units training over time, requiring effective management of environmental challenges that could otherwise restrict access or limit training days. This responsible management of natural resources is a critical readiness imperative. The program develops science-based solutions that enhance military readiness by addressing threats to training environments including wildfires, flooding, invasive species, and dust emissions. By providing installation managers with effective hazard mitigation and resource management technologies, SERDP maximizes available training days and ensures forces can prepare for deployment in realistic conditions. These efforts maintain the operational utility of DoD lands, providing an advantage to warfighters while ensuring military forces remain combat-ready. FY 2024 Accomplishments: Projects advanced scientific understanding of weather events driving extreme flooding and rapid glacial melt in western Greenland. Efforts conducted within the Wildland Fire Science Initiative led to new technologies to safely sustain prescribed fire activities on DoD and partner lands to manage wildfire risks. Projects continued to advance eDNA capabilities for compliance surveys of more than 250 threatened and endangered species. The program initiated priority invasive species research to address mission and economic impacts in the Pacific Islands, with input from the Indo-Pacific Combatant Command. Projects refined assessments of coastal flooding, salt water intrusion, and other natural hazards directly addressing installation resilience through improved estimates of exposure. FY 2025 Plans: The program will initiate new projects to develop models aiding installation planning staff in managing the interaction of natural hazards, fire management, and ecosystem transformations that impact DoD mission activities. Research will continue on the effects of multiple stressors on threatened and endangered species that affect the DoD mission and to prevent future listing.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Projects will develop models, tools, and data to evaluate installation systems resilience to compounded threats and natural hazards, specifically hurricanes and wildfire. New projects will advance measurements and modeling of micrometeorology key to installation resilience in the arid West. Additional projects will improve understanding and modeling of wildland fire smoke emissions and develop tools for smoke management from prescribed fires. FY 2026 Plans: The program will initiate new projects to advance understanding of DoD-relevant threatened, endangered, and at-risk species responses to multiple stressors with a focus on Indo-Pacific Command and other key DoD geographies, including the southeastern United States. Scenario modeling tools capable of integrating installations and ecosystem responses will be developed to assess threats from weather extremes and ecological transformations that impact mission activities and installation resilience. New projects will test efficient conservation strategies to prevent future listing of threatened and endangered species and guide changes to management strategies to save costs. FY 2025 to FY 2026 Increase/Decrease Statement: The FY 2025 to FY 2026 decrease of \$2.596 million reflects adjustments to promote Government efficiencies from efficiency in alignment with Executive Order 14222 and inflation. Additionally, the program requirements reflect scaling back invasive species research initiatives in FY 2026. The program is strategically realigning resources to prioritize installation resilience against natural hazards, threatened and endangered species management, and wildfire risk mitigation that more directly support critical mission readiness objectives. This focused approach will target the most immediate threats to installation resilience while maintaining essential conservation efforts that prevent training restrictions.			
Title: Weapons Systems and Platforms (WP) Description: Investments in Weapons Systems and Platforms develop technologies and materials that ensure secure access to critical military assets across installations, depots, and maintenance facilities. By creating solutions that reduce dependence on restricted chemicals and vulnerable supply chains, SERDP strengthens the military's ability to maintain essential defense platforms, from aircraft and vehicles to energy systems. SERDP's research addresses supply chain instability and material restrictions that threaten readiness at maintenance depots and operational bases. The program develops next-generation materials that extend the service life of mission-critical systems from production through decommissioning, while enhancing American mineral production and material resilience throughout the defense industrial base. These technologies support installation operations by ensuring access to vital systems, reducing maintenance costs, and improving energy resilience through advanced materials for power systems. By developing alternatives to hazardous chemicals	17.317	14.343	20.789

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
in paints, coatings, munitions, and equipment, SERDP protects personnel and facilities. These efforts ensure installation infrastructure from maintenance depots to energy systems can effectively sustain the reliable weapons systems and platforms needed to defend the nation. FY 2024 Accomplishments: Ionic liquid surfactant fluorine-free foam (F3) firefighting formulations were tested and exceeded the fire suppression performance of currently approved F3 products. Projects demonstrated polymer gel spinning of fabrics with incorporated DEET exhibiting 30+ weeks of effective insect repellency. Teams successfully sampled constituents from explosives and pyrotechnics using drone-mounted chemical detectors. A computational procedure was established for modeling perfluoropolymer degradation. A project developed an electrochemistry technique to produce dinitrotoluene (DNT) without generating red water, a major environmental hazard that has stopped domestic production of TNT. FY 2025 Plans: The program will initiate projects to develop improved PFAS-free firefighting formulations addressing the intent of Sec 323 of the FY2020 NDAA. Efforts will develop augmented reality for firefighter training with haptic feedback. Projects will continue evaluating PFAS-free textile coatings and identify alternatives for fluorinated polymers in energetics. Research will advance field effects processing for energetic molecules, develop rocket propellants without isocyanate-based binders, and create corrosion-mitigating coating systems with reduced environmental impact. Efforts will identify processes for refractory alloy recycling and develop elastocaloric materials for refrigeration methods with low global warming potential. FY 2026 Plans: New projects will develop improved emulsification agents for commercial F3 foams to address the intent of Sec 323 of the FY2020 NDAA. The program will develop prototype elastocaloric refrigeration systems for potential vehicle retrofitting to eliminate refrigerant flammability risk. Efforts will continue to develop PFAS-free textiles and scalable fabric treatment manufacturing technologies. Projects will develop alternatives for fluorinated polymers in energetics processing and closed destruction technologies for energetics demilitarization. FY 2025 to FY 2026 Increase/Decrease Statement: The FY 2025 to FY 2026 net increase of \$6.466 million reflects a programmed increase for PFAS chemical resiliency in weapons systems and platforms and development of alternative technology for demilitarization of energetics, as well as adjustments to promote Government efficiencies from efficiency in alignment with Executive Order 14222, inflation adjustments.

A. Mission Description and Budget Item Justification

The Joint Warfighting Program (JWP) supports the Assistant Secretary of Defense for Acquisition (ASD(A))'s responsibilities for acquisition and portfolio management. The JWP underwrites analyses, studies, performs limited scope experiments, wargaming, and partnerships that define joint capability gaps and develops credible requirements for follow-on acquisition efforts. These analyses and assessments deliver independent perspectives on potential remedies to align acquisition investments and solutions for joint capability gaps created by future warfighting environments and emerging threats. The JWP supports mission engineering integration management, as well as other high priority emerging issues requiring independent analysis to inform acquisition decisions that impact National Security.

New Start (Y/N): No

This Software Engineering Institute (SEI) Advanced Technology Development Program Element (PE) applies the software and computer science concepts developed under the 0602751D8Z PE to research, develop, and rapidly transition state-of-the-art software technology, tools, development environments, and best practices to improve the engineering, management, fielding, evolution, acquisition, and sustainment of software-intensive Department of Defense (DoD) systems.

A. Mission Description and Budget Item Justification

This program supports the Departments initiatives to Build a Sustainable and Long-Term Advantage, and Build a Resilient Joint Force and Defense Ecosystem.

Software is more pervasive than ever, and computer programs are growing in size and complexity. Designing, managing, and securing integrated, complex, and large-scale mission-critical systems are abilities that the Department of Defense (DoD) and the Defense Industrial Base (DIB) have not yet mastered. Reliance on software-intensive mobile and net-based products and systems has increased (e.g., Joint Tactical Radio System, USS ZUMWALT (DDG-1000), Joint Strike Fighter, F-22, and Army Modernization). As stated in the February 2018 Defense Science Board Report, "Design and Acquisition of Software for Defense Systems," software is a crucial and growing part of weapons systems and the national security mission, and the DoD must address its ability to build and sustain software continuously and indefinitely. With growing global parity in software engineering, the DoD must maintain leadership to ensure a competitive advantage.

The Carnegie-Mellon University Software Engineering Institute (SEI) Federally Funded Research and Development Center (FFRDC) was established in 1984 as an integral part of the DoD's initiative to identify, evaluate, and transition software engineering technologies and practices. The mission of the SEI is to provide the DoD with technical leadership and innovation through research and development to advance the practice of software engineering and technology. The SEI works across government, industry, and academia to improve the state of software engineering from the technical, acquisition, and management perspectives. The SEI engages in research and development of critical software technologies and tools and collaborates with the larger software engineering research community. It facilitates rapid transition of software engineering technologies into practice and evaluates emerging software engineering technologies to determine their potential for improving software-intensive DoD systems. Since its inception, the SEI has helped to transform the fields of software engineering and acquisition, network security, real-time systems, software architectures, and software-engineering process management.

The SEI Program Element (PE) addresses the critical need to research, develop, and rapidly transition state-of-the-art software technology, tools, development environments, and best practices to improve the engineering, management, fielding, evolution, acquisition, and sustainment of software-intensive DoD systems. The

A. Mission Description and Budget Item Justification												
This project focuses on two main research thrusts with known military applications: (1) Software Engineering, Systems Verification and Validation, and Mission Assurance (formerly Mission Assurance); and (2) Information Assurance.												
SEI research focuses on the most significant and pervasive software challenges within the DoD, such as the scalability and reliability of software assurance, supply chain risk management, validation of and trust in autonomous systems, human-computer and human-technology teaming and interaction, computing and communication at the tactical edge, and efficiency and performance of acquisition strategies and software development appropriate for a contested cyber environment.												
B. Accomplishments/Planned Programs (\$ in Millions)									FY 2024	FY 2025	FY 2026	
Title: SEI Advanced Technology Development in the Area of Software Engineering, Systems Verification and Validation, and Mission Assurance									13.950	15.118	11.104	
Description: This research seeks to mature and rapidly prototype techniques to verify methods for identifying requirements, systems of systems architectures, and virtual integration of components. Furthermore, research in this area will pursue rapid prototyping and transitioning of capabilities that verify requirements for software assurance, analysis/control of unverified code and automated repair of damaged code. Software production and code analysis methods developed through this program will also improve the ability to predict how complex software systems, including AI-enabled systems, will behave in untested environments. Increasingly, large numbers of lines of code and the addition of machine-learning techniques will require a commensurate increase in sophisticated verification and validation mechanisms.												
FY 2025 Plans:												
Integrate techniques in automated learning for system measurement, software Development and Operations, and model-based systems engineering for an automated assessment, modeling, and software deployment process. Focus on strategies for resilience and mission assurance in large complex infrastructures and develop prototype systems that can be transition and tested into DoD applications from cloud to embedded systems.												
FY 2026 Plans:												
Leverage AI generated software methods to automate software systems composition. Validate the results of the systems composition using statistical and graph theoretic methods including model-based systems engineering.												
FY 2025 to FY 2026 Increase/Decrease Statement:

B. Accomplishments/Planned Programs (\$ in Millions)									FY 2024	FY 2025	FY 2026
The decrease of \$4.014 million between FY 2025 and FY 2026 reflects FFRDC reductions and economic assumptions.											
Title: SEI Advanced Technology Development in the Area of Information Assurance									1.797	1.864	1.868
Description: Powerful machine learning algorithms can be subverted by malicious manipulation or falsification of software and data collected through normal channels. Algorithms must be trusted and effective in the presence of adversaries. This thrust seeks to defend against and minimize the impacts of information falsification attacks.											
FY 2025 Plans: Enable combined distributional machine learning for risk analysis between software, machine learning, and cyber security to enable assessment and management of automated systems. These risk metrics will be introduced to a variety of DoD applications from system assessment, to enterprise cloud analytics, and legacy embedded systems.											
FY 2026 Plans: Understanding the effect of training data sets on software system generation and develop methodologies to show how software integration and information service composition can be improved and validated through training data curation.											
FY 2025 to FY 2026 Increase/Decrease Statement: The increase of \$0.004 between FY 2025 and FY 2026 reflect minor budget fluctuations.											
Accomplishments/Planned Programs Subtotals									15.747	16.982	12.972

Note

New Start (Y/N): No.

In FY 2025, Project 731 (Innovation and Modernization) funding was transferred to Project 730 (Concepts and Capabilities) during the year of execution.

A. Mission Description and Budget Item Justification

This program supports the Department of Defense's (DoD) initiatives to "Build a Sustainable and Long-Term Advantage" and "Build a Resilient Joint Force and Defense Ecosystem."

The Defense Innovation Acceleration (DIA) program accelerates innovative capability prototypes (TRL 5-7) that address cross-Service/cross-domain military needs in 12 to 36 months. Operational and strategic capability gaps are identified through the alignment of the Joint Warfighting Concept with mission analysis. DIA focuses on providing prototype systems in support of multi-component experimentation, informing programs of record, and validating requirements. DIA prototypes are evaluated in operationally relevant demonstrations in conjunction with Office of the Assistant Secretary of Defense for Mission Capabilities (OASD(MC)) experimentation events. The demonstrations are assessed by representatives from the Combatant Command (CCMD) staffs who look for military utility in addressing the most pressing capability gaps as ranked by the CCMDs and the Joint Staff. DIA also harnesses small business and non-traditional performer innovation to create prototypes to address DoD's modernization challenges.

In FY26, DIA organized sub-projects by focus areas aligned to specific, persistent capability gaps. Aligning investments by focus areas allows Prototyping and Experimentation (P&E) to rapidly respond to urgent and emergent requirements at the speed of relevance. Focus areas include:

Kill Web Interoperability: The processes by which Joint Force Commanders plan, direct, coordinate, and control forces to accomplish assigned missions and enable Joint kill webs.

Resilient Communications: The ability to maintain hardened mission-capable systems that allow for secure freedom of communications in contested electromagnetic spectrum environments. This includes alternate position, navigation, and timing.

Sensors and Data Analytics: Networks of sensors and data collection assets, data analysis, and dissemination resources used to provide information to the Joint force about strategic and tactical threats.

UNCLASSIFIED

Exhibit R-2, RDT&E Budget Item Justification: PB 2026 Office of the Secretary Of Defense				Date: June 2025		
Appropriation/Budget Activity 0400: Research, Development, Test & Evaluation, Defense-Wide / BA 3: Advanced Technology Development (ATD)		R-1 Program Element (Number/Name) PE 0603838D8Z / Defense Innovation Acceleration (DIA)				
Collaborative Multi-Domain Autonomy: The use of multi-domain uncrewed systems and autonomy to increase warfighting capabilities and to mitigate/negate risk to warfighters.						
Contested Logistics / Sustainment: The coordinated use, synchronization, and often sharing of logistics resources to deploy, support, and sustain highly dispersed Joint forces in highly contested environments. This also includes other sustainment areas such as supply chain reduction efforts; additive manufacturing; operational/tactical water purification; and sustainment and transportation innovations.						
Weapons Kinetic/Non-Kinetic Effects: The delivery of weapon systems and long-range kinetic and non-kinetic effects in support of Joint offensive and defensive tasks to create specific lethal effects on a target. This area includes counter position, navigation, and timing; and techniques designed to deceive enemy observers and/or mitigate, disrupt, or negate adversary capabilities.						
Emerging Prototypes and Enablers: Supports the acceleration of DoD, CCMD, and Service priority efforts which provide unique capability and/or address critical gaps. This focus area incorporates Combat Support/Combat Enablers; Special Forces Capabilities; Medical Technologies/Devices; Special Access Program assimilation and operational management; prototyping through small business and non-traditional pathways; and the rapid development of technologies for inclusion in experimentation venues.						
B. Program Change Summary (\$ in Millions)		FY 2024	FY 2025	FY 2026 Base	FY 2026 OOC	FY 2026 Total

A. Mission Description and Budget Item Justification

Concepts & Capabilities (C&C) focuses on executing advanced operational prototypes with the Joint Services and Combatant Commands (CCMD). C&C validates warfighting concepts and accelerates new capabilities faster than the traditional defense acquisition process. C&C emphasizes delivering major system components and/or single fieldable systems for joint warfighting application, while informing Service programs of record. The delivery of these operational prototypes is typically 12 to 36 months.

C&C drives prototyping investments to address the joint warfighter's most pressing operational capability gaps and accelerates new capability development in conjunction with the Joint Services and CCMD. Based on established needs, C&C sponsors joint efforts to mature operational prototypes through approved developmental portfolios. Office of the Under Secretary of Defense for Research & Engineering (OUSD(R&E)) portfolio managers provide government oversight and execute collective development with operational leads from the Service and CCMDs; pool technical resources from the Service research, engineering laboratories, program executive offices; leverage academia and industry expertise as needed; require Service cost-sharing partnerships; and execute the necessary planning steps for future transition early within the developmental life cycle. This execution strategy represents a time-proven catalyst for collaborative development and accelerates delivery of operational prototypes to the joint warfighter.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Aerial Port of the Future (APoF) (Contested Logistics / Sustainment)	2.750	-	-
Description: APoF develops, integrates, and tests emerging capabilities at aerial ports by providing a logistics common operating picture for planning, processing, and managing joint force cargo; an integrated automated system to manage personnel, cargo, and munitions; and man/unmanned materiel handling equipment to rapidly load sustainment to global air mobility assets. In FY 2024, APoF conducted a military utility assessment and transitioned the automated infrastructure tools, hardware/software residuals, and robotic material handling equipment systems to Army Materiel Command (AMC) for eventual deployment to U.S. Indo-Pacific Command (USINDOPACOM) and U.S. European Command (USEUCOM) locations.			
Title: Collaborative Naval Information Warfare Systems Command Cyber Operations (N-Cyber) (Sensors and Data Analytics)	1.500	-	-
Description: N-Cyber is an offensive cyber and electronic warfare (EW) capability that enables warfighters to create non-kinetic weapons effects on traditionally hard to affect adversary systems from air, land, or sea through the integration of space, cyber, and EW. In FY 2024, N-Cyber conducted operational demonstrations and a military utility assessment in an operationally relevant environment before transitioning to the 16th Air Force, through the Air Force Life Cycle Management Center (AFLCMC), into PEO Compass Call.

Appropriation/Budget Activity 0400 / 3	R-1 Program Element (Number/Name) PE 0603838D8Z / <i>Defense Innovation Acceleration (DIA)</i>	Project (Number/Name) 730 / <i>Concepts and Capabilities</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
Title: Enabling Development and Experimentation Focus Area (Emerging Prototypes and Enablers) Description: This focus area enables rapid development of technologies for inclusion in specified experimentation venues to provide impacts to all Services and USINDOPACOM. In FY 2024, this focus area sponsored and executed the rapid development of technologies identified by OUSD(R&E) leadership for inclusion in specified experimentation venues in FY 2025.		48.950	-
Title: High-Frequency Silent Transmission over Resilient Mesh (HF STORM) (Resilient Communications) Description: HF STORM refines the DoD's Fully Networked Command, Control, and Communications (FNC3) and high frequency (HF) roadmaps to mature and layer several key technologies. These developments combine to increase transmission directivity while minimizing detection susceptibility in tactical, relocatable, and expeditionary ground and aerial nodes that link with a large ground-based array to provide global and secure reach in a contested or denied environment. In FY 2024, HF STORM performed an operational demonstration and military utility assessment before transitioning fieldable prototypes to the U.S. Army Europe and Africa (USAREUR-AF) and U.S. Marine Corps (USMC) programs of record.		4.537	-
Title: Logan (Emerging Prototypes and Enablers) Description: This is a classified project. Additional information is available upon request. In FY 2024, Logan transitioned to the Navy Cyber Warfare Development Group (NCWDG).		7.000	-
Title: QuickSink (Weapons Kinetic / Non-Kinetic Effects) Description: QuickSink develops a dual-mode seeker for air-delivered, anti-surface warfare (ASuW) weapons to reduce the number of air assets required by increasing lethality and stand-off, while decreasing costs. In FY 2024, QuickSink completed an operational demonstration and military utility assessment before transitioning to the AFLCMC Direct Attack Division for further development, qualification, and production as a Joint Direct Attack Munition (JDAM) seeker component.		2.213	-
Title: Samurai (Kill Web Interoperability) Description: Samurai supports the CCMD's focus on Denied, Degraded, Intermittent, and Limited (DDIL) communications environments. USINDOPACOM, in partnership with the National Geo-Spatial Intelligence Agency (NGA), conducted a series of experiments focused on the delivery of geospatial intelligence (GEOINT) and intelligence products from the continental U.S. (CONUS), through regional and sub-regional, and down to the tactical operations layer. In FY 2024, Samurai deployed an additional theater-level GEOINT asset and continued additional CCMD DDIL exercises to develop tactical and operational-level GEOINT templates for small form factor hardware leveraging multi-spectral resilient transport and GEOINT organizational intelligence workflow. Samurai transitioned as a leave-behind capability in support of Joint forces and Allied partners in the USINDOPACOM area of operations.		2.600	-

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
Title: Scout (Collaborative Multi-Domain Autonomy) Description: Scout builds attributable, cost effective, long-distance, autonomous low-profile vehicles to accomplish a variety of missions. The platform minimizes detection from a variety of sensors using low observable attributes. In FY 2024, Scout finalized integration of hardware and software updates and conducted an operational assessment of the integrated system and non-kinetic payloads. In FY 2025, Scout transitions to the U.S. Naval Special Warfare Command (NSW) and the U.S. Special Operations Command (USSOCOM).		0.615	-
Title: Sea Archer (Weapons Kinetic / Non-Kinetic Effects) Description: Sea Archer holds key fixed military systems at risk at the onset of conflict. Additional details are classified. In FY 2024, Sea Archer integrated hardware and software aboard the host platform and conducted an operational demonstration and military utility assessment on an instrumented range. In FY 2025, Sea Archer transitions to PEO Unmanned and Small Combatants and PMS 340.		2.045	-
Title: Signal of Opportunity Receiver (SORcer) Enable Ionospheric Modeling (SEIM) (Sensors and Data Analytics) Description: SEIM delivers HF propagation data for operational awareness of the electromagnetic operating environment. Artificial intelligence (AI) and deep neural network (DNN) techniques are utilized to enable autonomous use of SORcer systems to support better targeting and decision-making for the joint warfighter. In FY 2024, SEIM conducted an operational demonstration and completed a military utility assessment. SEIM technologies transitioned to the Military Applications of Space Environment (MASE) program of record within Space Systems Command PEO Space Domain Awareness and Combat Power.		1.555	-
Title: Surface-Launched Advanced Munition Datalink (SLAMD) (Weapons Kinetic / Non-Kinetic Effects) Description: SLAMD develops and integrates a tactical projectile data link (PDL) into a gun-launched, maneuvering projectile to enable long-range precision fires in a GPS-denied environment. The data link is an enabler for communications between the projectile and ground-based tracking radar to enable mid-course corrections to the projectile's path and enables ground-to-round and round-to-round communications for tactical applications, such as swarming. In FY 2024, SLAMD conducted a final technical demonstration, an in-flight operational demonstration, and a military utility assessment. In FY 2025, SLAMD will transition to the U.S. Army for integration into the Extended Range Cannon Artillery/M777ER-fired munition, Cannon Delivered Area Effects Munition Armor, XM1155/Subcal, and Hypervelocity Gun Weapon System (HGWS) Mid-Tier Acquisition (MTA).		3.886	-
Title: Turul (Kill Web Interoperability) Description: Turul provides scalable, machine learning-enabled algorithms to find and fix fleeting targets to accelerate kill chain activities against time-sensitive targets. Information from these capabilities provides situational awareness to CCMD operators		1.200	-

UNCLASSIFIED

and can be used to tip and cue other sensor systems. In FY 2024, Turul executed a military utility assessment and transitioned to a U.S. Space Force (USSF) Space Systems Command (SSC) program of record that utilizes the Global Unification Environment (GLUE) used by CCMD Joint Intelligence Operations Centers (JOICs).				
Title: Next Generation Atomic Clock (NGAC) (Resilient Communications) Description: NGAC matures a small, atomic clock that can work in operational environments and provide precision timekeeping, at mission relevant timescales, in GPS-denied and spectrum-denied environments. Originally, two solutions were down selected to mature, one that can operate in high temperature and vibration environments and one that can meet available power budgets. Subsequently, NGAC down selected to a minimum viable product, and in FY 2024, matured and validated the technology (to include the development of brass board prototypes). In FY 2026, this effort continues development under the Resilient Communications Focus Area. (This effort is a Congressionally directed transfer of Project 375 NGAC from OUSD(S&T) to OUSD(MC)/P&E.)		22.128	-	-
Title: Joint Undersea Surveillance and Targeting (JUST) (Sensors and Data Analytics) Description: JUST provides a new capability to monitor changes to the undersea battlespace and seabed infrastructure by demonstrating intelligent autonomous unmanned underwater vehicle (UUV)-enabled target recognition and change detection capability enabling secure Joint Force offensive and defensive operations. In FY 2024, JUST conducted three technology demonstrations, an operational demonstration, and a military utility assessment. FY 2025 Plans: In FY 2025, JUST transitions to NAVSEA PMS 394 and PMS 406, and the Office of Naval Research's (ONR) Full-Spectrum Undersea Warfare Project. FY 2025 to FY 2026 Increase/Decrease Statement: Project concludes in FY 2025.		4.771	0.630	-
Title: Autonomous Multi-Domain Launcher (AML) (Weapons Kinetic / Non-Kinetic Effects) Description: AML develops and demonstrates an unmanned, cab-less, highly mobile, C-130 transportable Long Range Precision Fires (LRPF) launcher. The prototype launcher is capable of leader-follower autonomy, drive-by-wire, and remote launcher turret and fire control operation. The prototype launcher is also capable of handling/launching longer munitions (up to 20 feet in length) while remaining compatible with the current Multiple Launch Rocket System (MLRS) Family of Munitions (MFOM) (13 feet in length). In FY 2024, AML performed an operational demonstration, in support of Valiant Shield 24, successfully executing 15 multi-domain fire missions while navigating a non-line of sight maneuver course through a jungle environment. AML also successfully launched the first two Precision Strike Missiles (PrSM) used against a moving maritime target.		2.944	1.700	-

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
<i>FY 2025 Plans:</i> In FY 2025, AML will transition the prototype launcher and technical data package to PEO Missiles and Space, Strategic and Operational Rockets and Missiles (PM STORM) Project Office, Field Artillery Launchers (FAL) Division.			
<i>FY 2025 to FY 2026 Increase/Decrease Statement:</i> Project concludes in FY 2025.			
<i>Title:</i> Birdseye Yonder (BEYOND) (Sensors and Data Analytics) <i>Description:</i> BEYOND matures and integrates an advanced, photonic-based, radio frequency (RF) signal processor for detection, identification, and tracking of airborne threats. The sensor technology is an ultra-wideband, 360-degree, passive design using a novel physically assisted wideband correlator. The system will integrate into existing USEUCOM air defense sensor networks. In FY 2024, BEYOND delivered a technical design for a relocatable receiver processor, receiver hardware, and completed a technical demonstration.		3.000	3.000
<i>FY 2025 Plans:</i> In FY 2025, the BEYOND processor will be matured and tested, and will conduct an operational demonstration with a military utility assessment at an OUSD(R&E) T-REX event featuring small and large UAS threats. When complete, the BEYOND prototype will be delivered to U.S. Air Force Europe (USAF-E) Ramstein Air Defense Sector Integration Lab, for continued experimentation. The technical data will be delivered to USMC PEO Intel and PEO Land Systems Expeditionary Radars.			
<i>FY 2025 to FY 2026 Increase/Decrease Statement:</i> Project concludes in FY 2025.			
<i>Title:</i> Collaborative Artificial Intelligence (AI) for Predicting Enemy Course of Action (ECOA) (CAPE) (Kill Web Interoperability) <i>Description:</i> CAPE is an AI-enabled decision support software for predicting ECOAs. CAPE introduces a unique decision centric architecture not currently found in fielded systems and advances symbolic plan recognition, semantic networks, and mixed-initiative reasoning that facilitate human-machine teaming while automating ignorance identification and request for information generation. In FY 2024, CAPE conducted a technical demonstration of a software prototype capable of operational use by the USSF.		2.000	1.667
<i>FY 2025 Plans:</i> In FY 2025, CAPE transitions to the USSF's SSC, with initial deployments focused on the National Space Defense Center (NSDC).			
<i>FY 2025 to FY 2026 Increase/Decrease Statement:</i>			

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2026 Office of the Secretary Of Defense		Date: June 2025	
Appropriation/Budget Activity 0400 / 3	R-1 Program Element (Number/Name) PE 0603838D8Z / <i>Defense Innovation Acceleration (DIA)</i>	Project (Number/Name) 730 / <i>Concepts and Capabilities</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
Project concludes in FY 2025.			FY 2026
Title: HAYFINS (Sensors and Data Analytics) Description: HAYFINS fuses protection technologies, artificial intelligence/machine learning (AI/ML), and legacy systems, enabling freedom of maneuver in support of multidomain operations. Additional details are classified. In FY 2024, HAYFINS designed and developed an initial prototype for demonstration and assembly. FY 2025 Plans: In FY 2025, HAYFINS will complete a final prototype of the hardware and software package and conduct a military utility assessment. HAYFINS will transition system architecture, software, and prototype hardware to support acquisition activities for PEO Intelligence, Electronic Warfare, and Sensors. FY 2025 to FY 2026 Increase/Decrease Statement: Project concludes in FY 2025.		4.754	5.446
Title: Joint Radiant Touchstone (J-RTS) (Sensors and Data Analytics) Description: J-RTS is a tactical software vulnerability tool that provides warfighters with freedom of maneuver, functions as a key offensive warfare enabler, and provides awareness for disaggregated/disadvantaged users. Additional details are classified. FY 2025 Plans: In FY 2025, J-RTS transitions to the U.S. Navy's PMW 120 Ship's Signal Exploitation Equipment Increment Foxtrot program of record, and U.S. Space Force's (USSF) Space Systems Command (SSC) program of record utilizing a web version of the Integrated Solutions for Situational Awareness (ISSA). FY 2025 to FY 2026 Increase/Decrease Statement: Project concludes in FY 2025.		1.695	1.230
Title: Low-Altitude Future Vertical Take-off and Landing (VTOL) Long-Range Attack Missile (LRAM) (Weapons Kinetic / Non-Kinetic Effects) Description: LRAM builds upon the L3Harris Inc. Red Wolf air-launched unmanned air vehicle (UAV). The project develops a launcher and control interface for vertical takeoff and landing (VTOL) aircraft, kinetic payload, command and control architecture, and a seeker for autonomous over-the-horizon engagements. This weapon system concept significantly extends the lethal range of VTOL-launched weapons. Moreover, outfitting the VTOL fleet of tactical aircraft (H-1, H-60 series, AH-64, and Joint Future Vertical Lift) with this weaponized UAV dramatically increases the number of aircraft available for over-the-horizon strike. In FY 2024, LRAM refined the digital architecture (seeker and data link), developed a kinetic warhead, and conducted a live-fire test.		3.000	4.000

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2026 Office of the Secretary Of Defense		Date: June 2025	
Appropriation/Budget Activity 0400 / 3	R-1 Program Element (Number/Name) PE 0603838D8Z / <i>Defense Innovation Acceleration (DIA)</i>	Project (Number/Name) 730 / <i>Concepts and Capabilities</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
<i>FY 2025 Plans:</i> In FY 2025, LRAM will conduct an operational demonstration and transition to PEO Air, ASW, Assault, and Special Mission Programs, PEO Unmanned Aviation and Strike Weapons, and PMA 2-24 under the Joint Air-to-Ground Munition (JAGM) program of record.			
<i>FY 2025 to FY 2026 Increase/Decrease Statement:</i> Project concludes in FY 2025.			
<i>Title:</i> Rapid Large Area Clearance (RLAC) (Contested Logistics / Sustainment) <i>Description:</i> RLAC develops and integrates autonomous small Unmanned Aerial Systems (sUAS) and Unmanned Ground Vehicles (UGV) equipped with automatic target recognition to rapidly survey, detect, identify, and map both surface and buried unexploded explosive ordnance (UXO), and then use a compact laser or kinetic system to neutralize the UXO at stand-off distances. The ability to rapidly conduct large area clearance of unexploded ordnance is critical for logistics operations at air and seaports, and ground lines of communication. In FY 2024, RLAC developed survey, detection, geolocation/mapping, and identification capabilities for all surface targets and further integrated autonomy and communication capabilities onto the RLAC platforms.		5.850	4.800
<i>FY 2025 Plans:</i> In FY 2025, RLAC transitions the final prototypes of the sUAS and UGV with autonomy and communications packages and standoff neutralization systems to PEO Unmanned and Small Combatants and PMS 408 for use by U.S. Joint Service Explosive Ordnance Disposal military teams.			
<i>FY 2025 to FY 2026 Increase/Decrease Statement:</i> Project concludes in FY 2025.			
<i>Title:</i> ShadowCat (Resilient Communications) <i>Description:</i> ShadowCat is part of the Fully Networked Command, Control, and Communications (FNC3) problem-set. Additional details are classified.		1.000	1.164
<i>FY 2025 Plans:</i> In FY 2025, ShadowCat will conduct a technical demonstration, operational demonstration, and a military utility assessment. ShadowCat will transition to a classified program of record.			
<i>FY 2025 to FY 2026 Increase/Decrease Statement:</i>			

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2026 Office of the Secretary Of Defense		Date: June 2025		
Appropriation/Budget Activity 0400 / 3	R-1 Program Element (Number/Name) PE 0603838D8Z / <i>Defense Innovation Acceleration (DIA)</i>	Project (Number/Name) 730 / <i>Concepts and Capabilities</i>		
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025	FY 2026
Project concludes in FY 2025.				
Title: Prototyping Development Efforts to Fill Identified Gaps (Emerging Prototypes and Enablers) Description: In FY 2024, the Services, Joint Staff, and CCMDs identified several technology projects for accelerated development to fill identified gaps. These include Bandit, Blue Shield, Carbon Mine, Contested Logistics (CL) Acceleration, Cyber Shield Coalition, Denied Area Operations (DAO), Diamond Shield Coalition, Familiar Relative, Joint Explosives and Propellant Prototyping Project (JEP3L), Lithium-Ion Reliable in the Arctic (LiRA), Pacific Ecosystem for Cyber (PeCoC) Acceleration, Rapid Employment Explosive Formations (REEF), Sandals, Unmanned Port System (UPS), and various decoys. Completed prototypes will participate in future experimentation venues. FY 2025 Plans: In FY 2025, prototype development continued for the following technologies: JEP3L, LiRA, Sandals, and REEF. In addition, the Services, Joint Staff, and CCMDs identified FLEX for accelerated development to fill identified gaps. Additional projects will be selected and initiated during the year of execution. FY 2025 to FY 2026 Increase/Decrease Statement: This focus area ends in FY 2025. Beginning in FY 2026, all funding for Prototyping Development Efforts to Fill Identified Gaps will be accounted for under the new FY 2026 focus areas: Kill Web Interoperability, Resilient Communications, Sensors and Data Analytics, Collaborative Multi-Domain Autonomy, Contested Logistics/Sustainment, Weapons Kinetic/Non-Kinetic Effects, and Emerging Prototypes and Enablers.		56.858	25.468	-
Title: Kinetic Calypso (Collaborative Multi-Domain Autonomy) Description: Kinetic Calypso upgrades and extends the operational life of U.S. undersea weapons stockpiles through novel low-cost employment methods of sea mines and torpedoes capable of delivering deterrent and mission relevant effects in future conflicts. The project's results will support integration of foreign modular minelaying systems into U.S. or partner-nation capabilities, and the defense industrial base, to complement U.S. Pacific Fleet's (PACFLT) Hellscape concept. In FY 2024, Kinetic Calypso adapted and demonstrated sea mines and torpedoes for new weapons applications. FY 2025 Plans: In FY 2025, Kinetic Calypso will perform at sea demonstrations to establish key performance parameters, demonstrate kinetic effects, and select upgraded weapons. FY 2026 Plans: In FY 2026, Kinetic Calypso will conduct extensive rapid prototype testing with a focus on autonomous payload integration. Data collected on various payload integrations, during technical and operational demonstrations, will highlight the multi-mission concept		6.962	7.675	5.200

of unmanned surface and undersea vehicles and influence the transition of mission specific payload technologies at the end of FY 2026.				
FY 2025 to FY 2026 Increase/Decrease Statement: Funding decreases due to reduced resource requirements.				
Title: Maritime Platform ORCAstrate (Collaborative Multi-Domain Autonomy) Description: Maritime Platform ORCAstrate demonstrates and experiments with five unmanned surface vessels (USVs) designed to provide flexible payload delivery. These vessels support future experimentation and complement PACFLT's employment of lethal effects in high-end conflicts at scale, while also complicating and degrading the adversary's ability to prioritize and process maritime targets. Platforms will be equipped with modular common architectures for navigation controls, sensors, and resilient communications at range or in contested environments. In FY 2024, Maritime Platform ORCAstrate developed command and control systems for the unmanned platforms and performed technical demonstrations of the platforms at sea. FY 2025 Plans: In FY 2025, Maritime Platform ORCAstrate will continue experimentation on unmanned surface platforms while refining the command-and-control systems. Participation in technical and operational demonstrations will buy down risk associated with the integration of autonomy, sensors, and communications hardware onto platforms designed with a modular common architecture. FY 2026 Plans: In FY 2026, Maritime Platform ORCAstrate will conduct final operational demonstrations to produce test results outlining the effectiveness of platforms designed with a modular common architecture. A technical data package will accompany test results before transitioning to Naval Sea Systems Command (NAVSEA) PEO Unmanned and Small Combatants and PMS 420 at the end of FY 2026. FY 2025 to FY 2026 Increase/Decrease Statement: Funding decreases due to reduced resource requirements.		7.377	6.573	5.700
Title: Cross-Service Sensor Netting for Integrated Air and Missile Defense (CSSN) (Sensors and Data Analytics) Description: CSSN enables the distribution of air defense radar measurements between U.S. Army, U.S. Navy, and U.S. Marine Corps (USMC) air defense networks to realize a broader and deeper field of engagement for air and space threats. CSSN links the Navy's Cooperative Engagement Capability, and, by extension the USMC's Cooperative Tracking Network, to the Army's Integrated Fire Control Network. In FY 2024, CSSN conducted system integration lab predictive analysis, scenario development, risk assessment, and tactical code integration. FY 2025 Plans:		6.015	4.000	6.455

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2026 Office of the Secretary Of Defense		Date: June 2025		
Appropriation/Budget Activity 0400 / 3	R-1 Program Element (Number/Name) PE 0603838D8Z I Defense Innovation Acceleration (DIA)	Project (Number/Name) 730 I Concepts and Capabilities		
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025	FY 2026
In FY 2025, CSSN will conduct modeling, simulation, planning, and execution of multiple tracking exercises in preparation for a series of live fire engagements in FY 2027. FY 2026 Plans: In FY 2026, CSSN will complete track-exercises with version 2.0 software, hold test readiness reviews, and continue Concept of Operations (CONOP), Tactics, Techniques, and Procedures (TTPs), and modeling and simulation development. The project will transition to PEO Integrated Warfare Systems and PEO Missiles and Space; and the Navy Cooperative Engagement Capability (CEC), Army Integrated Battle Command System (IBCS), and USMC Composite Tracking Network (CTN) programs of record. FY 2025 to FY 2026 Increase/Decrease Statement: Funding increases due to additional resource requirements needed for live fire engagements in FY 2027.				
Title: Red-Black Integrated Networking for Space Data Transport (RiBN-SDT) (Resilient Communications) Description: RiBN-SDT dynamic routing is a software-centric solution for resilient information sharing across crypto-partitioned networks. This solution provides dynamic control of encrypted network clouds and individual data links and flows, enabling dynamic re-routing of information across the “black” network core, agnostic to the original configuration and pathway. In FY 2024, RiBN-SDT completed a critical design review, demonstrated initial capability, and completed experimentation and data collection to fully validate networking software. FY 2025 Plans: In FY 2025, RiBN-SDT will design and build the space-airborne ground prototypes and deploy the prototypes for user feedback. FY 2026 Plans: In FY 2026, RiBN-SDT will complete testing and demonstration of the RiBN-SDT prototypes (space-airborne and ground), and complete a military utility assessment to understand joint, large-scale deployment among the Services. Successful demonstration results will determine the specific program office to which the technology will transition, and the U.S. Space Force will determine an appropriate acquisition strategy and sustainment plan. FY 2025 to FY 2026 Increase/Decrease Statement: Funding decreases due to reduced resource requirements.		1.450	3.520	2.500
Title: Scabbard Dome (Sensors and Data Analytics) Description: Scabbard Dome develops and demonstrates solutions for protecting standoff munition seekers against directed energy (DE) countermeasures and weapons by delivering DE-resilient materials, that are low-size, weight, power, and cost (SWaP-C), for subsonic standoff weapon electro-optical/infrared/radio frequency (EO/IR/RF) seekers and apertures. This capability will enable employment of standoff munitions against DE weapons and DE-protected targets. Scabbard Dome will also		1.960	4.750	4.500

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2026 Office of the Secretary Of Defense		Date: June 2025

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
apply hardening or DE-resistance to the munitions themselves to increase weapon system effectiveness. In FY 2024, Scabbard Dome developed key performance parameters, conducted baseline testing, and designed a DE-hardened seeker. FY 2025 Plans: In FY 2025, Scabbard Dome will mature a prototype and perform hardened seeker validation tests. FY 2026 Plans: In FY 2026, Scabbard Dome will complete validation testing, perform an operational demonstration and military utility assessment, and transition to the Air Force Life Cycle Management Center, PMA-201, and industry. FY 2025 to FY 2026 Increase/Decrease Statement: Funding decreases due to reduced resource requirements.			
Title: Spatiotemporal Hybrid Open Optical Terminal for Enhanced Relay (SHOOTER) (Resilient Communications) Description: SHOOTER develops and demonstrates a network of novel, multi-user optical terminals to rapidly connect distributed forces in an operational environment. SHOOTER addresses gaps in multi-user secure, low-signature mission data information transport between airborne and Mid- and High-Altitude Platforms (HAP) and “at the halt” ground and expeditionary users. Current implementations of point-to-point free space optics (FSO) technology make it difficult to aggregate nodes to service multiple users. In FY 2024, SHOOTER transitioned current lab-rated terminals to ground-to-ground testing, and developed, tested, and demonstrated the terminal acquisition model. FY 2025 Plans: In FY 2025, SHOOTER will test multi-node data transport and optimized fast switching capability, while managing the underlying dynamic nature of air platforms and distributed ground users. FY 2026 Plans: In FY 2026, SHOOTER will continue development of fast acquisition algorithms, establish multi-node, seamless optical switching and conduct an operational demonstration. SHOOTER has multiple transition paths, including: the Air Force’s Advanced Battle Management System (ABMS), the Army’s Project Convergence, the Navy’s Project Overmatch, and the USMC’s Digital Interoperability Program and Expeditionary Advanced Ground Link (EAGL). FY 2025 to FY 2026 Increase/Decrease Statement: Funding decreases due to reduced resource requirements.		1.950	3.780
Title: Unmanned Logistics Systems for Semi-Submersibles (ULS/SS) (Contested Logistics / Sustainment) Description: ULS-SS delivers cargo handling capability for a companion prototype of a low-cost, covert, autonomous, low-profile vessel (ALPV) for logistics transport. This vehicle provides tactical mobility and critical resupply from ship-to-shore and inter-		3.670	5.580

island distribution networks. ULS-SS builds upon previous ALPV efforts to develop, integrate, and test the Material Handling Equipment (MHE) required for transloading (loading/offloading) efficiently and effectively in austere locations. ULS-SS also develops ancillary equipment to transport large, heavy payloads from an afloat craft to the shore. In FY 2024, ULS-SS developed MHE and unloading concepts and built prototypes and interfaces. FY 2025 Plans: In FY 2025, ULS-SS will integrate MHE into the craft, demonstrate ship-to-shore capability, and conduct developmental testing and fleet exercises. FY 2026 Plans: In FY 2026, ULS-SS will continue to mature expeditionary loading and unloading capabilities, demonstrate seaworthiness and maneuver capability, and transition to PEO Unmanned and Small Combatants and PMS 420 via the Marine Corps Combat Development Directorate. FY 2025 to FY 2026 Increase/Decrease Statement: Funding decreases due to reduced resource requirements.			
Title: Special Access Program (SAP) Assimilation and Integrated Operational Management (Emerging Prototypes and Enablers) Description: Continuously funded project. This project is comprised of two execution essentials that support the P&E enterprise: (1) Special Access Program (SAP) Assimilation, and (2) Warfighter Integrated Operational Management. This project executes a select number of highly classified projects in areas such as hypersonics and counter-hypersonics, time-sensitive targeting, electronic miniaturization, electronic countermeasures, advanced mobile / ad hoc network communications, space situational awareness, cyber, counter-ISR, decoys and deception, and persistence surveillance. This element funds SAP assimilation and synchronization across the joint prototyping activities to ensure DIA efforts and investments remain fully SAP informed while maintaining requisite security compliance. Liaising directly with the joint warfighter (e.g., CCMDs and Services) on prototype development is paramount to avoid unwanted duplication, propagate collaboration, and achieve joint interoperability. FY 2025 Plans: Provide integrated operational management with joint Service and CCMD direct participation in shaping and executing operational prototypes. Sponsor and execute projects selected by OUSD(R&E) leadership that are fully SAP-informed and synchronized. FY 2026 Plans:		2.000	1.000
			1.000

Continue providing integrated operational management with joint Service and CCMD direct participation in shaping and executing operational prototypes. Sponsor and execute projects selected by OUSD(R&E) leadership that are fully SAP informed and synchronized.						
Title: Combining Information Content with Embedding Relationship Optimization (CICERO) (Collaborative Multi-Domain Autonomy) Description: CICERO automates foundational all-source intelligence analysis of units, equipment, and infrastructure, using software, artificial intelligence/machine learning (AI/ML), and statistical/qualitative analytic methods/techniques. After extracting relevant data concerning location, quantity, function, operational readiness, and disposition/relationships to other objects, CICERO updates intelligence data repositories. This allows the intelligence community to better understand enemy order of battle over long periods of time by linking new intelligence with existing reporting. FY 2025 Plans: In FY 2025, CICERO will continue development before transitioning, in FY 2026, to the Defense Intelligence Agency Analysis and Integration Office for deployment within the Defense Intelligence All-Source Analysis Enterprise (DIAAE) production workflows. CICERO will reach initial operational capability in FY 2027 at USINDOPACOM and/or USEUCOM. FY 2025 to FY 2026 Increase/Decrease Statement: Project concludes in FY 2025.				-	2.250	-
Title: Joint Ubiquitous Interoperable Communication Element (JUICE BOX) (Kill Web Interoperability) Description: JUICE BOX develops a communication method design and trade-off summary. Additional details are classified. FY 2025 Plans: In FY 2025, JUICE BOX will conduct a preliminary demonstration, with prospective transition to USSOCOM in FY 2026. FY 2025 to FY 2026 Increase/Decrease Statement: Project concludes in FY 2025.				-	1.500	-
Title: Low-cost Uncrewed Combat Attack System (LUCAS) L700 (Medium Configuration - 700 nautical miles range) (Weapons Kinetic / Non-Kinetic Effects) Description: LUCAS L700 is a cost-effective unmanned prototype in development for deployment at scale. Additional details are classified. FY 2025 Plans:				-	4.000	-

UNCLASSIFIED

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
In FY 2025, LUCAS L700 will deliver additional prototypes and be tested at various exercises to demonstrate feasibility. LUCAS L700 systems will undergo weapon development, safety, and certification with both the Army and Navy, before transitioning to the USMC. FY 2025 to FY 2026 Increase/Decrease Statement: Project concludes in FY 2025.			
Title: Passive Multi-Spectral Air Surveillance Kill Chains (PMASKC) Acceleration (Sensors and Data Analytics) Description: PMASKC Acceleration hastens hardware development for a passive multispectral air surveillance prototype. PMASKC uses passive sensors to locate and track airborne targets in a full-hemispherical volume to generate a comprehensive common operating air picture. FY 2025 Plans: In FY 2025, PMASKC Acceleration will evaluate sensors from multiple modalities to feed the fusion engine. When completed, the PMASK Acceleration track correlator will be available for further experimentation by the Services. FY 2025 to FY 2026 Increase/Decrease Statement: Project concludes in FY 2025.		-	3.000
Title: Broad EA Technology for Launched Effects (BEATLE) (Weapons Kinetic / Non-Kinetic Effects) Description: BEATLE integrates radio frequency (RF) jamming apertures, techniques, and control software onto the L3 Harris Inc. Red Wolf unmanned aircraft to demonstrate fully mission representative electronic attack in a mission representative test environment. The project leverages low size, weight, and power (SWaP) technologies and lessons learned from current developmental programs. FY 2025 Plans: In FY 2025, BEATLE will integrate new payloads and apertures into the developed platform and begin to implement and test the required system changes. FY 2026 Plans: In FY 2026, BEATLE will finalize a go/no-go decision for initial flight tests, conduct risk reduction flight testing, and complete a technical demonstration event. After completing an operational demonstration and assessment, BEATLE will transition to the U.S. Army PEO Aviation PM for Uncrewed Aircraft Systems. FY 2025 to FY 2026 Increase/Decrease Statement:		-	3.625
			3.500

Funding decreases due to reduced resource requirements.			FY 2026
Title: Containerized Agile Expeditionary and Rapid Beach Preparation (CONAER) (Contested Logistics / Sustainment) Description: CONAER further develops SUBMAT to allow customized installations tailored to actual beach conditions. SUBMAT is a new lightweight matting system, developed by the Army Engineer Research and Development Center (ERDC), that, when filled with sandy material at a deployed location, creates a stable roadway capable of supporting the movement of heavy vehicles through the surf and on the beach. CONAER also provide planners with site selection and analysis tools to choose landing locations based on beach data, vessel type, vehicle type, and available materials such as SUBMAT or Lightweight Quay Wall Fiber Reinforced Polymer. FY 2025 Plans: In FY 2025, CONAER will focus on scaled experimentation to improve sea state resiliency and durability and will demonstrate the quay wall construction. FY 2026 Plans: In FY 2026, CONAER will demonstrate the kit deployment and packaging, de-beaching capability, and the remote beach and port assessment tools. CONAER will deliver leave-behind articles for transition to the U.S. Army Product Manager Combat Support and Combat Service Support, U.S. Navy, and USMC. FY 2025 to FY 2026 Increase/Decrease Statement: Funding increases due to additional resource requirements.		-	1.250
			2.050
Title: Contested Logistics Ops by Robots for Expeditionary Recon via SHARC Swarms (CLOBBER S2) (Contested Logistics / Sustainment) Description: CLOBBER S2 develops and demonstrates a 45-foot version of the Navy's SHARC 38-foot prototype landing craft developed under a Navy SBIR. CLOBBER S2 also integrates autonomy and develops the CONOPs and TTPs for multiple missions such as logistics and force projection. FY 2025 Plans: In FY 2025, CLOBBER S2 will demonstrate the SHARC prototype, test networking and autonomy capabilities, and complete the design for the SHARC 45-foot prototype. FY 2026 Plans:		-	1.945
			2.435

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
In FY 2026, CLOBBER S2 will produce two SHARC prototypes for leave-behind capability with the U.S. Naval Forces Central Command's Unmanned Task Group 59.1 for continued demonstration, operational use, TTP development, and CONOP development.			
FY 2025 to FY 2026 Increase/Decrease Statement: Funding increases due to additional resource requirements.			
Title: Sea-based Interrogation and Remote Emulation Node (SIREN) (Sensors and Data Analytics) Description: SIREN obfuscates adversarial perception of the battle space and electronic surveillance systems through electronic intelligence (ELINT), signals intelligence (SIGINT), and communications intelligence (COMINT) manipulation and synthesis creating electronic decoys. These decoys allow Commanders to shape the battle space through maneuvering capability, perceived force multiplier, and the ability to occupy adversarial resources. Additional details are classified. FY 2025 Plans: In FY 2025, SIREN will integrate onto unmanned surface vessels (USVs) and be tested against various radar systems. Through this process, SIREN's emissions will be fine-tuned. This system is modular payload compliant, ensuring it is capable of being utilized across a broad spectrum of vessels. FY 2026 Plans: In FY 2026, SIREN will complete development and transition to the General Services Administration (GSA) schedule for future use by U.S. government (USG) customers.		-	4.000
Title: Talon SPEAR (Collaborative Multi-Domain Autonomy) Description: Talon SPEAR provides a globally networked point defense system to counter unmanned aircraft systems (cUAS) and UAS swarms. The project will deliver upgrades to fielded cUAS systems to reduce acquisition costs related to the recurring disposal of legacy systems and the development, procurement, and fielding of new systems. FY 2025 Plans: In FY 2025, Talon SPEAR will focus on domestic protection, and verify that all effects can run concurrently, without conflicts and within processing limits. The project will demonstrate integration of the CORIAN aperture and SPEAR server software and hardware and upgrade the existing hardware. FY 2026 Plans:		-	1.000
			2.000

Appropriation/Budget Activity 0400 / 3	R-1 Program Element (Number/Name) PE 0603838D8Z / <i>Defense Innovation Acceleration (DIA)</i>	Project (Number/Name) 730 / <i>Concepts and Capabilities</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
In FY 2026, Talon SPEAR will conduct ground-based testing to verify the system can detect targeted UASs and validate effects against those targets. The project will deliver four prototype hardware units to the Intelligence Community (IC), Pentagon Force Protection Agency, and the Navy N-4 counter-SHORE program.			
FY 2025 to FY 2026 Increase/Decrease Statement: Funding increases due to additional resource requirements.			
Title: GEO Satellite Ranging (GSR) (Sensors and Data Analytics)		-	1.000
Description: GSR aims to deliver expeditionary space domain awareness (SDA) capabilities to U.S. Space Command (USSPACECOM) in support of theater operations. The proposed system will allow operators to track and rapidly generate trajectory data for previously uncorrelated or actively maneuvering spacecraft and detect faint objects orbiting near high value assets.			5.000
FY 2025 Plans: In FY 2025, GSR will perform initial on-sky data collects to develop and test downstream algorithms. Technical milestones include: ladar collects with upgraded ranging detector; slow-time orbit determination with new ranging data; and data products pushed to the Unified Data Library (UDL). Each of these milestones are considered individual subsystem steps forward, which are needed for integrated system functionality.			
FY 2026 Plans: In FY 2026, GSR will focus on tightening integration of the individual milestones above and streamlining the process from measurement to pushed data. The end goal is to derive orbital information in under 30 minutes from measurements.			
FY 2025 to FY 2026 Increase/Decrease Statement: Funding increases due to additional resource requirements.			
Title: Mine Counter Measure System of Systems (MCM SoS) (Collaborative Multi-Domain Autonomy)		-	1.000
Description: MCM SoS accelerates the development of advanced, small class, unmanned underwater vehicles (UUVs) with advanced sensors and technologies to identify safe routes to ports by providing a clear understanding of underwater threats, including explosive threats and other hazards to navigation.			4.800
FY 2025 Plans: In FY 2025, MCM SoS will accelerate technology maturation of advanced sensors for the UUVs and will plan for technology demonstrations to improve threat detection, localization, and area coverage for military operations.			
FY 2026 Plans:

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
In FY 2026, MCM SoS will continue to mature technologies for demonstration while continuing to advance the full sensor suite for demonstrations in FY 2027 a military utility assessment in FY 2028.			
FY 2025 to FY 2026 Increase/Decrease Statement: Funding increases due to additional resource requirements.			
Title: Technology Readiness Experimentation (T-REX) and Indiana National Guard (INNG) Description: T-REX provides the resources for joint experimentation with technology readiness level 5-7 projects in an operationally relevant environment. The experimentation, which also includes allies and partners, facilitates more informed Senior Leader resourcing decisions to accelerate the transition of warfighting capabilities. In FY 2024, experimentation included 78 projects from industry, the Services, CCMDs, and Coalition Partners, and was principally conducted as part of the OUSD(R&E) sponsored Indiana T-REX campaign of events. FY 2025 Plans: In FY 2025, T-REX will support one Limited Objective Experimentation and one T-REX event in Indiana to assess ~100 projects from Industry, the Services, the CCMDs, and Coalition Partners focusing on counter-Unmanned Aerial Systems (c-UAS) and Integrated Base Defense. Additionally, support is provided to various OCONUS joint experimentation venues based on operational need and utility. FY 2026 Plans: In FY 2026, T-REX will support two T-REX events in Indiana to assess ~120 projects from Industry, the Services, the CCMDs, and Coalition Partners focusing on multi-domain uncrewed experimentation, c-UAS, Integrated Base Defense, and CCMD Priorities. Additionally, support is provided to various OCONUS joint experimentation venues based on operational need and utility. FY 2025 to FY 2026 Increase/Decrease Statement: Funding increases due to additional resource requirements.		-	13.800
Title: Alternative Positioning, Navigation, and Timing (PNT) for Acceleration in Platforms and Weapons (Resilient Communications) Description: Alternative PNT for Acceleration in Platforms and Munitions will identify promising, innovative, alternative PNT technologies and enabling technologies to assure PNT meets warfighter needs in navigation warfare (NAVWAR) and GPS-contested/denied environments. Individual efforts are identified and refined throughout the year of execution through outreach and discovery engagements, including pitch days with industry and non-traditional performers. Prospective efforts are closely coordinated with the Services to deconflict, improve jointness, and increase transition to Service acquisition programs. These investments will acceleration the maturity, integration, and fielding of alternative PNT solutions to Global Navigation Satellite Systems (GNSS) and military Global Positioning System (GPS).		-	0.000

Appropriation/Budget Activity 0400 / 3	R-1 Program Element (Number/Name) PE 0603838D8Z / <i>Defense Innovation Acceleration (DIA)</i>	Project (Number/Name) 730 / <i>Concepts and Capabilities</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
<i>FY 2026 Plans:</i> In FY 2026, this effort plans to initiate exploration and maturation of alternative PNT technologies and sensors across all warfighting domains and all contested/denied environments. These solutions will leverage advancements in modular open systems approach for PNT, data fusion algorithms, new PNT waveforms, non-RF datasets and sensors, and PNT architectures. In FY 2026, this effort will integrate, fuse data, and optimize PNT sensors onto specific platforms and test in a denied environment. The PB26 Control is actually \$13.860M. This will be corrected in the Budget Errata. <i>FY 2025 to FY 2026 Increase/Decrease Statement:</i> The FY 2026 request for DIA includes \$13.860 million of mandatory (reconciliation) funds. The mandatory funds will initiate exploration and maturation of alternative PNT technologies and sensors for platforms and munitions as consistent with Department priorities. Further information for this reconciliation request is provided in Chapter 2 of the Reconciliation Exhibit.			
<i>Title:</i> Kill Web Interoperability Focus Area <i>Description:</i> Kill Web Interoperability explores the process by which Joint Force Commanders plan, direct, coordinate, and control forces to accomplish assigned missions and enable Joint kill webs. Individual efforts are identified and refined throughout the year of execution through interactions with industry, academia, Service representatives, and CCMDs. Prospective efforts are closely coordinated with the CCMDs and Services to deconflict, improve jointness, and increase transition to Service acquisition programs. Candidate prototype projects undergo a selection process that assesses joint warfighter impact, transition potential, and technical merit/feasibility. Selected sub-projects target key capabilities that enable leap-ahead improvements in kill web interoperability. <i>FY 2026 Plans:</i> Initiate Kill Web Interoperability efforts in support of emergent operational gaps in collaboration with the joint Services and CCMDs. <i>FY 2025 to FY 2026 Increase/Decrease Statement:</i> The increase from FY 2025 to FY 2026 is to provide funding for Kill Web Interoperability efforts.		-	-

selection process that assesses joint warfighter impact, transition potential, and technical merit/feasibility. Selected sub-projects target key capabilities that enable leap-ahead improvements in resilient communications.			
FY 2026 Plans: Initiate Resilient Communications efforts in support of emergent operational gaps in collaboration with the joint Services and CCMDs.			
FY 2025 to FY 2026 Increase/Decrease Statement: The increase from FY 2025 to FY 2026 is to provide funding for Resilient Communications efforts, including the continued maturation and transition of the Next Generation Atomic Clock (NGAC).			
Title: Sensors and Data Analytics Focus Area Description: Sensors and Data Analytics explores networks of sensors and data collection assets, data analysis, and dissemination resources used to provide information to the Joint force about strategic and tactical threats. Individual efforts are identified and refined throughout the year of execution through interactions with industry, academia, Service representatives, and CCMDs. Prospective efforts are closely coordinated with the CCMDs and Services to deconflict, improve jointness, and increase transition to Service acquisition programs. Candidate prototype projects undergo a selection process that assesses joint warfighter impact, transition potential, and technical merit/feasibility. Selected sub-projects target key capabilities that enable leap-ahead improvements in sensors and data analytics.		-	-
FY 2026 Plans: Initiate Sensors and Data Analytics efforts in support of emergent operational gaps in collaboration with the joint Services and CCMDs.			
FY 2025 to FY 2026 Increase/Decrease Statement: The increase from FY 2025 to FY 2026 is to provide funding for Sensors and Data Analytics efforts.			
Title: Collaborative Multi-Domain Autonomy Focus Area Description: Collaborative Multi-domain Autonomy explores the use of multi-domain uncrewed systems and autonomy to increase warfighting capabilities and to mitigate/negate risk to warfighters. Individual efforts are identified and refined throughout the year of execution through interactions with industry, academia, Service representatives, and CCMDs. Prospective efforts are closely coordinated with the CCMDs and Services to deconflict, improve jointness, and increase transition to Service acquisition programs. Candidate prototype projects undergo a selection process that assesses joint warfighter impact, transition potential, and technical merit/feasibility. Selected sub-projects target key capabilities that enable leap-ahead improvements in uncrewed/ multi-domain autonomy.		-	-

FY 2026 Plans: Initiate Collaborative Multi-Domain Autonomy efforts in support of emergent operational gaps in collaboration with the joint Services and CCMDs.			
FY 2025 to FY 2026 Increase/Decrease Statement: The increase from FY 2025 to FY 2026 is to provide funding for Collaborative Multi-Domain Autonomy efforts.			
Title: Contested Logistics/Sustainment Focus Area Description: Contested Logistics / Sustainment explores the coordinated use, synchronization, and often sharing of logistics resources to deploy, support, and sustain highly dispersed joint forces in highly contested environments. Individual efforts are identified and refined throughout the year of execution through interactions with industry, academia, Service representatives, and CCMDs. Prospective efforts are closely coordinated with the CCMDs and Services to deconflict, improve jointness, and increase transition to Service acquisition programs. Candidate prototype projects undergo a selection process that assesses joint warfighter impact, transition potential, and technical merit/feasibility. FY 2025 to FY 2026 Increase/Decrease Statement: The increase from FY 2025 to FY 2026 is to provide funding for Contested Logistics/Sustainment efforts.			
Title: Weapons Kinetic / Non-Kinetic Effects Focus Area Description: Weapons Kinetic / Non-Kinetic Effects explores the delivery of weapon systems and long-range kinetic and non-kinetic effects in support of joint offensive and defensive tasks to create specific lethal effects on a target. This area includes counter positioning, navigation, and timing, and techniques designed to deceive enemy observers and/or mitigate, disrupt, or negate adversary capabilities. Individual efforts are identified and refined throughout the year of execution through interactions with industry, academia, Service representatives, and CCMDs. Prospective efforts are closely coordinated with the CCMDs and Services to deconflict, improve jointness, and increase transition to Service acquisition programs. Candidate prototype projects undergo a selection process that assesses joint warfighter impact, transition potential, and technical merit/feasibility. A. Mission Description and Budget Item Justification

Innovation and Modernization (I&M) focuses on addressing the Department of Defense's (DoD) current priority challenges in near real-time, through innovation discovery and leap-ahead prototyping. Activities include early exploration of low-cost potentially game-changing technologies and concepts, harnessing non-traditional performers and small business innovation to address DoD modernization and capability challenges. I&M acts as an innovation accelerator by funding discovery efforts and the development of prototypes to identify and mature solutions for joint capability gaps. I&M supports DoD modernization through multi-year projects with targeted technology and capability thrusts that are identified, selected, and executed within the year of execution. These efforts support technology maturation and lead to transition through partnerships with Services, Combatant Commands (CCMDs), and other defense agencies to enable effective, affordable, and critically needed early-stage prototype technologies. I&M achieves this through a tailored execution model that:

- Creates an innovation pipeline to support key experimentation and transition efforts, such as the Rapid Defense Experimentation Reserve (RDER), targeting DoD priorities and capability gaps
- Is informed by Department-level strategies and priorities including the interim National Defense Strategy, Joint Warfighting Doctrine, CCMD priorities, and the OUSD(R&E) critical technology areas
- Leverages and coordinates innovation from all sources, including Service laboratories, Federally Funded Research and Development Centers (FFRDCs)/University Affiliated Research Centers (UARCs), the defense industry, small businesses, non-traditional performers, and academia
- Responds rapidly with the ability to identify and fund prototypes within the year of execution to accelerate the rate of innovation and address emerging opportunities and threats
- Leverages Service, defense agency, and industry investments through partnerships that share risk and increase alignment with OUSD(R&E) priorities
- Incorporates transition sponsor participation during project development, prototyping, and evaluation

With funds available throughout the year of execution, I&M enables the OUSD(R&E) to identify, accelerate, and rapidly transition innovation from all sources that otherwise, would not be realized through traditional research and development pathways. This execution model causes I&M to lag traditional RDT&E obligation and execution benchmarks, however, since inception I&M has achieved an unbroken 100% obligation rate. Accordingly, I&M can be responsive and flexible to the DoD and joint warfighter needs, supporting rapid prototyping to meet immediate capability needs or game-changing technologies that maintain technological superiority and create enduring change.

I&M's focus on innovation discovery with a flexible execution model allows for rapid innovation through new technology and capability thrusts supported by joint and interagency partnerships with clearly defined milestones and risk reduction. Prototyping efforts are identified throughout the year by leveraging engagements with industry, Service laboratories, FFRDCs, and other innovation centers. Individual projects generally span 12 to 24 months, typically at a cost of less than \$2.000 million.

In FY 2025, Project 731 (Innovation and Modernization) was eliminated with funding transferred to Project 730 (Concepts and Capabilities).				
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025	FY 2026
Title: Echelon (Sensors and Data Analytics) Description: Echelon developed a common digital twin technical framework capable of supporting a wide variety of military RF systems. Echelon supports virtual testing of digital twin prototypes in a highly accurate, physics-based simulated operational environment, enabling the DoD to evaluate the effectiveness of prototype systems or subsystems in realistic environments and against red threats early in the development phase. The developed high-fidelity, multi-physics framework enables Service research and acquisition programs to mature digital twin prototypes prior to purchasing extensive hardware, enabling programs to shorten the development lifecycle of current system upgrades and next generation systems. This effort includes the hardware and software implementation of the first instantiation of the Echelon technical framework. In FY 2024, Echelon completed validation and executed a multi-function demonstration of multiple RF digital twins performing their respective RF mission, operating simultaneously, and interacting within the same high-fidelity multi-physics environment before transitioning to the U.S. Air Force and U.S. Army.		2.300	-	-
Title: Artemis (Sensors and Data Analytics) Description: Artemis developed and demonstrated a sensor package optimized for high-altitude operations. These sensors are packaged to minimize size, weight, and power (SWaP) requirements within a single multi-function stratospheric capable package. In FY 2024, activities included testing and demonstration of the Artemis multi-function RF sensor package on a surrogate fixed-wing aircraft prior to a performance demonstration during stratospheric flight. Following demonstration, the multi-function RF sensor package transitioned to the U.S. Army for qualification testing.		1.350	-	-
Title: Advanced Tactical Communications (ATC) (Resilient Communications) Description: Leveraging novel technologies, the ATC project developed a low SwaP communications capability that operates outside of the traditional radio frequency (RF) spectrum. The developed capability provides up to a 100-fold increase in communication bandwidth enabling new and novel warfighting capabilities on SwaP constrained platforms such as tactical ground vehicles and small unmanned aerial systems. In FY 2024, final refinements were made to the prototype subsystems, followed by manufacturing, integration, and testing of the final prototype. The ATC project culminated in a final test and evaluation of the integrated prototype in an operationally relevant environment before transitioning to the U.S. Army.		1.575	-	-
Title: Extended Range Threat Detection (Sensors and Data Analytics) Description: Extended Range Threat Detection provides the ability to engage advanced threats at greater ranges through software enhancements. These software upgrades significantly increase tracking range providing an improved capability for		1.900	-	-

advanced defense. Additional details are classified. In FY 2024, the project refined capabilities, drafted Concepts of Operations (CONOPS), and completed development for final testing at two field demonstrations before transitioning to the U.S. Army.			
Title: AM-Enhanced Lattice Castings (Emerging Prototypes and Enablers) Description: AM-Enhanced Lattice Castings uses distributed desktop-scale additive manufacturing to create casting patterns, deploy casting methodologies and generate large-scale intricate lattice-enhanced design concepts. In FY 2024, full-scale castings were produced and tested to demonstrate scale-up, cost metrics, and performance targets before transitioning to the Defense Threat Reduction Agency (DTRA) for manufacturing large-scale, advanced concepts in mission critical applications.		1.200	-
Title: Small 3D Printed Unmanned Aerial Vehicles (UAVs) (Collaborative Multi-Domain Autonomy) Description: Small 3D Printed UAVs developed a low-cost UAV utilizing a low-cost sensor array, commercial-off-the-shelf (COTS) parts, and 3D printing to reduce cost. Additional details are classified. In FY 2024, the project focused on end-to-end development and high fidelity sensing before transitioning to classified DoD partners.		1.800	-
Title: Vector Magnetic Navigation (Resilient Communications) Description: Vector Magnetic Navigation develops and tests an innovative navigation capability for GPS-denied environments using a diamond vector sensor to provide mission critical navigation performance improvements over current state-of-the art sensors. The project combines magnetic navigation for jam-resistant alternative navigation with diamond vector sensors for robust accuracy and attitude. In FY 2024, the project began integration of the diamond magnetometer hardware and pntOS-based magnetic navigation software onto the test platform. In FY 2025, Vector Magnetic Navigation completes development and testing before transitioning to DoD partners.		1.350	-
Title: Low-SWaP Anti-Jam Antenna (AJA) for Navigation Systems (Resilient Communications) Description: Low-SWaP AJA miniaturized existing anti-jam (AJ) technology into a dismounted form factor and integrated the unit with current and future dismounted Global Positioning System (GPS) systems. The effort leveraged an existing government-owned AJ design applicable for U.S. Army ground assured positioning, navigation, and targeting (PNT) systems and advances this design while reducing overall cost and SWaP. In FY 2024, the project continued development by miniaturizing the antenna to a hand-held form factor; integrating the antenna with the GPS receiver; and attending the PNT Assessment Exercise (PNTAX) 24 field event before transitioning, in FY 2025, the project transitions to the U.S. Army's C5ISR Center Soldier Integrated PNT Science and Technology (S&T) in support of the Dismounted Assured PNT System (DAPS) program of record.		2.000	-

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
Description: Resilient positioning, navigation, and timing (PNT) develops new capabilities for alternative PNT to ensure and enhance situational awareness in contested environments. This focus area explores technologies and capability concepts through platforms, command networks, and soldier systems, to extend the range of control and protect front-line warfighters and allies. Individual efforts are identified and refined throughout the year of execution through outreach and discovery engagements, including pitch days with industry and non-traditional performers. Prospective efforts are closely coordinated with the Services to deconflict, improve jointness, and increase transition to Service acquisition programs. These investments support targeted efforts, with co-funding from development and transition partners to prototype solutions for augmenting Global Navigation Satellite Systems (GNSS) and provide backup systems. In FY 2024, I&M executed and transitioned multiple Resilient PNT projects, including: • PNT Chain: This project delivered assured PNT to networked subscribers. The project created and demonstrated a prototype system-of-systems, consisting of unique hardware executing novel algorithms that delivers assured PNT. In FY 2024, the prototype completed development and performed testing and assessment of novel algorithms on progressively larger scales before transitioning to multiple Services. • RASCAL: This project developed a novel, exportable system to enable small, unmanned aircraft systems (UAS) to navigate to points of interest in denied and degraded environments using alternative means of navigation. Additional details are classified. Prototype development was completed in FY 2024 before transitioning to the U.S. Army. • LAMPOST: This project designed and fabricated a novel millimeter-scale hydrophone allowing a larger number of sensors to be deployed in each system, increasing the areal coverage and sensor performance. In FY 2024, the project completed fabrication and testing of the prototype hydrophone before transitioning to the U.S. Navy after an ocean-based demonstration. • Beckett: This is a classified program. Additional information is available upon request. Efforts concluded at the end of FY 2024 with the developed capability transitioning to classified partners. FY 2025 Plans: FY 2025 plans include continued development of physical hardware, software, concepts, and related systems or networks. These solutions will leverage advancements in commercial autonomy, indoor and underground navigation, and opportunities in an increasingly connected world, particularly through innovation from small businesses and non-traditional performers. Each prototype represents a component of the Resilient PNT project with multiple on-ramps and rapid innovation cycles to maximize the potential impacts for DoD modernization through innovation. FY 2025 to FY 2026 Increase/Decrease Statement: In FY 2026, funding for this focus area decreases to support acceleration of other high priority prototypes addressing the DoD's current priority challenges.			
Title: Autonomy at the Tactical Edge Focus Area (Collaborative Multi-Domain Autonomy)		3.240	10.630
			-

UNCLASSIFIED

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
Description: Autonomy at the Tactical Edge explores joint mission capabilities to enhance the lethality of the Joint Force, reduce the time to make critical decisions, autonomously distribute tasking and orders, and protect warfighters through increased use of low-cost, attritable, autonomous systems and enabling intelligent networks. Individual efforts are identified and refined throughout the year of execution through outreach and discovery engagements, including pitch days with industry and non-traditional performers. Prospective efforts are closely coordinated with the Services to deconflict, improve jointness, and increase transition to Service acquisition programs. Selected prototypes target key capabilities that enable leap-ahead improvements in intelligent autonomous systems with cost effective investments from small business and non-traditional performers, aligning with DoD priorities. Solutions may build upon commercial autonomy products, providing a rapid, alternative pathway to military capabilities. These projects leverage advances in high performance computing, autonomy, and machine learning to transfer cognitive burden closer to the point of collection and action. In FY 2024, I&M executed and transitioned multiple Autonomy at the Tactical Edge projects, including: • Autonomous Low-Profile Vessel (ALPV): This project designed, developed, and tested an autonomous maritime semi-submersible logistics platform prototype capable of transporting up to a 10-ton payload across large distances of the ocean with minimal visibility and possibility of detection. The low-profile and low-cost platform provides an innovative logistics solution to support the Joint Forces in austere locations. In FY 2024, final enhancements of the prototypes for autonomy and sea worthiness were completed, with the final craft capable of demonstrating long range, unattended, logistics resupply prior to transitioning to the USMC for additional development. • Modular Autonomous sUAS Swarm Delivery System (MASS-DS): This project provided a versatile set of domestically produced, AI-enabled, low-cost, attritable, small, unmanned aircraft systems (UAS) capable of being deployed in large numbers from a variety of crewed and uncrewed platforms and survivable in GPS/communications denied environments to perform intelligence, surveillance, and reconnaissance (ISR) tasks. In FY 2024, the MASS-DS airframes were evaluated at an OUSD(R&E) Technology Readiness Exercise (T-REX) event and a U.S. Air Force Special Operations Command (AFSOC) test event series prior to transitioning to the AFSOC sUAS System Program Office. • Identity Warrior: This project leveraged advances in optics, cloud computing, and artificial intelligence/machine learning (AI/ML) to passively capture and analyze human signatures at a distance. Identity Warrior screens individuals against known adversaries in real-time and provides automated reporting of significant events on existing Android computing platforms used throughout the Joint Force. In FY 2024, the project completed operational assessments with end users prior to transitioning to the U.S. Army, USMC, and USSOCOM. • TINCAN (Project 3750): This project developed technologies for information sharing and distributed collaboration. Additional details are classified. The prototype was completed in FY 2024 before transitioning to classified DoD partners. FY 2025 Plans:

Exhibit R-2A, RDT&E Project Justification: PB 2026 Office of the Secretary Of Defense		Date: June 2025	
Appropriation/Budget Activity 0400 / 3	R-1 Program Element (Number/Name) PE 0603838D8Z / <i>Defense Innovation Acceleration (DIA)</i>	Project (Number/Name) 731 / <i>Innovation and Modernization</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
FY 2025 plans include continued maturation of enhanced capabilities for multiple autonomous systems to cooperatively interact; development of agile computer vision systems; tools to fuse and infer information from a wide variety of sensors and datasets; autonomous task discrimination and prioritization; autonomous operation in complex terrain; collaborative systems for efficient distribution of contested logistics; data pre-processing to reduce bandwidth requirements for fully integrated command and control; and human-machine collaborative decision making providing faster-than-human response to threats. These efforts will examine common software platforms and modular open architecture systems to reduce development cost, increase collaboration among manned and unmanned platforms, and inform requirements. <i>FY 2025 to FY 2026 Increase/Decrease Statement:</i> In FY 2026, funding for this focus area decreases to support acceleration of other high priority prototypes addressing the DoD's current priority challenges.			
<i>Title:</i> Innovative Concepts for Counter C5ISR Focus Area (Sensors and Data Analytics) <i>Description:</i> Controlling the modern battlespace requires controlling the flow of information. Although traditionally a defense only technology area, advances in commercial sensors and apertures, autonomy, low-cost space platforms, and artificial intelligence or machine learning allow for innovative applications of commercial technology to address Joint Counter-Command, Control, Communications, Computers, Cyber, Intelligence, Surveillance and Reconnaissance (C-C5ISR) gaps. Individual efforts are identified and refined throughout the year of execution through outreach and discovery engagements, including pitch days with industry and non-traditional performers. Prospective efforts are closely coordinated with the Services to deconflict, improve jointness and increase transition to Service acquisition programs. Innovative Concepts for Counter C5ISR explores prototypes that counter the adversary's ability to collect information through sensors and networks. In FY 2024, I&M executed and transitioned multiple Counter C5ISR projects, including: • Chromatic Bugle: This project developed a modular payload for unmanned undersea systems. Additional details are classified. In FY 2024, this project completed development of the modular payload before transitioning the U.S. Navy to inform the design of future DoD systems. • Distributed sensing from Air, Ground, and Naval platforms (DRAGON): This project developed a cost-effective solution for incoming threat detection by incorporating advancements across multiple technology focus areas including improved infrared sensors, machine learning, and edge processing. Additional details are classified. In FY 2024, the prototype was completed and evaluated in a relevant environment before transitioning to the U.S. Navy and U.S. Marine Corps (USMC). • Kestrel: This project developed and demonstrated critical technology prototypes for enhanced undersea situational awareness for the U.S. Navy. Additional details are classified. In FY 2024, individual technology components were integrated into their final form factor with a demonstration in an operationally relevant environment before transitioning to a U.S. Special Operations Command (USSOCOM) Program of Record.		6.755	9.995

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
• Low-Cost Precision Delivery: This project developed a low-cost precision delivery capability with a modular, multi-purpose payload carrier for a variety of operational use cases. In FY 2024, the prototype was tested and demonstrated with end-user observation before transitioning to USSOCOM. • Athena: This project matured a radio frequency system to address modern threats. Additional details are classified. In FY 2024, the prototype completed integration and system validation prior to a demonstration in an operationally relevant environment. The developed capability transitioned to the U.S. Army. • Dawson: This is a classified program. Additional information is available upon request. Efforts concluded at the end of FY 2024 with the developed capability transitioning to classified partners. • Project Blackbird: This project investigated the effectiveness of potential architectures to enhance U.S. forces survivability in contested environments. Additional details are classified. Efforts concluded at the end of FY 2024, with the findings informing multiple efforts across the DoD. FY 2025 Plans: FY 2025 plans include continued exploration and maturation of multi-function, autonomous targeting and decision support tools, net-centric electromagnetic spectrum apertures, advanced materials, novel algorithms and waveforms, capabilities that monitor and impact information networks, and other systems to conceal, confuse, disrupt, degrade or destroy C5ISR capabilities. Specifically, efforts target advancements led by commercial and non-traditional performers that may have a disruptive effect on military concepts. FY 2025 to FY 2026 Increase/Decrease Statement: In FY 2026, funding for this focus area decreases to support acceleration of other high priority prototypes addressing the DoD's current priority challenges.			
Title: Prototyping Through Small Business and Non-Traditional Pathways (Emerging Prototypes and Enablers) Description: Prototyping Through Small Business and Non-Traditional Pathways leverages innovative technologies and emerging products developed by Service laboratories, Federally Funded Research and Development Centers (FFRDCs)/ University Affiliated Research Centers (UARCs), the defense industry, small businesses, non-traditional performers, and academia. Individual efforts are identified and refined throughout the year of execution through outreach and discovery engagements, including pitch days with industry and non-traditional performers. Prospective efforts are closely coordinated with the Services to deconflict, improve jointness, and increase transition to Service acquisition programs. Promising solutions are selected for prototyping, and if successful, transition through partnerships with the Services, Combatant Commands (CCMDs), and other defense agencies. This effort supports DoD's objectives of leveraging commercial innovation to maintain technology superiority; increasing rate of technology maturation; exploring alternative and faster pathways for acquisition; and fielding affordable and effective joint mission capabilities. I&M also transitioned multiple projects prototyped through non-traditional pathways, including:		8.109	12.844

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
• Arctic Grid Energy Storage (AGES): This project developed and demonstrated a battery storage and tactical generator microgrid capability that meets critical operational requirements in extreme cold weather environments; emphasizing scalable, flexible, and high-power quality for continuous and high-energy demands. In FY 2024, the project delivered and demonstrated a hybrid operational energy microgrid at the Alaska Cold Region Research and Engineering Laboratory (CRREL) site during a North American Aerospace Defense Command (NORAD) and U.S. Northern Command (USNORTHCOM) field exercise. Final transition occurred to NORAD, USNORTHCOM, Army Futures Command, and Army North (ARNORTH). • Lithium-ion Reliable in the Arctic (LiRA): This project tested and demonstrated novel heating approaches for soldier portable battery storage in extreme cold weather to meet CCMD and Service operational requirements. Combining state-of-the-art lithium-ion cells and integrated LiRA heating technology enables the soldier-mounted battery to operate and be charged at Arctic temperatures. In FY 2024, the project began development of the LiRA cell prototypes, with final transition to multiple Services for additional development and testing. • USSOCOM Ignite Innovation: This annual program is a low-cost innovation accelerator that combines the ingenuity and out-of-the-box thinking of military students, and the deep technical expertise of professional researchers, with real-world military problems curated by USSOCOM. Military students from multiple universities worked together to develop prototype solutions to relevant challenges like drone autonomy, sensor and data fusion, tactical route planning, resource allocation, and casualty care at the tactical edge. Development of prototypes occurred in FY 2024 with final transition into operational capabilities. FY 2025 Plans: Innovation and Modernization investment decisions are made during the execution year in response to DoD, CCMD, Service, and other government priorities. FY 2025 to FY 2026 Increase/Decrease Statement: In FY 2026, funding for this focus area decreases to support acceleration of other high priority prototypes addressing the DoD's current priority challenges.

A. Mission Description and Budget Item Justification

This program is executed via the Joint Directed Energy Transition Office (JDETO) in alignment with the Department of Defense Directed Energy Roadmap, as well as other strategic guidance. Section 219 of the 2017 National Defense Authorization Act designated a senior official for directed energy and redesignated a legacy office as the JDETO with reporting to the senior official. Currently, the Principal Director for Directed Energy serves as this senior official and updates the Department of Defense Directed Energy Roadmap on an annual basis. The goal of this program, in turn, is to support the Department's initiatives in directed energy to build a sustainable and long-term advantage, in addition to a resilient joint force and defense ecosystem.

This program funds advanced technology development in directed energy aimed at transitioning technology solutions for broadly defined military missions. These efforts include demonstrated performance pay-offs, increased capabilities, increased supportability, and increased affordability. In practice, directed energy weapon systems have many potential advantages, including speed-of-light time-to-target, high precision, low incremental cost per kill, and a magazine that is recharged through on-board, fuel-based power and thermal management systems that reduce logistics requirements in contrast to stocks of munitions or warheads. As a result, directed energy weapon systems have the potential to perform a wide variety of military missions. Activities conducted under this program will ultimately enable the employment of directed energy weapon systems.

A. Mission Description and Budget Item Justification

This project is part of an overall Department of Defense strategy in Joint directed energy advanced technology development. Efforts within this project will focus on scaling the output power of directed energy weapon systems to reach operationally effective power levels applicable to broad mission areas across the Department of Defense. Additionally, efforts will pursue improvements in common directed energy system components to enable scalable architectures and increase lethality. These efforts complement, and will be closely coordinated with, other Department efforts directed at specific Service and Agency missions. This project builds upon other investments in directed energy advanced technology development by the Services and Agencies to harmonize Department efforts and eliminate duplication. In support, efforts in this project have been coordinated with the Department of Defense Directed Energy and Non-Lethal Weapons Science and Technology Community of Interest.

This project is executed via two technical programs and a new initiative within the JDETO. The first technical program is the Directed Energy Applied Tech Program, which enables (1) advanced technology development in high energy laser and high power microwave systems that support eventual prototype-level integration and (2) proof of concept tech demonstrations in a laboratory or field environment with Joint-international participation. The second technical program is the Directed Energy Tech Maturation Program, which enables (3) advanced prototypes in support of demonstrating mission-driven lethality and survivability and (4) test and evaluation in a relevant field environment with Joint-international participation. Note that (1)-(4) are in alignment with the near-, mid-, and long-term goals of Department of Defense Directed Energy Roadmap and enable transition. The new initiative is the Pulsed High Energy Laser Scaling Initiative. This initiative is also in alignment with the near-, mid-, and long-term goals of the Department of Defense Directed Energy Roadmap and is the result of mandatory funding in FY 2026.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Directed Energy Advanced Technology Development	108.442	110.367	-
Description: Develop, mature, and demonstrate technologies that improve beam control and beam propagation for directed energy weapon systems. Conduct directed energy lethality and vulnerability experiments on materials, components, and targets. Develop a lethality database for use in system-level models.			
FY 2025 Plans: - Directed Energy Sources: 500 kilowatt and 1 megawatt class high energy laser development efforts under the High Energy Laser Scaling Initiative will continue with their prototype build phase in support of multiple milestones.			

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2026 Office of the Secretary Of Defense		Date: June 2025	
Appropriation/Budget Activity 0400 / 3	R-1 Program Element (Number/Name) PE 0603924D8Z / <i>High Energy Laser Advanced Development</i>	Project (Number/Name) 924 / <i>High Energy Laser Advanced Development</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
- Beam Control and Propagation: Validate the use of beam control technology to include acquisition and course track, fine track and aimpoint maintenance, wavefront compensation, and high power optical components in relevant environments to understand effectiveness and identify shortfalls that require additional research focus. - Lethality and Vulnerability: Static and dynamic lethality testing of representative and/or actual targets will be conducted using existing directed energy systems to validate aimpoint selections, vulnerability predictions, and system response. FY 2025 to FY 2026 Increase/Decrease Statement: The decrease of \$110.367 million between FY 2025 and FY 2026 is a realignment of funding from Directed Energy Advanced Technology Development to two technical programs within the JDETO referred to as the Directed energy Applied Tech Program in the amount of \$81.034 million and the Directed Energy Tech Maturation Program in the amount of \$33.885 million. The total amount of \$114.919 million includes a realignment of \$4.000 million from Trusted & Assured Microelectronics (Program Element 0604294D8Z) for an enhancement towards the Joint Beam Control System, as well as minor budget fluctuations of \$0.552 million.			
Title: Directed Energy Applied Tech Program Description: The Directed Energy Applied Tech Program enables (1) advanced technology development in high energy laser and high power microwave systems that support eventual prototype-level integration and (2) proof of concept tech demonstrations in a laboratory or field environment with Joint-international participation. Note that (1) and (2) are in alignment with the near-, mid-, and long-term goals of Department of Defense Directed Energy Roadmap. FY 2026 Plans: - High Energy Laser Scaling Initiative: Conclude the development of electronically driven continuous wave laser sources with industry partners. Utilize government and industry diagnostics to demonstrate 500-kilowatt-class and one-megawatt-class power levels. Also demonstrate performance with a technical readiness level suitable for integration into advanced prototypes. Transition these laser sources to the Directed Energy Tech Maturation Program within the JDETO in support of mission-driven lethality and survivability demonstrations. - High Energy Laser Systems: Continue assessment efforts in meter-class beam directors for long-term strategic missions. In support of mid-term tactical missions, continue the development of the Joint Beam Control System. Develop a Joint design package with emphasis on common interfaces and common components to help accelerate acquisition by the Military Services. - High Power Microwave Systems: Leverage applied research investments in agile-frequency sources, novel antenna designs, pulsed power, and effects testing made by the Services and Agencies and make additional investments in the components and		0.000	-

sub-systems needed for the development of a system-level prototype. This prototype should enable a near-term demonstration in a relevant field environment and leverage investments previously made by the JDETO in high power microwave technology.				
FY 2025 to FY 2026 Increase/Decrease Statement: The increase of \$80.793 million between FY 2025 and FY 2026 is to accelerate the start of Directed Energy Applied Tech Program.				
Title: Directed Energy Tech Maturation Program		0.000	-	33.784
Description: The Directed Energy Tech Maturation Program enables (1) advanced prototypes in support of demonstrating mission-driven lethality and survivability and (2) test and evaluation in a relevant field environment with Joint-international participation. Note that (1) and (2) are in alignment with the near-, mid-, and long-term goals of Department of Defense Directed Energy Roadmap.				
FY 2026 Plans: - Advanced Prototypes: Integrate higher order adaptive optics into a legacy meter-class beam director. Conduct initial field tests with a surrogate high energy laser at low power. Start the integration of the one-megawatt-class laser source from the High Energy Laser Scaling Initiative with this legacy meter-class beam director. Determine which beam director is best suited for the 500-kilowatt-class laser source from the High Energy Laser Scaling Initiative. Start the integration of this laser source with the to-be-determined beam director. - Test and Evaluation: Conduct test and evaluation in support of mission-driven lethality and survivability. Assess vulnerability for specific threats and develop surrogate threats that meet the overall mission requirements. Perform dynamic field tests to demonstrate the lethality of advanced prototypes and the survivability of surrogate threats. Repeat the tests for both point-defense and area-defense engagements. Transition the data from these tests to the Directed Energy Tech Utility Program within the JDETO. Help validate the engagement-level model predictions and refine aimpoint selection methodologies.				
FY 2025 to FY 2026 Increase/Decrease Statement: The increase of \$33.784 million between FY 2025 and FY 2026 is to accelerate the start of Directed Energy Tech Maturation Program.				
Title: Pulsed High Energy Laser Scaling Initiative		0.000	-	0.000
Description: The Pulsed High Energy Laser Scaling Initiative builds on the success of the High Energy Scaling Initiative currently being executed within the Directed Energy Applied Tech Program of the JDETO. The goal of this initiative is to scale electronically driven pulsed laser sources to operationally relevant energy densities and demonstrate performance with a technical readiness

A. Mission Description and Budget Item Justification

This program supports the Department's priorities to rebuild the military by matching threats to capabilities and re-establish deterrence by defending our homeland. The Test and Evaluation/Science and Technology (T&E/S&T) program seeks out and develops test technologies to keep pace with evolving weapons technologies. Aligned with national strategic guidance, this program is critical to ensure the Department's readiness to test and field rapidly emerging technologies and weapon systems that defend our homeland, deter aggression, and achieve peace through strength.

To meet this objective, the T&E/S&T Program performs the following activities:

- Exploits new technologies and processes to meet important T&E requirements.
- Expedites the transition of new technologies from the laboratory environment to the T&E community.
- Leverages industry advances in equipment, modeling and simulation, and networking to support T&E.

0400: Research, Development, Test & Evaluation, Defense-Wide / BA 3: Advanced Technology Development (ATD)		PE 0603941D8Z / Test and Evaluation Science and Technology				
Additionally, the T&E/S&T Program examines emerging T&E requirements resulting from Joint Service initiatives to identify T&E technology needs and develop a long-range roadmap for technology insertion. The program leverages and employs applicable applied research efforts from the highly developed technology base in the DoD laboratories and test centers, other Government agencies, and industry to accelerate development of new test capabilities. The program outreaches and engages academia to address test technology challenges. The T&E/S&T Program aligns with the science and technology (S&T) Communities of Interest (COI) to prepare the T&E community to test warfighting capabilities that emerge from priority S&T investments. The T&E/S&T Program utilizes Advanced Technology Development funding, which supports the development and demonstration of high payoff technologies for current and future DoD test capabilities.						
FY26 Controls are incorrectly reflected subject to the following corrections:						
1) Project 091 is understated. Correct control is \$579.223M						
3) Project 098 is overstated. Correct control is \$14.762M. Delta of \$141M is reflected in Project 091 total of \$579.223M.						
4) Project 112 does not reflect an additional \$550M of mandatory funding.						
B. Program Change Summary (\$ in Millions)		FY 2024	FY 2025	FY 2026 Base	FY 2026 OOC	FY 2026 Total

Congressional Add Subtotals for Project: 093		0.000	-
Congressional Add Totals for all Projects		53.350	-
Change Summary Explanation The overall \$1,340.053M increase from FY25 to FY26 will primarily support acceleration of hypersonic flight test activities including the continued conversion of SkyRange aircraft, the development of a prototype capability to support the SkyRange mission control element, and an increased tempo of hypersonic experimentation and system component testing through the Multi-Service Advanced Capability Hypersonics Test Bed (MACH-TB) program (added as a separate project line in FY26). The FY26 request includes \$1,095.772M of discretionary and \$550.000M of mandatory (reconciliation) funding, for a total of \$1,645.772M. The FY26 mandatory funds acquire long-lead hardware and block buy of launch service agreements with commercial launch providers for MACH-TB tests over the next three years; this will accelerate the timeline to achieve the Department’s goal of 50 flight tests per year.

A. Mission Description and Budget Item Justification

The Nuclear Test (NT) project mission addresses national test capability gaps by providing accurate, robust, and efficient T&E solutions to successfully develop, validate, and inform the employment of a modernized nuclear enterprise. The Department of Defense (DoD) is prioritizing investments to modernize the nuclear enterprise while sustaining and increasing the resiliency of legacy systems. Current developments focus on deploying capabilities and systems to validate new designs and new materials in a complex threat-representative environment. Current testing infrastructure and methodologies to assess nuclear enterprise systems and microelectronics resilience against emerging threats is limited. Many test capabilities used in the past for acquisition are no longer available, either stopped by policy decisions or dismantled for cost savings. The NT project addresses test technology needs for adequate assessment of nuclear enterprise resiliency and aligns with the DoD S&T priority investments. The NT project is supporting the development of a strategic roadmap and investment strategy to establish nuclear test environments for microelectronics, ground test environments for system level testing, and flight test range enhancements for end-to-end testing needs. The NT project develops technologies to enable robust, accurate, and timely T&E of a modernized nuclear enterprise, and to ensure system suitability and survivability.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Nuclear Test (NT)	38.703	10.806	11.079
Description: In FY24, NT began conducting a test infrastructure gap analysis on the needs of testing the nuclear enterprise. The analysis will result in a time-phased investment strategy based on those requirements. Work includes engaging the nuclear environments test community on needs and gaps to ensure traceability between strategic objectives and test technology development required for relevant microelectronic nuclear test environments such as single event effects, combined effects, electromagnetic pulse, and others.			
FY 2025 Plans: In FY25, NT will continue to mature test technologies related to nuclear effects testing. Highlights include: - Continue Nuclear Test infrastructure gap analysis - Continue efforts in EMP testing to include large area source development and instrumentation - Continue efforts related to neutron testing - Initiate efforts in Single Event Effects - Initiate efforts related to combined nuclear effects			
FY 2026 Plans:

A. Mission Description and Budget Item Justification

High-speed/hypersonic weapons are being developed to ensure the continued military superiority and strike capability of the United States including freedom of movement and freedom of action in areas protected by anti-access/area denial defenses. Current weapon system demonstrations and technology development programs include high-speed and hypersonic air-breathing missiles, maneuvering reentry and boost-glide weapons, hypersonic gun-launched projectiles, and air-breathing space access vehicles. These systems require development of conventional and high-speed turbine, ramjet, scramjet, and combined cycle engines; high temperature materials; thermal protection systems (TPS); and thermal management systems. The High Speed Systems Test (HSST) project addresses test technology needs including propulsion, aerodynamic and aerothermal testing, so the test community has the technology to support the required test scenarios for concepts under development in the S&T community. The technology developments within the HSST project align with the Department of Defense (DoD) S&T priority investments. As such, the HSST project is developing, validating and transitioning advanced T&E technologies for ground test, open-air range flight test, and advanced computational tools, along with instrumentation and diagnostics systems for use in both ground tests and flight tests of high speed systems.

The HSST project develops technologies to enable robust, accurate, and timely T&E of these future weapon systems. DoD acquisition regulations require weapon systems to undergo a thorough T&E process to detect deficiencies early and to ensure system suitability and survivability. However, the extreme environments in which these weapons operate preclude accurate determination of their performance and operability with today's T&E assets. Current national test capabilities have deficiencies in data accuracy, flight condition replication and simulation, test methods, productivity, modeling and simulation (M&S) fidelity, and range safety.

The HSST mission is to address these national test capability gaps by providing test technology solutions that will enable high-speed and hypersonic weapon systems to be successfully developed through accurate, robust, and efficient T&E.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: High Speed Systems Test (HSST)	110.873	143.830	79.223
Description: In FY24, HSST continued to advance ground and flight test technologies, techniques, instrumentation, and modeling and simulation capabilities required for the development of hypersonic weapon systems. Highlights include: - Completed design and acquisition of major components for hypersonic wave-heated facility (facility nozzle, combustion air heater assembly, diffuser), enabling new ground test capability for short-duration Mach 8 hypersonic ground test facility - With SkyRange, supported 3 hypersonic flight tests in 72 hours – one over the Atlantic, one over the Pacific, and one in CONUS - Successfully demonstrated MQ-9 (RangeReaper) data collection, expanding the SkyRange fleet size and mission support capability

A. Mission Description and Budget Item Justification

Weapon systems have become increasingly complex in recent years, resulting in the need for significantly more data to be passed among these systems as well as between the systems and our test infrastructure. A vast amount of data must be collected, transmitted, and analyzed, which requires a large amount of radio frequency (RF) spectrum resources. However, the amount of RF spectrum designated to support test and evaluation (T&E) is decreasing, most notably due to reallocation of spectrum for commercial use. The combination of decreasing RF spectrum and increasing data requirements results in an urgent need to develop test technologies that maximize the use of spectrum resources for the Department of Defense (DoD) T&E operations.

The L- and S- Band frequencies are the traditional spectrum allotted for military T&E use. The explosive need for spectrum in the commercial sector has resulted in reallocation of portions of these bands to industry. To compensate, the DoD is now authorized to use the C-Band spectrum which offers numerous benefits, including the potential for a large increase in available bandwidth, but the C-Band spectrum comes with technical challenges and regulatory constraints. Most notably, our current test infrastructure for telemetry is not designed to accommodate C-Band and the band is heavily shared for alternate uses. Technologies are required to implement innovative techniques that efficiently facilitate our use of C-Band without a major overhaul to our national test infrastructure. For instance, commercial telemetry transmitters operate in C-Band but do not have the form factor (size, weight and power) nor ruggedized packaging to survive airborne test applications.

Traditional telemetry applications employ streaming telemetry where data is moved one-way from the instrumented system under test to our test range infrastructure. Modern network based telemetry and cellular based telemetry capabilities enable more robust, efficient bidirectional transfer of data. The DoD strategy is to create technologies for implementing a telemetry capability in C-Band, using the legacy L- and S-Bands for both streaming and networked telemetry, and researching the feasibility of using higher frequency bands to augment telemetry operations.

The Spectrum Efficient Technology (SET) project is developing test technologies that enable more efficient use of legacy telemetry bands and expansion into non-traditional areas of the RF and optical spectra at DoD test ranges. The technology development efforts within the SET project have been prioritized to align with the Department of Defense guidance on science and technology priority investments. As such, the SET project is focusing on growing data requirements of warfighting systems and the limited availability of spectrum for testing. The SET project is structured to develop test technologies to advance range communications, networked and cellular based telemetry capabilities, and enhanced management of spectrum at DoD test ranges.

A. Mission Description and Budget Item Justification

In order to establish dominance in the modern battlespace, our offensive and defensive electronic warfare systems must be capable against advanced radio frequency (RF) directed threats and electro-optic (EO) guided threats, which include infrared (IR) guidance. Ensured dominance in these areas requires more robust test and evaluation (T&E) with technologies that are rapidly adaptable to changing threats.

Readily available, IR seeking, man-portable air defense systems (MANPADS) are difficult to detect and pose an imminent and lethal threat to military aircraft of all types. Our ability to counter such threats is essential to owning the battlespace in theater. Therefore, the ability to test missile warning systems (MWS), hostile fire indicator (HFI) systems, IR countermeasures (IRCM), and advanced threat sensors is critical to our national defense. Additionally, a new generation of enemy RF missile seekers is both currently fielded and in further development, requiring a correspondingly new generation of test technologies to test the latest countermeasures. The T&E community is required to test IRCM and RF countermeasure systems in a repeatable manner with ground-truth data before and after integration into warfighting systems. Without new test technologies, the Department of Defense (DoD) will be unable to perform adequate T&E of advanced warning and countermeasure systems.

The Electronic Warfare Electronic attack and Electronic protect (EP) community is developing jammers and EP measures that are more sophisticated and take advantage of newer technology that allows adaptive waveforms and artificial intelligence and autonomy to respond to threats more rapidly and robustly. In addition, the testing of these systems in realistic many on many environments that are more threat representative requires new technology investment.

The technology development efforts within the Electronic Warfare Test (EWT) project have been prioritized to align with DoD guidance on science and technology priority investments. As such, the EWT project is focusing on the test needs in both the EO, including IR, and the RF threat domains. Additionally, development of core test technologies in this area can be leveraged to meet other EO and RF test requirements, such as in fire control systems; intelligence, surveillance and reconnaissance (ISR) sensors, and weapon seekers.

The EWT project develops test technologies to stimulate IRCM and RF system sensors through the high-fidelity simulation of scenes viewed by the sensors. Stimulation can be as simple as testing to see if a system under test responds to an image or as complex as simulating complex battle space phenomena to measure the response of a system under test in a more relevant, cluttered scenario. Simulations and stimulations are used at open-air ranges and in installed system test facilities (ISTF), and in hardware-in-the-loop (HWIL) test beds.

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
Description: In FY24, EWT initiated and continued test technology maturation to address Electronic Attack test technology needs, expand the battlespace, and enable improved assessment of Electronic Warfare platforms. This includes efforts to address inadequate laboratory and secure Installed System Test Facility (ISTF) modeling and simulation (M&S) representing evolving and changing RF threat systems, simulator and stimulator test technology. These joint EW test technologies initiated will also address shortfalls with open-air-range complex radar emitters, models, and RF threats inability to represent emerging and changing threat systems. Highlights include: - Initiated efforts to improve EA techniques - Initiated efforts to expand current range play-boxes to enable test and training with EW platforms that stress modern threat radar acquisition and detection ranges - Began to address test technology needs for EW platforms and systems to have representative scale and depth for test and training of real-world missions - Continued to develop high-fidelity scene generation technology for both EO and RF environments - Continued to develop hardware and software that generates large number of independent radar targets in a high fidelity HITL facility; this enabled chamber testing of radars in denser target environments by generating large numbers of dissimilar false targets - Continued work on high temperature IR scene projectors - Developed a dynamic infrared (IR) scene projector to enable chamber testing of missile warning systems and directional infrared countermeasure systems; the new scene projector creates scenes with higher temperatures and higher resolution creating a more threat representative environment for sensor test - Transitioned and delivered scene projectors to the Air Force Guided Weapons Evaluation Facility (GWEF) - Continued work to increase efficiency of LED pixels for use in IR scene projectors - Continued to develop interfaces for use of Active Electronically scanned arrays for open-air range threat simulators FY 2025 Plans: In FY25, EWT will continue developing test technologies to improve simulated EW environments and secure test facilities, and enhance the scale and efficiency of EW testing in large-scale, open-air exercises and events. Highlights include: - Investments in technologies related to Cognitive EW, Cognitive Radar, and EW sensors that feed Artificial Intelligence uses of EW data - Improve Ground EW systems and cUAS EW testing - Efforts in infrared scene projection for sensor and seeker testing - Address scene generation for both EO and RF sensors and seeker testing - Improve motors for flight motion simulator performance - Improve airborne jammer simulation

A. Mission Description and Budget Item Justification

The Advanced Instrumentation Systems Technology (AIST) project addresses the test technology gaps resulting from emerging weapon systems that need to be assessed at the Department of Defense (DoD) installed systems test facility and hardware-in-the-loop testing (ISTF/HITL) and open-air range test facilities (including tropospheric, land-based, open-ocean, and undersea ranges). Instrumentation requirements for systems under test are increasing exponentially for new weapons systems. System-borne, warfighter-wearable, and remote sensing instrumentation packages are required. This instrumentation is for sensing and collecting critical performance data; determining accurate time, space, position information (TSPI) and attitude information; interfacing with command and control data links; monitoring and reporting system-wide communications; recording human operator physical and cognitive performance; and storing and transmitting data.

The technology development efforts within the AIST project have been prioritized to align with the DoD guidance on science and technology (S&T) communities of interest (COIs). The AIST project is focused on developing technologies for advanced TSPI instrumentation (especially with limited or no availability of Global Positioning System (GPS)), advanced sensors, advanced energy and power systems for instrumentation, micro-electronics, mitigating range encroachment issues, and measuring warfighter physical and cognitive performance. The AIST project addresses requirements for miniaturized, non-intrusive instrumentation suites with increased survivability in harsh environments. Such instrumentation is an urgent need because minimal space is available to add instrumentation to new or existing weapon systems subsequent to their development; furthermore, additional weight and power needs for instrumentation can adversely affect weapon system signature and performance. Instrumentation for humans-in-the-loop, especially dismounted warfighters, must not adversely affect performance, induce artificiality in the test environment, or create any operational burdens. New technologies can be exploited to integrate small, non-intrusive instrumentation (micro-technology) into emerging platforms during design and development, and, in some cases, into existing platforms. This class of instrumentation will provide critical system performance data during operational test (OT) and continuous assessment throughout a system's lifecycle. Technology developed under AIST can also benefit training and combat missions by enabling a continual feedback loop between the developer, training staff, operators, and commanders.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Advanced Instrumentation Systems Technology	21.508	21.396	18.847
Description: In FY24, AIST continued to develop test technologies for assessing emerging weapon systems at DoD installed systems test and hardware-in-the-loop facilities and (ISTF/HITL) as well as open-air range test facilities (including tropospheric, land-based, open-ocean, and undersea ranges). Major thrusts included efforts in advanced sensors and time-space-position information (TSPI) instrumentation. Highlights include:

Appropriation/Budget Activity 0400 / 3		R-1 Program Element (Number/Name) PE 0603941D8Z / <i>Test and Evaluation Science and Technology</i>		Project (Number/Name) 094 / <i>Advanced Instrumentation Systems Technology</i>	
B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026
- Continued three efforts to design a test technology for weapon testing use cases impacting the broad ocean area to collect TSPI, lethality, and scoring data; one technology uses optics, another leverages an imaging radar, and a third employs underwater acoustic technology. - Began a technology development effort that implements a terrestrial-based network of transmitters to maintain situational awareness on tactical system when performing Multi-Domain Operation testing in GPS jammed/denied/degraded environments. - Commenced development of a Global Navigation Satellite System (GNSS) engine software defined receiver using multichip module technology, and acquisition and tracking algorithm development to provide TSPI ground truth for T&E of missile systems, etc., in high dynamic environments. - Continued an effort to develop a sensor to collect acceleration measurement data during high-speed flight tests, enabling the gathering of accurate position and attitude, 6 Degrees of Freedom data over very long ranges and into the exo-atmosphere to measure the aerodynamics and internal guidance and control systems of new munitions in an ultra-high dynamic environment. - Continued development of an innovative sea battery technology to support energy generation in the deep ocean via oxidizing aluminum, enabling clandestine long-term deployments of deep ocean TSPI and advanced sensor instrumentation. - Continued an effort to develop advanced electromagnetic (EM) propagation modeling & real-world measurements for an open-air dynamic radar cross section measurement system to provide insight regarding potential effects of planned offshore wind power infrastructure on Atlantic Test Range operations. - Completed development of an effort to support testing of military aircraft using externally mounted sound pressure instrumentation to gather data for analysis in all weather conditions, to overcome current constraints to flight testing in dry environments. Flight testing in a relevant environment is planned to take place at the Naval Air Warfare Center Aircraft Division, Patuxent River, MD. - Continued a portable technology development effort using acoustic splash signatures to measure weapon location and attitude to characterize high dynamic weapon end-game maneuvers, and to evaluate impact location & velocity of attacking projectiles and resolving (scoring) very large quantities of impacts occurring closely spaced in position and/or time. This system has participated in at-sea system checkout activities and has been an auxiliary sensor on several at-sea tests of weapon systems impacting the ocean. FY 2025 Plans: In FY25, AIST will continue to develop test technologies for assessing emerging weapon systems at DoD installed systems test and hardware-in-the-loop facilities and (ISTF/HITL) as well as open-air range test facilities (including tropospheric, land-based, open-ocean, and undersea ranges). Highlights include: - Continue efforts to develop a mobile shallow water range to evaluate unmanned undersea vehicles (UUV) sensors and systems for high-resolution ocean environmental sensing, monitoring, and prediction systems

Quantity of RDT&E Articles	-	-	-	-	-	-	-	-	-	-		
A. Mission Description and Budget Item Justification												
The Department of Defense (DoD) is exploring the military utility, safety, and suitability of directed energy weapons. A robust test capability to assess directed energy weapons is essential to understanding their effectiveness and limitations, including determining their effectiveness in performing counter improvised explosive device (C-IED) operations and counter UAS operations. Such assessments will depend upon knowledge acquired through the test and evaluation (T&E) of directed energy technologies and testing of operational concepts. Directed energy weapon technologies, primarily consisting of high energy lasers (HEL) and high powered microwaves (HPM), are outpacing available test capabilities. Traditional test techniques for evaluating conventional munitions (with flight times ranging from seconds to minutes) are not sufficient for the T&E of directed energy weapons that place energy on target instantaneously. Consequently, new test technology solutions are needed to ensure that adequate developmental, live-fire, and operational test capabilities are available when directed energy programs are ready to test.												
Directed energy system and component testing requires three principal assessments: (1) energy or power on target; (2) the effects on the target; and (3) the propagation of the directed energy to the target through the atmosphere. In addition, the vulnerabilities of DoD systems to directed energy threats are required to be characterized, such as those requirements captured in Military Standard (MIL-STD)-464C. Equally as important, current test capabilities do not provide the detailed data required to understand U.S. directed energy system performance and effects. The technology development efforts within the Directed Energy Test (DET) project have been prioritized to align with DoD guidance on science and technology priority investments. As such, the DET project is developing the technologies necessary for quantitative assessment of United States (U.S.) HEL and HPM performance, as well as the vulnerability of DoD weapon systems to enemy directed energy threats.												
B. Accomplishments/Planned Programs (\$ in Millions)									FY 2024	FY 2025	FY 2026	
Title: Directed Energy Test									18.714	10.010	10.133	
Description: In FY24, DET continued to mature technologies to accelerate delivery of Directed Energy Weapons capabilities to the warfighter. Highlights include: - Initiated efforts to upgrade directed energy lab and test range infrastructure - Continued efforts to measure HEL energy on small targets such as mortars, rockets, artillery, and UAS; the effort designed a recoverable mortar prototype to address Army and Navy requirements and an Air Force requirement for a missile-mounted target board - Continued efforts to develop M&S capability for assessing effects of threat HEL systems on blue aircraft - Completed efforts to mature a dense plasma focus technology to produce strategically relevant, ultra-short pulse neutron fluence levels for nuclear vulnerability testing - Successfully demonstrated neutron production

Quantity of RDT&E Articles	-	-	-	-	-	-	-	-	-	-		

A. Mission Description and Budget Item Justification

The Command, Control, Communications, Computers, Intelligence (C4I) and Software Intensive Systems (SIS) (C4T) project addresses test technology for next generation resilient, survivable, federated networks and information systems (information superiority) from the tactical level up to strategic planning. The technology development efforts within the C4T project have been prioritized to align with DoD guidance of S&T Communities of Interest (Cols) and the interim National Defense Strategy. Gaps are driven by more complex warfare environments and distributed systems; large quantities of data and intelligence (e.g., Big Data, Artificial General Intelligence (AGI) and Machine Learning Algorithms (MLA)); and more software intensive systems (e.g. F-35, CVN, IBCS)).

C4T addresses gaps in Big Data Analytics technologies to gain knowledge from massive amounts of structured and unstructured data collected over a single test, but also expanded to look at the systems' performance over the acquisition lifecycle. The technologies are required when testing sensor platforms, command and control systems and weapon platforms that support the kill chain in a Joint multi-domain operation. These systems must be evaluated for their ability to provide the accurate, timely transfer of data (e.g., target tracks, weapons allocation, mission tasking, and situational awareness) as the data passes among the Services, Warfighting Domains, and Coalition Partners.

C4T also addresses gaps in Live and Simulated Environments, these technologies are required to increase the use of a distributed test environment for new warfare concepts leveraging simulated entities (e.g. modeling and simulation) for more thorough joint mission context platform T&E (e.g., Anti-Access Arial Denial (A2AD) and Manned and Unmanned Systems (MUM-T)). The technologies within C4T will remove undesired distributed testing biases while improving test agility and the tester's ability to effectively support knowledge management, rapid analysis of "Big Data," and automated test reporting. The C4T project advances these test technologies as well as Big Data collection, analysis, and visualization that enable the virtual integration of Department of Defense (DoD) weapon laboratories and open-air ranges. Using Modeling and Simulation (M&S) along with hardware-in-the-loop (HWIL) laboratories, the effectiveness of Joint missions can be assessed in terms of system-of-systems interoperability and effectiveness in executing Joint mission operations, including testing of weapons and C4I and SIS systems accessing and providing information.

Lastly, C4T addresses technologies to support C2 Analysis in Multi-Domain Operations (MDO), specifically at scale and density to fully assessed the mission kill web with new test design, planning and assessment technologies utilizing artificial intelligence and machine learning to not only plan assessments within a domain, but also to enable assessments of "what-if" testing cascading across the other domains of warfare. This will enable full assessment of multi-domain operations to ensure information superiority to accomplish mission objectives. New intelligent testing technologies are required for assessment of MDO missions for our future warfighter AI/ML-enabled C2 Warfighter Systems to ensure the battlefield will not be the testing field. These new MDO focused technologies are vital to creation of a robust operationally relevant Joint Service All Domain Test Range.

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
Title: C4I and Software Intensive Systems Test Description: In FY24, C4T continued to mature technologies for testing next generation resilient, survivable, federated networks and information systems (information superiority). Highlights include: - Transitioned advanced threat submarine modeling and simulation technology capabilities to the Naval Undersea Warfare Center Weapons Analysis Facility resulting in significant savings by reducing the number of live in-water runs required for testing torpedo systems. These technologies will be instrumental to all future next generation torpedo developments as well as current torpedo system upgrades. Recent work included increasing model fidelity and validating target models to support additional transition opportunities to the Navy Undersea Weapons Program Office and the Office of Naval Intelligence. - Transitioning advanced AI/ML technologies to support near real-time data collection and validation for the US Army indirect fire doctrine. Data collection includes structured and unstructured datasets which currently requires multiple days to validate after collection and often resulting in retesting cycles as anomalies are not recognized during execution. MVDW will provide these answers after the completion of each test day. - Transitioning advanced statistical analytic techniques to automatically calibrate cameras (low-cost, high-speed) for time-space-position information (TSPI) to the Redstone Test Center ATEC. This technology provides cost and time savings from existing high-cost cameras with lengthy (hours) calibration techniques to low-cost cameras that are calibrated within minutes. This technology has begun initial integration with Cloud Hybrid Edge-to-Enterprise Evaluation and Test Analysis Suite (CHEETAS) for transition. - Continued development of several big data analytics efforts implementing artificial intelligence/ machine learning techniques for multi-variant time series sensor datasets, unstructured dataset analytics (audio, video, and imagery), and advanced visualizations of large T&E datasets. These efforts include traditional statistical and machine learning/artificial intelligence techniques to deal with massive complex datasets; the software execution has been focused on the use of containerized microservices architecture for ease of technology transfer across all T&E organizations. Common technologies across C4T also support advanced data synchronization and fusion frameworks to automate development of assessment metrics and to quickly recall synchronized segments from large T&E datasets. - Creating advanced visualization techniques; to support the presentation of information by abstracting data into particles to optimally exploit current vision and neuroscience research. This allows the T&E analyst to visualize anomalies, trends, patterns, and failure conditions found across the entirety of the T&E dataset and not be focused on an individual dataset. These technologies are being developed to support test and evaluation of future warfighter C4I and Software Intensive Systems (4th and 5th generation military platforms). FY 2025 Plans: In FY25, C4T will initiate transition of advanced big data analytics technologies to support rapid data-to-decisions across complex and distributed warfighter systems environments and in support of each warfighter platform's acquisition lifecycle.		28.993	13.436

A. Mission Description and Budget Item Justification

The emergence of Artificial Intelligence (AI) brings a host of revolutionary capabilities that will profoundly influence warfare, and bring special challenges for testers of Artificial Intelligence systems. The Autonomy and Artificial Intelligence Test (AAIT) project addresses current and emerging challenges associated with the test and evaluation (T&E) of unmanned systems, particularly in testing autonomy, artificial intelligence, and machine learning. As such, AAIT is developing test technologies to simulate, stimulate, instrument, measure, and assess an autonomous system's ability to perceive its environment, process information, adapt to dynamic conditions, make decisions, and effectively act on those decisions in the context of mission execution.

AAIT will provide the test technologies to effectively measure performance and characterize risk, thereby increasing warfighter trust in autonomous systems and artificial intelligence tools. This program will improve DoD test capabilities and methodologies to address the testing of increasingly autonomous units operating in unstructured, dynamic, battlespace environments. Furthermore, advancements are being made in developing collaborating, system-of-autonomous-systems that will work in concert as a swarm or pack, and in close proximity with humans. New test technologies are needed to stress the collective set of autonomous systems under realistic conditions, predict emergent behavior of autonomous systems, emulate the complex environment, and assess mission performance of these highly coupled and artificially intelligent systems.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Autonomy and Artificial Intelligence Test	37.888	40.985	43.491
Description: In FY24, AAIT continued to develop technologies supporting unmanned systems testing, particularly the testing of autonomy, artificial intelligence, and machine learning. Highlights include: - Collaborated across the Department to ensure TRMC is investing in technologies relevant to the future of autonomous systems - Continued to address the unique challenges of autonomy T&E to provide enterprise solutions across the life cycle beginning with mission analysis and engineering and ending with the mission operations; this initiative is a leading pathfinder effort to address gaps identified by the National Security Commission on Artificial Intelligence - Continued to develop robustness testing technology to detect and predict safety-related vulnerabilities and failures within UAS software, in advance of live test – allowing testers a more comprehensive means of identifying and reporting on safety vulnerabilities found deep within the UAS software, allowing testers to test for defects that may not have ever been found by traditional testing techniques

A. Mission Description and Budget Item Justification

The Department's ability to use cyberspace for rapid communication and information sharing in support of operations is a critical enabler of DoD military missions. Advancements in utilizing cyberspace are outpacing the technologies needed for test and evaluation (T&E). The Cyberspace Test Technology (CTT) project develops advanced technologies and methodologies to test and evaluate DoD capabilities and information networks to defend and conduct full-spectrum military operations across cyberspace. This program will improve cyberspace T&E capabilities to support the continual experimental, contractor, developmental, operational, and live-fire testing requirements of warfighter systems operating in cyberspace. Many of the test tools and infrastructure items required for systems in cyberspace will require advancement and maturation of nascent test technologies. The CTT project will address test technology shortfalls in cyberspace testing, including planning cyberspace tests, creating representative cyberspace threats and test environments, executing cyberspace tests, and performing cyberspace test analysis and evaluation.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Cyberspace Test	18.024	14.619	155.762
Description: In FY24, CTT continued to develop and demonstrate advanced technologies and methodologies for testing the ability of DoD capabilities and information networks to defend and conduct full-spectrum military operations across cyberspace. Highlights include: - Developed a next-generation traffic generation and content system that uses modern artificial intelligence techniques and detailed network, human social, and workflow models to generate traffic – ensuring host and network traffic that was not easily distinguished from human generated traffic - Developed the novel capability to fuzz targets' virtual machine state – enabling an entirely new class of attacks compared to existing fuzzers, which fuzzed only the program inputs - Developed a capability built on a modular, open-source network that will enable fuzzing for critical DoD cyber-physical systems - Developed a framework to provide the red team and other DoD test organizations an automated attack capability – enabling red team personnel to focus on more challenging problems and other test organizations to conduct automated testing - Developed methods to automate the enumeration of vulnerable services on a host that enabled red team personnel to automate common attack patterns - Developed frameworks to support the ability of red teams to rapidly create and deploy capabilities to abuse existing functionality in applications and operating systems that enabled adversary emulation the use of automated attack suites - Developed tools to measure the efficacy of cyber testing events and share anonymized results for all DoD testing – enabling more thorough testing and improved testing efficiency

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
<i>FY 2025 Plans:</i> In FY25, CTT will continue developing and demonstrating test technologies to enable delivery of cyber-resilient systems to the warfighter, and enhance the scale and efficiency of cyber testing. Specific areas of emphasis will include test needs in the cyber-physical systems, tactical edge components, and enterprise information systems domains. <i>FY 2026 Plans:</i> In FY26, CTT will continue developing and demonstrating test technologies to enable delivery of cyber-resilient systems to the warfighter, and enhance the scale and efficiency of cyber testing. Specific areas of emphasis will include test needs in the cyber-physical systems, tactical edge components, and enterprise information systems domains. <i>FY 2025 to FY 2026 Increase/Decrease Statement:</i> The \$0.281M increase from FY25 to FY26 is due to program adjustments related to the transition of technologies for the CTT project.

A. Mission Description and Budget Item Justification												
The space domain has become a competitive, congested, and contested environment dominated by global economics and key to national security. With the creation of the United States Space Force, the Department of Defense (DoD) is prioritizing investments to maintain space superiority and increase resiliency of space systems. Current testing infrastructure and methodologies to assess space system resilience against emerging threats is limited. The Space Test (ST) project mission is to address national test capability gaps by providing accurate, robust, and efficient T&E solutions to successfully develop, validate, and inform the employment of new space control systems. The ST project addresses test technology needs for adequate realism for space systems and aligns with the DoD S&T priority investments and is developing a strategic roadmap and investment strategy to establish live and virtual range environments, develop space and ground-based threat emulation capabilities. The ST project seeks to develop technologies that will enable robust, accurate, and timely T&E of future space weapon systems.												
B. Accomplishments/Planned Programs (\$ in Millions)									FY 2024	FY 2025	FY 2026	
Title: Space Test									1.830	0.760	0.836	
Description: In FY24, ST continued developing accurate, robust, and efficient T&E solutions to successfully develop, validate, and inform the employment of new space control systems. Highlights include: - Conducted a test infrastructure analysis of space systems test needs and developed a time-phased investment strategy based on those requirements; work included engaging the space test community on needs and gaps to ensure traceability of test technology development to strategic objectives - Continued development of a space-based telemetry system to support long-range flight test needs - Continued development of a high-altitude tactical aerospace laser optical simulator - Started a combined NASA/DoD study to identify upgrades to facilitate classified system testing at existing NASA facilities - Began phase 1 development of a mobile space threat testbed with Lawrence Livermore National Laboratory												
FY 2025 Plans: In FY25, ST will continue developing test technologies to validate the functionality and resiliency of space systems. Highlights include: - Continue development of a mobile space threat testbed - Continue combined NASA/DoD study to identify upgrades to facilitate classified system testing at existing NASA facilities - Leverage SkyRange to reduce risk of space-based telemetry sensor development												
FY 2026 Plans:

A. Mission Description and Budget Item Justification Hypersonic development remains a top priority for the Department. The Multi-Service Advanced Capability for Hypersonics Test Bed (MACH-TB) accelerates delivery of advanced hypersonic and strategic capabilities to the warfighter by leveraging commercial space launch and non-traditional test beds to provide DoD, other Federal agencies, industry, and academia the capability to affordably and rapidly conduct hypersonic experiments and test hypersonic system components.												
B. Accomplishments/Planned Programs (\$ in Millions)									FY 2024	FY 2025	FY 2026	
Title: MACH-TB Description: MACH-TB is a new project in FY26 (112). Previous MACH-TB activities were conducted under the High Speed System Test project (091) of this program element. In FY24 and FY25, MACH-TB demonstrated the use of commercial space launch services, precision sounding rockets, and reusable/recoverable hypersonic test vehicles to conduct hypersonic experimentation and hypersonic system component flight testing. Highlights include: - Demonstrated the reusability of a fully recoverable uncrewed hypersonic test vehicle, marking the Nation's first return to reusable hypersonic flight testing since the manned X-15 program ended in 1968 FY 2026 Plans: In FY26, MACH-TB will continue to accelerate the cadence of flight tests supporting DoD hypersonic experimentation and hypersonic system component testing. Highlights include: - Continue to leverage commercial space launch and non-traditional test beds to support stakeholders across DoD, other Federal agencies, industry, and academia - Acquire long-lead hardware and block buy of launch service agreements with commercial launch providers for MACH-TB tests over the next three years; this will accelerate the timeline to achieve the Department's goal of 50 flight tests per year FY 2025 to FY 2026 Increase/Decrease Statement: New Project.									-	-	734.000

A. Mission Description and Budget Item Justification

This program supports the Department's initiatives to (1) deter strategic attacks against the United States, and its Allies and partners; (2) deter aggression while being prepared to prevail in conflict when necessary; and (3) building enduring advantages for the future Joint Force.

This program supports the Enhanced Trilateral Security Partnership among Australia, the United Kingdom, and the United States (AUKUS) (Project Code 079), the North Atlantic Treaty Organization (NATO) Defense Innovation Accelerator for the North Atlantic (DIANA) (Project Code 353), and Science and Technology (S&T) International Engagement Initiatives (Project Code 354).

AUKUS will deepen defense capability and technological cooperation by developing and providing joint advanced military capabilities to promote security and stability in the Indo-Pacific region. The AUKUS program will accelerate the delivery of advanced military capabilities, increased interoperability, and improved information sharing. The delivery of these capabilities will enhance AUKUS partners' military edge and strengthen integrated deterrence. In support of these objectives, the marquee AUKUS Pillar II project centers around increasingly complex collaborative demonstrations and evaluations that will lead to the validation of trilaterally-connected platforms from the sea floor to the stratosphere, and ultimately enable trilateral production, acquisition, fielding, and sustainment of these systems.

The NATO DIANA program will pursue operationally relevant advanced capability co-development, support integration of multi-national capabilities to act as a force multiplier, and test and evaluate promising solutions found across the innovation ecosystem. This complementary program to DIANA will allow the United States to pull successful security solutions from the DIANA effort across the Alliance into availability in the U.S. industrial base and for operational use and aligns with the critical technology areas and operational requirements.

The S&T International Engagement Initiatives program will incentivize the DoD Components, including the Military Services, to engage and/or expand their S&T cooperation with existing partners (e.g., Israel, India, Japan, South Korea) and with those new partners with whom they may be engaged in policy or operational activities but not in the S&T realm. The intent is to consider proposals submitted from the DoD Components. The appropriate leadership will select proposals using

a merit-based process that identifies the most promising solutions to operational challenges. The program portfolio aligns with the interim National Defense Strategy guidance, the priority critical technology areas, and operational requirements.

B. Program Change Summary (\$ in Millions)	FY 2024	FY 2025	FY 2026 Base	FY 2026 OOC	FY 2026 Total
Previous President's Budget	25.000	125.680	153.898	-	153.898
Current President's Budget	12.056	65.680	173.048	-	173.048
Total Adjustments	-12.944	-60.000	19.150	-	19.150
• Congressional General Reductions	-12.500	-			
• Congressional Directed Reductions	-	-			
• Congressional Rescissions	-	-			
• Congressional Adds	-	-			
• Congressional Directed Transfers	-	-60.000			
• Reprogrammings	-0.001	-			
• SBIR/STTR Transfer	-0.443	-			
• Economic Assumptions	-	-	-0.459	-	-0.459
• Program Adjustment - Discretionary	-	-	19.609	-	19.609

Change Summary Explanation

The decrease of \$60.000 million in FY 2025 was to transfer \$20.000M to Line 24 for U.S. Navy-funded AUKUS warfighting experiments and demonstrations and \$40.000M to line 294A for Defense Innovation Unit-funded AUKUS projects.

The FY 2026 request includes the increase of \$39.595 million for discretionary, and the decrease of \$10.300 million of discretionary funding for AUKUS, and the decrease of \$9.686 million for Innovation & Industrial Base Reduce Fourth Estate Science and Technology (S&T) Funding (International S&T Engagement Initiatives) for a total of \$19.609 million.

The decrease of \$0.459 million was for Economic Assumptions.

Note New Start (Y/N): No												
A. Mission Description and Budget Item Justification This program supports the Department’s initiatives to: (1) deter strategic attacks against the United States, and its Allies and partners; (2) deter aggression while being prepared to prevail in conflict when necessary; and (3) build enduring advantages for the future Joint Force. Specifically, the Enhanced Trilateral Security Partnership among Australia, the United Kingdom, and the United States (AUKUS) will deepen defense capability and technological cooperation by developing and providing joint advanced military capabilities to promote security and stability in the Indo-Pacific region. This program provides funding to pursue operationally relevant advanced capability co-development, co-production, and/or co-sustainment; support integration of multi-national capabilities to act as a force multiplier,, and test and evaluate promising solutions found across the AUKUS innovation ecosystem. The program portfolio aligns with the critical technology areas and operational requirements. As new AUKUS projects are considered in FY2026, the intent is to consider proposals submitted from the DoD Components and industry and academia partners. The appropriate leadership will select proposals using a merit-based process that identifies the most promising solutions to operational challenges with an emphasis on transitioning technologies to current or future programs of record.												
B. Accomplishments/Planned Programs (\$ in Millions)									FY 2024	FY 2025	FY 2026	
Title: AUKUS Multi-Classification Level Collaborative Computing Environment.									-	10.000	-	
Description: This project provides a multi-classification level collaborative computing environment to support efforts under the AUKUS Advanced Capabilities Pillar.												
FY 2025 Plans: FY 2025 plans include initiating establishment of a multi-classification level collaborative computing environment to support efforts under the AUKUS Advanced Capabilities Pillar. Funding will support technical infrastructure, licenses, project management, and other services. The initial expenditure will take place in FY 2025, with project funding to continue from FY 2026 to FY 2031.												
FY 2025 to FY 2026 Increase/Decrease Statement: The decrease of \$10.000M from FY 2025 to FY 2026 is due to the funds will be transferred to the Chief Information Officer (CIO) Defense Information Systems Agency (DISA) PE 0303170K to support a multi-classification level collaborative computing

environment to support efforts under the AUKUS Advanced Capabilities Pillar. Purpose of the MCLCCE funding remains consistent but realigns the funding to the proper execution office for efficiency purposes.			FY 2026
Title: AUKUS Advanced Capabilities Projects Description: This project pursues military-operations focused advanced capability co-development, co-production and/or co-sustainment; supports integration of multi-national capabilities to act as a force multiplier; and tests and evaluates promising solutions found across all three countries. Funding provides for the solicitation, evaluation, merit-based selection, and execution of new projects to get cutting-edge technological capabilities into the hands of the warfighters. Projects are selected based upon a tri-laterally agreed-upon governance framework, derived in part from proven DARPA processes. The senior tri-lateral leadership will continuously evaluate and re-prioritize sub-projects based on the evolving threat landscape in the Indo-Pacific region, with the Department ensuring early and complete Congressional notification as the program matures. An important element of the AUKUS Advanced Capabilities Projects is the AUKUS Maritime Autonomy Experimentation and Exercise Series ("Maritime Big Play"). MBP provides an annual series of exercises designed to drive technical integration of emerging trilateral capabilities culminating in a marquee event within the USINDOPACOM Area of Responsibility (AOR) to emphasize strategic deterrence. As the Series progresses year to year in scale and complexity, it provides a mechanism and forum to engage industry partners from across the partner nations to seek partnering and technology insertion opportunities, enables opportunities for foreign comparative testing, demonstrates the utility of emerging trilateral information sharing agreements, and provides an opportunity to showcase the security partnership with other nations seeking AUKUS involvement in project specific instances. FY 2025 Plans: FY2025 plans include (1) increasing the scale and complexity of the AUKUS Maritime Autonomy Experimentation and Exercise Series ("Maritime Big Play") campaign, building upon the campaign's successes in FY 2024; (2) conducting mission planning, compatibility analysis, and testing for the Trilateral Hypersonic Strike Weapons project; (3) contributing to large-scale tri-lateral experiments to enhance our ability to perform coalition operations with mature Resilient Autonomous and Artificial Intelligence Technologies; (4) conducting technical evaluations of proposed AUKUS projects to inform decision-making; and (5) supporting Select Trilateral Approved Projects by helping to address technical challenges. FY 2026 Plans: AUKUS sub-projects in FY 2026 will build on successes in FY 2025. In FY2026, OUSD R&E and international partners will increase the scale and complexity of the Maritime Big Play to enable AUKUS coalition-massed robotic autonomous systems to achieve greater reach, scale, and lethality. As the AUKUS Trilateral Advanced Capability Executive Group (ACEG) drives execution toward Trilaterally ACEG Approved Projects, there is a trilateral		-	50.680

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
acknowledgment that an AUKUS project may take one of three forms, "Co-Development/co-production/co-sustainment" across AUKUS partners; "Experimentation" of emerging trilateral capabilities to demonstrate and validate solutions to emerging I-JROC requirements and Key Operational Problems (KOP); and "procure, deploy, and maintain" interoperable solutions to warfighters across the trilateral partner formations. OUSD (R&E) has a significant role in the shaping of AUKUS projects for ACEG consideration, and for driving the execution of projects to maximize the opportunity to transfer operational capability to the AUKUS warfighter. Current plans include: (1) conducting technical evaluations to inform selection and shape the most promising AUKUS Pillar II projects ; (2) increasing the scale and complexity of the AUKUS Maritime Autonomy Experimentation and Exercise Series ("Maritime Big Play") to enhance interoperability and combined capability of un-crewed maritime systems among AUKUS partners; (3) developing common architectures and standards to enhance our ability to perform coalition operations with mature Resilient Autonomous and Artificial Intelligence Technologies; and (5) evaluating hypersonic strike missile mission performance using air, land and sea-based platforms, developing conceptual missile design, conducting platform compatibility assessment, conducting operational and survivability analysis, and initiating planning for component ground test and experimentation; and (5) supporting Select Trilateral Approved Projects by helping to address technical challenges. FY 2025 to FY 2026 Increase/Decrease Statement: The increase of \$68.108 million between FY 2025 and FY 2026 will fund expansion of the scale and complexity of Maritime Big Play (AUKUS Operational Experimentation Campaign) to enable AUKUS coalition-massed robotic autonomous systems to achieve greater reach, scale, and lethality. It will also support development of enhanced AUKUS capabilities to conduct long-range hypersonic strikes against adversary targets and to defend against adversary hypersonic weapons by leveraging AUKUS partners' collective sensors, weapons and C2 systems. The budget will also fund technical evaluations to inform prioritization and support execution of AUKUS Pillar II projects.			
Title: AUKUS Experimentation Campaign Description: This sub-project seeks to conduct a sequence of increasingly complex collaborative demonstrations and evaluations in operationally meaningful conditions that will lead to the validation of trilaterally-connected autonomous platforms from the sea floor to the stratosphere, and ultimately enable trilateral production, acquisition, and fielding of these systems. This project was consolidated into AUKUS Advanced Capabilities Projects in FY 2025 and FY 2026.		5.888	-
Title: Maritime Digital Experimentation Federation Description: The Maritime Digital Experimentation Federation (MDEF) is a trilateral experimentation network designed to support virtual and live interoperability testing and integration of uncrewed autonomous systems into trilateral operations.		-	5.000

Note

New Start (Y/N): No. Funding was re-aligned from Program Element 0605798D8Z.

A. Mission Description and Budget Item Justification

To combat the evolving threat and development of critical technologies, the North Atlantic Treaty Organization (NATO) established the Defence Innovation Accelerator for the North Atlantic (DIANA) to leverage dual-use technological advances in Allied centers of innovation to achieve the Alliance's operational requirements, including accelerating the development, testing, and fielding of security technology solutions to achieve an advantage over the evolving threat. The NATO DIANA program only provides non-traditional business partners from Alliance nations with funding to accelerate new technical solutions and commercialization specifically where the technology holds a dual use (commercial and defense in nature) potential. Advanced development and testing to facilitate adoption into U.S. defense programs requires supporting funding for our own labs and test centers to pull that technology into our Defense acquisition ecosystem.

This project enables the Office of the Under Secretary of Defense for Research and Engineering (OUSD(R&E)) to assist in accelerating military capability development for U.S. forces as well as our NATO Allies and will expose new U.S. industries to the European markets. Fielding of critical technologies in the proposed areas will have significant positive impact on detecting the enemy first, ensuing effective communications and data exchange between coalition partners, as well as systems developed by different original equipment manufacturers (OEMs), and enabling robotic and autonomous systems to remain on station longer periods of time for greater operation impact. NATO DIANA advances access to technology across larger security challenges. These enhancements will contribute to increasing lethality across the U.S. and NATO military capabilities.

The NATO DIANA initiative will fund dual-use technologies identified through the NATO DIANA challenges found sufficiently mature with the potential for meaningful impact for U.S. forces on the battlefield for continued development, testing, integration, and experimentation and proposes to fund each technology for capability maturation.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Defence Innovation Accelerator for the North Atlantic (DIANA)	-	0.000	35.761
Description: Funds efforts that are complementary to the DIANA program to allow the United States to pull successful security solutions from across the Alliance into availability in the U.S. industrial base and for operational use and aligns with the critical technology areas and operational requirements.			
FY 2025 Plans:

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
This project will annually fund dual-use technologies identified through the NATO DIANA challenges found sufficiently mature with the potential for meaningful impact for U.S. forces on the battlefield for continued development, testing, integration, and experimentation and proposes to fund each technology for capability maturation. These technologies will be identified under challenges based on a strategic direction developed with input from the Office of the Under Secretary of Defense for Research and Engineering. Each of the identified technology investments will be supported by end-to-end enablers, including mission and operational analysis, due diligence assessment, testing, and productization. Mission and operational analysis will assess the viability of the proposed technical approach and the mission impact of the technology in relevant operational scenarios. Due diligence assessment will assess the risks associated with the selected technology companies prior to investment, from both an adversarial risk perspective (e.g., foreign ownership, control, and influence) and from a financial risk perspective, as well as continue to monitor adversarial interest and engagement in selected technology companies post-award. Testing and evaluation will establish and quantify measures of performance and measures of effectiveness for the capability prototypes as they mature, to include through participation in operationally relevant demonstration environments. Lastly, productization will further mature qualified prototype capabilities, which sufficiently meet the measures of performance and effectiveness thresholds, for commercialization and operational use. FY 2026 Plans: Fund evaluation of dual-use technologies identified through the NATO DIANA 2024-2025 challenge problems found sufficiently mature with the potential for meaningful impact for U.S. forces on the battlefield for continued development, testing, integration, and experimentation and proposes to fund each technology for capability maturation. Each identified technology investments will be supported by mission and operational analysis, due diligence assessment, testing, and productization to assess the viability of the proposed technical approach and the mission impact of the technology in relevant operational scenarios; to assess the risks associated with the selected technology companies prior to investment, from both an adversarial risk perspective and from a financial risk perspective, as well as continue to monitor adversarial interest and engagement in selected technology companies post-award; to establish and quantify measures of performance and measures of effectiveness for the capability prototypes as they mature, to include through participation in operationally relevant demonstration environments; and to further mature qualified prototype capabilities for commercialization and operational use. FY 2025 to FY 2026 Increase/Decrease Statement: The increase of \$35.868 million from FY 2025 to FY 2026 is to support the rapid growth of the expected output from the DIANA program. Growing from an initial cohort of 44 companies in 1Q24 to an expected 150 awardees in 4Q25, and an anticipated awardees in excess of 2000 companies in FY25, the increased funding will enable full support for U.S. companies, introduce U.S. industries to the European markets, and enable our labs/test centers to bring critical technology capabilities to the warfighter.

D. Acquisition Strategy Successful projects support capability acquisition in several ways: technology upgrade insertion in a current platform or program providing greater capability or prolonging life of the system, inform or refine requirements for planned systems, or direct procurement. NATO DIANA will leverage the Department’s most efficient and effective cooperation or acquisition approaches to support the appropriate transition pathway.

A. Mission Description and Budget Item Justification

To keep pace with the rapidly evolving technological landscape, advancing science and technology (S&T) cooperation with our Allies and partners remains important. This project will incentivize the DoD Components, include the Military Services, to engage and/or expand their S&T cooperation with existing partners and with those partners with who they may be engaged in policy or operational activities but not in the S&T realm. In addition, this project will allow DoD to meet new and expanded requirements for substantive, administrative, and operational activities in support on international defense S&T cooperation.

The intent is to consider proposals submitted from the DoD Components. The appropriate leadership will select proposals using a merit-based process that identifies the most promising solutions to operational challenges with an emphasis on transitioning technologies current or future programs of record.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: International S&T Engagement Initiatives	-	0.000	3.499
FY 2025 Plans: This project will annually support additional international S&T projects or DoD Component, including Military Service, participation in OSD-led activities (e.g., workshops, delegation visits) with select allies and partners including Israel, Japan, Korea, Singapore, and/or India. For new projects, the intent is to consider project proposals submitted from the DoD Components. The appropriate leadership will select proposals using a merit-based process that identifies the most promising solutions to operational challenges with an emphasis on transitioning technologies to current or future programs of record.			
FY 2026 Plans: Incentivize Military Service participation in multiple exploratory workshops on OUSD(R&E) critical technologies with the intent to identify collaborative opportunities.			
Pursue operationally-focused cooperative efforts with current or new Allies and partners. Funding provides for the solicitation, evaluation, merit-based selection, and execution of new projects to get cutting-edge technological solutions into the hands of the warfighters. OUSD(R&E) leadership will select new projects based upon OUSD(R&E) priorities.

A. Mission Description and Budget Item Justification

This program supports the Department's initiatives to Build a Sustainable and Long-Term Advantage and Build a Resilient Joint Force and Defense Ecosystem. The National Security Innovation Network (NSIN) activities build networks of innovators that generate new solutions to national security problems. On April 4, 2023, the Secretary of Defense issued a memorandum re-aligning the Defense Innovation Unit (DIU) Director as a direct report to the Secretary of Defense. In July 2023, the DIU Director announced a reorganization that integrated NSIN into DIU to maximize strategic impact.

The Regional Network Team is responsible for building the networks of innovators. The physical network is spread across regions spanning the Continental United States and reaching out to Hawaii and Alaska. Regional engagement activities are led by Regional Directors supported by additional Regional Network Team members able to reach into critical venture innovation centers throughout the country including: Boston, MA; New York City, NY; Washington, DC; Orlando, FL; Chicago, IL; St. Louis, MO; Austin, TX; Denver, CO; Seattle, WA; San Diego, CA; and San Francisco, CA. Additional members of the Regional Network Team currently include Regional Engagement Principals (REPs) that are embedded in - and have responsibility for - critical innovation ecosystems within each region including universities and other tech hubs. This team will be integrated with DIU's commercial and regional engagement efforts to reduce duplication, strengthen national outreach, and foster cross-pollination of activities across the technological maturity spectrum. DIU will strengthen pathways for talent to serve and facilitate access to early-stage companies to engage with the Department through the following programmatic portfolios:

The Talent Portfolio provides opportunity for individuals outside the traditional federal talent pipeline to serve our country and solve real-world national security, technology, and policy challenges. By bridging the gap between students, academics, and entrepreneurs to engage with the Department of Defense (DoD), DIU is helping build a deep bench of diverse, qualified civilian and military workers to preserve our competitive emerging technology advantage with resilient personnel trained for the unpredictable global operating environment.

The Venture Portfolio develops and executes programs and services to facilitate access to emerging technology as it engages the talents of fast-moving innovators and non-traditional problem-solvers. The Venture Portfolio works directly with dual-use early-stage ventures emerging from both the academic and venture community who have solutions that address DoD problems. The Venture Portfolio creates advantage for defense innovation through customer discovery and solution adoption.

	FY 2024	FY 2025	FY 2026
Title: National Security Innovation Network (NSIN)	10.755	1.586	2.263
Description: Following the FY 2023 reorganization, DIU and NSIN will take on the mission to build networks of innovators that generate new solutions to national security problems. DIU will continue ongoing efforts to develop and execute programs that engage these networks to solve the problems of Department of Defense (DoD) entities from the Military Services, Joint Staff, Combatant Commands, Defense Agencies, and Field Activities. FY 2025 Plans: Under the reorganization, this initiative will: •Establish a coherent front-door for dual-use and emerging technology companies to access the Department of Defense in partnership with the Office of Small Business Programs and Service innovation organizations. •Expand successful outreach pilots to HBCU/MSIs •Strengthen the talent pipeline to serve our country and solve real-world national security, technology, and policy challenges. •Facilitate and accelerate global exchange of commercial technology and expertise via prize challenges, dual-use accelerator programming, and other programming. FY 2026 Plans: NSIN will continue to support the DIU 3.0 strategy to serve as the National OnRamp for defense innovation from the commercial sector. NSIN will continue to support the execution of the Defense Innovation OnRamp Hubs, along with its existing partnerships with the academic sector FY 2025 to FY 2026 Increase/Decrease Statement:

Note

New Start (Y/N): No

Per direction from Congressional professional staff members, PE 0604055D8Z will undergo a PE change to PE 0603055D8Z beginning in FY 2026. This change better aligns the PE with the BA-3 budget activity and improves differentiation from the Operational Energy Prototyping program, PE 0604555D8Z, which handles BA-4 workload. Moving forward, updates for the OECI program are documented in the budget exhibit for PE 0603055D8Z.

A. Mission Description and Budget Item Justification

OE innovation is the cornerstone of the future Joint Force, preserving command, control, and communications at all echelons and ensuring:

- increased lethality
- agile, integrated, shaping, and pulsed operations
- survivable and sustainable capabilities across domains and in any environment including contested and extreme ones (i.e., Arctic and Space)
- decisive information and decision advantage.

OECI powers this future by investing in early-stage energy innovation for military capabilities, incentivizing the Components to achieve energy superiority for U.S. Joint Forces and missions. The OECI program accelerates the transition of pre-commercial, military-unique technologies, promoting rapid fielding to warfighters. OECI is innovating today for energy superiority tomorrow, delivering unmatched value to the DOD warfighter by:

- Boosting lethality and supportability
- Enhancing operational readiness and responsiveness
- Extending operational capabilities and endurance for advanced platforms and weapons

OECI's technical thrust areas are:

- Operational Energy and Power Projection: Giving U.S. forces operational flexibility, freedom to operate at will, and a qualitative edge in all domains (including space and cyber), through implementation of advanced energy technologies. Investments include novel platform structures and power plant solutions for extended duration and enabling and enhancing maneuver without regret (including next-generation power and energy delivery (power beaming)).

UNCLASSIFIED

Exhibit R-2, RDT&E Budget Item Justification: PB 2026 Office of the Secretary Of Defense		Date: June 2025
Appropriation/Budget Activity 0400: <i>Research, Development, Test & Evaluation, Defense-Wide / BA 3: Advanced Technology Development (ATD)</i>		R-1 Program Element (Number/Name) PE 0604055D8Z / <i>Operational Energy Capability Improvement (OECI)</i>
• Operational Energy Surety: Ensuring U.S. forces, capabilities, and missions assured, robust, and resilient access to energy, including powering energy magazines (missile defense, Golden Dome, and counter-UAS) and data centers in the homeland and abroad. Technical areas include fuel fabrication processes, energy conversion, novel power generation, and energy storage and distribution technologies. • Please see higher classification for additional information.		
OECIF is laser-focused on accelerating solutions to critical OE capability gaps, delivering game-changing technologies that advance contested logistics, command energy resources, and electrify the battlespace. Select successes include: • TRISO Fuel Production: Reclaiming America's Nuclear Leadership: Established the only domestic, commercial TRISO nuclear fuel production capability in the US, eliminating a critical vulnerability in our nuclear infrastructure. This strategic capability is now enabling terrestrial and space RDT&E demonstrations, Service SMR initiatives at installations, and the national civilian advancement of advanced nuclear power, benefiting both utility and DOD applications and solidifying America's leadership in nuclear energy. • Revolutionary Airframe Prototyping: Redefining Airpower: Advanced oblique-angle flying wing (OAFW) technology, delivering unprecedented endurance, range, and altitude performance (greater than 40% increase) in under 12 months. These airframe advancements are applicable and scalable across multiple joint communities, advancing lift, refueling, and signature management and promising to redefine the future of airpower. • DHVPE: Securing Dominance in Space: Innovations are driving down the cost of space-qualified PV, reducing launch weight, and maturing power beaming components, enabling increased maneuverability and survivability in space and ensuring U.S. dominance in this critical domain. • Power Beaming: Projecting Power Across the Battlespace: Power beaming advancements have been made in multiple modalities (RF, Optical/Laser, mm Wave), accelerating the maturation of transmit, receive, beam forming/steering/safety capabilities and demonstrating concepts across modalities. This positions the U.S. as the undisputed leader in wireless power technology, enabling a new era of energy delivery. • Airborne Energy Delivery: Guaranteeing Resupply in Contested Environments: Innovations are increasing the standoff distance and accuracy for airborne energy delivery in contested environments, including GPS-denied environments, guaranteeing that ground forces receive the energy resupply they need to fight and win, regardless of the threat environment. • Power and Thermal management for energy magazine: Underpinning advancements for current laser technology use and scaling to support increasing future demands. The OECI program has a proven track record of successfully transitioning emerging OE capabilities, with over 80% of completed projects moving into practical application. Specifically, 117 of 132 completed projects have transitioned to: follow-on funding; equipment for CCMD exercises and demonstrations; knowledge or analytic tools supporting the Joint OE community; or commercial markets. OECI has been instrumental in advancing critical capabilities for energy-efficient shelters, ground vehicle efficiency, high-power weapons and power beaming, energy storage for unmanned systems, nuclear power, and technologies addressing key capability gaps, enabling the ability to command energy, power the force, and electrify the battlespace.

A. Mission Description and Budget Item Justification												
The OECIF project is the engine driving enhanced DOD operational effectiveness through targeted Science & Technology (S&T) investments. This project strategically prioritizes technologies enabling OE integration, supporting operations in contested environments and seamlessly embedding energy awareness into DOD command and control architectures. By harnessing energy data and information to improve decision-making, the OECIF project is developing a critical OE data layer as an integral part of JADC2 and, in-turn, transforming the battlespace. Specifically, S&T investments in this project are focused on: 1. Real-Time Power and Energy Performance Assessment: Providing state-of-the-art metering and monitoring of platform/system capabilities, delivering real-time performance assessment for optimized resource allocation. 2. Revolutionizing Mission Planning: Improving mission-planning tools and analytics while providing warfighters with unparalleled situational awareness and decision-making capabilities. 3. Empowering Operational Control: Increasing operational control and decision-making for power and energy at all warfighting echelons, enabling more agile and responsive operations with an emphasis on classification consideration. 4. Data-Driven Decision-Making: Developing next-generation OE modeling and simulation tools that quantify operational and business case impacts, empowering senior leaders to make informed decisions based on data-driven insights. 5. Informing Strategic Investments: Bringing power and energy innovation knowledge and analytics to warfighters and senior leaders, informing future acquisition, sustainment, and budget decisions and ensuring that investments are aligned with critical operational needs. 6. Cultivating Expertise: Delivering foundational training and education on power and energy innovation across the military and S&T communities, building a cadre of experts who can drive future innovation. All six technology areas within this project directly support the DOD's OE Strategy Enterprise-wide Energy Visibility (EWEV) line of effort, contributing to a more resilient and effective force. Program-wide administrative costs are also part of this project code and include transparency and accountability tools for the program and the OE-Innovation community, inclusion of warfighters into the projects enhancing technology awareness and adoption, and power and energy subject matter expertise.												
B. Accomplishments/Planned Programs (\$ in Millions)									FY 2024	FY 2025	FY 2026	
Title: Operational Energy Capability Improvement Fund (OECIF)									56.658	51.130	0.000	
Description: In FY 2024, OECIF delivered critical solutions to address key OE gaps, significantly enhancing Joint capabilities and improving battlespace awareness for warfighters operating in contested environments. Key technology advancements focused on: • Precision Energy Management: OE metering and monitoring capabilities enabling real-time energy consumption tracking for optimized resource allocation and reduced waste.

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026
- Enhanced Situational Awareness: Power and energy sensing technologies providing a comprehensive understanding of energy availability and usage across the battlespace. - Comprehensive Energy Data: Capturing end-to-end power, energy, and Class IIIB operational energy data, enabling data-driven decision-making for improved logistics and resource planning. - Optimized UAV Operations: Integrating weather data into Uncrewed Aerial Vehicle (UAV) planning and energy consumption models, maximizing UAV efficiency and extending mission range. These advancements provide warfighters with more accurate and reliable energy data, empowering them to make better resource management decisions and execute more efficient mission planning, ultimately increasing their effectiveness and survivability in contested environments. Furthermore, OECIF completed four in-depth analytical studies, developing strategic technology and investment roadmaps for emerging energy technology assessments, graphene and critical mineral energy storage supply chains, and energy security for continuity of operations. These studies equip warfighters with the most effective, cyber-secure, and energy-efficient tools, enabling faster decision-making and enhancing operational effectiveness, while also informing future competitive proposal calls to ensure continued innovation in critical areas. FY 2025 Plans: In FY 2025, the OED portfolio continues ten active projects aimed at revolutionizing operational energy management. These projects focus on: - Optimizing UAV energy consumption through enhanced command and control. - Enabling predictive maintenance by deploying power monitoring and anomaly detection tools. - Creating realistic scenario planning by advancing wargaming capabilities with live energy consumption data. - Providing real-time situational awareness by capturing edge-level energy data and visualizing it in Common Operational Pictures (COP). - Fostering DOD-wide collaboration and tracking operational energy research. - Ensuring data transmission in GPS-denied environments by utilizing resilient mesh networks. - Supporting multi-domain operations by aggregating joint-level energy data. - Closing visibility gaps in operational energy awareness by expanding digitization of legacy systems. - Bolstering warfighting capabilities in USINDOPACOM by increasing the density of multi-modal sensors producing cyber-physical power intelligence products (C PIP) at key sites.

A. Mission Description and Budget Item Justification

This project is revolutionizing operational energy resilience, a critical force multiplier enabling operational flexibility, freedom of maneuver, and guaranteeing mission success in any environment. By driving innovations across key technical areas, this project is ensuring that U.S. Joint Forces have the energy they need, when and where they need it.

The project's strategic focus areas include:

- **Next-Generation Capabilities: Powering the Future Battlespace:** Investing in high-power weapons enablers, advanced energy storage devices, power and thermal management technologies, energy magazines, and energy innovations optimized for arctic operations, ensuring that U.S. forces maintain a decisive advantage in any environment, including the most challenging and contested.
 - **Energy Diversification: Expanding the Energy Arsenal:** Focusing on Space and Arctic storage and use technologies including hydrogen, and PEM fuel cell technologies; expanding the range of available energy sources through innovative production and distribution methods, and providing power, fuel, and heat from waste resources thereby reducing reliance on vulnerable supply chains.
 - **Interoperability and Standardization: Creating a Seamless and Assured Energy Use:** Investing in tactical micro-gridding, electrical and communication standards, and energy component commonality for multiplatform applications, ensuring seamless integration across the force and enabling more agile and responsive operations.
- By pursuing these strategic objectives, this project is transforming operational energy resilience, expanding warfighter capability and safety, and ensuring that U.S. forces are prepared to meet the challenges of the future.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Operational Energy Resilience	43.957	34.170	0.000
Description: In FY 2024, Operational Energy Resilience (OER) transformed the battlespace by delivering groundbreaking advancements that enhance warfighter capabilities and guarantee mission success in any environment. Key achievements include: • Unmatched Tactical Edge Resilience: Pioneered resilient production, storage, delivery, and use of fuels and energy storage technologies at/near the tactical edge, including cold-weather solutions for the Arctic and reduced-cost logistical transportation solutions, ensuring operational effectiveness even in the most challenging and contested environments. • Game-Changing Innovation: Developed first-of-their-kind solutions, including Hydrogen-powered high-altitude balloons enabling over-the-horizon communication and hybrid airships extending range and system capabilities to address critical USINDOPACOM operational energy gaps, and expanding the reach and effectiveness of U.S. forces.

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
• Enhanced Lethality for Directed Energy Weapons: Revolutionized Directed Energy (DE) weapon capabilities via advanced thermal management systems and an increased energy magazine, enabling greater lethality, extended engagement times, and enabling decisive advantage against emerging threats. • Hybridization for Tactical Mobility and Expanded Fires: Expanded tactical silent watch/silent mobility, improved tactical sprint, and enhanced signature management (thermal and acoustic). Efforts are reducing reliance on costly and dangerous fuel supply convoys, boosting resilience through exportable power from crewed-uncrewed teaming, and optimizing energy use through vehicle-to-grid and vehicle-to-vehicle technologies providing both equipment power and payload (DE weapons) power. In addition to these groundbreaking advancements, OER successfully completed the following projects in FY 2024, delivering tangible benefits to the warfighter: 1. ACES: Analysis of Charging & Energy Storage (ACES): Provides data-driven insights into OE requirements for new technology platforms, enabling optimized resource allocation and informed decision-making. 2. eTHOR: Electrical Tactical Humanitarian Operations Response (eTHOR): Delivers readily deployable mobile electrical power for computing capabilities at the tactical edge and communications, enhancing command and control in dynamic environments. 3. EVEBEDE: Evaluation of Electric Batteries to Enable Directed Energy (DE) (EVERBEDE): Validates the use of advanced commercial Electric Vehicle (EV) batteries in high-power electric weapons and DE applications, paving the way for increased warfighter lethality against emerging threats. 4. G3BMS: Empowers greater control over battery technology by supplying a U.S. Government-owned technical data package for 3rd Generation 6T Lithium-Ion Battery Management System (G3BMS), resulting in greater sources of supply, lower costs, increased product availability, improved quality, and facilitating rapid transition of new cell technologies. Building on these successes, OER is continuing development of 13 projects from the previous FY while initiating new projects in FY 2025. The OER 456 p-code is driving state-of-the-art near-term innovations in operational effectiveness under austere conditions, including the Arctic, and advancing alternatives to fossil fuel requirements. OER is enabling increased DE weapons operability (use time, thermal loads, and power magazine) and ensuring resilient and innovative delivery/re-supply options of power and fuel solutions in contested environments, guaranteeing mission success in any environment and transforming the future of warfare. FY 2025 Plans: In FY 2025, OES is fortifying the Joint and coalition forces' operational advantage by delivering innovative energy solutions that ensure reliable power at the point of need. OES prioritizes enhancing energy interoperability and advancing technologies that provide diverse energy options for warfighters operating at the tactical edge, in contingency bases, or en route, even in the most challenging contested logistics environments and extreme conditions. OES is driving project advancements that dramatically improve energy resilience, endurance, and vigilance across land, air, and water domains through both autonomous and manned platforms. These advancements are:

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
• Empowering the Warfighter: Adapting and integrating fuel cells to enhance power generation capabilities, providing a more reliable and versatile energy source. • Optimizing Aerial Delivery: Exploiting modeling and simulation to streamline aerial delivery, support, and recovery operations, ensuring rapid and efficient energy resupply. • Extending Operational Reach: Increasing warfighter range, agility, and silent watch capability through the integration of multiple fuel/energy source options, enabling longer missions and greater stealth. • Maximizing Payload Capacity: Expanding the range and payload capacity of delivery platforms, allowing for the transport of more critical supplies and equipment. • Enabling Next-Generation Weapon Systems: Developing hybrid architectures and advanced energy management and distribution technologies to support Agile Combat Employment (ACE) and meet the high-energy demands of next-generation weapon systems, including Directed Energy (DE) weapons and advanced radar systems. Leveraging lessons from current conflicts and worldwide operations, FY 2025 projects include new initiatives that enable offensive operational energy strategies to disrupt adversary energy sources. OES is also providing warfighters at all echelons with critical systems/capability battery data, enhancing vehicle control and safety through open architecture (while freeing space for additional technology), and using routine maintenance runtimes from new platforms to generate power back to the grid during peak energy usage. By delivering these disruptive technologies, OES ensures a more resilient, persistent, and effective force capable of operating in, to, and through austere and contested environments. FY 2026 Plans: Future plans are addressed under PE 0603055D8Z. FY 2025 to FY 2026 Increase/Decrease Statement: Funding increase/decrease is addressed under PE 0603055D8Z

A. Mission Description and Budget Item Justification

The OE Demand Reduction project is revolutionizing operational energy management by driving innovations that:

- Shrink the Logistical Footprint: Reduce operational energy demand, minimizing reliance on vulnerable supply lines and freeing up resources for other critical missions.
- Maximize Performance in the Air and Space Domains: Increase efficiencies for aviation and space domains, enabling longer mission durations, greater payload capacity, and enhanced operational effectiveness.
- Mitigate Critical Vulnerabilities: Reduce risks by providing next-generation power and energy delivery options, such as power beaming, creating a more resilient and adaptable force.
- Dominate the Information Domain: Enable exploitation of critical power system signatures through Cyber-physical Power ISR Protection (C PIP), providing a decisive intelligence advantage by determining force capabilities and informing sustainment actions in both domestic and austere environments.

To achieve these ambitious goals, the project focuses on:

- Aviation Efficiency: Transforming Air Operations: Investing in innovations to gain efficiency and lower energy consumption through advances in aviation powerplants (e.g., uncrewed electrification, hybridization, etc.), flight software planning tools, inflight algorithms, composite airframe structures, and propulsion power options, enabling longer-range, more efficient, and more stealthy air operations.
- Space Efficiency: Powering Dominance in Space: Investing in power and energy (generation, transmission, storage, and resupply) for space access (platform launch and orbital transfer), platform maneuver and station keeping/resupply, and platform operation capabilities that improve energy efficiency, reduce energy consumption, and/or increase range/endurance. The project also focuses on innovations that dramatically reduce the cost of production and/or launch weight of critical space components, ensuring U.S. dominance in this critical domain.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Operational Energy Demand Reduction	49.205	40.331	0.000
Description: In FY 2024, Operational Energy Demand Reduction (OEDR) delivered transformative advancements that are reshaping the future of military operations and enhancing national security. Key achievements include: • Revolutionizing Power Delivery: Achieved significant breakthrough in power beaming by demonstrating multipoint tracking, successfully powering multiple assets simultaneously in a landmark test event at the United States Capitol, paving the way for wireless power delivery to remote and contested locations. • Securing Dominance in Space: Validated cutting-edge perovskite solar cell technology on orbit, providing a viable path to an alternative, high-efficiency, space-qualified US solar cell technology. This critical advancement revolutionizes space power generation, ensuring U.S. dominance in this critical domain.

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026
• Transforming UAV Operations: Completed design review and ground testing for an upgraded Class 4 UAV Gray Eagle with a hydrogen fuel cell system, resulting in higher payload power, improved platform capabilities, lower sustainment costs, increased mission reliability, and significantly reduced acoustic signatures. This upgrade transforms UAV operations, enabling longer endurance, stealthier missions, and enhanced effectiveness. • Please see higher classification for additional information. FY 2025 Plans: In FY 2025, OE&PP is set to revolutionize power projection, delivering critical capabilities that will reshape the future battlespace. Key initiatives include: 1. Powering the Small UAS Revolution: Maturing power beaming technologies that creates a procurable system capable of wirelessly powering Group 1 through Group 3 UAS platforms, enabling persistent surveillance and reconnaissance capabilities for warfighters in complex environments. 2. Silent Flight for Advanced UAS: Advancing future aviation fuel technology capable of silently propelling Group 4 UAS, enabling stealthy operations and expanded mission capabilities. 3. Unlocking the Potential of Space-Based Power: Developing on-orbit refueling capabilities for high-value National Security Space assets and enabling in-space assembly of large solar arrays, dramatically increasing power generation for DOD satellites and reducing launch fuel and costs. These FY 2025 OE innovations, driven by real-world operational insights, are aimed at diminishing operational energy requirements, enhancing efficiencies within the aviation and space sectors, and mitigating risks by furnishing cutting-edge power solutions and energy delivery mechanisms (such as power beaming) for bolstering military efficacy amidst challenging operational environments. Furthermore, gains in aviation efficiencies are poised to significantly increase range, endurance, payload, and lethality for future air operations. FY 2026 Plans: Future plans are addressed under PE 0603055D8Z. FY 2025 to FY 2026 Increase/Decrease Statement: Funding increase/decrease is addressed under PE 0603055D8Z.

A. Mission Description and Budget Item Justification

This project is at the forefront of a revolution in military power, spearheading DOD innovations in nuclear power (fission reactors and radioisotope power systems) and enabling joint operations across all domains. Recognized as a strategic priority, nuclear power is poised to redefine energy surety by:

- **Unleashing Unprecedented Power Density:** Maximizing the energy density of existing power systems by approximately 1,000,000x, enabling prolonged operations, reducing logistical dependencies, and providing a decisive advantage in contested environments.
- **Extending Reach to the Most Remote Locations:** Enhancing power system lifetime in remote and austere locations, guaranteeing reliable power for critical missions, regardless of the environment.
- **Liberating Personnel for Mission-Critical Tasks:** Minimizing the operational burden on personnel compared to traditional power systems (e.g., chemical batteries and fossil fuels), freeing up valuable resources for other vital tasks and increasing overall operational effectiveness.

The nuclear power portfolio's investments are focused on making nuclear technologies safer, lighter, more secure, more efficient, more economical, and more operational for the DOD, transforming the future of military power and ensuring U.S. dominance in the 21st century.

To realize this vision, this project is driving critical technology improvements in the supply chain and power conversion efficiency of both small and large RPS and fission subsystems and components, as well as de-risking complete fission mobile nuclear reactor systems. These transformative technology development efforts include investments in cutting-edge materials like smart carbon/carbon, shielding optimizations, betavoltaics, alphavoltaics, alpha photovoltaics, Stirling energy conversion technology, and supercritical CO2 energy conversion loops (sCO2). The nuclear power portfolio also funds rigorous studies to ensure the safety and security of these revolutionary technology investments, prioritizing responsible and sustainable development.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Nuclear Power	19.009	29.938	0.000
Description: The nuclear power portfolio is revolutionizing military power, leading DoD innovations in nuclear power (fission reactors and radioisotope power systems) to enable joint operations across all domains and securing U.S. dominance in the 21st century. Recognizing nuclear power as a strategic priority, the project is leveraging its unmatched capabilities to enhance energy surety by: • Unleashing Unprecedented Power Density: Maximizing the energy density of existing power systems by approximately 1,000,000x, enabling prolonged operations, reducing logistical dependencies, and providing a decisive advantage in contested environments. • Extending Reach to the Most Remote Locations: Enhancing power system lifetime in remote and austere locations, guaranteeing reliable power for critical missions, regardless of the environment.

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
• Liberating Personnel for Mission-Critical Tasks: Minimizing the operational burden on personnel compared to traditional power systems (e.g., chemical batteries and fossil fuels), freeing up valuable resources for other vital tasks and increasing overall operational effectiveness. FY2025 marked a year of significant progress, driven by strategic investments and a commitment to innovation: • Fueling America's Nuclear Renaissance: The nuclear power portfolio's strategic investment in the only commercial-scale, domestic TRISO fuel fabrication line for Project Pele is directly enabling the National efforts to rapidly deploy new reactors, unleashing more affordable, reliable, and secure energy across the United States. Based on this project's success, the Department of Energy (DOE) allocated the first allotments of domestic High Assay Low Enriched Uranium (HALEU) to a select group of advanced reactor suppliers, initiating the procurement of TRISO fuel for defense and commercial reactor designs – a testament to the program's transformative impact. • Ensuring Responsible Development: To maximize impact and ensure responsible stewardship of resources, the nuclear power portfolio established the Nuclear Technology Advisory Group (N-TAG), enabling comprehensive technical assessments of all funded projects and ensuring a higher return on investment. This strategic initiative paved the way for FY2025's first dedicated nuclear-focused call for proposals, yielding key projects that will drive innovation in critical areas. • Addressing Key Knowledge Gaps: The portfolio oversaw the completion of four studies addressing crucial knowledge gaps, including clarifying policy frameworks for nuclear power systems in very low Earth orbit (vLEO), identifying high-impact spaceflight applications for nuclear technologies, providing guidance for deploying nuclear power systems for the DOD, and exploring feasible designs for nuclear systems in contested environments, ensuring a well-informed and strategic path forward. These accomplishments demonstrate a relentless commitment to advancing nuclear technology for defense purposes while ensuring safe and secure operations, solidifying America's leadership in this critical domain. FY 2025 Plans: In FY 2025, the nuclear power portfolio is strategically advancing the next generation of nuclear energy solutions for the DOD, enhancing operational capabilities and paving the way for future dominance. Key initiatives include: • Targeted Innovation for Enhanced Capabilities: Conducting the first dedicated nuclear-focused call for proposals, yielding key projects designed to optimize supply chains and power conversion efficiency for small radioisotope power systems in both space and terrestrial environments. This targeted approach ensures that investments are aligned with critical operational needs. • Strategic Planning for Future Applications: Commissioning a maritime reactor transport study and developing a nuclear battlefield curriculum that incorporates lessons learned from current conflicts. These initiatives demonstrate a commitment to proactive planning and responsible development. Building upon previous successes, the nuclear power portfolio is continuing projects that improve the supply chain and power conversion efficiency of both small and large RPS and fission subsystems and components, as well as de-risking complete fission mobile nuclear reactor systems. These critical technology development efforts include investments in advanced materials like smart carbon/carbon and Stirling energy conversion technology, driving innovation and enhancing performance.

Furthermore, the portfolio is overseeing testing of a supercritical carbon dioxide (sCO2) power conversion technology, which enables the miniaturization of transportable fission systems, a key step towards deployable nuclear power. It is also overseeing the completion of four studies designed to address crucial knowledge gaps: • Clarifying policy frameworks for nuclear power systems in very low Earth orbit (vLEO). • Identifying high-impact spaceflight applications for nuclear technologies. • Providing guidance for deploying nuclear power systems for the DOD. • Exploring feasible designs for nuclear systems in contested environments. These ongoing efforts demonstrate substantial progress in advancing nuclear technology for defense purposes, while ensuring safe and secure operations. Anticipating significant shifts in national nuclear priorities, the nuclear power portfolio is strategically positioned to support current and upcoming Nuclear Executive Orders (EOs). Leveraging its restructured investment approach and the expertise of the Nuclear Technology Advisory Group (N-TAG), the portfolio is prepared to deliver higher-impact innovations that directly benefit newly formalized national security interests in nuclear power, ensuring a decisive advantage for the DOD. FY 2026 Plans: Future plans are addressed under PE 0603055D8Z. FY 2025 to FY 2026 Increase/Decrease Statement: Funding increase/decrease is addressed under PE 0603055D8Z.

A. Mission Description and Budget Item Justification

This Program Element supports the Interim National Defense Strategic Guidance (INDSG) counter the growing multi-domain threat posed by China; Deterring strategic attacks against the United States, Allies, and partners; Deterring aggression, while being prepared to prevail in conflict when necessary – prioritizing the challenge of China in the Indo-Pacific region, then the Russia challenge in Europe, and; Building a resilient Joint Force and defense ecosystem.

Nuclear Matters, Advanced Component Development & Prototypes addresses the need to defend and deter against weapons of mass destruction threats and to safeguard personnel, prevent unauthorized access to equipment, installations, material, and documents, and to safeguard the foregoing against espionage, sabotage, damage, and theft. This program oversees advanced engineering development and rapid fielding throughout the Department of Defense (DoD) for an integrated and systemic approach to develop material solutions.

The Physical Security Enterprise and Analysis Program (PSEAP) avoids duplication of effort, ensures systems integration, and promotes interoperability and sustainability. The material solutions either (a) lead to a Program of Record, (b) become technology insertions into existing programs; or (c) advance to being a certified Commercial/Government off-the-shelf product. The PSEAP advances enterprise-level physical security RDT&E solutions to reduce risk created by current and emerging threat by analyzing, researching, developing, demonstrating, and evaluating interoperable solutions to transition capability to warfighters. Collaboration with DoD Components, other government agencies, and the international community to prioritize and close capability gaps is a top priority of the PSEAP and the physical security community.

National Technical Nuclear Forensics (NTNF) mission requirements and responsibilities derive from multiple source documents. Per National Security Presidential Memorandum 35 (NSPM 35), the DoD leads the United States (U.S.) Government (USG) post-detonation NTNF capability. NSPM 35 also directs that the US will maintain and advance a robust NTNF capability to detect, identify, locate, and characterize the attribution of the source of an actual or attempted nuclear or radiological attack in all environments, to include underground, underwater, in the atmosphere, and space. Per DoD Directive S-2060.04, the Office of the Undersecretary of

---	---

Defense for Acquisition & Sustainment (OUSD(A&S)) is the office responsible for developing and leading the DoD's NTNF capabilities. Per the 2022 Nuclear Posture Review (NPR) Direction, greater investment in NTNF tools is required to ensure they remain responsive to the threat, and thus scientifically credible and internationally accepted to hold states facilitating acts of nuclear terrorism accountable. The FY 2022 – FY2026 Nuclear Forensics and Attribution Strategic (NFAS) Plan requires an NTNF capability to collect, analyze, and evaluate both air and ground post-nuclear detonation samples at accelerated directed timelines. The DoD mission to collect, analyze, and evaluate post-detonation prompt signals and nuclear debris is critical to our national defense and security to ensuring the USG can identify the source of nuclear material and hold those involved or supporting an attack accountable. Internal and independent assessments indicate that new capabilities are needed to sustain an effective deterrent against an unattributed nuclear attack and meet the challenges of future threats. This PE is the only DoD research, development, and test and evaluation (RDT&E) program focused on Advanced Component Development and Prototypes for post-detonation NTNF capabilities. Without fully supporting these requirements, the DoD's ability to meet this critical deterrence need will be significantly degraded.

The DoD, through the Innovative Technologies program, will partner with the National Nuclear Security Administration (NNSA) to develop technology aimed at preventing would-be proliferants from advancing nuclear weapons related efforts. Additionally, the DoD seeks to support current and future counterproliferation missions by leveraging the expertise within the national laboratories. The program goal is to ensure DoD's operational units are paired with the NNSA technology experts to develop requirements early in the process to reduce the time of fielding a technology.

Nuclear Survivability will invest in innovative radiation hardening techniques to modernize microelectronics for strategic and space systems and increase the reliability of mission critical systems. This program will result in achieving key metrics, including improved understanding of radiation effects on advanced Complementary Metal Oxide Semiconductor (CMOS) technologies; Radiation Hardened/Strategic Radiation Hardened parts qualified and available for space and strategic modernization; Improved mission critical systems reporting; and improved testing procedure guidance for extreme radiation environments.

A. Mission Description and Budget Item Justification

The Physical Security Enterprise and Analysis Program (PSEAP) pursues the development of nuclear and conventional physical security materiel solutions in response to the stated needs and requirements of the Combatant Commands and Military Services. This program leverages commonalities in physical security requirements in order to closely balance and integrate the needs of users. The PSEAP is responsible for avoiding duplication of effort, ensuring systems integration, and promoting interoperability and sustainability. The materiel solutions either (a) lead to a Program of Record, (b) become technology insertions into existing programs; or (c) advance to being a certified Commercial/Government off-the-shelf product.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Physical Security System Capability Development	26.792	26.217	25.734
Description: This program's focus is on advanced component development and prototypes for physical security components and systems to support valid requirements while eliminating duplication of effort, pursuing the use of government and commercial off-the-shelf products, ensuring systems integration, and promoting interoperability and sustainability. Leverages RDT&E investments to achieve physical security enterprise-level solutions to deter, detect, delay, deny and defeat adversaries threatening nuclear and non-nuclear environments. Promotes government and appropriate industry standards for interoperability with existing programs of record to achieve cohesive system architectures. Improves transition of successful RDT&E innovations to DoD Acquisition agencies by using technology transition agreements and other tools to provide improved warfighter capabilities against asymmetrical, conventional and Weapons of Mass Destruction threats. FY 2025 Plans: - Counter-Uncrewed Systems across All Domains: Detect, Track, Identify and Defeat uncrewed systems across all domains including air, land, surface & subsurface (Attribution, deterrence and swarms should be considered). - Advancements in Artificial Intelligence & Machine Learning, as well as Countering AI/ML and Autonomy: Leverage advancements in AI/ML and develop systems to effectively counter emerging threats posed by adversarial use of AI and autonomous technologies. (Post Quantum encryption may also be considered)

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026
- Insider Threat Detection: Develop insider threat detection systems to detect, mitigate, and prevent unauthorized activities within organizational networks, enhancing security against internal risks. - Maritime Security (Surface & Subsurface): Maritime security, both surface and subsurface, centered on the need for advanced and integrated sensor networks capable of effectively detecting, tracking, identifying, and responding to evolving threats in vast and challenging maritime environments. - Detection Beyond Installation Perimeter: Develop advanced surveillance and sensor technologies to effectively monitor and detect potential threats in surrounding areas, ensuring wide-ranging security coverage beyond installation perimeters. - Intrusion Detection on Physical Security System: Improve network intrusion detection on physical security system networks to detect and prevent unauthorized access to a physical security systems or networks (i.e., invest in cybersecurity intrusion detection system (IDS), like a physical security IDS). FY 2026 Plans: - Supply chain security: Mitigate vulnerabilities using physical security equipment/technology to counter potential threats to organic industrial base facilities and ports receiving materials from suppliers and shipping assets the supply DoD Services and foreign partners around the globe. - Mature All Domain Counter-Uncrewed Systems (C-UXS): Continue to address the proliferation of uncrewed systems used by our adversaries by advancing C-UXS capabilities that change the risk calculus for the adversary (i.e., deterrence) and increase Joint Force survivability and resiliency against UXS. - Access control to DoD ships and aircraft: Vetting and screening personnel by biometrically screen individuals against the DoD Automated Biometric Identification System, to also collect/transmit the info used to process, track, and transport evacuees to safe havens. - Modernize physical security systems: Replace antiquated and expensive sensors with unacceptable false alarm rates that require a persistent personnel presence with that uses artificial intelligence and machine learning to not only to deter and detect but to also track and assess threats. - Interoperability: Update PSEAG's Security Equipment Integration Working Group's Interface Control Documents to address future interoperability standards for physical security sensors and systems FY 2025 to FY 2026 Increase/Decrease Statement: FY 2025 to FY 2026 decrease reflects changes in budget to align with cost efficiencies and reform initiatives.

A. Mission Description and Budget Item Justification

Per NSPM 35, the DoD leads the USG post-detonation NTNF capability, and directs the U.S. to maintain and advance NTNF capabilities leading to the attribution of the source of an actual or attempted nuclear attack in all environments. Per the 2022 NPR, greater investment in NTNF tools is required to ensure they remain responsive to the threat. Per DoDD S-2060.04, OUSD(A&S) is the DoD office responsible for DoD's NTNF capabilities. Per the FY 2022 – FY 2026 NFAS Plan, accelerated timelines are required for the NTNF capability to collect, analyze, and evaluate both air and ground post-nuclear detonation samples. This program is the only DoD RDT&E program focused on Advanced Component Development & Prototypes for NTNF capabilities.

Collecting analyzing, and evaluating post-detonation prompt signals and nuclear debris is critical to ensure the USG can identify the source of nuclear material and holding those involved or supporting an attack accountable is critical to our national defense and security. Swift and accurate forensic and attribution capabilities are vital to supporting the President and Secretary of Defense in developing an appropriate, and timely, national response to a nuclear event and to prevent future attacks. An effective NTNF capability ensures potential adversaries, or those who support them, know that they will be held accountable if they use proxies or other non-traditional delivery (e.g., false-flag operations) of nuclear weapons against the U.S., U.S. interests, or allies. Both internal and independent studies indicate that continued improvement to the USG's NTNF capabilities is needed to sustain a credible deterrent against an attempted or actual nuclear attack.

Additionally, this program sustains perishable U.S. technical expertise at the operational DoD laboratories required to respond to a post-detonation NTNF event. The DoD's laboratory capability in this area is limited by capacity and technical expertise. Increased support of the DoD's NTNF mission is crucial to prevent attrition of current capabilities and knowledge base, ensure that this critical and unique deterrence capability is not lost, putting the security of the nation and the ability to deter specific kinds of nuclear attack at risk, and meeting a higher standard of timeliness and confidence as directed.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: NTNF Capability Development	22.404	29.238	23.892
Description: The development of capability to collect, analyze, and evaluate prompt signals and nuclear debris is critical to our national defense and security. Swift and accurate forensic analysis and contribution to USG attribution (identification) processes are vital to supporting the President and Secretary of Defense in developing an appropriate national response to a nuclear event and to prevent future attacks in a timely manner. Recent Russian nuclear threats related to Ukraine have sharpened the understanding of, and need for, robust nuclear forensics capabilities.

Exhibit R-2A, RDT&E Project Justification: PB 2026 Office of the Secretary Of Defense		Date: June 2025	
Appropriation/Budget Activity 0400 / 4	R-1 Program Element (Number/Name) PE 0603161D8Z / <i>Nuclear Matters, Advanced Component Development & Prototypes</i>	Project (Number/Name) 040 / <i>National Technical Nuclear Forensics</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
NTNF investments support development and retention of technical nuclear forensics expertise and improvements in CONUS and OCONUS collection and fixed laboratory processes. Investments will also support legacy NTNF capabilities and the operationalization of new capabilities. FY 2025 Plans: - RDT&E investment in the collection, analysis, and evaluation of ground and airborne post-detonation debris samples. -- Collection: Improve ground collection capabilities and tools to accelerate mission timelines. Develop requirements documents and begin conceptual design prototypes for next generation unmanned airborne and autonomous ground collection systems. -- Analysis: Improve debris and prompt signals analysis capabilities and expertise development at DoD laboratories to accelerate analysis and attribution timelines. -- Evaluation: Expand the debris diagnostic and prompt evaluation capability to speed the attribution process. Develop and design IT systems of tools to rapidly generate and disseminate nuclear forensic results across the DoD and to interagency leadership. - Improve the Quality Assurance process for assuring that the surrogate samples used in NTNF exercises best match anticipated real-world NTNF ground and airborne samples. - Develop, design, and validate new speed of light sensor systems to increase the portability and scalability of prompt signals coverage. - Complete Airworthiness T2 Package for integrating Harvester particulate collection pods on an MQ-9A Block 5 GEO and conduct successful flight demonstration. FY 2026 Plans: - Continue RDT&E investment in the collection, analysis, and evaluation of ground and airborne post-detonation debris samples. -- Continue to support collection: Improve ground collection capabilities and tools to accelerate mission timelines. Develop requirements documents and begin conceptual design prototypes for next generation unmanned airborne and autonomous ground collection systems. -- Continue to support analysis: Improve debris and prompt signals analysis capabilities and expertise development at DoD laboratories to accelerate analysis and attribution timelines. -- Continue to support evaluation: Expand the debris diagnostic and prompt evaluation capability to speed the attribution process. Develop and design IT infrastructure system of tools to rapidly generate and disseminate nuclear forensic results across the DoD and to interagency leadership. - Continue to improve the Quality Assurance process for assuring that the surrogate samples used in NTNF exercises best match anticipated real-world NTNF ground and airborne samples.

A. Mission Description and Budget Item Justification The DoD, in partnership with the NNSA, provides technical capability to understand and defeat nuclear threat devices, including improvised nuclear devices, radiological dispersal devices, and lost or stolen foreign nuclear weapons, as well as to develop foundational technologies supporting nuclear counterproliferation efforts.												
B. Accomplishments/Planned Programs (\$ in Millions)									FY 2024	FY 2025	FY 2026	
Title: Innovative Technologies									5.838	4.794	2.841	
Description: The DoD, through the Innovative Technologies program, will partner with the NNSA to develop technology aimed at preventing would-be proliferants from advancing nuclear weapons related efforts. Additionally, the DoD seeks to support current and future counterproliferation missions by leveraging the expertise within the national laboratories. The program goal is to ensure DoD's operational units are paired with the NNSA technology experts to develop requirements early in the process to reduce the time of fielding a technology.												
FY 2025 Plans: The Innovative Technologies program is reported in accordance with Title 10, United States Code, Section 119(a)(1) in the Special Access Program Annual Report to Congress.												
FY 2026 Plans: The Innovative Technologies program is reported in accordance with Title 10, United States Code, Section 119(a)(1) in the Special Access Program Annual Report to Congress.												
FY 2025 to FY 2026 Increase/Decrease Statement: FY 2025 to FY 2026 decrease reflects transition of DoD developmental acquisition efforts to some funded by end-use customers.

A. Mission Description and Budget Item Justification												
Nuclear Survivability will invest in innovative radiation hardening techniques to modernize microelectronics for strategic and space systems and increase the reliability of mission critical systems. This program will result in achieving key metrics, including improved understanding of radiation effects on advanced CMOS technologies; Radiation Hardened/Strategic radiation hardened parts qualified and available for space and strategic modernization; Improved mission critical systems reporting; and improved testing procedure guidance for extreme radiation environments.												
B. Accomplishments/Planned Programs (\$ in Millions)									FY 2024	FY 2025	FY 2026	
Title: Nuclear Survivability Research & Development									2.501	2.913	2.998	
Description: Many DoD mission-critical systems must survive and operate through one or more nuclear weapons effects (NWE) environments. This requires assured DoD access to NWE-survivable components, materials, and the test and evaluation infrastructure to validate system performance.												
This program will result in achieving key metrics, including improved understanding of radiation effects on advanced CMOS technologies; Radiation Hardened/Strategic radiation hardened parts qualified and available for space and strategic modernization; Improved mission critical systems reporting; and improved testing procedure guidance for extreme radiation environments.												
FY 2025 Plans:												
- Sponsor R&D to better understand the effects of extreme radiation environments on state-of-the-art microelectronics to support nuclear modernization and improve radiation hardening by design.												
- Sponsor R&D to improve radiation hardening techniques leveraging novel additive manufacturing technology.												
- Sponsor comparative study on electromagnetic pulse hardening techniques for critical infrastructure in support of Executive Order 13865 requirements.												
- Increase access and reduce cost for technologies and materials that provide increased levels of survivability to the effects of nuclear weapons.												
FY 2026 Plans:												
- Sponsor R&D to better understand the effects of extreme radiation environments on state-of-the-art microelectronics to support nuclear modernization and improve radiation hardening by design.												
- Sponsor R&D to improve radiation hardening techniques leveraging novel additive manufacturing technology.

Note

New Start (Y/N): No

A. Mission Description and Budget Item Justification

The Environmental Security Technology Certification Program (ESTCP) demonstrates and validates innovative technologies for military installations, while its sister program, the Strategic Environmental Research and Development Program (SERDP), invests in applied research to develop these solutions.

ESTCP tests promising technologies in relevant operational environments across DoD installations, providing decision-makers with reliable performance and cost data before widespread implementation. By validating solutions under real-world conditions, ESTCP reduces adoption risks and accelerates technology transfer to end users. The program has an excellent track record of return on investment, with many solutions deployed directly to installations without further development.

ESTCP conducts formal demonstrations at DoD facilities in operational settings to document and validate improved performance and cost savings. To ensure real impact, ESTCP collaborates with end users and regulators throughout the development and execution of each demonstration. Transition challenges are overcome with rigorous and well-documented demonstrations that provide the information needed by all DoD partners for technology adoption.

The program employs a competitive selection process to ensure high-quality demonstrations, issuing solicitations for proposals from government, academia, and industry. Each project develops a formal test and evaluation plan, and demonstration results undergo rigorous technical reviews to ensure conclusions are accurate and supported by data. This process ensures installations receive solutions that address current operational needs and deliver measurable benefits to the Department of Defense.

Change Summary Explanation

The FY 2026 request decrease reflects strategic adjustments across multiple program areas. Environmental Restoration funding decreases due to fewer PFAS treatment technology demonstrations. Weapons Systems and Platforms shows a net increase due to a \$1.000 million increase for PFAS chemical resiliency and alternative demilitarization technology, offset by decreases in AFFF alternatives and corrosion mitigation technologies. Installation Energy and Water funding shifts to focus on energy resilience technologies including microgrids, long-duration storage, and thermal networks, with reduced emphasis on efficiency technologies. Natural Hazards and Installation Resilience funding consolidates the former Resource Conservation program area but decreases overall,

eliminating planned hurricane assessment, wildfire prediction, and invasive species projects while focusing on infrastructure hardening that directly supports mission readiness. Sustainable Technology funding decreases by eliminating biobased product investments.		
The FY 2026 program funding reflects a net decrease of \$37.446 million, resulting from the following strategic adjustments: The FY 2026 request reflects an increase of \$1.000 million for the Closed Treatment Technologies for Demilitarizing Energetic Materials and Resilient Alternatives to PFAS-Containing DoD Materiel, reduction of \$28.224 million for Advisory and Assistance Services to promote efficiencies and advance the policies of the Administration in alignment with Executive Order 14222, "Implementing the President's Department of Government Efficiency Cost Efficiency Initiative," reductions of \$9.741 million for reforms to Climate, Energy, and Installation Resilience Programs, and reductions of \$0.481 million for inflation.

A. Mission Description and Budget Item Justification

The Environmental Security Technology Certification Program (ESTCP) demonstrates and validates innovative technologies for military installations, while its sister program, the Strategic Environmental Research and Development Program (SERDP), invests in applied research to develop these solutions.

ESTCP tests promising technologies in relevant operational environments across DoD installations, providing decision-makers with reliable performance and cost data before widespread implementation. By validating solutions under real-world conditions, ESTCP reduces adoption risks and accelerates technology transfer to end users. The program has an excellent track record of return on investment, with many solutions deployed directly to installations without further development.

ESTCP conducts formal demonstrations at DoD facilities in operational settings to document and validate improved performance and cost savings. To ensure real impact, ESTCP collaborates with end users and regulators throughout the development and execution of each demonstration. Transition challenges are overcome with rigorous and well-documented demonstrations that provide the information needed by all DoD partners for technology adoption.

The program employs a competitive selection process to ensure high-quality demonstrations, issuing solicitations for proposals from government, academia, and industry. Each project develops a formal test and evaluation plan, and demonstration results undergo rigorous technical reviews to ensure conclusions are accurate and supported by data. This process ensures installations receive solutions that address current operational needs and deliver measurable benefits to the Department of Defense.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Environmental Technology Demonstration/Validation	27.997	27.555	26.938
Description: Funds are programmed to develop cutting-edge technologies that enable the Department of Defense to deploy its most critical modernization initiatives on DoD-controlled installations. These innovations create the foundation for nuclear deterrence, missile defense, Indo-Pacific posture, and industrial base readiness across DoD's 28 million acres.			
Funding drives the most innovative solutions from industry, academia, and federal government partners addressing key priorities: tackling emerging and persistent land impact challenges, particularly from per- and polyfluoroalkyl substances (PFAS); addressing live-site unexploded ordnance (UXO) in underwater environments; advancing conservation and range sustainment technologies; and minimizing DoD weapons systems' lifecycle costs through hazardous materials elimination.

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026
These solutions ensure DoD maintains the contiguous, unencumbered spaces needed to effectively deploy, test, and operate new capabilities. By maximizing available training days, reducing regulatory burden, and enhancing land management, these technologies create the conditions necessary for DoD to install and operate next-generation systems on its installations while ensuring military readiness for multiple training units over time. FY 2024 Accomplishments: Initiated large-scale PFAS treatment and destruction field testing at military installations. Demonstrated underwater munitions response technologies and tested autonomous Remotely Operated Vehicles for underwater geophysical classification. Demonstrated cultural resource survey capabilities to reduce compliance costs. Deployed advanced laser-based forest and fire monitoring technologies to installations. Developed chemical-free water mist fire suppression for hangars. Validated non-toxic plating alternatives to eliminate cadmium and corrosion-resistant primers to reduce hexavalent chromium use. Demonstrated sustainable alternatives for F-16 emergency power units and heavy metal-free fuzes for grenades. FY 2025 Plans: Demonstrate PFAS destruction technologies for various media. Initiate engineering tests and live site demonstrations of munitions detection technologies. Demonstrate environmental DNA for rapid species surveys. Validate pollution prevention technologies including PFAS-free corrosion control methods, depainting alternatives, sustainable energetics processing, and PFAS-free firefighting formulations per 2020 NDAA requirements. FY 2026 Plans: Continue PFAS treatment technology validation and assess technology combinations. Support live-site demonstrations of munitions response technologies. Advance environmental security technologies to improve compliance and reduce regulatory burdens. Demonstrate chemical resilience technologies including antimicrobial and anti-biofouling coatings, isocyanate-free jet coatings, chromium-free thermal spray for F-35 landing pads, ship water disinfection alternatives, non-PFAS explosive binders, and energetic destruction technologies. FY 2025 to FY 2026 Increase/Decrease Statement: The FY 2025 to FY 2026 decrease of \$0.617 million reflects adjustments to promote Government efficiencies from efficiency in alignment with Executive Order 14222, "Implementing the President's Department of Government Efficiency Cost Efficiency Initiative and other inflation adjustments to the program. As a result there will be reductions across multiple program areas. Environmental Restoration funding decreases due to fewer PFAS treatment technology demonstrations. Weapons Systems and Platforms shows a net increase due to additional funding for PFAS chemical resiliency and energetics demilitarization technology, offset by decreases in AFFF alternatives and corrosion mitigation technologies. Resource Conservation and Resilience has been

recategorized as Natural Hazards and Installation Resilience, which appears as a decrease in this area but actually represents a strategic realignment that integrates management of DoD's natural and built infrastructure with hazard resilience efforts.					
Title: Energy Technology Demonstration/Validation Description: Funds are programmed to evaluate and deploy advanced energy and water technologies across DoD installations. This program directly supports Executive Order 14154 (Unleashing American Energy) and Executive Order 14156 (Declaring a National Energy Emergency) by enhancing the security and resilience of military installation infrastructure while improving operational efficiency and reducing costs. Military installations remain largely dependent on commercial power grids vulnerable to disruption from cyber-attacks, aging infrastructure, severe weather events, and potential direct attacks. As electricity outage frequency and duration increase, these investments enable DoD to withstand and rapidly recover from energy disruptions while ensuring mission continuity, addressing key vulnerabilities identified in Executive Order 14262 (Strengthening the Reliability and Security of the United States Electric Grid). The program leverages DoD's diverse built infrastructure to evaluate promising commercial technologies under varied environmental conditions and building types. By conducting demonstrations at actual installations, the program provides technology developers low-risk opportunities to validate performance when integrated with legacy systems under real-world conditions. This approach accelerates technology adoption by generating critical cost and performance data while giving installation managers hands-on experience with innovative solutions without the financial risk of full procurement. FY 2024 Accomplishments: Completed a successful demonstration of an on-site atmospheric water generation system resulting in a follow-on project to integrate the system at a live training site to supply military training exercises. Demonstrated and validated three microgrid design tools to support a more consistent and repeatable microgrid design approach to establish a basis from which to measure microgrid performance and process improvement. Completed electrical vehicle integration studies used to inform the Services charging infrastructure planning and follow-on projects to demonstrate applications for mobile energy storage to supply emergency backup power to critical facilities. Created and posted training materials for advanced lighting and controls technologies for DoD designers, acquisition professionals and energy managers. Completed demonstrations of advanced heating, ventilation, and air conditioning (HVAC) controls resulting in over \$100k annual energy cost savings and approximately 15% reduction in peak electrical demand. FY 2025 Plans: Continual planning multi-year demonstrations for microgrid and energy storage technologies that improved installation energy system reliability and resilience and reduced the time and cost of microgrid design and development. High efficiency building			46.628	46.450	49.116

Exhibit R-2A, RDT&E Project Justification: PB 2026 Office of the Secretary Of Defense		Date: June 2025		
Appropriation/Budget Activity 0400 / 4	R-1 Program Element (Number/Name) PE 0603851D8Z / Environmental Security Technology Certification Program (ESTCP)	Project (Number/Name) 514 / Environmental Security Technology Certification Program		
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025	FY 2026
HVAC technologies demonstrations will continue to establish life-cycle cost and indoor air quality improvement performance data. Planning of multi-year demonstrations for water efficiency and resilience technologies and analysis. Technology transition efforts through targeted partnerships with energy services companies (ESCOs) and utilities continued. These demonstrations will address requirements for installation energy resilience stated in DoD Instruction 4170.11, and energy and water efficiency objectives outlined in the DoD Installation Energy Strategy. Energy resilience solutions are being sought that integrate installation and operational energy assets to provide dual-use benefits.				
FY 2026 Plans: Demonstrations of innovative technologies and technology transition approaches will continue to improve installation energy and water resilience in accordance with DoD Instruction 4170.11, improve building performance, indoor air quality, energy and water efficiency and reduce facilities' utility and operational costs. Demonstrations will be initiated for integrated solutions that combine facility energy demand reduction, advanced district energy systems, energy storage and load flexibility to improve building-level and system-wide efficiency and reliability. Integrated solutions provide benefit through cumulative improvements in facility and equipment efficiency that reduce whole-system life cycle costs. Solutions will vary by regional factors and projects will be selected to validate system design approaches that are tailorable to the Department's installation portfolio. The program will seek to facilitate teaming with key stakeholders to leverage expertise in system design and analysis, cybersecurity technology operational systems, systems integration, project development and utility services.				
FY 2025 to FY 2026 Increase/Decrease Statement: The FY 2025 to FY 2026 reflects an overall increase of \$2.666 million for an increased focus on demonstrations that involve energy and water resilience technologies which can improve warfighter effectiveness and preserve freedom of action in the face of growing threats. This includes technologies to improve reliability and effectiveness of microgrids, long-duration energy storage technologies that alleviate supply chain challenges, and thermal energy networks that allow installations to be self-sufficient in contingency situations. Within this overall increase, there is a \$9.741 million reduction in Climate, Energy, and Installation Resilience Programs, resulting in a reduced emphasis on water and energy efficiency technologies as the program shifts toward treating energy as a critical capability requiring active and passive defenses and resilient infrastructure. This realignment ensures DoD installations can maintain operations during disruptions while addressing vulnerabilities in energy supply chains critical to national security.				
Title: Sustainable Technologies Evaluation and Demonstration Program		2.960	3.000	3.000
Description: The Sustainable Technologies Evaluation and Demonstration (STED) Program evaluates and demonstrates innovative technologies that meet current mission requirements while enhancing operational readiness, resilience, and security. STED validates cost-effective alternatives to widely implemented technologies across the Department and federal agencies, focusing on domestic solutions that reduce supply chain vulnerabilities. The program identifies, evaluates, and demonstrates

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026
technologies in operational environments to verify their ability to enhance mission performance, protect human health, and cost-effectively support DoD priorities.					
FY 2025 Plans: The program will continue evaluation, demonstration, and transition of innovative technologies in DoD operations. Efforts will build on recent successes such as improved Cleaner Lubricant and Preservative (CLP) for small arms, advanced rifle bore cleaner products, enhanced sorbents, and reusable targets. Demonstrations will validate improved operational performance, reduced maintenance requirements, waste reduction, and minimized environmental and health impacts. The program will prioritize technologies addressing high-priority operational needs and validate their performance in warfighter-relevant environments.					
FY 2026 Plans: The program will continue demonstrations of technologies and products that improve cost-effectiveness, enhance readiness, and strengthen supply chain security. STED will increase command-level participation in demonstrations of emerging solutions, including energy-efficient technologies, materials with recycled content, and less hazardous alternatives at DoD installations and federal agency facilities. These efforts will accelerate technology transition across the federal government while supporting domestic manufacturing capabilities.					
FY 2025 to FY 2026 Increase/Decrease Statement: N/A					
Title: Natural Hazards and Installation Resilience Technology Demonstration/Validation			37.413	45.191	44.927
Description: Funds are programmed to develop and demonstrate hardened infrastructure, physical systems, and decision support tools that protect DoD installations from natural hazards and enhance mission resilience. The program delivers technologies that strengthen critical infrastructure, harden facilities, and improve operational capabilities during extreme weather events. These investments directly impact EO 14153 (Unleashing Alaska's Extraordinary Resource Potential) as it relates to infrastructure, permafrost, critical minerals, and potential subsidence. Natural disasters hinder DoD mission readiness and have proven costly to installation infrastructure with billions in damage repair in recent years. As natural hazards increase in frequency and severity, SERDP and ESTCP investments provide tangible solutions to enhance installation resilience and protect mission-critical operations.					
FY 2024 Accomplishments: Established the highly successful Innovation Landscape Network (ILN) to efficiently transition research and technology to installation end-user communities. The Arctic Innovation Landscape Network (AILN) provided direct mission support to NORTHCOM by extending R&D advances in linear infrastructure construction on degraded permafrost throughout Alaska. The program selected projects to advance near-term (1-10 years) weather predictions to enhance environmental security assessments, particularly wildfire risk and tropical cyclone predictions.

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026
FY 2025 Plans: The program will conduct rapid testing of autonomous ground-based vehicles for firefighting applications through partnership with the Navy's Tech Grove. It will advance virtual reality for wildland fire training environments using next-generation fire and smoke modeling tools. The program will continue planning multi-year demonstrations focused on hardening infrastructure against natural hazards across key DoD geographies, implementing physical systems to protect DoD water supply, and improving the resilience of systems linking DoD installations and surrounding community infrastructure. Projects evaluating heat stress forecasting and physical mitigation technologies to reduce exposure to military personnel are expected to increase mission flexibility and reduce mandatory downtime under black flag conditions. Through the Innovation Landscape Network, end-users will rapidly refine technology investments for installations and mission applications, including permafrost-resistant construction demonstrations with NORTHCOM, coastal erosion protection systems for the mid-Atlantic and Alaska, permafrost stabilization hardware, and saltwater intrusion barriers. The program will provide rapid science support including advanced ash modeling from the US Geological Survey for Joint Base Elmendorf-Richardson in advance of the eruption of Mt. Spurr, west of Anchorage, AK. The budget reflects the consolidation of the former Resource Conservation and Resilience program area into Natural Hazards and Installation Resilience to better align with mission priorities. FY 2026 Plans: The program will initiate rapid demonstrations for hardened infrastructure and physical systems through OTAs, prize challenges, and rapid responses to address natural hazards facing installations in key DoD geographies. Projects will implement permafrost stabilization technologies on installations in Alaska, fire-resistant infrastructure in the Southeast, and drought-resistant water systems in the Southwest. The program will focus on flood-resistant structures for DoD buildings in coastal zones, resilient supply chain infrastructure, drought-resistant water systems, and physical hardening against weather extremes on DoD installations. The formal network of technology testbeds called "Innovation Landscapes" will continue within key DoD geographies with installations and partner agencies to demonstrate and validate infrastructure hardening technologies addressing multiple natural hazards and incompatible development. Areas with high concentrations of DoD installations including Alaska, Southern California, Sonoran Desert (Arizona), Coastal California, mid-Atlantic, Gulf Coast of Florida and Texas, and the Southeast US will receive focused attention. Projects will build robust, accelerated technology transfer on installations and with partner agencies in coordination with DOD Sentinel Landscapes partnerships. Within this Innovation Network, DOD end-users will help direct technology priorities to sustain mission activities and meet environmental compliance in the face of compounded threats. These testbeds will develop resilience metrics to improve natural hazard readiness and will leverage other agency funding and expertise to address complex resilience problems. FY 2025 to FY 2026 Increase/Decrease Statement: The FY 2025 to FY 2026 decrease of \$0.264 million reflects adjustments to promote Government efficiencies from efficiency in alignment with Executive Order 14222, "Implementing the President's Department of Government Efficiency Cost Efficiency

FY 2024 Accomplishments: FY 2024 reprogramming was received in August 2024. Will solicit for additional work on the topic of AFFF destruction and will capitalize on existing investments to test the potential for existing technologies to be deployed for AFFF destruction.					
Congressional Add: Environmental research-to-demonstration partnership centers			-	25.000	
FY 2025 Plans: In FY 2025, the program will establish university-based Environmental Research-to-Demonstration Partnership Centers through cooperative agreements with academic institutions. These centers will create a structured pipeline to accelerate the transition of promising technologies from research to demonstration across all ESTCP program areas. The centers will leverage university expertise and facilities to complement ESTCP's capabilities in environmental restoration, munitions response, installation resilience, energy and water, and weapons systems technologies. This network will implement a coordinated approach including technical working groups, streamlined validation processes, and collaborative teams of researchers, industry partners, and DoD end-users. The centers will serve as regional hubs for technology demonstration, providing DoD with expanded capacity to address installation challenges while delivering validated, cost-effective solutions that improve military readiness and environmental performance. A. Mission Description and Budget Item Justification

This program supports the Department's initiatives to Deter Aggression, Defend the Homeland, and Build Sustainable and Long-Term Advantage.

The Coalition Warfare Program (CWP) supports the DoD organizations that: 1) work with foreign partners to collaboratively address strategic technology gaps for current and future missions; 2) develop interoperability solutions for coalition operations; and 3) develop and strengthen defense relationships. It comprehensively supports the Interim National Defense Strategic Guidance (INDSCG) direction to engage allies and partners, implementing guidance to "fully engage all countries and institutions to cooperate on shared threats" and "redouble our efforts to deepen our cooperation with like-minded partners." The CWP provides a broad base of technological, operational, and logistical support for military operations and eases the U.S. financial and manpower burdens associated with meeting military goals and objectives. Coalitions and relationships with international partners are high priorities for the nation and the DoD.

The CWP supplements the United States (U.S.) Government proponents' funding for cooperative efforts, ensuring U.S. funds are sufficient to complete research and development activities with foreign partners. When CWP funds are used to help fund a cooperative project, that project leverages technical and financial contributions of the foreign partners and accelerates the development and delivery of technical solutions to the warfighter. For every \$1 the CWP has invested in cooperative projects with 81 partners since 2001, the program has leveraged \$3 in foreign partner resources and \$2 in other U.S. Government resources. The CWP funding enables the DoD project teams to transition technology to operational use, further development, or integration into other systems. These projects may also form the basis for future cooperation with international partners.

A. Mission Description and Budget Item Justification

The Coalition Warfare Program (CWP) supports the Department of Defense (DoD) organizations that: 1) work with foreign partners to collaboratively address strategic technology gaps for current and future missions; 2) develop interoperability solutions for coalition operations; and 3) develop and strengthen defense relationships. It comprehensively supports the Interim National Defense Strategic Guidance (INDSCG) direction to engage allies and partners, implementing guidance to "fully engage all countries and institutions to cooperate on shared threats" and "redouble our efforts to deepen our cooperation with like-minded partners." The CWP provides a broad base of technological, operational, and logistical support for military operations and eases the U.S. financial and manpower burdens associated with meeting military goals and objectives. Coalitions and relationships with international partners are high priorities for the nation and the DoD.

The CWP supplements U.S. Government proponents' funding for cooperative efforts, ensuring U.S. funds are sufficient to complete research and development activities with foreign partners. When CWP funds are used to help fund a cooperative project, that project leverages technical and financial contributions of the foreign partners and accelerates the development and delivery of technical solutions to the warfighter. For every \$1 the CWP has invested in cooperative projects with 81 partners since 2001, the program has leveraged \$3 in foreign partner resources and \$2 in other U.S. Government resources. The CWP funding enables the DoD project teams to transition technology to operational use, further development, or integration into other systems. These projects may also form the basis for future cooperation with international partners.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026 Base	FY 2026 OOC	FY 2026 Total
Title: Coalition Warfare Program (Continuing Projects)	9.642	9.890	10.090	0.000	10.090
Description: The CWP provides funding on a competitive basis to DoD organizations to conduct cooperative research, development, test, and evaluation projects with foreign partners. The goals of the CWP program are to: collaboratively address strategic technology gaps for current and future missions, develop interoperability solutions for coalition operations, and strengthen current and future defense partnerships. The CWP selects projects for funding through an annual competitive selection process in accordance with DoD and Combatant Command needs.					
In addition to funding newly selected projects, the program also provides funding to projects that began in earlier selection cycles (for a total of up to three years of funding for each project). Currently, the funded portfolio includes 57 active projects governed by negotiated/signed international agreements with 21 foreign partners.

D. Acquisition Strategy

The Combatant Commands, Services, Defense Agencies, and the Office of the Secretary of Defense nominate candidate projects on an annual basis. CWP provides selected projects up to three years of funding. The Program selects projects that address DoD priorities and meet the needs and requirements specified by the Joint Staff and the Combatant Commanders. Projects have equitable contributions from international partners, strong potential for transition, Combatant Command endorsement, and contribute to allied interoperability and/or meet a warfighter need.

A. Mission Description and Budget Item Justification

Purpose: This program supports the Department's mission to achieve peace through strength by restoring the warrior ethos and trust in our military, rebuilding our military by matching threats to capabilities, and reestablishing deterrence by defending our homeland.

The Department of Defense (DoD) Next Generation (FutureG) Information Communications Technologies (ICT) program will conduct large-scale experimentation and prototyping of fifth-generation (5G) and future-generation (FutureG) cellular network technology for military uses. The program will adopt, adapt, and advance on commercial technologies for asymmetric warfighter advantage and research and develop wireless innovations to meet DoD technical and capability requirements.

Approach:

- Leverage and advance 5G/FutureG capability to deliver asymmetric operational warfighting advantage over China.
- Rebuild US leadership in 5G/FutureG for strategic advantage in economic/information competition.
- Leverage and drive increasing overlap between commercial mobile network capabilities and warfighting needs.
- Deliver high availability systems with security assurance in all DoD operational settings.
- Provide the communications fabric required to achieve Combined Joint All Domain Command and Control w/ Allies & Partners and ensure that both near-term and future generations of information and communications technologies will be capable of supporting US military and national security objectives.

Program Partners:

DoD Chief Information Officer (CIO) and CIO 5G Cross Functional Team (CFT)

Change Summary Explanation

Decrease of \$57.600 million in FY 2025 reflects a \$10.000 million increase for Navy flightline 5G network expansion, a \$29.000 million reduction due to “unjustified request”, and a \$28.600 million transfer to DoD Chief Information Officer (CIO).

UNCLASSIFIED

Exhibit R-2, RDT&E Budget Item Justification: PB 2026 Office of the Secretary Of Defense		Date: June 2025
Appropriation/Budget Activity 0400: Research, Development, Test & Evaluation, Defense-Wide / BA 4: Advanced Component Development & Prototypes (ACD&P)	R-1 Program Element (Number/Name) PE 0604011D8Z / Next Generation Information Communications Technology (5G)	
Decrease of \$29.748 million in FY 2026 reflects a \$15.100 million transfer to DoD CIO, and \$14.496 million realignment for higher DoD priorities, and a \$0.152 million reduction for Economic Assumption. The FY 2026 request for Next Generation Information Communications Technology (5G) includes \$41.185 million of discretionary. Further information for this reconciliation request is provided in Chapter 2 of the Reconciliation Exhibit.

A. Mission Description and Budget Item Justification

Provide innovation that enables commercial network technologies in tactical operations: 1) develop scalable, interoperable, and resilient warfighting networks that support Combined Joint All-Domain Command and Control; 2) develop integrated heterogenous warfighting networks composed of commercial cellular and traditional military equipment. When able, expeditionary and tactical projects will be evaluated in a deployed expeditionary environment over tactical 5G infrastructure with operationally relevant numbers of users and geographic scale.

The prototyping and experimentation project at Marine Corps Logistical Base Albany (MCLBA) transitioned 5G enabled Smart Warehouse Capability while Naval Station Norfolk transitioned a shipboard wireless network architecture design to Military Sealift Command. Similarly, the 5G Expeditionary Advanced Based Operations (EABO) experiment at Camp Pendleton will culminate on schedule having successfully transitioned tactical 5G experimentation capability to the Marine Corps.

Current efforts will continue to leverage scalable, interoperable, and resilient warfighting networks that support Combined Joint All-Domain Command and Control. Future efforts will optimize within the constraints of standards by investing early in relevant areas ahead of commercial markets and commencing seedling research in artificial intelligence.

The Army Tactical Mobility project is a cost effective, combat-ready 5G On-The-Move (OTM) Command and Control (C2) capability that meets latency, throughput, range, and resiliency objectives. This program will address operational needs and future Secure Cellular Program requirements for survivability of Army networks to include the distributed Command Post (i.e., mobility, dispersion, concealment). Additionally, in partnership with the NATO Cooperative Cyber Defense Center of Excellence, the Scalable Interoperable Resilient-5G (SIR-5G) initiative employs 5G secure roaming, Radio Access Network (RAN) Sharing, and internetworking to provide a -5G warfighting network that NATO allies can directly procure as they increase their defense spending.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Expeditionary and Tactical Use	105.178	49.082	12.281
Description: Demonstrate use cases that enable commercial network technologies in tactical operations, while also assessing and developing mitigations to their security vulnerabilities.			
FY 2025 Plans: The DoD will culminate and transition activities at the remaining 5G experiment sites. The program will continue technology transitions and transferring sites to services through collaboration with DoD 5G CFT.

Exhibit R-2A, RDT&E Project Justification: PB 2026 Office of the Secretary Of Defense		Date: June 2025	
Appropriation/Budget Activity 0400 / 4	R-1 Program Element (Number/Name) PE 0604011D8Z / <i>Next Generation Information Communications Technology (5G)</i>	Project (Number/Name) 724 / <i>Expeditionary and Tactical Use</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
These projects include efforts at Naval Station Norfolk and Camp Pendleton. Naval Station Norfolk experimentation developed a 5G Reference Architecture for cost-effective Ship-wide and Pier-side 5G infrastructure testbed to host reliable and repeatable experimentation, grow organic knowledge, and build industry and academic partnerships. Additionally, the Camp Pendleton EABO project developed and deployed a private, standalone, multiband, 5G Open Radio Access Network (RAN) testbed with nomadic towers and cores, mobile edge computing (MEC), and mobile 5G relays for Expeditionary Advanced Base Operations. Localized full scale 5G mobile cellular networks such as the Army Tactical Mobility project will continue to support military application experimentation at select DoD Service sites. DoD will further continue to leverage Prototype Physical Layer Leverage (PL2) to employ standard 5G capabilities to provide a scalable and interoperable warfighting network among allies and partners, allowing tactical radios to integrate with 5G networks and security enhancements FY 2026 Plans: Complete remaining transition tasks for the Tactical Mobility command effort with the Army and execute project new starts focused on tactical risk analysis and mitigation and zero-touch deployment, orchestration & management. FY 2025 to FY 2026 Increase/Decrease Statement: The decrease of \$36.801 million between FY 2025 to FY 2026 reflects the conclusion and successful transition of experiments within the portfolio and a realignment of several projects under the OUSD R&E umbrella.			
Title: 5G Cross Functional Team (CFT) Support Description: Provide coordination of joint warfighting concepts, research and development, policy and program integration, acquisition and transition, and secure operations of 5G in DoD.		10.266	-

A. Mission Description and Budget Item Justification

Deliver high availability wireless communication systems with security assurance across all DoD operational settings: 1) exploit the growing DoD diversity, coalition, and commercial communication option to provide high-availability secure communication; 2) provide wireless network risk assessment tools and mitigations that inform operational decision-making. Prototyped and/or enhanced capabilities will be based on technologies such as anomaly detection and zero-trust policy enforcement to maximize availability and resilience for wireless connectivity; multi-networking across wired and wireless systems for finding and exploiting alternate paths and redundant paths to ensure secure and reliable communication; Radio Access Network (RAN) Sharing that leverage commercial and private mobile network operators; and 5G non-terrestrial networks that use satellite, drones, and other low-altitude airborne vehicles to provide connectivity. These technologies will enable warfighters to access mobile communications anywhere they operate leveraging existing commercial 5G infrastructure and enhanced 5G network security architectures.

Current efforts will leverage world-wide high availability commercial networks for assured and resilient DoD communications. Future efforts will build on today's developments in non-terrestrial networks toward multi-layer non-terrestrial networks that will provide ubiquitous access to communication and compute.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Ubiquitous, Secure, and Instant Access	4.875	26.355	22.402
Description: Demonstrate the capacity to deliver high availability wireless communication systems with security assurance by prototyping and/or enhancing technologies to both defend and exploit leverage 5G networks.			
FY 2025 Plans: Continue to conduct 5G security assessments at both classified and unclassified levels and testing of new vulnerability mitigation techniques using the Exemplar Network at the Idaho National Laboratory (INL). Transition congested/contested spectrum prototyping and experimentation activities such as Secure Transit over Untrusted Networks (STUN) and Command and Control FutureG INDOPACOM Relocatable Experimentation (CFIRE).			
STUN was integrated into the U.S. Indo-Pacific Command Orient Shield 2024 exercise to enhance the security of data in transit between U.S. Army command elements and distributed command posts throughout Japan. STUN participation in Orient Shield 2024 serves as a proof-of-concept event for STUN's inclusion in the FutureG-funded U.S. Army-Japan (USAR-J) Dark Horizons communications concept.

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026
The CFIRE Mobile Test Infrastructure team provided a Portable Operational Network Infrastructure (PONI) kit for critical communications during the deployment of the 36th Munitions Squadron Tactical Ammunition Rapid Response Package (TARRP) as part of the VALIANT SHIELD 2024 exercise. The CFIRE team also provided a PONI for 5G network coverage in support of airfield restoration in the Northern Mariana Islands. Additionally, CFIRE activities at the Lualualei Annex of Joint Base Pearl Harbor Hickam recently demonstrated bi-directional Radio Access Network (RAN) Sharing between Naval Air Station Whidbey Island (NASWI) and Lualualei. This lays the foundation for many more RAN sharing experiments including the integration of non-terrestrial networks for data backhaul. FY 2026 Plans: Continue to conduct 5G security assessments at the classified level at INL. Culminate and transition remaining tasks relative to STUN and CFIRE and complete remaining transition tasks for 5G UAS Relay. Coordinate our spectrum sharing efforts with relevant agencies to provide a whole of government approach that incorporates both longer term fundamental research with interagency partners Continue to leverage the growing commercial 5G infrastructures, develop and demonstrate prototypes for sharing Radio Access Networks (RANs) with an emphasis on RAN sharing in both the INDOPACOM and EUCOM regions and execute project new starts focused on 5G non-terrestrial networks. Execute project new starts focused on INDOPACOM use cases for broadband direct-to-cell, unmanned systems control, alternative positioning, navigation, and timing, and non-3G partnership project access via non-terrestrial networks. FY 2025 to FY 2026 Increase/Decrease Statement: The decrease of \$3.953 million between FY 2025 to FY 2026 reflects the conclusion and successful transition of experiments within the portfolio and a realignment of several projects under the OUSD R&E umbrella.

A. Mission Description and Budget Item Justification

Continue to research and leverage Open Radio Access Network (Open RAN) commercial technologies to accelerate critical DoD enterprise and mission capabilities and support the ability to fully leverage secure and resilient next generation networks.

Support commercially sustainable advancements that deliver military and industry impact using open systems.

DoD will conduct active and passive security vulnerability assessments of 5G prototypes in order to support zero-trust security designs for military 5G applications.

Funding will be used to develop policies, regulations, and standards for streamlined deployment of protected, resilient Government and commercial networks and continue development of Open Radio Access Network (ORAN) standards and technologies that accelerate the adoption of open interfaces, interoperable subsystems, and modular, multi-vendor solutions, as well as leverage new technology components to create new ICT systems.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Resilient and Open Commercial Solutions	0.325	6.390	5.132
Description: Develop policies, regulations, and standards for streamlined deployment of protected, resilient Government and commercial networks. Conduct active and passive security vulnerability assessments to support 5G security capabilities.			
FY 2025 Plans: Maintain efforts to inform and influence statutes, policies, regulations, and standards within DoD, the U.S. Government, and international bodies supporting a forward-thinking Next-G position.			
FY 2026 Plans: Continue efforts to inform and influence policies, regulations, and standards within DoD, the U.S. Government, and international bodies supporting a forward-thinking NextG position.			
Strengthen existing and develop new technology relationships with allies and partners that lead to common standards, open, secure and interoperable technologies and FutureG innovation and development in support to the joint warfighter.			
Continue to support DoD CIO recommendations on standards and spectrum policy into relevant FutureG research efforts.			
FY 2025 to FY 2026 Increase/Decrease Statement:

A. Mission Description and Budget Item Justification Integrated Sensing and Communications (ISAC) programs will launch around major topic areas. These topic areas are selected through extensive collaboration with both industry and academia to understand the current state of technology. Generally, those areas are built around sensing systems with the ability to communicate, and communications systems with the ability to sense. Research continues into capabilities utilizing ambient signals for object and event detection, and how to apply the capability at network and enterprise levels. Lab-based fundamental research demonstrations are planned to assess ISAC utility within DoD. Capabilities developed under the ISAC portfolio can directly support emerging requirements around Golden Dome for America.												
B. Accomplishments/Planned Programs (\$ in Millions)									FY 2024	FY 2025	FY 2026	
Title: Integrated Sensing and Communications Description: Establish long-term research and application paths to give the U.S. a leap-ahead, stay-ahead position in ISAC for both capabilities and counter-measures. FY 2026 Plans: FY 2026 serves as the initial kickoff of development programs identified in the ISAC technology roadmap developed in FY 2025. These projects focus around the “radar-like” identification of objects and environments utilizing communications systems. These system collaboration aspects will allow the systems to perform at scale and ascertain context of the objects in their environment. This is an enabling technology, likely to be prominent in Golden Dome for America. FY 2025 to FY 2026 Increase/Decrease Statement: The increase of \$2.000 million between FY 2025 and FY 2026 is due to the realignment of funds from project 725 to project 729 for the ISAC effort.									0.000	-	2.000

A. Mission Description and Budget Item Justification

The DoD RDT&E corrosion prevention program, as defined in Public Law 107-314 in section 2228 of title 10 United States Code (section 2228(d)(2)), is the mechanism to change DoD's reactive approach of corrective corrosion maintenance to a proactive approach to improve weapon system corrosion prevention reliability and maintainability through technology. The strategic goal of the DoD Corrosion Prevention Program is to demonstrate the ability to improve weapon system readiness through the implementation of targeted and effective material and nonmaterial solutions that reduce the corrosion impacts on reliability, maintainability, and cost of DoD weapon systems and infrastructure. Historically, the program's projects have shown an opportunity to achieve a 17:1 return-on-investment.

From 2001-2023, the Government Accountability Office (GAO), the Congressional Budget Office and the DoD IG have conducted multiple weapon systems and infrastructure audits and continue to find corrosion is a significant impact on availability and cost. GAO's Aviation Sustainment Quick Look reports (GAO-18-678, GAO-21-101SP, and GAO-23-106217) consistently show that 33% of the audited aviation systems report corrosion as a factor in reduced aviation Operational Availability (Ao) rates. The F-35 program is a current example of current corrosion prevention acquisition decisions and resulting corrosion maintenance issues of the continued flawed approach to weapon system corrosion prevention.

In addition, corrosion continues to be a major factor in Materiel Availability (Am) of weapon systems. Examples of the corrosion impact on materiel availability include:

- (a) F-22 Reliability and Maintainability Maturation Program total funding requirement increased 100% (\$664 million to \$1.3 billion) to correct unplanned corrosion issues (GAO-12-447, GAO-14-425)
- (b) The Department of the Navy is deferring shipyard corrosion repairs, allocating a 6%+ cost growth factor for future corrosion repair work. (GAO-22-105032)

These materiel availability examples illustrate the continued reactive sustainment engineering approach to corrosion prevention during the operational and sustainment phase of fielded weapon systems.

Furthermore, the Maintenance Availability Data Warehouse (MADW) data, maintained on DoD online data repository, shows a \$20 billion total corrosion maintenance cost trend across DoD weapon systems and infrastructure. In perspective, the allocated FY 2025 budget for the DoD Corrosion Program represents an investment equivalent to 0.013% of the \$20 billion annual corrosion maintenance cost of weapon systems and infrastructure.

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
Description: Corrosion prevention and control projects and activities are conducted in support of the support of the strategic plan to reduce the impact of corrosion on the cost and availability of DoD equipment and facilities. - Completed the Improved Landing Gear Durability for F/A-18E/F Super Hornet evaluating the application of multiple corrosion prevention technologies to improve the landing gear system to improve readiness and reduce cost; resulting in the engineering approvals to initiate the specific technology transitions into components on 3 additional platforms: F-35 Navy/USMC variants, CH-53 platform, and V-22 platform. - Implemented CPC technologies on LPD-24 (USS Arlington) during its April 2023-July 2024 maintenance period to start its service environment demonstration and validation. - Collaborated with the Association of Materials Protection and Performance (AMPP) to deliver six industry developed corrosion control and coatings inspection training course to over 230+ DoD acquisition and depot-level workforce personnel. The DoD workforce demand for CPC training is illustrated in a FY 2024 waitlist from 300+ to 561 students which is 200+ increase to the FY 2023 waitlist. - The CPO supported technical revision of Mil-Std-1568, Materials and Processes for Corrosion Prevention and Control in Aerospace Weapon Systems, was selected as a winner of the Defense Standardization Program Achievement Award. FY 2025 Plans: Execute follow-on FY 2024 RDT&E project efforts: - Composite Sunshield for Ready Service Lockers – Demonstration (Industry Partner Collaborator: Composite Resources) - Ultra-Short Pulse Laser Surface Prep for Optimizing Adhesion and Mitigating Corrosion of Marine Connectors (Industry Partner Collaborator: PulseTex) - Demonstrate technologies for mitigating electronics corrosion on autonomous assets. - Development of a digital engineering corrosion design tool to assess galvanic corrosion impacts and predict the corrosion lifecycle risks (Industry Partner Collaborators: Siemens Govt Tech and Corrdesa) FY 2026 Plans: Continued execution of: - Composite Sunshield for Ready Service Lockers – Demonstration (Industry Partner Collaborator: Composite Resources) - Ultra-Short Pulse Laser Surface Prep for Optimizing Adhesion and Mitigating Corrosion of Marine Connectors (Industry Partner Collaborator: PulseTex) - Demonstrate technologies for mitigating electronics corrosion on autonomous assets.

Note

New Start (Y/N): No

Beginning in FY 2025 Program Element funding was realigned under a new project code to correctly align PE funding in support of Chief Digital and Artificial Intelligence Officer (CDAO) priorities. The new project code is: (1) P074 AI/ML Scaffolding. The prior year funding project code did not continue after FY 2023 though the overarching goals of the program element are the same. The new project code refocuses the PE and provides traceability to the current priorities of the CDAO.

A. Mission Description and Budget Item Justification

The Chief Digital and Artificial Intelligence Officer (CDAO) supports the Department's initiatives to build enduring advantage and build a resilient Joint Force and defense ecosystem. The CDAO is responsible for strengthening and integrating data, artificial intelligence, and digital solutions in the Department in support of the interim National Defense Strategy and Section 1513 of the National Defense Authorization Act (NDAA) for FY 2023.

The functions of the CDAO are as follows: lead and oversee the DoD's strategy development and policy formulation for data, analytics, and AI; break down barriers to data and AI adoption within DoD institutional processes; create enabling digital infrastructure and services that support Components' development and deployment of data, analytics, AI, and digital-enabled solutions; selectively scale proven digital and AI-enabled solutions focused on enterprise and joint use cases; and surge digital services for rapid response to crises and emergent challenges. The CDAO will continue priority projects that align to the mission. This includes expanding the AI integration between the DoD and Intelligence Community (IC); enterprise data repository; establishing a responsible AI ecosystem; executing the AI and Data Accelerator (ADA) initiative; and developing a Data, Analytics, and AI Adoption Strategy. These various lines of effort will support the overarching mission of accelerating the Department's adoption of data, analytics, and AI to preserve decision advantage across the Joint Force.

The CDAO's DoD and IC Integration Division was chartered to create joint interoperability and to harness and scale AI across the DoD and IC jointly, especially within the Defense Intelligence Enterprise. The organizational purpose is to improve coordination and interoperability between DoD and the IC, minimize duplication while maximizing a common approach, and develop an innovated joint AI operational concept and capability, where appropriate. This funding is assigned to support algorithm development, data preparation, and integration experimentation to create joint DoD and IC capabilities. Further details are classified and available upon request.

Note

New Start (Y/N): No

The interim National Defense Strategy (NDS) directs the Department of Defense (DoD) to seed opportunities in critical technology areas, including biotechnology, as part of our broader responsibility to ensure enduring U.S. technological advantage, and the Department will use this program element to execute the Administration's vision for advanced manufacturing of critical technologies.

A. Mission Description and Budget Item Justification

The Advanced Manufacturing Components and Prototypes (AMCAP) program is established to validate the build and/or expansion of advanced manufacturing infrastructure and conduct research, develop, test, and evaluation (RDT&E) to facilitate development and transition of promising advanced manufacturing technologies to higher manufacturing readiness levels (MRL) via component and prototype development. Funding for this program is focused on requirements emerging from the Defense Biomanufacturing Strategy, which is guiding the execution of the Distributed Bioindustrial Manufacturing Program (DBIMP) – formerly known as the Manufacturing Enabled by Modular and Reusable (MEMBR) assets initiative investments to scale up domestic manufacturing of bioindustrial products. The project under this program will cover the full range of technologies critical to the Department of Defense (DoD) and manufacturing technologies with dual-use commercial applications to support the industrial base that will supply the DoD.

A. Mission Description and Budget Item Justification

This project will mature manufacturing processes to support the transition of advanced manufacturing components and prototypes to address warfighter needs.

With initial emphasis in the bioindustrial manufacturing area, the project will advance the scale up production of molecules of interest. Through the biotechnology Distributed Bioindustrial Manufacturing Program (DBIMP) – formerly known as the Manufacturing Enabled by Modular Bioindustrial & Reusable (MEMBR) assets initiative - the project will establish a network of flexible manufacturing facilities to scale-up promising biotechnology capabilities for integration into DoD missions.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Pilot-Scale Production of Bioindustrial Products	-	16.776	45.513
Description: Bioindustrial projects to scale up promising molecules utilizing flexible bioindustrial manufacturing facilities. Biotechnology activities could include, but are not limited to, initial pilot or production scale batches, producing material needed for qualification to a military or commercial specification, test batches to facilitate the technology transfer from a pilot facility to an industrial scale facility, development of downstream processing techniques at scale, standard operating procedure (SOP) development, and test and evaluation. The biotechnology projects are to be performed in bioindustrial infrastructure funded by DoD.			
FY 2025 Plans: Conduct bioindustrial initial pilot or production scale batches of candidate molecules to prove capability to produce material for military needs. Prepare test batches to facilitate technology transfer of products to available industrial scale facilities and develop downstream processing techniques supporting production at scale. Develop and apply initial standard operating procedures (SOP) for at scale production. Conduct test and evaluation to validate and prove processes used.			
FY 2026 Plans: In support of the Distributed Bioindustrial Manufacturing Program (DBIMP), continue maturation of biomanufactured fibers for DoD specific applications using qualification testing and prototyping for relevant environments. Continue prototyping and early test and evaluation efforts for forward deployed biomanufacturing. Conduct techno-economic analyses of biomanufactured fibers and biomanufactured energetic precursor materials. Complete first tier of qualification testing for the biomanufactured fiber. Formulate biomanufactured energetic precursors and produce material necessary for qualification. Perform pilot process optimization and produce biomaterials using mature precursor chemicals or materials and formulate final materials for biomanufactured products

Appropriation/Budget Activity 0400 / 4	R-1 Program Element (Number/Name) PE 0604125D8Z / <i>Advanced Manufacturing Components and Prototypes</i>	Project (Number/Name) 232 / <i>Advanced Manufacturing Components and Prototypes</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
critical to DoD and the United States. This effort includes military specification and conformance testing. Promising candidate molecules and materials selected in FY 2025 will become qualification projects in FY 2026. The program will conduct feasibility assessments for bioindustrial manufacturing prototypes for low resource environments important to the DoD mission.			
<i>FY 2025 to FY 2026 Increase/Decrease Statement:</i> The increase of \$28.601 million between FY 2025 and FY 2026 will fund the most promising 3-6 follow-on projects emerging from 34 ongoing bioindustrial candidate projects. These 3-6 follow-on projects will focus on maturing products in need of qualification testing and/or technoeconomic analysis. One example is additional qualification testing for biomanufactured fibers for DoD filters, which may include the production of prototypes. An Economic Assumptions decrease of \$0.136 million reflects a reduction in non-pay, non-fuel purchases based on revised inflation rates.

A. Mission Description and Budget Item Justification

In support of the Interim National Defense Strategy, the Strategic Capabilities Office (SCO) develops, demonstrates, and transitions operationally impactful capabilities and effects to shape and counter emerging threats and increase the lethality of the Joint Force in contested environments. The SCO combines innovation with concepts of operation to develop novel capabilities solving critical national security challenges in partnership with the Services, Defense Agencies, Combatant Commands (CCMDS), Joint Chiefs of Staff, Intelligence Community, and the Office of the Secretary of Defense (OSD).

A. Mission Description and Budget Item Justification

The Strategic Capabilities Office (SCO) develops, demonstrates, and transitions operationally impactful capabilities and effects to shape and counter emerging threats and increase the lethality of the Joint Force in contested environments. The SCO combines innovation with concepts of operation and information management to develop novel capabilities solving critical national security challenges in partnership with the Services, Defense Agencies, Combatant Commands (CCMDS), Joint Chiefs of Staff, Intelligence Community, and the Office of the Secretary of Defense (OSD).

SCO's FY 2026 Pacific Deterrence Initiative (PDI) spending under Exercises, Training, Experimentation, and Innovation includes \$639.296 million discretionary and \$167.000 million mandatory for a total of \$806.296, an increase of \$150.786 million from FY 2025, with five new capability projects transitioning into Execution in FY 2026.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Advanced Innovative Technologies Project Management	56.206	53.040	56.597
Description: SCO has a small government workforce, and relies on this project to fund the required additional labor for subject matter experts and programmatic support teams to help centrally manage the execution of the SCO prototype development portfolio. This project funds the travel for government employees and salaries for detailed staff, Inter-governmental Personnel Act participants, and Systems Engineering and Technical Assistance (SETA) contract staff that manage SCO's projects, studies, and test support. This staff annually supports ~25 prototype project teams, the on-going study and development of additional concepts, and the office support functions like: program security representatives, intelligence, Information Technology, and finance and accounting support staff required to enable the project teams.			
FY 2025 Plans: These funds provide for SCO labor and travel to support the ~25 project teams that are active each fiscal year.			
FY 2026 Plans: These funds provide for SCO labor and travel to support the ~25 project teams that are active each fiscal year.

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
SCO will migrate from the DARPA DSN to the DISA DoDNET(S) in FY 2025, funding both organizations through the transition. SCO will also be working with DISA to plan the transition from the DARPA DMSS for unclassified service to the DISA DODNET.			
FY 2026 Plans: SCO is planning minor renovation to its Chantilly, VA office requiring \$7.6M for its portion of the facility. SCO expects to complete the transition to DISA DODNET, and the migration of its SAP system from SAV to a cloud-based service in FY 2026 and will have higher than normal costs through the transition. Once the migration away from DMSS, DSN, and SAV is complete, continued payment to DARPA will only be for the DSWAN system.			
FY 2025 to FY 2026 Increase/Decrease Statement: The increase from FY 2025 to FY 2026 is due to planned minor construction to upgrade the SCO facility and IT.

to Idaho for preparation and storage. The SCO team will continue to work with the NRC in developing a regulatory process for future transport of microreactors. SCO will also support the development of requirements for a potential Service transition. FY 2026 Plans: Complete final site design of Project Pele, moving fully into construction and assembly phase. Fabricate reactor core, intermediate heat exchanger, and power conversion modules. Begin assembly of above-ground concrete site structure. Prepare Pele fuel for insertion into reactor. All the aforementioned tasks will be the first such work on a Generation IV nuclear reactor anywhere outside of China, and will cultivate know-how which can be applied to any future commercial or defense-purposes advanced nuclear reactors. The SCO team will also continue to work with NRC in support of an improved regulatory process for transportation of Pele-descended reactors, as well as supporting a potential Service transition. Survivability testing will complete its most important test, with specific details available at a higher classification level. The FY 2026 request includes \$0 million of discretionary and \$79.000 million of mandatory (reconciliation) for a total of \$79.000 million. FY 2025 to FY 2026 Increase/Decrease Statement: The decrease supports phasing required for a development cycle with the Pele reactor delivered in FY 2027.

A. Mission Description and Budget Item Justification

This program supports microelectronics modernization activities that enable defense systems to keep pace with commercial microelectronics technological advances, reduce reliance on obsolete microelectronics, and mitigate the Department's reliance on sole source foundries for assured state-of-the-art (SOTA) microelectronics. It addresses the challenges of 1) having enduring access to a multiplicity of modern manufacturing processes that require commercial volumes to maintain long term viability and 2) protecting the intellectual property (IP) of the microelectronic parts that are manufactured.

Microelectronics technology is a critical enabler for the development of new systems and sustainment of fielded systems. In addition, this program directly supports the priority of building a resilient Joint Force and defense ecosystem through modernization of key capabilities and fostering pathways to adapt SOTA commercial and dual-use technologies to Defense needs. This program also supports the objective of Making the Right Technology Investments by supporting the domestic microelectronics innovation ecosystem and partnering with industry to quickly incorporate market-driven commercial advances with military-relevant capabilities.

This program supports the OUSD(R&E) Microelectronics Modernization Roadmap. The primary areas of focus of this roadmap include the following: access to state-of-the-art microelectronics technology, access to advanced packaging and test; access to the best commercial design technology; evidence-based assurance and secure design; foundry access; policies, standards, and Joint Federated Assurance Center (JFAC) governing body; access to radiation hardened microelectronics; access to non-complementary metal oxide semiconductor state-of-the-art (SOTA) microelectronics for radio frequency and optoelectronic applications; education and workforce development; and supply chain awareness and security.

A. Mission Description and Budget Item Justification

Microelectronics are critical technologies that drive the modern economy and enable the defense systems that allow warfighters to accomplish their missions. Other nations recognize the need to control the microelectronics supply chain and indigenous state-of-the-art (SOTA) manufacturing. Aggressive investments and licit and illicit actions by peer nations threaten U.S. leadership. China alone purports investment of \$150 billion and a national strategy to achieve dominance in all major areas of microelectronics by 2030. Russia and China have publicly stated that advanced microelectronics, AI, and machine learning (ML) are the keys to economic and military dominance.

This project funds the operation of microelectronics software assurance (SwA) support to DoD programs and organizations of the Joint Federated Assurance Center (JFAC), codified in the National Defense Authorization Act (NDAA) for Fiscal Year 2025, Sec 922, to support the assurance needs of the Department of Defense by ensuring, pursuant to policies related to hardware and software assurance and supply chain risk management, that the software and hardware developed, acquired, maintained, and used by the Department are free from intentional and unintentional vulnerability during the life-cycle of development and deployment of assured, trustworthy defense systems. The collaboration between the JFAC and program offices will help mitigate existing and emerging critical threats and vulnerabilities in microelectronics to all DoD programs.

The project supports the implementation of Executive Order 14028 Improving the Nation's Cybersecurity for software assurance for critical software such as software bill of materials, and information communications technology supply chain risk management, and the PD, Cyber Roadmap for mitigation of software vulnerabilities that are cyber related.

This project includes establishment of new strategic partnerships with existing commercial SOTA domestic foundries to develop a data-driven, risk- based approach to supply chain protection and develop the assured access, secure design, and manufacture of advanced microelectronics technology and electronic components.

Successful implementation will transition these technologies to use in DoD programs, obtain access to multiple commercial microelectronics facilities, establish secure design capabilities, and solidify a data-driven approach to supply chain protection. It also includes keeping pace with the rapid advancements in microelectronics technology and the globalization of this industry sector. It will provide the basics for updating and strengthening DoD assurance policy and includes collaborating with industry to develop data driven evidence-based practices.

B. Accomplishments/Planned Programs (\$ in Millions)

Exhibit R-2A, RDT&E Project Justification: PB 2026 Office of the Secretary Of Defense			Date: June 2025		
Appropriation/Budget Activity 0400 / 4		R-1 Program Element (Number/Name) PE 0604294D8Z / <i>Trusted and Assured Microelectronics</i>	Project (Number/Name) 907 / <i>Access to State-of-the-Art (SOTA) Microelectronics - Development</i>		
B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026
Description: This project's activities will advance the state of the art for evidence-based software assurance tools and methods practiced by the JFAC labs to enhance both microelectronics hardware and software assurance for the DoD enterprise. The project accelerates the development of assurance technologies to ensure the integrity of DoD weapon systems, information systems, and national security systems in direct support of program offices across the microelectronics life cycle. The JFAC bridges the various federated DoD organizations across the Joint Services and the National Security Agency (NSA). The JFAC advances the development of assurance technologies, offers scalable enterprise assurance capabilities, fosters a thriving assurance ecosystem, and provides access to leading assurance solutions to include policies, guidance, best practices, training, resources, tools, assessments, expertise, source code, and data. FY 2026 Plans: • Select, procure, and adapt quantities of state-of-the-art software assurance (SwA) tools; innovate and advance technology for detection of malicious and subverted code in DoD embedded systems; technology and infrastructure support to programs to determine and mitigate exploitable vulnerabilities; map vulnerabilities and threats to SwA tool capabilities and provide assessments of how well SwA tools and techniques function for programs; focus on both embedded software and software tools to address supply chain vulnerabilities, bill of materials(BoM)validation and integrity of intellectual property (IP)blocks. • Continue to align expanding JFAC infrastructure to cloud native environments to support hardware assurance (HwA), deploy SwA tools, training and shared experiences, and best tool-use practice directly to programs and organizations. FY 2025 to FY 2026 Increase/Decrease Statement: The increase from zero in FY 2025 to \$8.5 million in FY 2026 is to restore emphasis on SwA to deliver increased confidence in the integrity of microelectronics used by the Department.					
Title: Access to State-of-the-Art (SOTA) Microelectronics - Development Description: This activity supports resilience in sources for Department microelectronics by implementing manufacturing capability at multiple foundries ensuring the government is not dependent on one single source for critical components. Design and fabricate advanced microelectronics utilizing state-of-the-art electronic design automation (EDA) tools and process development kits (PDKs). Demonstrate hardware through dedicated and multi-project wafer runs at multiple foundries. Rapid Assured Microelectronic Prototypes – Commercial (RAMP-C): This project enables the DoD and the defense industrial base to collaborate with the commercial microelectronics industry to increase prototype development, demonstration, and address the war fighter's need to maintain and modernize weapon systems as the threat landscape shifts.			225.610	148.435	108.039

Appropriation/Budget Activity 0400 / 4		R-1 Program Element (Number/Name) PE 0604294D8Z / <i>Trusted and Assured Microelectronics</i>		Project (Number/Name) 907 / <i>Access to State-of-the-Art (SOTA) Microelectronics - Development</i>	
B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026
This project enables the Trusted and Assured Microelectronics (T&AM) program to demonstrate, by end of FY 2025, full access to U.S. commercial state-of-the-art (SOTA) design, foundry, and advanced packaging capability and meet DoD's unique needs within two to three years for modernization, including for radiation hardened (RH) and photonics applications. The capability will reduce the time needed to replace microelectronics components that are generations behind the commercial sector, move away from off-shore sources for SOTA commercial integrated circuits, and accelerate the demonstration and adoption of evidence-based assurance methods throughout the microelectronics lifecycle and supply chain. Secure Manufacturing: This project builds capability in the government and the defense industrial base (DIB) to design and manufacture in the most advanced onshore microelectronics fabrication technologies. By moving innovative microelectronic device concepts from older technologies (e.g., 12 nm) to 1.8nm, the DoD can achieve improvements in performance parameters such as latency, bandwidth, and size, weight and power (SWaP) for critical EW, sensing and communications missions. This project readies the Department to take full advantage of the Secure Enclave. FY 2025 Plans: Foundry Access: • Continue to enhance access to state-of-the-art (SOTA) fabrication ecosystem. • Maintain program of record access to assured fabrication flow and fund multi-project wafer production runs at multiple SOTA domestic sources. RAMP-C: A leading edge (<7 nanometer), commercially-viable, U.S.-located domestic wafer foundry ecosystem access is established. The ecosystem will have capability on the order of > 26,000 wafer starts per month for design and manufacturing of evidence-based assured, dual-use commercial and DoD custom integrated circuits. This project will enable the following: • Access, meaning the ability for DoD programs and the defense industrial base to purchase parts and devices with the necessary assurance, to a SOTA U.S. wafer foundry, to commercial and critical evidence-based assured dual-use COTS integrated circuits, and to capabilities necessary to develop evidence-based assured custom DoD integrated circuits. • The jump-start in commercial use of the domestic foundry by key U.S. fabless companies. • Establishment of a viable design ecosystem including access to 3rd party design modules. • The reduction in the cost differential of building a U.S.-located wafer foundry verses off-shore. • The enablement of commercially-supported and enduring U.S. logic foundry capability.

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026
• Leverage the expertise of commercial industry to develop and demonstrate novel capabilities for design of State-of-the Art (SOTA) with assurance. Cloud/Electronic Design Automation (EDA): • Continue activities for prototype demonstration of an emulation based evidence-based assurance design flows • Continue efforts to raise the technology readiness level (TRL) of pilot emulation efforts to production readiness by standardizing the cloud-based emulation workflows, enhancing the robustness of the flows, and bringing them up to IL-4 Design Acceleration and Transition: • Continue activities with Design Acceleration Centers to leverage commercial intellectual property (IP), EDA, and processes enabling prototype transition acceleration • Continue to expand and accelerate development and evaluation and initiate insertion of IP for application-specific integrated circuit (ASIC) and Chiplet security including authentication, Firmware Attestation and Decryption and system-on-chip (SOC) Interface encryption. • Continue to develop and evaluate, and initiate insertion of, tools and techniques for Protect of silicon IP during manufacturing and test phase, including multi-chip package (MCP). • Continue development of using commercial off-the-shelf (COTS) parts in more critical DoD applications utilizing the inherent personalization features FY 2026 Plans: Foundry Access and RAMP-C: Completion of the dedicated RAMP-C project to leverage the leading edge (<7 nanometer), commercially-viable, U.S.-located domestic wafer foundry ecosystem for design and manufacturing of evidence-based assured, dual-use commercial and DoD custom integrated circuits. Evolution of RAMP-C to transition-focused development of microelectronics devices with enhanced mission capability by leveraging <7 nanometer microelectronics manufacturing. This project will: • Continue to enhance access to state-of-the-art (SOTA) fabrication ecosystem. • Maintain program of record access to assured fabrication flow and fund multi-project wafer production runs at multiple SOTA domestic sources. • Continue growth in commercial and government use of the most advanced domestic foundries by key U.S. fabless companies.

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026
• Leverage a digital engineering/design ecosystem including access to 3rd party design modules. • Promote modeling and simulation to anticipate performance benefits to be derived from design and fabrication of DoD microelectronics in advanced (<7 nm) technologies. • Utilize commercially-supported and enduring U.S. logic foundry capability. • Leverage the expertise of commercial industry to develop and demonstrate novel capabilities for design of State-of-the Art (SOTA) microelectronics with assurance. Domain Specific Design and Transition: • Leverage EDA tools for emulation based evidence-based assurance design flows. • Construct domain-specific architectures that leverage commercial intellectual property (IP), EDA, and processes enabling accelerated prototype demonstration and transition. • Continue to expand and accelerate development and evaluation, and initiate insertion of IP, for application-specific integrated circuit (ASIC) and Chiplet security including authentication, Firmware Attestation and Decryption and system-on-chip (SOC) Interface encryption. • Continue to develop and evaluate, and initiate insertion of, tools and techniques to protect silicon IP during packaging and test phase, including multi-chip package (MCP). • Continue leverage of trusted commercial off-the-shelf (COTS) parts in for DoD applications. Artificial Intelligence Hardware at the Edge: • Conduct ongoing evaluation of the NorthPole AI inference processor against emerging commercial technologies for DoD applications. • Identify demonstration opportunities to support transition of Northpole technology for operational use. • Investigate the potential of Neuromorphic AI processors that are robust radiation tolerant, low power and low latency for real-time onboard AI and autonomy capabilities for future DOD and intelligence community systems across all operational domains (space, land, air, sea). FY 2025 to FY 2026 Increase/Decrease Statement: The decrease of \$23.396 million between FY 2025 and FY 2026 is due to completion of the RAMP and RAMP-C efforts in fiscal year 2025 and early FY 2026, respectively, followed by the evolution of these efforts to domain-specific design and transition efforts which will leverage the secure design environment developed by RAMP and the leading-edge process design kit and IP library developed by RAMP-C.

A. Mission Description and Budget Item Justification

The DoD needs modern microelectronics capabilities. Advanced packaging provides necessary performance improvements, size weight power and cost (SWAP-C) benefits, and unique opportunities to disaggregate DoD requirements into smaller and lower cost chiplets while maximally leveraging state-of-the-art (SOTA) commercial technologies. However domestic advanced packaging capabilities are limited and the heterogeneous integrated (HI) chiplet ecosystem is nascent. This project collaborates with DoD, the Defense Industrial Base (DIB), and domestic commercial industry to leverage and enhance existing capabilities to develop self-sustaining advanced packaging and test solutions that meet DoD needs.

B. Accomplishments/Planned Programs (\$ in Millions)

Title: Access to Advanced Packaging and Testing - Development	FY 2024	FY 2025	FY 2026
Description: This project is developing chiplets and advanced packaged microelectronics informed by DoD requirements. It leverages domestic heterogeneous integrated (HI) packaging technologies to accelerate DoD adoption of the most advanced microelectronics available. Key technologies, processes and tools will be developed and improved upon, allowing DoD to utilize HI technologies to package chips and chiplets to realize performance and SWAP-C benefits. The SOTA Heterogeneous Integrated Packaging (SHIP) contract provides access to dual-use heterogeneous packaged digital and RF microelectronics and manufacturing processes. Working with world-class industrial partners will provide early access to proprietary information related to these technologies, giving DoD an asymmetrical advantage. It will enable personalization of, and customization for supporting DoD programs. It enables a revolutionary leap in system performance that will greatly reduce SWaP by incorporating the immense advances in SOTA commercial off the shelf (COTS) processing technologies, such as field programmable gate arrays (FPGAs), microprocessors, and Graphic Processing Units (GPUs). The Strategic Transition of Microelectronics to Accelerate Modernization by Prototyping and Innovating in the Packaging Ecosystem (STEAM PIPE) contract develops additional HI and chiplet prototypes with an emphasis on transition strategy and identified impact to DoD systems.	68.121	82.404	90.784

Appropriation/Budget Activity 0400 / 4	R-1 Program Element (Number/Name) PE 0604294D8Z / <i>Trusted and Assured Microelectronics</i>	Project (Number/Name) 908 / <i>Access to Advanced Packaging and Testing - Development</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
In order to meet the project mission, further work is needed. Testing of advanced MCP technologies in DoD relevant environments will occur. Access to advanced packaging processes with capabilities to support ITAR will be developed. Detailed studies of the chiplet and SOTA HI packaging ecosystem and barriers to DIB use will continue. Identification of DoD and DIB advanced packaging and chiplet needs will be refined. Solutions to drive down cost and schedule will be developed. FY 2025 Plans: Continue the establishment of, and accelerate access to, SOTA packaging and test facilities capable of packaging, testing and personalization of integrated circuits in which the fully assembled and operationally functional Multi-Chip Package (MCP) can contain ITAR regulated and/or classified information. Continue to ensure reuse and standardization for sustainability and costs. Continue executing transition strategy through engagement with programs offices and DIB, data driven analyses, and risk reduction. Continue to expand and accelerate the development of: • Advanced packaging capability utilizing re-shored commercial manufacturing, assembly, domestically sourced materials, and test for productization and qualification. • Processes and capabilities to meet DoD's heterogeneous integration (HI) packaging unique design needs • Advanced radio frequency (RF) packaging design tools, process design kits (PDKs), assembly design kits (ADKs), and platforms using a wide selection of material choices. • A catalog of designs, die, chiplets, package types, etc. • Prototyping microelectronics evidence-based assurance guidance for microelectronics heterogeneous integrated packaging • Enhance secure design and packaging capability with new tools/techniques. • Post-assembly personalization and operational test capabilities. • MCP finish capability for additional security to protect DoD specific intellectual property (IP) and critical program information (CPI) in the fully functional MCP. FY 2026 Plans: Continue the establishment of, and accelerate access to, SOTA packaging and test facilities capable of packaging, testing and delivery of integrated circuits in which the fully assembled and operationally functional Multi-Chip Package (MCP) can contain ITAR regulated and/or classified information. Continue to ensure reuse and standardization for sustainability and costs. Continue executing transition strategy through engagement with programs offices and DIB, data driven analyses, and risk reduction. Ongoing planned activities are as follows: • Development of advanced dual-use multi-chip packages (MCPs) • Development of DoD relevant chiplets • Lower barriers between DIB and high-volume commercial technologies to enable faster and lower cost prototyping of custom chiplets and MCPs

A. Mission Description and Budget Item Justification

This project addresses Government needs for microelectronics that represent only a small market share while spanning a wide range of devices, from legacy components to state-of-the-art (SOTA) technologies. The Government must sustain specialty suppliers and maintain access to a diverse microelectronics ecosystem to develop and acquire the application specific integrated circuits (ASICs) and specialized or modified commercial off the shelf (COTS) components required to satisfy military needs for radiation hardened, radio frequency (RF) and optoelectronic (OE) microelectronics.

By partnering in the maturation of state-of-the-art material sources, foundries, and packaging facilities, the DoD is able to develop the ability to align commercial practices with DoD needs for unique functionality and encourage open access design to stimulate innovation and drive affordability. Subject matter expertise, technology, and manufacturing capability and capacity, including fabrication, packaging and test, are all needed. Moreover, domestic supply chains must be made more stable for both RF Gallium Nitride (GaN) and integrated photonics availability, integrity and security for the Department and the Defense Industrial Base.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Access to Radiation Hardened-, RF-, and Opto-Electronic Development	242.234	180.076	174.701
Description: Government-unique trusted design and manufacturing flows have been developed to enable a tier of trust for select ASIC parts including processors, memory, microcontrollers, field programmable gate arrays (FPGAs), and radiation-tolerant processors. DoD has partnered with the intelligence community, the Department of Energy, and the National Aeronautics and Space Administration to develop radiation hardened components that permit systems to operate in space and other harsh environments. State-of-the-practice (SOTP) and state-of-the-art (SOTA) technologies will be characterized and developed in support of Radiation Hardened By Process (RHBP) and Radiation Hardened By Design (RHBD) activities to satisfy radiation hardened requirements of DoD modernization programs. Radio frequency (RF)- and opto-electronic (RF/OE) technologies are critical enablers of asymmetric DoD capabilities for communications in congested regions of the spectrum and efficient data transfer as well as domestic dual-use industrial base capabilities. RF/OE efforts are developing and demonstrating RF Gallium Nitride (GaN) and integrated photonic material sources, foundries, and packaging resources and facilities. These investments will break microelectronics bottlenecks to enable compact millimeter wave transceivers and artificial intelligence training for edge compute.

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
<i>FY 2025 Plans:</i> Planned activities are as follows: • Continue to mature multiple MRL-7 state-of-the-art RF GaN foundries offering open access to millimeter wave device design and advanced interconnect services. • Continue to mature MRL-6 multiple co-packaged optical chiplets and multi-chip packages offering high-bandwidth data transfer capabilities. • Continue to mature manufacturing readiness level (MRL)-6 advanced semiconductor material production and baseline for insertion into multiple millimeter wave foundries. • Continue workforce development program for radio frequency (RF), power, and photonics. • Continue development of next generation RF Gallium Nitride (GaN) power technologies to increase RF power efficiency and dramatically improve thermal efficiency and management, decreasing the power load on DoD platforms. • Continue development of next generation RF GaN prototypes with improved performance at an affordable cost for drop in Line Replaceable Units (LRUs) in existing systems potentially without major architectural and structural redesign. Leverage commercial developments in next generation RF GaN power technologies to adapt for DoD applications. • Continue development of radiation hardened by design (RHBD) techniques in state-of-the-art (SOTA) technologies with validated radiation aware process design kits (PDKs) and radiation hardened cell libraries • Transition developed radiation hardened technologies into space and strategic programs. Initiate effort to transition emerging memory architectures for artificial intelligence (AI) applications, benefiting existing Programs of Record and emerging DoD electronics systems. • Develop emerging memory architectures for future DoD edge applications for AI, with more severe power constraints as AI models grow in size and the need for rapid response means always-on is required. • Continued characterization, development, and demonstration of space and strategic radiation hard microelectronics technology in support of DoD modernization efforts. These radiation hardened investments fund projects in the following rad hard technology areas: radiation hardened by process (RHBP) RHBD to support space and strategic application-specific integrated circuit (ASIC) requirements, standalone radiation hardened components for cross-service common parts needs, as well as lab modernization in support independent validation and verification of rad hard technology. <i>FY 2026 Plans:</i> Planned activities to deliver radiation hardened by process (RHBP) components and RHBD components to support space and strategic application-specific integrated circuit (ASIC) requirements, standalone radiation hardened components for cross-service

common parts needs, as well as lab modernization in support independent validation and verification of rad hard technology are as follows: • Continue development of radiation hardened by design (RHBD) techniques in state-of-the-art (SOTA) technologies with validated radiation aware process design kits (PDKs) and radiation hardened cell libraries • Transition developed radiation hardened technologies into space and strategic programs. • Continue characterization, development, and demonstration of space and strategic radiation hard microelectronics technology in support of DoD modernization efforts. Planned activities in RF and Optoelectronics will mature and demonstrate RF Gallium Nitride (GaN), co-packaged optics (CPO), and Power Silicon Carbide (SiC) as follows: • Continue maturation and development of State-of-the-art RF GaN materials, devices, and foundries offering open access to millimeter wave device design and advanced interconnect services • Continue maturation and development of multiple co-packaged optical chiplets and multi-chip packages offering high-bandwidth data transfer capabilities. • Continue maturation and development of high-voltage Power SiC electronics and high-temperature peripherals for unique DoD applications. • Continue workforce development program for radio frequency (RF), power, and photonics. • Continue rapid prototyping and experimentation to develop next generation beyond CMOS technologies that advance capabilities of state-of-the-art for tactical transceivers and compute systems, such as Open Radio Access Network (O-RAN) communications, electronic warfare, and radar. FY 2025 to FY 2026 Increase/Decrease Statement: The decrease of \$5.375 million between FY 2025 and FY 2026 is due to the reprioritization of funds to support other projects within this PE which require increased funding levels to maintain technical progress toward critical objectives.

A. Mission Description and Budget Item Justification

This project will promote microelectronics innovation and create an evidence-based assured microelectronics pipeline including maintaining Joint Federated Assurance Center (JFAC) strategic partnerships, assuring field programmable gate array (FPGA) devices, supply chain awareness and security, and workforce development. It will slow and, in the long-term, reverse offshoring trends by fostering commercial and Government alliances to preserve the U.S. ecosystem, lower barriers to innovation and adoption, strengthen workforce expertise, and ensure DoD has access to the next generation of advanced technology by utilizing an evidence-based assurance approach. This approach enables management of microelectronics security that is commensurate with program risk throughout the product pipeline and maintain the United States as the global source for high- end, secure, and reliable microelectronics components.

In addition, this project will develop a new data driven risk-based assurance paradigm for supply chain protection. This paradigm will strengthen security while improving access, without exposing sensitive intellectual property (IP) to the foundry and requiring post-manufacture validation of foundry products. The enhancement will develop evidence-based assured design concepts in manufactured systems, enabling a formal risk-based approach to protection techniques. Manufactured microelectronics will be tested to ensure that IP protections meet or exceed current National Security Agency standards for IP protection, and to develop DoD's ability to detect certain malicious supply chain attacks on DoD microelectronics.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Create an Evidence-Based Assured Microelectronics Pipeline – Development	115.024	126.254	130.127
Description: DoD is investing in next-generation disruptive technology, leveraging U.S. innovation, and transitioning materials, architectures, and designs into prototype capabilities for use by multiple industrial sectors. This and additional targeted investments in workforce will begin to address long-term talent needs. In addition, the Department will continue to enhance its partnership with industry to mitigate supply chain risks.			
Significant increases in assurance and protection of DoD technical data and components will be achieved through improvements in design practices, modern commercial security practices, and advanced packaging and chain of custody technologies. This activity, along with continued engagements and partnerships with industry will foster necessary security features in commercial products and infrastructure that will facilitate long-term assured access for the U.S. Government to commercial advanced state-of-the-art (SOTA) technology providers.			

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2026 Office of the Secretary Of Defense		Date: June 2025	
Appropriation/Budget Activity 0400 / 4	R-1 Program Element (Number/Name) PE 0604294D8Z / <i>Trusted and Assured Microelectronics</i>	Project (Number/Name) 912 / <i>ME U.S. ME Dominance-Dev</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
This project funds the operation hardware assurance (HwA) support to DoD programs and organizations of the Joint Federated Assurance Center (JFAC), established in National Defense Authorization Act (NDAA) Sec 937, to increase DoD's HwA by providing engineering tools, technical services, best practices, innovative technologies and other assistance to programs to detect, assess, prioritize, and mitigate vulnerabilities from hardware attacks and assurance against supply chain exploitation vulnerabilities. The JFAC will provide capabilities for programs to keep assessment findings throughout the life cycle of their systems for data mining (e.g., documentation on rationale for previous mitigation decisions). The collaboration between the JFAC and program offices will help mitigate existing and emerging critical threats and vulnerabilities in hardware available to all DoD programs. DoD is required to establish assured supply chain and operational security standards for the purchase of all (Commercial and Custom) microelectronics and protection of Intellectual Property across the entire lifecycle. An evidence-based assurance approach addresses FY 2020 NDAA Sec 224 requirement for trusted supply chain and operational security standards. Accelerate the adoption of an evidence-based assurance approach with multiple DoD pilot programs. This includes developing program guidance on baseline threats and mitigations per required level of assurance. This requires working closely with commercial industry, the defense industrial base and government JFAC subject matter experts. FY 2025 Plans: • Continue development of DoD program relevant application prototypes. • Expand number of Joint Federated Assurance Center (JFAC) hardware assurance (HwA) labs that have capabilities which complement existing analytical services. • Conduct proactive Validations & Verification (V&V) on FPGA families • Provide technical and analytical support to Military Global Positioning System (GPS) User Equipment (MGUE) program. Level of support dependent on MGUE requirements. • Stimulate rapid maturation and transition of emerging technologies and co-development with industry for assurance and security. • Continue development of industry outreach strategy to address critical technologies identified by DoD assurance and intelligence analysis. Sharing developed technical threat information with industry partners. • Continue to provide engineering and foreign language expertise to the counterintelligence community to support collection, analysis, investigations, and operations related to the DoD and US Government supply chains and foreign intelligence entity (FIE) threats to semiconductor-related equities. • Continue development of the counterintelligence portal for semiconductor analysis and mitigations (CSPAM) tool to share raw and finished intelligence analysis, intelligence collection, and threat data relating to the semiconductor industry within the law enforcement, counterintelligence, and intelligence communities, as well as key government stakeholders.			
			FY 2026

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2026 Office of the Secretary Of Defense		Date: June 2025	
Appropriation/Budget Activity 0400 / 4	R-1 Program Element (Number/Name) PE 0604294D8Z / <i>Trusted and Assured Microelectronics</i>	Project (Number/Name) 912 / <i>ME U.S. ME Dominance-Dev</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
• Continue the semiconductor familiarization training program for intelligence and counterintelligence personnel and integrate into their established research, development, and acquisition (RDA) training plans. • Continue to perform foreign technology analysis of emerging technologies for the counterintelligence and intelligence communities, to determine semiconductor industry sub-sectors, companies, or technologies that might be the targets of FIE activities, and which foreign companies might be the beneficiaries of foreign targeting. • Expand hardware assurance (HwA) laboratory tools and capabilities to keep pace with emerging commercial developments • Continue conducting supply chain risk-analysis and engagements with the U.S. Semiconductor industry to mitigate supply chain threats • Enable and accelerate maturation and adoption of an evidence-based assurance approach • Mature a regulatory and policy framework to enable long-term access to assured legacy, State-of-the-Practice (SOTP), and SOTA microelectronics. This includes tasks to: Extend access, Evaluate, mature, and improve assurance practices. • Ensure evidence-based assurance approach is aligned with DoD's comprehensive systems security engineering (SSE) framework. This includes: Trusted Systems and Networks (TSN) Analysis and Component level – FY 2020 NDAA Section 224 response for custom and commercial microelectronics. • Use pilot projects to mature threat driven risk-based decision making models. • Leverage existing efforts, including DoD policy, guidance, threat identification efforts, analysis and response, mitigations, technical efforts, Commercial standards and best practices, and Proactive Technology Analysis. • Support breadth of DoD microelectronics, including Custom – Custom Integrated Circuit (CIC), Field Programmable Gate Array (FPGA), and Commercial – Commercial Off The Shelf (COTS) and modified commercial components. • Cultivate a replicable and scalable Public-Private-Academic Partnership (PPAP) model to attract Science, Technology, Engineering, and Mathematics (STEM) students into trusted and assured microelectronics (T&AM) fields of study - Use outreach and curriculum guidance programs for K-12 education, STEM instruction at bachelor's degree and advanced degree levels, and continuing workforce training efforts to: • Develop a clearable, knowledgeable workforce to support and execute DoD program workforce modernization needs in microelectronics, and • Obtain and maintain an agile and adaptive workforce that meets current, as well as future, DoD needs FY 2026 Plans: • Develop guidance and best practices to enable OUSD R&E and DoD programs to make informed decisions and implementation of FPGA-specific hardware assurance methodologies in support of DoD Policy. • Proactively develop and maintain tools, technologies, and techniques that enable DoD to mitigate vulnerabilities in FPGA-based systems. • Leverage DoD policy, existing guidance, threat identification efforts, analysis, commercial standards and best practices to inform DoD programs of microelectronic assurance risks and mitigation options.

A. Mission Description and Budget Item Justification

Microelectronics components are the foundation of modern military systems. The Department of Defense (DoD) is exposed to various vulnerabilities that threaten the ability to source microelectronics needed to sustain programs of record. To prepare the Department for Great Power Competition, the DoD must take action to ensure access to the microelectronic components needed to sustain our defense programs and systems effectively and affordably. The Department also needs a better strategy to transition leading edge technology developed by both government and industry to DoD programs of record, to ensure the Department maintains a competitive edge.

B. Accomplishments/Planned Programs (\$ in Millions)	FY 2024	FY 2025	FY 2026
Title: Defense Microelectronics Cross-Functional Team Funding Description: A Cross-Functional Team (CFT) was established effective January 2021 to develop a DoD strategy and implementation and transition plan to minimize vulnerabilities within the Department's microelectronic supply chain. The transition plan will be comprehensive, and include a budget plan. The CFT will function as an advisory body to the Deputy Secretary of Defense (DSD), the Under Secretary of Defense for Research and Engineering (USD(R&E)), the Under Secretary of Defense for Acquisition and Sustainment (USD(A&S)) to strengthen the domestic microelectronics supply chain.	4.270	-	-

Note

New Start (Y/N): No

The PB 2026 Control is actually \$274.892 million. This will be corrected in the Budget Errata.

A. Mission Description and Budget Item Justification

The Rapid Prototyping Program supports the Department's initiatives to Defend the Homeland, Build Sustainable and Long-Term Advantage, and Build a Resilient Joint Force and Defense Ecosystem.

RPP supports the rapid development of prototypes within 12-to-24 months (technical maturation TRL 7-9) to address joint urgent needs identified through ideation with the Joint Staff, Combatant Commands, or Secretary of Defense guidance. Prototype requirements are developed using threat-informed physics-based mission analyses and are evaluated under the Office of the Assistant Secretary of Defense for Mission Capabilities' (OASD(MC)) campaign of experimentation, resulting in military utility assessments. RPP supports the maturation of joint prototypes across the Department (including those developed by the Strategic Capabilities Office (SCO), Defense Innovation Unit (DIU), Defense Advanced Research Projects Agency (DARPA), and the Services (TRL 5-6)) that have successfully demonstrated a required capability but have not been independently assessed in an interoperable, system of systems architecture.

Overarching program goals include modernization of cross-cutting joint technology areas, providing fieldable end-to-end mission capabilities for joint application, informing disparate programs of record, and delivering capabilities more quickly than traditional acquisition. RPP develops prototypes that reduce technical and integration risk across the Services and accelerate capabilities to programs of record and future Joint, rapid experimentation. RPP project selection aligns to strategic guidance including priority joint mission threads and the Under Secretary of Defense for Research and Engineering's (USD(R&E)) critical technology areas. RPP rapidly develops and fields cross-cutting, joint prototype capabilities demonstrated in an operational environment to inform DoD and Service leadership.

In FY 2026, RPP organized projects by focus areas aligned to specific, persistent capability gaps. Aligning the program to Secretary of Defense priorities, the following focus areas will allow Prototyping and Experimentation to rapidly respond to urgent and emergent requirements at the speed of relevance. Focus areas include:

Kill Web Interoperability: The processes by which Joint Force Commanders plan, direct, coordinate, and control forces to accomplish assigned missions and enable Joint kill webs.

Resilient Communications: The ability to maintain hardened mission-capable systems that allow for secure freedom of communications in contested electromagnetic spectrum environments. This includes alternate position, navigation, and timing.

UNCLASSIFIED

Exhibit R-2, RDT&E Budget Item Justification: PB 2026 Office of the Secretary Of Defense				Date: June 2025		
Appropriation/Budget Activity 0400: Research, Development, Test & Evaluation, Defense-Wide I BA 4: Advanced Component Development & Prototypes (ACD&P)		R-1 Program Element (Number/Name) PE 0604331D8Z I Rapid Prototyping Program				
Sensors and Data Analytics: Networks of sensors and data collection assets, data analysis, and dissemination resources used to provide information to the joint force about strategic and tactical threats. Collaborative Multi-Domain Autonomy: The use of multi-domain uncrewed systems and autonomy to increase warfighting capabilities and to mitigate/negate risk to warfighters. Contested Logistics / Sustainment: The coordinated use, synchronization, and often sharing of logistics resources to deploy, support, and sustain highly dispersed joint forces in highly contested environments. This also includes other sustainment areas such as supply chain reduction efforts; additive manufacturing; operational/tactical water purification; and sustainment and transportation innovations. Weapons Kinetic/Non-Kinetic Effects: The delivery of weapon systems and long-range kinetic and non-kinetic effects in support of Joint offensive and defensive tasks to create specific lethal effects on a target. This area includes counter position, navigation, and timing; and techniques designed to deceive enemy observers and/or mitigate, disrupt, or negate adversary capabilities. Emerging Prototypes and Enablers: Supports the acceleration of DoD, CCMD, and Service priority efforts which provide unique capability and/or address critical gaps. This focus area incorporates Combat Support/Combat Enablers; Special Forces Capabilities; Medical Technologies/Devices; Special Access Program assimilation and operational management; prototyping through small business and non-traditional pathways; and the rapid development of technologies for inclusion in experimentation venues.						
B. Program Change Summary (\$ in Millions)		FY 2024	FY 2025	FY 2026 Base	FY 2026 OOC	FY 2026 Total

A. Mission Description and Budget Item Justification												
The Rapid Prototyping Program (RPP) develops prototypes to deliver capabilities, inform requirements, and bridge the gap between RDT&E activities and fieldable solutions. RPP facilitates and accelerates joint, cross-cutting prototyping efforts within the Services and Defense Agencies. This program has the agility to select, fund, and implement projects in the year of execution as new opportunities or threats emerge. In consultation with the Service Science and Technology (S&T) executives, selected projects generally receive a single year of funding to accelerate capability transition to Services' and Agencies' programs of record. Projects deemed critical by the Under Secretary of Defense for Research and Engineering (USD(R&E)), the Joint Staff, and the Combatant Commands receive higher amounts of funding across multiple years. Planned funding supports the Joint Warfighting Concept (JWC), the Office of the Under Secretary of Defense for Research and Engineering's (OUSD(R&E)) critical technology areas, and Service and Agency needs to enable rapid response to emergent and time-sensitive threats.												
B. Accomplishments/Planned Programs (\$ in Millions)									FY 2024	FY 2025	FY 2026	
Title: Low SWAP-C RF Sensors (Sensors and Data Analytics)									3.816	-	-	
Description: The Low Size, Weight, Power, and Cost (SWaP-C) Radio Frequency (RF) Sensors project integrated and demonstrated a resilient communications system that includes low probability of intercept / low probability of detection (LPI/LPD) tools to provide constant connectivity at minimum power. The wireless, networked, low-SWaP, low-cost RF sensors provide asymmetric awareness over large maritime areas. The prototypes monitor RF signals that indicate crewed or uncrewed activity over large geographical areas, particularly areas that stretch along a critical border or shoreline.												
In FY 2024, the project integrated the sensor network and demonstrated capabilities within a realistic environment.												
Title: Tibanna Counter Unmanned Aerial System Assessment (Sensors and Data Analytics)									3.809	-	-	
Description: This effort provided a venue to quickly discover, demonstrate, and assess new and innovative warfighting capabilities, accelerate joint innovation, and provide a body of evidence and feedback for future warfighting concept development.												
In FY 2024, five Counter Unmanned Aerial System (CUAS) technologies were integrated and assessed for the detection and characterization of multiple near-ground, slow-moving, high-value targets. The CUAS assessment was conducted in conjunction with domestic and foreign technologies to test integration of systems and to simulate battlefield actions with counter-purpose systems. The assessment was completed Q4 FY 2024, and results are informing U.S. European Command CUAS requirements and activities.

Exhibit R-2A, RDT&E Project Justification: PB 2026 Office of the Secretary Of Defense		Date: June 2025	
Appropriation/Budget Activity 0400 / 4	R-1 Program Element (Number/Name) PE 0604331D8Z / <i>Rapid Prototyping Program</i>	Project (Number/Name) 638 / <i>Rapid Prototyping Program</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
Title: Terrestrial Electronic Surveillance (Sensors and Data Analytics) Description: This effort is developing and integrating a sensing technology in support of weapons systems. Additional details are classified. FY 2025 Plans: The Terrestrial Electronic Surveillance effort will integrate and demonstrate the developed prototype on an unmanned platform for increased operational utility. Additional details are classified. FY 2025 to FY 2026 Increase/Decrease Statement: Effort completes in FY 2025.		2.000	2.600
Title: Counter Unmanned Aerial System High Power Microwave Testing and Assessment (Weapons Kinetic/Non-Kinetic Effects) Description: This effort integrated and assessed the capability of new technologies to identify, track, target, and defeat enemy Unmanned Aerial Systems (UAS). As low-cost lethal drones have proliferated across the world, the United States' ability to counter and defend against these threats at scale needs to evolve. Integration of new sensor technology with directed energy weapons may provide a cost effective, scalable solution. In FY 2024, this effort experimented with directed energy, high powered microwaves, and other capabilities to support defense against small UAS. The effort completed analysis Q4 FY 2024 and informed requirements for U.S. Army programs.		4.000	-
Title: Multi-domain Unmanned Secure Integrated Communications (MUSIC) (Resilient Communications) Description: Multi-domain Unmanned Secure Integrated Communications (MUSIC) develops and integrates an advanced networked capability to ensure tactical communications in denied and degraded environments. The capability leverages multiple available communication networks to create resilient and dynamic communication pathways that seamlessly adapt to changing conditions. The highly dynamic and distributed communications network is designed to scale across thousands of nodes and automatically prioritize traffic flows across the mission network in real-time. In FY 2024, MUSIC demonstrated and evaluated a minimum viable prototype (MVP) with repackaged commercial module and software-defined networking (SDN) features. FY 2025 Plans:		2.000	5.500

Appropriation/Budget Activity 0400 / 4	R-1 Program Element (Number/Name) PE 0604331D8Z / <i>Rapid Prototyping Program</i>	Project (Number/Name) 638 / <i>Rapid Prototyping Program</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
In FY 2025, this effort will modify, integrate, and test a military configured SDN and gateway prototype with configured network equipment modules, software, and firmware for a complete mission performance capability. The prototype will be demonstrated and validated with an expanded network in an operationally relevant scenario.			
FY 2025 to FY 2026 Increase/Decrease Statement: Effort completes in FY 2025.			
Title: Multi-domain Autonomous Tactical Expendable Radio (MATER) (Resilient Communications) Description: (Resilient Communications) (MATER) addresses the current challenge of low cost, attritable, frequency agile radios enabling joint force interoperability, especially on size, weight, and power (SWaP) constrained uncrewed platforms. The project leverages multi-billion-dollar commercial investments in the development of low-cost software-defined transceivers for the cellular industry and adapts these to military-relevant waveforms and applications for platforms. This project is built upon the latest microelectronic processors operating in 5G cellphones, mobile broadband, and internet of things (IoT) devices. Using these industry standard chipsets as the basis for a family of military communication devices allows the DoD to reap the benefits of their built-in advanced signal processing, encryption, and acceleration capabilities, and also to gain the size and power benefits of microelectronics manufactured at commodity scale on advanced micro-electronics manufacturing nodes for low SWaP applications. FY 2025 Plans: In FY 2025, this effort will continue demonstration of the minimum viable radio prototype. MATER will develop and integrate additional tactical radio and data capabilities to enable an interoperable joint mission performance capability. The prototype will be demonstrated and validated in an operationally relevant scenario. FY 2025 to FY 2026 Increase/Decrease Statement: Efforts conclude at the end of FY 2025 with the project transitioning to the U.S. Army.		-	4.749
Title: Wolfpack (Weapons Kinetic/Non-Kinetic Effects) Description: Wolfpack develops multi-domain prototypes that can deliver payloads, both kinetic and non-kinetic, to a target from small, containerized launchers. Wolfpack leverages proven delivery platforms and integrates payloads to support intelligence, surveillance, and reconnaissance (ISR), kinetic, and decoy missions using attritable and swarming uncrewed systems. Wolfpack enables joint mission engagement using integrated command and control (C2) of the Wolfpack uncrewed platform and payload of swarming uncrewed aerial systems (UAS) that interface with multi-Service control systems.		9.100	5.124

Exhibit R-2A, RDT&E Project Justification: PB 2026 Office of the Secretary Of Defense		Date: June 2025	
Appropriation/Budget Activity 0400 / 4	R-1 Program Element (Number/Name) PE 0604331D8Z / <i>Rapid Prototyping Program</i>	Project (Number/Name) 638 / <i>Rapid Prototyping Program</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
In FY 2024, Wolfpack modified a UAS for carry and release of smaller, group 1 UAS for ISR and kinetic missions. The work included the development of a flyable UAS prototype, integration of common launch tubes and group 1 UAS payloads, and functional system ground testing including demonstrated jettison capability for airborne payload delivery. FY 2025 Plans: Complete prototype system development and integrate prototype payload with platform for system live fire test. FY 2025 to FY 2026 Increase/Decrease Statement: Efforts conclude at the end of FY 2025 with the project transitioning to the U.S. Air Force.			
Title: Swarming Prototype Attack Unmanned Aerial Systems (Collaborative Multi-Domain Autonomy) Description: This project develops and integrates novel payloads and capabilities into existing unmanned aerial systems (UAS) to aid in kill-chain closure at the tactical edge. Prototypes seek to provide identification, targeting, and battle damage assessment with kinetic and non-kinetic effects focused on autonomous target recognition, identification, and terminal engagement. UAS will integrate swarm coordination and collaboration in multi-agent mission roles. In FY 2024, the Swarming Prototype Attack UAS integrated commercial UAS with novel electronic warfare (EW) payloads in support of testing and assessment in a realistic environment. The project demonstrated the ability to find and fix a target, then apply an EW attack. FY 2025 Plans: The Swarming Prototype Attack UAS effort will complete development of prototype payloads and will demonstrate integrated system within unmanned aerial systems. FY 2025 to FY 2026 Increase/Decrease Statement: Efforts conclude at the end of FY 2025 with the project transitioning to the U.S. Navy.		3.771	8.500
Title: Stratospheric Payload Development and Maturation (Collaborative Multi-Domain Autonomy) Description: This effort matures platforms, and develops and integrates payloads, in support of stratospheric domain operations. High altitude payloads enable and improve multi-domain communication and collaboration and provide additional ISR capabilities. In FY 2024, the effort successfully performed platform airworthiness evaluations for high-altitude operations with preliminary integrated mission payloads. This included development of three platforms: a long endurance UAS, and two variants of solar high-altitude long endurance platform systems. FY 2025 Plans:		28.375	23.807
			20.000

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
Complete development and testing of three prototype payloads that integrate into surrogate test platforms.			
FY 2026 Plans: In FY 2026, the effort will expand development and testing of new communications and ISR prototype payloads with the surrogate long endurance UAS and high-altitude test platforms, and will perform military assessment exercises and demonstrations to validate long endurance mission capabilities.			
FY 2025 to FY 2026 Increase/Decrease Statement: Funding decrease in FY 2026 due to the reduced level of effort required to complete development, integration, and demonstration activities to validate the stratospheric operations capabilities before the effort transitions to Service programs of record.			
Title: Joint Fires Network (Kill Web Interoperability) Description: The Joint Fires Network (JFN) prototype will connect sensors and weapon systems using enterprise and edge information technology to remove the latency of target quality data between multi-domain forces. The JFN will combine actionable and distributed data from sensors from multiple Services to find, fix, track, target, engage, and assess (F2T2EA) targets using the most viable weapon system through an integrated joint fire control solution that will enable information and decision superiority at the combatant command level. In FY 2024, the effort refined, tested, and demonstrated a federated JFN capability with advanced application integration.		15.000	-
Title: Mines and Fast Attack Craft (Collaborative Multi-Domain Autonomy) Description: This effort integrates, demonstrates and assesses multiple mine and fast attack craft prototypes in support of combatant command (CCMD) mission threads. Prototypes seek to provide autonomy for identification, targeting, and battle damage assessment with kinetic effects. FY 2025 Plans: This effort will demonstrate and assess a fast attack craft for priority combatant command missions. FY 2026 Plans: In FY 2026, the project will demonstrate and assess an increased number of fast attack craft platforms and payloads for priority CCMD missions. FY 2025 to FY 2026 Increase/Decrease Statement: Funding increases in FY 2026 to support experimentation, assessment, and testing activities for additional platforms and payloads in realistic environments.		-	9.351

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
Description: Kill Web Interoperability explores the process by which Joint Force Commanders plan, direct, coordinate, and control forces to accomplish assigned missions and enable Joint kill webs. Individual efforts are identified and refined throughout the year of execution through interactions with industry, academia, Service representatives, and CCMDs. Prospective efforts are closely coordinated with the CCMDs and Services to deconflict, improve jointness, and increase transition to Service acquisition programs. Candidate prototype projects undergo a selection process that assesses joint warfighter impact, transition potential, and technical merit/feasibility. Selected sub-projects target key capabilities that enable leap-ahead improvements in Kill Web Interoperability. FY 2026 Plans: Initiate Kill Web Interoperability efforts in support of emergent operational gaps in collaboration with the joint Services and Combatant Commands (CCMDs). FY 2025 to FY 2026 Increase/Decrease Statement: The increase from FY 2025 to FY 2026 is to provide funding for Kill Web Interoperability efforts.			
Title: Resilient Communications Description: Resilient Communications explores the ability to maintain hardened mission-capable systems that allow for secure freedom of communications in contested electromagnetic spectrum environments. This includes alternate positioning, navigation, and timing. Individual efforts are identified and refined throughout the year of execution through interactions with industry, academia, Service representatives, and CCMDs. Prospective efforts are closely coordinated with the CCMDs and Services to deconflict, improve jointness, and increase transition to Service acquisition programs. Candidate prototype projects undergo a selection process that assesses joint warfighter impact, transition potential, and technical merit/feasibility. Selected sub-projects target key capabilities that enable leap-ahead improvements in Resilient Communications. FY 2026 Plans: Initiate Resilient Communications development and integration efforts in support of emergent operational gaps in collaboration with the joint Services and Combatant Commands (CCMDs). FY 2025 to FY 2026 Increase/Decrease Statement: The increase from FY 2025 to FY 2026 is to provide funding for Resilient Communications efforts.		-	-
			21.250

Candidate prototype projects undergo a selection process that assesses joint warfighter impact, transition potential, and technical merit/feasibility. Selected sub-projects target key capabilities that enable leap-ahead improvements in sensors and data analytics.			
FY 2026 Plans: Initiate Sensors and Data Analytics development and integration efforts in support of emergent operational gaps in collaboration with the joint Services and Combatant Commands (CCMDs). FY 2025 to FY 2026 Increase/Decrease Statement: The increase from FY 2025 to FY 2026 is to provide funding for Sensors and Data Analytics efforts.			
Title: Collaborative Multi-Domain Autonomy Description: Collaborative Multi-Domain Autonomy explores the use of multi-domain uncrewed systems and autonomy to increase warfighting capabilities and to mitigate/negate risk to warfighters. Individual efforts are identified and refined throughout the year of execution through interactions with industry, academia, Service representatives, and CCMDs. Prospective efforts are closely coordinated with the CCMDs and Services to deconflict, improve jointness, and increase transition to Service acquisition programs. Candidate prototype projects undergo a selection process that assesses joint warfighter impact, transition potential, and technical merit/feasibility. Selected sub-projects target key capabilities that enable leap-ahead improvements in uncrewed/ multi-domain autonomy. FY 2026 Plans: Initiate Collaborative Multi-Domain Autonomy development efforts in support of emergent operational gaps in collaboration with the joint Services and Combatant Commands (CCMDs). warfighter impact, transition potential, and technical merit/feasibility. Selected sub-projects target key capabilities that enable leap-ahead improvements in contested logistics/sustainment.			
FY 2026 Plans: Initiate Contested Logistics / Sustainment development efforts in support of emergent operational gaps in collaboration with the joint Services and Combatant Commands (CCMDs).			
FY 2025 to FY 2026 Increase/Decrease Statement: The increase from FY 2025 to FY 2026 is to provide funding for Contested Logistics / Sustainment efforts.			
Title: Weapons Kinetic / Non-Kinetic Effects Description: Weapons Kinetic / Non-Kinetic Effects explores the delivery of weapon systems and long-range kinetic and non-kinetic effects in support of joint offensive and defensive tasks to create specific lethal effects on a target. This area includes counter positioning, navigation, and timing, and techniques designed to deceive enemy observers and/or mitigate, disrupt, or negate adversary capabilities. Individual efforts are identified and refined throughout the year of execution through interactions with industry, academia, Service representatives, and CCMDs. Prospective efforts are closely coordinated with the CCMDs and Services to deconflict, improve jointness, and increase transition to Service acquisition programs. Candidate prototype projects undergo a selection process that assesses joint warfighter impact, transition potential, and technical merit/feasibility. and technical merit/feasibility. Selected sub-projects target key capabilities that enable leap-ahead improvements in joint warfighter capability.			
FY 2026 Plans: Initiate Emerging Prototypes and Enablers development efforts in support of emergent operational gaps in collaboration with the joint Services and Combatant Commands (CCMDs). FY 2025 to FY 2026 Increase/Decrease Statement: The increase from FY 2025 to FY 2026 is to provide funding for Emerging Prototype and Enabler efforts.			
Title: Low Cost Short Range Air Defense Experimentation (LSHORAD) (Weapons Kinetic/Non-Kinetic Effects) Description: LSHORAD experimentation will test and validate the effectiveness of innovative defensive capabilities in real-world scenarios. Tested capabilities will provide a critical layer of protection against low-altitude threats. The experimentation will focus on detection and tracking, interception and neutralization, and the operational integration into seamless air defense infrastructures and command and control (C2) networks. FY 2025 Plans: Identify and assess advanced LSHORAD technologies for testing, and conduct field experiments to evaluate the performance of detection, tracking, and interception systems in various scenarios. FY 2025 to FY 2026 Increase/Decrease Statement: Efforts conclude at the end of FY 2025 with successful technologies transitioning to the Services.		-	2.800
Title: Project Ariel (Weapons Kinetic/Non-Kinetic Effects) Description: This effort is integrating and demonstrating a maritime capability. Additional details are classified. (BLOS) operation. Integration with group 3 UAS is a critical next step to enable longer endurance platforms to operate at their full potential range and loiter times.				
FY 2025 Plans: Integrate and test RAST systems with group 3 UAS in support of BLOS operation.				
FY 2025 to FY 2026 Increase/Decrease Statement: Integration and testing concludes at the end of FY 2025 with the project transitioning to U.S. Central Command.				
Title: Tallneck (Weapons Kinetic/Non-Kinetic Effects)		-	1.000	2.500
Description: Tallneck is developing and demonstrating a Counter- Command, Control, Computing, Communications, Cyber, Intelligence, Surveillance, Reconnaissance, and Tracking (Counter-C5ISRT) capability. Additional details are classified.				
FY 2025 Plans: Prototype a classified Counter-C5ISRT capability.				
FY 2026 Plans: Integrate and demonstrate a classified Counter-C5ISRT capability.				
FY 2025 to FY 2026 Increase/Decrease Statement: Increase in funding from FY 2025 to FY 2026 supports demonstration in an operational environment.				
Title: Cryptid Stare (Weapons Kinetic/Non-Kinetic Effects)		-	2.240	-
Description: Cryptid Stare is developing and demonstrating an indications and warnings (I&W) array capability. Additional details are classified.				
FY 2025 Plans: Develop and demonstrate a classified I&W capability.				
FY 2025 to FY 2026 Increase/Decrease Statement: Efforts conclude at the end of FY 2025 with the project transitioning to Classified DoD partner.				
Title: Advanced Energetics Prototyping and Demonstration		-	-	25.000
Description: This effort will demonstrate advanced energetics applications in multiple system prototypes to show improved warhead effectiveness and lethality, improved propulsion performance, and operational gains from novel materials. Aligns to FY 2024 NDAA Section 243 requirement to incorporate CL-20 into 3 weapon systems. Selected systems for incorporation and intended performance improvements are classified.

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
FY 2026 Plans: Mature and procure test articles and energetic materials, and execute a limited test series for 3 selected munitions to show improvements in lethality and/or range. FY 2025 to FY 2026 Increase/Decrease Statement: The increase from FY 2025 to FY 2026 is to provide funding for Advanced Energetics Prototyping and Demonstration.			
Title: High Reliability Cluster Munitions (HRCM) Development and Demonstration Description: The HRCM effort will advance the state of the art for area effects munitions through the maturation of the Distributed Fuzing Architecture (DFA) and Long Range Dispense Submunition (LRDS) technologies. The DFA is a modular, internal power and data transmission architecture that enables a variety of area effects payloads to be integrated into an assortment of delivery platforms. Its design supports the intermingling of different submunition effectors into a single carrier platform, adding significant tactical flexibility and capability. LRDS is a state-of-the-art submunition effector being developed to incorporate advances in machine learning, warhead technologies, and novel flight structures. The resulting submunition will provide the warfighter with a highly lethal, long range, low cost, precision attack capability. HRCM will be demonstrated in a live fire exercise in collaboration with Army Long Range Precision Fires. FY 2026 Plans: Initiate the HRCM effort development efforts in support of emergent operational needs in collaboration with Services and Combatant Commands. Progress on the DFA and LRDS will be transitioned from corresponding Joint Enhanced Munition Technology Program science and technology efforts. Coordination with U.S. Army Long Range Precision Fires will provide technical specifications and integration support. FY 2025 to FY 2026 Increase/Decrease Statement: The increase from FY 2025 to FY 2026 is to provide funding for HRCM Development and Demonstration in the PrSM.		-	80.800

Note

New Start (Y/N): No

Starting in FY 2025, funding re-aligned to new National Security Innovation Capital (NSIC) Program Element (PE) 0603021D8Z and Defense Innovation Unit PE 0603342D8Z to better align funding to the mission.

A. Mission Description and Budget Item Justification

This program supports the Department's initiatives to Build a Sustainable and Long-Term Advantage and Build a Resilient Joint Force and Defense Ecosystem.

The Defense Innovation Unit (DIU) mission is to strengthen U.S. national security by accelerating the adoption of commercial technology throughout the military and growing the national security innovation base. DIU partners with organizations across the DoD and the interagency to rapidly prototype, field, and scale commercial solutions that can save lives, lead to new operational concepts, increase efficiencies, and save taxpayer dollars. With offices in Silicon Valley, Boston, Austin, Chicago, and in the Pentagon, DIU is able to attract the best and brightest talent and cutting-edge solutions.

Exhibit R-2, RDT&E Budget Item Justification: PB 2026 Office of the Secretary Of Defense		Date: June 2025
Appropriation/Budget Activity 0400: Research, Development, Test & Evaluation, Defense-Wide I BA 4: Advanced Component Development & Prototypes (ACD&P)	R-1 Program Element (Number/Name) PE 0604341D8Z I Defense Innovation Unit (DIU) Prototyping	
The National Defense Strategy for FY 2026 asserts that we have returned to an era of inter-state strategic competition with Russia and China, heightening the sense of urgency with which the nation, and Department of Defense (DoD), must reform our acquisition policies and approach to sustaining military-technical superiority. Notably, 11 of the 14 critical technology focus areas are dual use and rapidly developed by the commercial sector. While adversaries are challenging the U.S. across several dimensions, most importantly, our near peer competitors are at par or ahead of the United States in critical technology areas. Consistent with the Administration's research and development budget priorities, this new era of competition requires technological superiority to ensure the United States’ ability to project power, maintain international norms and rule of law, provide credible deterrence, and prevail in conflict. On April 4, 2023, the Secretary of Defense issued a memorandum re-elevating the DIU Director as a direct report to the Secretary of Defense and refocusing DIU on delivering strategic impact at scale and at speed through direct operations and catalyst of the innovation community for the Department. DIU increases the Department's access to commercial technologies and talent, with the ultimate goal of fielding commercial technology at a pace that effectively deters our adversaries and helps ensure victory if we are forced to fight. Working across the country, and in collaboration with our allies and partners, DIU is developing new ways of doing business, growing our national security innovation base to include more "non-traditional" companies that had previously not collaborated with the military, working with traditional vendors in novel ways to increase efficiency, and challenging innovators to share their knowledge and expertise in support of our nation's defense. Through a competitive prototype process, DIU identifies and provides access to technology companies and products on behalf of DoD organizations. Additionally, DIU executes projects to leverage commercial sector technology analogous to military applications thereby increasing dual-use technology agility for the DoD. DIU Prototyping funds facilitate the award of projects that can augment commercial technologies, existing government-owned capabilities, or concepts for defense application. DIU focuses on six technology areas where commercial industry is the lead: • Artificial Intelligence (AI)/ Machine Learning (ML) – Applying AI/ML learning to accelerate critical decision making and operational impact. • Autonomy – Adopting and countering autonomous systems with a focus on human-machine interaction and scalable teaming. • Cyber – Making enterprise combat information open, accessible, and secure for defense personnel across the globe. • Energy - Leveraging proven advancement in energy and materials technology to enhance capabilities and strengthen resilience across installation and distributed operations. • Human Systems – Optimizing the human system and its enabling platforms through enhanced equipment, innovative training, and novel health applications. • Space – Developing on-demand access to space, persistent satellite capabilities, and broadband space data transfer.

A. Mission Description and Budget Item Justification

The Defense Innovation Unit (DIU) mission is to strengthen U.S. national security by accelerating the adoption of commercial technology throughout the military and growing the national security innovation base. DIU partners with organizations across the DoD and the interagency to rapidly prototype, field, and scale commercial solutions that can save lives, lead to new operational concepts, increase efficiencies, and save taxpayer dollars. With offices in Silicon Valley, Boston, Austin, Chicago, and in the Pentagon, DIU is able to attract the best and brightest talent and cutting-edge solutions.

The National Defense Strategy for FY 2026 asserts that we have returned to an era of inter-state strategic competition with Russia and China, heightening the sense of urgency with which the nation, and Department of Defense (DoD), must reform our acquisition policies and approach to sustaining military-technical superiority. Notably, 11 of the 14 critical technology focus areas are dual use and rapidly developed by the commercial sector. While adversaries are challenging the U.S. across several dimensions, most importantly, our near peer competitors are at par or ahead of the United States in critical technology areas. Consistent with the Administration's research and development budget priorities, this new era of competition requires technological superiority to ensure the United States' ability to project power, maintain international norms and rule of law, provide credible deterrence, and prevail in conflict.

DIU increases the Department's access to commercial technologies and talent, with the ultimate goal of fielding technology at a pace that effectively deters our adversaries and helps ensure victory if we are forced to fight. Working across the country, and in collaboration with our allies and partners, DIU is developing new ways of doing business, growing our national security innovation base to include more "non-traditional" companies that had previously not collaborated with the military, working with traditional vendors in novel ways to increase efficiency, and challenging innovators to share their knowledge and expertise in support of our nation's defense.

Through a competitive prototype process, DIU identifies and provides access to technology companies and products on behalf of DoD organizations. Additionally, DIU executes projects to leverage commercial sector technology analogous to military applications thereby increasing dual-use technology agility for the DoD. DIU Prototyping funds facilitate the award of projects that can augment commercial technologies, existing government-owned capabilities, or concepts for defense application.

DIU focuses on six technology areas where commercial industry is the lead:

- Artificial Intelligence (AI)/ Machine Learning (ML) – Applying AI/ML learning to accelerate critical decision making and operational impact.
- Autonomy – Adopting and countering autonomous systems with a focus on human-machine interaction and scalable teaming.
- Cyber – Making enterprise combat information open, accessible, and secure for defense personnel across the globe.

A. Mission Description and Budget Item Justification

The Defense Innovation Unit (DIU) mission is to strengthen U.S. national security by accelerating the adoption of commercial technology throughout the military and growing the national security innovation base. DIU partners with organizations across the DoD and the interagency to rapidly prototype, field, and scale commercial solutions that can save lives, lead to new operational concepts, increase efficiencies, and save taxpayer dollars. With offices in Silicon Valley, Boston, Austin, Chicago, and in the Pentagon, DIU is able to attract the best and brightest talent and cutting-edge solutions.

The National Defense Strategy for FY 2026 asserts that we have returned to an era of inter-state strategic competition with Russia and China, heightening the sense of urgency with which the nation, and Department of Defense (DoD), must reform our acquisition policies and approach to sustaining military-technical superiority. Notably, 11 of the 14 critical technology focus areas are dual use and rapidly developed by the commercial sector. While adversaries are challenging the U.S. across several dimensions, most importantly, our near peer competitors are at par or ahead of the United States in critical technology areas. Consistent with the Administration's research and development budget priorities, this new era of competition requires technological superiority to ensure the United States' ability to project power, maintain international norms and rule of law, provide credible deterrence, and prevail in conflict.

DIU increases the Department's access to commercial technologies and talent, with the ultimate goal of fielding technology at a pace that effectively deters our adversaries and helps ensure victory if we are forced to fight. Working across the country, and in collaboration with our allies and partners, DIU is developing new ways of doing business, growing our national security innovation base to include more "non-traditional" companies that had previously not collaborated with the military, working with traditional vendors in novel ways to increase efficiency, and challenging innovators to share their knowledge and expertise in support of our nation's defense.

Through a competitive prototype process, DIU identifies and provides access to technology companies and products on behalf of DoD organizations. Additionally, DIU executes projects to leverage commercial sector technology analogous to military applications thereby increasing dual-use technology agility for the DoD. DIU Prototyping funds facilitate the award of projects that can augment commercial technologies, existing government-owned capabilities, or concepts for defense application.

DIU focuses on six technology areas where commercial industry is the lead:

- Artificial Intelligence (AI)/ Machine Learning (ML) – Applying AI/ML learning to accelerate critical decision making and operational impact.
- Autonomy – Adopting and countering autonomous systems with a focus on human-machine interaction and scalable teaming.
- Cyber – Making enterprise combat information open, accessible, and secure for defense personnel across the globe.

A. Mission Description and Budget Item Justification

The Defense Innovation Unit (DIU) mission is to strengthen U.S. national security by accelerating the adoption of commercial technology throughout the military and growing the national security innovation base. DIU partners with organizations across the DoD and the interagency to rapidly prototype, field, and scale commercial solutions that can save lives, lead to new operational concepts, increase efficiencies, and save taxpayer dollars. With offices in Silicon Valley, Boston, Austin, Chicago, and in the Pentagon, DIU is able to attract the best and brightest talent and cutting-edge solutions.

The National Defense Strategy for FY 2026 asserts that we have returned to an era of inter-state strategic competition with Russia and China, heightening the sense of urgency with which the nation, and Department of Defense (DoD), must reform our acquisition policies and approach to sustaining military-technical superiority. Notably, 11 of the 14 critical technology focus areas are dual use and rapidly developed by the commercial sector. While adversaries are challenging the U.S. across several dimensions, most importantly, our near peer competitors are at par or ahead of the United States in critical technology areas. Consistent with the Administration's research and development budget priorities, this new era of competition requires technological superiority to ensure the United States' ability to project power, maintain international norms and rule of law, provide credible deterrence, and prevail in conflict.

DIU increases the Department's access to commercial technologies and talent, with the ultimate goal of fielding technology at a pace that effectively deters our adversaries and helps ensure victory if we are forced to fight. Working across the country, and in collaboration with our allies and partners, DIU is developing new ways of doing business, growing our national security innovation base to include more "non-traditional" companies that had previously not collaborated with the military, working with traditional vendors in novel ways to increase efficiency, and challenging innovators to share their knowledge and expertise in support of our nation's defense.

Through a competitive prototype process, DIU identifies and provides access to technology companies and products on behalf of DoD organizations. Additionally, DIU executes projects to leverage commercial sector technology analogous to military applications thereby increasing dual-use technology agility for the DoD. DIU Prototyping funds facilitate the award of projects that can augment commercial technologies, existing government-owned capabilities, or concepts for defense application.

DIU focuses on six technology areas where commercial industry is the lead:

- Artificial Intelligence (AI)/ Machine Learning (ML) – Applying AI/ML learning to accelerate critical decision making and operational impact.
- Autonomy – Adopting and countering autonomous systems with a focus on human-machine interaction and scalable teaming.
- Cyber – Making enterprise combat information open, accessible, and secure for defense personnel across the globe.

A. Mission Description and Budget Item Justification

The Department of Defense (DoD) Unmanned System Common Development Program allows the Office of the Under Secretary of Defense for Acquisition and Sustainment (OUSD(A&S)) to support both the near-term and long-term advancement of DoD unmanned systems capabilities. This includes the development of common technologies, standards, concepts, and guidance that can be applied across all Military Services. Currently, this effort is primarily focused on the development of technologies and concepts that support the operation of DoD Small Unmanned Aerial System (UAS) both in the U.S. National Airspace and in an expeditionary environment. While the initial focus is on Small UAS, supporting unmanned systems of all sizes and modalities is the long-term goal. Key aspects of the initial Small UAS effort include (1) making available unmanned systems and components for DoD procurement and operation that are safe, secure, interoperable, and effective on the modern battle field, (2) facilitating access and integration of unmanned systems into military and civilian environments in a safe and effective manner, and (3) establishing and overseeing coordination, agreements, guidance, and standards that enable the DoD's operation of unmanned systems in military and civilian environments.

A. Mission Description and Budget Item Justification

The FY 2026 request for Unmanned Systems Development includes \$0.799 thousand of discretionary funds which supports the Department's unmanned system development goals of making available commercial unmanned systems and components for DoD procurement and operations that are safe, secure, interoperable, and effective on the modern battlefield. This effort includes: (1) identifying and mitigating unmanned system related cyber and operations security threats, (2) developing standards, concepts, and guidance that support the Department's procurement and operation of unmanned systems, and (3) facilitating the acquisition of modern commercially developed unmanned systems for DoD use that are sourced from trusted supply chains and are cyber-secure.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Unmanned Systems Development	32.913	1.210	0.799
Description: FY 2024 Accomplishments: Under this program the DOD continued to support its goal of making available unmanned systems and components for DoD procurement and operations that are safe, secure, resilient, and interoperable. Specific accomplishments included overseeing the procurement and operation of all UAS to ensure the compliance with applicable policies and regulations and the mitigation of potential cyber and operations security vulnerabilities. Accomplishments also included supporting the effort to make safe, secure, resilient, and interoperable unmanned systems and components available for the Department's use by (1) adding several unique platforms to the Blue UAS Cleared List, (2) adding numerous vetted components to the Blue UAS Component List, (3) supporting the sustainment of existing and new Blue UAS systems to ensure the integrity of these platforms are maintained over time, and (4) updating the Department's policy to streamline the review and approval process for the use of commercially developed UAS.			
FY 2025 Plans: - Continue rapidly identifying, testing, selecting, and making available commercial Small UAS capable of meeting the operational demands of the DoD. This effort is intended to increase the availability of Blue UAS and Blue UAS components for future procurement by the DoD. - Continue conducting penetration testing and cybersecurity assessment on unmanned systems in order to assess and validate system security and provide the Government with an understanding of the level of security risk incurred by system operation. - Integrate Cyber Security Policies and standards into unmanned system Architectures. - Continue the development of unmanned systems cyber security concepts in order to limit cyber security vulnerabilities.

A. Mission Description and Budget Item Justification

The FY 2026 request for Unmanned Systems Integration includes \$0.726 thousand of discretionary funds which supports the Department's unmanned system integration goals of facilitating access and integration of unmanned systems into military and civilian environments in a safe and effective manner. This effort includes: (1) the safe and effective integration of UAS within civil and military airspace and (2) the development of standards, concepts, and guidance to support this integration. In the near-term, this project is focused on the development of concepts and prototype systems that support the DoD UAS integration mission and includes the execution of various evaluation events that integrate military UAS with ATC operations and other airspace related activities. This effort also includes the development and integration of the following current airspace access and integration system initiatives: (1) UAS Drone Zone, (2) Low Altitude Authorization and Notification Capability (LAANC), and (3) UAS Traffic Management (UTM). The long-term goal of this project is to establish the ability for DoD UAS to operate beyond visual line of sight (BVLOS) safely, effectively, and routinely in U.S. national, foreign national, international, training, and combat airspace. The results from this effort will be shared with federal partners, to include the Federal Aviation Administration (FAA), in order to help shape the development of UAS airspace access and integration related concepts, technology, and rulemaking.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Unmanned Systems Integration	0.749	0.583	0.726
Description: FY 2024 Accomplishments: Under this program the DoD conducted various testing efforts that focused on the continued development and testing of technologies and concepts that will support the DoD's long-term goal of enabling routine, efficient, safe, and secure airspace access and integration for DoD UAS operations. Specific accomplishments included (1) the successful evaluation of the FAA Low Altitude Authorization and Notification Capability for DoD use, setting the stage for integrating systems at DoD Air Traffic Control facilities across the Department, (2) transitioning the Department's airspace access program from the Certificate of Authorization (COA) Approval Processing System (CAPS) to the Drone Zone system, (3) the development and evaluation of DoD UTM related prototype systems that will enable future UAS beyond visual line-of-sight operations for the Department within both civil and military airspace, and (4) demonstrating the ability to successfully pass telemetry data from multiple platforms on the Blue UAS Cleared list to the DoD prototype UTM system.			
FY 2025 Plans: - Develop DoD prototype UAS integration/security systems and associated concepts that support DoD operations in both US national airspace and expeditionary airspace.			

UNCLASSIFIED

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026
- Ensure concepts and systems developed are aligned with the vision established in current UAS integration and security related concept of operations documents. - Assist in the development of future DoD UAS integration and security related concept of operations documents through ongoing research and the execution of Operational Assessments and Demonstrations of UTM capabilities within the DoD and Federal Government. - Ensure systems and concepts developed support integration with FAA current/planned airspace access and airspace integration systems to include, but not limited to, UTM systems. - Develop and test methods to integrate DoD UAS into the UTM environment to include demonstrating a method to pass information between unmanned aircraft on the DIU Blue UAS Cleared List and the DoD prototype UTM Federal UAS Service Supplier (FUSS). - Develop UAS airspace integration procedures and standards as well as conduct modeling, simulation, and operational analysis needed to validate those procedures and standards. - Conduct live flight and simulated demonstrations using developed UAS integration and security systems and associated concepts in order to (1) demonstrate the latest capabilities, (2) assess system interoperability, (3) refine concepts and hardware/software solutions, and (4) validate current standards. - Develop recommendations for safe separation standards and techniques that enable low-altitude military UAS to remain clear of other aircraft. - Engage the FAA to advance DoD UAS and Counter UAS airspace integration. FY 2026 Plans: - Continue to develop DoD prototype UAS related command and control systems and associated concepts that support DoD operations in both US national airspace and expeditionary airspace, with a specific focus on integrating counter UAS operations, UAS, and Air Traffic Control operations. - Field the Department's UTM capabilities at one or more DoD sites for each Military Service and continue to collect data from these sites to refine UTM related technology and concepts. - Conduct joint UTM demonstration events in collaboration with the FAA to inform jointly developed system certification standards. - Develop Group 3-5 UAS airspace integration procedures and standards as well as conduct modeling, simulation, and operational analysis needed to validate those procedures and standards. - Establish routine BVLOS live flight cargo delivery operations using the Department owned airspace integration technology and concepts developed UAS integration and security systems and associated concepts in order to (1) demonstrate the latest capabilities, (2) assess system interoperability, (3) refine concepts and hardware/ software solutions, and (4) validate current standards. B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026
The change between FY 2025 and FY 2026 is a reallocation between the Program Element (PE) project codes. The overall PE has no significant change in funding levels.					
Accomplishments/Planned Programs Subtotals			0.749	0.583	0.726
			FY 2024	FY 2025	
Congressional Add: Unmanned Systems Integration			5.500	6.500	
FY 2024 Accomplishments: The additional funding allowed the Department to develop, demonstrate, and assess the technologies and concepts needed to support the responsive, precise, flexible, and efficient transport of military cargo via uncrewed platforms at a tactical level. This included the use of a semi-autonomous air transport capability that provides point-to-point delivery of cargo to company size units at a location that is beyond line-of-sight of the supply hub location. The successful simulated efforts accomplished in FY 2024 will set the stage for follow-on live flight operations that will ultimately lead to the routine use of UAS supported cargo delivery operations conducted across the Department. This effort included partnerships with the Northern Plains UAS Test Site, Grand Forks County North Dakota, National Aeronautics and Space Administration (NASA), the MITRE Corporation, and the Air Force Research Laboratory. The effort also included the development of the Department’s UAS airspace operations concept document which is necessary to align all DoD UAS airspace integration Research, Development, Test and Evaluation (RDT&E) efforts towards a single objective.					
FY 2025 Plans: FY 2025 Plans: The additional funding will allow the Department to advance its long-term goal of enabling routine, efficient, safe, and secure airspace access and integration for DOD unmanned aerial systems (UAS) and counter UAS related operations conducted within both civilian and military airspace. Specific plans for the ‘Unmanned Systems Integration’ funding line in FY 2025 include: -Build on the technology, concepts, and procedures developed under previous Project ULTRA efforts to plan and execute numerous live flight cargo delivery events and other UAS capabilities. -Develop and validate UAS logistical support technologies and concepts needed to operate a UAS to enable the responsive, precise, flexible, and efficient transport of military cargo at a tactical level. -Develop and validate airspace integration technologies and concepts developed by DoD, NASA, and industry that enable DoD UAS to safely conduct beyond visual line of sight operations in U.S. national airspace outside of restricted or prohibited areas.

A. Mission Description and Budget Item Justification

The FY 2026 request for Unmanned Systems Integration Support includes \$0.617 thousand of discretionary funds which supports the Department's unmanned system integration goals of establishing and overseeing coordination, agreements, guidance, and standards that enable the DoD's operation of unmanned systems in military and civilian environments. This effort includes leading multiple Joint and Interagency forums focused on identifying, prioritizing, and executing tasks aimed at overcoming challenges associated with the successful development, fielding, and operation of DoD unmanned systems.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Unmanned Systems Integration Support	0.676	0.734	0.617
Description: FY 2024 Accomplishments: Under this program the DOD continued to support the establishment and oversight of coordination, agreements, guidance, and standards that enable the operation of unmanned systems in military and civilian environments. Specific accomplishments included (1) continued support of the UAS EXCOM, the UAS Science and Research Panel (SARP), and other interagency organizations that are focused on synchronizing the federal government towards achieving the goal of enabling routine, efficient, safe, and secure airspace access and integration for member UAS operations within U.S. National Airspace and (2) the development of the Department's UAS airspace operations concept document which is necessary to align all DoD UAS airspace integration Research, Development, Test and Evaluation (RDT&E) efforts towards a single objective.			
FY 2025 Plans: - Support unmanned system objectives of the DASD (Platform and Weapons Portfolio Management), Assistant Secretary of Defense (Acquisition); and Under Secretary of Defense (Acquisition and Sustainment). - Support the DoD Co-Chair of the UAS Executive Committee, to include the Integration and Security Senior Steering Groups and the UAS Science and Research Panel (SARP). - Support the OUSD(A&S) Co-Chair of the OSD UAS cyber-security Exception and Waiver Board. - Support the OUSD(A&S) Co-Chair of the Joint Robotics and Autonomous System Enterprise (JRASE). - Support development of unmanned and autonomous systems' roadmaps, concepts, standards, procedures, and policies. - Support the processing of UAS cyber-security procurement and operations requests. - Inform and guide development of the DoD's Blue Small UAS and Blue Architecture programs. - Inform and guide UAS integration decisions, programs, and test events.

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026
- Conduct unmanned systems related interagency coordination. - Support administrative and travel related cost associated with the unmanned system common development program. FY 2026 Plans: Under this program the DoD will continued to support the establishment and oversight of coordination, agreements, guidance, and standards that enable the operation of unmanned systems in military and civilian environments by engaging in the following areas: - Support unmanned system objectives of the DASD (Platform and Weapons Portfolio Management), Assistant Secretary of Defense (Acquisition); and Under Secretary of Defense (Acquisition and Sustainment). - Serve as DoD Co-Chair of the UAS Executive Committee, to include the Integration and Security Senior Steering Groups and the UAS Science and Research Panel (SARP). - Serve as OUSD(A&S) Co-Chair of the OSD UAS cyber-security Exception and Waiver Board. - Serve as OUSD(A&S) Tri-Chair of the JRASE to prioritize and execute joint initiatives that support the development of unmanned system related strategies, concepts, standards, procedures, and policies. - Oversee the processing of UAS cyber-security procurement and operations requests. - Inform and guide development of the DoD's Blue Small UAS and Blue Architecture programs. - Inform and guide UAS integration decisions, programs, and test events. FY 2025 to FY 2026 Increase/Decrease Statement: The change between FY 2025 and FY 2026 is a reallocation between the Program Element (PE) project codes. The overall PE has no significant change in funding levels.					
Accomplishments/Planned Programs Subtotals			0.676	0.734	0.617
			FY 2024	FY 2025	
Congressional Add: Unmanned Systems Integration Support			0.500	0.500	
FY 2024 Accomplishments: The additional funding allowed the Department to develop, demonstrate, and assess the technologies and concepts needed to support the responsive, precise, flexible, and efficient transport of military cargo via uncrewed platforms at a tactical level. This included the use of a semi-autonomous air transport capability that provides point-to-point delivery of cargo to company size units at a location that is beyond line-of-sight of the supply hub location. The successful simulated efforts accomplished in FY 2024 will set the stage for follow-on live flight operations that will ultimately lead to the routine use of UAS supported cargo delivery operations conducted across the Department. This effort included partnerships with the Northern Plains UAS Test Site, Grand Forks County North Dakota, National Aeronautics and Space Administration (NASA), the MITRE Corporation, and the Air Force Research Laboratory. The effort also included the development of the

Department's UAS airspace operations concept document which is necessary to align all DoD UAS airspace integration Research, Development, Test and Evaluation (RDT&E) efforts towards a single objective. FY 2025 Plans: FY 2025 Plans: The additional funding will allow the Department to advance its long-term goal of enabling routine, efficient, safe, and secure airspace access and integration for DOD unmanned aerial systems (UAS) and counter UAS related operations conducted within both civilian and military airspace. Specific plans for the 'Unmanned Systems Integration Support' funding line in FY 2025 include: -Develop and published the second version of the Department's UAS airspace concept of operations based on lessons learned from Project ULTRA and other similar DoD initiatives which aligns all DoD UAS airspace integration Research, Development, Test and Evaluation (RDT&E) efforts towards a single objective. -Conduct planning and interagency coordination necessary to establish a repeatable process to conduct the safe and efficient cargo delivery operations in both DOD and FAA controlled air traffic control airspace to support flights between Grand Forks Air Force Base and Cavalier Space Force Station. -Obtain the numerous authorizations needed to execute the beyond visual line of sight live flight operations associated with the Project Ultra effort to deliver cargo between Grand Forks Air Force Base and Cavalier Space Force Station.

035: Operational Energy Prototyping	44.238	38.668	49.838	55.005	-	55.005	-	-	-	-	-	-

Note

In FY2025, Congress directed a name change to this program. The name change is first reflected in FY 2026. The new PE name is Operational Energy Prototyping Fund (vice Operational Energy Capability Improvement – Non S&T) In FY 2024, Program Element (PE) funding realigned to new project codes in support of the Department's strategic priorities. The new project codes include: (1) Operational Energy Prototyping (2) Congressional Adds (3) and Nuclear. The prior year funding project codes did not continue after FY 2023 though the overarching goals of the program remain the same. The new project codes refocus the PE and provide traceability to the Department's Operational Energy (OE) Strategy.

A. Mission Description and Budget Item Justification

The Operational Energy Prototyping Fund program solely addresses joint operational energy requirements and provides the solutions pipeline for integrating next-generation power and energy technology across current and emerging Department of Defense (DOD) operational platforms and weapon systems. Investments in OEPF transition across multiple services, support current policy objectives, and inform future policy goals.

This program supports the Department's initiatives to build a sustainable long-term advantage for an interoperable, optimally powered, and energy resilient Joint Force. The OEPF program accelerates transitions of OE technologies by more than two years. The program prioritizes demonstrating and validating prototypes in an operationally relevant environment that increase warfighting capabilities through reducing logistical demand and complexity and increasing commonality for interoperability and resilience. The program focuses on warfighter and demonstration feedback at Service and Combatant Command exercises and events, data collection, and analysis for acquisition decision-making and ensures the warfighter has the energy and understanding to effectively command power across all domains and levels of engagement.

OEPF validates and demonstrates joint, high priority innovative, and cost-effective prototypes, technologies, and methods to address known capability gaps in accordance with the DOD OE Strategy/interim National Defense Strategy. The prototypes meet/shape power and energy requirements and support acquisition strategies and decision making. The OECIF program element is the primary, but not exclusive, feeder to OEPF. OEPF competitively intakes the best projects with the greatest likelihood of Service support for transition. OECIF has topics every year so OEPF generally reflects prior OECIF investment. In FY2023 OECIF focused on solutions to mitigating contested logistics challenges through the reduction of OE demand and enabling enterprise-wide power and energy visibility. FY2026 OEPF will benefit from the successful technology development in this area. Additional upcoming OECIF topic maturation include: FY2024: Efficiencies for Aviation, Space, and Commanding Energy (OEPF FY2027); FY2025: Lessons Learned from Current Conflicts (OEPF FY2028); FY2026: Resilience and Readiness (OEPF FY2029).

A. Mission Description and Budget Item Justification

OEPF addresses joint operational energy requirements and provides the solution pipeline for integrating and transitioning next-generation power and energy technology into Service Programs of Record (POR). OEPF demonstrates innovative energy capabilities in an operational environment. Operational Energy prototyping investment areas include but are not limited to: Aviation, Tactical Vehicles, Ground-Based Expeditionary Energy, Battery Safety and Standardization, and Space-based energy solutions. Projects focus on incorporating: warfighter feedback in real-use scenarios; collecting metering and monitoring data to support energy capability analyses; generating Service Requirements and addressing Combatant Command Requirements; modeling and simulation tools to maximize and quantify energy efficiency and operational impacts; and creating warfighter training and adoption materials. This program supports the Department's initiatives to build a sustainable long-term advantage for an interoperable, optimally powered, and energy resilient Joint Force.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Operational Energy Prototyping	38.668	49.838	55.005
Description: Description: In FY 2024, OECI Non S&T conducted a live field demonstration for warfighters showcasing 16 industry partner displays and 11 OECI Non S&T sponsored technologies that focused on: interoperability, standardization, energy common operating picture, and innovation. The event featured a first-of-its-kind warfighter feedback digital collection application developed by OECI Non S&T. The warfighter feedback application responds to the recommendation from the Government Accountability Office (GAO) Report GAO-23-105868 - Department of Defense (DOD) which states the Navy and Air Force should focus on transition planning, including operator input. This fully scalable and repeatable workflow application allows for utilization by any DOD agency for warfighter engagements. As part of a joint/multination U.S. Army Project Convergence event, the OECI Non S&T sponsored-Warfighter Extended Demonstration (WED) conducted a two-phase experiment between two Family of Medium Tactical Vehicles (FMTVs). The vehicles networked as a microgrid to electrically power three command posts, eliminating the need for six towed generators. Each FMTV produced up to 120kW/600VDC. Key accomplishments include: the ability to be mobile and setup in 10 minutes, 50% reduction in fuel consumption, improved air quality inside of shelters, and the ability to provide continuous power for three days without refueling.

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026
OECI Non S&T-Sponsored Global Positioning Systems (GPS) Denied Kit, in collaboration with Program Executive Office Combat Support & Combat Service Support (PEO CS&CSS), tested a solution providing aerial delivery platforms with an affordable, modular, GPS-denied capability enabling aerial resupply in contested environments. Operational Energy-Innovation (OE-I) Warfighters from the U.S. Army Sustainment Center of Excellence and others provided input on the development of these systems via the OECI Non S&T Warfighter Touchpoint application. Early warfighter Subject Matter Expertise (SME) propelled the requirements, supported transition, and decreased capability gaps in aerial delivery energy platforms. Additionally, OECI Non S&T competitively selected and initiated a series of projects in FY 2024 which expect to fully execute by the end of FY 2025. The projects include: Aviation efficiencies for propulsion system advances; Airframe designs with operational energy-benefit; Forward-operating refueling and re-powering capabilities; Ground-vehicle power and fuel optimization including optimal resupply in contested environments; Improved on-board power for use and distribution to warfighting systems; Power management for increased survivability (improved signature, anti-idle, and silent operations); Improved vehicle-to-vehicle/vehicle-to-grid microgrid fuel/power optimizations; Operational battery improvements for improving size, weight, safety, and extending reach and operating temperatures; and, Optimizing power and energy utilization in space. FY 2025 Plans: Planned efforts in FY 2025 include: Inserting operational energy OECI Non S&T-sponsored technology into NORAD&USNORTHCOM's Arctic Edge exercise; Establishing a specialized warfighter network chartered to provide feedback on transitioning operational energy technologies; Validating a high altitude Uncrewed Aerial System (UAS) endurance enabler; Demonstrating a long-endurance Uncrewed Aerial Vehicle (UAV) Intelligence Surveillance and Reconnaissance (ISR) platform to extend the range of the operational mission; Optimizing uncrewed, autonomous, continuous-powered counter-intrusion intelligence platform; Storing dynamic energy for critical operational energy systems; Validating a lithium ion battery thermal runaway solution enabling longer endurance missions; Prototyping an energy-precise munitions loader that mitigates existing health hazards to warfighters and is approved for nuclear munitions loading; Optimizing an aviation battery standardization effort addressing unmet mission requirements and lowering battery procurement costs to DOD; Prototyping tactical vehicles with a power-generating engine block to reduce the need for towed generators in the battlespace; Demonstrating production capability for > 30% efficient III-V solar cells grown using dynamic hydride vapor phase epitaxy at pilot industrial scale; Enabling persistent UAV operations through wireless power transfer; Expanding the domestic industrial base for Gen 6T lithium ion batteries that can be safely transported and stored at zero-volts enabling long-term pre-positioning of strategic energy resources capable of charging in sub-zero temperatures; and, Creating a standardized lithium ion aviation battery that reduces the number of batteries needed from nine to one. FY 2026 Plans:

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
OEPF will continue performing warfighter demonstrations at both Continental United States (CONUS) and Outside the Continental United States (OCONUS) locations and collecting warfighter input utilizing the OECI Non S&T developed Warfighter Touchpoint application to inform Requirements, acquisition strategies, and perform validation analytics. This comprehensive approach accelerates transition of these advanced OE warfighting capabilities across the services and into programs of record. FY 2026 projects are focusing on requirements definition. Anticipated efforts include: Deployment of energy-sensors at key locations around the globe demonstrating diagnostic and preventive maintenance capabilities; Prototyping tactical wheel hub-drive technology in track vehicles enabling longer mission duration; Enabling ground vehicle operability at Arctic conditions while reducing diesel consumption, reducing idle time, and enabling silent watch in Arctic environments; Power beaming technologies driving towards a procurable system capable of powering Group 1 UAS platforms; Space-based power production; and, Subsurface thermal power demonstrations. OEPF (Non S&T) will continue performing warfighter demonstrations at both CONUS and OCONUS locations and collecting warfighter input utilizing the OECI Non S&T developed Warfighter application to inform Requirements, acquisition strategies, and performing validation analytics. This comprehensive approach accelerates transition of these advanced Operational Energy warfighting capabilities across the services and into programs of record. FY 2026 projects are focusing on informing requirements definition and supporting acquisition strategies ahead of transition to the Services' program offices. Modeling and simulation for each project is providing input to analytical and cost decisions. The projects are also providing documentation supported by Futures' wargaming inputs in support of Acquisition Decision-making. New emphasis is being placed on energy-informed Mission Planning and providing power and energy input into CJADC2. FY 2026 projections include: Demonstrating novel range extender for communications that accelerates pace of in-flight refueling for rapid sortie generation during contested/pulsed INDOPACOM operations; Increase operational range of an uncrewed logistics delivery platform in contested environment; High power density flight-rated aircraft batteries that enable expeditionary basing and extend flight time in emergency situations; Industry-leading high-efficiency solar cell design and manufacturing to improve individual satellite performance and reduce required constellation size. FY 2025 to FY 2026 Increase/Decrease Statement: The FY 2025-2026 increase aligns with the growth in advanced technology maturation and the emphasis to go fast in fielding the best emerging operational technologies. The additional funding allows OECI Non S&T/OEPF to showcase emerging OE prototypes in additional Combatant Command demonstrations and experimentation events targeting USINDOPACOM, USAFRICOM, and USEUCOM.

C. Other Program Funding Summary (\$ in Millions) N/A Remarks N/A D. Acquisition Strategy OECI Non S&T/OEPF works with service-specific PORs ensuring funded projects transition into acquisition programs. The ASD(EI&E) approach integrates across the entire Joint OE community, guaranteeing Joint Forces are integrating warfighting lessons from current conflicts related to power and energy and have the energy needed to fight and win in contested environments. ASD(EI&E) collaborations include the Service energy offices, other DOD innovation programs (including DIU), Combatant Commands, Defense Department laboratories, industry, and academia. Each year, the Combatant Commanders and the Services' Program Executive Offices (PEO) propose projects which improve warfighter capability. Subject Matter Experts evaluate power and energy candidates ranking the attributes for warfighter impact and support for integration into a POR. The most impactful projects then receive funding as available. OECI Non S&T FY 2025 Transitions include the following technologies: - Small Tactical Universal Battery (STUB) is transitioning to Small Unit Power POR within PEO Soldier (RDT&E PE 0604827A), Project Manager (PM) Soldier Warrior (SWAR) and Mobile Soldier Power for procurement (PE 8827R80800). STUB is a standardized battery that reduces the number, types, and weight of batteries and chargers carried by dismounted warfighters. - Low-Cost Helicopter Sling (LC HSL) is transitioning to the US Army PM Force Sustainment Systems (FSS) to support the Sustainment Aerial Delivery Equipment – Sling Load POR (PE 0604804A) in FY 2025. LC HSL reduces logistical burden by reducing mission fuel requirements. - Global Positioning System – Denied (GPS-denied) is transitioning to the Army PM FSS, United States Air Force (USAF) Special Forces Command and United States Marine Corps (USMC) Logistics Combat Element Integration Division (RDT&E PE 0654804L39 and PROC PE MA7806000) in FY 2026. GPS-denied is an on-demand, platform-agnostic capability for delivering energy to the tactical edge in GPS-denied/contested environments to power small unit assets and support crewed/uncrewed operations. - Data Integration for Ground Systems (DIGS) is transitioning to Product Director Test, Measurement, Diagnostics Equipment (PD TMDE) (PE 0604622A) POM FY 2027, as a ground vehicle energy visibility and predictive logistics management tool. DIGS captures engine runtime, fuel usage, maintenance requirements, and identifies vehicle energy optimizations.

Note

New Start (Y/N): No

FY24 program funding is transferred from the Creating Helpful Incentives to Produce Semiconductors (CHIPS) for America Defense Fund to the FY Research, Development, Test and Evaluation, Defense-Wide appropriation for proper execution. Funding from FY2023 through 2027 were appropriated by, and are transferred using special transfer authority provided by, section 102(b) of the CHIPS Act of 2022, division A of Public Law 117–167.

A. Mission Description and Budget Item Justification

This Program Element supports the Department's initiatives to Build Sustainable and Long-Term Advantage, Defend the Homeland, and Deter Aggression.

The Office of the Under Secretary of Defense for Research and Engineering (OUSD(R&E)) is executing the Microelectronics Commons (the Commons) activity pursuant to the Fiscal Year (FY) 2021 National Defense Authorization Act (NDAA) (Pub. L. 116-283), including the CHIPS for America Act, and funded through the CHIPS for America Defense Fund established by the CHIPS Act of 2022. The FY 2021 NDAA legislation significantly emphasized solutions that promote the domestic on-shoring of capabilities to address economic and technology security concerns. Under FY 2021 NDAA Sec. 9903(b), the DOD was directed to establish a National Network for Microelectronics Research and Development (NNMRD) to enable the laboratory-to-fabrication transition of microelectronics innovations in the United States and to expand the global leadership in microelectronics of the United States. Specifically, the DOD is addressing a component of the NNMRD, the Commons, through a public-private partnership consisting of regional innovation hubs distributed across the U.S. to foster a pipeline of innovative ideas and talent residing in, for example, university labs and small business R&D teams.

Background

U.S. technological dominance in microelectronics materials, processes, devices, and architectural designs can only be sustained through the development of a robust domestic innovation ecosystem that fosters the rapid development and transition of novel concepts into commercially viable manufacturing processes. The U.S. innovation ecosystem has long been the driver of our nation's technology leadership throughout the world. U.S. R&D kick-started the enormous semiconductor industry and continues to lead the world in developing the next generation of disruptive technologies including new materials, devices, circuits, architectures, and design tools.

In recent years, the efficient domestic adoption of U.S. chip innovation has been threatened as emerging hardware technologies have become increasingly reliant on offshore sources for State of the Art (SOTA) manufacturing, prototyping, and investment. There are several significant hurdles that hardware startups face, including limited or expensive access to necessary facilities and design infrastructure, high costs of design intellectual property, limited expertise with hardware engineering, and

UNCLASSIFIED

Exhibit R-2, RDT&E Budget Item Justification: PB 2026 Office of the Secretary Of Defense				Date: June 2025

high costs of prototyping. As a result, the number of U.S. hardware startups has dropped significantly and foreign investment in U.S.-based technology startups has enabled offshore fabrication and maturation of emerging technologies.						
To address these needs, OUSD(R&E) is standing up the Commons as a public private partnership, consisting of regional innovation hubs distributed across the U.S. to foster a pipeline of innovative ideas and talent residing in university labs and small business R&D teams. The partnership will provide resources for and access to specialized lab equipment, technical expertise, and connections to existing or upgraded prototyping facilities. Fabrication facilities (fabs) will help mature promising technologies and demonstrate the manufacturing and economic benefits of these innovations for dual-use application for defense and commercial sectors.						
The Commons focuses on critical, on-shore prototyping to transition innovation from universities, start-ups, and small companies to fabrication facilities (lab-to-fab transition). Key features include:						
• Creates and connects “Lab-to-Fab” testing/prototyping hubs to form a network focused on maturing emerging microelectronics technologies • Provides broad access to these prototyping hubs, potentially by augmenting facilities and enabling access to facilities within local semiconductor companies or FFRDCs. • Facilitates microelectronics education and training of students at local colleges and universities and grows a talent pipeline to bolster local semiconductor economies and contribute more broadly to the growth of a domestic semiconductor workforce.						
This program element focuses on the advanced component development and advanced prototyping activities of the Commons, including staffing at Commons Hub facilities, prototype development, and the establishment and development of a path for successful Lab-to-Fab technology transition. The Commons will establish early and sustained engagement with industry and academic stakeholders to build consensus on technology roadmaps to guide maturation and delivery of innovation into a given commercial fab’s pilot line and production plans.

FY24 program funding is transferred from the Creating Helpful Incentives to Produce Semiconductors (CHIPS) for America Defense Fund to the FY Research, Development, Test and Evaluation, Defense-Wide appropriation for proper execution. The funds were appropriated by, and are transferred using special transfer authority provided by, section 102(b) of the CHIPS Act of 2022, division A of Public Law 117–167.

A. Mission Description and Budget Item Justification

This project focuses on advanced prototyping activities of the Commons. Additionally, it focuses on providing cost-effective ways to capture and incentivize domestic R&D for various semiconductor technologies in a low-volume production environment and transition them for DOD and commercial market applications. Specifically, it works to transition developments from Commons Hubs resulting from technology identification and research funded by Commons PEs 0602669D8Z and matured by activities funded by Commons PE 0603669D8Z. The project also supports the establishment of the Commons Hubs, which will be networks of regional capabilities organized in collaboration with the CM to address DoD and commercial needs and requirements. The Hubs may include existing academic facilities augmented to enhance intrinsic specializations in emerging areas of microelectronics. Each Hub will concentrate on one of six technical areas including: Secure Edge Computing, 5G/6G Technology, Artificial Intelligence Hardware, Quantum Technology, Electromagnetic Warfare, and Commercial Leap Ahead Technologies. Core Facilities (i.e., fabs) are integral parts of the Hubs network that will provide key fabrication capabilities that are required to demonstrate prototypes with the volume and characteristics required to ensure reduced risk for full manufacturing production.

Note

New Start (Y/N): No

- Starting in FY2026, 'Investment Prospectus Analysis' will now be referred to as 'Investment Strategy'.
- In FY2024 and FY2025, Transition Acceleration Program (TAP), Global Technology Scouting and Co-Investment Program (GTS), and Investment Strategy programs were budgeted in PE 0901579D8Z. Starting in FY2026, these programs are budgeted in this program element (PE 0604679D8Z).

A. Mission Description and Budget Item Justification

In support of the Department of Defense, Office of Strategic Capital's (OSC) mission is to attract and scale private capital to technologies critical to the national and economic security of the United States. The National Defense Authorization Act for Fiscal Year 2024 (FY2024 NDAA) states OSC shall:

- Develop, integrate, and implement capital investment strategies proven in the commercial sector to shape and scale investment in critical technologies and assets;
- Identify and prioritize promising critical technologies and assets that require funding and have the potential to benefit DoD; and
- Make eligible investments in such technologies and assets, such as supply chain technologies, not always supported through direct investment.

To accomplish its mission, OSC uses loans, loan guarantees, and technical assistance – an efficient use of taxpayer dollars – to crowd in investment by aligning government and private sector incentives. The office's tools take advantage of the power of markets and competition to support DoD needs. OSC's investments are guided by its FY2025 Investment Strategy, which describes that competition between the United States and its adversaries occurs over the: (i) control of economic chokepoints; (ii) scaling of key industries, and (iii) commercialization of critical technologies. OSC investments will provide the Department of Defense advantages in all these competitive arenas, especially by securing critical supply chains and rebuilding the industrial base. These activities directly align with the administration's priorities communicated through the Interim National Defense Strategic Guidance (INDSG), and other forthcoming authoritative documents such as the National Security Strategy of the United States (NSS), Interim National Defense Strategy (NDS) and Defense Planning Guidance (DPG).

Specifically, the program will:

- Develop new financial products, such as direct equipment finance loans for manufacturers, project finance loans to support capital intensive projects, working capital loans for businesses in need of short-term financing, and loan guarantees through private banks.
- Provide loans, loan guarantees and technical assistance to businesses, funds, and other entities within the 33 Covered Technology Categories prescribed by Congress in line with the objectives described by the FY25 Investment Strategy, INDSG, NSS, NDS, and DPG.
- Identify and prioritize areas for investment through engagements with the Services, Combatant Commands, National Security Council, and other interagency partners.

• Funding Realigned to PE 0901579D8Z in FY 2026 for proper execution	-	-	0.382	0.000	0.382

Change Summary Explanation

Funding previously resided in Office of Strategic Capital (OSC) PE 0901579D8Z. Funding Realigned to PE 0604679D8Z in FY 2026 for proper execution.

In FY26, the previous President's Budget Request of \$128.258 has been budgeted to two different PE lines:

- \$21.318 budgeted as RDT&E dollars in this program element (PE 0604679D8Z) for GTS and Investment Strategy. \$0.382 is incorrectly reflected due to an administrative error in the database.
- \$106.940 budgeted as credit subsidy dollars in PE 0902199D8Z for the Credit Program and the Critical Technologies Limited Partnership Program.

The FY 2026 request for Office of Strategic Capital (OSC) includes \$0.382 million of discretionary and \$21.318 million of mandatory (reconciliation) for a total of \$21.700 million. The mandatory funds Low Cost Weapons. Further information for this reconciliation request is provided in Chapter 2 of the Reconciliation Exhibit.

A. Mission Description and Budget Item Justification

In support of the Department of Defense, Office of Strategic Capital's (OSC) mission is to attract and scale private capital to technologies critical to the national and economic security of the United States. The National Defense Authorization Act for Fiscal Year 2024 (FY2024 NDAA) states OSC shall:

- Develop, integrate, and implement capital investment strategies proven in the commercial sector to shape and scale investment in critical technologies and assets;
- Identify and prioritize promising critical technologies and assets that require funding and have the potential to benefit DoD; and
- Make eligible investments in such technologies and assets, such as supply chain technologies, not always supported through direct investment.

To accomplish its mission, OSC uses loans, loan guarantees, and technical assistance – an efficient use of taxpayer dollars – to crowd in investment by aligning government and private sector incentives. The office's tools take advantage of the power of markets and competition to support DoD needs. OSC's investments are guided by its FY2025 Investment Strategy, which describes that competition between the United States and its adversaries occurs over the: (i) control of economic chokepoints; (ii) scaling of key industries, and (iii) commercialization of critical technologies. OSC investments will provide the Department of Defense advantages in all these competitive arenas, especially by securing critical supply chains and rebuilding the industrial base. These activities directly align with the administration's priorities communicated through the Interim National Defense Strategic Guidance (INDSG), and other forthcoming authoritative documents such as the National Security Strategy of the United States (NSS), Interim National Defense Strategy (NDS) and Defense Planning Guidance (DPG).

Specifically, the program will:

- Develop new financial products, such as direct equipment finance loans for manufacturers, project finance loans to support capital intensive projects, working capital loans for businesses in need of short-term financing, and loan guarantees through private banks.
- Provide loans, loan guarantees and technical assistance to businesses, funds, and other entities within the 33 Covered Technology Categories prescribed by Congress in line with the objectives described by the FY25 Investment Strategy, INDSG, NSS, NDS, and DPG.
- Identify and prioritize areas for investment through engagements with the Services, Combatant Commands, National Security Council, and other interagency partners.
- Create new data tools to map economic networks to determine chokepoints that impact U.S. national and economic security.
- Increase private capital investment to enhance the commercialization of DoD and United States Government (USG) science & technology investments.

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025	FY 2026 Base	FY 2026 OOC	FY 2026 Total
Description: Leveraging existing development programs, projects, and warfighter priorities, this program aligns private investment and RDT&E funding to co-invest in critical technology companies that are developing compelling military capabilities with clear pathways to transition to existing or future programs of record. RDT&E funding is used to fund a Pathfinder program to validate advanced manufacturing methods and approaches to meet critical demand for solid rocket motors. This effort coordinates Service and OSD funding with private sector investment across multiple contract efforts to maximize available capital, operational impact, and broader USD(R&E), ASA(ALT), and ASN(RDA) equities. • In FY2024 and FY2025, Transition Acceleration Program (TAP) funds were budgeted in PE 0901579D8Z. • Starting in FY2026, Transition Acceleration Program (TAP) funds are budgeted in this program element (PE 0604679D8Z). FY 2025 Plans: FY2025 funds continued to fund a Pathfinder program to develop and validate advanced manufacturing methods to meet critical demands for solid rocket motors. OSC awarded two additional contracts to emerging technology companies proposing novel approaches in advanced manufacturing to fill the services’ requirements. Each company will provide the DoD with solid rocket motor engine prototypes and the processes they utilized to manufacture them which will give the DoD the ability to increase domestic production capacity of solid rocket motors. This aligns with OSC’s goal to increase the production capacity across the domestic supply chain. FY 2026 Base Plans: Due to a substantial reduction in funding for this program, so the program will focus on transitioning the projects to the Services, monitoring existing awards, and providing the necessary adjustments to current contracts. FY 2026 OOC Plans: N/A FY 2025 to FY 2026 Increase/Decrease Statement: Funding for TAP concluded in FY2025.						
Title: Global Technology Scouting and Co-Investment Program (GTS) Description: The Global Technology Scouting and Co-Investment (GTS) program leads international activities to leverage OSC’s financial tools and co-investment opportunities with allies, into critical technologies, which support interoperability, integrated deterrence, and prevent adversarial capital investment.		0.000	0.000	0.200	0.000	0.200

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025	FY 2026 Base	FY 2026 OOC	FY 2026 Total
• In FY2024 and FY2025, Global Technology Scouting and Co-Investment Program (GTS) funds were budgeted in PE 0901579D8Z. • Starting in FY2026, Global Technology Scouting and Co-Investment Program (GTS) funds are budgeted in this program element (PE 0604679D8Z). FY 2025 Plans: In FY 2025, GTS is developing an international strategic engagement plan for OSC to advance collaboration with other DoD, interagency and international partners in prioritized critical technology sectors and key terrain, aiming to source and develop deal opportunities aligned to OSC's mission and Combatant Command strategic priorities. Additionally, GTS led a co-investment in a work program supporting a priority Service capability and sourced several deals from an INDOPACOM partner. FY 2026 Base Plans: OSC will continue to develop and formally implement its international engagement and origination strategy. OSC will establish two formal relationships aligned with its strategic priorities to enhance collaboration and achieve shared national security objectives. FY 2026 OOC Plans: N/A FY 2025 to FY 2026 Increase/Decrease Statement: This program experienced consistent funding levels.						
Title: Investment Strategy Description: The Investment Strategy program develops, drafts, and coordinates OSC's Investment Strategy to ensure the office's investments are aligned broadly with the Department's priorities articulated by the INDSG, NSS, NDS, DPG and other strategic documents. As a part of this analysis, Strategy conducts a combination of quantitative and qualitative research to map economic networks, assess key industries, and determine which critical technologies are essential to economic and national security. This work continuously informs where the office deploys its resources. • In FY2024 and FY2025, Investment Strategy funds were budgeted in PE 0901579D8Z. • Starting in FY2026, , Investment Strategy funds are budgeted in this program element (PE 0604679D8Z).		0.000	0.000	0.182	0.000	0.182

A. Mission Description and Budget Item Justification

This program supports the Department's initiatives to Deter Aggression, Defend the Homeland, and Build Sustainable and Long-Term Advantage.

This program supports the Office of the Director, Cost Assessment & Program Evaluation (CAPE) by funding activities that help CAPE to implement warfighting analysis in support of the interim National Defense Strategy (NDS). The CAPE accomplishes this by leading studies to support campaign analysis and analytical research across a spectrum of national security issues and concerns.

These RDT&E resources support critical studies and analyses to assist senior DoD leaders in optimally balancing the lethality, partnership, and reform levels of effort to carry out the NDS. The research agenda focuses on near to long-term problems identified by the Deputy Secretary of Defense, and addresses difficult and complex questions linked to program alternatives for current and future capabilities and forces in order to enhance the senior leadership's deliberations and decision-making.

This program provides the scientific and technical engineering services needed for research studies in the development of models and simulations and the evaluation of current analytical tools and scientific methods used to evaluate and assess scenarios and concepts of operations for a wide range of warfighting environments and scenarios. Deliverables from this program will include reports, briefings, and analyses designed to illuminate findings and assessments to inform Operation Plan development and DoD's approach to concept development, joint campaign analysis, evaluation, and force development.

A. Mission Description and Budget Item Justification

This program supports the Office of the Director, Cost Assessment & Program Evaluation (CAPE). It funds activities that help CAPE to implement the vision of the Deputy Secretary of Defense to support new approaches to campaign analysis. CAPE will accomplish this by leading studies and developing analytic tools to think about future capabilities and posture.

This program provides for analytical research across a spectrum of issues and concerns. The research agenda is focused on near to long-term problems identified by the Deputy Secretary of Defense, and addresses difficult and complex questions linked to program alternatives for current and future capabilities and forces in order to enhance the senior leadership's deliberations and decision-making.

This program provides the scientific and technical engineering services needed for research studies in the development of models and simulations and the evaluation of current analytical tools and scientific methods used to evaluate and assess future scenarios and concepts of operations for a wide range of warfighting environments and scenarios. Deliverables from this program will include reports, briefings, and analyses designed to illuminate findings and assessments. Outcomes include the compilation and campaign analyses data to support the DoD capabilities to the challenges of a near-peer warfight and strategic and programmatic options for post INF treaty weapons options.

B. Accomplishments/Planned Programs (\$ in Millions)

A. Mission Description and Budget Item Justification

The Rapid Defense Experimentation Reserve (RDER) program supports core program management and integration activities necessary to plan and execute a multi-year campaign of experimentation. The RDER initiative is a whole of DoD effort focused on joint experimentation to provide rapid capabilities that address our most difficult military challenges. The Secretary of Defense established the RDER initiative in the Defense Planning Guidance for Fiscal Years 2024-2028, to enable multi-component experimentation through a campaign of learning that accelerates technology transition and scale-up with the Services through the Deputy's Management Action Group. This experimentation is executed using validated mission vignettes to assess Measures of Effectiveness and Measures of Performance identified in Modeling and Simulation. Integrated Assessment plans are developed for each prototype in the experiment and the data is collected through a campaign of experimentation utilizing Service demonstration venues or Combatant Command Training Exercises. The final prototype assessment will consist of a body of evidence that consists of Modeling and Simulation data, range or exercise performance, and doctrine, organization, training, materiel, leadership and education, personnel, and facilities (DOTMLPF) issues. The assessment will drive a Department decision point for transition or acceleration of RDER projects.

The Office of the Under Secretary of Defense for Research and Engineering OUSD(R&E) process for incubating promising prototypes starts with a novel experimental design based on a web of interconnected systems addressing specific Defense Planning Scenarios. This approach is unique from other experimentation that focuses on determining individual system efficacy. Additionally, the experimental design is unique in using the web of systems to explore new warfighting concepts that capitalize on contributions of multiple Services as a true joint force. The experimentation yields live data which is evaluated to depict system operational analysis against the predicted performance from modeling and simulation. The Operational Utility Assessment establishes the body of evidence for the "best of breed" and the rapid adaptation of the capability by the Services.

OUSD(R&E) manages the Department's multiple RDER experimentation events and conducts integration activities with the Joint Force. OUSD(R&E) oversees an integrated selection process with the Joint Staff, Services, and Combatant Commands that incorporates the most promising innovative prototypes into existing exercise venues such as: Balikatan and Grey Flag. RDER utilizes funding to plan, integrate, and oversee joint experiments; provide assessments on project viability; and, deliver results to facilitate decisions on transitioning promising capabilities with the Services.

A. Mission Description and Budget Item Justification

The RDER program focuses on a campaign of joint experimentation on rapid capabilities that address our most complex military challenges. The Secretary of Defense established RDER in the Defense Planning Guidance to enable multi-component joint experimentation through a campaign of learning and to establish a body of evidence to support rapid adoption by the Services. RDER enables the Services, agencies, industry, and other organizations to identify “best of breed” capabilities to be prototyped in large-scale joint experiments and validate and/or refine the Joint Warfighting Concept (JWC).

OUSD(R&E)’s process for incubating promising prototypes starts with a novel experimental design based on a web of interconnected systems addressing specific Defense Planning Scenarios. This approach is unique from other experimentation that focuses on determining individual system efficacy. Additionally, the experimental design is unique in using the web of systems to explore new warfighting concepts that capitalize on contributions of multiple Services as a true joint force. The experimentation yields live data that the OUSD(R&E) analyzes against the performance predicted in modelling and simulation.

OUSD(R&E) manages the Department’s multiple RDER experimentation events and conducts integration activities with the Joint Force. OUSD(R&E) oversees an integrated selection process with the Joint Staff, Services, and Combatant Commands that incorporates the most promising innovative prototypes into existing exercise venues such as: Project Capstone, Northern Edge, Valiant Shield, Talisman Sabre, Grey Flag, Joint Battle Problem, and TREX. RDER utilizes funding to plan, integrate, and oversee joint experiments; provide assessments on project viability; and, deliver the results to the Deputy Secretary of Defense management action group to facilitate decisions on transitioning promising capabilities with the Services.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Rapid Defense Experimentation Reserve (RDER) Program Management	2.515	2.375	0.000
Description: Program Management includes the oversight of the execution of prototypes resourced with the Services to address required capabilities. This effort includes the evaluation of service candidates through the technical maturation phase prior to executing an experiment. Activities include monitoring new technologies through the innovation stakeholder community, which includes the Service laboratories, industry, academia, and federally funded research and development centers and assess “best of breed” prototypes integrated in joint experimentation venues.			
FY 2025 Plans:			

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2026 Office of the Secretary Of Defense		Date: June 2025	
Appropriation/Budget Activity 0400 / 4	R-1 Program Element (Number/Name) PE 0604790D8Z / <i>Rapid Defense Experimentation Reserve (RDER)</i>	Project (Number/Name) 790 / <i>Rapid Defense Experimentation Reserve (RDER)</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
RDER will complete the evaluation of FY 2024 candidates and initiate the execution of FY 2025 experimentation. This establishes and coordinates experimentation venues that provide interoperability for multi-component defense planning scenarios and mitigate potential risks of incompatibility at the joint level. PMs plan to oversee the cost, schedule, and performance of prototypes within the JWC functional battles: Fires; C2; IA; Contested Logistics and Space and Cyber. RDER PMs plan to collaborate with system developers to select risk reduction experiments that meet the technology maturation milestones for the multi-component experiments at Balikatan and Grey Flag. RDER PMs provide program oversight and prepare assessment and experimentation plans for each prototype technology. FY 2026 Plans: In FY 2025, the Department of Defense (DoD) Service formally assumed responsibility for defense experimentation functions previously managed by the Rapid Defense Experimentation Reserve (RDER). This transition ensured sustained oversight of prototype development, cost, schedule, and performance within Joint Warfighting Concept (JWC) functional battles, strengthening interoperability and innovation in joint defense planning. Through this transition, the DoD Service sustained continuity, innovation, and readiness in defense experimentation efforts. FY 2025 to FY 2026 Increase/Decrease Statement: The Rapid Defense Experimentation Reserve (RDER) was eliminated as part of the budget to streamline defense innovation efforts, reduce redundancy, and optimize resource allocation toward more impactful modernization initiatives.			
Title: Experiments Integration Description: RDER coordinates with the exercise planning cells at the Combatant Commands (CCMD) to conduct experiments. Technical readiness reviews evaluate system design requirements in order to define requirements for participation into multiple experimentation venues. RDER reviews prototype system requirements and maps each within the network architectures for data dissemination and collection. RDER identifies risks that would impede interoperability at multi-component experiment venues. This effort integrates the fully functional capabilities of RDER prototypes into joint operational kill webs to enable joint experimentation. FY 2025 Plans: Funding integrates prototypes into multiple experimentation events to include Balikatan and Grey Flag. The effort supports operational readiness reviews for each technology which includes safety review, Authority to Operate (ATO), and compliance standards to support technical maturity. This effort is executed for each experimentation event within the campaign series. FY 2026 Plans: In FY 2025, the Department of Defense (DoD) Service assumed full ownership of prototype integration across multiple experimentation events, including Balikatan and Grey Flag, ensuring their alignment with operational readiness objectives. This transition enabled the DoD Service to lead comprehensive reviews for each technology, including safety assessments, Authority to Operate (ATO) approvals, and compliance standards to support technical maturity. the campaign series, this effort strengthened the DoD's commitment to innovation, interoperability, and the effective integration of emerging capabilities within joint operational frameworks.				
FY 2025 to FY 2026 Increase/Decrease Statement: The Rapid Defense Experimentation Reserve (RDER) was eliminated as part of the budget to streamline defense innovation efforts, reduce redundancy, and optimize resource allocation toward more impactful modernization initiatives.				
Title: Experiment Design Description: Resources provide the analysis to support the Combatant Commands establishing the system-of-system level architecture for integrating multiple prototypes into a single experimentation event. For each experimentation event, RDER evaluates each system level design to establish a government reference architecture that seamlessly employs prototype technologies at multiple experimentations geolocated across multiple states. Measures of Effectiveness (MOEs) and Measures of Performance (MOPs) are established to be collected at each event. These Integrated assessment plans are developed for each individual technology. FY 2025 Plans: In FY 2025, RDER plans to employ government reference architecture for each experimentation venue to measure prototype interoperability at Balikatan and Grey Flag. RDER evaluates and validates the technical maturity of each interface with the experimentation architectural design utilizing architectural analysis tools. The final experimentation architecture is utilized to evaluate performance of the warfighter kill chains. FY 2026 Plans: In FY 2025, the Department of Defense (DoD) Service assumed full ownership of experimentation efforts, utilizing government reference architecture across venues to assess prototype interoperability at Balikatan and Grey Flag. The DoD Service will evaluate and validate the technical maturity of each interface within the experimentation architectural design using advanced architectural analysis tools. Through this transition, the DoD Service maintained oversight, fostering innovation and interoperability within multi-component defense planning. FY 2025 to FY 2026 Increase/Decrease Statement: The Rapid Defense Experimentation Reserve (RDER) was eliminated as part of the budget to streamline defense innovation efforts, reduce redundancy, and optimize resource allocation toward more impactful modernization initiatives.		2.500	3.850	0.000
Title: Experimentation Execution Description: The execution phase consists of the collection of experimental system performance that is evaluated against the Measures of Effectiveness (MOEs) and Measures of Performance (MOPs) that have been previously established. RDER establishes a data collection command and control network architecture to monitor the behavioral analysis of prototypes during an		4.600	4.182	0.000

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025	FY 2026
experimental event. Data is collected and stored for post event analysis. RDER deploys an experimentation unit to provide onsite observation, oversight, and governance during a prototype experiment event. These evaluation teams are required at each data collection node or technology location involved in the experiment. FY 2025 Plans: In FY 2025, RDER shall deploy the Deployable Experimentation White Cell (DEWC) for experimental prototype data collection during Balikatan and Grey Flag. RDER shall procure an additional command and control facility to support the experimentation that are geographically dispersed. This function requires personnel to maintain operational command and control of each prototype to perform experimentation. Personnel are located onsite with the prototype and the deployed operational cell to assess the operational readiness of the capability. The functional cell acquires the operational accreditation of the DEWC for each experiment and acquires the automated tools to produce daily quick look analysis for each event. Operation updates and reports are briefed daily to OSD, Services, and Combatant Command. FY 2026 Plans: In FY 2025, the Department of Defense (DoD) Service assumed full ownership of experimental prototype data collection, deploying the Deployable Experimentation White Cell (DEWC) during Balikatan and Grey Flag. To support geographically dispersed experimentation, the DoD Service will maintain command and control facility, ensuring operational oversight and readiness assessments. The functional cell will control operational accreditation and integrated automated tools for rapid analysis, with to senior leadership, reinforcing informed decision-making and strategic oversight. FY 2025 to FY 2026 Increase/Decrease Statement: The Rapid Defense Experimentation Reserve (RDER) was eliminated as part of the budget to streamline defense innovation efforts, reduce redundancy, and optimize resource allocation toward more impactful modernization initiatives.				
Title: Opposing Force (OPFOR) Threat Emulation Description: Opposing Force (OPFOR) threat emulation establishes a plausible, flexible military force representing a composite of varying capabilities of actual adversary forces within an experiment. Resources provide a threat informed and operationally relevant environment to conduct experiments. RDER employs OPFOR across geographically dispersed experiments which requires the procurement of Manpower to operate OPFOR capabilities, a deployable experimentation white cell to maintain command and control of RDER proposal external from the exercise, maritime threats, UAVs/Drones, UUVs, Small boats, Electromagnetic Spectrum emitters, mobile and fixed medium range BMs, and Decoys to establish a relevant environment for RDER capabilities. FY 2025 Plans:		5.201	6.150	0.000

Appropriation/Budget Activity 0400 / 4	R-1 Program Element (Number/Name) PE 0604790D8Z / Rapid Defense Experimentation Reserve (RDER)	Project (Number/Name) 790 / Rapid Defense Experimentation Reserve (RDER)		
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025	FY 2026
In FY 2025, OPFOR emulations shall be reduced across the experiments via the allocations of threat emitters, maritime and ground-based targets, decoys, and communications nodes necessary to create a fully threat informed, multi-domain, operationally relevant environment for projects across Balikatan and Grey Flag. This functional component conducts a threat analysis to identify and acquire threat representative targets to establish a relevant environment for the experiment. The entity provides personnel to act as OPFOR that would serve as the viable force during the experiment. The entity coordinates on all the communication equipment and infrastructure that is required to integrate into the Services tactical networks. This effort also coordinates all logistical shipping and storage requirements for threat representative targets to forward deployed events. FY 2026 Plans: In FY 2025, the Department of Defense (DoD) Service took ownership of OPFOR emulations, enhancing threat representation in Balikatan and Grey Flag through emitters, targets, decoys, and communications nodes. This transition ensured a realistic, multi-domain environment, integrating threat analysis, tactical network infrastructure, and logistical coordination for deployed assets. FY 2025 to FY 2026 Increase/Decrease Statement: The Rapid Defense Experimentation Reserve (RDER) was eliminated as part of the budget to streamline defense innovation efforts, reduce redundancy, and optimize resource allocation toward more impactful modernization initiatives.				
Title: Data Collection and Assessment Description: This effort supports the manpower required for data collection teams. The collection teams record the joint operational data to assess the measurements of performance and measurements of effectiveness of a prototype in a multi-component experimentation venue. It resources personnel who are co-located at multiple experimentation locations to include experiment venues, UARC/FFRDC's in the Continental United States, as well as at the CCMD headquarters. Data collection teams are required for each individual technology being evaluated at each event. FY 2025 Plans: RDER plans a slight reduction on the coalition experimentation but continues to perform data collection on projects executing experiments at Balikatan and Grey Flag. The team provides an independent assessment of each report daily during an experimentation. This includes acquiring the analysis tools for each prototype to support the analytical analysis of the data. An analysis team will provide a report that would provide recommendations on experimentation findings. FY 2026 Plans: In FY 2025, the Department of Defense (DoD) Service assumed responsibility for coalition experimentation, maintaining data collection at Balikatan and Grey Flag. The Services will submit daily assessments to support prototype evaluations at their leadership level FY 2025 to FY 2026 Increase/Decrease Statement:		5.000	2.200	0.000

Note

New Start (Y/N): No

In FY 2026, \$8.8 million of funding is realigned from the Foreign Comparative Testing Program Element 0603133D8Z, Project Code 313, Foreign Comparative Testing, to conduct aligned Capability Portfolio Management (CPM) reviews in partnership with the Joint Staff and Office of the Under Secretary of Defense for Acquisition and Sustainment (OUSD(A&S)) as per DoD Directive 7045.20. The Joint Staff and Combatant Commands (COCOMs) identify warfighter challenges. OUSD(A&S) identifies challenges in programs of record. Multi-Domain Joint Operations (MDJO) will conduct Technology Modernization Transition Reviews (TMTRs) to identify and assess technologies that address these challenges and supports the accelerated transition of the most promising technologies. In addition, this funding supports MDJO chairing and supporting Senior Governance Forums (SGF) per DoD Directive 5105.79. Prior program funding selects technologies to address warfighter gaps identified in the Joint Warfighting Concept (JWC) and Combatant Command Integrated Priority List (IPL) and supports technology transition to programs of record within the Services.

A. Mission Description and Budget Item Justification

MDJO facilitates identification and transition of priority joint capabilities to the Military Services and Agencies. MDJO completes this through persistent, proactive stakeholder engagement with continuous transition risk assessment, development of technology transition plans, and coordination across the Department of Defense. Ensuring transition begins in the project identification phase, MDJO guides project selection for major Assistant Secretary of Defense for Mission Capabilities [ASD(MC)] programs. MDJO drives project selection toward interim National Defense Strategy priorities by leveraging warfighter input captured through its role as the official Research and Engineering (R&E) representative to the Joint Staff's Joint Capabilities Integration and Development System (JCIDS) process and its engagements with the COCOMs and SGFs. In the JCIDS process representative role MDJO provides technical expertise to the Joint Requirements Oversight Council (JROC) Functional Capability Boards (FCBs) within the supporting areas of Force Development and Design, Force Application, Protection, C4/Cyber, Battlespace Awareness, and Logistics and Sustainment. MDJO actively participates in Joint Staff FCBs bringing awareness of potential gap filling technologies to the JROC. MDJO's participation in Cost Assessment and Program Evaluation (CAPE) reviews, Warfighter Senior Integration Groups (W-SIG), and other Senior Governance Forums enables these organizations to incorporate innovative technologies into their decision processes. MDJO leverages its technical expertise across interim National Defense Strategy priorities to conduct TMTRs, which serve as R&E's integrated contribution to CPM across the Department.

This program provides funding necessary for MDJO to fulfill its project identification, Joint Staff coordination, Senior Governance Forum directive, technology modernization efforts, and transition support roles.

A. Mission Description and Budget Item Justification												
MDJO facilitates identification and transition of priority joint capabilities to the Military Services and Agencies. MDJO completes this through persistent, proactive stakeholder engagement with continuous transition risk assessment, development of technology transition plans, and coordination across the Department of Defense. Project identification activities inform the specific focus areas for the ASD(MC) Mission Engineering and Prototyping & Experimentation activities. Concurrently, project transition activities accelerate the fielding of successfully demonstrated joint capabilities. MDJO’s core mission is to align Joint Force efforts to the interim National Defense Strategy priorities. Additionally, MDJO conducts and chairs TMTRs to review the health of research and development portfolios to identify promising technologies to address warfighter gaps and support investment decisions.												
B. Accomplishments/Planned Programs (\$ in Millions)									FY 2024	FY 2025	FY 2026	
Title: Project Identification Activities									-	-	4.753	
Description: MDJO identifies technologies, systems, and system-of-systems that close time-critical joint gaps in high-priority, multi-domain missions. MDJO leverages capability gap assessments, Science & Technology (S&T) innovation harvesting, the Defense Advanced Research Projects Agency (DARPA) Technology Development Working Group, modeling and simulation, and continuous engagements across the Department of Defense to conduct project identification. As part of this effort, MDJO conducts a systematic and inclusive selection process for the Rapid Defense Experimentation Reserve (RDER) program.												
FY 2026 Plans: Conduct identification of critical DoD missions requiring accelerated technical solutions to shape prototyping efforts across the ASD(MC) portfolio, Joint Service investments, industry proposals and other stakeholder interests. The identification process is achieved through: capability gap assessments and continuous engagement with the Joint Staff, Combatant Commands, and Services; S&T harvesting through communities of interest, data collections, and innovation workshops; DARPA Technology Development Working Group workshops; systematic, inclusive facilitation of the RDER selection process; and participation in the (FCBs) for the JROC.												
FY 2025 to FY 2026 Increase/Decrease Statement: Level of effort remains the same from FY 2025 to FY 2026, with the increase attributed to an economic adjustment.												
Title: Project Transition Activities									-	-	6.790

Exhibit R-2A, RDT&E Project Justification: PB 2026 Office of the Secretary Of Defense		Date: June 2025		
Appropriation/Budget Activity 0400 / 4	R-1 Program Element (Number/Name) PE 0604791D8Z I Multi-Domain Joint Operations (MDJO)	Project (Number/Name) 122 I Multi-Domain Joint Operations		
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025	FY 2026
Description: MDJO transitions technologies, systems, and system-of-systems that close time-critical joint gaps in high-priority, multi-domain missions. To accomplish this activity, MDJO maintains proactive stakeholder engagement with continuous transition risk assessment for all active prototyping and experimentation efforts. Upon successful completion of development, MDJO works with the Office of the Under Secretary of Defense for Acquisition and Sustainment (OUSD(A&S)) leveraging their Competitive Advantage Pathfinders (CAP) program to ensure successful transition into a fielded capability. MDJO also leverages the Agile Transition Procurement Pilot established in section 834 of the FY 2022 National Defense Authorization Act (NDAA) to facilitate transition where appropriate. FY 2026 Plans: Conduct transition activities in collaboration with the Services, Combatant Commands, OUSD(A&S) CAP program, and others as necessary. FY 2025 to FY 2026 Increase/Decrease Statement: Level of effort remains the same from FY 2025 to FY 2026, with the increase attributed to an economic adjustment.				
Title: Technology Modernization Transition Reviews (TMTRs) and Senior Governance Forum support Description: MDJO chairs and conducts TMTRs to assess the research and development efforts within portfolios. TMTRs consider the warfighter impact, cost schedule, performance, technology readiness, manufacturing readiness and transition readiness of each project within a portfolio to make recommendations regarding additional investments or divestments of efforts. TMTRs are part of integrated CPM including Joint Staff Capability Portfolio Management Reviews (CPMRs) and OUSD(A&S) Integrated Acquisition Portfolio Reviews (IAPRs) that inform JROC's, acquisition decisions and Deputy's Management Action Group (DMAG). TMTRs are structured to (1) Synchronize technology development with transition planning to meet strategic objectives. (2) Integrate with, and inform, acquisition portfolio reviews of the Joint Staff, OUSD(A&S), and Cost Assessment and Program Evaluation (CAPE). (3) Provide the OUSD(R&E)'s science and technology inputs to CAPE to support the annual President's Budget Request. FY 2026 Plans: MDJO is responsible for conducting approximately 12 TMTRs each fiscal year. Six reviews are integrated across the Joint Staff, OUSD(R&E), and OUSD(A&S) to address strategic operational issues raised by the Joint Staff. The remaining six reviews focus on independent topics to provide further guidance for prioritizing the development of critical technologies within the DoD. FY 2025 to FY 2026 Increase/Decrease Statement:		0.000	-	8.800

A. Mission Description and Budget Item Justification

The FY 2024 National Defense Authorizations Act (NDAA) directs The Under Secretary of Defense for Acquisition and Sustainment (USD(A&S)) and Under Secretary of Defense for Research and Engineering (USD(R&E)) to select the Head and Deputy Head of Joint Energetics Transition Office (JETO), respectively. JETO will establish and manage a DoD field activity dedicated to systems engineering associated with energetic materials. Additionally, JETO has been assigned strategic roles, tactical roles, coordination responsibilities, and directed studies.

This new joint office is intended to improve the transition of energetic materials and technologies to programs of record. It will also result in cost savings through economies of scale and lower barriers for additional suppliers entering the market. Roles and responsibilities of include:

DoD Field Office: The establishment and management of a Department of Defense field activity will be dedicated to systems engineering associated with energetic materials. The field activity mission will be to reduce technical risk; integrate research; develop, test, and evaluate energetic materials; and perform Department of Defense system demonstration programs on novel energetic materials for use in weapon systems. This field office will execute studies to inform the Energetic Materials Strategic Plan and Investment Strategy. Per NDAA language, these activities must be funded under budget activity 3 (advanced technology development) or budget activity 4 (advanced component development and prototypes).

Strategic Roles: JETO will create an Energetic Materials Strategic Plan and Investment Strategy and report on changes and progress annually.

Tactical Roles: JETO will identify and develop plans to alleviate any shortfalls in the supply chain for energetic materials. It will determine targets which would be better addressed with advanced energetics materials. It will also conduct studies which inform the Program Objective Memorandum (POM) process.

Coordination: JETO will identify promising new energetic materials and technologies. It will mature, integrate, prototype, test, and demonstrate novel energetic materials and technologies. It will also expedite the transition of energetic materials and technologies from the research and development phase to production and operational use. Finally, it will identify or establish prototyping demonstration venues.

Directed Studies: JETO will oversee processes, including recommending changes to regulations to (1) expedite the validation, verification, and accreditation of modeling and simulation, and (2) expedite the qualification process for energetic materials, from discovery through integration.

A. Mission Description and Budget Item Justification

This program is executed via the Joint Directed Energy Transition Office (JDETO) in alignment with the Department of Defense Directed Energy Roadmap, as well as other strategic guidance. Section 219 of the 2017 National Defense Authorization Act designated a senior official for directed energy and redesignated a legacy office as the JDETO with reporting to the senior official. Currently, the Principal Director for Directed Energy serves as this senior official and updates the Department of Defense Directed Energy Roadmap on an annual basis. The goal of this program, in turn, is to support the Department's initiatives in directed energy to build a sustainable and long-term advantage, in addition to a resilient joint force and defense ecosystem.

This program funds advanced component development and prototypes in directed energy aimed at reducing the technology risk, engineering integration, and life-cycle costs associated with directed energy weapon systems. These efforts inform requirements to develop functional and allocated baselines of end-item system configurations. In practice, directed energy weapon systems have many potential advantages, including speed-of-light time-to-target, high precision, low incremental cost per kill, and a magazine that is recharged through on-board, fuel-based power and thermal management systems that reduce logistics requirements in contrast to stocks of munitions or warheads. As a result, directed energy weapon systems have the potential to perform a wide variety of military missions. Activities conducted under this program will ultimately enable the demonstration of military utility for mission areas across the Department of Defense.

A. Mission Description and Budget Item Justification

This project is part of an overall Department of Defense strategy in Joint directed energy technology maturation and utility. Efforts within this project will focus on enabling next-generation directed energy weapons that engage threats at longer ranges with shorter engagement timelines in adverse environments with improved size, weight, and power requirements. These efforts complement, and will be closely coordinated with, other Department efforts directed at specific Service and Agency missions. This project builds upon other investments in directed energy technology maturation and utility by the Services and Agencies to harmonize Department efforts and eliminate duplication. As a result, efforts in this project will transition directed-energy technology to the Services and Agencies at a high enough technical readiness level for direct insertion into directed energy weapon systems.

This project is executed via a rebranded technical program, a new technical program, and a new initiative within the JDETO. The rebranded technical program is the Directed Energy Tech Maturation Program, which enables (1) advanced prototypes in support of demonstrating mission-driven lethality and survivability and (2) test and evaluation in a relevant field environment with Joint-international participation. The new technical program is the Directed Energy Tech Utility Program, which enables (3) studies, analyses, and evaluations in mission-driven lethality and survivability that supports directed energy military utility assessments and (4) experimentation in an operationally relevant environment with Joint-international participation. Note that (1)-(4) are in alignment with the near-, mid-, and long-term goals of Department of Defense Directed Energy Roadmap and enable transition. The new initiative is the Joint Laser Weapon System Initiative. This initiative is also in alignment with the near-, mid-, and long-term goals of the Department of Defense Directed Energy Roadmap. Both the Directed Energy Tech Utility Program and the Joint Laser Weapon System Initiative are the result of mandatory funding in FY 2026.

participation. Note that (1) and (2) are in alignment with the near-, mid-, and long-term goals of Department of Defense Directed Energy Roadmap. FY 2025 Plans: - Open Architectures: Using a modular open system approach, leverage previously identified reference architectures and identify a scalable beam control solution. - Command and Control: Survey engagement timelines for missions across the Department of Defense and optimize the kill chain associated with directed energy weapon systems to reduce latency and enable more robust battle management. - Mission Engineering: Develop high fidelity system-level models and conduct military utility studies with warfighter input to evaluate the future employment of directed energy weapon systems in operationally relevant environments. FY 2026 Plans: - Advanced Prototypes: Using a modular open system approach, refine a previously developed reference architecture for advanced prototypes. Provide support to programs implementing the reference architecture. Test and Evaluation: Conduct operational-analysis and mission-engineering studies. Leverage these studies to develop and refine common directed energy weapon system command and control timelines. Integrate lessons learned from these studies into test and evaluation efforts across the Department of Defense to reduce kill chain latencies and enable more robust battle management. FY 2025 to FY 2026 Increase/Decrease Statement: The increase of \$2.658 million between FY 2025 and FY 2026 reflects a realignment from High Energy Laser Research Development (Program Element 0602890D8Z) and High Energy Laser Advanced Development (Program Element 0603924D8Z) to establish a funding baseline in directed energy tech maturation that supports the near-, mid-, and long-term goals of Department of Defense Directed Energy Roadmap.			
Title: Directed Energy Tech Utility Program Description: The Directed Energy Tech Utility Program enables (1) studies, analyses, and evaluations in mission-driven lethality and survivability that supports directed energy military utility assessments and (2) experimentation in an operationally relevant environment with Joint-international participation. B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
- Mission-driven lethality: Collect lethality data for a prioritized list of threats and a prioritized set of aimpoints on those threats. Develop vulnerability modules from this lethality data based on a Joint process with approved standards. Upload these modules to a Joint repository. - Mission-driven survivability: Collect survivability data for a prioritized list of assets and a prioritized set of aimpoints on those assets. Develop vulnerability modules from this survivability data based on a Joint process with approved standards. Upload these modules to a Joint repository. - Directed Energy Military Utility Initiative: Update engagement-level models with the vulnerability modules uploaded to a Joint repository. Distribute the updated models to support directed energy weapon system integration into exiting military utility studies. Conduct Joint military utility studies with warfighter input to evaluate the future employment of directed energy weapon systems. FY 2025 to FY 2026 Increase/Decrease Statement: The increase of \$17.000 million between FY 2025 and FY 2026 is to accelerate the start of classified technical programs.			
Title: Joint Laser Weapon System Initiative Description: The Joint Laser Weapon System is being developed by the Army and Navy in support of counter cruise missile missions. The JDETO is executing an initiative in support of this Joint program. The initiative enables Joint oversight and is in alignment with the near-, mid-, and long-term goals of Department of Defense Directed Energy Roadmap. FY 2026 Plans: Perform operational-analysis and mission-engineering studies in support of the Joint Laser Weapon System. Provide Joint oversight in the form of coordinating and leading working groups with multiple stakeholders. Integrate this initiative into the Directed Energy Tech Maturation Program within the JDETO. FY 2025 to FY 2026 Increase/Decrease Statement: The increase of \$5.000 million between FY 2025 and FY 2026 is to accelerate the start of the Joint Laser Weapon System Initiative.		0.000	-

- Starting in FY2026, the 'Loan Program Office' will now be referred to as 'Credit Program' and 'Investment Prospectus Analysis' will now be referred to as 'Investment Strategy'
- Starting in FY2026, funding for Transition Acceleration Program (TAP), Global Technology Scouting and Co-Investment Program (GTS), and Investment Strategy is budgeted in PE 0604679D8Z
- Starting in FY2026, funding for the Credit Program and Critical Technologies Limited Partnership Program (CTLP Program) is budgeted in PE 0902199D8Z

A. Mission Description and Budget Item Justification

In support of the Department of Defense, Office of Strategic Capital's (OSC) mission is to attract and scale private capital to technologies critical to the national and economic security of the United States. The National Defense Authorization Act for Fiscal Year 2024 (FY2024 NDAA) states OSC shall:

- Develop, integrate, and implement capital investment strategies proven in the commercial sector to shape and scale investment in critical technologies and assets;
- Identify and prioritize promising critical technologies and assets that require funding and have the potential to benefit DoD; and
- Make eligible investments in such technologies and assets, such as supply chain technologies, not always supported through direct investment.

To accomplish its mission, OSC uses loans, loan guarantees, and technical assistance – an efficient use of taxpayer dollars – to crowd in investment by aligning government and private sector incentives. The office's tools take advantage of the power of markets and competition to support DoD needs. OSC's investments are guided by its FY2025 Investment Strategy, which describes that competition between the United States and its adversaries occurs over the: (i) control of economic chokepoints; (ii) scaling of key industries, and (iii) commercialization of critical technologies. OSC investments will provide the Department of Defense advantages in all these competitive arenas, especially by securing critical supply chains and rebuilding the industrial base. These activities directly align with the administration's priorities communicated through the Interim National Defense Strategic Guidance (INDSG), and other forthcoming authoritative documents such as the National Security Strategy of the United States (NSS), interim National Defense Strategy (NDS) and Defense Planning Guidance (DPG).

Specifically, the program will:

- Develop new financial products, such as direct equipment finance loans for manufacturers, project finance loans to support capital intensive projects, working capital loans for businesses in need of short-term financing, and loan guarantees through private banks.
- Provide loans, loan guarantees and technical assistance to businesses, funds, and other entities within the 33 Covered Technology Categories prescribed by Congress in line with the objectives described by the FY25 Investment Strategy, INDSG, NSS, NDS, and DPG.
- Identify and prioritize areas for investment through engagements with the Services, Combatant Commands, National Security Council, and other interagency partners.

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025	FY 2026 Base	FY 2026 OOC	FY 2026 Total
Description: This program provides loans, loan guarantees, and technical assistance to investment funds to increase their investable capital for investments in portfolio companies within the 33 Covered Technology Categories (as described in the FY2024 and FY2025 NDAA's) vital to national and economic security. The intent is to increase investment in unaddressed and underserved sectors critical to national security by attracting private capital and aligning incentives with the mission of the Office of Strategic Capital -- all at little or no cost to the taxpayer. • In FY2024, there were no funds for CTLP Program. • In FY2025, \$20.000M was transferred from PE 0901579D8Z to DoD Credit Program Account (PE 0902199D8Z) for CTLP Program. • Beginning in FY 2026, funds for CTLP Program will be budgeted to DoD Credit Program Account (PE 0902199D8Z). FY 2025 Plans: OSC will execute two complementary programs -- both focused on fund-level leverage tools. Led by the Small Business Administration (SBA) and supported by OSC, the Small Business Investment Company Critical Technologies Initiative (SBICCT Initiative) is expected to Green Light approve and/or License 10 additional funds. These funds, over time, would substantially increase investment in small businesses focused on critical technologies, supply chain and component-level technologies and production processes vital to U.S. national and economic security interests. Simultaneously, OSC is launching CTLP Program, which compared to the SBICCT Initiative allows funds to take on additional leverage, expands the scope of permissible investments, and allows funds to invest internationally. The CTLP Program is designed to attract sophisticated private sector investment funds through market-aligned terms and conditions that smooth out capital calls to private investors and enhance efficiencies and returns. CTLP Program is expected to issue its first Green Light approval letter and/or License to a qualifying investment fund before the fiscal year ends. FY 2026 Base Plans: Funding for CTLP Program is budgeted in PE 0902199D8Z starting in FY 2026. FY 2026 OOC Plans:

Appropriation/Budget Activity 0400 / 4		R-1 Program Element (Number/Name) PE 0901579D8Z / Office of Strategic Capital (OSC)		Project (Number/Name) 732 / Office of Strategic Capital		
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025	FY 2026 Base	FY 2026 OOC	FY 2026 Total
N/A						
FY 2025 to FY 2026 Increase/Decrease Statement: Funding for CTLP Program is budgeted in PE 0902199D8Z starting in FY 2026.						
Title: Credit Program		0.000	0.000	0.000	0.000	0.000
Description: This program provides direct loans, loan guarantees, and technical assistance to businesses operating within the 33 Covered Technology Categories (CTCs) mandated by Congress in the FY2024 and FY2025 NDAAs. These companies require significant debt capital to expand manufacturing, secure critical supply chains, and produce components that are the foundation of key capabilities. Given the market risk of businesses within the 33 CTCs, private debt financing is often insufficient or otherwise inaccessible. As a result, private companies are unable to compete especially against businesses that receive direct support from adversary countries. OSC addresses this capital gap by providing attractively priced, long-term capital to these companies that support U.S. national and economic security.						
• In FY2024, \$49.200M was transferred from PE 0901579D8Z to DoD Credit Program Account (PE 0902199D8Z) for Credit Program.						
• In FY2025, \$69.049M was transferred from PE 0901579D8Z to DoD Credit Program Account (PE 0902199D8Z) for Credit Program.						
• Beginning in FY 2026, funds for Credit Program will be budgeted to DoD Credit Program Account (PE 0902199D8Z).						
FY 2025 Plans: OSC is currently executing on its first direct loan product: equipment finance. The office began accepting applications in January 2025 and received more than 200 loan applications, representing \$8.9 billion in financing requests. The office is now conducting credit underwriting, performing national security assessments, and drafting the necessary documentation to finalize loans. OSC expects it will issue its first conditional approval and term sheet, representing an obligation of funds.						
FY 2026 Base Plans: Funding for Credit Program is budgeted in PE 0902199D8Z starting in FY 2026.						
FY 2026 OOC Plans:

N/A						
FY 2025 to FY 2026 Increase/Decrease Statement: Funding for Credit Program is budgeted in PE 0902199D8Z starting in FY 2026.						
Title: Transition Acceleration Program (TAP) Description: Leveraging existing development programs, projects, and warfighter priorities, this program aligns private investment and RDT&E funding to co-invest in critical technology companies that are developing compelling military capabilities with clear pathways to transition to existing or future programs of record. RDT&E funding is used to fund a Pathfinder program to validate advanced manufacturing methods and approaches to meet critical demand for solid rocket motors. This effort coordinates Service and OSD funding with private sector investment across multiple contract efforts to maximize available capital, operational impact, and broader USD(R&E), ASA(ALT), and ASN(RDA) equities. FY 2025 Plans: FY2025 funds continued to fund a Pathfinder program to develop and validate advanced manufacturing methods to meet critical demands for solid rocket motors. OSC awarded two additional contracts to emerging technology companies proposing novel approaches in advanced manufacturing to fill the services’ requirements. Each company will provide the DoD with solid rocket motor engine prototypes and the processes they utilized to manufacture them which will give the DoD the ability to increase domestic production capacity of solid rocket motors. This aligns with OSC’s goal to increase the production capacity across the domestic supply chain. FY 2026 Base Plans: Funding for TAP is budgeted in PE 0604679D8Z starting in FY 2026. FY 2026 OOC Plans: N/A FY 2025 to FY 2026 Increase/Decrease Statement: Funding for TAP is budgeted in PE 0604679D8Z starting in FY 2026.		15.000	15.030	0.000	0.000	0.000
Title: Global Technology Scouting and Co-Investment Program (GTS) Description: The Global Technology Scouting and Co-Investment (GTS) program leads international activities to leverage OSC’s financial tools and co-investment opportunities with allies, into critical technologies, which support interoperability, integrated deterrence, and prevent adversarial capital investment.		13.726	15.030	0.000	0.000	0.000

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025	FY 2026 Base	FY 2026 OOC	FY 2026 Total
FY 2025 Plans: In FY 2025, GTS is developing an international strategic engagement plan for OSC to advance collaboration with other DoD, interagency and international partners in prioritized critical technology sectors and key terrain, aiming to source and develop deal opportunities aligned to OSC’s mission and Combatant Command strategic priorities. Additionally, GTS led a co-investment in a work program supporting a priority Service capability and sourced several deals from an INDOPACOM partner.						
FY 2026 Base Plans: Funding for GTS is budgeted in PE 0604679D8Z starting in FY 2026.						
FY 2026 OOC Plans: N/A						
FY 2025 to FY 2026 Increase/Decrease Statement: Funding for GTS is budgeted in PE 0604679D8Z starting in FY 2026.						
Title: Investment Strategy		4.800	4.810	0.000	0.000	0.000
Description: The Investment Strategy program develops, drafts, and coordinates OSC’s Investment Strategy to ensure the office’s investments are aligned broadly with the Department’s priorities articulated by the INDSG, NSS, NDS, DPG and other strategic documents. As a part of this analysis, Strategy conducts a combination of quantitative and qualitative research to map economic networks, assess key industries, and determine which critical technologies are essential to economic and national security. This work continuously informs where the office deploys its resources.						
FY 2025 Plans: OSC is advancing the FY2025 Investment Strategy analysis by adding additional data sources (government and open source) to the existing data platform; implementing an analytics platform on top of the data set to automate the process of finding economic vulnerabilities; integrating perspectives from Combatant Commands, the private sector, interagency partners, allies, and the Intelligence Community; and providing actionable insights to the investment team regarding key strategic chokepoints.						
FY 2026 Base Plans: Funding for Investment Strategy is budgeted in PE 0604679D8Z starting in FY 2026.						
FY 2026 OOC Plans:

Title: Defense Ventures Fellowship Program Description: The Defense Ventures Fellowship Program places select DoD personnel in immersive fellowships within leading investment firms and defense technology companies. This initiative aims to enhance DoD expertise in cutting-edge technologies and innovative business practices, drive innovation within the DoD, strengthen public-private partnerships, and develop future leaders equipped to navigate the evolving defense landscape. By providing structured learning opportunities, mentorship, and real-world project experience, the program cultivates a more agile and innovative workforce, ultimately strengthening national security. FY 2025 Plans: OSC, in collaboration with private sector stakeholders, is setting up a program structure aligned with OSC priorities, personnel rhythms, and programmatic needs. This collaborative design phase will be used to formalize program characteristics, secure necessary approvals for a beta implementation, and recruit inaugural participants. FY 2026 Base Plans: In FY 2026, OSC will begin placing key DoD personnel in private sector firms as a part of the fellowship. FY 2026 OOC Plans: N/A FY 2025 to FY 2026 Increase/Decrease Statement: Funding for this program in FY 2025 was a Congressional add. Note

New Start (Y/N): No

CDAO realigned several project codes and transferred funding to other PEs to provide better transparency and improve project management. For example, CDAO transferred all AI/ML Scaffolding activities and funding to the Apha-1 PE0604133D8Z to create a single PE for its AI and autonomy efforts. CDAO transferred Improved Data Quality and Foundation Enablers funds to the new BA-08 PE 0608140D8Z because they support Advana platform maturation. CDAO repurposed Pcode for Management Innovation Pilots based on Congressional direction in FY24, and created Pcode 786 for Acquisition Ecosystem to break it out from Foundation Enablers and provide transparency on these activities while keeping this function in Dem/Val. The purpose of the Dem/Val Activities PE to prototype and mature new efforts is better represented under this new structure and provides better visibility to CDAO programs.

A. Mission Description and Budget Item Justification

The Chief Digital and Artificial Intelligence Officer (CDAO) Demonstration and Validation (Dem/Val) PE line supports prototyping of new data, analytics, and AI capabilities and acquisition, policy, process, and people approaches that are not yet mature enough to field at scale. This line enables CDAO to test and validate new approaches to digital technology capability development and delivery and inform future procurement activities, policy changes, and/or acquisition models to enable DoD adoption of data, analytics, and AI.

Note Project 081 / AI/ML Scaffolding activities has been realigned to PE 0604133D8Z (Alpha-1) starting FY26 and across the FYDP to create a single PE focused on CDAO AI activities with the intent of improving transparency and oversight, and maturing execution and scalability of AI capabilities in DoD.												
A. Mission Description and Budget Item Justification The mission of the AI/ML Scaffolding project was developing, providing, brokering, and advising on the infrastructure, data, tools, services, and best practices needed to accelerate appropriate AI/ML development and adoption. For FY2026, AI/ML Scaffolding funds were realigned to PE 0604133D8Z (Alpha-1).												
B. Accomplishments/Planned Programs (\$ in Millions)									FY 2024	FY 2025	FY 2026	
Title: AI/ML Scaffolding Description: The mission of the AI/ML Scaffolding project was developing, providing, brokering, and advising on the infrastructure, data, tools, services, and best practices needed to accelerate appropriate AI/ML development and adoption. For FY2026, AI/ML Scaffolding funds were realigned to Alpha-1. Previous projects funded by AI/ML Scaffolding have been reprioritized under Alpha-1 or have concluded. FY 2025 Plans: In FY2025, Program Element (PE) funding supported six project codes: (1) P081 AI/ML Scaffolding; (2) P082 Digital Talent Management (DTM); (3) P083 Defense Digital Service (DDS); (4) P084 Improved Data Quality; (5) P786 Acquisition Ecosystem; and (6) P067 Chief Technology Officer (CTO). The prior year funding project codes did not continue after FY 2024 though the overarching goals of the program element are the same. The six project codes provide traceability for specific CDAO efforts in this line. FY 2025 to FY 2026 Increase/Decrease Statement: FY 2026 decrease reflects a realignment of projects for better visibility and enterprise enablement.									-	143.060	-

Note New Start (Y/N): No												
A. Mission Description and Budget Item Justification The Digital Talent Management project code supports CDAO's role as the OSD Functional Community Manager (FCM) for the data and AI workforce, referred to as the Defense Digital Workforce (DDW). Funding enables education, training, and community management for the DDW.												
B. Accomplishments/Planned Programs (\$ in Millions)										FY 2024	FY 2025	FY 2026
Title: Digital Talent Management Efforts Description: Requested funding would support skills assessment, training programs, and learning management for data and AI workforce tracking and reporting. FY 2025 Plans: In FY 2025, this RDT&E funding would develop a competency-based skills assessment tool to gauge individual proficiency in specific data and AI skills, identify gaps, and generate customizable training plans to address the identified gaps. It would incorporate data and AI training materials into career development programs and track workforce readiness to address the critical talent gaps in AI. It would support development of a new training course for Senior Leaders. It would also create a new Learning Management System to host educational and training resources in one location and support reporting requirements to track AI workforce capability and capacity. FY 2025 to FY 2026 Increase/Decrease Statement: In FY26, CDAO realigned talent management activities across all PEs to support workforce training and development as part of the fielding of new data, analytics, and AI capabilities. Embedding workforce investments with new capability delivery ensures proper training and upskilling for all DoD employees to use data, analytics, and AI, thus facilitating broader/faster adoption per CDAO's mission.										-	23.031	-

Note

In FY26, efforts in Project Code 083 were realigned to other PEs or concluded. FY26 contains no funding in this line.

A. Mission Description and Budget Item Justification

In FY25, Foundational Enablers funded a variety of CDAO projects and capabilities, which in FY26, moved to other project codes or PEs or concluded. The mapping follows:

- Acquisition Ecosystem (FY26: remains in this PE, moved to code 786)
- Advana Platform (FY26: moved to new BA08 Pilot PE0608140D8Z)
- SUNet (FY26: moved to new BA08 Pilot PE0608140D8Z)
- CDAO Centrally Managed Support (FY26: no funding, concluded activities)
- Defense Digital Services (FY26: no funding, concluded activities)
- Enterprise Platforms and Capabilities (EPC): Data Engineering, Data Operations, and Data Governance (FY26: moved to new BA08 Pilot PE0608140D8Z)

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Foundational Enablers Efforts	-	193.488	-
Description: CDAO's Foundational Enablers efforts in this PE include: • Acquisition Ecosystem: provides rapid, effective, and efficient acquisition support to CDAO and DoD at large (through decentralized offerings) by providing contracting capabilities, guidance, and training for the acquisition workforce on AI. The CDAO Acquisition Ecosystem provides several types of contracting mechanisms / vehicles such as CSOs, OTAs, BOAs, and BPAs; expedited contracting processes; and AI-driven tools to streamline federal procurements. (Moves to project code 786 in FY26.) • Advana Platform: Advana is DoD's enterprise data acquisition, data operations, and data analytics capabilities within a government and military-owned environment hosted in DoD and NGA clouds, as well as available at the edge. Advana delivers 24/7 continuous operations on NIPR, SIPR, JWICS, SUNet, and Edge environments and supports a rapidly growing user community that now exceeds 100,000+ users, 500+ data connections, hosts the DoD Federated Data Catalog, hosts the DSD Pulse applications, and provides a DevSecOps pipeline to field 3rd party applications on DoD data. The "Creating Data Advantage" Memo, signed by DSD on 5 May 2021, directs that "The Advancing Analytics (Advana) platform is the single

enterprise authoritative data management and analytics platform for the Secretary of Defense, Deputy Secretary of Defense, and Principal Staff Assistants (PSAs), with inputs from all DoD Components". (Moves to new BA08 Pilot PE0608140D8Z in FY26) • Secure Unclassified Network (SUNet) Enterprise: SUNet is a National Security System used as an AI development environment and multi-national collaboration & data sharing environment for non-traditional partners (e.g., Sky Blue). Its unique capabilities include: - Unique and Extensible US Government Platform: Designed as an Open Architecture, Non-Proprietary USG capability - Internet accessible, GIG-Waiver precludes special hardware/software required to access, alternative MFA - Supports commercial, non-traditional development, and non-CAC multi-national partners; government (IL-5) and Industry Data Protection; Hybrid, On-Prem, Multi-cloud Enterprise. - AI Development & Non-Traditional Partner Data Sharing used to deploy 250+ AI models, label 208+ million objects, and build over 1,000+ models from 30+ vendors - Partner collaboration platform for 25+ international partners, multiple mission profiles (SUNet moves to new BA08 Pilot PE0608140D8Z in FY26) • CDAO Centrally Managed Support: Centrally managed support provides basic and advanced workforce enabling tools to empower the CDAO to advance mission for DoD. (These activities conclude by FY26.) • Defense Digital Services (DDS): The Defense Digital Services (DDS) effort provides DoD with highly-technical expertise to advise on and rapidly develop, prototype, and deploy digital solutions to meet the needs of the warfighter and the policymaker. Digital solutions provided by this effort include prototypes, technology assessments of government digital services, cybersecurity solutions via bug bounties, and surging digital services for crises response. (These activities conclude by FY26.) • Enterprise Platforms and Capabilities (EPC) Data Engineering, Data Operations, and Data Governance: Implements enterprise data acquisition, data engineering, data governance, data cataloging, and data integration capabilities available to 100,000+ Advana users and is required to support several top-priority CDAO use cases across the Department. These top-priority use cases include DSD Pulse metrics, the DoD Audit, the Federated Data Catalog, GIDE, J4 Operational Logistics, J35S Orion, J8 GFMDI, J7 JEXNET, all BASI products, and 300+ production applications hosted in the Advana platform. This effort also develops and sustains the expanding the number of enterprise data connections feeding data from Authoritative Data Sources (ADS) into the Federated Data Catalog hosted in Advana. This effort manages and currently sustains 500+ active data connections feeding data into the Federated Data Catalog. (EPC moves to new BA08 Pilot PE0608140D8Z in FY26.) FY 2025 Plans: In FY 2025, Foundational Enablers continue and expand upon FY 2024 activities. Details follow.

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026
• Acquisition Ecosystem funding supports: - TradewindAI.com: Webpage of news & offerings - Tradewind Portal: OT Challenge postings, Requests for Information, Communities of interest (inc. TryAI CSO, AI Talent 2.0 BOAs, and other vehicles) - Solutions Marketplace: A centralized, video repository of readily awardable AI/ML, digital and data analytics solutions - Contract Writing System/AcqBot: Prototype project which applies AI, natural language processing (NLP), and robotic process automation (RPA) in a practical manner and intuitive workflow to assist with requirements generation - Public Private Partnership (PPP): Pilot to establish a new paradigm for a 'Global – Open & Trusted Ecosystem of Partners' where IP and work products can be shared as well as protected - On Demand AI Fundamentals: Pilot training program to teach acquisition officials how to identify AI opportunities, set strong foundations for implementation, and overcome bureaucratic and procurement barriers • Advana Platform funding supports: - Continuous delivery, sustainment, and expansion of operational enterprise capabilities available in Advana NIPR, SIPR, JWICS, and Edge environments. - Institutionalize data, analytics, and AI-driven decision advantage Drive timely, data-driven decisions and actions that support mission success by embedding accessible and approachable products and capabilities into the daily operations of our customers. - Deliver a positive and reliable customer experience for all users Provide an intuitive, interactive, and pleasant customer experience across applications and tools that make it easy to get work done, request assistance, and provide feedback. - Provide secure, scalable, and cost-effective enterprise solutions Deliver scalable, secure, and audit-compliant architecture and enterprise capabilities. Maximize our return on investment by operating as a secure, cost-effective shared service provider on multiple security domains with ATO (NIPR, SIPR, JWICS, SUNet, and Edge). - Accelerate DoD's data, analytics, and AI capabilities with world-class enterprise offerings Deliver world-class capabilities that lead DoD to adopt leading transformative data solutions (e.g., predictive / prescriptive methods, emerging capabilities) to drive data driven decision advantage at scale and enable mission and warfighter success. • CDAO Centrally Managed Support funds emerging Foundational Enablers, cyber security support activities, Defense Digital Service prototyping and cybersecurity activities, and technology assessments of in-development digital solutions. • EPC Data Engineering, Data Operations, and Data Governance funds continuous delivery, sustainment, and expansion of existing data connections, automated data operations, cross domain service integrations, and data cataloging enterprise services available in Advana NIPR, SIPR, JWICS, and Edge environments, including:

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
- Delivering a scalable, automated, event-driven enterprise service designed to automatically move data between the Advana landing zone throughout the medallion architecture, through automated cross-domain solutions, and to external partner platforms using external data sharing capabilities available in Advana. - Managing the automated data operations layer and data governance capabilities available in the Advana NIPR, SIPR and JWICS environment. This architecture currently supports 500+ operational data connections, 100,000+ Advana users, and 2,000+ Federated Data catalog users. - Delivering and continuously expanding the DoD Federated Data Catalog hosted in the Advana environment. This Data Catalog provides all users, data stewards, and senior leadership with an automated enterprise capability to enable large-scale data discovery, cataloging of AI/ML models, and provides detailed metadata for each catalog asset. • SUNet Enterprise funds: - Integration with the Advana ecosystem of enterprise platforms and capabilities operating on NIPR, SIPR, JWICS, and Edge. - Pipelines: CDAO will provide scalable, reliable, standardized pipelines for DoD to provide baseline requirements for AI development to include Data, AI, and Tool pipelines. - Partners: SUNet will enable DoD users, non-traditional vendors, and academia to develop AI across the enterprise. - Cross platform connection: SUNet is a key piece in the federated AI enterprise that provides secure connections to other platforms (e.g., Advana, SIPR) to push data, models, and accredited tools are nascent. This effort will scale, standardize, and automate the process to improve the AI landscape, allowing best practices to be shared across platforms. - Platform Enhancements: State of the art tools, software, and licenses will be made available to users along with enhancements to make the platform cheaper, efficient, robust, and scalable - Hardware Refresh: Large portions of the hardware are nearing end of life. Investments in new, cutting-edge processors, firewalls, switches, etc. will enhance the platforms security and performance. - Security Enhancements: Critical security teams have been short staffed or over-burdened with additional tasks. In addition to upgrading tools, licenses, and hardware, security teams will be supplemented. <i>FY 2025 to FY 2026 Increase/Decrease Statement:</i> The Foundation Enablers programs were broken out at the recommendation of Congress for accurate program alignment to intended PE functions. This provides clearer visibility to the programs previously under Foundation Enablers. Advana and SUNet were aligned under the new BA08 PE 0608140D8Z - Enterprise Platforms and Capabilities - Software Pilot Program. Acquisition Ecosystem became its own project code 786 under Dem/Val Activities.

A. Mission Description and Budget Item Justification

This is a continuation of the initial FY24 Management Innovation Pilot (H.R. 118-121) and seeks to improve warfighter lethality and DoD efficiency by using data, analytics, and AI to modernize business practices across CDAO and DoD.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Management Innovation Pilots	-	11.382	2.247
Description: This is a continuation of the initial FY24 Management Innovation Pilot (H.R. 118-121) and seeks to improve warfighter lethality and DoD efficiency by using data, analytics, and AI to modernize business practices across CDAO and DoD. Funding will extend select FY2024-25 efforts into FY26.			
FY 2025 Plans: CDAO selected pilot projects based on Congressional intent for Management Innovation, namely to: 1) improve financial management and auditability of DoD, 2) replace and/or streamline human tasks, and 3) improve efficiency of the Department. This project enables CDAO to continue and expand the spirit of the Management Innovation Pilot to mature key efforts and/or meet new goals. Pilot projects include using data and AI to accelerate a clean audit in DoD, speed up acquisition and cyber security processes, digitize budget management, and improve background investigations.			
FY 2026 Plans: Funding will extend some management projects from FY24-25 into FY26 based on success criteria and impact.			
FY 2025 to FY 2026 Increase/Decrease Statement: Decrease represents overall funding availability and projected management innovation efforts.

A. Mission Description and Budget Item Justification Funding for Acquisition Ecosystem leverages digital and AI technologies to improve acquisition processes and provides training to the acquisition workforce on how to procure digital and AI technologies more effectively. The goal is to develop, sustain, and share across the acquisition workforce acquisition approaches that enable greater agility, speed, and mission utility when procuring digital and software-based technologies.												
B. Accomplishments/Planned Programs (\$ in Millions)									FY 2024	FY 2025	FY 2026	
Title: Acquisition Ecosystem									-	-	6.949	
Description: Funding supports two focus areas: Acquisition of AI: Sharing creative approaches across the acquisition workforce to improve agility, speed, and mission utility to improve acquiring AI and software-based commercial capabilities. AI For Acquisition: Development and sustainment of DoD acquisition and contracting processes that provide the agility and rapid procurement of AI-enabled commercial solutions needed to meet evolving mission needs.												
FY 2026 Plans: FY 2026 continues and expands CDAO Acquisition Ecosystem activities, including: Acquisition of AI: CDAO practices and offers agile contracting pathways, like the Tradewinds Solution Marketplace (TSM), which leverages existing acquisition authorities by fully aligning with FAR, DFARS, CSO and OTA standards and decentralized ordering vehicles to create easier access to contracting vehicles for DoD AI For Acquisition: CDAO experiments with AI enabled acquisition tools, such as Acqbot, Bidscale, Pryon, and Turbo Innovate to create an AI-enabled end-to-end contracting process.												
FY 2025 to FY 2026 Increase/Decrease Statement: FY 2026 increase reflects portfolio realignment from 081 for better program visibility as recommended by Congress.

Note

The FY 2026 request for Alpha-1 includes \$441,821 thousands of discretionary and \$140,749 thousands of mandatory (reconciliation) for a total of \$582,570 thousands. The mandatory funds support Integrated Enablers for All-Domain, Attributable Autonomous Systems. Further information for this reconciliation request is provided in Chapter 6 of the Reconciliation Exhibit

A. Mission Description and Budget Item Justification

The Alpha-1 PE provides enterprise digital enablers and prototyping efforts to enable the Joint force to access, develop, and adopt artificial intelligence (AI) in warfighting, readiness, and business use cases more easily, securely, reliably, and responsibly. Alpha-1 funding supports AI activities associated with computer vision, generative AI (GenAI), autonomy, and Responsible AI (RAI) adoption. It also includes funding to recruit, train, educate, and enable the DoD workforce to advance AI adoption. Specific activities include enterprise data acquisition and labeling, AI development pipelines, testing and evaluation tools and processes, RAI capability development and enablement, AI and autonomy modeling and simulation, access to proven and emerging AI models, and associated compute infrastructure costs. Investments in these enterprise digital enablers allow DoD to invest centrally in common enablers to ensure interoperability and drive efficiencies, while multiple organizations and platforms can then leverage the capabilities locally in their use cases.

A. Mission Description and Budget Item Justification												
AI/ML development in the DoD has a high barrier to entry in terms of cost, certification to operate, workforce expertise, contracting, etc. DoD entities often independently solve the same problems and develop solutions that are not interoperable with other efforts. Alpha-1 provides enterprise services and capabilities that enable AI efforts across DoD organizations and mission areas.												
B. Accomplishments/Planned Programs (\$ in Millions)									FY 2024	FY 2025	FY 2026	
Title: Alpha-1 Development									52.909	53.307	-	
Description: The Alpha-1 PE provides enterprise digital enablers and prototyping efforts to enable the Joint force to access, develop, and adopt artificial intelligence (AI) in warfighting, readiness, and business use cases more easily, securely, reliably, and responsibly. Alpha-1 funding supports AI activities associated with computer vision, generative AI (GenAI), autonomy, and Responsible AI (RAI) adoption. Investments in these enterprise digital enablers allow DoD to invest centrally in common enablers to ensure interoperability and drive efficiencies, while multiple organizations and platforms can then leverage the capabilities locally in their use cases.												
FY 2025 Plans:												
Alpha-1 funding supports:												
- Autonomy: Enterprise data acquisition and labeling, automated target recognition (ATR) AI development, and digital providing ground modeling and simulation efforts in support of Replicator autonomy efforts.												
- Generative AI: Fielding GenAI capabilities and engineering support to Combatant Commands, the Joint Staff, and OSD to improve warfighting, readiness, and business outcomes.												
- RAI/T&E: Developing AI test and evaluation tools to ensure AI capabilities are effective, secure, and reliable.												
FY 2025 to FY 2026 Increase/Decrease Statement:												
Decrease reflects internal project realignment for better program visibility.

Appropriation/Budget Activity 0400 / 5	R-1 Program Element (Number/Name) PE 0604133D8Z / Alpha-1 Development Activities	Project (Number/Name) 081 / Alpha-1 Development
Remarks The CDAO goal and strategy is to enable DOD Components to build AI/ML capabilities more easily, securely, reliably, and responsibly. ALPHA-I's mission is to eliminate the gap between AI's R&D, DEV-OPS, Acquisition, and data-pipeline deployment while providing all the ML-OPS tools for the DoD at Scale. Alpha-I should provide a service to the department that is responsible for strengthening and integrating data, analytics, artificial intelligence and machine learning (AI/ML), Development Operations, and digital solutions. This will be accomplished via collaboration and integration with existing and emerging DoD AI/ML programs and projects, and by selectively making investments to create portfolios of common, interoperable capabilities, tools, and services to enable the development and adoption of AI/ML across the DoD. Enterprise Services, Interoperability, and Collaboration will be key to develop, provide, broker, and advise on the design and development of infrastructure, apps, tools, and services needed by the variation of customers across the warfighting domains and platforms. Specifically focusing the tool sets to support the building of AI within narrow AI, generative AI and autonomy. As the market continues to mature rapidly in technology, intelligence, etc., the CDAO will continue to adapt and prioritize work based on the Department's need, delivering the mix of capabilities and best practices that will help all DOD components. Delivery of requirements, data labeling, data mesh, consulting, and continuing of Testing and Evaluation will be critical for DOD if they want to succeed in any type of conflicts moving forward.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Autonomy Description: Drive coordinated enterprise-wide development of ATR models and autonomous systems with a focus on the data acquisition and labeling pipeline, synthetic data, model and simulation, and T&E services. CDAO will partner with NGA and DIU for the full AI/ML pipeline for ATR model development. CDAO will focus on data ingest, labeling, and model and sim capabilities or enterprise use. The FY 2026 request for Autonomy includes \$109.024 thousand of discretionary and \$16.000 thousand of mandatory (reconciliation) for a total of \$125.024. The mandatory funds support Integrated Enablers for All-Domain, Attributable Autonomous Systems. Further information for this reconciliation request is provided in Chapter 6 of the Reconciliation Exhibit. FY 2026 Plans: Acquire, label, and deliver data to support priority autonomy requirements. Expand M&S and synthetic data generation capabilities and availability. Replicate data pipelines and labeling capabilities on classified networks. Pilot new data modalities and data fusion techniques to accelerate new model development. Grow use of enterprise data acquisition and labeling capabilities to service more DoD projects. FY 2025 to FY 2026 Increase/Decrease Statement:	-	-	125.024

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026
FY 2026 increase reflects portfolio realignment from 081 for better program visibility as recommended by Congress.					
Title: Frontier AI Description: Provide available commercial capabilities and lead pilots to accelerate adoption of Frontier AI capabilities on mission areas through rapid prototyping and rigorous experimentation. Partner with GenAI companies and CCMDs to apply models to address gaps and develop assessments to properly evaluate capability. The FY 2026 request for Frontier AI includes \$320.815 thousand of discretionary and \$124.749 thousand of mandatory (reconciliation) for a total of \$445.564. Further information for this reconciliation request is provided in Chapter 6 of the Reconciliation Exhibit. FY 2026 Plans: Develop intake and assessment criteria for onboarding new pilots. Complete existing pilots and disseminate lessons learned or assist in transition planning in case of success. Enterprise purchasing of general use generative AI models for NIPR/SPIR /JWICS. Generative AI available cross multi cloud integration. Prototype generative AI solutions for warfighters, audit, and improving DoD efficiency. FY 2025 to FY 2026 Increase/Decrease Statement: FY 2026 increase reflects portfolio realignment from 081 for better program visibility as recommended by Congress.			0.000	-	304.815
Title: AI Theater Cloud (AITC) Description: AI Theater Cloud (AITC) plans, designs, delivers, and supports enterprise-level infrastructure, cloud, and other data-centric capabilities that increase the delivery of data, the speed of decision-making, and enhance warfighting capabilities of US, Allies, and partner nation mission partners. The project's technical solutions provide improved access to data and inference from artificial intelligence (AI) and other advanced analytics for Combatant Commands, Components, and Forward Deployed Elements including those in contested, degraded, or austere environments. There are three lines of effort in the project, Innovative Infrastructure Enhancements, Unclassified Collaboration Enclaves, and Classified Collaboration Enclaves. The Innovative Infrastructure LOE delivers robust and flexible infrastructure that supports effective and timely AI and data solution capabilities, removes long-haul latency and bandwidth limitations of existing communications infrastructure, and provides resilience for theater and edge users. The Unclassified Enclave LOE delivers cloud-based infrastructure access, user authentication, common collaboration tools, and shared database tools in unclassified enclaves that are secured with two factor authentication but do not require a US-only Common Access Card. An example solution from this LOE is the Sky-Blue enclave employed by the International Donor Coordination Center of the Security Assistance Group – Ukraine, operating in support of US EUCOM, NATO, and the EU. The Classified Collaboration LOE delivers similar capabilities but in enclaves authorized to process			0.000	-	11.982

A. Mission Description and Budget Item Justification

This Program Element supports the Interim National Defense Strategic Guidance to counter the growing multi-domain threat posed by China; Deterring strategic attacks against the United States, Allies, and partners; Deterring aggression, while being prepared to prevail in conflict when necessary – prioritizing the China challenge in the Indo-Pacific region, then the Russia challenge in Europe, and; Building a resilient Joint Force and defense ecosystem.

Nuclear Matters, System Development & Demonstration addresses the need to defend and deter against weapons of mass destruction threats and to safeguard personnel, prevent unauthorized access to equipment, installations, material, and documents, and to safeguard the foregoing against espionage, sabotage, damage, and theft. This program oversees advanced engineering development and rapid fielding throughout the DoD for an integrated and systemic approach to develop material solutions.

The Physical Security Enterprise and Analysis Program (PSEAP) avoids duplication of effort, ensures systems integration, and promotes interoperability and sustainability. The material solutions either (a) lead to a Program of Record, (b) become technology insertions into existing programs; or (c) advance to being a certified Commercial/Government off-the-shelf product. The PSEAP advances enterprise-level physical security RDT&E solutions to reduce risk created by current and emerging threat by analyzing, researching, developing, demonstrating, and evaluating interoperable solutions to transition capability to warfighters. Collaboration with DoD Components, other government agencies, and the international community to prioritize and close capability gaps is a top priority of the PSEAP and the physical security community.

National Technical Nuclear Forensics (NTNF) mission requirements and responsibilities derive from multiple source documents. Per National Security Presidential Memorandum 35 (NSPM 35), the DoD leads the U.S. Government (USG) post-detonation NTNF capability. NSPM 35 also directs that the US will maintain and advance a robust NTNF capability to detect, identify, locate, and characterize the attribution of the source of an actual or attempted nuclear or radiological attack in all environments, to include underground, underwater, in the atmosphere, and space. Per DoD Directive S-2060.04, the Office of the Undersecretary of Defense for Acquisition & Sustainment (OUSD(A&S)) is the office responsible for developing and leading the DoD's NTNF capabilities. Per the 2022 Nuclear Posture Review (NPR) Direction, greater investment in NTNF tools is required to ensure they remain responsive to the threat, and thus scientifically credible and internationally accepted to hold states facilitating acts of nuclear terrorism accountable. The FY 2022 – FY 2026 Nuclear Forensics and Attribution Strategic (NFAS) Plan requires an NTNF capability

Appropriation/Budget Activity 0400: <i>Research, Development, Test & Evaluation, Defense-Wide I BA 5: System Development & Demonstration (SDD)</i>	R-1 Program Element (Number/Name) PE 0604161D8Z / <i>Nuclear Matters, System Development & Demonstration</i>
--	--

to collect, analyze, and evaluate both air and ground post-nuclear detonation samples at accelerated directed timelines. The DoD mission to collect, analyze, and evaluate post-detonation prompt signals and nuclear debris is critical to our national defense and security to ensuring the USG can identify the source of nuclear material and hold those involved or supporting an attack accountable. Internal and independent assessments indicate that new capabilities are needed to sustain an effective deterrent against an unattributed nuclear attack and meet the challenges of future threats. This PE is the only DoD research, development, and test and evaluation (RDT&E) program focused on System Development and Demonstration for post-detonation NTNF capabilities. Without fully supporting these requirements, the DoD's ability to meet this critical deterrence need will be significantly degraded.

B. Program Change Summary (\$ in Millions)	FY 2024	FY 2025	FY 2026 Base	FY 2026 OOC	FY 2026 Total
Previous President's Budget	6.229	13.549	12.933	-	12.933
Current President's Budget	6.120	13.549	12.874	-	12.874

A. Mission Description and Budget Item Justification

The Physical Security Enterprise and Analysis Program (PSEAP) pursues the development of nuclear and conventional physical security materiel solutions in response to the stated needs and requirements of the Combatant Commands and Military Services. This program leverages commonalities in physical security requirements in order to closely balance and integrate the needs of users. The PSEAP is responsible for avoiding duplication of effort, ensuring systems integration, and promoting interoperability and sustainability. The materiel solutions either (a) lead to a Program of Record, (b) become technology insertions into existing programs; or (c) advance to being a certified Commercial/Government off-the-shelf product.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Physical Security System Capability Development Description: This program matures capability before transitioning to warfighter user community by developing physical security components and systems to support valid requirements while eliminating duplication of effort, pursuing the use of government and commercial off-the-shelf products, ensuring systems integration, and promoting interoperability and sustainability. Leverages RDT&E investments to achieve physical security enterprise-level solutions to deter, detect, delay, deny and defeat adversaries threatening nuclear and non-nuclear environments. Promotes government and appropriate industry standards for interoperability with existing programs of record to achieve cohesive system architectures. Improves transition of successful RDT&E innovations to DoD Acquisition agencies by using technology transition agreements and other tools to provide improved warfighter capabilities against asymmetrical, conventional and Weapons of Mass Destruction threats. FY 2025 Plans: - Counter-Uncrewed Systems across All Domains: Detect, Track, Identify and Defeat uncrewed systems across all domains including air, land, surface & subsurface (Attribution, deterrence and swarms should be considered). - Advancements in Artificial Intelligence & Machine Learning, as well as Countering AI/ML and Autonomy: Leverage advancements in AI/ML and develop systems to effectively counter emerging threats posed by adversarial use of AI and autonomous technologies. (Post Quantum encryption may also be considered)	6.120	5.616	4.851

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026
- Insider Threat Detection: Develop insider threat detection systems to detect, mitigate, and prevent unauthorized activities within organizational networks, enhancing security against internal risks. - Maritime Security (Surface & Subsurface): Maritime security, both surface and subsurface, centered on the need for advanced and integrated sensor networks capable of effectively detecting, tracking, identifying, and responding to evolving threats in vast and challenging maritime environments. - Detection Beyond Installation Perimeter: Develop advanced surveillance and sensor technologies to effectively monitor and detect potential threats in surrounding areas, ensuring wide-ranging security coverage beyond installation perimeters. - Intrusion Detection on Physical Security System: Improve network intrusion detection on physical security system networks to detect and prevent unauthorized access to a physical security systems or networks (i.e., invest in cybersecurity intrusion detection system (IDS), like a physical security IDS). FY 2026 Plans: - Supply chain security: Mitigate vulnerabilities using physical security equipment/technology to counter potential threats to organic industrial base facilities and ports receiving materials from suppliers and shipping assets the supply DoD Services and foreign partners around the globe. - Mature All Domain Counter-Uncrewed Systems (C-UXS): Continue to address the proliferation of uncrewed systems used by our adversaries by advancing C-UXS capabilities that change the risk calculus for the adversary (i.e., deterrence) and increase Joint Force survivability and resiliency against UXS. - Access control to DoD ships and aircraft: Vetting and screening personnel by biometrically screen individuals against the DoD Automated Biometric Identification System, to also collect/transmit the info used to process, track, and transport evacuees to safe havens. - Modernize physical security systems: Replace antiquated and expensive sensors with unacceptable false alarm rates that require a persistent personnel presence with that uses artificial intelligence and machine learning to not only to deter and detect but to also track and assess threats. - Interoperability: Update PSEAG's Security Equipment Integration Working Group's Interface Control Documents to address future interoperability standards for physical security sensors and systems FY 2025 to FY 2026 Increase/Decrease Statement: FY 2025 to FY 2026 decrease reflects changes in budget priorities within the DoD

A. Mission Description and Budget Item Justification

Per NSPM 35, the DoD leads the USG post-detonation NTNF capability and directs the U.S. to maintain and advance NTNF capabilities leading to the attribution of the source of an actual or attempted nuclear attack in all environments. Per the 2022 NPR, greater investment in NTNF tools is required to ensure they remain responsive to the threat. Per DoDD S-2060.04, OUSD(A&S) is the DoD office responsible for DoD's NTNF capabilities. Per the FY 2022 – FY 2026 NFAS Plan, accelerated timelines are required for the NTNF capability to collect, analyze, and evaluate both air and ground post-nuclear detonation samples. This Program Element is the only DoD RDT&E program focused on System Development & Demonstration for NTNF capabilities.

Collecting, analyzing, and evaluating post-detonation prompt signals and nuclear debris is critical to ensure the USG can identify the source of nuclear material and holding those involved or supporting an attack accountable is critical to our national defense and security. Swift and accurate forensic and attribution capabilities are vital to supporting the President and Secretary of Defense in developing an appropriate, and timely, national response to a nuclear event and to prevent future attacks. An effective NTNF capability ensures potential adversaries, or those who support them, know that they will be held accountable if they use proxies or other non-traditional delivery (e.g., false-flag operations) of nuclear weapons against the U.S., U.S. interests, or allies. Both internal and independent studies indicate that continued improvement to the USG's NTNF capabilities is needed to sustain a credible deterrent against an attempted or actual nuclear attack.

Additionally, this program sustains perishable U.S. technical expertise at the operational DoD laboratories required to respond to a post-detonation NTNF event. The DoD's laboratory capability in this area is limited by capacity and technical expertise. Increased support of the DoD's NTNF mission is crucial to prevent attrition of current capabilities and knowledge base, ensure that this critical and unique deterrence capability is not lost, putting the security of the nation and the ability to deter specific kinds of nuclear attack at risk, and meeting a higher standard of timeliness and confidence as directed.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: NTNF Capability Development	-	7.933	8.023
Description: The development of capability to collect, analyze, and evaluate prompt signals and nuclear debris is critical to our national defense and security. Swift and accurate forensic analysis and contribution to USG attribution (identification) processes are vital to supporting the President and Secretary of Defense in developing an appropriate national response to a nuclear

event and to prevent future attacks in a timely manner. Recent Russian nuclear threats related to Ukraine have sharpened the understanding of, and need for, robust nuclear forensics capabilities. NTNF investments support development and retention of technical nuclear forensics expertise and improvements in CONUS and OCONUS collection and fixed laboratory processes. Investments will also support legacy NTNF capabilities and the operationalization of new capabilities. <i>FY 2025 Plans:</i> - Prepare elements necessary to model, simulate, and develop data outputs for injects for prompt and material diagnostic requirements necessary to conduct an end-to-end exercise for the NTNF mission. - Execute a National-Level technical demonstration, or series of technical demonstrations, with Interagency Partners to test the full nuclear forensics process from sample collection to final technical assessment. - Operationalize deployed nuclear detection prompt signals sensors (the United States Prompt Detection System), connecting the in-field sensors to active operational centers so that their data feed can be continuously monitored. <i>FY 2026 Plans:</i> - Continue to prepare elements necessary to model, simulate, and develop data outputs for injects for prompt and material diagnostic requirements necessary to conduct an end-to-end exercise for the NTNF mission. - Continue to execute a National-Level technical demonstration, or series of technical demonstrations, with Interagency Partners to test the full nuclear forensics process from sample collection to final technical assessment. - Continue to operationalize deployed nuclear detection prompt signals sensors (the United States Prompt Detection System), connecting the in-field sensors to active operational centers so that their data feed can be continuously monitored. <i>FY 2025 to FY 2026 Increase/Decrease Statement:</i> FY 2025 to FY 2026 increase reflects changes in budget priorities within the DoD.

A. Mission Description and Budget Item Justification

This program supports the Department's initiatives to Defend the Homeland, Provide Nuclear Deterrence, and Build Sustainable and Long-Term Advantage.

This program provides in-depth technical, engineering, integration support, to manage, analyze, and inform acquisition and resourcing decisions in information and integration portfolios, to include nuclear weapons systems; nuclear command, control, and communications (NC3); missile defense; command, control, communications, computers, intelligence, surveillance, and reconnaissance (C4/ISR); and space systems

- C4ISR: Develop and maintain a roadmap to improve data link interoperability, data link waveform standards, and global enterprise capabilities, enabling resilient, survivable, federated networks.
- NC3 and Strategic Deterrence: Execute NC3 Enterprise Capability Portfolio Management on behalf of the Office of the Under Secretary of Defense for Acquisition and Sustainment (USD(A&S)). Provides acquisition expertise to recapitalize the nation's nuclear deterrent and reduce risk in nuclear modernization programs.
- Space and Missile Defense (SMD): Provides acquisition expertise to inform synchronized modernization and fielding of space and missile defense systems, including Space Control, Remote Sensing, Satellite Communication (SATCOM), Position, Navigation and Timing (PNT), launch, and homeland and regional missile defense capabilities.

A. Mission Description and Budget Item Justification

Provide in-depth technical, engineering, integration support, and system of system analysis for space, missile defense, cyber, C4MD, NC3, and nuclear delivery system modernization program portfolio management.

- C4ISR: Develop and maintain a roadmap to improve data link interoperability, data link waveform standards, and global enterprise capabilities, enabling resilient, survivable federated networks.
- NC3 and Strategic Deterrence: Execute NC3 Enterprise Capability Portfolio Management on behalf of the OUSD(A&S). Provides acquisition expertise to recapitalize the nation's nuclear deterrent and reduce risk in nuclear and NC3 modernization programs.
- SMD: Provides acquisition expertise to inform synchronized modernization and fielding of space and missile defense systems, including Space Control, Remote Sensing, SATCOM, PNT, launch, and homeland and regional missile defense capabilities.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Joint Information and Capability Modernization	9.406	12.893	10.527
Description: FY 2024 Accomplishments: C4ISR: - Performed Bandwidth Efficient Common Data Link (CDL-BE) compliance analysis on over 120 platforms/users, evaluated new and evolving industry and government waveforms, and identified data transport plans for emerging capabilities. - Completed two National Intelligence Acquisition Boards (NIAB), one MS-A and four MS-B, authorizing the full-scale development of intelligence community major systems acquisitions. - Executed the initial Joint All-Domain Command and Control (JADC2) Integration Acquisition Portfolio Review (IAPR), evaluated current JADC2 acquisitions to identify acquisition challenges and proposed extensible reforms to the Defense Acquisition System, the Planning, Programming, Budgeting & Execution (PPBE) process, and the Joint Capabilities Integration & Development Systems. - Executed A&S co-chair function within the C3LB, conducted strategic planning, prioritization, policy execution, resource review, and oversight; addressed Link 16, Tactical Data Link Portfolio Management, Emergency Mass Warning and Notification, Next Generation 9-1-1, High Frequency Governance, SATURN Lead Service, and SATCOM Force Design Assessment. - Executed A&S leadership role within the Congressionally directed 5G Cross Functional Team, focused upon accelerating acquisition and sustainment of 5G capabilities and services.

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
- Provided technical and acquisition support to the JADC2 Cross Functional Team (CFT), provided coordination and AO support for reviews of JADC2 Reference Architecture, and developed JADC2 Implementation Plan products to support critical cross-functional team timelines and deliverables. - Implemented US/France datalink interoperability between 4th/5th gen platforms and supported United States/United Kingdom Federated Network C3 joint cooperation group. - Provided acquisition leadership and technical support to Department of Defense Chief Information Office-led Electro-Magnetic Spectrum efforts. - Developed the FY 2025 Joint Tactical Network Center Management Plan and Tri-Military Department Resource Plan which align the DoD's prioritized Joint communications needs and requirements between the Tactical Communications Senior Steering Group, the Communications Technology and Waveform Working Group, Service sponsors, and other key Stakeholders. NC3 and Strategic Deterrence: - Supported the NC3 Capability Portfolio Manager with analysis presented to senior leadership bodies (NC3 Deputy's Management Action Group, Council on Oversight of the National Leadership Command, Control, and Communications System (CONLC3S), etc.) and recommended investment and policy alternatives. - Conducted NC3 IAPR which identified schedule and integration risks associated with recapitalization of fixed, ground mobile, and airborne command and control platforms. - Partnered with United States Strategic Command (USSTRATCOM) NC3 Enterprise Center to evolve the NC3 Capability Planning Guidance for FY 2028-2032. Revised and implemented solutions to ensure NC3 protection of critical NC3 information through revision of security assurance policy and developing a long-term plan for implementing security solutions to NC3 government and industrial base partner using emerging commercial standards. - Supported the recapitalization of the nation's nuclear deterrent, drove risk reduction in nuclear delivery system modernization programs, enhanced sustainment of fielded nuclear capabilities, supported Department-wide efforts to execute according to the NPR implementation plan. - Led numerous Department-wide engagements for the statutorily-required OUSD(A&S) Sentinel Intercontinental Ballistic Missile (ICBM) Program Nunn-McCurdy evaluation and Sentinel ICBM Program Technical Baseline Review, fostered whole of government support for the program's initial outreach to facilitate future program restructure efforts. - Conducted one In-Progress Review (IPR) for the Acquisition Category ID (ACAT 1D) Sentinel ICBM Program and two IPRs for the Long Range Standoff Weapon (LRSO) Program, reviewing cost, schedule, performance, and risk of these critical strategic deterrence programs. The Sentinel Program IPR provided an update on the progress of the Sentinel ICBM Program restructure, as directed from the OUSD(A&S) Sentinel ICBM Program Nunn-McCurdy Acquisition Direction Memorandum (ADM). For LRSO, the IPRs ensured a thorough examination of the program's execution within the Engineering and Manufacturing Development phase and secured OUSD(A&S) ADMs authorizing advanced procurement of obsolete parts to reduce program risk as it approaches its Production Phase within the acquisition life cycle.

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026
- Led the establishment of the Nuclear-Armed, Sea-Launched Cruise Missile Program per the FY24 NDAA requirement, providing POTUS additional strategic deterrence and response options. - Authored and delivered Congressionally mandated 20-yr Reentry Vehicle Roadmap to the Hill – leveraged it to advocate for additional industrial base funding in PBR26 - Continued successful advocacy with Test Resource Management Center for nuclear systems testing and infrastructure support/upgrades - Directly supported the Nuclear Deputy’s Management Action Group with analysis presented to senior leadership bodies within the Nuclear Weapons Council Working Groups and sub-working groups to support investment and policy opportunities within nuclear modernization activities. SMD: - As co-chair of the PNT oversight council, performed oversight and cross-Service coordination of PNT modernization acquisitions to improve DoD warfighting capability. - Conducted Space Control mission thread analysis to identify schedule risk and integration challenges relating to the mission essential function in executing OPLANS. - Performed portfolio management of SATCOM, Remote Sensing, Space Control, PNT, Assured Access to Space, and Missile Defense acquisitions. Identified multi-Service programmatic disconnects for development, fielding, and operations of space, ground, and user capabilities; engaged with joint community to develop resolution courses of action FY 2025 Plans: C4ISR: - Execute A&S co-chair function of the C3LB governance council, performing oversight and cross-Service coordination of public safety communications, tactical radio and networks, TDL, and common data link modernization acquisitions to improve DoD system interoperability. - Perform acquisition oversight/management, programmatic (cost, schedule, & performance), and technical data assessment to ensure continued progress of Intelligence Community Major Systems Acquisitions and Special Interest Acquisition, including projected increases for space based ISR and targeting capabilities. - Execute further JADC2 Integration Acquisition Portfolio Reviews (IAPRs), evaluate current and emerging JADC2 acquisitions to identify acquisition challenges and proposed extensible reforms to the Defense Acquisition System, the Planning, Programming, Budgeting & Execution process, and the Joint Capabilities Integration & Development Systems. - Provide technical and acquisition support to the JADC2 CFT, provided coordination and AO support for reviews of JADC2 Reference Architecture, and developed JADC2 Implementation Plan products to support critical cross-functional team timelines and deliverables.

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026
- Provide technical assessments and enterprise-level analysis in support of USD(A&S)'s role as the Principal Staff Assistant on Common Data Links and Joint Cyber Command & Control Systems; develop CDL database; conduct assessment of BE-CDL compliance - Continue support to OUSD(A&S) International Cooperation activities in line with the interim National defense strategy to strengthen alliances and attract new partners. Continue coordination for Yockey waivers, DoD Advocacy Requests, and Policy issues. Work with France to define an interoperability roadmap for 2030 and beyond. - Continue the TDL capability roadmap by synchronizing Department acquisition strategies to field next generation waveforms, gain efficiencies, and maintain Interoperability between the Services, allies, and partner nations. - Oversee acquisition and sustainment activities designed to mature, increase the capacity, capability, and resiliency of DoD's intelligence, surveillance, and reconnaissance space, airborne, and terrestrial data processing, exploitation, transportation, and distribution networks - Provide acquisition leadership and technical support to DoD CIO-led Electro-Magnetic Spectrum efforts as well as strategy and roadmap development to support Congressional and DoD senior leader deliverables. - Continue oversight of JTNC coordination activities and maintain the JTNC Management Plan as a living document reflecting priorities from the Tactical Communications Senior Steering Group, the Communications Technology and Waveform Working Group, Service sponsors, and other key Stakeholders. NC3 and Strategic Deterrence: - Partner with USSTRATCOM NC3 Enterprise Center to evolve the NC3 Capability Planning Guidance for FY 2028-2032. Revise and implement solutions to ensure NC3 protection of critical NC3 information through revision of security assurance policy and developing a long-term plan for implementing security solutions to NC3 government and industrial base partner using emerging commercial standards. - Support the NC3 CPM with analysis presented to senior leadership bodies (NC3 Deputy's Management Action Group, Council on Oversight of the National Leadership Command, Control, and Communications System, etc.) and recommend investment and policy alternatives. - Complete NC3 Integrated Acquisition Portfolio Review (IAPR) to identify programmatic schedule risk and integration challenges focused on transitioning advanced networking capabilities into programs to better integrate command nodes and elements and improve dynamic resiliency against modern threats. Space and Missile Defense: - Provide in-depth technical, engineering, integration support, and system of system analysis for space systems and missile defense modernization program portfolio management. - As a Co-Chair for the Position, Navigation, and Timing (PNT) oversight council, conduct strategic planning, prioritization, policy execution, resource review, and oversight of DoD PNT initiatives.

A. Mission Description and Budget Item Justification

The Defense Exportability Features (DEF) Program funds activities to support identification of major defense acquisition programs for possible export and the planning for design and incorporation of exportability features during the research and development phases of these programs. Features include, but are not limited to, technology and engineering design activities such as capability differentials, anti-tamper, system assurance, and software assurance. Activities include the development of program protection strategies for the program; the design and incorporation of exportability features into the system; implementation of exportability requirements into contracts; and other research, development, test, and evaluation activities.

Defense exportability features play a critically important role in Department of Defense (DoD) efforts to build partnership capacity. Funding supports building joint and coalition environments by enabling the export of DoD systems to a wide range of partner nations, resulting in improved security and interoperability.

In addition to operational benefits, by providing these resources up front, the United States and partner nations will save both significant resources and increased time delays by incorporating exportability features earlier in the acquisition cycle vice retrofitting an operational program of record system. Retrofitting requires substantial delay while program protection measures are incorporated prior to export. Experience has shown that failure to identify the full range of Critical Program Information (CPI) early in a DoD program's design phase can drive major affordability and schedule programs. Early development of export variants, including systems design approaches to integrate exportable anti-tamper protection and differential capability requirements to lower production costs, make it possible to improve quality and timely deliveries to Allies and partners and may enhance U.S. industry share of the global marketplace.

The DEF Program funds activities to support identification of major defense acquisition programs for possible export and the planning for design and incorporation of exportability features during the research and development phases of these programs. Features include, but are not limited to, technology and engineering design activities such as capability differentials, anti-tamper, system assurance, and software assurance. Activities include the development of program protection strategies for the program; the design and incorporation of exportability features into the system; implementation of exportability requirements into contracts; and other research, development, test, and evaluation activities.

Defense exportability features play a critically important role in DoD efforts to build partnership capacity. Funds support building joint and coalition environments by enabling the export of DoD systems to a wide range of partner nations, resulting in improved security and interoperability. In addition to the operational benefits, by providing these resources up front, the United States and partner nations will save significant resources by more efficiently designing and producing exportable U.S. systems.

Experience has shown that failure to identify the full range of CPI early in a DoD program's design phase can drive major affordability and schedule problems later when programs have to "retrofit" program protection measures prior to export. Early development of export variants, including systems design approaches to integrate exportable anti-tamper protection and differential capability requirements to lower production costs, makes it possible to improve quality and timely deliveries to allies and friends and may enhance U.S. industry share of the global marketplace.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026 Base	FY 2026 OOC	FY 2026 Total
Title: DEF Program	14.192	15.779	6.780	0.000	6.780
Description: The DEF Program enables DoD programs to develop and incorporate technology protection features in designated systems during the research and development phase of such systems to prepare them for export. By facilitating the export of U.S. defense systems, the DoD enhances the U.S. defense industrial base, strengthens the military capabilities of U.S. allies around the world, and increases coalition interoperability.					
Program activities that were funded in FY 2024 included:

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026 Base	FY 2026 OOC	FY 2026 Total
- Tactical High Power Microwave Operational Responder (THOR) (Air Force): Developed a detailed design of THOR to the Mjölñir-E system incorporating the exportability features identified during Phase 1A. The specific exportability features were incorporated into the detailed design during the completion of the Phase 1A Study. - Surface Antisubmarine Warfare Synthetic Trainer (SAST) (Navy): SAST, Performed Feasibility Design Analysis defining software solutions, and provided an engineering development plan for completing technology control requirements for USW Embedded Training in 1) Direct Connect to Navy Continuous Training Environment and 2) Enhanced Entity Modeling. FY 2025 Plans: THOR (Air Force): Continue Phase 2 development of a detailed design of Tactical High Power Microwave Operational Responder to the Mjölñir-E system incorporating the exportability features identified during Phase 1A. The specific exportability features to be incorporated into the detailed design will be determined during the completion of the Phase 1A Study. Airborne High Frequency Radio Modernization (AHFRM) (Air Force): The AHFRM AN/ARC-260 radio is replacing the end-of-life AN/ARC-190 HF. The AN/ARC-260 is the only airborne high frequency radio in Air Force development to address capability gaps across 14 aircraft platforms. The previous radio has been sold Foreign Military Sales (FMS) for various air platforms and the replacement is already getting Allie and partner interest. Ammunition support in Weapon System (Army): drafting for 50mm Family of Ammo as part of lethality suite supporting XM913 weapon system and for XM30 Combat Vehicle but potentially other platforms. Next Generation Squad Weapon (NGSW) (Army): Phase 2 of DEF study for the NGSW will identify the various exportation considerations that go with military small arms ammunition and build a detailed assessment of the key components and the functional architecture of the family of ammunition to determine the sensitivity of each design to release via FMS. FY 2026 Base Plans: Provide funding to help DoD programs plan for and study exportability features in line with DoD guidance, including the DoD instruction (DoDI) 5000.85, Major Capability Acquisition that requires DoD programs to design

+\$9.765 million is required to support Next Generation Resource Management Systems (NGRMS) of which +\$1.489 million is to support NGRMS acceleration..

A. Mission Description and Budget Item Justification

As the Department of Defense's strategic, operational, and tactical plans and objectives transform the war fighter with new capabilities and doctrine, the budgeting and accountability of funds used to pursue the Department's objectives will become more complicated and detailed allowing senior leaders to make decisions with supporting rationale for the taxpayer. Incorporating information technology towards current and emerging business processes manifesting into a state-of-the art system of systems will result in increasing efficiencies, timely diagnostics, and reducing lifecycle costs to maintain, sustain, and repair.

This initiative exploits emerging technology, processes, trends, capabilities, and techniques to incorporate state-of-the-art information technology enabling the ability, agility, and level of fidelity to collect, process, administrate, and report resource management data and to automate business processes within a more robust analytical environment within the Office of the Under Secretary of Defense (Comptroller) (OUSD(C)).

Next Generation Resource Management Systems (NGRMS):

The OUSD(C) is responsible for advising the Secretary of Defense on all Defense budgetary and fiscal matters, for Defense budget development and execution, and for overseeing financial management across the Department. The OUSD(C) has a broad set of responsibilities in supporting the Planning, Programming, Budget, and Execution (PPBE) process. The Office of the Director, Cost Assessment and Program Evaluation (CAPE), provides independent analytic advice to the Secretary of Defense on all aspects of the Defense program, including alternative weapon systems and force structures, the development and evaluation of program and defense program alternatives, and the cost-effectiveness of defense systems. There is a critical need for the development of a state-of-the-art information technology system to modernize and replace multiple, antiquated legacy systems and processes used to formulate, justify, present, and defend the entire Department of Defense budget in the OUSD(C) to meet Title 10 and Title 31 mission and reporting requirements. NGRMS is critical in formulating the DoD Budget and thereby providing the necessary fund requests to defend the homeland, deter strategic attacks against the United States, our Allies and partners. By formulating and presenting the DoD budget, NGRMS, through our Services, is helping to deter aggression, yet ensuring that we are prepared to prevail in conflicts with a prioritization to the Chinese challenge in the Indo-Pacific and the Russian challenge in Europe. Through a strong DoD Budget, NGRMS is a major factor in building a resilient Joint Force and Defense ecosystem. The Comptroller's plan for mitigating the deficiencies and capability gaps associated with current systems is the development of the NGRMS.

UNCLASSIFIED

Exhibit R-2, RDT&E Budget Item Justification: PB 2026 Office of the Secretary Of Defense				Date: June 2025		
Appropriation/Budget Activity 0400: Research, Development, Test & Evaluation, Defense-Wide I BA 5: System Development & Demonstration (SDD)		R-1 Program Element (Number/Name) PE 0605027D8Z I OUSD(C) IT Development Initiative				
The OUSD(C) and CAPE use multiple systems to formulate, justify, distribute, and execute the DoD budgets. The information managed by the budget formulation and programming systems is redundant, and reconciliation of information is difficult and inefficient. These systems require extensive manpower investments to provide executives the information needed to make timely key financial decisions. The OUSD(C) and CAPE require a more efficient and effective Defense budget environment that optimizes the budget cycle to ensure users are processing and reporting efficiently, and DoD Senior Leadership has the information to make informed, critical decisions. The OUSD(C) requires capabilities to provide for the effective formulation, and justification of the Defense budget to be adaptable and modern. The requirement is for: • Automated exchange and reconciliation of budget data • Improved efficiency through the utilization of a unified budgetary model • Instantaneous ability to generate data for management reviews and decisions • Capability to accommodate emerging business practices • Agile methods to launch and terminate new development efforts more quickly • Seamlessly combine the out puts of multiple efforts at various levels of maturity for organizational responsiveness and alternative resource allocation for innovation adoption As of the 3rd Quarter FY 2022, NGRMS has been developed and has deployed Initial Operational Capability (IOC) to all Department of Defense Services and agencies. The system has been designed as a single system with a unified data source for OUSD(C) and CAPE, which supports the reforming and modernizing of the PPBE process. It provides a single, integrated system that employs the latest technologies to fulfill the Department’s financial management responsibilities in an effective, efficient, and adaptable manner. The new system’s agile development approach compliments the continuous and ongoing studies and changes to the PPBE and appropriation processes to prevent stagnant complexities. It also provides twenty-first century information technology that allows users to view information from multiple fully integrated modules simultaneously, e.g., current year budget submission, decision documents from previous years, and budget execution information.

A. Mission Description and Budget Item Justification

The Office of the Under Secretary of Defense (Comptroller) (OUSD(C)) is responsible for advising the Secretary of Defense on all Defense budgetary and fiscal matters, for Defense budget development and execution, and for overseeing financial management across the Department. The OUSD(C) has a broad set of responsibilities in supporting the Planning, Programming, Budget and Execution (PPBE) process. The Office of the Director, Cost Assessment and Program Evaluation (CAPE), provides independent analytic advice to the Secretary of Defense on all aspects of the Defense program, including alternative weapon systems and force structures, the development and evaluation of programs and defense program alternatives, and the cost-effectiveness of defense systems.

OUSD(C) and CAPE use multiple systems to formulate, justify, distribute, and execute DoD budgets. The information managed by the budget formulation and programming systems is redundant, and reconciliation of information is difficult and inefficient. These systems require extensive manpower investments to provide executives the information needed to make timely key financial decisions. The OUSD(C) and CAPE require a more efficient and effective Defense budget environment that optimizes the budget cycle to ensure users are processing and reporting efficiently and DoD Senior Leadership has the information to make informed, critical decisions.

The OUSD(C) requires capabilities to provide for the effective formulation, and justification of the Defense budget to be adaptable and modern. This includes the following:

- Automated exchange and reconciliation of budget data
- Improved efficiency through the utilization of a unified budgetary model
- Instantaneous ability to generate data for management reviews and decisions
- Capability to accommodate emerging business practices
- Agile methods to launch and terminate new development efforts more quickly
- Seamlessly combine the outputs of multiple efforts at various levels of maturity for organizational responsiveness and alternative resource allocation for innovation adoption

As of the 3rd Quarter FY 2022, NGRMS has been developed and has deployed Initial Operating Capability (IOC) to all Department of Defense Services and agencies. The system has been designed as a single system with a unified data source for OUSD(C) and CAPE, which supports the reforming and modernizing of the PPBE

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
Title: Next Generation Resource Management System Description: Plan, develop, test and evaluate the system components (i.e. unified database, expert system, cross domain security, enterprise service bus, applications, services) and supportability requirements in modernizing the budget formulation, programming execution, and reporting capabilities for the Department of Defense. Activities will include, but not be limited to, the preparation of all documentation required for Clinger-Cohen Compliance and acquisition regulations, developing requests for proposals, and oversight and management of contracts and deliverables. FY 2025 Plans: FY 2025 planned development will include additional cyber security enhancements (as necessary), additional data and structure standardizations, cloud implementations (STRATUS), and more robust analytical ties to execution FY 2026 Plans: FY2026 planned development will include additional cyber security enhancements (as necessary), additional data and structure standardizations, cloud development (STRATUS), Budget Exhibits' reform, integration of the programmatic exhibit collection (sunset CAPE's legacy tool (SNAP/SNAP-IT), development of NGRMS as a Service, and more robust analytical ties to execution. FY 2025 to FY 2026 Increase/Decrease Statement: The increase for NGRMS from FY 2025 to FY 2026 includes cloud sustainment requirements, as the system moves to Full Operational Capability (FOC). We anticipate the higher level of funding will meet the future development efforts to reform and modernize the existing PPBE and appropriation processes, directly supporting the PPBE Reform initiatives.		5.256	7.564

A. Mission Description and Budget Item Justification

This program supports the Department's initiative to Build Sustainable and Long-Term Advantage.

Defense-wide Electronic Procurement Capabilities provides for the development of critical enterprise-wide e-business requirements for the procurement community. These requirements result from statute, regulation, process re-engineering, internal control requirements, and audit findings. This program provides for the introduction of innovative, time and cost-saving technologies into procurement processes across the Department. Resources are provided to conduct agile software development and testing on new or modified defense-wide e-business applications to ensure system and application development, integration, and demonstration of production representative systems and capabilities.

A. Mission Description and Budget Item Justification

Defense-wide Electronic Procurement Capabilities provides for the development of critical e-business enterprise-wide requirements for the procurement community. These requirements may result from statute, regulation, process re-engineering or internal control requirements. This program provides opportunities for the introduction of innovative, time-saving, and cost-saving technologies into procurement processes across the Department. Resources are provided to conduct agile software development and testing on new or modified defense-wide e-business applications to ensure system and application development, integration, and demonstration of production representative systems and capabilities.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
<i>Title:</i> Defense-Wide Electronic Procurement Capabilities- Contingency	6.647	9.485	9.366
<i>Description:</i> FY 2024 focused on improving the identification and tracking of government furnished property and resolving audit findings – completing Phase IV capabilities in the Procurement Integrated Enterprise Environment (PIEE) to support Component accountable property systems. Defense Pricing, Contracting, and Acquisition Policy (DPCAP) focused on continued development of the catalog data standard to enable better price comparisons. Additional standard development focused on improvements in procurement and purchase request data standards, particularly for the spares, other transactions, and financial assistance types of awards. Further developed the modules in PIEE to use the catalog data standard to drive better product and pricing identification; as well as better integrate the module capabilities to enable better efficiencies and transparency. Completed transition of former Defense Contract Management Agency (DCMA) contract administration capabilities. Continued to enhance supply chain risk data mining and data collection capabilities in the Supplier Performance Risk System (SPRS) supporting statutory requirements. Leveraged robotics and automation efforts for streamlining procurement processes and expanding data mining – implementing capabilities to support annual procurement data validation requirements. Developed enterprise requirements coming from emerging statutes and regulations for the fourth estate contract writing capability. Completed initial deployment of the 4th estate contract writing capability.			
<i>FY 2025 Plans:</i> FY 2025 plans will focus on deploying enterprise-wide capabilities in PIEE to support both the Services' new contract writing capabilities and Procure-to-Pay (P2P) initiatives including deployment of the other transactions / assistance and catalog data standard, expansion of the centralized solicitation module capabilities, and a modernized clause logic capability. Enhance

the 4th estate contract writing module for identified requirements beyond the initial minimal viable product, including complex contract types and other transactions. Continue to develop the procurement analytics area of Advana, integrating additional data feeds from enterprise systems and leveraging artificial intelligence and robotics for increasing detail for management decisions. Continue to enhance supply chain performance and risk data mining and data collection capabilities in the SPRS supporting statutory requirements and Department initiatives. Develop enterprise requirements coming from emerging statutes and regulations for the procurement community. <i>FY 2026 Plans:</i> FY 2026 plans will focus on deploying additional enterprise-wide capabilities in PIEE to support both the Services' contract writing capabilities and Procure-to-Pay (P2P) initiatives with a special focus on the modernized clause logic capability including potential support to classified contracting activities. Develop enterprise requirements coming from emerging statutes and regulations for the procurement community. Enhance the suite of procurement data standards and to address items intended to close gaps identified by Component financial audits. Continue to enhance the 4th estate contract writing module for identified requirements beyond the initial minimal viable product, addressing items identified during initial deployment. Continue to enhance supply chain performance and risk data mining and data collection capabilities in the SPRS supporting on-going statutory requirements and DoD supply chain initiatives. Continue to develop the procurement analytics area of Advana, leveraging artificial intelligence capabilities for increasing detail for decision-makers. The slight increase from FY 2025 to FY 2026 is to speed delivery of capabilities of the enterprise capabilities in the Procurement Integrated Enterprise Environment (PIEE), including enhancements to the 4th Estate's Electronic Contract Writing Module (ECWM) to complete data migration from the retiring Procurement-Desktop Defense (PD2). <i>FY 2025 to FY 2026 Increase/Decrease Statement:</i> The slight increase from FY 2025 to FY 2026 is to speed delivery of capabilities of the enterprise capabilities in the Procurement Integrated Enterprise Environment (PIEE), including enhancements to the 4th Estate's Electronic Contract Writing Module (ECWM) to complete data migration from the retiring Procurement-Desktop Defense (PD2).

A. Mission Description and Budget Item Justification

This effort supports the Department's initiatives to Build Sustainable and Long-Term Advantage, Defend the Homeland, and Deter Aggression.

This program supports microelectronics modernization activities that enable defense systems to keep pace with commercial microelectronics technological advances, reduce reliance on obsolete microelectronics, and mitigate the Department's reliance on sole source foundries for assured state-of-the-art (SOTA) microelectronics. It addresses the challenges of 1) having enduring access to a multiplicity of modern manufacturing processes that require commercial volumes to maintain long term viability and 2) protecting the intellectual property (IP) of the microelectronic parts that are manufactured.

Microelectronics technology is a critical enabler for the development of new systems and sustainment of fielded systems. In addition, this program directly supports the priority of building a resilient Joint Force and defense ecosystem through modernization of key capabilities and fostering pathways to adapt SOTA commercial and dual-use technologies to Defense needs. The program also supports the objective of Making the Right Technology Investments by supporting the domestic microelectronics innovation ecosystem and partnering with industry to quickly incorporate market-driven commercial advances with military-relevant capabilities.

Recognizing that an assured supply of microelectronics is a U.S. Government-wide concern, this activity will interface with the services and interagency partners and stakeholders to capture requirements, opportunities for collaboration, and strategic decisions develop capabilities to address multiple missions, to limit the overall cost of these requirements to the USG, limit unneeded duplication, and enable technology transition and adoption.

This activity is being led by the Under Secretary of Defense for Research and Engineering.

Change Summary Explanation

The FY 2026 request for Trusted and Assured Microelectronics includes \$143.475 million of discretionary \$26.000 million of mandatory (reconciliation) for a total of \$169.475 million. The mandatory funds USCENTCOM Procurement of Long Endurance of attributable Aerial Intelligence Surveillance Reconnaissance (ISR) Platforms. Further information for this reconciliation request is provided in Chapter 2 of the Reconciliation Exhibit.

Program decrease of \$1.488 million in FY 2026 for Economic Assumptions.

A. Mission Description and Budget Item Justification

This project establishes multiple strategic partnerships with existing commercial state-of-the-art (SOTA) domestic foundries to develop a data-driven, evidence-based approach to supply chain protection and demonstrate the assured manufacture of advanced electronic components. Its objectives include keeping pace with the rapid advancements in microelectronics technology globally while maintaining trust and assurance in DoD microelectronics in the light of globalization of this industry sector.

Successful implementation will transition these SOTA technologies to use in DoD programs, obtain access to multiple commercial microelectronics facilities, establish secure design capabilities, and practice a data-driven evidence-based approach to supply chain protection. It includes collaborating with industry to apply evidence-based assurance methodologies.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Access to State-of-the-Art (SOTA) Microelectronics - Demonstration	140.750	95.331	87.222
Description: This project implements multiple foundries and process design kits (PDKs) to provide resilience in manufacturing resources to satisfy the government's needs to fabricate critical microelectronic components; that is to reduce dependence single sources. Hardware solutions are demonstrated through dedicated and multi-project wafer runs at multiple foundries.			
Commercial foundries generate enormous amounts of data as part their quality assurance practices to improve reliability and increase yield. This project collects and utilizes these data within the evidence-based assurance methodology to allow quantitative comparison of performance and security metrics in the design and test stages of the microelectronics lifecycle, thereby mitigating risk.			
Secure Design Environment:			
The Rapid Assured Microelectronic Prototypes (RAMP)

Appropriation/Budget Activity 0400 / 5		R-1 Program Element (Number/Name) PE 0605294D8Z / <i>Trusted and Assured Microelectronics</i>		Project (Number/Name) 902 / <i>Access to State-of-the-Art (SOTA) Microelectronics - Demonstration</i>	
B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026
This effort established the ability to fabricate secure, controlled DoD designs in on-shore commercial foundries. The effort established multiple strategic partnerships with existing commercial domestic microelectronics design vendors and foundries to develop a data-driven, risk-based approach to supply chain protection and demonstrated assured manufacture of advanced electronic components. This effort demonstrated the technical means for protecting intellectual property (IP) and informed decision makers responsible for updates to export regulations applicable to advanced microelectronics technologies. Rapid Assured Microelectronic Prototypes – Commercial (RAMP-C): This effort has enabled the DoD and the defense industrial base to collaborate with the commercial microelectronics industry to develop, prototype, demonstrate, and address the DoD's need to maintain and modernize weapon systems as the threat landscape shifts. This effort enables the T&AM program to demonstrate, by end of FY 2025, full access to U.S. commercial state-of-the-art (SOTA) design, foundry, and advanced packaging capability and meet DoD's unique needs within two to three years for modernization, including for rad-hard and photonics applications. The capability will reduce the time needed to replace microelectronics components that are generations behind the commercial sector, move away from off-shore sources for SOTA commercial integrated circuits, and accelerate the demonstration and adoption of evidence-based assurance methods throughout the microelectronics lifecycle and supply chain. This project readies the Department to take full advantage of the Secure Enclave. FY 2025 Plans: Foundry Access and RAMP-C: • Continue to enhance access to SOTA fabrication ecosystem and state-of-the-art (SOTA) U.S. wafer foundry. • Maintain program of record access to assured fabrication flow and fund multi-project wafer production runs at multiple state-of-the-art (SOTA) domestic sources. • Provide access to commercial and critical evidence-based assured dual-use commercial off-the-shelf (COTS) integrated circuits. • Support development of evidence-based assured, custom DoD integrated circuits. • Jump-start commercial use of the domestic foundry by key U.S. fabless companies. • Expand access to design tools including access to 3rd party design modules. • Enable a commercially-supported and enduring U.S. logic foundry capability.

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026
• Leverage the expertise of commercial industry to develop and demonstrate novel capabilities for design of SOTA with assurance. Domain Specific Design and Transition: • Validate and leverage application-specific modeling and simulation to anticipate performance benefits to be derived from design and fabrication of DoD microelectronics in advanced (<7 nm) technologies. • Continue activities for prototype demonstration of emulation based evidence-based assurance design flows, leveraging SOTA electronic design automation tools. • Continue efforts to raise the technology readiness level (TRL) of pilot emulation efforts to production readiness. • Continue activities to leverage commercial intellectual property (IP), EDA, and processes to accelerate demonstrate and transition prototypes. • Continue to expand and accelerate development and insertion of IP for application-specific integrated circuit (ASIC) and Chiplet security including authentication, Firmware Attestation and Decryption and system-on-chip (SOC) Interface encryption. • Continue to develop and insert tools and techniques to protect silicon IP during packaging and test phase, including multi-chip package (MCP). • Continue demonstration of using COTS parts in more critical DoD applications utilizing the inherent personalization features FY 2026 Plans: Foundry Access: • Enhance access to state-of-the-art (< 14 nanometer) fabrication ecosystem. • Maintain program of record access to assured fabrication flow and fund multi-project wafer production runs at multiple SOTA domestic sources. • Continue the enablement of commercially-supported and enduring U.S. logic foundry capability. • Leverage the expertise of commercial industry to develop and demonstrate novel capabilities for design of State-of-the Art (SOTA) with assurance. • Continue activities to provide access to leading edge (<7 nanometer), commercially-viable, U.S.-located domestic wafer foundry ecosystems. Domain Specific Design and Transition: • Leverage EDA tools for emulation based evidence-based assurance design flows.

A. Mission Description and Budget Item Justification

The DoD needs modern microelectronics capabilities. Advanced packaging provides necessary performance improvements, size weight power and cost (SWAP-C) benefits, and unique opportunities to disaggregate DoD requirements into smaller and lower cost chiplets while maximally leveraging state-of-the-art (SOTA) commercial technologies. However domestic advanced packaging capabilities are limited and the heterogeneous integrated (HI) chiplet ecosystem is nascent. This project collaborates with DoD, Defense Industrial Base (DIB), and domestic commercial industry to leverage and enhance existing capabilities to demonstrate self-sustaining advanced packaging and test solutions that meet DoD needs.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Access to Advanced Packaging and Testing - Demonstration	33.933	30.221	29.968
Description: This project is demonstrating the adoption of chiplets and advanced packaged microelectronics to meet DoD requirements. The Stimulating Transition for Advanced Microelectronics Packaging (STAMP) effort works with DoD program offices and the defense industrial base (DIB) partners to address residual risks to enable transition of multi-chip packaging (MCP) prototypes into DoD systems. This project utilized the Strategic Transition of Microelectronics to Accelerate Modernization by Prototyping and Innovating in the Packaging Ecosystem (STEAM PIPE) contract to ensure additional HI and chiplet prototypes follow the identified transition strategy into DoD systems. Additionally, the Government Lab Advanced Microelectronics – Evaluation & Reporting (GLAM-ER) effort is providing DoD Government labs access to advanced MCP prototype development kits for the purpose of upskilling the Government workforce and to assess the prototypes capabilities in meeting future DoD requirements.			
FY 2025 Plans: • Continue sub-system/system demonstrations leveraging heterogeneous integrated packaging targeting DoD transitions • Continue advanced packaging prototypes targeting DoD transitions • Continue advanced packaging reliability and qualification risk reduction projects • Demonstrate prototype hardware and additional program-driven designs of increasing complexity and capability/performance.

Appropriation/Budget Activity 0400 / 5	R-1 Program Element (Number/Name) PE 0605294D8Z / <i>Trusted and Assured Microelectronics</i>	Project (Number/Name) 903 / <i>Access to Advanced Packaging and Testing - Demonstration</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
• Accelerate and expand the development of multi-chip packaging (MCP) prototype demonstrators in collaboration with DoD Programs and the defense industry for process intensive applications and RF such as AESA Radar, cognitive EW and autonomy, while enhancing security for protecting IP and CPI. • Expand and accelerate demonstration of prototype hardware and additional program-driven designs of increasing complexity and capability/performance: • Layered approach for IP & CPI protection • Enhanced resistance to security and cyber threats • Customized personalization per Program or multi-chip package (MCP) • Risk reduction by much greater visibility into the supply chain and assembly process, including quantifiable data for material tracking, meteorology and process control • Continue to demonstrate enhanced secure design and secure packaging with new tools and techniques. FY 2026 Plans: • Continue DoD sub-system/system demonstrations leveraging heterogeneous integrated packaging targeting DoD transitions • Continue advanced packaging prototypes targeting DoD transitions in collaboration with DoD Programs and the defense industrial base (DIB) • Continue working with DoD Government labs to evaluate prototype hardware development kits for meeting DoD future needs FY 2025 to FY 2026 Increase/Decrease Statement: The decrease \$0.253 million between FY 2025 and FY 2026 is due to minor planning adjustments.

A. Mission Description and Budget Item Justification
 This project addresses the dual problems of commanding only a small market share while requiring an expansive range of unique microelectronics needs, from boutique and legacy components to state-of-the-art (SOTA) technologies. The Government must sustain specialty suppliers, given their criticality to national security. In particular, DoD needs access to a diverse microelectronics ecosystem to develop and acquire the application specific integrated circuit (ASICs) and personalized commercial off the shelf (COTS) components required for military radiation hardened and radio frequency and optical needs.

 The Department frequently relies on commercial suppliers to optimize performance and reduce costs for sophisticated weapon system and secure network functionality. It is critical that the DoD has future access to subject matter expertise, technology, and manufacturing.

 In addition to radiation hardened microelectronics needs, the DoD requires access to radio frequency (RF) and opto-electronic materials, foundries, and packaging facilities, to enable next generation sensors and communications. The DoD must leverage state-of-the-art microelectronic technologies driven by mega-trends such as 5G wireless and datacenters to combat emerging threats and provide overmatch technology to the warfighter. At the same time, the DoD must fill the gaps which are left unaddressed these dual-use mega-trends to satisfy mission requirements. Partnering in the maturation of state-of-the-art material sources, foundries, and packaging facilities, enables DoD to tailor process development towards unique DoD interests and encourage open access design, stimulating innovation and driving affordability. Additionally, critical investments must be made in the domestic supply chains supporting both RF Gallium Nitride (GaN) and integrated photonics to maintain the integrity and security of the Defense Industrial Base.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Access to Radiation Hardened-, RF-, and Opto-Electronic - Demonstration	28.074	24.884	26.285
Description: Government-unique trusted design and manufacturing flows have been developed to enable a tier of trust for select ASIC parts; however, this approach addresses only a small subset of DoD microelectronics requirements (e.g., processors, memory, microcontrollers, field programmable gate arrays (FPGAs), and radiation-tolerant processors).			
The DoD will partner with the intelligence community, the Department of Energy, and the National Aeronautics and Space Administration to demonstrate radiation hardened components that permit systems to operate in space and other harsh

A. Mission Description and Budget Item Justification

The FY 2026 request for AI2 includes \$13.556 million for AI2. The AI2 was established to create an enduring acquisition infrastructure for delivering integrated joint, system-of-systems capabilities, and establish the necessary policies, forums, and processes to (1) Enable the delivery of integrated defense capabilities, leveraging Military Department and service-specific system acquisition; (2) Drive adoption of threat-based mission thread analysis to inform acquisition, resourcing, and requirements decisions; and (3) Support acquisition portfolio reviews to drive resourcing and enterprise decisions.

Program funding institutionalizes the lessons learned from the Department's Competitive Advantage Pathfinders (CAP) and Integrated Acquisition Portfolio Reviews (IAPR) and aligns service-specific system acquisition programs, prototypes, and Science and Technology (S&T) projects to deliver joint integrated capabilities. The program executes studies, analyses, and pathfinding efforts to (1) Govern the processes across the Defense Acquisition System to integrate and align portfolios and programs across the lifecycle from Services, Office of the Secretary of Defense (OSD) Components, and Combatant Commands (COCOMs); (2) Create an enduring infrastructure, tools, and processes for Service and OSD teams to better integrate system-of-systems capabilities; and (3) Remove regulatory and institutional barriers towards leveraging service-unique acquisitions for joint requirements.

Change Summary Explanation

The decrease of \$0.041 from PB FY 2025 to PB FY 2026 is due to minor inflation rates adjustments. Note that this is a new PE in FY 2025 to increase funding transparency. Acquisition Integration and Interoperability has been funded under PE 0608648D8Z, Acquisition Visibility in FY Year 2024.

AI2 was established to create an enduring acquisition infrastructure for delivering integrated joint, system-of-systems capabilities, and establish the necessary policies, forums, and processes to (1) Enable the delivery of integrated defense capabilities, leveraging Military Department and service-specific system acquisition; (2) Drive adoption of threat-based mission thread analysis to inform acquisition, resourcing, and requirements decisions; and (3) Support acquisition portfolio reviews to drive resourcing and enterprise decisions.

Program funding institutionalizes the lessons learned from the Department's Competitive Advantage Pathfinders (CAP) and Integrated Acquisition Portfolio Reviews (IAPR) and aligns service-specific system acquisition programs, prototypes, and Science and Technology (S&T) projects to deliver joint integrated capabilities. The program executes studies, analyses, and pathfinding efforts to (1) Govern the processes across the Defense Acquisition System to integrate and align portfolios and programs across the lifecycle from Services, OSD Components, and COCOMs; (2) Create an enduring infrastructure, tools, and processes for Service and OSD teams to better integrate system-of-systems capabilities; and (3) Remove regulatory and institutional barriers towards leveraging service-unique acquisitions for joint requirements.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Acquisition Integration and Interoperability	-	15.618	13.556
Description: Program funding institutionalizes the lessons learned from the Department's Competitive Advantage Pathfinders (CAP) and Integrated Acquisition Portfolio Reviews (IAPR) and aligns service-specific system acquisition programs, prototypes, and Science and Technology (S&T) projects to deliver joint integrated capabilities. The program executes studies, analyses, and pathfinding efforts to (1) Govern the processes across the Defense Acquisition System to integrate and align portfolios and programs across the lifecycle from Services, OSD Components, and Combatant Commands (COCOMs); (2) Create an enduring infrastructure, tools, and processes for Service and OSD teams to better integrate system-of-systems capabilities; and (3) Remove regulatory and institutional barriers towards leveraging service-unique acquisitions for joint requirements.			
FY 2025 Plans: Enable the delivery of integrated defense capabilities, leveraging Military Department and service-specific system acquisition and drive adoption of threat-based mission thread analysis to inform acquisition, resourcing, and requirements decisions. AI2 will support acquisition portfolio reviews to drive resourcing and enterprise decisions. Because AI2's efforts span multiple mission applications, acquisition programs, experimental prototypes, and cross-weapons integration, its achievements are similarly

complex and encompass various disciplines, including everything from policy, governance models, data integration, technical development, program management and operational integration - consistent with the AI2 charter which was established by USD(A&S). FY 2025 plans, which are directly aligned with the priority of building a resilient and integrated joint force: - Integrated Acquisition Portfolio Reviews, assessing the acquisition health across various portfolios to drive timely and effective solutions. - Counter-C5ISRT for the pacing threat, including integration and alignment of the Department's portfolios and governance bodies spanning Cyber and Electronic Warfare (EW). - Joint Long-Range Fires (LRF), comprising interoperability requirements to align capabilities across the Services and fill remaining kill chain gaps. - Capability acquisition for Combined Joint All-Domain Command and Control (CJADC2), focusing on driving the Department's efforts towards a centralized C2, and ensuring effective cross-service and joint integration. FY 2026 Plans: AI2 will continue to facilitate integrated defense capabilities, leveraging Military Department and service-specific system acquisition, expanding Integrated Acquisition Portfolio Reviews, supporting counter-C5ISRT for the pacing threat, including integration and alignment of the Department's portfolios and governance bodies, and capability acquisition for Combined Joint All-Domain Command and Control (CJADC2). FY 2025 to FY 2026 Increase/Decrease Statement: The decrease from FY 2025 to FY 2026 is mainly due to the Congressional Add of \$2.814 million.

New Start (Y/N): No

This is a PE Name change from PE 0505167D8Z Domestic Prepare Against Weapons of Mass Destruction (WMD) in FY 2024 to PE 0605755D8Z / Rad/Nuc Defense Modernization Systems Dev/Demo in FY 2025. The name and PE number was changed to more accurately reflect the prescribed purpose of the Program Element.

A. Mission Description and Budget Item Justification

This Program Element (PE) supports the Department's Defense Priorities to Rebuild our Military and Reestablish Deterrence.

This PE supports the development and modernization of radiological and nuclear (R/N) defense capabilities that enable the Department to prevent R/N attacks on the homeland and Joint Force abroad through deterrence, as well as survive and operate in and through an R/N environment. This PE aligns to the Interim National Defense Strategy and addresses the challenges of keeping pace with our increasingly nuclear-capable adversaries through the development of modern R/N detection and identification capabilities that are networked into secure and hardened communications, command, and control (C3) systems.

This PE supports the Office of the Under Secretary of Defense for Acquisition and Sustainment (OUSD(A&S)) Radiological and Nuclear Defense Capability Development (RND CD) Program. The RND CD Program is addressing the strategic objective of fielding modernized R/N detection capabilities to enable the Joint Force to operate more effectively in a R/N contaminated environment (Department of Defense (DoD) Strategic Management Plan for FY2022-2026). The RND CD Program enhances DoD's capabilities to campaign across the domains of threats and spectrums of conflict by improving the Department's capability to campaign, fight, and win in a R/N environment. By building a R/N resilient Joint Force and National Guard Bureau, this program contributes to reestablishing deterrence by denying any strategic advantage our adversaries may perceive in using nuclear weapons on the homeland or Joint Force stationed abroad. This program is specifically geared to provide modern, networked R/N detection, indication, and identification capabilities to the warfighter and to replace obsolescing equipment, increasing capability to operate in a R/N environment (2023 CWMD Strategy).

The RND CD Program enables DoD to: prepare for and respond to any emergency involving nuclear and/or radiological events in the United States; provide a capability for the Joint Force to withstand, operate through, and recover from an R/N event; improve resilience; and promote integrated layered deterrence of WMD with state, local, and other federal agencies.

This funding line is the only BA5 funding in the Department dedicated to providing improved R/N capability to the warfighter.

UNCLASSIFIED

Exhibit R-2, RDT&E Budget Item Justification: PB 2026 Office of the Secretary Of Defense	Date: June 2025
---	------------------------

Appropriation/Budget Activity 0400: <i>Research, Development, Test & Evaluation, Defense-Wide I BA 5: System Development & Demonstration (SDD)</i>	R-1 Program Element (Number/Name) PE 0605755D8Z I <i>Radiological and Nuclear Defense Modernization System Dev/Demo</i>
--	---

The Office of the Secretary of Defense uses the RNDCD Program to invest strategically in projects across the Military Services, Combatant Commands, and Defense Agencies. Funding is prioritized for projects that close Joint Force warfighter capability gaps. An annual investment strategy is used to meet emergent operational and capability needs which are validated by the Joint Force and the National Guard Bureau, yielding new fielded capabilities within one to three years.

Through the Radiological and Nuclear Defense Modernization of Systems Development and Demonstration PE, the RNDCD Program will invest in the maturation of prototypes; integration of technologies, systems and components; developmental, environmental, and operational test and evaluation; and transition of capabilities that improve DoD's capability to detect and identify radiological and nuclear threats. This program bridges the gap between basic research and fielded capabilities by accelerating and enabling the transition of technologies, by leveraging prior science and technology (S&T) investments made by the Department of Defense, other Federal agencies, and industry.

Specifically, in FY2026, this PE will support the advanced development of (1) a hands-free, clandestine radiation detection system; (2) an underwater x-ray radiography system; (3) new detection systems using cadmium zinc telluride (CZT); (4) drop/leave behind sensors; (5) environmental testing for dismounted radiation sensors; (6) an R/N detection capability for GPS denied environments; and (7) phase ratio calibration for global nuclear detection monitors. All these projects will buy down Joint Force risk to mission and risk to force by ensuring efficient field detection systems that can identify and alert of the presence of radiation hazards.

This program funds labor, materials, and travel to support the requirements of this program, performed by a government agency or by private individuals or organizations under a contract with the government, for activities and acquisitions including RDT&E, assessments and analyses, research studies, education, and other activities related to capability development and fielding.

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025	FY 2026
Title: Radiological and Nuclear Mod Sys Dev/Demo		0.000	3.575	3.307
Description: The Radiological and Nuclear Defense Modernization: Systems Development and Demonstration program invests in the maturation of prototypes; integration of technologies, systems and components; developmental, environmental, and operational test and evaluation; and transition of capabilities that improve DoD’s capability to detect and identify radiological and nuclear threats. The program leverages significant S&T investments by the Department of Defense, other Federal agencies, and industry to accelerate and enable transition to fielded capabilities. Resulting fielded capabilities protect the warfighter; support indications and early warning systems as well as command and control systems; and enable the disablement or defeat of WMD and their delivery systems.				
FY 2025 Plans: FY 2025 Plans: • Develop, transition, and field operational R/N Detection, Identification, Early warning, and Command Control capabilities to the Joint Force and the National Guard Bureau. • Partner with the Military Services and Defense Agencies to mature and transition advanced prototypes to fielded R/N detection and identification capabilities.

A. Mission Description and Budget Item Justification

This program supports the Under Secretary of Defense for Acquisition and Sustainment (OUSD(A&S)) roles as Principal Staff Assistant (PSA) for Nuclear Command Control and Communications (NC3) and NC3 Capability Portfolio Manager (CPM) as directed by the Secretary of Defense in the NC3 Governance Improvement (NGI) Implementation Plan and Department of Defense Directive 3730.02. The role of the NC3 PSA and NC3 CPM is to ensure alignment of NC3 acquisition, procurement, modernization, sustainment, interoperability and resources to deliver effective current and future NC3 capabilities, and proactively manage the NC3 portfolio to align NC3 programs with DoD nuclear weapons platform and delivery systems sustainment and modernization efforts.

The NC3 Portfolio consists of approximately 200 systems, platforms, networks, and applications. The goals of the CPM are to 1) assess NC3 modernization programs and their integration, synchronization, and contribution to the NC3 enterprise, 2) monitor the readiness of operational NC3 systems, 3) identify performance gaps and make recommendations on technology upgrades and prototyping to enable the future capabilities to outpace the threat, and 4) support data-driven portfolio management by developing the necessary tools and processes to assess and manage integrated programmatic and technical risks. This includes the analytical expertise, and information storage and retrieval systems to support the continuing development of CPM for managing the complex NC3 enterprise. These efforts will simultaneously support the Commander, U.S. Strategic Command (USSTRATCOM) as NC3 Enterprise Lead; NC3 Enterprise Center (NEC); systems engineering and architecture development entities; the Under Secretary of Defense for Research and Engineering (USD(R&E)), the Joint Staff, and the Services. This program supports the capability portfolio-based approach (DoD Directive 7045.02, "Capability Portfolio Management").

This program funds development of new tools, technical assessments, and planning for the CPM to manage the NC3 enterprise. This includes:

- 1) developing analytical tools for improving NC3 enterprise-level management and programmatic and technical risk assessments;
- 2) supporting the office of primary responsibility for NC3 enterprise capability portfolio management, to include assessing current capability, complying with statutory mandates, and conducting NC3-related studies, analyses, and policy updates;
- 3) assessing DoD Component plans, programs, and budgets for adequacy and execution (including courses of action development and recommendations);
- 4) identifying, prototyping, evaluating, and recommending new technology for inclusion in the NC3 system; and
- 5) developing NC3 corrective action and risk mitigation plans to support the NC3 CPM investment recommendations to senior DoD leadership.

A. Mission Description and Budget Item Justification

This program supports development and operation of analytical tools to evaluate authoritative data (cost, schedule, performance, risk) on NC3 Portfolio programs to maximize portfolio alignment to strategic priorities and capabilities. It will create integrated development and delivery schedules for NC3 programs. These tools will forecast system/capability degradation as well as plans for capability replacement, improvement, or replacement in the context of the larger NC3 enterprise. It also provides the technical expertise to support risk management analysis (with an emphasis on system design, development and acquisition) of the NC3 enterprise and will develop strategies for synchronizing NC3 preplanned improvements. It will support the timely exchange of program and capability status information between elements of the NC3 enterprise, the Office of the Secretary of Defense (OSD) staff, and the combatant commands with a goal of increasing the use of electronic means to provide current and accurate information on key elements of the NC3 enterprise.

The effort will develop robust, integrated capability plans and schedules for NC3 capabilities to clarify system dependencies and identify disconnects. It will also support cross-department collaboration for development of enterprise-wide approaches for capability management. This includes: (1) vertical and horizontal integration activities within the Department and with the interagency where appropriate; (2) a coordinated portfolio-based approach to planning, programming, budgeting and execution; (3) reform efforts at the legislative, governance, policy, management and execution levels; 4) protection of information and technology that support or enables technology-based capability development for the NC3 warfighting domain and 5) supports the identification, evaluation, and incorporation of promising technology for inclusion in the NC3 system.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Nuclear Command, Control and Communications (NC3)	3.935	3.849	3.158
Description: FY 2024 Accomplishments: -Conducted analysis and supported NC3 governance, oversight, and decision-making to include the Deputy Secretary of Defense chaired NC3 (May 2024), Under Secretary of Defense for Acquisition and Sustainment chaired NC3 Integrated Acquisition Portfolio Review (IAPR) (February 2024) and Council on Oversight of the National Leadership Command, Control, and Communications System (CONLC3S)Restricted Principals Meetings (January and March 2024) and multiple NC3 Acquisition Steering Boards (ASB) with detailed programmatic cost, schedule, and performance analysis for senior acquisition executive decisions on resource allocations and strategic direction. -As co-lead with USSTRATCOM, executed Phase One of the NC3 Next Trade Space Study. Developed alternatives for next generation mobile command centers in accordance with guidance from OSD Cost Assessment and Program Evaluation (CAPE). Provided solutions for decision and consideration in FY 2026 program and budget review.

Appropriation/Budget Activity 0400 / 5	R-1 Program Element (Number/Name) PE 0605772D8Z / <i>Nuclear Command Control and Communications (NC3)</i>	Project (Number/Name) 815 / <i>Nuclear Command, Control and Communications (NC3)</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
– Developed a strategy and action plan to protect critical information for NC3 Next Generation capabilities. Establish guidance and tools for program offices to comply with elevated security classification levels. – Developed and executed a FY 2026 budget strategy to address budget sufficiency for the NC3 portfolio. Draft program review recommendations on NC3 high risk programs, and initiate issue artifacts in support of program and budget review efforts to align NC3 investment. FY 2025 Plans: Conduct analysis and support the NC3 Deputy Management Action Group, NC3 IAPR, National Leadership Command, Control, and Communications System (CONLC3S), the NC3 SEA Board, and other Senior Leader NC3 meetings. Develop secure and cost-effective alternatives in protecting the NC3 data (e.g., systems engineering, RDT&E, contracting, and acquisition) leveraging best practices by other government agencies (e.g., IC, Army, Air Force) in protecting their most sensitive data. Perform trade space analysis on potential COAs to guide the design and investment decisions. FY 2026 Plans: Conduct analysis and support senior leadership forums to address the overall health of the NC3 enterprise. Provide the Deputy Secretary of Defense and other senior leaders with assessments and recommendations requiring senior leadership guidance to mitigate significant operational and programmatic risks across the NC3 enterprise. As co-lead with USSTRATCOM, execute Phase Three of the NC3 next trade space study. Develop alternatives for next generation capabilities that pace the threat and provide the President with situation monitoring to support nuclear decision making. Select budget and acquisition ready solutions for decision and consideration in the FY 2028 program and budget review. Develop and execute a FY 2028 budget strategy to address budget sufficiency for the NC3 portfolio. Draft program review recommendations on NC3 high risk programs, and initiate issue artifacts in support of program and budget review efforts to align NC3 investment. FY 2025 to FY 2026 Increase/Decrease Statement: The FY 2026 request was reduced by \$0.656 million for Advisory and Assistance Services to promote efficiencies and advance the policies of the Administration in alignment with Executive Order 14222, “Implementing the President’s Department of Government Efficiency Cost Efficiency Initiative.”

A. Mission Description and Budget Item Justification

The Joint Fires Network (JFN) is a multi-domain resilient fires-informing decision network at theater strategic and operational levels that provides a persistent targeting common operating picture and mission command applications to enable top echelon decision makers to optimize allocation of weapons across Services and partners at speed and scale. The JFN network is the primary network operating within the Special Access security domain.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Joint Fires Network (JFN)	-	-	0.000
Description: The Joint Fires Network (JFN) is a multi-domain resilient fires-informing decision network at theater strategic and operational levels that provides a persistent targeting common operating picture at the SAP level to enable top echelon decision makers to optimize allocation of weapons across Services and partners at speed and scale. The FY 2026 request for Joint Fires Network includes \$0 thousand of discretionary and \$24,000 thousand of mandatory (reconciliation) funding for a total of \$24,000 thousand. The mandatory dollars fund the transition to CDAO program budget and execution oversight.in FY 2026. Further information for this reconciliation request is provided in Chapter 6 of the Reconciliation Exhibit. FY 2026 Plans: In FY 2026, the JFN will transition from prototype to program of record led by a JFN Integrated Program Office (IPO). DAF PEO C3BM will serve as the lead component with Service and DISA deputies. JFN v2.0 product baseline will be released, to include updates to the MLS architecture, cloud hosting, additional multi-domain C2 planning features, predictive ISR, and Battle Management C2 applications. JFN will support INDOPACOM capability development, exercise, and rehearsal and cross-CCMD experimentation to inform requirements for the extension of JFN across multiple Combatant Commands, geographic regions, allies and partners. CDAO will establish the integration framework between CJADC2 capabilities and JFN and ensure bi-directional data sharing between capabilities. The first operations center at INDOPACOM will be activated and additional JFN nodes will be integrated via CDAO's tactical data mesh efforts. JFN nodes outside of the INDOPACOM have been committed to CYBERCOM, SPACECOM, STRATCOM, and EUCOM. After the initial transition year, budget and execution oversight will be retained at the OSD level by CDAO in FY 2027 to ensure a continued focus on CCMD requirements. After successive JFN v1.0, 1.5, and 1.8 product updates are tested through 2025, the JFN v2.0 product baseline will be released and include updates to the MLS architecture, cloud hosting, additional multi-domain C2 planning features, predictive ISR, and a

A. Mission Description and Budget Item Justification

The Enterprise Energy Information Management (EEIM) supports the interim National Defense Strategy (NDS) to build a more lethal force through modernization of key capabilities, the NDS defense objective of establishing an unmatched twenty-first century National Security Innovation Base (NSIB) that effectively supports Department operations and sustains security and solvency, and the NDS strategic approach of reforming the Department's business practices by simultaneously increasing performance and affordability while still minimizing risk.

Established in FY 2013 and tasked with supporting the Department's goals for audit readiness, energy efficiency, Real Property (RP) accountability, and to improve data quality and integration across the full spectrum of sustainment business functions. Department of Defense (DoD) Real Property Information Management (RPIM) is used to maintain accurate and accessible data for all DoD real property assets. The Enterprise Energy Information Management (EEIM) Business Process Re-engineering (BPR) activities, develop and publish data standards. Funding supports accountability requirements, such as, reconciliation of enterprise real property inventory records and development of asset management processes, business rules and associated data standards.

Funding also supports fielding an enterprise Real Property Information Management platform coupled with an independent verification and validation capability, providing access to real time data through Web Services Description Language (WSDL) in support of timely, data-driven decision-making. The Real Property Information Portal also hosts a build out of data stores and portal requirements for Energy Resiliency and Conservation Investment Program (ERCIP) management as well as, the Construction Management Portal (CMP).

The Clearinghouse was established under USC, Title 10, Section 183a, directing the establishment of a Military Aviation and Installation Assurance Clearinghouse for review of mission obstructions Siting Clearinghouse (...to be referred to as the "Clearinghouse"). The Clearinghouse: (a) coordinates Department of Defense (DoD) review of applications for energy projects or antenna structure projects filed with the Secretary of Transportation pursuant to section 44718 of title 49 and received by the DoD from the Secretary of Transportation; (b) provides procedures to ensure affected local military installations are consulted; (c) accelerates the development of planning tools necessary to determine the acceptability to the Department of Defense of proposals included in an application for an energy project or antenna structure project submitted pursuant to such section; (d) reviews and assesses proposed actions likely scope, duration, and level of risk of any adverse impact of such energy project or antenna structure project on military operations and readiness; and (e) identifies any feasible and affordable actions that could be taken by the Department, the developer of such energy project or antenna structure project, or others to mitigate the adverse impact and to minimize risks to national security while allowing the energy project or antenna structure project to proceed with development.

Change Summary Explanation

The FY 2026 request was reduced by \$0.637 million for Advisory and Assistance Services to promote efficiencies and advance the policies of the Administration in alignment with Executive Order 14222, "Implementing the President's Department of Government Efficiency Cost Efficiency Initiative." The remaining \$0.021 million is a decrease inflation adjustment.

Note N/A												
A. Mission Description and Budget Item Justification The real property inventory fulfills requirements of Executive Orders (EO) to achieve and maintain real property accountability and is a key component supporting both audit readiness and life-cycle asset management activities. This funding provides the department independent verification and validation needed to reconcile data errors, promoting improved data quality, and facilitating interoperability with Service systems to provide an enterprise view of asset management across the real property lifecycle from acquisition to disposal. Oversight and configuration management of business rules and standards are used to determine requirements, manage inventory records, and improve business processes. This initiative includes development and procurement of the enterprise data warehouse for integrating existing and future EI&E systems and database needs. The required Real Property Unique Identifier (RPUID) process is included in this enterprise system.												
B. Accomplishments/Planned Programs (\$ in Millions)									FY 2024	FY 2025	FY 2026	
Title: Real Property Accountability									8.158	6.401	5.856	
Description: The Assistant Secretary of Defense (ASD) for Energy, Installations, and Environment (EI&E) is the Senior Real Property Officer for the DoD, responsible for accountability and utilization of all DoD Real Property Assets. This funding provides the department an enterprise data warehouse coupled with an independent verification and validation capability. The DoD Real Property accountability efforts are mandated by EO and Public Law (PL) for improved reporting and utilization of federal real property, and to support data driven decisions.												
FY 2025 Plans: Continue to support reconciliation and audit corrective action plan efforts by identifying errors/inconsistencies in RP inventory records, asset accountability and management processes, and business rules and associated data. Bring Real Property Information Management (RPIM) platform and WSDL implementation to Initial Operating Capability(IOC) and complete links to DoD’s main financial accountability system called ADVANA (Advanced Analytics). This will ensure improved data quality supporting multiple analyses and provide quality management mechanism for all the DoD and real property information.												
FY 2026 Plans: Continue to support reconciliation and audit corrective action plan efforts by identifying errors/inconsistencies in Real Property inventory records, asset accountability and management processes, and business rules and associated data. Bring Real Property

A. Mission Description and Budget Item Justification

The Clearinghouse was established under USC, Title 10, Section 183a, directing the establishment of a Military Aviation and Installation Assurance Clearinghouse for review of mission obstructions Siting Clearinghouse (...to be referred to as the "Clearinghouse"). The Clearinghouse: (a) coordinates Department of Defense (DoD) review of applications for energy projects or antenna structure projects filed with the Secretary of Transportation pursuant to section 44718 of title 49 and received by the DoD from the Secretary of Transportation; (b) provides procedures to ensure affected local military installations are consulted; (c) accelerates the development of planning tools necessary to determine the acceptability to the Department of Defense of proposals included in an application for an energy project or antenna structure project submitted pursuant to such section; (d) reviews and assesses proposed actions likely scope, duration, and level of risk of any adverse impact of such energy project or antenna structure project on military operations and readiness; and (e) identifies any feasible and affordable actions that could be taken by the Department, the developer of such energy project or antenna structure project, or others to mitigate the adverse impact and to minimize risks to national security while allowing the energy project or antenna structure project to proceed with development.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Clearinghouse	0.000	0.751	0.617
Description: The Clearinghouse works with FFRDCs and DOD UARCs to identify impacts to DOD assets and capabilities from energy projects and to identify technical mitigation measures necessary to overcome potential degradation of DOD assets and capabilities.			
FY 2025 Plans: Funding will be used to refine impacts analysis of energy projects on DOD and explore development of promising energy project interference mitigation solutions to restore and enhance military assets and capabilities. Research and development will continue to be done primarily through work with Federally Funded Research and Development Centers (FFRDCs) and universities. Results will continue to be generally shared with federal interagency partners, energy industry, state partners and other stakeholders as appropriate.			
FY 2026 Plans: Funding will be used to refine and accelerate the deployment of promising energy project interference mitigation solutions to restore and enhance military assets and capabilities. Research and development will continue to be done primarily through work with Federally Funded Research and Development Centers (FFRDCs) and universities. Results will continue to be generally shared with federal interagency partners, energy industry, state partners and other stakeholders as appropriate.

D. Acquisition Strategy			
To ensure the Military Aviation and Installation Assurance Siting Clearinghouse (Clearinghouse) Technical Studies Program has access to qualified expertise, the Deputy Assistant Secretary of Defense for Energy Resilience and Optimization will collaborate with the Washington Headquarters Services Acquisition Directorate. This collaboration will focus on sourcing, acquiring, and maintaining highly proficient technical subject matter experts. The Clearinghouse, mandated by Title 10, Section 183a, assesses the potential adverse impacts of energy projects (particularly those affecting military radar systems, operations, research, development, testing, evaluation, and training) on DoD activities. These assessments are conducted through research and development projects undertaken by Federally Funded Research and Development Centers (FFRDCs) and DoD-Affiliated University Research Centers (UARCs), utilizing task orders under the Assistant Secretary of Defense, Acquisition and Sustainment's Analytic & Technical Support Services (ATSS) Indefinite Delivery/ Indefinite Quantity (IDIQ) contract.

A. Mission Description and Budget Item Justification

Counterproliferation (CP) Advanced Development supports the 2025 Interim National Defense Strategic Guidance objective of peace through strength with advanced development of capabilities that reestablish deterrence and rebuild our military. Program investments in CP capabilities, enable the Department to maintain credible options to defend the homeland against WMD use. Investments result in capabilities that take action against actors of concern and reduce access to WMD development pathways and delay further development, degrade capabilities where possible, and prevent WMD use. (2023 DoD Strategy to Counter Weapons of Mass Destruction (CWMD)).

This Program Element (PE) fields new capabilities to operating units with assigned CP/CWMD missions that disrupt, degrade, delay, deny, and defeat adversary nuclear, chemical, and biological weapons, delivery platforms, command and control systems, and hardened and deeply buried targets. Fielded capabilities provide exquisite tactical situational awareness, low visibility methods of maneuver, and the ability to employ immediate effects without diminishing future military options that supports the Administration's CP priorities.

Funding is prioritized for projects that close Joint Force warfighter capability gaps, including the defense of Taiwan and the homeland. An annual investment strategy is used to meet emergent operational requirements that are validated by the Joint Force. This yields new fielded capabilities within one to two years.

This program funds labor, materials, and travel to support the requirements of this program, performed by a government agency or by private individuals or organizations under a contract with the government, for activities and acquisitions including Research, Development, Test & Evaluation (RDT&E), assessments and analyses, research studies, education, and other activities related to capability development and fielding of nuclear modernization, homeland missile defense, one-way attack autonomous systems, critical cybersecurity and counter-small UAS initiatives.

• DOGE Efficiency	-	-	-2.470	-	-2.470
• Inflation Adjustment	-	-	-0.043	-	-0.043
Change Summary Explanation					
The FY 2025 to FY 2026 funding decrease to align with higher priority interim National Defense Strategy requirements. Until funding is restored to FY 2023 levels, the Department will continue to accept risk and field 1-3 fewer new counter WMD capabilities each year to the Joint Force.					
The FY 2026 request for Counterproliferation Advanced Development includes \$14,620 million of discretionary spending. The discretionary funds support the following: Cyber Security, INDOPACOM Capabilities, Intel, Missile Defense, Nuclear, Nuclear Modernization, Homeland Missile Defense, One-Way Attack/ Autonomous Systems, Counter-small UAS Initiatives, and Priority Critical Cybersecurity.					
The FY 2026 request was reduced by \$2.470 million for Advisory and Assistance Services to promote efficiencies and advance the policies of the Administration in alignment with Executive Order 14222, "Implementing the President's Department of Government Efficiency Cost Efficiency Initiative.", and reduction of \$0.043 million was due to inflation adjustment.

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
• Transitioned multiple classified, operationally-ready offensive counterproliferation capabilities to specialized units assigned to USSOCOM and within INDOPACOM, CENTCOM, and EUCOM; • Transitioned multiple classified capabilities to operations and sustainment on behalf of Combatant Commands including USSOCOM, INDOPACOM, STRATCOM, and CYBERCOM; • Transitioned multiple classified capabilities to operations and sustainment that support operational preparation of the environment on behalf of the broader DoD CWMD Enterprise; • Transitioned additional capabilities that support CWMD operational decision-making on behalf of DoD and the USG; • Matured prototypes, systems, and components for test and evaluation by end-users and transition to fieldable CWMD capabilities under other classified projects. FY 2026 Plans: • Transition multiple operationally-ready offensive counterproliferation capabilities to specialized units assigned to USSOCOM, and within INDOPACOM, CENTCOM, and CENTCOM; • Provide flexible options for execution of overt and discreet counterproliferation and CWMD operations to disrupt, delay, degrade, deny, and defeat adversary WMD capabilities in support of USSOCOM and other CCMDs. FY 2025 to FY 2026 Increase/Decrease Statement: The FY 2025 to FY 2026 funding increase restores the program to FY 2024 levels. In FY 2024 and FY 2025, CP/CWMD funding was reduced to align with higher priority interim National Defense Strategy requirements. Until funding is restored to FY 2023 levels, the Department will continue to accept annual risk of 1-2 fewer fielded counter WMD capabilities each year to the Joint Force.

D. Acquisition Strategy			
The Office of the Deputy Assistant Secretary of Defense for Threat Reduction and Arms Control (ODASD(TRAC)) establishes annual priorities based on national and the DoD strategies and Administration guidance. Based on those priorities, TRAC solicits project proposals from Combatant Commands, Military Services, and Defense Agencies. To be selected, a proposed project must have a validated requirement, an engaged requirement champion, a viable acquisition strategy, and a qualified program management office. In support of CWMD campaigning, a technology project must identify its starting and desired end-state Technology Readiness

Note

New Start (Y/N): No

Following FY 2024 the PE name "Domestic Prepare Against WMD" changed to "Radiological and Nuclear Defense Modernization System Development and Demonstration" and the PE number changed from 0505167D8Z to 0605755D8Z to more accurately reflect the prescribed purpose of the Program Element.

A. Mission Description and Budget Item Justification

As a FY 2024 new start, this program supports the Department's initiatives to Deter Aggression, Defend the Homeland, Provide Nuclear Deterrence, and Build Sustainable and Long-Term Advantage.

The Radiological and Nuclear (Rad/Nuc) Detection Gear Modernization and Procurement for the Joint Force research and development activities (RDAs) enhance DoD's capabilities to campaign across the domains of threats and spectrums of conflict by: improving our capability to operate in the Radiological and Nuclear environment – including in the information and early warning domain; reinforcing our own warfighting advantages by providing increased capability to detect and identify radiological and nuclear threats; and enhancing our interoperability and access to address acute forms of coercion. This program is specifically geared to provide improved rad/nuc detection, indications and identification capability to the warfighter and to upgrade obsolete equipment (Interim National Defense Strategic Guidance).

RDAs provide enhanced Rad/Nuc capabilities. The Domestic Prepare against WMD portfolio enables DoD to provide Joint force and National Guard capability development for radiological and nuclear (R/N) capability development, acquisition and modernization funding to prepare for or to respond to any emergency involving nuclear, and radiological events in the United States; will ensure DoD strategic direction aligns with the National Defense Strategy's priority for Homeland Defense; is a necessary action in the Homeland to improve resilience; and promotes integrated deterrence of WMD with state, local and other federal agencies.

The Domestic Prepare against WMD portfolio is executing along cohesive lines of effort (LOEs) designed to prepare the Joint Force for a Future Operating Environment in which adversary pursuit or possession of WMDs pose threats ranging from existential to tactical, and limit U.S. strategic choices.

The Office of the Secretary of Defense uses the Domestic Prepare against WMD portfolio to invest strategically in projects across the Military Services, Combatant Commands, and Defense Agencies. Funding is prioritized for projects that close Joint Force warfighter capability gaps. An annual investment strategy is used to meet emergent operational, and capability needs validated by the Joint Force and the National Guard Bureau, yielding new fielded capabilities within one to two years.

--	--

The Domestic Prepare against WMD portfolio: Systems Development and Demonstration program invests in maturation of prototypes; integration of technologies, systems and components; developmental and operational test and evaluation; and transition to fielded capabilities that improve capability to detect and identify radiological and nuclear threats. This program bridges the gap between basic research to accelerate and enable transition of technologies to fielded capabilities by leveraging significant science and technology (S&T) investments made by the Department of Defense, other Federal agencies, and industry.

This program funds labor, materials, and travel to support the requirements of this program, performed by a government agency or by private individuals or organizations under a contract with the government, for activities and acquisitions including RDT&E, assessments and analyses, research studies, education, and other activities related to capability development and fielding.

Note

In Fiscal Year 2024 per Congressional recommendation, a new Program Element (PE) was created to support Combined Joint All-Domain Command and Control (CJADC2) development and experimentation activities. This PE was initially placed under Budget Activity (BA) 05, where \$359,056 of CJADC2 funds were executed (R-1 Line 140). In late 2024, CDAO realigned this work to Budget Activity (BA) 06 to reflect its focus on operational integration and testing activities with commercial software. The remaining FY 2024 CJADC2 funds (\$21K) were aligned to BA 06 as indicated on this R-1 line.

For PB26, CDAO created two new project codes (668 and 669) and modified the focus of the existing project code (085) to improve transparency into the work being done in PE 0604122D8Z. Project Code 085 now reflects work on the Data Integration Layer (DIL) (in FY 2024-25 it designated the entire CJADC2 program). Project Code 668 reflects work on Mission Command Applications. Project Code 669 reflects work on the Global Information Dominance Experimentation (GIDE) series.

A. Mission Description and Budget Item Justification

The Chief Digital and Artificial Intelligence Officer (CDAO) mission is to accelerate DoD adoption of data, analytics, and artificial intelligence (AI) to enable decision advantage from the boardroom to the battlefield. This includes improving CJADC2 in support of the Joint Warfighting Concept through four lines of effort:

-Open DAGIR: The CDAO created the Open DAGIR acquisition approach to secure government data rights, ensure open application programming interfaces (APIs), and implement open systems best practices in the acquisition of commercial software. CDAO applies Open DAGIR to the procurement of government-owned/contractor-operated data stacks. This enables interoperability across data stacks, and allows third party application developers to build software that can access relevant mission data in and across those Joint interoperable data stacks. Open DAGIR is not a specific technical solution, but an acquisition approach CDAO applies to procurement of data, analytics, and AI capabilities across vendors.

-Data Integration Layer (085): These efforts mature management of DoD operational data and deploy a tactical edge data mesh (EDM) to enable data integration among new and legacy systems. EDM is a resilient, interoperable data integration service connecting sensors, weapons, and other battlefield assets for enhanced situational awareness and coordination into a cloud environment. EDM leverages commercial software, a government-owned software development kit (SDK), and open application programming interfaces (APIs) to integrate government and vendor systems, facilitate tactical data sharing, and incorporate artificial intelligence/machine learning (AI/

--	---

ML) capabilities at the edge. EDM supports multi-domain operations across echelons, including enhanced C2 and fires in contested environments by optimizing data exchange among Denied, Disrupted, Intermittent, and Limited (DDIL) communication paths.

-Mission Command Applications (668): This effort integrates data, analytics, and AI in support of the seven Joint warfighting functions leveraging a common government owned/contractor operated data stack that adheres to Open DAGIR principles. Requested funding purchases licenses for Combatant Command (CCMD) and Joint Staff access to Maven Smart System (MSS) on multiple networks, engineering support to integrate new data sources and digitize workflows, maintenance of a DevSecOps pipeline to allow third party vendors to develop and field applications on MSS, funding for those third party vendors to close CJADC2 gaps, and cloud compute costs needed to run applications and workflows.

-Global Experimentation (669): The Global Information Dominance Experimentation (GIDE) series is an iterative, metrics-based approach to experimentation with Combined Joint All-Domain Command and Control (CJADC2) capabilities and concepts. The experimentation series leverages CCMD and Service exercises, as well as smaller data integration sprints, to test new data integrations and digital workflows in the context of real mission use cases, on live networks, and with real data and users. Capabilities that prove successful in GIDE rapidly field to warfighters on the spot because they are software-based. GIDE workflows include cross-CCMD strategic and operational global integration, CCMD and Service workflows, and tactical-to-operational fires workflows in coordination with the Services.

This line also supports funding to recruit, train, educate, and enable the DoD workforce to adopt digital CJADC2 capabilities, concepts, and workflows.

Note Project Code 085 in PB 2026 breaks out the funding for the essential CJADC2 function of Data Integration.												
A. Mission Description and Budget Item Justification The DIL funding line contains efforts to mature management of DoD operational data and deploy a tactical edge data mesh (EDM) to enable data integration among new and legacy systems. EDM is a resilient, interoperable data integration service connecting sensors, weapons, and other battlefield assets for enhanced situational awareness and coordination into a cloud environment. EDM leverages commercial software, a government-owned software development kit (SDK), and open application programming interfaces (APIs) to integrate government and vendor systems, facilitate tactical data sharing, and incorporate artificial intelligence/machine learning (AI/ML) capabilities at the edge. EDM supports multi-domain operations across echelons, including enhanced C2 and fires in contested environments by optimizing data exchange among Denied, Disrupted, Intermittent, and Limited (DDIL) communication paths.												
B. Accomplishments/Planned Programs (\$ in Millions)									FY 2024	FY 2025	FY 2026	
Title: Data Integration Layer (DIL) for CJADC2									0.021	222.945	26.701	
Description: The DIL funding line invests in EDM nodes, data integration with EDM, and data interoperability improvements.												
FY 2025 Plans: CDAO awarded a production Other Transaction Authority (OTA) agreement after successfully completing prototyping as part of the Joint Operating System (JOS). This award resourced the deployment of Edge Data Mesh (EDM) nodes and additional data integrations with edge sensors and effectors to support CCMD needs. Key EDM deployments in FY25 supported JTF-Southern Border and INDOPACOM, including SOCPAC, PACFLT, USARPAC, and MARFORPAC. This funding also enabled Data Integration Services (DIS) that improved blue data objects, data specificity, and a methodology for enabling enterprise cross-domain solutions to move data across the data mesh at multiple classification levels.												
FY 2026 Plans: In FY 2026 CDAO will field additional EDM nodes to build out capability supporting INDOPACOM C2 and other priorities. CDAO will continue to support API-enabled data integrations for the nodes. CDAO will also continue to improve blue data objects and enterprise cross-domain solution capabilities.												
FY 2025 to FY 2026 Increase/Decrease Statement:

Title: Mission Command Applications									-	-	243.928	
Description: Requested funding purchases licenses for Combatant Command (CCMD) and Joint Staff access to Maven Smart System (MSS) on multiple networks, engineering support to integrate new data sources and digitize workflows, maintenance of a DevSecOps pipeline to allow third party vendors to develop and field applications on MSS, funding for those third party vendors to close CJADC2 gaps, and cloud compute costs needed to run applications and workflows.												
FY 2026 Plans:												
CDAO will continue to procure MSS licenses and engineering support for CCMDs, including INDOPACOM, EUCOM, SOUTHCOM, SPACECOM, AFRICOM, STRATCOM, NORAD/ NORTHCOM, CENTCOM, TRANSCOM, and the Joint Staff. This includes the ability to share new applications and data integrations across CCMDs, and the ability to leverage AI in MSS. Funding also supports the mission manager pipeline, a government-owned DevSecOps pipeline to integrate 3rd party applications into MSS under Open DAGIR to expand the vendor base able to develop applications on data in the GOCO MSS data stack. Finally, funding supports cloud computing costs associated with these capabilities.												
FY 2025 to FY 2026 Increase/Decrease Statement:

New Start (Y/N): No

A. Mission Description and Budget Item Justification

This program supports the Department's initiatives to Defend the Nation, Take Care of People and Build Sustainable and Long-Term Advantage.

This funding supports the Defense Readiness Reporting System - Strategic (DRRS-S), the comprehensive readiness reporting system for the Department of Defense mandated under Title 10 U.S. Code. The system measures, in an objective, accurate, and timely manner, the capability of the armed forces to carry out the National Security Strategy prescribed by the President, as well as, the defense planning guidance provided by the Secretary of Defense, and the National Military Strategy prescribed by the Chairman of the Joint Chiefs of Staff. DRRS-S hosts information and applications used to support the Geographic and Functional Combatant Commanders, the Services, Combat Support Agencies, the Joint Staff and the Office of the Secretary of Defense.

DRRS-S is the evolution of readiness reporting to a more comprehensive system, better able to meet the Department's current and future readiness information challenges. Included in these challenges is the expansion in scope of the entities who can and do report readiness. Shifting from solely resource centric readiness reporting to a resource informed mission and capabilities-based reporting system, oriented towards the National Military Strategy (NMS), makes substantially more complex demands on readiness reporting, but portrays a far more relevant and holistic picture of readiness. The challenges associated with sourcing and evaluating the readiness of our forces engaged in on-going real operations, mean that force managers need applications that will query the entire Department for suitable, available organizations to meet current needs. DRRS-S continues to incorporate more data and develop more capable functionality to meet the evolving needs of both the operational employers of the Force, but also those responsible for Force Generation.

The National Defense Authorization Act for FY 2019 revised Title 10 U.S. Code and provided the Department of Defense direction requiring growth in the DRRS-S program and identified the program's need to maintain the technical currency necessary to quickly meet future challenges associated with providing senior leaders with relevant and timely information. Such initiatives include implementing the complex data structures and visualization tools needed to operationalize the Department's Enterprise Force Structure, (formerly referred to as Global Force Management - Data Initiative, (GFM DI)) and reporting at lower organizational levels consistent with how Forces are employed.

A. Mission Description and Budget Item Justification

This funding supports the Defense Readiness Reporting System - Strategic (DRRS-S), the comprehensive readiness reporting system for the Department of Defense mandated under Title 10 U.S. Code. The system measures, in an objective, accurate, and timely manner, the capability of the armed forces to carry out the National Security Strategy prescribed by the President, as well as the defense planning guidance provided by the Secretary of Defense, and the National Military Strategy prescribed by the Chairman of the Joint Chiefs of Staff. DRRS-S hosts information and applications used to support the Geographic and Functional Combatant Commanders, the Services, Combat Support Agencies, the Joint Staff and the Office of the Secretary of Defense.

DRRS-S is the evolution of readiness reporting to a more comprehensive system, better able to meet the Department's current and future readiness information challenges. Included in these challenges is the expansion in scope of the entities who can and do report readiness. Shifting from solely resource centric readiness reporting, to a resource informed mission and capabilities-based reporting system, oriented towards the National Military Strategy (NMS), makes substantially more complex demands on readiness reporting, but portrays a far more relevant and holistic picture of readiness. The challenges associated with sourcing and evaluating the readiness of our forces engaged in on-going real operations mean that force managers need applications that will query the entire Department for suitable, available organizations to meet current needs. DRRS-S continues to incorporate more data and develop more capable functionality to meet the evolving needs of both the operational employers of the Force, but also those responsible for Force Generation.

The National Defense Authorization Act for FY 2019 made revisions to Title 10 U.S. Code directing the Department of Defense to take actions which required growth in the DRRS-S program. The legislation identified the program's need to achieve and maintain the technical currency necessary to quickly meet future challenges associated with providing senior leaders with relevant and timely information. Such initiatives include implementing the complex data structures and visualization tools required to operationalize the Department's Enterprise Force Structure, (formerly referred to as Global Force Management - Data Initiative, GFM DI)) and reporting at lower organizational levels consistent with how the Department's forces are employed.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Defense Readiness Reporting System	12.512	11.415	8.552
Description: The Defense Readiness Reporting System (DRRS) establishes a capabilities-based, adaptive, near real-time readiness information system for DoD. DRRS measures the readiness of military forces and supporting infrastructure to accomplish their designed and assigned missions. DRRS integrates a host of key technologies to achieve an information system that supports Service tailored assessment tools, analytic capabilities, and force presentation tools. DRRS contains readiness metrics and data to support the Military Services, Combatant Commands, Combat Support Agencies, Joint Staff, and OSD's

A. Mission Description and Budget Item Justification

The Joint Systems Architecture Development (JSAD) program element supports the Office of the Under Secretary of Defense, Acquisition and Sustainment (OUSD A&S), Office of the Deputy Under Secretary Defense Platform Weapons and Portfolio Management (DASD PWPM) mission to use Capability Portfolio Management (CPM) to analyze, manage, and inform acquisition and resourcing decisions in platform and weapon portfolios, to include air, surface, electronic, and cyber warfare systems. The program is broken up into two focus areas: Portfolio Systems Acquisition (PSA), supporting air, land, sea, and undersea warfare programs and munitions; and Electromagnetic Warfare (EW), supporting the statutory responsibilities of the EXCOM.

All efforts DASD PWPM strive to deliver the warfighter the best equipment and systems, and to do so by performing top down, national security strategy-driven, capabilities-based planning by fully leveraging Department and acquisition reform initiatives.

The JSAD program enables collaborative efforts to achieve these goals with a focus on Major Defense Acquisition Programs (MDAPs) and integrated acquisition portfolio management. These efforts entail integrated roadmaps to support acquisition investment decisions, and assessments of MDAPs and other linchpin acquisition efforts in a capability area context. Activities in the JSAD project are focused on three areas:(1) integrated acquisition portfolio analysis; (2) acquisition roadmaps; and (3) acquisition decision support. These efforts guide the development and fielding of integrated acquisition systems in order to achieve Joint mission capabilities across the operational domain to defend against any global threats.

The Department uses enterprise-wide approaches which include:(1) horizontal integration within the Department and unity of effort through greater interagency collaboration; (2) engaging in a coordinated and portfolio-based approach to planning, programming, budgeting and execution; and (3) significant reforms at the governance, management and execution levels. To accomplish this intent, there needs to be a focused goal and concerted emphasis on shifting from systems acquisition to portfolio systems acquisition.

A. Mission Description and Budget Item Justification

The FY 2026 request for Portfolio Systems Acquisition (PSA) includes \$6.166 thousand of discretionary funds which supports air, land, sea, and undersea warfare programs and munitions with a focus on MDAPs and integrated acquisition portfolio management. These efforts entail integrated roadmaps to support acquisition investment decisions, and assessments of MDAPs and other linchpin acquisition efforts in a capability area context. PSA funds provide support in the areas of (1) integrated acquisition portfolio analysis; (2) acquisition roadmaps; and (3) acquisition decision support. These efforts guide the development and fielding of integrated acquisition systems in order to achieve Joint mission capabilities across the operational domain to defend against any global threats.

A. Mission Description and Budget Item Justification												
The FY 2026 request for Electromagnetic Warfare (EW) includes \$2.461 thousand of discretionary funds which supports EMSO capability recommendations for Departments priorities to include Golden Dome Homeland defense and Strategic Deterrence within the Indo Pacific region. The EW project funds capability advancements that focus on transitioning programs to the warfighter. The EW line also aligns Department efforts with key allies under the AUKUS Pillar II EW working group, to institutionalize cooperative acquisition and ultimately increase warfighter lethality.												
B. Accomplishments/Planned Programs (\$ in Millions)									FY 2024	FY 2025	FY 2026	
Title: Electromagnetic Warfare									3.260	3.343	2.461	
Description: FY 2024 Accomplishments:												
- Completed EW EXCOM analysis of EW Counter-C5ISR capabilities and Electromagnetic Spectrum Operations Operational Assessment.												
- Continued cross-Service collaboration on and demonstrations of EW materiel solutions in Army and Navy.												
- Continued mission analysis of Airborne Electromagnetic Attack capabilities to support EW missions, including Suppression of Enemy Air Defenses.												
- Completed DoD Directed Energy (DE) capabilities analysis and DoD DE management processes review.												
- Continued to develop international partnerships in EW capabilities with key allies, including Australia and the UK.												
- Continued to analyze Department EW capability gaps to inform future DoD EW investment in programs and systems.												
FY 2025 Plans:												
- Continue mission engineering analyses and integration to incorporate Electromagnetic Warfare effects and capabilities in critical mission thread areas in order to meet evolving threats.												
- Continue to develop plans and conduct DOTMLPF-P initiatives to advance the Department's EW capabilities strategy.

A. Mission Description and Budget Item Justification

This program supports the Department's priorities to rebuild the military by matching threats to capabilities and re-establish deterrence by defending our homeland. Since its inception in FY 1990, Central Test and Evaluation Investment Program (CTEIP) provides the development of the most needed, high-priority Test and Evaluation (T&E) capabilities for joint/multi-Service requirements. CTEIP investments address strategic requirements related to Hypersonics, Directed Energy, Cyber, Electronic Warfare, Nuclear Effects, Space, Autonomy, and Multi-Domain Operations. Other Investments in test infrastructure align with objectives in the Strategic Plan for DoD T&E Resources for high priority test needs and common range Infrastructure. The CTEIP uses a corporate investment approach to combine T&E needs from Service, Defense, and other Government agencies in order to maximize opportunities for joint efforts and avoid unwarranted duplication of test capabilities. CTEIP evaluates and selects for execution, proposals that align to national strategic guidance and USD(R&E) priorities, provide the greatest return on investment, make efficient use of limited test resources, leverage industry capabilities and Service investments, and promote joint solutions to fill test capability gaps. CTEIP provides enterprise solutions that benefit the whole Department. These investments are needed to ensure the Department's readiness to test and field rapidly emerging technologies and weapon systems that defend our homeland, deter aggression, and achieve peace through strength.

A. Mission Description and Budget Item Justification

The Central Test and Evaluation Investment Program (CTEIP) develops needed, high-priority Test and Evaluation (T&E) capabilities for joint/multi-Service requirements. CTEIP efforts include Hypersonics, Directed Energy, Cyber, Electronic Warfare, Nuclear Effects, Space, Autonomy and Multi-Domain Operations. Other Investments in test infrastructure align with objectives in the Strategic Plan for DoD T&E Resources for high priority test needs and common range Infrastructure.

CTEIP uses a corporate investment approach to combine T&E needs from Service, Defense, and other Government agencies in order to maximize opportunities for joint efforts and avoid unwarranted duplication of test capabilities. CTEIP evaluates proposals and selects those that align to national strategic guidance, provide the greatest return on investment, make efficient use of limited test resources, leverage Service investment, and promote joint solutions to fill test capability gaps. CTEIP provides enterprise solutions that benefit the Department as a whole.

These investments are needed so that test capabilities keep pace with U.S. and adversary technical advances as well as with quickly changing threats. The CTEIP includes special studies, analyses, project improvements, quick reaction efforts, and strategic planning related to test capabilities and infrastructure. CTEIP investments increase efficiency and reduce the cost of testing on DoD's major ranges and test facilities. CTEIP provides efficiencies within the Department by sharing test resources that enable data collection and use between the test and training communities.

	FY 2024	FY 2025	FY 2026
Title: Central Test and Evaluation Investment Program	743.247	805.414	542.773
Description: In FY24, CTEIP developed enterprise solutions for high-priority T&E needs in critical technology areas and foundational capabilities. Highlights include: Hypersonics - Initiate development of a new hypersonic ground test complex with private industry to address growing demand for aerodynamic, aerothermal, and propulsion test needs - Develop a clean air, variable Mach ground test capability for Developmental Test & Evaluation (DT&E) of full-scale hypersonic boost glide and scramjet weapon systems. - Develop a mid-pressure arc heaters to expand the DoD H2 Hypersonic Test Facility to provide higher enthalpy at the midpressure altitudes to enable ground testing of Prompt Global Strike, Maneuvering Reentry Vehicles, and SCRamJet components such as nose cones, fins, and other leading-edge surfaces.

Appropriation/Budget Activity 0400 / 6		R-1 Program Element (Number/Name) PE 0604940D8Z / <i>Central Test and Evaluation Investment Program (CTEIP)</i>		Project (Number/Name) 940 / <i>Central Test and Evaluation Investment Program (CTEIP)</i>	
B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026
- Develop a next generation aeroshell test capability arc heater facility that increases DoD's capacity to conduct aerothermal materials testing in support of hypersonic missiles, ballistic missiles, and other high altitude ballistic/maneuvering munitions. - Develop weather effects upgrades for existing test track to provide a small-scale rain and snow erosion test capability to validate vehicle structural design. - Develop an improved sled track rockets that provides a new modular rocket propulsion system for the three DoD high speed test tracks including an improved capability to ground test full scale components at hypersonic speeds. - Provide a scoring system motion compensation table to develop a radar pedestal motion compensation mechanism and test and verification system to support weapon lethality testing in broad open ocean environments. - Return to service a Mach 7 test capability at an Air Force hypersonic ground test facility to provide a full-scale aerothermal structural capability for seeker aperture development. - Develop Modeling & Simulation (M&S) capability to support boost glide thermal analysis software upgrades that provides a tool set for improving capabilities for predicting aerothermal and ablation response to high speed, high temperature flow in ground and flight test environments. - Develop advanced material response models validated with ground test data to predict weather erosion in flight. - Implement non-ballistic radar tracking algorithms and the supporting infrastructure to track nonballistic hypersonic vehicles for Reagan Test Site. - Refresh Reagan Test Site Kiernan Reentry Measurement System (KREMS) radar hardware and software systems to increase system functionality and system capability. - Improve high fidelity, high temperature scene projectors for installed system and hardware-in-the-loop laboratory testing of sensors and seekers for high-speed weapons and missile engagements. Directed Energy - Develop shortwave infrared zoom capability to be mounted on multiple DoD tracking systems to track, determine effects phenomenology, and Time Space Positioning Information (TSPI) of aerial directed energy targets at night and in obsuration. - Develop a ruggedized, shielded, man-portable highspped data recording system for High Power Microwave (HPM) directed energy testing. - Develop a diagnostic system for confirming performance of current and future High Energy Laser (HEL) systems. - Develop a remote target sensor capable of measuring HPM effects on internal components attacked by HPM systems. - Develop a frequency-agile S-Band High Power Microwave threat source for Military Standard 464C vulnerability testing. - Develop tethered HPM recorder and electronic attack target to accelerates development of instrumentation necessary for testing UAS vulnerabilities in an HPM threat environment. - Develop upgraded system placement analysis capability to provide 3D outdoor effects test planning needed to support testing of Counter UAS HPM systems. - Develop 6 DoD vibration tables for HEL systems mounted on ships, ground vehicles, and aircraft.

Exhibit R-2A, RDT&E Project Justification: PB 2026 Office of the Secretary Of Defense		Date: June 2025	
Appropriation/Budget Activity 0400 / 6	R-1 Program Element (Number/Name) PE 0604940D8Z / <i>Central Test and Evaluation Investment Program (CTEIP)</i>	Project (Number/Name) 940 / <i>Central Test and Evaluation Investment Program (CTEIP)</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
- Develop portable electronic field sensors to cover a wide area measurement system to characterize the HPM Efield and test blue HPM effectiveness against airborne threats. Cyber - Develop an avionics test bed providing a common framework to allow embedded avionics components to engage in an error-free state while component level cybersecurity T&E is performed. - Expand an existing test application to include cyber test capabilities to monitor, check for, alert on, identify messaging, and identify the source of the messaging that is modified or indicates a modification “tipoff” capability. - Develop wideband RF Cybersecurity test tool for exploiting unencrypted Radio Frequency datalinks by capturing datalink information and generating RF messages in real time. Electronic Warfare - Upgrade missile attitude instrument suite used to capture 6DOF TSPI and validate RF and IR missile models, while meeting requirements associated with OCONUS transport and operation. - Implement littoral electromagnetic range to establish a secure, well-instrumented coastal test environment to validate emerging commercial and government electromagnetic systems and tactics. - Develop Very High Frequency (VHF) threat simulator to support wideband VHF MIL STD 464C testing of a full-sized target such as an aircraft. - Develop closed-loop Passive Electronic Scanned Array (PESA) simulator with two transportable, closed-loop threat radar systems replicating the performance of a classified, widely fielded long-range surface-to-air missile system. - Develop test capability in which Electro-Optical/Infrared (EO/IR) imagery is directly injected into the systems’ core computer via sensor emulators. - Develop an electronic attack package for a drone target that can target multiple radar systems under test (SUT)s at multiple frequency bands. - Develop Integrated Air Defense System (IADS) enhancements with networked threat emulation to provide a comprehensive threat representative IADS capability at an open-air range and other facilities providing four threat representative Command Posts to existing Electronic Warfare (EW) capabilities. - Develop an RF and cyber effects test environment for Electromagnetic Maneuver Warfare. - Upgrade Digital Integrated Air Defense System (DIADS) M&S capacities to support expansion of EW testing across western test ranges. - Establish enterprise architecture and approach to implement multirange aircraft instrumentation interoperability and network connectivity to meet EW open-air battle shaping test and training needs for air warfare missions. - Provide upgraded and new Radar Cross Section (RCS) measurement capabilities to measure and evaluate advanced low observable technologies in increasingly complex and cluttered environments.

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026
Nuclear Effects - Develop a test capability to assess the vulnerability of missile components to a nuclear weapon. - Develop test facility upgrade for Single Event Effects (SEE) testing to increase capacity of testing natural space radiation. - Upgrade a survivability and vulnerability test facility to provide an improved control system and subsonic wind capability. - Upgrade an X-ray simulator to measure the susceptibility of missile components to damage from space environments. Space - Provide a dual laser threat simulation capability to evaluate space-based Intelligence, Surveillance and Reconnaissance (ISR) sensors against surrogate ground and air-based laser threats. Autonomy - Develop autonomous systems test capability to provide digital robotic and autonomous systems integrated virtual environment for testing DoD autonomous ground vehicle systems and an open-air range environment capability to test full scale autonomous vehicles. - Develop autonomous teaming for a suite of capabilities furthering Unmanned Aircraft Systems (UAS) systems integration into controlled airspace and the test tools for integrating manned/unmanned teaming between ranges. Demonstration at Pax River, MD has been successful. Initial capabilities will be delivered to Naval Air Station Pax River, MD, Redstone Arsenal, AL and Edwards AFB, CA. - Develop Naval autonomous systems test capabilities to establish a Modeling and Simulation (M&S) capability to test the performance of Naval surface ship autonomous systems software. - Provide a maritime survivability library and threat M&S tool which evaluates the lethality of emerging anti-ship weapons, using artificial intelligence/machine learning techniques. Common Range Instrumentation - Develop counter Unmanned Aircraft Systems (cUAS) lethality diagnostics to provide a shielded enclosure for flight controllers, lethality and HPM diagnostics for cUAS operations. - Develop an open-air capability for creating a mission relevant RF test environment for testing cUAS systems at Naval Air Warfare Center (NAWCAD) Webster Field, MD. - Develop advanced NextGen optical range tracking systems to increase performance, reduce costs and establish secure reliable optical tracking capability on DoD open-air ranges. - Develop real-time vehicle data collection capability that reduces instrumentation size, weight and power requirements by replacing three unique data collectors with one modular, scalable data collector that has increased storage capacity.

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
- Develop a modular hybrid tracking system for aircraft and weapon testing that provides a range of time, space position information (TSPI) capabilities in Global Positioning System (GPS)-denied environments. - Upgrade maritime long-range fires test assets with an additional telemetry frequency, enabling range safety control and telemetry to support stream raid/simultaneous engagements. - Develop open ocean weapons impact scoring system to provide persistent, relocatable range capability for beyond line of sight, high precision weapon scoring and range surveillance. - Develop a multi-axle vehicle chassis simulator and a drive train simulator to test heavy 4 and 5 axle vehicle performance and reliability. FY 2025 Plans: In FY25, CTEIP will continue developing enterprise solutions for high-priority T&E needs in critical technology areas. Highlights include: Hypersonics - Continue build out of “fly the mission on the ground” hypersonic wind tunnels - Build capacity for hypersonic arc heater testing - Develop rocket motors to support hypersonic testing on the high-speed test track - Complete preliminary design of recoverable, high-speed test track - Complete development of midcourse tracking capability for hypersonic open-air testing - Restore a full-scale subsonic wind tunnel to allow testing of Future Vertical Lift platforms and other rotary wing aircraft - Develop large scale (high fidelity) supersonic and hypersonic aerodynamic test capability to support next-generation hypersonic weapon separation Electronic Warfare - Develop a facility to support classified testing unable to be accomplished on open-air test ranges - Field representative EW threats to support testing of Blue system airborne electronic attack systems - Develop high-fidelity, low clutter tracking (TSPI) capability of small Radar Cross Section (RCS) vehicles to support CUAS and swarming sUAS testing - Develop the capability to model high-fidelity air-to-air (A/A) targets and associated electronic attack environments in a repeatable lab environment to test advanced 5th and 6th generation aircraft radar A/A modes - Develop real-time Multispectral Sensor Scene Projection/Injection capability to test seekers and advanced multispectral weapons Space

A. Mission Description and Budget Item Justification

This program supports the Department's priorities to rebuild the military by matching threats to capabilities and re-establish deterrence by defending our homeland. The Joint Mission Environment Test Capability (JMETC) program provides a Department of Defense (DoD) enterprise-wide test capability to support system-to-system interoperability testing, mission-level environment testing, and cyber event operations, including cyber testing, cyber training, cyber experimentation, and cyber mission rehearsal. The JMETC program implements the infrastructure capabilities defined in the DoD "Testing in a Joint Environment Roadmap" to provide acquisition program managers a robust nation-wide capability to "test like we fight." The JMETC program provides a persistent, distributed test and evaluation (T&E) capability that supports system development to measure and improve interoperability performance and cyber resiliency, and provide a software acquisition pathway that otherwise would not be readily available to Service/Component acquisition programs. The JMETC program is funded within the Research, Development, Test and Evaluation (RDT&E) Management Support Budget Activity because it provides test capability in support of RDT&E programs. By linking distributed facilities, as well as providing the necessary tools, services and subject matter expertise, the JMETC program allows acquisition programs to efficiently evaluate their warfighting capability in a realistic joint mission environment. The JMETC program has been aligned to national strategic guidance to advance the Department's readiness to experiment and test the development of resilient, survivable, federated networks and information systems from the tactical level up to strategic planning, as well as test and assess cyber defenses that deter aggression and achieve peace through strength.

Change Summary Explanation					
The overall \$18.101M increase from FY25 to FY26 will support expansion of distributed RDT&E networks to an additional 10-20 sites including OCONUS and mission partners, continued joint experimentation at Combatant Commands, development and implementation of improved next-generation big data analysis solutions, increased cloud storage and services to enable T&E data availability requirements across the acquisition lifecycle, and the development of National Cyber Range Complex sites to address growing demand for cybersecurity test, training, experimentation, and mission rehearsal.

A. Mission Description and Budget Item Justification

The Joint Mission Environment Test Capability (JMETC) program provides a Department of Defense (DoD) enterprise-wide test capability to support system-to-system interoperability testing, mission-level environment testing, and cyber event operations, including cyber testing, cyber training, cyber experimentation, and cyber mission rehearsal. The JMETC program implements the infrastructure capabilities defined in the DoD “Testing in a Joint Environment Roadmap” to provide acquisition program managers a robust nation-wide capability to “test like we fight.” The JMETC program provides a persistent, distributed test and evaluation (T&E) capability that supports system development to measure and improve interoperability performance and cyber resiliency, and provide a software acquisition pathway that otherwise would not be readily available to Service/Component acquisition programs. The JMETC program is funded within the Research, Development, Test and Evaluation (RDT&E) Management Support Budget Activity because it provides test capability in support of RDT&E programs. By linking distributed facilities, as well as providing the necessary tools, services and subject matter expertise, the JMETC program allows acquisition programs to efficiently evaluate their warfighting capability in a realistic joint mission environment. The JMETC program has been aligned to national strategic guidance to advance the Department’s readiness to experiment and test the development of resilient, survivable, federated networks and information systems from the tactical level up to strategic planning, as well as test and assess cyber defenses that deter aggression and achieve peace through strength.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: JMETC Distributed Test	102.123	122.312	140.016
Description: In FY24, JMETC Distributed Test continued to expand the Department’s capability and capacity to conduct complex, large-scale distributed experimentation, test, and training events; provided direct support to end users; and developed and demonstrated big data analysis solutions to reduce post-test data access time from weeks to hours. Highlights include: - Demonstrated impressive gains in data analysis speed during test events with the Cloud Hybrid Edge-to-Enterprise Evaluation & Test Analysis Suite (CHEETAS), an innovative enterprise solution that provides evaluators with high-quality, reliable data in a significantly reduced timeframe so they can identify and correct issues earlier and at a lower cost than with legacy data analysis capabilities. CHEETAS uses artificial intelligence and machine learning techniques to significantly decrease the labor of subject matter experts determining the validity of data collected during tests – reducing the time to ingest, process, convert, and tag data from weeks to hours. - Supported DoD distributed experimentation, test, and training events such as system interoperability certification, system interoperability assessments, command and control systems, air and missile defense, 4th and 5th Generation Aircraft, unmanned aircraft, precision-guided bombs, munitions, missile tracking and guidance, infrared countermeasures, Joint Fires, Joint Close Air Support, and coalition exercises

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
- Provided test planning support to users and organizations to conduct interoperability testing on numerous DoD systems including command and control systems; information warfare; air and missile defense; intelligence, surveillance, and sensor systems; surface ships; anti-surface warfare; anti-submarine warfare; tactical radar systems; precision-guided bombs; unmanned aircraft; autonomous aircraft; manned fixed wing aircraft; helicopters; and enterprise information systems - Continued to expand the JMETC Secret Network (JSN) infrastructure to meet requirements - Assisted customers with the use of distributed test tools and troubleshooting of the end-to-end network infrastructures - Provided on-site support for the execution of large-scale, complex distributed events FY 2025 Plans: In FY25, JMETC Distributed Test will continue expanding the Department's enterprise-wide test capability to support system-to-system interoperability testing and mission-level environment testing. Highlights include: - Build on the success of CHEETAS by developing and implementing improved next-generation big data analysis solutions - Expand secure, distributed JMN connectivity to an additional 20-30 sites to include OCONUS and Partner facilities - Increase cloud expansion to enable T&E data availability requirements across the acquisition lifecycle - Expand JSN connectivity to CONUS and OCONUS sites to enable integration of T&E capabilities with INDOPACOM - As a recognized Enterprise Cross-Domain System (eCDS) provider, make eCDS improvements to support T&E community emerging requirements to support other than secret and partner releasability requirements - Increase expansion of Development, Security, Operations (DevSecOps) capabilities to enable rapid cyber evaluation, integration, and deployment of developed capabilities - Develop All Domain Test Range (ADTR) to support joint experimentation at Combatant Commands FY 2026 Plans: In FY26, JMETC Distributed Test will continue to support the Department's enterprise-wide distributed test, big data analysis, and experimentation capabilities. Highlights include: - Continue building on the success of CHEETAS by developing and implementing improved next-generation big data analysis solutions - Increase cloud storage and services to enable T&E data availability requirements across the acquisition lifecycle - Continue All Domain Test Range (ADTR) joint experimentation at Combatant Commands - Expand distributed RDT&E networks to 10-20 additional sites, including OCONUS and mission partners FY 2025 to FY 2026 Increase/Decrease Statement: The \$17.704M increase from FY25 to FY26 will support expansion of distributed RDT&E networks to an additional 10-20 sites including OCONUS and mission partners, continued joint experimentation at Combatant Commands, development and

A. Mission Description and Budget Item Justification

The National Cyber Range Complex (NCRC) is composed of cyber ranges and a secure distributed network infrastructure to service the cyber range user community. The NCRC currently consists of five functional cyber ranges, including the National Cyber Range in Florida as well as four Regional Service Delivery Points (RSDP) located in Hawaii, Alabama, Maryland, and Massachusetts. To enhance DoD cyber range test and training capability and capacity, the NCRC is being expanded with additional cyber ranges co-located with key Service organizations at Naval Information Warfare Center Atlantic (NIWC LANT), SC; Naval Air Station Patuxent River (NAS Pax River), MD; and 46th Test Wing Eglin Air Force Base (AFB), FL to support an increase of cyber testing of DoD systems as well as training of cyber warfighters. The JMETC Multiple Independent Level of Security (MILS) Network (JMN) currently links sites across the DoD, industry, and academia, providing secure access between cyber ranges, laboratories, and facilities. Both the cyber ranges and the network infrastructure are accredited to support multiple levels of security classifications, specifically configured to meet particular cyber event requirements. The NCRC investments have been aligned to support the interim National Defense Strategy in improving cyber defense, cyber resilience, cyber lethality, and the continued integration of cyber capabilities into the full spectrum of military operations.

- The NCRC conducts cyberspace test and training events for the full spectrum of DoD customers including research, development, acquisition, testing, training and operational Cyber Mission Forces (CMF). The NCRC executes wide variety of event types including science and technology (S&T) demonstrations, developmental test and evaluation (DT&E), operational test and evaluation (OT&E), security controls assessments, capability assessments, cyberspace operations training, development and refinement of cyberspace tactics, techniques, and procedures (TTP), cyber forensics/malware analysis) and cyberspace operations mission rehearsal. The NCRC enables acquisition programs to conduct cybersecurity test and evaluation in an operationally representative cyberspace environment enabling identification, validation and mitigation of vulnerabilities. The NCRC also supports training, mission rehearsal and certification of the CMF in support of US Cyber Command by enabling operational forces to efficiently evaluate cyber warfighting capability in a realistic joint mission environment to include bi-lateral and multi-national exercises.
- The NCRC provides secure facilities, technology, processes, and workforce to rapidly create hi-fidelity, mission-representative friendly, neutral, and adversarial cyberspace environments.
- The NCRC also facilitates integration of distributed organizations with different missions and workforce relevant to cyber operations (e.g., cyber operators, penetrations testers, cyber assessors, cyber observers, cyber analysts, etc.). The NCRC supports cyber activities across of a full spectrum of DoD systems, including weapon platforms, C4I systems, business systems, network devices, and other systems vulnerable to a cyber-attack. The NCRC extensively utilizes automation to minimize human error, to reduce the time required to set-up for a cyber event, and to ensure repeatable results. In addition, the NCRC employs post-event sanitization techniques on all assets after exposure to malicious code to restore back to a known, clean state, which allows for reuse in future events.
- The NCRC has a multidisciplinary workforce with software, systems, network, virtualization, automation, system administration, and cybersecurity subject matter expertise. In support of successful planning and execution of hosted events, the NCRC workforce helps users define and refine their event objectives, assists with identifying and prioritizing potential vulnerabilities, designs virtualized cyber environments, develops customized traffic generation and instrumentation solutions, integrates 3rd party hardware and software, executes cyber events on behalf of the user, provides cooperative vulnerability and penetration assessments, performs detailed cyber analysis, and delivers detailed reports with actionable information to decision makers. In addition, the NCRC workforce supports both the Executive

Agent for Cyber Test Ranges and the Executive Agent for Cyber Training Ranges, to identify and address relevant needs, define and promulgate standards, and seek efficiencies through focused investments.					
B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026
Title: JMETC National Cyber Range Complex (NCRC)			73.008	70.465	70.862
Description: In FY24, the NCRC continued to advance warfighter capabilities and system resiliency by providing operationally representative cyberspace environments for testing, training, experimentation, and mission rehearsal. The NCRC also continued to add capability and expand its footprint, supported by a 10-year, \$2.4 billion contract under which awardees compete for individual task orders, enabling the government to quickly and affordably incorporate technology advances at existing and future NCRC locations. Highlights include: - Supported 100+ cyber events, including cybersecurity test and evaluation support to Major Defense Acquisition Programs (MDAP), Major Automated Information Systems (MAIS) Acquisition Programs, and smaller acquisition programs, as well as cybersecurity training to multiple COCOMS and Service organizations - Continued to support testing systems and subsystems across multiple domains (land, air, sea, and space) relevant to manned and unmanned aircraft, surface ships, command and control systems, data management platforms, weapons platforms, satellites, radars, and missile defense systems - Continued to support Cyber Table Top (CTT) exercises, which help acquisition programs identify and prioritize potential vulnerabilities for further assessment and mitigation early in the acquisition lifecycle - Continued to support Service Cyber Mission Forces (CMF) with training, certification, mission rehearsal and TTP development focused events - Established new government-controlled cyber range facilities, to include facility conversion work, procurement of computing resources, physical security accreditation, and development of training courseware for utilization of core NCRC cyber range tools by new NCRC workforce members - Implemented an NCRC unclassified (NCRC-U) capability, which has hosted cyber T&E workforce development activities for multiple government customers and academia to strengthen cyber vulnerability assessment expertise					
FY 2025 Plans: In FY25, the NCRC will continue expanding capability and capacity with the addition of cyber ranges co-located with key Service organizations at Naval Information Warfare Center Atlantic, SC; Naval Air Station Patuxent River, MD; and 46th Test Wing Eglin Air Force Base, FL to address the growing demand for cybersecurity test, training, experimentation, and mission rehearsal. Highlights include: - Full operational capability at the cyber range co-located with Naval Information Warfare Center Atlantic, SC - Initial operational capability at the cyber range co-located with Naval Air Station Patuxent River, MD

New Start (Y/N): No

In FY 2025, the Under Secretary of Defense for Research & Engineering (USD(R&E)) realigned funding from Project Code 842 to Mission Engineering and Integration (ME&I) Program Element 0603142D8Z, Project Code 123 to fund the Office of Mission Integration (MI). This new funding structure, which separates funding for MI from funding for the Office of Systems Engineering and Architecture (SE&A), better reflects the organizations' functional structure within the Office of the USD(R&E).

A. Mission Description and Budget Item Justification

The Systems Engineering program element establishes dedicated funding to carry out the duties as described in 10 U.S.C 133a and the Department of Defense Directive 5137.02, "Under Secretary of Defense for Research and Engineering (USD(R&E))," dated July 15, 2020. In alignment with the 2025 Interim National Defense Strategic Guidance, the program element supports the administration's top priorities of Rebuild Our Military and Reestablish Deterrence by reforming the acquisition process, rapidly fielding emerging technologies, and building a resilient Joint Force and defense ecosystem.

This funding directly supports defense acquisition programs and supports rapidly fielding emerging technologies identified by the USD (R&E). Furthermore, it supports the implementation of Department initiatives and advances the development, modernization, and adoption of emerging technologies with speed and agility in the areas of systems engineering, interoperability, digital engineering, software engineering, model-based systems engineering, specialty engineering, value engineering, modular open systems approaches, standardization, and workforce development.

A. Mission Description and Budget Item Justification

The Systems Engineering project provides resources to develop and promote advanced engineering principles, techniques, and practices across the Department of Defense (DoD); connects and strengthens the technical community; develops the engineering and technical workforce; advances and manages standards; and provides technical expertise for independent engineering assessments to advance the development and adoption of emerging technologies with speed and agility. Engineering is the backbone of technology development and transition, playing a crucial role in turning innovative ideas into practical and real solutions. On behalf of the Under Secretary of Defense for Research and Engineering (USD(R&E)), this project executes the following activities:

- Supports USD(R&E)'s initiatives to modernize the DoD's systems and software engineering practices to include the use of modular open systems approaches (MOSA) and advanced systems engineering techniques to build systems capable of seamlessly incorporating new technologies to respond to emerging threats.
- Furthers the adoption of digital engineering, modeling, and simulations to allow the DoD to rapidly field and implement innovative technologies for the Joint warfighter.
- Furthers the adoption of modern Agile/DevSecOps (Development, Security, and Operations) software practices and improves cross-organizational collaboration to modernize DoD software processes, capability, and expertise.
- Facilitates execution of the Secretary of Defense initiative to modernize software acquisition to acquire, deliver, and iterate on our weapon and business systems software. Supports collaboration and management activities through the DoD Software Modernization Senior Steering Group in coordination with the Office of the Under Secretary of Defense for Acquisition and Sustainment (OUSD(A&S)), DoD Chief Information Officer (CIO), and the Military Services.
- Improves delivery of advanced capability to warfighters by modernizing reliability and maintainability, manufacturing and quality, system safety, human systems integration, and value engineering practices.
- Identifies, develops, manages, and provides access to standardization processes and products for the defense community to promote interoperability, reduce cost, and sustain readiness.
- Leads production of policy, guidance, and workforce development initiatives for the DoD engineering and technical workforce.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Systems Engineering	17.373	20.538	20.066
Description: The Systems Engineering project supports and improves the OUSD(R&E)'s efforts in systems engineering, digital engineering, MOSA, software modernization, and standardization management. In addition, the funds facilitate workforce development to ensure the DoD maintains its advantage in warfighter readiness in a rapidly evolving technological environment.			
FY 2025 Plans: • Promote the adoption of operational imperatives for open system standards and architectures as statutorily directed and emphasized in the Tri-Service MOSA Memo.			

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2026 Office of the Secretary Of Defense			Date: June 2025

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026
• Support model-based systems engineering (MBSE) to enable faster adoption and deployment of the critical technology areas. • Serve as Lead Standardization Activity for systems engineering specifications and standards, modular and open systems standards and specifications (MOSS), and modeling and simulation (M&S) standards and methodologies. • Update the DoD Modeling and Simulation Strategy. • Develop a DoD MOSA implementation guide. • Update DoDI 4245.14, DoD Value Engineering Program. • Develop additional combat efficiencies by reducing failure modes, hazards, and defects early and throughout the capability life cycle of weapon systems. • Identify gaps in engineering policies and guidance. Develop updates or new policies to address identified gaps. • Coordinate software engineering modernization in areas of enterprise cloud services, software factories, DevSecOps (Development, Security, and Operations), continuous delivery pipelines, and applications of artificial intelligence in the warfighting domain. • Support the DoD in its efforts to advance digital engineering (DE) and M&S efforts to align with industry practices. Promote the integration of physics-based models into campaign-level system-of-systems models. Support modeling efforts that enable standardizing engineering data to serve as authoritative sources of truth for the digital threads of DoD capabilities. • Develop the workforce of tomorrow by working with Military Departments, Defense Acquisition University, and other DoD Agencies to identify critical workforce competencies and deploy essential training and credentials in critical technical skill areas. • Lead the DoD Digital Talent Management Forum. Support collaboration across the Office of the Secretary of Defense (OSD) and the Military Services to enhance workforce management by unifying and streamlining parallel Department-wide digital talent (e.g., software engineering) efforts. • Build a resilient Joint Force and defense ecosystem by: engaging with technology demonstration efforts to develop next-generation data analytics and rapid prototypes; collaborating within OSD to address the digital transformation needs of independent technical risk assessments; and executing prototyping efforts in the area of application programming interfaces (APIs) to modernize DoD's approach to interoperability. • Provide engineering expertise to OUSD(R&E)'s critical technical reviews and independent technical risk assessments. • Advance foundational engineering practices (including reliability and maintainability, manufacturing and quality, system safety, human systems integration, and value engineering) to improve readiness and enhance lethality and effectiveness. • Serve as the Defense Standardization Executive, coordinating standards activities with the DoD community and the Defense Standardization Program Office. FY 2026 Plans: • Continue to support model-based systems engineering (MBSE) to enable faster adoption and deployment of the critical technology areas by developing organizational, workforce, project, and model transition guidance to lead the Department in transitioning to a data and API-first MBSE approach.

A. Mission Description and Budget Item Justification

The Engineering Architectures project advances efforts in system-of-systems architecture for the Department of Defense. The project supports the development of an enterprise-wide strategy to integrate existing and future systems to improve the Department's technological advantage in joint, multidomain operations.

Systems Engineering & Architecture (SE&A) develops policy, guidance, and training to enable rigorous engineering and the accelerated delivery of affordable, innovative, and operationally relevant mission capabilities for U.S. all-domain dominance in an environment with scarce resources, near-peer threats, and continual, rapid, and complex technological change. On behalf of the Under Secretary of Defense for Research & Engineering (OUSD(R&E)), this project executes the following activities:

- Supports acquisition programs in the development and execution of system-of-systems engineering and architectures to enable accelerated delivery of innovative mission capabilities.
- Supports the development of enterprise system-of-systems engineering architecture guidance to facilitate improved interoperability in acquisition programs.
- Develops a workforce capable of fielding and sustaining enterprise system-of-systems engineering and architectures.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Engineering Architectures	3.062	4.131	3.339
Description: The Engineering Architectures project supports and improves OUSD(R&E)'s efforts in Nuclear Command, Control, and Communications (NC3) and Combined Joint All-Domain Command and Control (CJADC2) as they progress through the acquisition life cycle. In addition, the funds support the development of policy and guidance for system-of-systems (SoS) architectures.			
FY 2025 Plans: • Update the Nuclear Command, Control, and Communications (NC3) Technology Development Plan to reflect changes in NC3-related research and development (R&D) efforts and how they address NC3 gaps. • Provide NC3 systems engineering and architecture assistance to the USD for Acquisition and Sustainment(A&S)and CDR USSTRATCOM. • Assist CDR USSTRATCOM in the development of the NC3 Enterprise Engineering Management Plan. • Provide systems engineering and architecture assistance to CJADC2.

A. Mission Description and Budget Item Justification

The OUSD(P&R)'s Studies and Analysis Support program serves to leverage specialized expertise and critical capabilities designed to help meet varied research, study, and analytical support needs in the manpower, personnel, talent management, force readiness, training, education, force safety, family support, resiliency, and health services portfolios. This funding supports intellectually rigorous, relevant, and timely assessments of policies, programs, and procedures across the P&R enterprise. Funded research, studies, program evaluations, surveys, and analysis support P&R roles in executing the interim National Defense Strategy in a proactive and forward leaning posture, focusing on a strategic programmatic and policy framework for the future.

This program advances P&R's statutory title 10 and Principal Staff Assistant responsibilities with respect to promoting a ready and agile Total Force positioned to execute the Department's mission.

Funding is leveraged to address key strategic and long-term challenges facing the Department and includes targeted assessments to support program evaluation and efficacy. It also encompasses comprehensive research and complex exploration to support data-aligned, insights-driven, and outcome-based decision-making and critical analysis to develop needed evidentiary bases for policy development or modification.

A. Mission Description and Budget Item Justification

The OUSD(P&R) Studies and Analysis Support program serves to leverage specialized expertise and critical capabilities designed to help meet varied research, study, and analytical support needs in the manpower, personnel, human capital, force readiness, training, education, force safety, family support, resiliency, and health services portfolios. This funding line supports independent, intellectually rigorous, relevant, impartial, objective, and timely assessment of policies, programs, and procedures across the P&R enterprise. Funded research, studies, program evaluations, surveys, and analysis support P&R in executing the interim National Defense Strategy and DoD leadership priorities in a proactive and forward leaning posture, focusing on a strategic programmatic and policy framework for the future of the Department's force development, talent management, and readiness. Funding is leveraged to address critical and complex, inter-disciplinary strategic long-term challenges facing the Department, and includes targeted assessments to support program evaluation and efficacy. It also encompasses comprehensive research and complex exploration to support data-aligned, insights-driven, and outcome-based decision-making and critical analysis to develop needed evidentiary bases for policy development or modification in support of the Administration's priorities, congressional direction, and Secretary of Defense direction.

Note

New Start (Y/N): No

The FY 2026 request for Nuclear Matters Management Support includes \$12.549 million of discretionary spending.

A. Mission Description and Budget Item Justification

The mission of Nuclear Matters is to ensure the continued credibility, safety, security, resiliency, and effectiveness of the U.S. nuclear deterrent to deter adversaries, assure allies and partners, and achieve U.S. objectives if deterrence fails—today and in the future. Nuclear Matters serves as the Department of Defense (DoD) focal point for the modernization and sustainment of the U.S. nuclear weapons stockpile, as well as for a wide range of nuclear counter-terrorism and counter-proliferation issues.

The funds for this program are used to support research, development, test and evaluation efforts as well as studies and analyses for nuclear weapons modernization, sustainment, security, use control, nuclear weapons stockpile safety, and survivability requirements. Funds are also used to develop and implement plans for the future of the stockpile and broader nuclear deterrent; infrastructure analyses and assessments; DoD-National Nuclear Security Administration (NNSA) Nuclear Weapons Council (NWC) activities, as mandated by Title 10 U.S. Code, section 179; radiological and nuclear emergency response efforts; and management of international programs of nuclear cooperation, particularly with respect to enhancing international nuclear safety and security. Nuclear Matters is also responsible for policy development and implementation for personnel reliability; nuclear weapons, nuclear command and control, and special nuclear materials security; use control; nuclear weapons transportation; physical security equipment; countering nuclear threats; and nuclear and radiological incident response. Additionally, Nuclear Matters serves as a focal point for DoD activities and initiatives related to countering the threat from nuclear terrorism and nuclear proliferation.

Nuclear Matters is leading a series of efforts to provide data-driven support to integrated portfolio management for 21st century nuclear deterrent sustainment and modernization. The United States is modernizing all three legs of its nuclear triad and is also reconstituting its nuclear weapons production capability at roughly the same time, while simultaneously sustaining weapons and systems that have aged well beyond their original design lives. The NWC and similar bodies seek to manage the transition from legacy Cold War delivery systems and weapons to replacement systems and warheads and make decisions that will affect U.S. national security through the end of the 21st century. To field a modern, threat-informed, nuclear deterrent that will keep pace with evolving adversary capabilities, it is necessary to conduct a variety of assessment and study efforts to enable data-driven decisions concerning the future of the U.S. nuclear deterrent.

To meet the 2023 National Defense Authorization Act requirement to implement a portfolio management framework for nuclear forces, the Office of the Assistant Secretary of Defense for Nuclear, Chemical, and Biological Defense Programs will lead a nuclear integration and analysis cell to identify and analyze risks and

Change Summary Explanation

The FY 2026 request was reduced by \$6.874 million for Advisory and Assistance Services to promote efficiencies and advance the policies of the Administration in alignment with Executive Order 14222, "Implementing the President's Department of Government Efficiency Cost Efficiency Initiative." Reduction of \$0.058 million was due to inflation adjustment, and \$0.010 million reduction for Reforms.

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
- Conduct oversight of Nuclear Weapon Incident Exercises for the DoD, in coordination and cooperation with other U.S. Government Agencies (to include state/local/tribal) and NATO Partners. FY 2025 to FY 2026 Increase/Decrease Statement: There are no changes between FY 2025 and FY 2026.			
Title: Nuclear Incident Response and North Atlantic Treaty Organization (NATO) and International Nuclear Programs Description: In accordance with Presidential Policy Directive 35, US Nuclear Weapons Command and Control, Safety and Security and the DoD implementer, DoDD S-5210.81, the DoD will establish policy on nuclear weapons procedures for responding to U.S. nuclear weapons accidents and incidents and serve as the technical advisor to the Secretary of Defense in the event of a nuclear accident or incident. Coordinates with other U.S. Government Agencies and allies to ensure their standards complement DoD efforts for responding to accidents and incidents. Regularly consult with NATO allies through the High Level Group, which is the senior advisory body to the NATO Nuclear Planning Group, consisting of subject matter experts and supporting the Assistant Secretary of Defense for Nuclear, Chemical and Biological Defense in their role as Vice-Chair of the HLG. The HLG is comprised of national policy makers and experts from Allied capitals. The United States participates in several international programs of cooperation regarding nuclear weapons with foreign governments and regional defense organizations that involve unclassified and classified information exchanges. In general, these agreements are designed to promote safety and security, advance stockpile stewardship, and collaborate in counter-proliferation efforts. FY 2025 Plans: - Serve as Chair of the Nuclear Weapons Accident and Incident Subcommittee tasked in Federal response plans and national directives with the responsibility to coordinate and execute U.S. nuclear weapons incident and accident response policy. - Coordinate overseas nuclear weapon storage and deployment issues with the Department of State, Combatant Commands, Services, and other DoD organizations. FY 2026 Plans: - Serve as Chair of the Nuclear Weapons Accident and Incident Subcommittee tasked in Federal response plans and national directives with the responsibility to coordinate and execute U.S. nuclear weapons incident and accident response policy.		0.375	0.373

Appropriation/Budget Activity 0400 / 6	R-1 Program Element (Number/Name) PE 0605161D8Z / Nuclear Matters Management Support	Project (Number/Name) 161 / Nuclear Matters Management Support		
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025	FY 2026
- Coordinate overseas nuclear weapon safety, security, and survivability issues, including supporting storage and nuclear command, control, and communications infrastructure, with the Department of State, Combatant Commands, Services, and other DoD organizations. FY 2025 to FY 2026 Increase/Decrease Statement: There are no changes between FY 2025 and FY 2026.				
Title: Stockpile Planning and Decision Making Description: To meets its security needs and those of its allies, the U.S. will need a safe, secure, and reliable nuclear deterrent for the foreseeable future. There's increased risk, absent nuclear testing, in assuring long-term safety and reliability of today's aging stockpile—the legacy warheads left over from the Cold War. Today's nuclear weapons enterprise is not sufficiently responsive to technical problems in the stockpile, or to potential emerging threats. The task is to ensure the U.S. nuclear weapons stockpile and supporting infrastructure, meets long-term national security needs. FY 2025 Plans: - Conduct life cycle activities in support of the nuclear weapons stockpile under DoDD 3150.01, Joint DoD-DOE/NNSA Nuclear Weapon Life-Cycle Activities and DoDM 5030.55, DoD Procedures for Joint DoD-DOE Nuclear Weapons Life Cycle Activities. - Manage DoD RDT&E activities for nuclear warheads to include B61, W76, W78, W80, B83, W87, W88 Weapons. - Support studies for warhead replacement. FY 2026 Plans: - Conduct life cycle activities in support of the nuclear weapons stockpile under DoDD 3150.01, Joint DoD-DOE/NNSA Nuclear Weapon Life-Cycle Activities and DoDM 5030.55, DoD Procedures for Joint DoD-DOE Nuclear Weapons Life Cycle Activities. - Manage DoD RDT&E activities for nuclear warheads to include B61, W76, W78, W80, B83, W87, W88 Weapons. - Support studies for warhead replacement. FY 2025 to FY 2026 Increase/Decrease Statement: There are no changes between FY 2025 and FY 2026.		1.336	1.259	0.955
Title: Nuclear Matters Technical Support Description: Support to Nuclear Matters includes the following: - Managing the operational, technical, and administrative support for the NWC and its subordinate bodies for a safe, secure, effective, and credible nuclear deterrent. - Developing and coordinating all reports to the President and Congress as mandated by public law including the Report on Stockpile Assessments, Nuclear Weapons Stockpile Memorandum, NWC Certification of the NNSA Budget, Nuclear Weapons		5.778	6.233	4.020

A. Mission Description and Budget Item Justification

This program supports the Department's initiatives to deter aggression, defend the homeland, and build enduring advantage.

The Networks and Information Integration (NII) program supports Military Global Positioning System (GPS) User Equipment (MGUE) modernization, alternative positioning, navigation, and timing (PNT) policy, and the DoD's PNT Oversight Council. It also supports interagency activities related to space-based PNT and electromagnetic spectrum (EMS) management.

In support of the National Defense Strategy, resilient PNT and GPS services provide a battlespace advantage through precision targeting, intelligence, surveillance, and reconnaissance (ISR), efficient logistics, and force tracking. The joint force is modernizing PNT capabilities to use GPS M-code and incorporate alternate PNT information via a modular open systems approach.

The integrated planning and management project oversees national-level command and control (C2) capabilities development and interoperability through the National Leadership Command Capabilities Management Office (NMO). The NMO ensures timely situational awareness and decision tools for senior leaders, supporting the DoD CIO's oversight of critical command, control, and communications (C3) assets. Focus areas include national leadership C3 systems, national security/emergency preparedness, DoD support to civil authorities, continuity of government, and cyber mission indications and warnings.

Title: Support to Networks and Information Integration (NII)				10.120	8.580	15.597
FY 2025 Plans:						
- Implement Interim National Defense Strategic Guidance, in coordination with OSD, MILDEPs, JS, and Combatant Commands, to ensure a resilient DoD PNT enterprise.						
- Oversee the DoD PNT investment strategy to synchronize PNT materiel solutions development across the Joint Capabilities Integration and Development System, Defense Acquisition System, planning, programming, budgeting, and execution.						
- Implement PNT DoD instructions and DoD manuals to enforce PNT and navigation warfare policy, PNT system compliance with navigation warfare requirements, and security policy.						
FY 2026 Plans:						
- Continue base program initiatives from prior budget year.						
- Increase focus and funding on alternate PNT capabilities, to include resilient PNT services and situational awareness of the electronic battlespace.						
FY 2025 to FY 2026 Increase/Decrease Statement:						
The FY2025 to FY2026 increase is due to classified adds.

A. Mission Description and Budget Item Justification

This RDT&E program supports the Department's initiatives to Defend the Homeland, Build Sustainable and Long-Term Advantage, and Taking Care of People. Funding enables oversight and advances intelligence and security innovation, develops Artificial Intelligence (AI), and enables technical analysis & assessments. Some initiatives span multiple fiscal years, whereas some are one-year initiatives.

The interim National Defense Strategy (NDS) describes an efficient and effective Department with an ability meet U.S. policy goals and objectives. It supports the NDS line of effort to build a more lethal force by conducting research and evaluation of global Defense Intelligence & Security Enterprise (DISE) topics to modernize key capabilities and develop AI. This innovation effort is closely coordinated with other Office of the Secretary of Defense (OSD) organizations, enabling efficiency and reformation of outdated business processes, sustaining security “best practices”, and minimizing risk. This PE provides guidance, counsel, and options to national leaders on improving the near-term efficiency and effectiveness of Intelligence, Surveillance, and Reconnaissance (ISR) capabilities by spearheading the expedited delivery of ISR systems, technologies, policies, and processes in support of warfighter operations around the globe.

Funding promotes technology research and development across the DISE. Intelligence research activities support ISR efficiency, advance AI, and proliferate the usage of intelligence data. Activities also include proof of concept and application development related to enabling process improvement, efficiencies, and innovation. Funding also supports activities that support testing and evaluation across the DISE. Intelligence research activities support ISR efficiency, advance AI, and proliferate the usage of intelligence data. Activities also include proof of concept and application development related to enabling process improvement, efficiencies, and innovation. Funding also supports activities that support testing and evaluation across the DISE.

A. Mission Description and Budget Item Justification

Intelligence Activities require expert engineering and technical assessments on a wide range of classified ISR operational capabilities that directly support NDS priorities. Further, senior-level education is provided for a better understanding to make informed decisions on ISR operations related initiatives, platforms, sensors, and force structure. This PE: 1) Establishes and assesses oversight of the DoD ISR enterprise; 2) Evaluates ISR enterprise performance and effectiveness in terms of strategic sufficiency and alignment to the NDS and monitor allied and partner ISR contributions; 3) Provides expertise on matters of technical collection and operational employment; 4) Provides ISR guidance, counsel, and options to national leaders on improving the near-term efficiency and effectiveness of ISR capabilities by spearheading the expedited delivery of ISR systems, technologies, policies, and processes in support of warfighter operations around the globe; and 5) Conducts research and evaluation of global ISR topics to modernize key capabilities.

Security Activities require coordinated, technology advancements to Personnel Vetting, Physical Security, Industrial Security, Critical Technology Protection, and Law Enforcement that secure the Department and Defense Industrial Base. Activities within this PE include proof of concept and application development related to enabling process improvement, efficiencies, and innovation.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: General Spt to USD(I&S)	2.980	3.155	3.468
Description: OUSD(I&S) developed an AI technology to expedite the release of information to foreign partners. Machine Assisted Disclosure (MAD) integrates within a Combatant Commands workflow to proliferate a robust, coalition Common Operating Picture (COP), while maintaining operational security by leveraging existing Foreign Disclosure Officers.			
OUSD(I&S) initiated the Reimagining Polygraph project to identify, develop, and enhance technologies in support of credibility assessments (CA); design tradecraft for the effective and objective use of these technologies; and provide a viable path forward to integrate and deploy these technologies in support of the DoD mission.			
OUSD(I&S) promoted studies that realized the efficiencies of a wide range of classified ISR operational capabilities that directly support NDS priorities.

A. Mission Description and Budget Item Justification

DoD Small Business Innovation Research (SBIR) and Small Business Technology Transfer (STTR) programs are designed to provide small, high-tech businesses opportunities to propose innovative ideas and solutions in response to technological challenges posed by the DoD Components that will address existing and emerging national security threats and to develop new military capabilities. The SBIR and STTR programs are critical pathways for the Department to tap the innovation of America's small business community and research institutions to support development of cutting-edge technologies that will increase the readiness, modernization and lethality of the Joint Force.

A. Mission Description and Budget Item Justification

The goals of the OSD Small Business Technology Transfer (STTR) program is to stimulate a partnership of ideas between small business concerns (SBCs) and research institutions through DoD funded research or research and development (R/R&D). By providing awards to SBCs or cooperative R/R&D efforts with research institutions, DoD supports innovation and economic growth to generate decisive and sustained U.S. military advantages. This program supports high priority projects within the DoD Components, their missions, and the Warfighter.

A. Mission Description and Budget Item Justification

The goals of the Office of the Secretary of Defense (OSD) Small Business Innovation Research (SBIR) program is to stimulate technological innovation, increase private sector commercialization of federal research and development (R&D), increase small business participation in federally funded R&D, and foster participation by minority and disadvantaged firms in technological innovation. Leveraging the innovation of small business concerns is an important contributor to the development of the cuttingedge technologies that will generate decisive and sustained U.S. military advantages by increasing the readiness, modernization and lethality of the Joint Force. This program supports high priority projects within the DoD Components, their missions, and the Warfighter.

A. Mission Description and Budget Item Justification

Under the authority defined in 15 U.S.C. 638 (y), Commercialization Readiness (CR) Program (CRP), OSD established the “OSD Transitions SBIR/STTR Technology (OTST) Program”. The CR Program is a dynamic, results-oriented response to the Congressional challenge to the DoD in 2006 to deliver more advanced SBIR/STTR technologies faster to our warfighters. The OTST program is an interim technology maturity phase (Phase II) inserted into the SBIR/STTR development process and is structured to be a technology pull to meet requirements that address potential and emerging requirements.

New Start (Y/N): No

In FY 2025, funding transferred from Defense Technology Analysis - PE 0605798D8Z Project 797.

A. Mission Description and Budget Item Justification

The Office of the Under Secretary of Defense for Research and Engineering OUSD(R&E) works closely with the Military Services, Combatant Commands, industry, academia, and other stakeholders to ensure that the Department's critical technology area strategy addresses the key national security challenges- from rising seas to a rising China- that the United States faces today and will face in the future.

Within OUSD(R&E), the Office of the Assistant Secretary of Defense for Critical Technologies OASD(CT) is responsible for managing and overseeing the set of critical technology areas (CTAs) vital to maintaining the United States' national security that are designated by the USD(R&E). While many technologies may cross between these categories, these groupings represent the broad and different approaches that are required to advance technologies crucial to the Department. By focusing efforts and investments into these designated critical technology areas, the Department will accelerate transitioning key capabilities to the Military Services and Combatant Commands. As the Department's technology strategy evolves and technologies change, the critical technology areas will be updated to the technology priorities.

The Critical Technology Analysis (CTA) Program Element (PE) funds engineering, scientific, and analytical support for the designated CTAs and programs within OASD(CT). Funds in this PE directly support the organization and are critical to developing and continuously updating research and technology development roadmaps, studies, and analysis as required by Section 217 of the National Defense Authorization Act for fiscal year 2021.

	FY 2024	FY 2025	FY 2026
Title: Critical Technology Analysis	-	11.422	11.781
Description: The OASD(CT) is responsible for developing the Department's roadmap efforts for the critical technology areas designated by the USD(R&E). Identification of leading edge technology is critical in delivering capability to the warfighter and maintaining the competitive advantage. Funding for research, technical analysis and management, and other advanced research methods will allow for success in identifying game changing technology investments for the Department's modernization efforts.			
FY 2025 Plans: Adversary and competitor actions seek to disrupt and diminish the United States' advantages. Advancement of research and development in the critical technology area priorities will enhance the United States' competitive advantage. The Department

will conduct analysis and research studies to support updates to, and advancements of critical technology area roadmaps synchronized with related priorities. Analysis includes the critical technology area industrial base and the workforce, including universities. The studies and analyses conducted will focus not only on closing gaps and identifying overlap but providing leap-ahead capabilities across all critical technology areas. In addition to the CTAs' analysis and roadmap studies, funding executed for this project will substantially enhance mission support capabilities for the OASD(CT), providing a boost to furthering the foundation and ultimately aiding in the acceleration of delivering capabilities that provide the technical advantage of the Department. <i>FY 2026 Plans:</i> FY 2026 plans will be a continuation from FY 2025. The Office of the Assistant Secretary of Defense for Critical Technologies (OASD(CT)) will continue to conduct research, studies, and analyses to support updates to and advancement of the critical technology roadmaps related to USD(R&E) priorities. Also, funds will be utilized for studies and analyses with focus not only on closing gaps and identifying overlap, but providing lead-ahead capabilities across all CTAs, the critical technology area industrial base and workforce, including universities. In addition to the CTA analysis and roadmap studies, funds for this project will substantially enhance mission support capabilities for the OASD(CT) to include contractor support for Program Management, System Engineering, Financial Management, and Administrative Support. These mission support elements are essential to the OASD(CT), the CTAs currently identified, and ultimately the mission of OUSD(R&E). <i>FY 2025 to FY 2026 Increase/Decrease Statement:</i> Total decrease of \$0.047 million in FY26 includes \$0.012 million of discretionary, and \$0.035 million for Economic Assumptions.

A. Mission Description and Budget Item Justification

This program supports the Department of Defense's three priorities: Defend the Nation, Take Care of Our People, and Succeed through Teamwork.

This program provides funding for the administration of the Small Business Innovation Research (SBIR) and Small Business Technology Transfer (STTR) Program Office. The authority to establish SBIR and STTR programs is codified in 15 U.S.C. 638. The statutory goals of the programs are to stimulate technological innovation, meet federal research and development (R&D) needs, foster and encourage participation in innovation and entrepreneurship by women and socially or economically disadvantaged persons, and increase private sector commercialization of innovations from federal R&D funding. In addition, the STTR program aims to foster technology transfer through cooperative R&D between small businesses and research institutions.

The DoD SBIR/STTR programs set-aside over two billion dollars annually defense-wide to competitively fund scientific and technical innovation to specifically address the interim National Defense Strategy (NDS) modernization priorities and the mission needs of participating DoD components. The DoD components participating in the SBIR/STTR programs include: Army, Navy, Air Force, Defense Advanced Research Projects Agency (DARPA), Missile Defense Agency (MDA), Defense Threat Reduction Agency (DTRA), U.S. Special Operations Command (SOCOM), Joint Science & Technology Office for Chemical & Biological Defense (CBD), Defense Logistics Agency (DLA), Defense Microelectronics Activity (DMEA), Defense Health Agency (DHA), Chief Digital and Artificial Intelligence Office (CDAO), Defense Human Resources Activity (DHRA), Quantum Science, National Geospatial Intelligence Agency (NGA), Basic Research Office (BRO), 5G/Future G, and Strategic Capabilities Office (SCO).

A. Mission Description and Budget Item Justification

The Small Business Innovation Research (SBIR) program and the Small Business Technology Transfer (STTR) programs are highly competitive programs that encourage domestic small businesses to engage in federal research, development, test and evaluation (RDT&E) with the potential for commercialization. Through a competitive awards-based program, SBIR/STTR enables small businesses to explore their technological potential and provide the incentive to profit from its commercialization. By including qualified small businesses in the nation's research and development (R&D) arena, high-tech innovation is stimulated, and the United States gains entrepreneurial spirit as it meets specific research and development needs.

The SBIR/STTR programs are executed in three phases. The purpose of Phase I is to determine the scientific technical and commercial merit, and feasibility of ideas submitted under the SBIR/STTR programs. Phase II is the principal research or research and development effort and is expected to produce a well-defined deliverable prototype. Phase III SBIR/STTR efforts derive from, extend or conclude Phase I or Phase II efforts, and are not funded with SBIR/STTR funds. Under Phase III, companies participating in the SBIR/STTR programs are expected to obtain funding from the private sector and/or non-SBIR/non-STTR government sources to develop the prototype into a viable product or non-R&D service for sale in military and/or private sector markets.

This Program funds the administrative support to the SBIR/STTR programs including: policy development and oversight; surveillance of program execution for participating DoD agencies; outreach and training; hosting, operation and maintenance for the Defense SBIR/STTR Innovation Portal (DSIP); planning and execution of the OSD SBIR/STTR portfolio; reporting and data analytics; financial management; strategic communication of the DoD technological needs; transition; oversight of the DoD Due Diligence Program; and the liaison between Congress, SBA, and the GAO.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: SBIR Challenge Admin	3.831	5.346	5.411
Description: This project is the only source of funds for the coordination, administration, and execution of the Department's SBIR/STTR programs in accordance with statute, Small Business Administration (SBA) SBIR/STTR Policy Directive, and the DoD policies and regulations. The Director of Defense SBIR/STTR within the Office of the Under Secretary of Defense for Research and Engineering (OUSD(R&E)) is tasked with oversight and execution of essential SBIR/STTR Program activities that are required by law.			
FY 2025 Plans: - Implement the due diligence program and provide small businesses with the revised foreign disclosure form;

A. Mission Description and Budget Item Justification

This program supports the President's priority to achieve peace through strength, and the Department's priorities to advance deterrence, work with Allies and partners to reorient to key threats and build a resilient defense industrial base and acquisition process.

This program develops and implements effective technology and program protection to support rapidly and securely fielding military technologies. We must protect sensitive technologies and military programs from theft, diversion, and exploitation by our strategic competitors.

Maturing and implementing the Office of the Under Secretary of Defense for Research and Engineering's (OUSD(R&E)) technology priorities requires a healthy and capable U.S. National Security Innovation Base (NSIB). The targeting of U.S. capabilities by our strategic competitors creates the potential to degrade core U.S. military technological advantages through unwanted technology transfer to and from the NSIB. Unwanted technology transfer includes exfiltration of unclassified technology, sensitive data, and of intellectual property, and malicious introduction of supply chain risk, jeopardizing DoD's ability to maintain the technology advantage required to support the lethality and survivability of the Joint Force.

DoD's technology and program protection plan includes:

- (1) Research Security to ensure the intellectual capital generated by the NSIB are not stolen or exploited.
- (2) Development of tools and techniques to ensure the Department's strategic technology investments are protected to enable the U.S. to engage in technology transfer at the time, place, and parties of our choosing.

UNCLASSIFIED

Appropriation/Budget Activity 0400: <i>Research, Development, Test & Evaluation, Defense-Wide I</i> BA 6: <i>RDT&E Management Support</i>	R-1 Program Element (Number/Name) PE 0605797D8Z <i>I Maintaining Technology Advantage</i>
--	---

(3) Securing defense acquisition programs, systems, and components through robust program protection planning that holistically and efficiently manages technology and program risk without impeding capability delivery to the warfighter.

The Department will support these three efforts by developing the appropriate suite of analytic tools and protection activities across the science and technology (S&T) and acquisition enterprise and programs to address the threat over the long term. S&T protection focuses on ensuring the integrity of the research enterprise through execution of due diligence on technology development efforts. Acquisition program protection comprises traditional Defense Acquisition System activities, such as Program Protection Planning and Independent Technical Risk Assessment, and developing new concepts, training, and best practices, such as Secure Cyber Resilient Engineering, to address ever evolving threats to our acquisition programs and our ability to deliver military capability to the warfighter.

B. Program Change Summary (\$ in Millions)	FY 2024	FY 2025	FY 2026 Base	FY 2026 OOC	FY 2026 Total
Previous President's Budget	38.923	31.629	29.781	-	29.781
Current President's Budget	37.713	31.629	29.675	-	29.675
Total Adjustments	-1.210	0.000	-0.106	-	-0.106
• Congressional General Reductions	-	-			
• Congressional Directed Reductions	-	-			
• Congressional Rescissions	-	-			
• Congressional Adds	-	-			
• Congressional Directed Transfers	-	-			
• Reprogrammings	-0.004	-			
• SBIR/STTR Transfer	-1.135	-			
• FFRDC reductions	-0.071	-	-0.017	-	-0.017
• Economic Assumptions	-	-	-0.089	-	-0.089

Change Summary Explanation

FY 2024 change of -\$1.210 million is due to SBIR/STTR (-\$1.135 million), Cancelled Accounts (-\$0.004 million) and Federally Funded Research and Development Center (FFRDC) (-\$0.071 million) reductions.

FY 2026 change of -\$0.106 million is due to FFRDC (-\$0.017 million) and Economic Assumptions (-\$0.089) reductions.

A. Mission Description and Budget Item Justification

The Technology Industrial Innovation Base (TIIB) effort develops near- and long-term strategies and employs mechanisms to retain the U.S. advantage in current and emerging modernization technology priorities by addressing the capabilities of the industrial innovation base to develop, test, manufacture, and sustain them. This project provides support to technology priority leaders in identifying industrial innovation base needs; characterizing and assessing priority technology investments, identifying and mitigating issues and risks impacting the industrial innovation base, and exploiting opportunities to advance technology development, testing, and manufacturing. One of TIIB's main objectives is to create balance between promotion of the industrial innovation base while protecting the technology from interference or exploitation by competitors. This balance will aid the Department's advancing critical and emergent technologies ahead of competitor nations and actors while sustaining a healthy, resilient, and globally competitive industrial innovation base. This portfolio of activity extends efforts initiated in response to FY 2019 National Defense Authorization Act (NDAA) Section 1793.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Technology Industrial Innovation Base (TIIB)	8.050	-	-
Description: This project uses a three-step approach: (1) Assess, (2) Protect/Promote; and (3) Monitor. In the first step, TIIB uses emerging technology assessments to translate technology needs to manufacturing and industrial innovation base requirements in order to identify industrial innovation base issues, risks, and opportunities. TIIB created an assessment methodology that incorporates four types of studies to provide a full overview of the technology from a manufacturing and industrial innovation base point of view. The results of the assessments are used to generate industrial-innovation-base inputs to technology roadmaps, develop an investment plan addressing the needs of the industrial innovation base, and create technology and industrial innovation base protection and promotion strategies (second step of the approach). TIIB leverages DoD and Federal Government tools and initiatives to implement the strategies. In the third step, TIIB uses data analytics to measure the success of mitigation and exploitation strategies, establish trends in the markets, and identify the need for additional assessments or changes in investments and strategies. TIIB applied these three steps to Advanced Battery Supply Chain Disruptions, Capabilities within the Directed Energy Industrial Base, DoD Battery Standardization for 2030, Directed Energy Early Supply Chain, and began an assessment of the Strength and Resilience of the U.S. Quantum Technology Supply Chain. Additionally, TIIB organized and hosted the Trusted AI and Autonomous Systems (TAIA) Defense Technology Review Conference, the inaugural Hypersonics Horizontal Protection Workshop, and the Hypersonics Government-Industry Engagement Event (HGIEE).

A. Mission Description and Budget Item Justification												
As the Department develops advanced technologies, it must use a rigorous, repeatable methodology to protect technology advantage. For example, the Department will establish and implement procedures to protect critical technology in science and technology (S&T), encompassing the lifecycle of basic and applied research, advanced technology development, prototyping, and technology transition to programs. This includes driving consistency across risk-based security reviews for fundamental research and Small Businesses Innovation Research / Small Business Technology Transfer (SBIR/STTR) programs. This also include working with the acquisition community to identify Programs of Record and S&T Projects that require enhanced protection to maintain U.S. technological advantage. The production, updating, and use of Technology Area Protection Plans (TAPPs) generate consistent protection of critical technology, provide foundational guidance for communicating about the technology to particular audiences, and inform protection and controls integrated with technology promotion activities. The implementation of the guidance and TAPPs have broad impacts across DoD and interagency-wide activities associated with critical technologies, including development of protection practices with DoD research performers (e.g., the DoD and national laboratories, academia, small businesses, and the broader industrial innovation base); international agreements; counterintelligence and law enforcement priorities and activities; export controls; and foreign investment screening through the Committee on Foreign Investment in the United States (CFIUS).												
B. Accomplishments/Planned Programs (\$ in Millions)									FY 2024	FY 2025	FY 2026	
Title: Science and Technology (S&T) Protection									11.663	13.356	11.813	
Description: This project supports efforts to maintain DoD’s technology advantage by establishing activities to ensure accountability for mitigating strategic competitor exploitation of technologies critical to national security objectives. This project will develop and oversee S&T guidance and practices for informed horizontal protection of emerging and critical technology areas.												
FY 2025 Plans:												
- Institutionalize and update as needed DoD risk-based security review guidance (e.g., fundamental research, SBIR/STTR) that are consistent across the DoD and mitigate foreign influence in S&T efforts.												
- Continue to update TAPPs to drive horizontal protection of Critical Technology Areas.												
- Implement, refine, and develop new data-driven models and capabilities that enable data-informed identification and implementation of courses of action that appropriately protect DoD technology advantage.												
- Implement, assess, and improve proactive analytic tools supporting the biomanufacturing NSIB, including a map of the domestic biomanufacturing ecosystem for identification and tracking of metrics to support future implementation, refinement, and protection of U.S. investments in domestic biomanufacturing capabilities in support of the DoD Biomanufacturing Strategy.												
FY 2026 Plans:												

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2026 Office of the Secretary Of Defense		Date: June 2025	
Appropriation/Budget Activity 0400 / 6	R-1 Program Element (Number/Name) PE 0605797D8Z / <i>Maintaining Technology Advantage</i>	Project (Number/Name) 138 / <i>S&T Protection</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
- Update as needed DoD risk-based security review practices (e.g., fundamental research, SBIR/STTR) that are consistent across the DoD and mitigate foreign influence in S&T efforts. - Implement DoD risk-based security reviews for fundamental research to mitigate foreign influence in S&T efforts across OSD. - Prioritize Programs of Record and S&T Projects that require enhanced protection to maintain U.S. technological advantage. - Update TAPPs at the speed of relevancy and technology development to drive horizontal protection for Critical Technology Areas, at the rate of 2 per year. - Institutionalize and update data-driven models and capabilities that enable data-informed identification and implementation of courses of action that appropriately protect DoD technology advantage. - Institutionalize and update proactive analytic tools supporting the biomanufacturing NSIB, including a map of the domestic biomanufacturing ecosystem for identification and tracking of metrics to support future implementation, refinement, and protection of U.S. investments in domestic biomanufacturing capabilities in support of the DoD Biomanufacturing Strategy. <i>FY 2025 to FY 2026 Increase/Decrease Statement:</i> The decrease of \$1.498 between FY 2025 and FY 2026 reflects a realignment of funds for higher priority DoD missions and will impact the speed and volume of tools that support the protection of military capabilities that are being developed using emerging technologies. An Economic Assumptions decrease of \$0.035 reflects a reduction in non-pay, non-fuel purchases based on revised inflation rates. A reduction of \$0.010 million is due to reduced Federally Funded Research and Development Center (FFRDC) support.

Quantity of RDT&E Articles	-	-	-	-	-	-	-	-	-	-		

A. Mission Description and Budget Item Justification

The DoD established a joint analysis capability, the Joint Acquisition Program and Exploitation Cell (JAPEC), to produce analytics products in support of the technology protection mission, such as for foreign investment screening; engage with acquisition, intelligence, counterintelligence, and law enforcement sources to determine consequences of, and appropriate preventative/mitigation actions against unwanted technology transfer; and assess controlled unclassified technical information losses. JAPEC detects and characterizes past technology losses, conducts damage assessments of lost information, and provides insights with predictive value to support and promote activities. JAPEC enables comprehensive, detailed assessments of U.S. military technological vulnerability, as well as inform the development and application of effective policies, countermeasures, and enforcement actions to preserve U.S. technical superiority in all warfighting domains. JAPEC engages with select allies and partners to develop protection efforts across the extended supply chains resulting from the partnerships created by the global S&T community.

JAPEC and supporting organizations synchronize, integrate, coordinate, and inform DoD efforts to protect critical technologies from malign investment by strategic competitors and to combat malign activities. JAPEC conducts trend analysis of protection efforts for the Department's critical acquisition programs and technologies, incorporates findings into protection processes and activities, and analyzes losses, to determine consequences and appropriate courses of action, such as deterrence of our strategic competitors as well as promotion of the NSIB.

JAPEC also manages OUSD(R&E)'s responsibilities for CFIUS, including the assessments, reviews, and investigations of transactions on the CFIUS docket, especially those pertaining to critical technology, sensitive personal data (such as genomic data), and the NSIB, as well as the identification of "non-notified" transactions that are not yet before CFIUS but which may raise national security concerns for OUSD(R&E) programs and mission space, meriting formal review. This line of effort involves the initial screening of all CFIUS transactions (to determine OUSD(R&E) equities), coordination with subject matter experts who provide vulnerability and consequence information to support the analysis of the risks to national security presented by each transaction affecting OUSD(R&E) mission space, and full market analytics to consider risks presented by aggregate industry investment trends and the 2025 America First Investment Policy to scrutinize and prohibit Chinese investments in critical technology sectors.

JAPEC is also the focal point for related efforts, such as OUSD(R&E)'s screening of mergers and acquisitions for antitrust consideration, when they might impair the health of the Defense Industrial Base, and OUSD(R&E)'s export control activities where JAPEC provides technical advice and recommendations to the Defense Technology Security Administration regarding regulations of, and applications for licenses to export critical technology.

This project also funds collaborative activities to ensure consistent technology protection guidance and actions across the DoD enterprise, leading the way for reviving our defense industrial base and reforming acquisition processes on technology and program protection matters.

Exhibit R-2A, RDT&E Project Justification: PB 2026 Office of the Secretary Of Defense		Date: June 2025	
Appropriation/Budget Activity 0400 / 6	R-1 Program Element (Number/Name) PE 0605797D8Z / <i>Maintaining Technology Advantage</i>	Project (Number/Name) 139 / <i>Joint Acquisition Protection Exploitation Cell (JAPEC)</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
Title: Joint Acquisition Protection Exploitation Cell (JAPEC) Description: Integrate controlled unclassified information, to include Controlled Technical Information (CTI), protection efforts across the DoD to proactively mitigate losses resulting from unwanted technology transfer and to exploit opportunities to combat strategic competitors that may threaten U.S. military advantage. FY 2025 Plans: FY 2025 Plans: - Develop consistent technology protection guidance and actions across the DoD enterprise by integrating, synchronizing, and deconflicting current and future technology protection guidance and actions applied to technologies supporting DoD military capability. - Assess and improve the implementation of CTA protection lines of effort involving transactions subject to CFIUS, export license applications, and antitrust considerations, such as through new analytic products to illuminate trends among non-notified transactions that may merit the attention of CFIUS. - Support and inform the NSC and DoD stakeholders when they are making and implementing national and international policy to appropriately protect technology. - Execute new investment risk authorities as required by statute or executive order, to include support in drafting implementing regulations. - Work with DoD and interagency partners to scope export controls to protect emerging and foundational technology and to implement the 2025 America First Trade Policy and 2025 America First Investment Policy. FY 2026 Plans: - Continue driving towards consistent technology protection guidance and actions across the DoD enterprise by integrating, synchronizing, and deconflicting activities across the Department. Fund pilot programs to explore new concepts and capabilities in support of Department-wide protection activities. Focus on intellectual property protection activities, defense industrial base threat assessment improvements, holistic horizontal program protection, and critical program information identification and protection - Continue to mature the CTA protection lines of effort involving transactions subject to CFIUS and outbound investment regulations, export license applications, intellectual property, and domestic mergers and acquisitions, through analytic products to illuminate trends (such as among non-notified transactions in critical technology that may merit the attention of CFIUS), at a rate of hundreds of transactions per year spanning all 14 CTAs. - Support and inform the NSC and DoD stakeholders when they are formulating and implementing the administration's national and international policies to appropriately protect technology. A. Mission Description and Budget Item Justification

The Department of Defense (DoD) must address System Security Engineering risk, including cyber resilience, cybersecurity, and supply chain risks to DoD networks, weapon systems, and information stored and processed on both the DoD and the Defense Industrial Base (DIB) unclassified contractor information networks that support DoD programs. The Department of Defense (DoD) must address System Security Engineering risk, including cyber resilience, cybersecurity, and supply chain risks to DoD networks, weapon systems, and information stored and processed on both the DoD and the Defense Industrial Base (DIB) unclassified contractor information networks that support DoD programs. Advanced persistent threats (APTs) that can evade commercially available security tools and defeat generic security best practices, drives the need for diligent program protection planning and execution.

This project supports implementation of DoDI 5000.83, Technology and Program Protection to Maintain Technological Advantage. Activities carried out for Program Protection Planning include providing Program Protection Plan (PPP) review and oversight for Acquisition Category 1D Acquisition Programs and providing guidance to ensure consistency and comprehensive protection of the acquisition program. Program protection planning must address protection of controlled technical information, critical program information, critical components and critical mission functions; and integration of system security policies and acquisition and S&T practices, secure cyber resilient engineering activities, and system security risk reduction activities.

This initiative is developing new and maturing existing system security engineering methodologies and capabilities to advance DoD Programs' ability to protect critical information, functions, and components. This initiative is supporting the education and training of system security and program protection acquisition professionals through the establishment and course development of Defense Acquisition Credentials.

This project funds continual engagement with other Department stakeholders;, acquisition programs, and the defense industrial base to ensure protection of controlled unclassified information; improve software and hardware assurance mitigations and management of information communication technology (ICT) supply chain risk management risks; improve integration of cybersecurity into the engineering processes through secure cyber resilient engineering methods; improve software assurance and hardware assurance practices; mature processes to identify and protect Critical Program Information; and mature processes to integrate defense exportability features to allow for expediated transfer of U.S. defense systems. This project supports the maturation of SSE and assurance best practices through community and working group engagements. Methodologies, tools, and capabilities are made available and scaled through enterprise resources to maximize adoption.

Activities funded by this initiative support DoD Instruction 5200.44 Trusted Systems and Networks with the use of proven mitigation techniques and tools, the ongoing refinement of ICT risk management processes, and creation of needed technology; implementation of DoD Instruction 5200.39 Critical Program Information (CPI) Identification and Protection Within Research, Development, Test, and Evaluation (RDT&E) and DoD Directive 5200.47 Anti Tamper to identify and protect Critical

Title: Program and Technology Protection		4.819	5.138	4.929
Description: This project provides system security engineering and secure cyber resilient engineering policy, guidance and technical implementation assessments to inform and reduce risks in sharing and storing Controlled Technical Information and data, improve mitigation of ICT supply chain risk management risks, improve integration of cybersecurity into the engineering processes, improvements in defense exportability and anti-tamper practices, improve processes and tools to identify Critical Program Information and improve program protection planning. Activities carried out support implementation of DoD instruction 5000.83, Technology and Program Protection to Maintain Technological Advantage; DoD Instruction 5200.44 Trusted Systems and Networks; DoD Instruction 5200.39 Critical Program Information (CPI) Identification and Protection within RDT&E and DoD Directive 5200.47E Anti Tamper to identify and protect Critical Program Information; DoD Instruction 8582.01 Security of Unclassified DoD Information on Non-DoD Information Systems.				
FY 2025 Plans: Provide support to 3 USD(R&E) Independent Technical Review Assessments for conduct of program protection planning and cyber vulnerability activities to assess: - Conduct of criticality analyses and supply chain risk management protections. - Conduct of Critical Program Information analysis and anti-tamper protections. - Conduct of secure cyber resilient engineering activities and technical cyber risks. Advance the state of the practice of systems security engineering and secure cyber resilient engineering: - Continue implementation activities to expand software assurance capabilities provided by military software assurance centers to implement secure software supply chain requirements in EO 14028, Improving the Nation’s Cybersecurity. - Continue development of system security engineering methodologies to align with the updated DoDI 5200.44; methods include use of Defense Microelectronics Activity when products and services are not available, and application of exclusion authorities to identify and mitigate system security risk, to include cybersecurity and ICT supply chain risk, methodologies include software assurance, hardware assurance, system assurance. - Continue to develop secure cyber resilient engineering courseware, refine guidance, refine standards, supporting program protection and conduct outreach with government, industry, and allies and partners. - Deliver recommendation to NATO on approach to update NATO Standard on Engineering for System Assurance in Programs to align with US adoption of System Security Engineering. - Continue to refine secure cyber resilient engineering guidance, tools and mitigation approaches for capability, system and technology risks.

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
Safeguard Controlled Unclassified Information, including Controlled Technical Information: - Develop guidance to implement NIST SP 800-172 for controlled technical information. - Refine guidance for safeguarding information protection methods for contractor unclassified information networks to base on implementation lessons learned. Safeguard Critical Program Information: - Deliver Critical Program Information Horizontal Protection Guidance to refine anti tamper methods and implementation. - Continue to oversee Anti Tamper Executive Agent Advance protections for Acquisition Category 1D acquisition programs - Improve efficiency of Program Protection activities through transition to a data driven approach. Integrate Secure cyber-Resilient Engineering materials with technology and program protection guidance. Defense exportability integration: - Continue to refine improvements to defense exportability protection methods to allow expedited transfer to allies and partners of U.S. Defense systems. FY 2026 Plans: Continue review and support of ACAT 1D Acquisition Program Protection Plans and Independent Technical Risk Assessments. Normalize disparate supply chain risk management (SCRM) activities in collaboration with Department stakeholders to ensure consistent application of SCRM principles. Improve program adoption of high assurance techniques to continuously re-certify software, supporting continuous integration and rapid fielding. Continue advancing the state of the practice of system security engineering. - Improve efficiency and effectiveness of Program Protection in the DoD acquisition lifecycle through incorporation of a fully digital, dynamic Program Protection Plan. - Deliver capabilities to support the implementation of program protection in DoD programs through enterprise services. Institutionalize Critical Program Information identification, horizontal protection guidance and anti-tamper methods delivered in FY 2025.

A. Mission Description and Budget Item Justification

This program supports the Department's initiatives to rebuilding the military by rapidly fielding emerging technologies.

This program provides mission support to the USD(R&E) covering a wide range of studies and analysis in support of the R&E program and its impacts on the Department's decision to fund RDT&E efforts. Such activities include: (1) identification and development of new technological opportunities; (2) insertion of new technologies into warfighting systems and operations; and (3) management and evaluation of the effectiveness of technology programs.

Note

In order to better align and support the Joint Warfighting Concept, the Homeland Defense Capability Development initiative is focused on unmanned and counter unmanned systems science and technology (S&T) innovation.

A. Mission Description and Budget Item Justification

The Homeland Defense Capability Development Initiatives project uniquely engages with the Services, Combatant Commands, and our federal partners on critical S&T initiatives to both develop emerging unmanned systems technology and countering small unmanned system threats to our military forces and installations across all domains. Work in this project explores and identifies critical technology needs across the domains of Air, Land, Sea and Space, and enables development of synergistic platforms and weapons systems S&T strategies to include unmanned and counter small unmanned systems technologies, directed energy, munitions, power and energy, and their applications to future force projection and protection capabilities as identified in the interim National Defense Strategy.

Key technology applications complement the Office of the Under Secretary of Defense for Research and Engineering's (OUSD(R&E)) modernization priorities: Fully Networked Command, Control, and Communications; Directed Energy; Cyber; Autonomy; and Machine Learning/Artificial Intelligence.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Homeland Defense Capability Development Initiatives	2.822	2.823	2.872
Description: The Homeland Defense Capability Development Initiatives project uniquely engages with the Services, Combatant Commands, and our federal partners on critical S&T initiatives to both develop emerging unmanned systems technology and countering unmanned system threats to our military forces and installations across all domains. Work in this project explores and identifies critical technology needs across the all domains, and supports development of synergistic enabling platforms and weapons systems S&T strategies to include unmanned and counter unmanned systems technologies, munitions, power and energy, advanced materials, position, navigation and timing, quantum science, biotechnology, future generation wireless technology, and their applications to future force projection and protection capabilities as identified in the interim National Defense Strategy. Intelligence and Autonomy; Human Machine Interfaces; Advanced Materials; Biotechnology; Quantum Science; and Future Generation Wireless Technology. FY 2025 Plans: Perform component system integration and additional technology development to produce a technologically mature counter 5G sUAS demonstrator systems and demonstrate system performance at a field test in a controlled test environment. Conduct a prototype demonstration of counter unmanned systems swarm science and technology (S&T) efforts and field evaluation of technologies that offer scalable/modular options that can lead to rapid development of deployable systems. Identify and implement technical and operational approaches to improve defensive measures that decrease the effectiveness of attacks against friendly forces and their assets from threat unmanned systems. Continue assessment of S&T efforts of unmanned systems in the area of countering autonomous systems/swarms and intelligence, surveillance, and reconnaissance (ISR) sUAS. Use modeling and simulation analysis results of large-scale counter unmanned systems capabilities in the homeland based to improve current/future technical capabilities of both friendly and adversarial unmanned systems. Complete joint allied counter-swarm analysis and S&T counter-swarm efforts as part of the United States/United Kingdom Stocktake agreement and The US-Israel Operational Technology Working Group (OTWG); implement a plan to transition capabilities to operational prototype and fielding to the Warfighter. Continue counter unmanned aircraft systems technology cooperation initiatives with allies from the Indo-pacific region. Further strategic studies, analyses and modeling to identify critical technologies required to enable advanced force projection and protection capabilities and mitigate future adversarial threats across air, land, and sea domains. Funding is allotted for Advanced Materials Technologies support to assist with budget priorities, tracking technology readiness and road mapping activities for materials and manufacturing processes. FY 2026 Plans: Identify and evaluate system-level approaches to improve defensive measures that decrease the effectiveness of attacks against friendly forces and their assets from threat unmanned systems. Continue assessment of technologies to counter autonomous systems, swarms, and intelligence, surveillance, and reconnaissance (ISR) unmanned systems capabilities; Use modeling and simulation analysis results of large-scale counter unmanned systems capabilities based in the homeland to improve current/future technical capabilities of both friendly and adversarial unmanned systems; Complete joint allied counter-swarm analyses as part of the United States/United Kingdom Stocktake agreement and the US-Israel Operational Technology Working Group (OTWG); Transition capabilities to operational prototype and fielding to the Warfighter; Continue counter unmanned systems technology cooperation initiatives with Allies from the Indo-pacific region; Continue strategic studies, analyses, modeling and simulations to identify critical technologies required to enable advanced force projection and protection capabilities and mitigate future adversarial threats across air, land, and sea domains.

A. Mission Description and Budget Item Justification

The Laboratory Resource Management project provides funding for the Defense Laboratory Office within the USD(R&E). The Defense Laboratory Office mission is to craft policy and provide the oversight necessary to both preserve current, and develop future, DoD in-house laboratory capabilities such that they continue to generate mission-critical innovations that increase the U.S. military advantage and enhance U.S. national security. The Defense Laboratory Office advocates and supports the DoD laboratory system in three areas: (1) facilities and infrastructure; (2) personnel and quality of workforce; and (3) technology transfer. FY 2022 added the Central Lab Investment Program (CLIP). This effort seeks to address infrastructure gaps within the Department's Laboratory community by establishing a dedicated funding stream for the DoD's laboratories to address infrastructure issues, including facility planning, design, construction, sustainment repair, and/or modernization.

The DoD Laboratory Enterprise consists of more than 60 laboratories with approximately 67,000 employees (approximately 50,000 of whom are scientists and engineers).

Section 211 of the National Defense Authorization Act (NDAA) for FY 2017 also transferred the management of the laboratory demonstration program at Science and Technology Reinvention Laboratories (STRs) from the Under Secretary of Defense for Personnel and Readiness (USD(P&R)) to the Under Secretary of Defense for Research and Engineering (USD(R&E)).

Section 218 of the NDAA for FY 2018 amended the authority by re-designating management to the USD(R&E).

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Laboratories and Personnel Office	2.180	3.689	3.689
Description: Provides advocacy, strategic planning, and policy for the DoD's laboratories. Develops proposals and investment strategies for laboratory infrastructure, technology transfer programs, and personnel development.			
FY 2025 Plans: Propose and evaluate best practices for planning, programming, and executing infrastructure construction projects at DoD Science and Technology Reinvention Laboratories (STRs) and support methodologies for assessing their readiness to achieve their missions.			
FY 2026 Plans:

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
Propose and evaluate best practices for planning, programming, and executing infrastructure construction projects at DoD Science and Technology Reinvention Laboratories (STRs) and support methodologies for assessing their readiness to achieve their missions.			
FY 2025 to FY 2026 Increase/Decrease Statement: Funds remain the same between FY25 and FY26.			
Title: Central Lab Investment Program (CLIP)		28.000	28.142
Description: This effort is targeting the modernization and recapitalization of critical Science & Technology (S&T) infrastructure gaps within the Department's Laboratory community. The competitive program conducts an annual call for S&T topics for DoD laboratories to address failing infrastructure issues and modernization to include facility planning, design, construction, sustainment repair, and/or modernization of critical research capabilities to keep the laboratories globally competitive to advance military technologies.			
In addition, CLIP proposals can include acquisition of unique equipment and tools to replace vital research capital equipment, enabling the laboratories to devote their RDT&E funding to critical research and development and offset their sustainment, repair, and modernization (SRM) funding gap.			
FY 2025 Plans: Funds will address the challenges that the Service laboratories face in their attempts to fund laboratory and equipment capability improvements through a comprehensive strategic plan.			
Select and award laboratory infrastructure and equipment projects received under a FY 2024 call for proposals.			
FY 2026 Plans: FY 2026 CLIP project awards will be made in FY 2026. Proposal award prioritization is based on DoD mission impact, alignment with S&T priorities, cross-laboratory collaboration, and project executability. In addition, plans for the "FY 2027 CLIP Call For Proposals" will be initiated followed by FY 2027 CLIP proposals received and evaluated in FY 2026, pending award in FY 2027.			
FY 2025 to FY 2026 Increase/Decrease Statement: The increase of \$0.281 million between FY 2025 and FY 2026 reflects minor budget fluctuations and will enable additional CLIP lab modernization projects to be eligible for award.			
Accomplishments/Planned Programs Subtotals		30.180	31.831

A. Mission Description and Budget Item Justification

The Defense Technology Analysis (DTA) project funds engineering, scientific, and analytical support for the Office of the Under Secretary of Defense for Research and Engineering (OUSD(R&E)) and specifically the Officer of Deputy Chief Technology Office for Critical Technologies DCTO(CT). The DCTO(CT) supports the USD(R&E) by prioritizing the interim National Defense Strategy modernization lines of effort in order to maintain competitive advantage against adversaries. The efforts funded in this project directly support and are critical to developing and continuously updating research and technology development roadmaps as required by Section 217 of the National Defense Authorization Act for FY 2021.

B. Accomplishments/Planned Programs (\$ in Millions)	FY 2024	FY 2025	FY 2026
Title: Defense Technology Analysis Description: The DCTO(CT) is responsible for developing the Department's roadmap efforts in the fourteen modernization priority areas: Directed Energy, Hypersonics, Integrated Sensing and Cyber, Trusted AI & Autonomy, Integrated Sensing & Cyber, Microelectronics, Space Technology, Renewable Energy Generation & Storage, Advanced Computing & Software, Human-Machine Interfaces, Advanced Materials, Biotechnology, Quantum, and Future G. Identification of leading edge technology is critical in delivering capability to the warfighter and maintaining the competitive advantage. Funding for research, technical analysis and management, and other advanced research methods will allow for success in identifying game changing technology investments for the Department's modernization efforts.	12.745	-	-

A. Mission Description and Budget Item Justification

The Department's key expertise for reviewing and guiding research and engineering (R&E) programs resides in the (OUSD(R&E)). The OUSD(R&E) staff augment their responsibilities through connections to technology experts in various fields throughout academia, industry, and government.

This project provides engineering, scientific, and analytical support to the OUSD(R&E) in its responsibility for direction, overall quality, and content of the science and technology (S&T) program. This activity conducts assessments and analyses to ensure maximum utilization of research and development funds to accomplish the overall objectives of the S&T program. It ensures the technology being developed is affordable and minimizes system development risk. Funds are required for technical, analytical, management support, travel, and publications.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Defense Support Teams	7.987	9.059	9.150
Description: This project provides engineering, scientific, and analytical support to the OUSD(R&E) in its responsibility for direction, overall quality, and content of the S&T program. Furthermore, it ensures that the technology being developed is affordable and minimizes system development risk.			
FY 2025 Plans: The FY 2025 plans will be formulated during FY 2024 with efforts related to engineering, scientific, analytical, and managerial support to the OUSD(R&E) in developing strategies, plans, and policies to develop and exploit technology; conduct technology analyses, make recommendations, and develop guidance for S&T plans and programs; review acquisition programs and make recommendations to optimize effectiveness of the DoD investments; and oversight of S&T issues and initiatives and respond to Congressional special interests.			
FY 2026 Plans: The FY 2026 plans will be formulated during FY 2025 with efforts related to engineering, scientific, analytical, and managerial support to the OUSD(R&E) in developing strategies, plans, and policies to develop and exploit technology; conduct technology analyses, make recommendations, and develop guidance for S&T plans and programs; review acquisition programs and make recommendations to optimize effectiveness of the DoD investments; and oversight of S&T issues and initiatives and respond to Congressional special interests.

A. Mission Description and Budget Item Justification

Technology Transfer and Commercial Partnership's (T2CP) mission is to provide policy, guidance and coordination of the DoD T2 Components' programs which encompass more than 9,000 active public private partnerships with DoD laboratories. The T2 budget is used to implement the 15 USC 3702 and 3710, multiple 10 USC partnership authorities, and DoD Instructions 5535.08 and .11.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Technology Transfer and Commercial Partnership	-	1.657	-
Description: Provides the resources for the management and policy of OSD and DoD-Wide T2 activities. Provides contractual and subject matter expert support for the Undersecretary of Defense (Research and Engineering)'s DoD Domestic T2 responsibilities per DoDD 5137.02. FY 2025 Plans: The Department of Defense (DoD) laboratories continue to develop and transfer innovative solutions to the US industrial base for economic impact in excess of \$100B. \$10B of this was transition back to the DoD as developed products and services. The DoD will continue to improve the transfer and transition of technologies by implementing a DoD strategic plan that derives from the recommendations of the DoD technology transfer (T2) Impact Model study and DoD T2 components' participation, notably: • Technology transition through T2 – developing training tools and resources for laboratory T2 professionals (and technical staff) and acquisition offices to better plan for transition during technology development. • Professional development – continue to coordinate and provide support for developing DoD laboratory T2 professional staffs to be public private partnership experts. • DoD laboratory generated intellectual property (IP) including software – develop additional guidance (handbook and training) to protect and transfer IP and software.

A. Mission Description and Budget Item Justification												
(U) The objectives of the DSSG program are to: (1) identify emerging leaders of science and technology in both the traditional disciplines and in new or interdisciplinary fields related to defense needs; (2) introduce these individuals to the national security community and current defense issues and needs; (3) foster in them a long-term interest in defense issues and needs;(4) create a network of informed, talented, and involved alumni within key disciplines and research centers that are critical to national security; and (5) provide continuing opportunities for those who complete the program to bring their experience and talents to bear on issues and challenges confronting national security.												
B. Accomplishments/Planned Programs (\$ in Millions)									FY 2024	FY 2025	FY 2026	
Title: The Defense Science Study Group (DSSG) Program									0.000	-	1.000	
Description: Each class runs for two years and consists of 15-20 members. The members spend about twenty-two days per year working with the program, typically with four sessions per year, specifically two eight-day sessions during the summer and two three-day sessions during the academic year.												
The program has five general components: (1) an overview of the national security community and meetings with senior military commanders and civilian officials with an emphasis on S&T programs; (2) visits to Joint Commands and military installations to receive briefings, meet personnel from all levels, and observe military operations; (3) visits to intelligence organizations and to the Executive Office of the President; (4) interaction with a group of mentors to the program who have distinguished careers in the national security arena as former military commanders, civilian officials, or technical advisors; and (5) the preparation of "think pieces", which allow the members to personalize their DSSG experience, to focus on a particular area of importance to DoD, and to begin to establish contacts with individuals in DoD with related interests.												
DARPA will maintain its role as funder of the program while passing technical oversight and collaboration opportunities to OUSD(R&E).

A. Mission Description and Budget Item Justification

This program carries out the duties in accordance with Title 10 U.S.C. Section 133a, FY 2018 National Defense Authorization Act (NDAA) (Public Law 115-91) section 838, and the Department of Defense (DoD) Directive 5137.02 dated July 15, 2020. In FY 2020, the Under Secretary of Defense for Research and Engineering (USD(R&E)) established the Developmental Test, Evaluation, and Assessments (DTE&A) organization to provide consolidated Developmental Test and Evaluation (DT&E) and Independent Engineering Assessment functions in a single office. The Director, DTE&A, is the principal advisor to the Secretary of Defense; USD(R&E); and the Under Secretary of Defense, Acquisition and Sustainment (USD(A&S)) on DT&E, Independent Engineering Assessments, and Technical Risk Assessments in the Department of Defense (DoD). The assessment products developed by this program inform investment decisions for critical Warfighter capabilities that align to the Department's 17 priorities including Nuclear Modernization, Virginia-class submarines, executable surface ships, Homeland Missile Defense, One Way Attack/ Autonomous Systems, and Munitions. This program supports the Department's initiatives to rebuild the military and reestablish deterrence.

The Office of the Under Secretary of Defense for Research and Engineering (OUSD(R&E)) engages with Major Defense Acquisition Programs (MDAPs) within the Adaptive Acquisition Framework, providing engineering and DT&E/Cybersecurity DT&E planning expertise to ensure decision-quality data is available at major engineering program reviews and program milestones. This engagement directly helps Program Managers succeed in rebuilding the military and rapidly fielding emerging technologies. OUSD(R&E) engages with programs to help meet interoperability requirements to deepen interoperability and Strengthen Alliances. Finally, OUSD(R&E) works with Director, Operational Test and Evaluation to streamline T&E policy and guidance to improve test efficiency and reduce acquisition cost and schedule to reform acquisition processes.

This program supports and improves the engineering and DT&E efforts of Major Defense Acquisition Program (MDAP), Rapid Prototyping/Fielding efforts, and other Special Interest (SI) acquisition programs designated by USD(R&E) or USD(A&S) as they progress through the acquisition/development lifecycle; supports development of the defense acquisition workforce Test and Evaluation (T&E) career field; and supports development of policy and guidance for the conduct of DT&E and Cyber DT&E within the DoD. This program also provides dedicated resources to support MDAP and Rapid Prototyping/Fielding Program Managers, Chief Developmental Testers,

A. Mission Description and Budget Item Justification

The Development Test & Evaluation (DT&E) project 804 provides resources to support Major Defense Acquisition Program (MDAP) and Rapid Prototyping/Fielding Program Managers, Chief Developmental Testers, and Lead DT&E Organizations in the development of comprehensive, efficient, and innovative DT&E strategies/plans to support key acquisition milestones and engineering decisions. This project also supports the Under Secretary of Defense for Research and Engineering (OUSD(R&E)) to manage the Test & Evaluation (T&E) career field and curriculum for the Department of Defense (DoD) acquisition workforce and develop policy and guidance for the conduct of DT&E within DoD. On behalf of the USD(R&E) this project executes the following activities:

- Support acquisition programs in the development of comprehensive, efficient, and innovative test strategies that can be documented in Test and Evaluation Master Plans (TEMPs). For Acquisition Category (ACAT) ID programs, review and approve/disapprove the DT&E strategy/plans within the TEMP. For ACAT IB and IC programs, review the DT&E strategy/plans within the TEMP and provide a recommendation to the Service Milestone Decision Authority as to whether or not the strategy is adequate.
- Support rapid prototyping, rapid fielding, and technology demonstrations efforts in the development of tailored comprehensive, efficient, and innovative DT&E strategies/plans.
- For ACAT ID programs, provide independent DT&E Sufficiency Assessments to the Defense Acquisition Executive at the Milestone B and C decisions with the goal of reducing discovery of performance issues later in the acquisition lifecycle when deficiencies are more costly to correct.
- For ACAT IB and IC programs, provide an independent DT&E program assessment to the Service Milestone Decision Authority prior to the development Request for Proposal (RFP) release decision point and at the Milestone B and C decisions with the goal of reducing discovery of performance issues later in the acquisition lifecycle when deficiencies are more costly to correct.
- When requested by the Secretary or Deputy Secretary of Defense, provide independent developmental test assessments in support of Under Secretary of Defense for Acquisition and Sustainment (USD(A&S)) and Service Major Defense Acquisition Programs.
- Support the development of independent technical risk assessments and advise the Secretary on the progress toward meeting Key Performance Parameters, technology maturation, reliability growth projections, interoperability, and cyber resilience before any decision to grant Milestone A or B approval, or enter into low-rate initial production or full-rate production for ACAT ID programs or when requested by the Secretary.
- Support the Scientific Test and Analysis Techniques Center of Excellence (STAT COE) that provides scientific analytical expertise to service MDAPs.
- Identify the DoD test infrastructure gaps and support development of the OUSD(R&E) test resources strategic plan.
- Evolve the DT&E 'state of practice' to keep pace with emerging technologies and improve test efficiency to field systems faster.
- Coordinate with Director, Operational Test and Evaluation to improve T&E efficiency and make best use of integrated testing.

A. Mission Description and Budget Item Justification

The Cybersecurity Development Test and Evaluation (DT&E) for Weapon Systems project 048 provides dedicated resources to support Major Defense Acquisition Program (MDAP) and Rapid Prototyping/Fielding Program Managers, Chief Developmental Testers, and Lead DT&E Organizations in the development of comprehensive, efficient, and innovative cyber DT&E strategies to support key acquisition milestones and engineering/programmatic decisions. Cyber DT&E includes cybersecurity and cyber resilience as the components of cyber survivability. On behalf of the Under Secretary of Defense for Research and Engineering (USD(R&E)) this project executes the following activities:

- Support acquisition programs in the development of comprehensive, efficient, and innovative cyber DT&E strategies that can be documented in Test and Evaluation Master Plans (TEMPs). For Acquisition Category (ACAT) ID programs, review and approve/disapprove the cyber DT&E strategy/plans within the TEMP. For ACAT IB and IC programs, review the cyber DT&E strategy/plans within the TEMP and provide a recommendation to the Service Milestone Decision Authority as to whether or not the strategy is adequate.
- Support rapid prototyping, rapid fielding, and technology demonstrations efforts in the development of tailored comprehensive, efficient, and innovative cyber DT&E strategies/plans.
- Support the development of independent technical risk assessments and advise the Secretary on the progress towards meeting the cyber survivability Key Performance Parameter before any decision to grant Milestone A or B approval, or enter into low-rate initial production or full-rate production for ACAT ID programs or when requested by the Secretary.
- Identify DoD cyber test infrastructure gaps and support development of the OUSD(R&E) test resources strategic plan.
- Evolve the cyber DT&E 'state of practice' to keep pace with emerging technologies and improve test efficiency to field systems faster.
- Coordinate with Director, Operational Test and Evaluation to improve cyber T&E efficiency and make best use of integrated testing.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Cybersecurity DT&E for Weapon Systems	8.299	7.052	7.169
Description: Cybersecurity DT&E for Weapon Systems project 048 supports and improves the cyber DT&E efforts of MDAP, Rapid Prototyping/Fielding efforts, and other Special Interest (SI) acquisition programs as they progress through the acquisition/development lifecycle; and support development of policy and guidance for the conduct of cyber DT&E within the DoD. Cyber DT&E includes cybersecurity and cyber resilience as the components of cyber survivability.			
FY 2025 Plans:			

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2026 Office of the Secretary Of Defense		Date: June 2025	
Appropriation/Budget Activity 0400 / 6	R-1 Program Element (Number/Name) PE 0605804D8Z / <i>Development Test & Evaluation</i>	Project (Number/Name) 048 / <i>Cybersecurity DT&E for Weapon Systems</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
- Continue to work with acquisition Program Managers, Chief Developmental Testers, and Lead Development Test and Evaluation (DT&E) organizations to improve cyber DT&E planning and develop comprehensive and efficient DT&E strategies/plans using disciplined integrated decision support keys, developmental evaluation frameworks, and Scientific Test and Analysis Techniques (STAT). Help programs develop cyber DT&E objectives that align measurable and testable cyber performance requirements for security standards, and cyber resilience. - Continue to support rapid prototyping, rapid fielding, and technology demonstrations efforts in the development of tailored comprehensive, efficient, and innovative cyber DT&E strategies/plans. - Expand the Office of the Under Secretary of Defense for Research and Engineering (OUSD(R&E)) 'Shift Left' initiative to focus on cyber DT&E strategies and processes for non-acquisition, pre-acquisition, and for acquisition programs in advance of releasing Technology Maturation and Risk Reduction (TMRR) and Engineering and Manufacturing Development (EMD) Request for Proposals (RFPs) and increasing the amount and quality of data available to support production decisions. - Continue to refine cyber DT&E policies and guidance addressing cyber DT&E throughout the lifecycle across all Adaptive Acquisition Framework programs. - Assess cyber performance/resilience to support development of DT&E Sufficiency Assessments Acquisition Category (ACAT) ID programs or DT&E program assessments Acquisition Category (ACAT) 1B/1C programs. - When requested by the Secretary or Deputy Secretary of Defense, provide independent cyber developmental test assessments in support of Under Secretary of Defense for Acquisition and Sustainment (USD(A&S)) and Service Milestone Decision Authorities. - Continue to provide cyber DT&E subject matter experts to assist programs in building integrated cyber DT&E strategies, conducting mission based cyber risk assessments like Cyber Table Top Exercises to identify potential threat vectors and assist programs with exercising cyber DT&E planning and preparing activities in the Department of Defense (DoD) Cyber DT&E Process. - Continue to promote the application of sound cyber DT&E and related technical disciplines across the Department's acquisition community and programs. - Implement research and initiatives that evolve the cyber DT&E 'state of practice' to keep pace with emerging technologies and improve test efficiency to field systems faster. - Implement initiatives to guide acquisition programs for how to identify and mitigate cyber risk in supply chains, development environments, tools and processes. - Continue to collaborate with the Intelligence communities to improve cyber intelligence support to cyber DT&E. - Continue to work with Lead cyber DT&E organizations to improve cyber DT&E workforce capability and retention as well as capacity to support earlier integrated contractor and government cyber DT&E. FY 2026 Plans:

A. Mission Description and Budget Item Justification

The Independent Engineering Assessments project 149 provides resources to support Major Defense Acquisition Program (MDAP) Program Managers and Chief Engineers/Systems Engineers in the development of comprehensive, efficient, and innovative engineering strategies/plans to support key acquisition milestones and engineering decisions. For Acquisition Category (ACAT) ID programs, this project also conducts independent engineering assessments, including Independent Technical Risk Assessments (ITRAs), and assessments at the Preliminary and Critical Design Reviews. On behalf of the Under Secretary of Defense for Research and Engineering (USD(R&E)) this project executes the following activities:

- Support acquisition programs in the development of comprehensive, efficient, and innovative systems engineering strategies. Provide Systems Engineering support to ACAT ID programs. For ACAT ID programs, review and approve/disapprove the System Engineering Plans (SEPs) to ensure engineering activities, strategies, and plans are comprehensive and consistent with best practices.
- Monitor and advise USD(R&E) and Under Secretary of Defense for Acquisition and Sustainment (USD(A&S)) on technical and engineering aspects of MDAPs and select alternate acquisition pathway programs to ensure they are adequate to support fielding and the achievement of cost, schedule and performance goals to include readiness, i.e., producibility, reliability, maintainability, sustainment, and other considerations.
- For ACAT ID programs, provide ITRAs to the Defense Acquisition Executive (DAE) at the Milestone (MS) A, B, and C decisions with the goal of identifying technical risk and outlining potential mitigation measures that should be considered during program execution. For select high priority ACAT IB and IC programs, review and approve service conducted ITRAs prior to the applicable milestone decision point.
- For ACAT ID programs, conduct Preliminary and Critical Design Review assessments to inform the Defense Acquisition Executive of technical risks, maturity of the technical baseline, and the program's readiness to proceed in accordance with statute.
- For ACAT ID programs, the ITRA and Preliminary Design Review (PDR) assessments support the DAE decision to approve MS B in accordance with statute. They also support the DAE as the milestone decision authority in satisfying requirements to notify congress a written record of the decision to grant MS B for a major defense acquisition program including identification of risks, mitigation measures, and technology maturity in accordance with statute.
- Support acceleration of USD(R&E) modernization initiatives in accordance with the interim National Defense Strategy (NDS).
- Conduct other technical reviews as requested, such as Nunn-McCurdy certification reviews, Non-Advocate Reviews, focused technical assessments, schedule risk assessments, and software readiness reviews to identify and mitigate program risk.
- Coordinate with the Services to improve engineering practices for Major Defense Acquisition Programs (MDAPs) and rapid prototyping/fielding programs. Identify, document, and share lessons learned to improve Systems Engineering across the DoD.
- Guide Service and other component organizations in the development planning process to ensure proposed MDAP programs are executable within acceptable levels of risk.

A. Mission Description and Budget Item Justification

This program supports the Department's initiatives to Deter Aggression, Defend the Homeland, and Build Sustainable and Long-Term Advantage.

This program supports the Office of the Director, Cost Assessment & Program Evaluation (CAPE) by funding assessments that help to resolve budget and programmatic issues across the full range of the Department's activities. Projects that support this effort help to inform leadership on program alternatives, capability concept development, design and cost, as well as the appropriate balance of capabilities across the force. They also help to identify how well the Department is meeting its expenditure goals, and how well the force can implement the interim National Defense Strategy. These RDT&E resources support critical studies and analyses to assist senior DoD leaders in optimally balancing the lethality, partnership, and reform levels of effort to carry out the interim National Defense Strategy.

This program provides for analytical research across the entire spectrum of defense issues and concerns. The research agenda focuses on near to long-term problems identified by the Secretary of Defense, addressing difficult and complex questions linked to program alternatives for current and future capabilities and forces in order to enhance senior leadership's deliberations and decision-making.

This program provides the scientific and technical engineering services needed for research studies in the development of models and simulations and the evaluation of current analytical tools and scientific methods used to evaluate and assess weapons systems and warfighting capabilities for warfighting environments and scenarios, and related force structure. Deliverables from this program will include reports, briefings, and analyses designed to illuminate critical issues facing the Department. Outcomes include recommendations for new modeling techniques, programmatic alternatives, and scenario development.

The FY 2024 budget proposal continues resources to support the Enterprise Visibility and Maintainability of Operation and Support Costs (EVAMOSC). EVAMOSC supports CAPE's responsibility to develop and maintain a database of actual operating and support (O&S) costs for major weapons systems, as required in 10 USC Ch. 137, Sec. 2337a and further refined by Sec. 832 of the 2019 NDAA. Additionally, the EVAMOSC data capability will directly support development and reporting of readiness metrics associated with implementation of the interim National Defense Strategy. In FY 2024, CAPE will continue to design and develop an enterprise data platform to serve as the authoritative source of O&S cost data for major weapon systems.

A. Mission Description and Budget Item Justification												
Enterprise Visibility and Management of Operating and Support Cost (EVAMOSC) addresses CAPE's responsibility to develop and maintain a database of actual operating and support (O&S) costs for major weapons systems, as required in 10 USC Section 4325. Additionally, the EVAMOSC data capability will directly support development and reporting of readiness metrics associated with implementation of the interim National Defense Strategy.												
B. Accomplishments/Planned Programs (\$ in Millions)									FY 2024	FY 2025	FY 2026	
Title: Enterprise Visibility and Maintainability of Operating and Support Costs (EVAMOSC)									5.543	5.331	5.465	
Description: EVAMOSC addresses CAPE's responsibility to develop and maintain a database of actual operating and support (O&S) costs for major weapons systems, as required in 10 USC Section 4325. Additionally, the EVAMOSC data capability will directly support development and reporting of readiness metrics associated with implementation of the interim National Defense Strategy.												
FY 2025 Plans: Design and develop an enterprise data platform to serve as the authoritative source of O&S cost data for major weapon systems: - Develop data ingestion pipelines, business rules, logic models, and data catalogues to support collection, reporting, and analysis of enterprise-level O&S cost data. - Develop system administration, security, and user management functionality for an enterprise data asset anticipated to provide services to over 3,000 users across the DoD. - Construct an advanced database in an Amazon Web Service Cloud environment, acquire data from more than 75 source data systems, and map this data to all DoD weapons systems using standardized O&S cost data definitions.												
FY 2026 Plans: Further develop and maintain an enterprise data platform of O&S cost data for major weapon systems: - Develop and execute data ingestion pipelines, business rules, logic models, and data catalogues to support collection, reporting, and analysis of enterprise-level O&S cost data. - Perform system administration, security, and user management functionality for an enterprise data asset anticipated to provide services to over 3,000 users across the DoD. - Deliver services via an advanced database in an Amazon Web Service Cloud environment, acquire data from more than 75 source data systems, and map this data to all DoD weapons systems using standardized O&S cost data definitions.

A. Mission Description and Budget Item Justification

This program supports the Department's initiative to Take Care of People, and Build Sustainable and Long-Term Advantage.

This program supports the Office of the Director, Cost Assessment & Program Evaluation (CAPE). It funds assessments that help the Analysis Working Group (AWG) to assist the Secretary and Deputy Secretary in guiding the analytic community and ensuring strategic analysis products are robust and of the highest quality. The end goal is an analytic enterprise that is agile, responsive, and provides sound decision support for the Secretary and Deputy Secretary. This program provides for analytic research across the Department to guide reform of the Departments analytic enterprise. Projects that support this effort help to develop a high performing and innovative analytic enterprise with the right policies, structures, people, and tools to support timely strategic decision that create an advantage for the U.S Military now and into the future.

Note

New Start (Y/N): No.

Responsible AI requirements have been realigned to Alpha-1 Development PE 0604133D8Z in FY 2026 as this better aligns the intent of the AI requirements.

A. Mission Description and Budget Item Justification

The Chief Digital and Artificial Intelligence Officer (CDAO) supports the Department's initiatives to build an enduring competitive advantage, while forging a resilient Joint Force and defense ecosystem. The CDAO is responsible for strengthening and integrating data, artificial intelligence, and digital solutions in the Department in support of the interim National Defense Strategy and Section 1513 of the National Defense Authorization Act (NDAA) for FY 2023. The CDAO Responsible AI (RAI) Division ensures the Department is provided with the technical tools and resources efficiently assess and assure its AI-enabled capabilities, to support rapid fielding of capabilities that are lethal, performant, and reliable. The CDAO RAI Division supports the strategic priority of addressing institutional management priorities, the strategic objective of strengthening governance and removing policy barriers, and the performance goal of overseeing the development, acquisition, testing, and integration of Responsible AI and AI Assurance tools and processes across the DoD, as outlined by the Responsible AI Strategy & Implementation Pathway (S&IP). The CDAO Responsible AI (RAI) Division is the Department's lead for Responsible AI and AI Assurance, including managing the Department's AI Assurance Portal (which provides access to the AI testing and monitoring tools, resources, and artifacts from across the Department), leading the development of technical tools, best practices, resources, governance, and strategy & policy guidance related to responsible AI and AI Assurance; and leads the Department's work on AI Assurance Policy (established by the CDAO Charter).

The RAI Division fulfills the functions of both RAI Capability Development and the building of an RAI Customer Ecosystem. The RAI Division provides critical tools and infrastructure and best practices to all DoD Partners. This includes the building and release of the RAI Toolkit and RAI Toolkit Web Application, the AI Assurance Portal, DoD Data and Model Card Templates and supporting software, the DoD's Frontier AI Red Teaming Program (for the AI RCC), technical guardrails and benchmarks for Frontier AI, enterprise-wide AI Assurance Tools, RAI & AI Assurance support to the Services, the development and validation of the Department's AI Assurance policies, and various technical resources for topics including Red Teaming, Human Machine Teaming, Stakeholder Engagement, Risk Management, etc. Additionally, CDAO RAI Division has built and continues to grow the DoD RAI Ecosystem, through chairing the Department's RAI Working Council, leading the DoD's RAI Community of Interest, Chairing (through appointment by the White House) the Federal Government's CAIO AI Risk Management Working Group, co-chairing NATO's working group on AI Assurance, and leadership of other AI Assurance projects and bodies within the inter-agency and internationally.

--	---

In FY26 and beyond, the CDAO RAI Division will continue to integrate best practices and guidelines on developing AI technologies and build them into modular RAI Toolkits and to address specific Use Cases addressed to the Department's most urgent needs around lethality and efficiency. This work will be highlighted in FY25, as the RAI Division will run multiple RAI Toolkit validation experiments and pilots with our DoD partners, integrate those lessons learned into RAI Toolkit V2, while providing specific Toolkits to address frontier AI and DoDD 3000.09 Autonomy in Weapon Systems. Throughout the FYDP, RAI Division will continue to build and integrate the RAI Ecosystem, through industry, inter-agency, and international leadership including leading the stand up of a collaboration with the leading AI Labs on frontier AI Red Teaming (in support of the AI RCC), standing up a frontier AI policy experimentation and validation initiative with the leading AI Labs, chairing the Federal Government's Chief AI Officer Council Risk Practices Working Group (which sets the recommended risk process and resources for the government to meet White House policy and requirements), and the RAI Development Group (RAIDG) (which provides technical and developer support on key RAI issues to priority DoD projects).

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
RAI will complete pilots, exercises, and validation working implementation of multiple pilots and exercises to validate the RAI Toolkit (including with DoD and international partners), development of various technical tools for AI Assurance, safety, and performance testing, and the stand-up of the Department's AI Assurance Portal. RAI will provide new, modular variations of the RAI Toolkit for different use cases (including for autonomous weapons and generative AI). RAI will look to transition critical capabilities to other CDAO Directorates (including DTM, Mission Analytics, Cyber Assurance, and Assessment & Assurance) and to partners in the components and services and partners in the coming years. RAI will maintain critical RAI architecture and ecosystems, while continually adopting best practices and providing critical guidelines to enable alignment to the DoD and Federal Government requirements, policies, and priorities, thereby ensuring justified confidence for warfighters and decision makers. <i>FY 2025 to FY 2026 Increase/Decrease Statement:</i> \$0.779M transferred from PE 0604123D8Z to PE 0606135D8Z in PB26. As such the BA-5 program Responsible AI previously in PE 0604123D8Z will be enveloped by the BA-6 Responsible AI Project in FY2026. This action consolidates total RAI activities into BA-06.

A. Mission Description and Budget Item Justification

The Office of Net Assessment provides the Secretary of Defense, the Deputy Secretary of Defense, and other senior DoD leaders with independent, rigorous, and long-term analytical assessments of fundamental security issues. This includes, but is not limited to, identifying and analyzing emerging threats, technologies, and geopolitical trends that could significantly impact U.S. national security interests, and developing analyses that examine the standing trends and future prospects of U.S. and other military capabilities and military potential. The net assessments address near and long-term problems and opportunities for the U.S. military forces to help counter technological advantages of potential U.S. adversaries. These efforts will pursue research to analyze the future security environment. This request directly supports the interim National Defense Strategy (NDS) and the Department's initiatives to Defend the Homeland, Deter Aggression and Prevail in Conflict, Build Enduring Advantage and and critically aligns with the Department's priorities of accelerating warfighting capabilities, strengthening alliances, fostering a culture of innovation and accountability.

A. Mission Description and Budget Item Justification

This program supports the Department's initiatives to Build Long-Term Advantage, and Build a Resilient Joint Force and Defense Ecosystem.

The Secretary of Defense established the Defense Science Board (DSB) as a discretionary advisory committee, in accordance with chapter 10 of title 5, U.S. Code (commonly known as "the Federal Advisory Committee Act" or "FACA" and 41 C.F.R. § 102- 3.50(d). The DSB provides independent advice and recommendations on matters supporting the Department of Defense's (DoD) scientific and technical enterprise to the Secretary of Defense, the Deputy Secretary of Defense, the Under Secretary of Defense for Research & Engineering, the Chairman of the Joint Chiefs of Staff, and other Department officials. The DSB focuses on matters concerning science, technology, manufacturing, acquisition processes, and other topics of special interest to the DoD in response to specific tasks, and is not established to advise on individual DoD procurements. The DSB is concerned with the pressing and complex technological problems facing the DoD in such areas as research, engineering, organizational structure and process, business and functional concepts, and manufacturing, and ensures identification of new technologies and new applications of technology in those areas to strengthen national security.

The funds provided allow for the procurement of professional, analytical, and administrative services, to include the tasks of planning, preparation, execution, administrative support, logistics, documentation, and travel for DSB, Subcommittee and Task Force meetings and conferences. The vendors contracted provide essential services in support of the DSB and the DSB staff in the following areas: technical, business, and administrative planning; organizing, managing, coordinating, and tracking (e.g., cost, schedule, and deliverables); and performance management, data management, and subcontract management along with refining initial and final reports of the various study groups.

Exhibit R-2, RDT&E Budget Item Justification: PB 2026 Office of the Secretary Of Defense		Date: June 2025		
Appropriation/Budget Activity 0400: <i>Research, Development, Test & Evaluation, Defense-Wide / BA 6: RDT&E Management Support</i>		R-1 Program Element (Number/Name) PE 0606300D8Z / <i>Defense Science Board</i>		
C. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025	FY 2026
In FY2024 the DSB was directed to add an additional Permanent Subcommittee on Strategic Options, and Permanent Subcommittee on the Eugene G. Fubini Award, for a total of four Permanent Subcommittees. The DSB will continue to support this additional work using resources in the budget as requested herein. <i>FY 2025 Plans:</i> DSB will conduct four Quarterly meetings of the full Board, complete the previous full Board FY2024 Summer Study to include briefings to senior stakeholders, conduct an FY2025 Summer Study with the full Board. Additionally the DSB will operate four Permanent Subcommittees and up to six subcommittee studies (Task Forces) as directed by the Secretary of Defense, the USD(R&E), and Congress. These studies, often highly classified, will provide independent advice and recommendations on matters concerning science, technology, manufacturing, acquisition processes, and other topics of special interest to the DoD. The DSB will utilize contracted services to procure professional, analytical, and administrative services, to include the tasks of planning, preparation, execution, administrative support, logistics, documentation, and travel for DSB, Subcommittee and Task Force meetings and conferences. <i>FY 2026 Plans:</i> DSB will conduct four Quarterly meetings of the full Board, complete the previous full Board FY 2025 Summer Study to include briefings to senior stakeholders, conduct an FY 2026 Summer Study with the full Board. Additionally the DSB will operate four Permanent Subcommittees and up to six subcommittee studies (Task Forces) as directed by the Secretary of Defense, the USD(R&E), and Congress. These studies, often highly classified, will provide independent advice and recommendations on matters concerning science, technology, manufacturing, acquisition processes, and other topics of special interest to the DoD. The DSB will utilize contracted services to procure professional, analytical, and administrative services, to include the tasks of planning, preparation, execution, administrative support, logistics, documentation, and travel for DSB, Subcommittee and Task Force meetings and conferences. <i>FY 2025 to FY 2026 Increase/Decrease Statement:</i> The increase of \$2.119 million from FY 2025 to FY 2026 supports additional Defense Science Board multi-year studies including congressionally-mandated activities and aims at advancing innovative solutions for national security. These studies leverage the expertise of the selected board members, who contribute their specialized knowledge to conduct assessments and generate actionable recommendations that support the priorities of DoD and the Administration.

A. Mission Description and Budget Item Justification

This effort supports the Department's priority of Taking Care of Our People. The requirements are aligned to Department of Defense (DoD)/Federal strategic direction, including the DoD Digital Modernization Strategy, DoD and Federal Data Strategies, Personnel and Readiness Strategy for 2030, and the DoD Safety and Occupational Health (SOH) Strategic Plan.

To protect the lives, safety, health, and welfare of the DoD workforce, and the significant investments we make in our weapons systems, platforms, and infrastructure, we must acknowledge and provide adequate resources for SOH. Ensuring the safety of our workforce requires an enduring culture of safety, where consistent and standardized mishap, near-miss, and hazard reporting is the norm – at least on-par with industry and the private sector aviation and industrial communities. According to the 2020 National Commission on Military Aviation Safety (NCMAS) report, this begins with a centralized system and processes with which to gather, synthesize, and report Safety information at all levels. In addition to the NCMAS report, 10 United States Code Service (USCS) 184 directs the Department to establish uniform data collection standards and a centralized collection system and repository for mishap information. Currently, the DoD collects SOH information from disparate, incomplete, and often overlapping sources - a process that hinders opportunities for timely and in-depth trending and analysis to support Department-wide risk mitigation and mishap prevention efforts. Many of the DoD Components, including some of the Combatant Commands, do not have a safety information management system to enter, track, or manage mishaps, near-misses, or hazards. Without such a system and process, the Department is unable to adequately identify and analyze trends across the DoD Components, efficiently share lessons learned, and track corrective actions in response to recommendations. This effort addresses the Congressional requirements and fulfills capability gaps through modernization of the Force Risk Reduction tool to a safety information case management system. The system will be based on the Department's safety business processes and data standards, which are being incorporated into Department of Defense Instruction (DoDI) 6055.07 "Mishap Notification, Investigation, Reporting, and Record Keeping." A central SOH information management system based on the safety business processes and data standards will be available for all DoD Components, providing the capability to those DoD Components without an existing automated tool. It will continue to consolidate all SOH information serving as the Department's authoritative repository for all standardized SOH data, and ensuring leaders have current, accurate, and actionable safety information and insights to forecast, mitigate, and prevent future mishaps, injuries, and occupational illnesses, and to drive safety innovation and modernization. Failure to receive this funding will result in non-compliance with Title 10 U.S.C. §184 requirements. Expanding FR2 functionality is the most efficient and effective approach to providing a compliant centralized safety collection and information management capability and repository. Without this funding, the Department will continue to lack a complete understanding of safety impacts to our personnel and operational readiness. Mishap reporting will continue to be inconsistent, and the Department will struggle to manage and share recommendations and lessons learned across the enterprise and respond effectively to external inquiries (e.g., Congress, Government Accountability Office). These persistent gaps will negatively impact our ability to make timely and informed risk decisions and resource investments for mishap

Note

New Start (Y/N): No

A. Mission Description and Budget Item Justification

FY 2026 request for program element includes \$14.220 million of discretionary and \$25.000 million of mandatory (reconciliation) for a total of \$39.220 million. The mandatory funds are for Golden Dome Cybersecurity (U). Further information for this reconciliation request is provided in section 20003 of the Reconciliation Exhibit.

This PE supports the Department's initiatives to Revive the Warrior Ethos, Rebuild Our Military, and Reestablish Deterrence.

The Cyber Resiliency & Cybersecurity Policy program supports the efforts of the Office of the Under Secretary of Defense, Acquisition and Sustainment (OUSD A&S), focusing on the defense of the Department's critical mission weapon systems and supporting DoD Installation Critical Infrastructure (ICI) and supporting Commercial Critical Infrastructure (CCI) from cyber attack, protecting the Department's sensitive unclassified information residing within the Defense Industrial Base (DIB) sector and supply chain, and capability portfolio management for Joint Cyber Capabilities used by the Cyber Mission Force. This program funds the following critical efforts:

1) Cybersecurity for Weapon Systems and Critical Infrastructure: Conduct Capability Portfolio Management and lead the Department's Strategic Cybersecurity Program (SCP) to continue critical weapon systems and ICI cybersecurity assessments and mitigations and cyber harden priority Department of Defense (DoD) missions. Office of Assistant Secretary of Defense for Acquisition (ASD(A))/Cyber Warfare Directorate (CWD) Cyber Resiliency efforts are aligned with the following initiatives:

Assess:

- Conduct mission level cyber risk assessments for priority Defense Missions in support of Combatant Commands (CCMDs). Conduct enhanced mission level cyber risk assessments/wargames for the Missile Defense Mission in support of Golden Dome for America. Conduct supporting table top exercises (TTXs).
- Conduct Cyber Risk Assessments for ICI and CCI in support of CCMDs and asset owners.
- Conduct Integrated Sensing Monitoring Experiments (ISMX) and Sensing and Monitoring Pilots to assess the performance of Cybersecurity Sensing and Monitoring capabilities for WS and ICI.

Inventory / Prioritize:

- Develop, sustain, and employ the Cyber Risk Mitigation Tool (CRMT), an Enterprise-wide decision support tool for tracking and prioritizing cyber vulnerability assessments and mitigations. Develop CCMD specific cyber risk scorecards/risk matrices.

UNCLASSIFIED

Exhibit R-2, RDT&E Budget Item Justification: PB 2026 Office of the Secretary Of Defense				Date: June 2025		
Appropriation/Budget Activity 0400: Research, Development, Test & Evaluation, Defense-Wide / BA 6: RDT&E Management Support		R-1 Program Element (Number/Name) PE 0606771D8Z / Cyber Resiliency & Cybersecurity Policy				
- Prioritize and advocate for Cyber Risk Mitigations based upon mission analysis conducted by program offices, the National Security Agency (NSA), Deep Cyber Resiliency Assessment teams, USCYBERCOM (USCC), and other cybersecurity professionals. Mitigate: - Advocate and oversee funding for priority ICI and commercial critical infrastructure (CCI) supporting Golden Dome for America based on a prioritized list of assets. - Conduct SCP POAM periodic updates with Services and Agencies for prioritized DoD weapon systems. Enhance Governance: Conduct 4-Star Level Integrated Acquisition Portfolio Reviews (IAPRs) that address cybersecurity / cyber hardening / cyber defense for priority DoD missions. 2) Weapon System Cyber Security – CCI Cybersecurity // Cybersecurity Supply Chain Risk Management (C-SCRM): In collaboration with the Department of Defense Chief Information Office (DoD CIO), conduct the C-SCRM in support of FY2019 NDAA Section 889, and Title 10 USC Section 3252 and Section 4713 . Partner with other DoD organizations and the DIB / CCI sectors to demonstrate / assess cost-effective and scalable cybersecurity services that augment and/or enhance existing commercial capabilities and services. Focus on identifying options and assessing the efficacy of cybersecurity services for small-to-medium sized DIB / CCI companies that are critical to the DoD supply chain but lack sufficient cybersecurity capabilities to protect CUI , data integrity, and availability of DIB supply chain. 3) Capability Portfolio Management for Cyberspace Operations: Conduct Capability Portfolio Management of the Joint Cyber Capabilities employed by Cyber Mission Force in collaboration with USCYBERCOM. Improve cyber lethality of the capabilities of Joint Cyber Warfighting Architecture (JWCA) supporting offensive and defensive cyberspace operations and improve the readiness of the Cyber Operations Forces to operate in a cyber-contested environment including the ability to Defend the Homeland and key capabilities such as Golden Dome. Work across the Department to reform acquisition processes and accelerate the adoption of modern software practices to deliver warfighting capability at the speed of need.

A. Mission Description and Budget Item Justification

The Cyber Resiliency & Cybersecurity Policy program supports the efforts of the Office of the Under Secretary of Defense, Acquisition and Sustainment (OUSD A&S), focusing on the defense of the Department's critical mission weapon systems and supporting DoD Installation Critical Infrastructure (ICI) and supporting Commercial Critical Infrastructure (CCI) from cyber attack, protecting the Department's sensitive unclassified information residing within the Defense Industrial Base (DIB) sector and supply chain, and capability portfolio management for Joint Cyber Capabilities used by the Cyber Mission Force. This program funds the following critical efforts:

1) Cybersecurity for Weapon Systems and Critical Infrastructure: Conduct Capability Portfolio Management and lead the Department's Strategic Cybersecurity Program (SCP) to continue critical weapon systems and ICI cybersecurity assessments and mitigations and cyber harden priority Department of Defense (DoD) missions. Office of Assistant Secretary of Defense for Acquisition (ASD(A))/Cyber Warfare Directorate (CWD) Cyber Resiliency efforts are aligned with the following initiatives:

Assess:

- Conduct mission level cyber risk assessments for priority Defense Missions in support of Combatant Commands (CCMDs). Conduct enhanced mission level cyber risk assessments/wargames for the Missile Defense Mission in support of Golden Dome for America. Conduct supporting table top exercises (TTXs).
- Conduct Cyber Risk Assessments for ICI and CCI in support of CCMDs and asset owners.
- Conduct Integrated Sensing Monitoring Experiments (ISMX) and Sensing and Monitoring Pilots to assess the performance of Cybersecurity Sensing and Monitoring capabilities for WS and ICI.

Inventory / Prioritize:

- Develop, sustain, and employ the Cyber Risk Mitigation Tool (CRMT), an Enterprise-wide decision support tool for tracking and prioritizing cyber vulnerability assessments and mitigations. Develop CCMD specific cyber risk scorecards/risk matrices.
- Prioritize and advocate for Cyber Risk Mitigations based upon mission analysis conducted by program offices, the National Security Agency (NSA), Deep Cyber Resiliency Assessment teams, USCYBERCOM (USCC), and other cybersecurity professionals.

Mitigate:

- Advocate and oversee funding for priority ICI and commercial critical infrastructure (CCI) supporting Golden Dome for America based on a prioritized list of assets.
- Conduct SCP POAM periodic updates with Services and Agencies for prioritized DoD weapon systems.

Enhance Governance:

Conduct 4-Star Level Integrated Acquisition Portfolio Reviews (IAPRs) that address cybersecurity / cyber hardening / cyber defense for priority DoD missions.

Appropriation/Budget Activity 0400 / 6	R-1 Program Element (Number/Name) PE 0606771D8Z I Cyber Resiliency & Cyber security Policy	Project (Number/Name) 145 I Cyber Resiliency & Cybersecurity Policy		
2) Weapon System Cyber Security – CCI Cybersecurity // Cybersecurity Supply Chain Risk Management (C-SCRM): In collaboration with the Department of Defense Chief Information Office (DoD CIO), conduct the C-SCRM in support of FY2019 NDAA Section 889, and Title 10 USC Section 3252 and Section 4713 . Partner with other DoD organizations and the DIB / CCI sectors to demonstrate / assess cost-effective and scalable cybersecurity services that augment and/or enhance existing commercial capabilities and services. Focus on identifying options and assessing the efficacy of cybersecurity services for small-to-medium sized DIB / CCI companies that are critical to the DoD supply chain but lack sufficient cybersecurity capabilities to protect CUI , data integrity, and availability of DIB supply chain. 3) Capability Portfolio Management for Cyberspace Operations: Conduct Capability Portfolio Management of the Joint Cyber Capabilities employed by Cyber Mission Force in collaboration with USCYBERCOM. Improve cyber lethality of the capabilities of Joint Cyber Warfighting Architecture (JWCA) supporting offensive and defensive cyberspace operations and improve the readiness of the Cyber Operations Forces to operate in a cyber-contested environment including the ability to Defend the Homeland and key capabilities such as Golden Dome. Work across the Department to reform acquisition processes and accelerate the adoption of modern software practices to deliver warfighting capability at the speed of need.				
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025	FY 2026
Title: Cyber Resiliency & Cybersecurity Policy		40.608	40.401	14.220
Description: FY 2024 Accomplishments:				
Conduct Cyber Risk Assessments in support of Combatant Commands (CCMDs). Mission Level Cyber Risk Assessments (MLCRA): - Developed Quick Look Report, After Action Report (AAR), and Out Brief for the Mission Resilience II Wargame conducted in support of United States Space Command (USSPACECOM). Integrated findings into OPS DEPs SCP Briefing, briefed key DoD leaders and briefed Analytic Working Group. - Planned and executed Mission Resilience III Wargame in support of United States Northern Command (USNORTHCOM).				
Cyber Risk Assessments: - Completed six CRAs for Mission Partners across the DoD including a high priority special request from a Combatant Command (CCMD) and initiated planning for DoD Installation Critical Infrastructure (ICI) Cyber Risk Assessments in support of CCMDs. Mission partners include Army Materiel Command, National Aeronautics and Space Administration (NASA), United States Transportation Command (USTRANSCOM), United States Strategic Command (USSTRATCOM), and United States Indo-Pacific Command (USINDOPACOM).				
Integrated Sensing and Monitoring Experiments: - Planned and executed the first ever Integrated Sensing and Monitoring Experiment (ISMx) in collaboration with US Space Force and key mission partners. Key findings highlighted areas for investment to improve Department’s capability for conducting cybersecurity sensing and monitoring on mission systems.

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
Inventory/Prioritize: - In consultation with the services, JS, CCMDs, combat support agencies, and USSTRATCOM, refined the requirements and desired functionality for the Cyber Risk Mitigation Tool (CRMT) into categories of strategic, operational, and tactical. - In support of CCMD Mission Prioritization, developed a methodology to measure and weigh combatant commands mission interdependencies and how to define risk to mission from kinetic and non-kinetic fires. - Established working relationships with 10 of 11 Combatant Commands (CCMD) and refined methodology to measure and weigh combatant commands mission interdependencies and decompose mission risk and impact into discrete joint mission threads and critical capabilities. - Developed and presented a model to quantify and prioritize weapon systems for Strategic Cybersecurity Program (SCP) assessment based on mission impact. Mitigate: - Developed and coordinated the Strategic Cybersecurity Program (SCP) Policy for issuance. - Developed, coordinated, and delivered initial annual report to Congress on the SCP covering FY22 and FY23 - Developed draft Initial Capabilities Document (ICD) for cybersecurity sensing and monitoring at scale on key cyber terrain. - Developed Framework for applying Zero Trust Principles to WS and ICI. - Initiated oversight of the \$250M in funding for DoD ICI Cyber Hardening. - Supported Cyber Supply Chain Risk Management initiatives across the Department including support to implementation of Section 889/1656 Prohibitions on covered information and communication technologies for programs in acquisition and sustainment. - Conducted Critical Infrastructure Cybersecurity Engagements with NATO and USINDOPACOM. Enhance Governance: - Supported multiple OUSD(A&S) Integrated Acquisition Portfolio Reviews (IAPR) with cybersecurity contributions as a factor in determining overall acquisition risk. - Conducted Phase I of Cyber Defense of the Global Logistics Mission IAPR in collaboration with USTRANSCOM and briefed results to 4-Star Level forum chaired by the USD(A&S). Weapon System Cyber Security - Cybersecurity Supply Chain Risk Management(C-SCRM): - Completed DIB Cybersecurity Study in Collaboration with DoD CIO and presented findings and recommendations to CAPE in support of PBR2026. Conducted detailed analysis of the firmographics of the DIB in collaboration with key industry partners. Collaborated with DoD CIO and other DoD Stakeholders in the Development of the initial DoD DIB Cybersecurity Strategy. Initiated planning for Weapon System C-SCRM Pilots.

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026
Capability Portfolio Management for Cyber Capabilities: - Conducted Capability Portfolio Management for Joint Cyber Warfighting Capabilities in accordance with DoDD 7045.20. Informed the DepSecDef directed Counter C5ISR-T Integrated Acquisition Portfolio Review (IAPR) by providing cyber related inputs including DOTMLPF-P analysis. - Continued to provide Principal Staff Assistant (PSA) oversight to USCYBERCOM Component Acquisition Executive as the command executes joint cyberspace operations capabilities System of Systems (SoS) Systems Engineering & Integration (SE&I) Authority delegated to the command through an Acquisition Decision Memorandum in July 2023. - In collaboration with USCYBERCOM, developed the response to FY2023 NDAA Section 1509 to review the organizational, programmatic, and technical enablers for PEO JWCA to enable the command to deliver cyber warfighting capabilities are speed and scale. FY 2025 Plans: Conduct Cyber Risk Assessments in support of CCMDs: Mission Resilience (MR) Games: Prepare for MR IV with CCMD and complete MR III. Deep Cyber Resiliency Assessments: Perform multiple DCRA's for Mission Partners across the DoD in support Department priorities. Conduct Cyber Risk Assessments of priority DoD Assets Cybersecurity for Weapon Systems and Defense Critical Infrastructure (DCI): - Lead the Department's Strategic Cybersecurity Program (SCP) to continue critical weapon systems and defense critical infrastructure cybersecurity assessments and mitigations. - Develop, update, and refine cybersecurity Policy. - Support cybersecurity reviews of MDAPs where USD(A&S) is the MDA. - Enable USD(A&S) cybersecurity reviews across programs to inform milestone decision authority determinations. - Codify USD(A&S) cybersecurity policy and implementation guides for DoD installations, facilities, and DoD-owned critical infrastructure. - Codify USD(A&S) cyber Supply Chain Risk Management policy and implementation guides in coordination with DoD CIO and USD(I&S) for programs and procurement. - Support identification of knowledge, skills, and abilities required of personnel to implement cybersecurity policy, plans, and initiatives to defend DoD's critical infrastructure, installations, and facilities. Cyber Risk Information Management:

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026
- With both classified versions of the CRMT at full operational capability and datasets being loaded automatically via machine-to-machine interface, focus will be placed on adding Service datasets, threat reporting, and other datasets to meet stakeholder needs, as appropriate. - CRMT use will further expand within the Cyber Warfare Directorate to incorporate all section information and expand tool use in wargames and at CCMDs. Develop Cybersecurity Scorecards for Priority DoD Missions Weapon System Cyber Security - Cybersecurity Supply Chain Risk Management(C-SCRM): -Conduct Phase II of Weapon System C-SCRM Pilots (+\$15 million in FY 2025). Demonstrate the efficacy of C-SCRM capabilities and continue to develop and refine C-SCRM best practices. Capability Portfolio Management for Cyber Capabilities: - Continue to advance and mature capabilities for conducting mission engineering for cyberspace operations. - Manage the portfolio of Joint Cyber Warfighting Architecture (JCWA) components to enable the cyber mission force to efficiently and effectively conduct offensive and defensive cyber missions. Support offensive and defensive architecture development and portfolio management in collaboration with USCYBERCOM. - As the OUSD(A&S) Cyberspace Operations Enterprise portfolio manager OPR, assess the effectiveness of USCYBERCOM requirements generation, mission engineering, and capability prioritization for cyberspace operations capabilities acquisition. In support of the calendar year 2025 USD(A&S)-chaired Cyberspace Operations Enterprise Integrated Acquisition Portfolio review (IAPR) meeting, conduct mission engineering analysis to identify capability gaps across the priority cyberspace operations mission thread. The results will inform OSD fiscal year 2026 Program Budget Review. FY 2026 Plans: Assess: Conduct Cyber Risk Assessments in support of CCMDs: - Mission Resilience (MR) Games: Complete MR IV with a Focus on Missile Defense in support of Golden Dome for America. Develop enhanced Cyber Attack/Cyber Defense Scenarios for Golden Dome. Prepare for MR V with CCMDs. - Cyber Risk Assessments (CRAs): Perform multiple CRAs for Mission Partners across the DoD in support Department priorities, with an enhanced focus on Missile Defense and Production Lines Installation Critical Infrastructure (ICI) for priority DoD programs. Inventory/Prioritize: Cyber Risk Information Management: - Achieve full operating capacity (FOC) on the JWICS instance of the CRMT. - Focus on adding Service datasets, vulnerability data, threat reporting, and other datasets to meet stakeholder needs, as appropriate.

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026
- Fully integrate CCMA impact data in CRMT at all classification levels that are FOC. - Expand use and integration of CRMT at strategic (JS, SCP), operational (MLCRA, CCMDs), and tactical levels (services, and program offices). - Refine impact and risk models to ensure that data collected is accurate, agile, and reflects changes to priorities and current senior leader strategies. Complete model to SCP prioritization of mission impact to select systems for SCP assessment and integrate into the enterprise tool, CRMT. - Develop tailored cyber risk scorecards/dashboards for the Missile Defense Mission in support of Golden Dome for America. Mitigate: - Lead the Department's Strategic Cybersecurity Program (SCP) to continue critical weapon systems and defense critical infrastructure cybersecurity assessments and mitigations. - Conduct cybersecurity posture sustainment for priority C2 and data processing nodes aligned with Golden Dome. - Provide oversight of the mitigation of cyber vulnerabilities and the modernization of control systems in ICI on DoD bases that support Golden Dome. - Enhance cybersecurity of Commercial Critical Infrastructure supporting Golden Dome and provide oversight for funded mitigations. - Develop, update, and refine cybersecurity Policy. - Support cybersecurity reviews of Major Defense Acquisition Programs (MDAPs) where USD(A&S) is the MDA. - Enable USD(A&S) cybersecurity reviews across programs to inform milestone decision authority determinations. - Codify USD(A&S) cybersecurity policy and implementation guides for DoD installations, facilities, and DoD-owned critical infrastructure. - Codify US (A&S) Cybersecurity Supply Chain Risk Management (C-SCRM) policy and implementation guides in coordination with DoD CIO and USD Intelligence and Security (I&S) for programs and procurement. - Support identification of knowledge, skills, and abilities required of personnel to implement cybersecurity policy, plans, and initiatives to defend DoD's critical infrastructure, installations, and facilities. - Conduct future Critical Infrastructure Cybersecurity Workshops in support of CCMDs and others . Enhance Governance: - Conduct Integrated Acquisition Portfolio Reviews for Cyber Defense of Priority DoD missions, with a focus on the Missile Defense Mission in support of Golden Dome for America. Weapon System Cyber Security - Cybersecurity Supply Chain Risk Management(C-SCRM): - Prioritize Golden Dome assets for enhanced C-SCRM initiatives. - Continue to update C-SCRM Policy and Best Practices.

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026
- Contribute to implementation DoD Sector Risk Management Agency responsibilities.					
Capability Portfolio Management for Cyberspace Operations: - As the OUSD(A&S) Cyberspace Operations Enterprise Portfolio Manager, drive strategic alignment across planning, requirements, technology, acquisition, sustainment, programming, budgeting, and execution to improved cyber lethality and readiness to operate in a cyber-contested environment. Reform key processes to improve the effectiveness of USCYBERCOM requirements generation, mission engineering, and capability prioritization for cyberspace operations capabilities enabling National Security objectives. Collaborate with the acquisition community and Department stakeholders to reform acquisition strategies and processes and adopt modern software practices. Conduct USD(A&S) chaired Cyberspace Operations Enterprise Integrated Acquisition Portfolio Review (IAPR) and support other IAPRs by providing cyber-related insights, conducting mission engineering analysis to identify capability gaps impacting priority cyberspace operations such as the Cyber National Mission Force missions to Defend the Homeland including support to Golden Dome. The results will inform OSD Programming Guidance and fiscal year 2027 Program Budget Review. <i>FY 2025 to FY 2026 Increase/Decrease Statement:</i> FY26 overall decrease of \$6.18M is due to a combination of changes: FY25 to FY26 reduction of \$23.5M due to only receiving plus up funds FY24 and FY25 to conduct additional Deep Cyber Resiliency Assessments Weapon Systems Cybersecurity Supply Chain Risk Management Assessments; FY25 Congressional add of \$5M for Deep Cyber Resiliency Assessments; FY26 decrease of \$2.437M for DOGE Advisory and Assistance contract reductions; FY 26 decrease of \$0.206M for FFRDC and internal adjustments; FY25 increase of \$25M for Golden Dome Cybersecurity

Note

New Start (Y/N): No. The Defense Civilian Training Corps (DCTC) program was established in FY 2023 and funded under the Department of Defense Acquisition Workforce Development Account (DAWDA). In FY 2024, DCTC was realigned to the Office of Under Secretary of Defense for Acquisition and Sustainment (OUSD(A&S)). Program funded by Congress and at the direction of Congress starting in FY 2023.

A. Mission Description and Budget Item Justification

The FY 2026 request for DCTC includes \$8.752 thousands of discretionary and \$0 thousands of mandatory (reconciliation) for a total of \$8.752 thousands. The Defense Civilian Training Corps (DCTC) program is directed by 10 U.S.C. Ch 113 with the purpose to prepare selected students for public service and meet critical skill gaps in acquisition, digital and critical technologies, science, engineering, finance, and other civilian occupations determined by the Secretary of Defense. Chapter 113 requires the Secretary of Defense, acting through the Under Secretary of Defense for Acquisition and Sustainment (USD(A&S)), to establish units at any accredited civilian educational institution authorized to grant baccalaureate degrees. Using Chapter 113 direction and FY 2023 and FY 2024 DCTC appropriated funding, both an add by Congress (the PB23 and PB24 request did not include a request for DCTC funding), the USD(A&S) initiated in August 2023 a pilot two-year (junior and senior) program preparing future acquisition and sustainment civilians, with four DCTC pilot units deployed at four universities. The first DCTC cohort was comprised of 85 undergraduate scholars who started DCTC in August 2023 and graduated May 2025.. The second DCTC cohort started in August 2024 and is comprised of 100 undergraduate scholars (juniors). The third cohort was selected in December 2024 and graduates in May 2027. The DCTC pilot program is completed and ends with graduation of the third cohort.

The DCTC program provides scholar education and development through DoD-context undergraduate classes and DoD real-world challenge projects sponsored by DoD field organizations which also host project-based summer internships with mentoring. DCTC classes cover DoD mission, structure and functions, the defense acquisition system and functions, innovation and technical literacy. The DCTC program includes completion of scholar security clearances and use of hiring authorities at graduation for immediate placement in jobs at DoD organizations. DCTC strengthens the DoD talent (supply-side) pipeline with new-hire DoD civilians, prepared for DoD acquisition and sustainment mission careers, accelerated in development and readiness for public service and contributing day-one as national security professionals to the DoD acquisition and sustainment mission. Again, the DCTC pilot program is completed and ends with graduation of the third cohort.

A. Mission Description and Budget Item Justification

The Department of Defense (DoD) needs a reliable supply of diverse weapons systems and supplies to ensure operational readiness amidst unpredictable volatile global events. These national security challenges place variable stresses on the DoD's munitions inventory and generate a range of production needs, limiting the utility of addressing capability requirements strictly on a program-by-program basis. This Program Element (PE) advances promising manufacturing technologies and processes with the intention of improving operational readiness across the Joint Force. This PE furthers the Department's efforts to rebuild the military and reestablish deterrence by accelerating the delivery of critical weapon systems through advanced manufacturing. It identifies and prototypes ways to build and maintain surge production capacity and resilience for critical weapons. It identifies areas for advanced manufacturing, works with piloting entities to analyze approaches, and collaborates with critical weapons programs. The outcomes will include scalable demonstrations and guidance on advanced manufacturing and acquisition reforms.

A. Mission Description and Budget Item Justification

The Department of Defense (DoD) needs a reliable supply of diverse weapons systems and supplies to ensure operational readiness amidst unpredictable volatile global events. These national security challenges place variable stresses on the DoD's munitions inventory and generate a range of production needs, limiting the utility of addressing capability requirements strictly on a program-by-program basis. This Program Element (PE) advances promising manufacturing technologies and processes with the intention of improving operational readiness across the Joint Force. This PE furthers the Department's efforts to rebuild the military and reestablish deterrence by accelerating the delivery of critical weapon systems through advanced manufacturing. It identifies and prototypes ways to build and maintain surge production capacity and resilience for critical weapons. It identifies areas for advanced manufacturing, works with piloting entities to analyze approaches, and collaborates with critical weapons programs. The outcomes will include scalable demonstrations and guidance on advanced manufacturing and acquisition reforms.

Note

In FY 2026 the Sustainment Transition Capabilities funding is discretionary funding which reflects a new start for the fiscal year.

A. Mission Description and Budget Item Justification

Mission Description: FY 2022 NDAA Section 142 requires the Department to transition Sustainment functions from the F-35 Joint Program Office to the Military Departments (MILDEPs) of the Air Force and Navy no later than end of 2027. The Under Secretary of Defense (USD) Acquisition & Sustainment (A&S) Report to Congress dated 30 January 2023, states that the MILDEPs will achieve Initial Operating Capability (IOC) by end of 2027 to act as the Inventory Control Point (ICP) and reach Full Operating Capability (FOC) by end of 2029. Additionally, for NDAA Section 142 to effectively occur, FY 2024 NDAA Section 1005 mandates that the Department achieve an unmodified audit opinion by the end of 2028.

To achieve both statutory requirements and allow the MIPDEPS to assume ICP control by the end of 2027, the Department requires a Logistics Information Technology (LogIT) network that will facilitate necessary data exchange via Department standard Defense Logistics Management Standard (DLMS) transactions and the F-35 prime vendor systems. Once the network is established the Departments' financial and business systems will have enabled capability for full asset visibility, financial transactions, and Inventory Control Points (ICPs) accountability operations. This investment will deliver that data architecture design, implementation, and capability which will provide the MILDEPs with the necessary asset visibility and controls to assume full ICP responsibilities from the prime vendors. F-35 spares are currently maintained within the current Prime vendor databases. The vendor did not use established standardized Department of Defense supply and inventory control processes when the F-35 program originated. As a result, this prevents the Department from easily capitalizing the parts and assuming full ICP responsibilities from the prime vendors.

The establishment of the data exchange will allow the Department to begin the transition of the spares inventory into the ICPs for lifecycle management. This transition will be accomplished through establishing provisioning and cataloging actions of the F-35 spares, estimated in value around \$15 Billion. Provisioning and cataloging the spares will convert the spares to National Stock Numbers (NSNs) facilitating their integration into the Defense Logistics Agency's (DLAs) Warehouse Management System (WMS) for worldwide inventory management and asset visibility. The outcome will provide the MILDEPs with necessary data elements to accomplish demand planning, procuring and repairing spares.

Justification: The RDT&E funds will be used to ensure the necessary data architecture is designed and implemented to automate data between the prime vendors and the Department's business systems. The Deputy Chief Finance Officer (DCFO) requires a mandated milestone of October 2026 for Services to financially report on the program to ensure two years of clean data in support of an unmodified opinion two years later in October of 2028, as mandated by FY 2024 NDAA Section 1005. To accomplish this mandate, the design and production of the data architecture will be built early in 2026 for testing and validation. Follow on funding in FY 2027 and FY

--	--

2028 will drive incremental development of data pipelines to facilitate FY2022 NDAA Section 142 ICP transition to the MILDEPs (i.e. linking requisitions within industry systems to the MILDEPS so they can perform ICP functions).

Note: The program will use both RDT&E and Procurement funding to accomplish the program requirements to meet FY 2022 NDAA Section 142 implementation schedules and NDAA Section 1005 mandates. Procurement funding will be used to support the program requirement for FY 2022 NDAA Section 142 implementation. The P-40 captures the programs procurement requirement needs to complete the full funding to complete both: FY2022 NDAA Section 142 implementation schedule and FY 2024 NDAA Section 1005 mandates. The Procurement dollars will fund the technical data needed to support the aforementioned Provisioning and Cataloging of the spares to enable the MILDEPs to perform their ICP functions of demand planning and procuring the parts, as well as create NSNs for ingestion into Department systems such as DLA's WMS to provide inventory asset visibility.

Note

In FY 2026 the Sustainment Transition Capabilities funding is discretionary funding which reflects a new start for the fiscal year.

A. Mission Description and Budget Item Justification

Mission Description: FY 2022 NDAA Section 142 requires the Department to transition Sustainment functions from the F-35 Joint Program Office to the Military Departments (MILDEPs) of the Air Force and Navy no later than end of 2027. The Under Secretary of Defense (USD) Acquisition & Sustainment (A&S) Report to Congress dated 30 January 2023, states that the MILDEPs will achieve Initial Operating Capability (IOC) by end of 2027 to act as the Inventory Control Point (ICP) and reach Full Operating Capability (FOC) by end of 2029. Additionally, for NDAA Section 142 to effectively occur, FY 2024 NDAA Section 1005 mandates that the Department achieve an unmodified audit opinion by the end of 2028.

To achieve both statutory requirements and allow the MIPDEPS to assume ICP control by the end of 2027, the Department requires a Logistics Information Technology (LogIT) network that will facilitate necessary data exchange via Department standard Defense Logistics Management Standard (DLMS) transactions and the F-35 prime vendor systems. Once the network is established the Departments' financial and business systems will have enabled capability for full asset visibility, financial transactions, and Inventory Control Points (ICPs) accountability operations. This investment will deliver that data architecture design, implementation, and capability which will provide the MILDEPs with the necessary asset visibility and controls to assume full ICP responsibilities from the prime vendors. F-35 spares are currently maintained within the current Prime vendor databases. The vendor did not use established standardized Department of Defense supply and inventory control processes when the F-35 program originated. As a result, this prevents the Department from easily capitalizing the parts and assuming full ICP responsibilities from the prime vendors.

The establishment of the data exchange will allow the Department to begin the transition of the spares inventory into the ICPs for lifecycle management. This transition will be accomplished through establishing provisioning and cataloging actions of the F-35 spares, estimated in value around \$15 billion. Provisioning and cataloging the spares will convert the spares to National Stock Numbers (NSNs) facilitating their integration into the Defense Logistics Agency's (DLAs) Warehouse Management System (WMS) for worldwide inventory management and asset visibility. The outcome will provide the MILDEPs with necessary data elements to accomplish demand planning, procuring and repairing spares.

Justification:

The RDT&E funds will be used to ensure the necessary data architecture is designed and implemented to automate data between the prime vendors and the Department's business systems. The Deputy Chief Finance Officer (DCFO) requires a mandated milestone of October 2026 for Services to financially report on the

Remarks			
D. Acquisition Strategy While this section is not required per DoD 700.14-R, Volume 2B, Chapter 5, as a Budget Activity 6 item. Below is a summary of the Acquisition Strategy: - The team Department has already identified a high level Operational Overview and System Level Overview to build data pipelines from industry data sources to Enterprise requirements via the Defense Automated Addressing System (DAAS) as translator and broker to support audit; additional analysis is continuing to determine if the same architecture will support sustainment transition to the MILDEPs. - An Other Transactional Authority (OTA) Agreement to is in work to deliver definintization of the data architecture as a prototype to include identifying necessary data elements to support Defense Logistics Management Standard (DLMS) transactions within DAAS, maximize the use of existing pipelines, establishing data delivery, and testing implementation. Capability to see assets and financial transactions in support of audit will be delivered first in incremental, Minimum Viable Products (MVPs); later MVPs will be agreed upon and delivered to support sustainment transition to the MILDEPs, likely in 2027/2028 after audit financial reporting requirements are developed, tested and delivered. - Technical Interchange Meetings (TIMs) with industry are in work to validate data deliver requirements and sourcing of the necessary data elements, as well as cost and schedule expectations. - Additional Program Increment Planning sessions and completion of the industry TIMs will validate the use of DAAS and inform MILDEPs on whether additional work is needed within their Service enterprises to ensure data is communicated to necessary systems to enable audit and sustainment transition. - Follow on investment in 2027 and 2028 will fund any necessary additional work within the Defense Logistics Agency or the MILDEPs to complete the architecture.

A. Mission Description and Budget Item Justification

This RDT&E program supports the Department's initiatives to Defend the Homeland, Build Sustainable and Long-Term Advantage, and Taking Care of People. This program also supports DoD Data Strategy, specifically enabling next-generation approaches to protect data as it is a strategic asset.

The Defense Operations Security Initiative (DOSI) establishes and leads the Department's next-generation Operations Security (OPSEC) capability development and affiliated investment strategy. Investments support DoD's current and emerging OPSEC capability gaps, including countering advances in non-U.S. Intelligence, Surveillance, and Reconnaissance (ISR) capabilities and denying the understanding of U.S. capability, capacity, readiness, and critical technology and information from adversaries. These investments spur and accelerate Department innovation and preserve U.S. technology superiority. DOSI analysis and engineering lead the community's ability to sustain and maximize technology advantage as they are transitioned to Service and Agency programs for sustainment, maintenance, and capacity programming. Test and evaluation analyses establish measure and countermeasure effectiveness in current and emerging operational environments.

A. Mission Description and Budget Item Justification												
DOSI establishes and leads the Department's next-generation OPSEC capability development and affiliated investment strategy. Investments support DoD's current and emerging OPSEC capability gaps, including countering advances in non-U.S. ISR capabilities and denying the understanding of U.S. capability, capacity, readiness, and critical technology and information from adversaries. These investments spur Department innovation and preserve U.S. technology superiority. DOSI analyses and engineering activities lead the community's ability to sustain and maximize technology advantages as they are transitioned to Service and Agency programs for sustainment, maintenance, and capacity programming. Results of tests and evaluations enable the community to identify OPSEC measure and countermeasure effectiveness in current and emerging operational environments.												
B. Accomplishments/Planned Programs (\$ in Millions)									FY 2024	FY 2025	FY 2026	
Title: Defense Operations Security Initiative									3.026	3.151	2.493	
Description: RDT&E investments denied or complicated the ability of our adversary to use Artificial Intelligence (AI) to understand U.S. capabilities, capacity, readiness, and critical technology and information. Past investments accelerated cutting-edge Department innovation toward preserving U.S. information and technology superiority. DOSI's analyses and engineering activities enabled the OPSEC community's ability to sustain and maximize technological advantages.												
FY 2025 Plans:												
- Oversee RDT&E on next-generation capabilities that counter foreign ISR capabilities and deny adversaries' understanding of U.S. capability, capacity, and readiness.												
- Oversee research, development, prototyping and testing on capabilities or processes that better enable the OPSEC community practitioners.												
- Provide oversight and advocacy for transitioning previously developed capabilities into formalized program offices and program executive offices across DoD Components.												
- Participate in Defense RDT&E processes to advance basic and applied research, science and technology, and technology development and testing to elevate OPSEC capability and capacity across the Department.												
FY 2026 Plans:												
- Leverage the Applied Research Laboratory for Intelligence & Security (ARLIS) to conduct analysis of foreign ISR capabilities, develop risk mitigation measures, and support the proliferation of coordinated OPSEC measures.

A. Mission Description and Budget Item Justification

This program supports the Department's initiative to modernize critical legacy information technology (IT) portfolio management systems and develop strategies and initiatives to improve the efficiency and effectiveness of IT investments across the DoD information enterprise.

The current systems (Select and Native Programming Data Input System – Information Technology (SNaP-IT), Department of Defense Information Technology Investment Portal (DITIP), and DoD Information Technology Portfolio Repository (DITPR)) were developed as standalone applications/systems to meet specific data requirements, which results in data inaccuracy and inconsistency. The modernization effort includes developing business process maps, system design diagrams, and data dictionaries, which will form the baseline to analyze processes, data, and system redundancies and required improvements across the various systems. The modernization effort will achieve an integrated IT portfolio management process and a more homogenous data and reporting environment, which delivers timely, accurate, and transparent information to leadership.

This program element also supports developing information enterprise strategies, policies, architectures, and deliver DoD's software modernization implementation-plan, while also streamlining business systems.

A. Mission Description and Budget Item Justification

This program modernizes the DoD's legacy IT portfolio management systems (SNaP-IT, DITIP, and DITPR) to improve the efficiency and effectiveness of IT investments. The current standalone systems lead to data inaccuracy and inconsistency. The modernization effort will create integrated IT portfolio management processes and a homogenous data environment, providing timely, accurate information to leadership. This includes developing business process maps, system designs, and data dictionaries to analyze redundancies and required improvements. This program also supports developing IT strategies, policies, architectures, and DoD's software modernization implementation plan, while streamlining business systems.

A. Mission Description and Budget Item Justification

Fifth generation (5G) wireless networking is critical for U.S. defense modernization and modern warfare. The DoD is accelerating 5G adoption to operate effectively anywhere, anytime, even in contested environments, ensuring U.S. military superiority and national security.

The Secretary of Defense 5G Wireless Networking Cross-Functional Team (5G CFT), mandated by Congress, accelerates 5G adoption across the DoD. The 5G CFT executes DoD's 5G policy, research, and acquisition activities, supporting the National Defense Strategy's objective to preserve command, control, and communications in a fast-paced battlefield.

The DoD is leveraging 5G for military applications, from improving coverage on installations to deploying tactical communications in austere environments. The DoD will continue developing advanced 5G network architectures, implementing cybersecurity and zero trust enhancements, and investing in open radio access network (RAN) prototyping to inform secure 6G system designs, expanding RAN intelligent controller capabilities.

Change Summary Explanation

FY25 PB to FY25 enacted change summary explanation: \$5.1M increase due to funding realigned to DoD CIO (BA 07) from USD(R&E) (BA 04) to support:
 - Expanded open RAN intelligent controller capabilities (e.g., spectrum agility and battlefield operations).

Description: 5G wireless networking is critical for U.S. defense modernization and modern warfare. The DoD is accelerating 5G adoption to operate effectively anywhere, anytime, even in contested environments, ensuring U.S. military superiority and national security.												
FY 2025 Plans: The 5G CFT will advise DoD leadership on 5G adoption, focusing on: supporting military department transition plans and 5G integration into existing programs; standardizing the 5G infrastructure siting process' piloting data integration for a 5G coverage enterprise view; executing the DoD's 5G standards strategy for advanced networking technologies and spectrum coexistence; advising on 5G policy, acquisition, sustainment, and resourcing for operational use; and facilitating cross-coordination on DoD, interagency, and international 5G efforts, implementing the 5G Standards Strategy, and participating in relevant industry organizations.												
FY 2026 Plans: Continue base program initiatives from prior budget year. • Advise DoD on policy, acquisition, sustainment, and resourcing to establish, sustain, and transition 5G capabilities to operational use, maintaining U.S. military superiority. Operational transition of 5G prototypes: • FY26 transition/implement 3 tranche projects to the MILDEPs to sustain. 5G infrastructure buildout: • Streamline/support planned commercial carriers on-premise 5G infrastructure. • Work with commercial carriers to incentivize additional required infrastructure. 5G standards: • Continue working across DoD with interagency, international, and industry partners to advance DoD unique capabilities in commercial specifications. 5G private network strategy and implementation plan execution:

A. Mission Description and Budget Item Justification

Chemical and biological weapons (CBW)-based threats continue to evolve in response to changing geopolitics and emerging technologies. Each of the nations that are deemed as threats to United States (U.S.) national security are believed to have and/or be developing chemical and/or biological weapons. The Department of Defense (DoD) must be prepared to eliminate these threats during and/or after the execution of a contingency operation or in support of a diplomatic breakthrough, enabling the U.S. to achieve peace through strength and strengthening deterrence.

Chemical Weapons Convention (CWC) and Biological Weapons Convention (BWC) obligations and DoD strategic guidance demand the Department maintain a complete and enduring capability to assess and destroy CBW, regardless of location or environment. In accordance with the CWC and BWC, the U.S. must be prepared to “destroy [chemical/biological] weapons...in its possession or...under its jurisdiction or control.” It is critical for the DoD to possess the capabilities to directly disable or defeat WMD threats prior to use. This capability must provide operational flexibility that enables early action and expedient destruction, from small-scale disablement and defeat in a non-permissive or austere environment to large-scale destruction of a foreign CBW stockpile in a post-contingency or permissive environment.

Our current capabilities are inadequate to support these requirements, and we are currently unable to invest in the development and/or improvement of capabilities to eliminate CBW on the scale required. The Department must be proactive in ensuring we are prepared to eliminate known and expected CBW threats before adversary use against U.S. military or civilian personnel at home or abroad or our allies.

The Chemical and Biological Weapons Elimination (CBWE) Research and Development Activities (RDAs) support the Department’s initiatives to rebuild our military and reestablish deterrence by ensuring a complete and enduring capability to assess and destroy chemical and biological weapons (CBW), regardless of location or operational environment. This program addresses Joint Force priorities, tasks, and requirements. Fiscal Year (FY) 2026 funding is for the advanced development of chemical weapons destruction capabilities in support of Joint Warfighter and U.S. Recovered Chemical Warfare Material requirements.

The CBWE portfolio provides material solutions that enable DoD to prevent adversary acquisition, transfer, deployment, and use of CBW as well as meet U.S. Chemical Warfare Convention (CWC) treaty obligations.

The CBWE portfolio will execute along several Lines of Effort (LOEs) to help prepare the Joint Force for a future operating environment in which adversary possession of Weapons of Mass Destruction (WMDs) pose threats ranging from tactical to existential, and limit U.S. strategic choices. These LOEs will create options for assessment

Appropriation/Budget Activity 0400: <i>Research, Development, Test & Evaluation, Defense-Wide I BA 7: Operational Systems Development</i>	R-1 Program Element (Number/Name) PE 0607162D8Z I <i>ChemBio Weapons Elimination Technology Improvement</i>
---	---

and destruction of recovered chemical warfare material within the U.S., as well as chemical and biological warfare material across the continuum of conflict, including materiel solutions for the destruction of small-scale and bulk CBW agents, and solutions for the elimination of nation state CBW programs and stockpiles.

The Office of the Secretary of Defense uses the CBWE Portfolio to invest strategically in projects to fill validated requirements from the Services, Combatant Commands, combat support agencies, and defense agencies. Funding is prioritized for projects that close Joint Force and domestic assess, disable and/or destroy capability gaps. An annual investment strategy is used to prioritize and meet capability needs.

The CBWE Technology Improvement program invests in upgrades and enhancements to fielded systems used to assess, disable, and/or destroy chemical and biological weapons and material – foreign and domestic. Funds are used for integration of operational prototypes into fielded systems, or other upgrades and enhancements, including any necessary test and evaluation.

This program funds labor, materials, and travel requirements, performed by a government agency or by private individuals or organizations under a contract with the government, for activities and acquisitions including Research, Development, Test & Evaluation (RDT&E), assessments and analyses, and other activities related to capability development and fielding.

B. Accomplishments/Planned Programs (\$ in Millions)		
Title: P*548 / ChemBio Weapons Elimination Technology Improvement		
Description: The CBWE program invests in materiel solutions through the improvement of technologies; developmental and operational test and evaluation; and transition to fielded capabilities that counter WMD proliferation. This program enables the transition of technologies to fielded capabilities by leveraging significant Science and Technology (S&T) investments made by the DoD, other Federal agencies, and industry.		
FY 2025 Plans: Conducted advanced development of large item chemical weapons destruction technologies in support of service requirements. Completed system assembly and installation work and began factory acceptance testing for follow-on full-scale agent testing of the Explosive Destruction System Phase 3 (EDS P3). Transitioned development of the chemical weapon access and chemical agent transfer system (Waterjet) from the Defense Threat Reduction Agency (BA3) and began advanced development efforts.		
FY 2026 Plans: Advanced development, improvement, and testing of chemical weapons destruction technologies in support of service and joint warfighter requirements. - Complete full-scale agent testing of EDS-P3. - Continue advanced development of the Waterjet system. - Conduct systemization of large-scale explosively configured chemical warfare material destruction technology (Static Detonation Chamber - SDC). - Conduct agent testing of small-scale bulk chemical agent destruction system.

Remarks			
D. Acquisition Strategy			
The Office of the Deputy Assistant Secretary of Defense for Threat Reduction and Arms Control (ODASD(TRAC)) establishes annual priorities based on National strategies and senior leader guidance. Based on those priorities, TRAC solicits project proposals from Combatant Commands, Military Services, Defense Agencies, and interagency partners. To be selected, a proposed project must have a validated requirement, an engaged requirement champion, a viable acquisition strategy, and a qualified program management office. A technology project must identify its starting and desired end-state Technology Readiness Level. Likewise, the end-user for any proposed project must demonstrate a long-term plan for acceptance and sustainment of a fieldable capability.

Note

The FY 2026 request for IBAS includes \$273.379 million of discretionary and \$2,054.991 million of mandatory (reconciliation) for a total of \$2,328.370 million. The mandatory funds support the Workforce, Critical Minerals and Materials, Castings and Forgings, Kinetic Capabilities, Energy Storage and Batteries and Microelectronics sectors. Further information for this reconciliation request is provided in Section 20004 (Munitions & Supply Chain) and 20009 (INDOPACOM Capabilities) of the Reconciliation Exhibit.

A. Mission Description and Budget Item Justification

The Industrial Base Analysis and Sustainment Support (IBAS) program element line is one component of a broader Department of Defense (DoD) investment strategy to strengthen the competitive posture of the Defense Industrial Base (DIB) and secure domestic supply chains. Residing within the Manufacturing Capability Expansion and Investment Prioritization (MCEIP) Directorate within the Office of the Assistant Secretary of Defense for Industrial Base Policy (OASD(IBP)), IBAS investments are used both discretely and in combination with other DoD investment programs, such as MCEIP's Defense Production Act (DPA) Title III, to ensure collaborative and non-duplicative investment supporting critical DIB and United States (U.S.) supply chain issues. The IBAS program element supports MCEIP priorities through investment in prime and sub-tier suppliers, which mitigate supply chain risks and eliminate production capacity bottlenecks in accordance with current Presidential, National Security Council, and Secretary of Defense guidance during times of presidential transition priorities, goals and objectives. IBAS program element investments are further synchronized across the Department through coordination with other research and development programs, including but not limited to the Defense-Wide Manufacturing Science and Technology Program (MSTP) residing in the Office of the Under Secretary of Defense for Research and Engineering (OUSD(R&E)).

IBAS Support was established in accordance with 10 United States Code (U.S.C.) Section 4817, Industrial Base Fund. The ability of the United States to maintain readiness and to surge and sustain in response to an emergency directly relates to the capacity, capabilities, and resiliency of our manufacturing industry, and the DIB and relevant supply chains. IBAS authorities and flexibility are key components to building the industrial capabilities needed to innovate, produce, and sustain the weapon systems for today and tomorrow.

The IBAS program element provides the Department with a unique capability to achieve the strategic aims of the Interim National Defense Strategic Guidance (INDSCG) and the 2023 National Defense Industrial Strategy, which call for a strong, resilient, responsive and healthy U.S. Defense Industrial Base that underpins current and future U.S. force readiness. This program element is uniquely positioned to improve the U.S. DIB's competitiveness and ability to respond to the Department's needs by applying focused investments to 1) monitor and assess the current state of the DIB, 2) address critical issues in the DIB relating to urgent operational needs, 3) address supply chain vulnerabilities, and 4) support efforts to expand the DIB.

Global supply chain disruptions have become more common, with recent events highlighting risks and vulnerabilities that undermine our national security.

Management Process – In order to successfully execute the FY 2026 budget, the IBAS Program Office within the OASD(IBP) will oversee the health of the IBAS portfolio and projects. The IBAS Program Office collaborates with relevant Military Department or defense agency technical leads to develop, coordinate, and execute acquisition strategies and implementation plans for each strategic focus area.

FY 2026 strategic focus areas that will be executed in IBAS Project Code P819 include workforce, critical minerals and materials, castings and forgings, kinetic capabilities, energy storage and batteries, and microelectronics. Descriptions of each focus area are included in the P819 R-2a exhibit.

The FY 2026 request for IBAS includes \$273.379 million of discretionary and \$2,054.991 million of mandatory (reconciliation) for a total of \$2,328.370 billion. The mandatory funds support the Workforce, Critical Minerals and Materials, Castings and Forgings, Kinetic Capabilities, Energy Storage and Batteries and Microelectronics sectors. Further information for this reconciliation request is provided in Section 20004 (Munitions & Supply Chain) and 20009 (INDOPACOM Capabilities) of the Reconciliation Exhibit.

Appropriation/Budget Activity 0400: <i>Research, Development, Test & Evaluation, Defense-Wide / BA 7: Operational Systems Development</i>		R-1 Program Element (Number/Name) PE 0607210D8Z / <i>Industrial Base Analysis and Sustainment Support</i>
<u>Change Summary Explanation</u> FY 2026: \$687.164 million decrease is comprised of a \$2.000 million realignment of funds from Industrial Base Analysis and Sustainment (IBAS) Program Element 0607210D8Z, Project Code 819, IBAS to Program Element 0605295D8Z, Microelectronics Coordination Cell (MECC), Project Code 632, MECC, to enable the DoD to have assured access to microelectronics. Additionally, a \$3.552 million decrease was a result of the realignment of funds to the Global Investments and Economic Security (GIES) Program of the Office of Secretary of Defense (OSD), Operation and Maintenance, to review foreign acquisitions, mergers and/or investments in U.S. businesses impacting our national security. The remaining decrease is comprised of economic assumption reduction of \$2.847 million for inflation, reduction of \$82.974 million for Advisory and Assistance Services to promote efficiencies and advance the policies of the Administration in alignment with Executive Order 14222, "Implementing the President's Department of Government Efficiency Cost Efficiency Initiative", and reduction of \$11.900 million for other higher DoD priorities. The \$989.991 million mandatory transfer consists of IBAS program funds designated as mandatory (reconciliation) funds. FY 2026 funding efforts are for Workforce, Critical Minerals and Materials, Castings and Forgings, Kinetic Capabilities, Energy Storage and Batteries and Microelectronics as follows: Workforce: In collaboration with the Navy's Maritime Industrial Base (MIB) team the Industrial Base Analysis and Sustainment (IBAS) program plans to continue building on successes from ongoing regional training systems (RTS) investments in New England, Virginia, and increasingly in the Great Lakes region while expanding its focus on Indo-Pacific region needs. FY 2026's primary effort will be a continuation and sustainment of major, multi-year, joint OSD-Navy endeavors begun in FY 2023 focused on ensuring the health and capacity of the DoD's Maritime and Submarine industrial workforces. Critical Minerals and Materials: To meet requirements outlined in 10 U.S.C. 4872, the Defense Federal Acquisition Regulation Supplement (DFARS) 252.225-7052, and address risks and issues identified in Executive Order 14241, FY 2026 efforts will address critical shortfalls in the permanent magnet and rare earth element (REE) supply chains by focusing investments on on developing domestic metallization capabilities – the remaining critical step in developing a domestic mine-to-magnet capability and transferring some of China's ~90 percent magnet market dominance to the U.S. In addition, recent trade restrictions in April of 2025 have frozen the export of REE materials as part of China's response to escalating trade tensions with the United States. These restrictions further demonstrate the importance of developing a secure domestic supply chain for REEs. As a domestic supply of rare earth element oxides and metals becomes available, the U.S. must strategically develop resources and processes for validation and testing for defense applications and support DoD supply chain qualification activities. Expansion of minerals processing capabilities in the U.S. and among our allies has exposed shortfalls and foreign dependence for chemicals required to convert ores into finished saleable goods; addressing these emerging dependencies will be essential to enable supply chain resilience in FY 2026 and beyond. The DoD must also be ready to address shortfalls in other elements such as gallium, germanium, scandium, noble gases, and other materials used in traditional defense systems, microelectronics, hypersonics, and manufacturing processes. The DoD must be prepared to adapt and address emerging supply chain threats due to escalating trade tensions with China. By 2027, defense contractors will be required to source rare earth minerals and other materials from allied supply chains. This will be impossible without significant public and private investments in conversion of rare earth element oxides into metals, alloyed and sintered into magnets, and qualified for use in DoD systems.		

UNCLASSIFIED

Exhibit R-2, RDT&E Budget Item Justification: PB 2026 Office of the Secretary Of Defense		Date: June 2025
Appropriation/Budget Activity 0400: Research, Development, Test & Evaluation, Defense-Wide I BA 7: Operational Systems Development	R-1 Program Element (Number/Name) PE 0607210D8Z I Industrial Base Analysis and Sustainment Support	
Castings and Forgings (C&F): FY 2026 funding adds new infrastructure efforts to increase melt capability for specialty steels and capability to produce ammunition bodies. Additional investments will support infrastructure projects to enable progress toward, and in some cases, initial Operational Capability for key efforts supporting the rapid development, testing, and qualification of new metal alloys and manufacturing processes. These efforts will improve product quality, production, and efficiency; sustain and expand metalworking workforce development capabilities to further propagate the positive impacts of automation on worker capability and cost-effectiveness and sustain and enhance efforts to secure the upstream materials supply chain to mitigate or eliminate dependence upon foreign adversaries. Kinetic Capabilities: FY 2026 funding will implement cost reduction and production capacity improvements of hypersonic missiles and munitions within the defense industrial base. Projects will include increasing capacity of hypersonic testing of thermal protection systems materials supporting test flights and support to projects investigating how additive manufacturing can be implemented into solid rocket motors to expedite manufacturing, reduce cost, and decrease manual touch labor during the hypersonic missile integration process. Energy Storage & Batteries: FY 2026 efforts will initiate recommendations from DoD analysis and examine opportunities to apply commercial sourcing applications. Microelectronics: FY 2026 funding will be utilized to develop critical upstream material supply resilience for electro-deposited copper foil and continuing support for radio frequency (RF) supply chain requirements focusing on Cruise Missile Defense of the Homeland (CMD-H) and identified DoD-Wide RF Electronics Programs. Funding will scale and mature onshore manufacturing capabilities for the DoD as well as promising early research innovations from the services and OUSD(R&E) to validate and de-risk them for transition to programs of record. To ensure this investment contributes towards a robust and resilient microelectronics defense industrial base, awards will prioritize high-mix/ low volume, multi-use investments that can demonstrate stakeholder buy-in and/or commercial underpinnings such that the capabilities are self-sustaining.

Note

The FY 2026 request for IBAS includes \$273.379 million of discretionary and \$2,054.991 billion of mandatory (reconciliation) for a total of \$2,328.308 billion. The mandatory funds support the Workforce, Critical Minerals and Materials, Castings and Forgings, Kinetic Capabilities, Energy Storage and Batteries and Microelectronics sectors. Further information for this reconciliation request is provided in Section 20004 (Munitions & Supply Chain) and 20009 (INDOPACOM Capabilities) of the Reconciliation Exhibit.

A. Mission Description and Budget Item Justification

Global supply chain disruptions have become more common, with recent world events highlighting risks and vulnerabilities that undermine our national security. The 2022 Industrial Capabilities Report (ICR) report outlined strategic focus areas and enabling capabilities, associated vulnerabilities, and recommendations to strengthen the DIB.

The FY 2026 IBAS budget reflects the DoD's commitment to ensuring our supply chains can provide our warfighters with decisive advantage. This budget includes investments to respond to Executive Orders, emerging and modernization priorities and technologies, and other defense requirements. The IBAS budget is the result of significant coordination for each strategic focus area via the Program Review Teams (PRTs), which developed an integrated and prioritized investment strategy to address the most pressing needs for each focus area, to include mapping to investment authorities. The FY 2026 IBAS budget reflects the outcome of the PRT recommendations and has been coordinated to complement adjacent investments by related programs including the Defense Production Act Title III and Manufacturing Technology (ManTech) programs, and within the Military Services. Accordingly, investments in the following strategic focus areas will establish, sustain, and expand domestic capabilities and capacities to build more sustainable and resilient supply chains.

Workforce – The DoD relies on a skilled workforce to innovate, produce, and sustain our weapon systems. Decades of erosion across workforce development pipelines jeopardize and threaten our industrial base's ability to remain competitive. Workforce is a critical enabler for all DIB technology, mission, and market sectors. Analytically informed IBAS industrial workforce investments catalyze the development of sustained, regionally focused public-private partnerships (between companies, state/ local governments, academia, non-profits, industry associations, and other entities) to strategically close shortfalls in recruitment, training capacity/quality, and hiring/ retention. Efforts will continue to focus on recruitment, training, placing and retaining skilled workers in support of defense priority states / regions coordinating with other interagency programs, and leveraging authorities from other departments to support priority defense programs. FY 2026's primary effort will be the continuation and sustainment of a major, multi-year, joint OSD-Navy endeavor begun in FY 2023 focused on ensuring the health and capacity of the DoD's Maritime and Submarine industrial workforces.

Exhibit R-2A, RDT&E Project Justification: PB 2026 Office of the Secretary Of Defense		Date: June 2025
Appropriation/Budget Activity 0400 / 7	R-1 Program Element (Number/Name) PE 0607210D8Z / <i>Industrial Base Analysis and Sustainment Support</i>	Project (Number/Name) 819 / <i>Industrial Base Analysis and Sustainment</i>
Critical Minerals & Materials - Nearly every DoD weapons system, information technology resource, and supply chain — from cutting-edge missile defense systems to petroleum refining-relies on critical minerals and materials, including rare earth elements (REEs). In particular, the supply chain for REEs is highly concentrated in China. Currently, China accounts for over 60 percent of REE mineral production and over 90 percent of downstream processing of those minerals to their end applications, most notably permanent magnets. A disruption in the REE supply chain, whether due to world events or planned for geopolitical reasons, significantly affects the DoD's ability to manufacture a wide range of platforms and equipment and is thus a serious risk to national security. A resilient supply chain for REE oxides, metals, and magnets is required to enable continued manufacture and sustainment of DoD systems. To provide domestically made REE magnets, the entire REE supply chain must be supported: from mining REE ores, to processing and enriching the ores, to extraction of individual REE oxides, to metallization of each REE oxide, to creation of magnets using domestic REE metals, and finally to qualification of domestic magnets in end use defense applications. The DoD must also be ready to address shortfalls in other elements such as gallium, germanium, scandium, noble gases, and other materials used in traditional defense systems, microelectronics, hypersonics, and manufacturing processes which will require additional funding. To mitigate the most pressing REE supply chain risk, the DoD will utilize planned FY 2026 funding to partially fund a domestic metallization capability for REEs. This key supply chain node must be addressed to enable the manufacture of magnets from domestically processed metals and for use in other specialty applications. Significant additional funding beyond the current programmed level is needed to address other key critical mineral supply chain shortfalls that pose a threat to national security. Additional funding would allow the program to tackle further shortfalls in REE supply chains including sourcing, processing, magnet manufacturing, recycling, and qualification of materials into DoD supply chains. Additional funding would also enable addressing challenges with peripheral supply chains in processing chemicals, alternative feedstock & recovery projects for critical minerals and materials, and emerging critical mineral concerns due to global events such as export restrictions. Critical minerals and materials investments are necessary to establish a resilient, commercially sustainable domestic- and ally-controlled mine-to-magnet supply chain by FY 2027 in accordance with E.O. 14241 and U.S.C. 10 Section 4872. Furthermore, recent DFARS 252.225-7052 which require manufacturers for defense applications to source all materials for Samarium-Cobalt and Neodymium-Iron-Boron REE magnets from domestic sources by 2027. Significant investment in the REE supply chain is needed to comply with these laws and divest from reliance on Chinese controlled supply chains for REEs. Any delay in funding this capability will jeopardize the success of all domestic magnet-making efforts by the U.S. defense or commercial industrial bases. This would likely render defense manufacturers unable to comply with federal regulations concerning restrictions on REEs used in end products and could delay delivery of critical DoD systems such as the F-35, which requires over 900 pounds of REEs for each plane, and Virginia-class submarines, which require 9,200 pounds of REEs for each vessel. Many platforms will be affected if immediate action is not taken to secure the REE industrial base and develop a resilient supply chain for REEs. Energy Storage and Batteries – Due to the small DoD market share and customized battery requirements, the DoD is unable to fully leverage the large commercial investment in state-of-the-art energy storage technology. The nearly 100 percent foreign battery supply chain limits the DoD's ability to field battery enabled weapons/platforms free of adversary supply chain control. To mitigate these risks, DoD is investing to develop domestic assured access to batteries through three focus areas: 1) Initiate studies to define the aggregate demand for energy storage and batteries across the DoD; 2) Pivot to commercial standards and batteries to the maximum extent possible; and 3) Establish internal DoD safety testing capacity for energy storage and batteries for future weapons systems. FY 2026 efforts will initiate recommendations from the DoD demand analysis and examine opportunities to apply commercial sourcing applications.		

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2026 Office of the Secretary Of Defense		Date: June 2025
Appropriation/Budget Activity 0400 / 7	R-1 Program Element (Number/Name) PE 0607210D8Z / <i>Industrial Base Analysis and Sustainment Support</i>	Project (Number/Name) 819 / <i>Industrial Base Analysis and Sustainment</i>
Castings and Forgings (C&F) – Machine tools and cast and forged parts are critical to the development, procurement, and sustainment of all major defense systems. Cast and forged parts are found in 20 percent of the products representing the U.S. Gross Domestic Product. Continuous industry consolidation and offshoring since the 1960's have hollowed out domestic capability, reducing or eliminating competition and increasing our dependence on other nations, including China. To mitigate these risks, the DoD will continue to invest in four strategic lines of effort: 1) Metalworking research and infrastructure supporting production and research in the organic and commercial industrial base; 2) Workforce Development to improve the C&F workforce's size, capacity, skills, and cost-effectiveness; 3) Upstream Supply Chain Security to provide timely, assured access to reliable sources of supply for the raw, refined, and semi-fabricated metals, materials, and related capabilities required to produce C&F and alternative parts for DoD; and 4) Strategy Refinement informed by tools and analyses that enable DoD decision makers to sense evolving conditions, develop appropriate plans, and adjust efforts as conditions change. Kinetic capabilities, which include precision guided missiles/munitions, hypersonic weapons, directed energy weapons, small, unmanned aircraft systems (sUAS), counter-sUAS, and one-may-attack attritables, enable the military to project power, neutralize threats, and achieve strategic objectives in an increasingly complex global landscape. Moreover, robust kinetic capabilities provide the U.S. with a strategic advantage in international negotiations and diplomacy. To maintain the kinetic edge and ensure warfighters have the tools they need to succeed, continued investment in research, development, test, evaluation, manufacturing, and high-capacity production is required. The projects undertaken by this program are of paramount importance to the nation's defense and security, and the support of government leaders in this critical endeavor is essential. The DoD will launch efforts to: 1) Address supply chain vulnerabilities of hypersonic weapons and the most critical munition, missile, and sUAS components; 2) Update material specifications, including production and quality testing requirements; and 3) Foster sub-tier suppliers and competition in the kinetic capabilities sector industrial base to improve production capacity while reducing costs. FY 2026 primary focus efforts will expand the hypersonics solid rocket motor and propellant industrial base. Microelectronics – Microelectronics components are the foundation of a modern economy and military systems. Various vulnerabilities such as lack of domestic advanced manufacturing capabilities and diminished capacity threaten the DoD's ability to source microelectronics needed to sustain programs of record. To prepare the Department for increased global economic and strategic challenges, the DoD must take action to ensure access to the microelectronic components needed to sustain our defense programs and systems effectively and affordably. To maintain a competitive edge, the Department also needs a better strategy to transition leading edge technology developed by both government and industry to DoD programs of record. To respond to the threat and establish a secure and assured domestic supply chain, the DoD will pursue multiple lines of microelectronics efforts. Efforts in the IBAS Program are 1) Expanding the number of qualified domestic lower-tier suppliers providing leading edge microelectronics and packaging Global supply chain disruptions have become more common, with recent world events highlighting risks and vulnerabilities that undermine our national security. The 2022 Industrial Capabilities Report (ICR) report outlined strategic focus areas and enabling capabilities, associated vulnerabilities, and recommendations to strengthen the DIB.		
B. Accomplishments/Planned Programs (\$ in Millions)		
Title: Industrial Base Analysis and Sustainment (IBAS) Support		
Description: IBAS currently focuses efforts and investments for all fiscal years in the categories listed above and below, continuing investments to mitigate supply chain risks and on-going assessments for both traditional defense sectors and cross-cutting sectors. Investments in Workforce, Kinetic Capabilities, Critical Materials and Minerals, Castings and Forgings, Energy Storage and Batteries, Microelectronics.

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026
<i>FY 2025 Plans:</i> FY 2025 Plans: 1. Workforce Industrial Skills Development and Acceleration (National Imperative for Industrial Skills (NIIS) initiative): Over 50 NIIS portfolio pilot projects (ongoing plus new awards) will be executed during FY 2025, iteratively testing, validating, and refining multiple elements or segments of the initiative's 'Industrial Skills Workforce Development Model.' The intent is to produce increasing levels of real-world system maturity, harmonization/integration and effectiveness as depicted in the model. In continued actions following-up on recommendations from the OASD(IBP) report, "Career and Technical Education (CTE) Pilot Program, Report to the House and Senate Appropriations Committees, August 2023," the Innovation Capability and Modernization (ICAM) Office will continue to invest in creating new and expanding existing outreach and education programs to get more students into technician-level CTE pipelines and partner with other government organizations (for example, the Drug Enforcement Administration was added as a new partner in FY 2024). Investment will create and expand age-appropriate K-12 baseline industrial skills programs that introduce and attract students to defense industry careers and essential skillsets starting in middle school. Submarine Industrial Base Workforce: IBAS, in partnership with the Navy submarine enterprise, will continue to invest in the industrial base's development of the necessary recruitment functions, education and training programs, and worker retention/ wrap-around support for critical workforce development needs. The objective is to accelerate the path to establishing at-scale regional training systems and other workforce pipeline delivery capability to provide sufficient numbers of "ready to work" high skill technical tradespeople supporting production levels meeting the nuclear Navy's submarine modernization requirements. Using informed data analytics, we will collaborate with all appropriate government agencies to identify new workforce supply sources so that all Americans can prosper from jobs in the MIB. Efforts will continue to focus on priority states/regions where key suppliers reside. Continuing to build-out regional training systems in New England, Virginia, and the Great Lakes region, IBAS will expand its focus to include the Gulf Coast, West Coast, Hawaii, and broader Indo-Pacific regions. IBAS investments will address critical Indo-Pacific workforce needs focused heavily on the region's sustainment mission, such as the introduction of advanced training programs and the associated curricula for skilled professionals in the realms of welding, machining, non-destructive testing, fiber optics and additive manufacturing. This strategy relies on the use of regional coordinators to help establish and improve essential organizational regional relationships and better align DoD, other U.S. Government agency capabilities, state/local, and nongovernmental investments in each defense-critical region. FY 2025 efforts will include a contract awarded to supplement the submarine industrial base (SIB) with an advanced manufacturing training suite in Oahu and will also explore infrastructure, talent pipelines, and training systems in Guam. FY 2025 efforts will include maintenance, repair, and operational sustainment of capabilities developed in previous years, and a contract awarded to supplement the submarine industrial base (SIB) with an advanced manufacturing training suite in Oahu and will also explore infrastructure, talent pipelines, and training systems in Guam. Associated data analytic initiatives in the Indo-Pacific region will guide future investment in this critical region.

Exhibit R-2A, RDT&E Project Justification: PB 2026 Office of the Secretary Of Defense			Date: June 2025	
Appropriation/Budget Activity 0400 / 7	R-1 Program Element (Number/Name) PE 0607210D8Z / Industrial Base Analysis and Sustainment Support	Project (Number/Name) 819 / Industrial Base Analysis and Sustainment		
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025	FY 2026
2. Critical Minerals & Materials Critical Materials and Rare Earth Elements (REE): Continue efforts initiated in prior years to establish, sustain, and improve domestic rare earth capabilities, value-added manufacturing, and essential commercial product production. These critical activities must continue despite new supply chain challenges including non-allied export controls on materials & technology as well as dramatically increased costs and lead times. Continue the design and scaling of two domestic REE processing lines in support of the DoD's efforts to address supply chain risks associated with the dependence on rare earth elements from foreign non-allied countries. Begin efforts to qualify and support stockpiling of magnets for defense applications. Continue development of technologies for extracting critical minerals from alternative and sustainable feedstocks such as acid mine drainage and coal ash tailings. Initiate efforts to reduce dependence on non-allied countries for essential equipment, minerals, and materials for the processing of REEs.				
3. Castings and Forgings (C&F) and Machine Tools Continue to increase the pace and scope of research into ways to supplement or obviate the need for cast and forged products, and to incorporate Industry 4.0 capabilities (including but not limited to industrial automation and robotics) more broadly into production of those products. Continue to work with the Services to accelerate metalworking process improvement, expand workforce development efforts, revitalize casting and forging-related capabilities for materials processing, welding/joining, and additive manufacturing. Continue to develop modern computational tools to support advanced applied metallurgy, work with industry and academia to reduce barriers to entry posed by legacy qualification processes for materials and production processes, evaluate and invest in projects for new metal alloys and metal working processes that will improve performance and cost-effectiveness. Complete several projects to improve materials modeling, production, and inspection capabilities at key suppliers of aviation and ground combat systems. Continue and enhance work with the Air Force to create and evaluate production processes for critical alloy powders. Leverage results of FY 2024 study of investment needs in C&F-related joint/government/industry/academic centers of excellence to begin program of specific investments.				
Continue execution of projects to provide timely, assured access to the raw and refined metals (including ingot, bar and plate stock, wire, and powder) and other materials, semi-fabricated products, and refractory metals needed to produce the cast, forged, and additively manufactured parts required to equip and sustain U.S. and other forces in fulfillment of national strategic guidance (i.e., the National Security Strategy, interim National Defense Strategy, National Defense Industrial Strategy) and published Operations Plans and Concept Plans.				
Apply IBAS-sponsored data analysis tools to inform DoD and manufacturers' analyses to quickly match DIB firms with C&F product suppliers, identify alternative sources of supply and implement the National Defense Industrial Strategy C&F Implementation Plan

Exhibit R-2A, RDT&E Project Justification: PB 2026 Office of the Secretary Of Defense		Date: June 2025	
Appropriation/Budget Activity 0400 / 7	R-1 Program Element (Number/Name) PE 0607210D8Z / <i>Industrial Base Analysis and Sustainment Support</i>	Project (Number/Name) 819 / <i>Industrial Base Analysis and Sustainment</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
4. Energy Storage and Batteries Conduct efforts that 1) Deploy a DOD Lithium Battery Database to enable DOD battery standardization and facilitates selection of common battery factors for the Services, 2) Expand the availability of lithium battery safety expertise for joint military efforts, and 3) Expand on opportunities to couple vehicle and heating systems electrification with energy storage to improve cost of electric power delivery; investigate and apply new energy storage technologies that offer better cost-benefit and mitigation of supply chain issue. These efforts will better position the DOD to leverage affordable domestic battery production for Electric Vehicles (EVs) and other applications. 5. Kinetic Weapons Hypersonics Continue industrial base projects improving U.S. manufacturing capabilities to expand capacity for hypersonics programs in coordination with other OSD and Military Service organizations. Efforts target critical paths to increase capacity of existing suppliers, complete weapon development, conduct static fire testing of solid rocket motor second sources, and improve production capability to meet requirements. Continue affordability enhancements on thermal protection systems and additional supply sources of hypersonic weapons. Nine ongoing projects from FY 2023 continue progress to help drive down cost and increase affordability to field hypersonic weapon systems for the Navy and Army. A system-level approach will be used to address manufacturability and testing focusing on hypersonic all-up rocket motor case, nozzle, and cone assembly. Plans remain focused on using additive manufacturing to develop innovative and efficient manufacturing processes while reducing costs. Continue to assess potential investments in hypersonic weapons demand signals, supply chains, and accelerated schedule for delivery. 6. Microelectronics Secure Packaging – Eight efforts initiated in FY 2023 continue to establish a US-owned, domestic, trusted, pure-play and open access Advanced Packaging Framework for low volume production of 2.5-D and 3-D Advanced System Integration and Packaging secure solutions. Targeted activities and capabilities include completion of tool acquisition and equipment engineering to support advanced packaging manufacturing along with developing secure microelectronics solutions and demonstrators. Targeted processes include wafer preparation and wafer bumping capabilities on 300mm substrates, advanced interposer manufacturing capability for radiofrequency (RF) applications, and Fan-Out Wafer-Level Packaging capability. Domestic access and sourcing of materials and chemicals is being established. Security solutions, prototype planning, and development are advancing towards completion. Enterprise Parts Management System (EPMS) – Activity primarily consists of system development to include completion of the Preliminary Design Review (PDR) and minimum viable product development and delivery. Efforts also focus on achieving Cloud

Appropriation/Budget Activity 0400 / 7	R-1 Program Element (Number/Name) PE 0607210D8Z / <i>Industrial Base Analysis and Sustainment Support</i>	Project (Number/Name) 819 / <i>Industrial Base Analysis and Sustainment</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
Impact Level 4 and obtaining authority to operate for minimum viable product capabilities. Policy and requirements development will continue to ensure full functionality, integration, and adoption of EPMS.			
RF Microelectronics – Effort focuses on design and development of Prototype X-band Radar microelectronic components for Homeland Cruise Missile Defense to be used for the Fire Control Radar program. Activities will include demonstration of RF sensor prototype that will utilize an open architecture design and provide enhancements to the multi-tiered RF component supply chain improving DIB resiliency.			
Digital Engineering/Cloud Compute – Develops, extends, and maintains Digital Engineering infrastructure projects to compliment pilot efforts to increase efficiency and reduce overall cost of DoD microelectronics systems. Additionally, efforts include selection and acquisition of Electronic Design Automation (EDA) tools and Intellectual Property (IP) licenses, development of cost-shared based pilots for tech insertion, and maintenance of a Tri-Service Working Group to oversee “Common” IP licensing and maximize benefits to all services.			
Upstream Electronic Material Security – Funding and establishment of projects that bolster the domestic PrCB and/or advanced substrate defense industrial base. Work in this effort will address critical DIB supplier bottlenecks in the areas of sub-tier manufacturing capacity improvements for electronic products, manufacturing capability expansions to provide expanded product offerings for the DoD and establish domestic sources for critical upstream manufacturing materials.			
FY 2026 Plans: FY 2026 Plans: 1. Workforce Industrial Skills Development and Acceleration (National Imperative for Industrial Skills (NIIS) initiative): The portfolio of over 50 pilot efforts funded in FY 2025 will continue in FY 2026 at various planned programmatic stages, refining multiple elements or segments of the initiative’s ‘Industrial Skills Workforce Development Model.’ Many ongoing and to-be awarded NIIS efforts are designed to familiarize, train, and recruit students presently in K-12 and career and technical education (CTE) pipelines. Our efforts connect skilled workers with manufacturing competencies and introduce them to skillsets needed to support the DIB. As part of the NIIS initiative, continued investment will be made to restore the might of American manufacturing by providing necessary recruiting, training, job placement, and wrap-around support needed to introduce and retain the best workers in the DIB. Additionally, IBAS will continue to invest in data analytics projects to 1) more deeply assess needs across program lifecycles, 2) better understand competing needs for production and maintenance workforces across multiple defense programs, and 3) improve IBAS program industrial workforce risk management investment and policy decisions, especially in critical defense areas such as the U.S. Indo-Pacific Command, the New England region, and the Great Lakes region.

Appropriation/Budget Activity 0400 / 7		R-1 Program Element (Number/Name) PE 0607210D8Z / <i>Industrial Base Analysis and Sustainment Support</i>		Project (Number/Name) 819 / <i>Industrial Base Analysis and Sustainment</i>	
B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026
Submarine Industrial Base Workforce: IBAS, in partnership with the Navy submarine enterprise, will continue to invest in the industrial base's development of the necessary recruitment functions, education and training programs, and worker retention/ wraparound support for critical workforce development needs. The sustained objective is to accelerate the path to establishing at-scale regional training systems and other workforce pipeline delivery capabilities to provide sufficient numbers of "ready-to-work" high skill technical tradespeople supporting production levels meeting the nuclear Navy's submarine modernization requirements. Continue to build-out regional training systems in New England, Virginia, Great Lakes region, Gulf Coast and West Coast, with continued special focus on Indo-Pacific sustainment needs, by continuing advanced training programs and the associated curricula for skilled professionals in the realms of welding, machining, non-destructive testing, fiber optics and additive manufacturing. This includes identifying new workforce supply sources and opportunities, to grow the American DIB workforce, through informed data analytics. This strategy relies on the use of regional coordinators to help establish and improve essential organizational regional relationships and better align DoD, other U.S. Government agency capabilities, state/local, and nongovernmental investments in each defense critical region. 2. Critical Minerals and Materials Critical Materials and Rare Earth Elements (REE): Continue efforts initiated in prior years to establish, sustain, and improve domestic rare earth capabilities and value-added manufacturing in support of defense and essential commercial product production. Prioritize investment of current funding allocation in midstream production of REE products through metallization, in line with the administration's goal of a domestic mine-to-magnet supply chain. Additional funding in FY 2026 would enable addressing numerous additional priorities including support of domestic REE processing industry by funding the development of supply for precursor and reagent chemicals used in REE processing. Expand support for critical upstream capabilities in response to market forces and anticipated increased demand. Continue to address new supply chain challenges, including non-allied export controls on materials and technology as well as dramatically increased costs and lead times. Begin testing and continue engineering/construction of two domestic REE processing lines in support of the DoD's efforts to address supply chain risks associated with the dependence on REE from foreign non-allied countries. Continue efforts initiated in prior years to reduce dependence on non-allied countries for essential equipment and materials for the processing of REEs. Continue to support and explore prototype technologies and processes for REE separation and processing to support new domestic sources, with increased emphasis on recycling. Support qualification efforts for domestic REE suppliers to become qualified for use in DoD supply chains. Develop domestic Germanium and Gallium sources and processing infrastructure to refine and purify these materials for use in microelectronics. 3. Castings and Forgings (C&F) and Machine Tools In FY 2026, the IBAS program will leverage a significant increase in funding detailed in the National Defense Industrial Strategy C&F Implementation Plan to deliver even more changes to Industry 4.0-enabled production and metrology processes, automated/

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2024	FY 2025	FY 2026
robotics equipment and processes, and computational tools that speed and supplement the production of cast and forged products, as well as initial development and testing of advanced/alternative materials, products, and processes, including those with improved corrosion-resistance. IBAS will continue to increase the size and depth of capabilities for quickly educating and training new metalworkers and Government metals experts to increase production of qualified workers with the up-to-date knowledge, skills, and abilities to succeed in metalworking and related fields in the Organic Industrial Base (OIB) and commercial industrial base. IBAS will continue to execute specific plans to right size and improve the capabilities of C&F-related joint/government/ industry/academic centers of excellence.					
The program will continue to support, and expand as appropriate, the scope of specific projects to provide timely, assured access to the raw and refined metals (especially titanium, modern alloys, and refractory metals) in the form of bar and plate stock, wire, and powder, as well as other materials, semi-fabricated products, and ceramic refractories needed to produce superior cast, forged, and additively manufactured parts.					
IBAS Program personnel will continue to refine the Implementation Plan and other strategic documents as conditions evolve, to support development and execution of new projects as needed.					
4. Energy Storage and Batteries Initiate efforts that assess viability of moving to a standardized Lithium-ion battery to improve battery performance upon deployment of the DOD Lithium Battery Database 3) ensure the availability of lithium battery safety expertise for joint military effort.					
5. Kinetic Weapons Hypersonics IBAS investments will continue targeting the capability and affordability of hypersonic weapon systems in coordination with the Services and OSD stakeholders. These efforts will focus on improving production capability and cost reduction of the Navy's Conventional Prompt Strike (CPS) hypersonic weapon and the Army's "Dark Eagle" Long Range Hypersonic Weapon (LRHW) to expand the industrial base capacity and lower costs for the high demand missile in support of Combatant Commander operational needs. IBAS will increase the production capacity of solid rocket motors (SRM), SRM components, and propulsion to meet surge expectations.					
6. Microelectronics RF Microelectronics – Efforts will continue developing a Prototype X-band Radar for Homeland Cruise Missile Defense to be used for the Fire Control Radar program. Current activity analysis determines that enhancements targeting transitioning capabilities will be necessary during FY 2026 activities. During FY 2026, Low Rate Initial Production (LRIP) activities to support NORAD

and USNORTHCOM will include addressing supply chain risks by adapting commercial technology to defense applications and improvements to provide critical Size, Weight, Power and Cost (SWAP-C) advantages.			
Upstream Electronic Material Security – Funding and establishment of projects that bolster the domestic PrCB and/or advanced substrate defense industrial base. Work in this effort will address critical DIB supplier bottlenecks in the areas of sub-tier manufacturing capacity improvements for electronic products, manufacturing capability expansions to provide expanded product offerings for the DoD and establish domestic sources for critical upstream manufacturing materials.			
FY 2025 to FY 2026 Increase/Decrease Statement: The FY 2026 request for IBAS includes \$273.379 million of discretionary and \$2,054.991 billion of mandatory (reconciliation) for a total of \$2,328.308 billion. The mandatory funds support the Workforce, Critical Minerals and Materials, Castings and Forgings, Kinetic Capabilities, Energy Storage and Batteries and Microelectronics sectors. Further information for this reconciliation request is provided in Chapter 2 of the Reconciliation Exhibit.			
Accomplishments/Planned Programs Subtotals		754.081	1,013.920
		FY 2024	FY 2025
Congressional Add: Automated textile manufacturing		5.000	-
FY 2024 Accomplishments: Developed domestic production capacity for production of garments and uniforms for the DoD utilize automation and minimize labor.			
Congressional Add: Advanced Headborne Systems and Manufacturing		5.000	-
FY 2024 Accomplishments: Funded facility improvements to increase production capacity to 200,000 helmets / year for both air and ground systems.			
Congressional Add: Ruggedized Transceivers		10.000	-
FY 2024 Accomplishments: Existing award elements have been finalized to increase the production capacity through the development of new prototype manufacturing processes.			
Congressional Add: Advanced Thermoplastics Demonstration		10.000	-
FY 2024 Accomplishments: Solicited and awarded a follow-on effort to advance the Technology Readiness Level (TRL) from the FY 2023 level of TRL 4 to TRL 7. The program advanced thermoplastic manufacturing technologies and final product manufacturing expertise to support a current air platform and set the stage for adoption in additional ground vehicles, aircraft, spacecraft, and missile systems. Investigated capabilities include blanks, profiles and formed parts, and the production of integrated complex thermoplastic assemblies via

patented composite structural assembly. Benefits to DoD include weight reduction of up to 50 percent, improved impact resistance and durability, up to 75 percent reduction in manufacturing time, and easier servicing and maintenance through reduction of overall part count.			
Congressional Add: Munitions Supply Chain Diversification FY 2024 Accomplishments: The initiation of a new compact multi-range for the Maritime Strike Tomahawk Weapon System to accelerate production and increase throughput capacity. The additional compact multi-range is supporting the sub-tier performer fabrication and quality and performance testing of the seeker assembly. This project is enhancing the manufacturing capabilities of the sub-tier supplier and enabling accelerated integration of the technical components.		5.000	-
Congressional Add: Domestic Nickel Superalloy Castings FY 2024 Accomplishments: Solicited and awarded an effort to support qualification of process improvements by domestic suppliers of superalloy castings used in the engines of military land and air platforms including the M1 Abrams tank and F-35 Joint Strike Fighter. This project enables introduction of mature technical process improvements into DoD programs to reduce reliance on virgin, non-domestically sourced material thereby strengthening the defense industrial base and ensuring supply chain resiliency.		4.000	-
Congressional Add: Freeze-dried Plasma FY 2024 Accomplishments: Advance domestic production capability for freeze dried blood products to support forward units treating warfighters within the “golden hour” after injury improving care and survivability.		7.800	-
Congressional Add: Domestic Organic Light Emitting Diode Microdisplay Manufacturing FY 2024 Accomplishments: This has been officially identified as ICAM acquisition government approved to move forward for award as a follow-on effort. Performer delineation is currently under review.		24.500	-
Congressional Add: 3D Printing Technology FY 2024 Accomplishments: Solicited and awarded an effort to leverage 3D printing technology to support expeditious repair or replacement of key parts in forward locations in the INDOPACOM theater.		3.000	-
Congressional Add: Securing Rare Earth FY 2024 Accomplishments: Developed new acquisition pathways and developed requirements for alternative rare earth element (REE) separation technologies and sustainable, alternative feedstocks.		5.000	-

		FY 2024	FY 2025
FY 2024 Accomplishments: Identified relevant government stakeholders.			
Congressional Add: 5G Testbed		10.000	-
FY 2024 Accomplishments: Phase 1 activities of providing engineering labor support for setup and instrument testbeds has been funded.			
Congressional Add: Advanced Electrification Demonstration		3.000	-
FY 2024 Accomplishments: Leveraged previous studies on installation electrification to prototype energy storage solution and demonstrate aboard continental United States facilities. Effort expands upon domestic production of battery materials and informs tactical programs within U.S. Marine Corps and Army to improve power availability in forward deployed areas.			
Congressional Add: Battery Manufacturing Supply Chain Resilience		5.000	-
FY 2024 Accomplishments: Supplemented efforts to onshore domestic manufacturing of battery materials informed by supply chain analytics. Expanded partnership to advance technology needed to improve manufacturing techniques, increasing resiliency of domestic battery sourcing.			
Congressional Add: Critical Materials Processing		10.000	-
FY 2024 Accomplishments: Developed new acquisition pathways and developed requirements for alternative rare earth element (REE) separation technologies and sustainable, alternative feedstocks.			
Congressional Add: Critical Minerals from Chromatographic Separation		2.000	-
FY 2024 Accomplishments: Conducted several relevant vendor visits to develop technical and material requirements for proposed solutions. Developed new acquisition pathways and developed requirements for alternative rare earth element (REE) separation technologies and sustainable, alternative feedstocks.			
Congressional Add: Defense Supply Chain and Workforce Readiness Program		2.000	-
FY 2024 Accomplishments: Anticipated accomplishment: Conduct pilot activity to mitigate supply chain risks for the defense industrial base and its workforce within the U.S. state of Kansas and beyond.			
Congressional Add: Extreme Environment Clothing		2.000	-
FY 2024 Accomplishments: Developing automation of cold weather uniforms.			
Congressional Add: High Temperature Ceramics Lab and Prototyping Capability		2.000	-

C. Other Program Funding Summary (\$ in Millions)			
N/A			
Remarks			
NA			
D. Acquisition Strategy			
The ICAM Office established the Government-run Cornerstone Other Transaction Agreement (COTA) in 2018 to award the majority of the IBAS program projects. COTA leverages expertise and personnel at the Army Contracting Command in Rock Island, Illinois to execute DIB resiliency and supply chain initiatives that focus on prototype projects, which, enables increasing DIB capabilities and capacities over a broad range of DoD requirements. Other acquisition vehicles such as the General Services Administration (GSA) and other Military Service and Defense Agency vehicles are used as required if IBAS program requirements exceed COTA's annual capacity.

Note

New Start (Y/N): No

A. Mission Description and Budget Item Justification

Counterproliferation (CP) Modernization supports the 2025 Interim National Defense Strategic Guidance objective of peace through strength with modernized capabilities that reestablish deterrence and rebuild our military. Program investments in CP capabilities, including pathway defeat and WMD device defeat activities, enable the Department to maintain credible options to defend the homeland against WMD use. Investments result in capabilities that take action against actors of concern and reduce access to WMD development pathways and delay further development, degrade capabilities where possible, and prevent WMD use. (2023 DoD Strategy to Counter Weapons of Mass Destruction (CWMD)).

This Program Element (PE) modernizes currently fielded capabilities for operating units with assigned CP/CWMD missions to disrupt, degrade, delay, deny, and defeat adversary nuclear, chemical, and biological weapons, delivery platforms, command and control systems, and hardened and deeply buried targets. Program investments enable modernized WMD deterrence and CP capabilities that provide flexible options across all domains, including tactical situational awareness, low visibility methods of maneuver, and the ability to employ immediate effects without diminishing future capabilities, enabling active campaigning that supports the Administration's CP priorities, mitigating risk to mission and risk to force.

Funding is prioritized for projects that close Joint Force warfighter capability gaps to defend Taiwan and the homeland. An annual investment strategy is used to meet emergent operational needs validated by the Joint Force, yielding new fielded capabilities within one to two years.

This program funds labor, materials, and travel in support of its requirements, performed by a government agency or by private individuals or organizations under a contract with the government, for activities and acquisitions including Research, Development, Test & Evaluation (RDT&E), assessments and analyses, , education, and other activities related to capability development and fielding of nuclear modernization, homeland missile defense, one-way attack autonomous systems, critical cybersecurity and counter-small UAS initiatives.

• Internal Realignment	-0.349	-	-	-	-
• Realignment with interim National Defense Strategy requirements	-	-	-0.628	-	-0.628

Change Summary Explanation

The FY 2025 to FY 2026 funding increase restores the program to funding slightly above FY 2024 levels. In FY 2024 and FY 2025, CP/CWMD funding was reduced to align with higher priority interim National Defense Strategy requirements. Until funding is restored to FY 2023 levels, the Department will accept annual risk of 1-2 fewer modernized counter WMD capabilities to the Joint Force.

The FY 2026 request for Counterproliferation Modernization includes \$12.704 million of discretionary funding. These funds support modernization efforts for the following: Cyber Security, INDOPACOM Capabilities, Intel, Missile Defense, Nuclear, Nuclear Modernization, Homeland Missile Defense, One-Way Attack/Autonomous Systems, Counter-small UAS Initiatives, and Priority Critical Cybersecurity.

The FY 2026 request was reduced by \$0.588 million for Advisory and Assistance Services to promote efficiencies and advance the policies of the Administration in alignment with Executive Order 14222, "Implementing the President's Department of Government Efficiency Cost Efficiency Initiative." and reduction of \$0.040 million was due to inflation adjustment.

D. Acquisition Strategy			
The Office of the Deputy Assistant Secretary of Defense for Threat Reduction and Arms Control (ODASD(TRAC)) establishes annual priorities based on national and DoD strategies and Administration guidance. Based on those priorities, TRAC solicits project proposals from Combatant Commands, Military Services, and Defense Agencies to enhance Joint Force lethality. To be selected, a proposed project must have a validated requirement, an engaged requirement champion, a viable acquisition strategy, and a qualified program management office. A technology project must identify its starting and desired end-state Technology Readiness

Note

New Start (Y/N): No

This Program Element (PE) was originally established in Fiscal Year (FY) 2024 under PE 0505167D8Z – Domestic Prepare Against Weapons of Mass Destruction (WMD). Beginning in FY 2025, the PE was renamed and renumbered to PE 0607757D8Z – Radiological and Nuclear Defense Modernization Operational System Development to more accurately reflect the mission of the program.

A. Mission Description and Budget Item Justification

This Program Element (PE) supports the Department's Defense Priorities to Rebuild our Military and Reestablish Deterrence.

This PE supports the modernization of radiological and nuclear (R/N) defense capabilities that enable the Department to prevent R/N attacks on the homeland and Joint Force abroad through deterrence, as well as survive and operate in and through a R/N environment. This aligns with the Interim National Defense Strategy and addresses the challenges of keeping pace with our increasingly nuclear-capable adversaries by developing modern R/N detection and identification capabilities that are networked into secure and hardened communications, command, and control (C3) systems.

This PE supports the Office of the Under Secretary of Defense for Acquisition and Sustainment (OUSD(A&S)) Radiological and Nuclear Defense Capability Development (RND CD) Program. The RND CD Program is addressing the strategic objective of 'fielding modernized R/N detection capabilities to enable the Joint Force to operate more effectively in a R/N contaminated environment' (Department of Defense (DoD) Strategic Management Plan for FY2022-2026). The RND CD Program enhances DoD's capabilities to campaign across the domains of threats and spectrums of conflict by improving the Department's capability to campaign, fight, and win in a R/N environment. By building a R/N resilient Joint Force and National Guard Bureau, this program contributes to reestablishing deterrence by denying any strategic advantage our adversaries may perceive in using nuclear weapons on the homeland or Joint Force stationed abroad. This program is specifically geared to provide modern, networked R/N detection, indication, and identification capabilities to the warfighter and to upgrade obsolescing equipment, increasing capability to operate in a R/N environment (2023 CWMD Strategy).

The RND CD Program enables DoD to: prepare for and respond to any emergency involving nuclear and/or radiological events in the United States; provide a capability for the Joint Force to withstand, operate through, and recover from an R/N event; improve resilience; and promote integrated layered deterrence of WMD with state, local, and other federal agencies.

UNCLASSIFIED

Exhibit R-2, RDT&E Budget Item Justification: PB 2026 Office of the Secretary Of Defense	Date: June 2025
---	------------------------

Appropriation/Budget Activity 0400: <i>Research, Development, Test & Evaluation, Defense-Wide I BA 7: Operational Systems Development</i>	R-1 Program Element (Number/Name) PE 0607757D8Z I <i>Radiological and Nuclear Defense Modernization Operational System Development</i>
---	--

This funding line is the only Budget Authority (BA)-7 funding in the Department dedicated to modernizing R/N capabilities for the warfighter.

The Office of the Secretary of Defense uses the RND CD Program to invest strategically in projects across the Military Services, Combatant Commands, and Defense Agencies. Funding is prioritized for projects that close Joint Force warfighter capability gaps. An annual investment strategy is used to meet emergent operational and capability needs which are validated by the Joint Force and the National Guard Bureau, yielding new fielded capabilities within one to three years.

Through the Radiological and Nuclear Defense Modernization Operational Systems Development PE, the RND CD Program will invest in the modernization of fielded capabilities to improve DoD's capability to detect and identify radiological and nuclear threats; integration of technologies, systems and components; operational test and evaluation of fielded capabilities to new end users; and delivery of field and table top exercises to identify, refine, and address materiel and non-materiel gaps and requirements in R/N defense. This program seeks to merge previous research, development, and acquisitions efforts across DoD to field common and interoperable capabilities across the Joint Force and the National Guard Bureau.

Specifically in FY 2026, this PE will support the modernization of 1) the Radioisotope Identification Detector (RIID); 2) the Radiological Detection System (RDS); 3) the Gamma Detector Response and Analysis Software (GADRAS) suite; 4) the Vehicle Integrated Platform Enhanced Radiation Detection, Indication, and Computation (VIPER) system; 5) a test and evaluation article for Army mobile radiation sensors; and 6) a R/N detector for use in a GPS denied environment.

This program funds labor, materials, and travel to support the requirements of this program, performed by a government agency or by private individuals or organizations under a contract with the government, for activities and acquisitions including Research, Development, Test, and Evaluation (RDT&E), assessments and analyses, research studies, education, and other activities related to capability development and fielding.

This program funds labor, materials, and travel to support the requirements of this program, performed by a government agency or by private individuals or organizations under a contract with the government, for activities and acquisitions including Research, Development, Test, and Evaluation (RDT&E), assessments and analyses, research studies, education, and other activities related to capability development and fielding.				
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025	FY 2026
Title: Radiological and Nuclear Defense Modernization Operational Systems Development Description: The Radiological and Nuclear Defense Modernization Operational Systems Development PE will invest in the modernization of fielded capabilities to improve DoD’s capability to detect and identify radiological and nuclear threats; integration of technologies, systems and components; operational test and evaluation of fielded capabilities to new end users; and delivery of field and table top exercises to identify, refine, and address materiel and non-materiel gaps and requirements in R/N defense. This program seeks to merge previous research, development, and acquisitions efforts across DoD to field common and interoperable capabilities across the Joint Force and the National Guard Bureau. FY 2025 Plans: • Develop, transition, and field operational R/N Detection, Identification, Early warning, and Command Control capabilities to the Joint Force and the National Guard Bureau. • Partner with the Military Services and Defense Agencies to mature and transition advanced prototypes to fielded R/N detection and identification capabilities. • Complete critical design reviews of prototypes, systems, and components for test and evaluation by end-users and transition to fieldable R/N Detection and identification capabilities under other classified projects. • Develop Joint Personnel Dosimeter to transition to fielded capability for the Joint Force. • Achieve networkability of Radiological Detection System on behalf of the Joint Force. FY 2026 Plans:		-	1.668	2.945

A. Mission Description and Budget Item Justification

The DoD CIO information systems security program (ISSP) provides focused defense cybersecurity and information assurance technology and technical solutions research, development, testing, and integration critical to meet Title 10 U.S. Code Section 2224 (10 U.S.C. §2224) (Defense Information Assurance Program); Public Law 113-283 (Federal Information Security Modernization Act of 2014); Office of Management and Budget (OMB) Circular A-130; multiple DoD cybersecurity-related instruction series, such as 8500, 8510, 8520, 8530, and 8540; Executive Order 14028, “Improving the Nation’s Cybersecurity”; National Defense Authorization Act (NDAA) for Fiscal Year (FY) 2022, Section 1528; National Cybersecurity Strategy (March 2023), OMB M-22-09, “Moving the U.S. Government Toward Zero Trust Cybersecurity Principles”; National Security Memorandum 8, “Memorandum on Improving the Cybersecurity of National Security, Department of Defense, and Intelligence Community Systems”; Fulcrum: The DoD Information Technology Advancement Strategy; FY 2022 – 2026 DoD Strategic Management Plan; DoD CIO 2024 Defense Industrial Base Cybersecurity Strategy; and DoD CIO 2022 Zero Trust (ZT) Strategy.

ISSP assists the DoD CIO and mission partners in: developing cybersecurity governance processes; modernizing communications security (COMSEC) and cryptography, including post-quantum solutions; integrating and synchronizing the DoD information environment; enhancing communications cybersecurity and national security system protection; adopting Zero Trust (ZT) cybersecurity principles; defending against supply-chain attacks; overseeing cybersecurity risk management; developing and sustaining Defense Industrial Base (DIB) cybersecurity activities; integrating cybersecurity standards across the DoD.

Same as program level mission description.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Information Systems Security Program Plans and Accomplishments	97.157	31.127	25.347
Description: This program element directly contributes to both integrated deterrence and the development of enduring advantages. Regarding integrated deterrence, the program strengthens the DoD's ability to deter aggression through enhanced resilience of its information systems and networks. This resilience acts as a deterrent by making U.S. systems less vulnerable to attack and disruption, thereby reducing the potential adversarial gains. Furthermore, the program supports strategic competition with China and addresses persistent threats from Russia, North Korea, Iran, and violent extremist organizations by providing the cybersecurity tools and expertise necessary to defend against their evolving cyber capabilities. In terms of building enduring advantages, the program focuses on adapting and fortifying the defense ecosystem. This includes modernizing cybersecurity infrastructure, implementing advanced security protocols like Zero Trust, and fostering a culture of cybersecurity awareness and vigilance. By continuously improving the defense ecosystem's cybersecurity posture, the program ensures that the U.S. maintains a technological and operational advantage in the face of increasingly sophisticated cyber threats. This proactive approach ensures long-term security and resilience, contributing to the overall strategic advantage of the United States. FY 2025 Plans: \$19.124 million: • Continue base program initiatives in prior budget year. \$7.500 million:

A. Mission Description and Budget Item Justification

The DoD CIO defense industrial base (DIB) cybersecurity initiative includes the Cybersecurity Maturity Model Certification (CMMC) program that was previously contained in PE 0606771D8Z (Cyber Resiliency & Cybersecurity Policy), and additional cybersecurity strategy, policy, and capability development efforts to support our DIB partners and our DIB supporting capabilities. This program works side-by-side with other DoD CIO programs, including the DoD CIO information systems security program (PE 0303140D8Z), to provide focused DoD capability requirements to assess DIB contractor and subcontractor compliance with existing federal contract and controlled unclassified information (CUI) protection requirements, protecting the information from cybersecurity risks, including advanced persistent threats. It also includes efforts to develop, test, and distribute DoD cybersecurity services for DIB partners and stakeholders. This program works in alignment with/to meet the "Fulcrum: The DoD Information Technology Advancement Strategy", FY 2022 – 2026 DoD Strategic Management Plan, DoD CIO 2024 DIB Cybersecurity Strategy, and DoD CIO 2022 Zero Trust (ZT) Strategy. This PE also supports the objectives of an integrated deterrence through deterrence tailored approaches and building enduring advantages by transforming the future force foundation and adapting and fortifying our defense ecosystem.

C. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025	FY 2026
Title: DIB Cyber security initiative Description: Same as Mission description FY 2025 Plans: FY 2025 plans continue base program initiatives from the prior budget year. Additional initiatives are due to anticipated CMMC program transition to operational status in FY 2025, resulting in program scope change. - Operationalize the CMMC eMASS infrastructure. - Manage and update the CMMC eMASS database. - Update the CMMC requirements to remain in sync with the National Institute of Standards and Technology standards. - Initiate the CMMC performance metrics collection. - Partnerships on new and existing DoD initiatives and pilots to enhance DIB cybersecurity. FY 2026 Plans: - Amend publication of 32 CFR CMMC program rule to incorporate latest revision to NIST cybersecurity guidelines. - Continue FY25 base program initiatives. Phased CMMC program implementation in FY26 will result in additional initiatives. - Update the CMMC eMASS database on NIPR and finalize initial develop and deploy a SIPR instantiation, to include integrating and using cross-domain solutions. - Analyze and track CMMC performance metrics to ensure effective program management and identify potential operational impacts to the CMMC ecosystem. - Partner with the MILDEPs and other agencies and their initiatives to improve DIB CS. FY 2025 to FY 2026 Increase/Decrease Statement: Funds decreased in FY 2026 due to DoD CIO realigning mission requirements and level setting cybersecurity resourcing.		20.922	15.524	10.840

A. Mission Description and Budget Item Justification

The Policy R&D Program supports the interim National Defense Strategy by providing analysis to overcome military security challenges. The global security environment is dynamic and complex. Continuous research and analysis is necessary for understanding foreign military structures and capabilities, as well as for developing mid- to long-term anticipatory and strategic perspectives on security issues. These perspectives can then guide necessary changes to policies, strategies, processes, and capabilities that advance U.S. and interests. This program blends multiple research disciplines including policy, sciences, and engineering to better understand matters affecting strategy, planning, management of international alliances and partnerships, crisis preparedness and response, budgetary and operational oversight, cyber and space challenges, special operations, homeland defense, nuclear and missile defense, and other emerging threats to the national security of the US. The program also supports statutorily directed requirements related to OUSD Policy mission areas.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026
Title: Future Security Challenges	2.648	2.520	2.333
Description: Provides program management oversight and technical support to identify current and emerging future security challenges to the Department, and for international cooperation activities with Allies and international partners to confront these challenges. Anticipates exploitation of technology, including available and advanced capabilities, and work with the international commercial sector and academia concerning adversary's application of technology. Program explores processes and policy to integrate international capabilities across the spectrum of security challenges.			
FY 2025 Plans: Continue FY 2024 efforts to include: • The INDO-PACOM AOR remains an area with increased emphasis and the program will continue to perform trend analysis and developing mitigation options. • Develop opportunities to apply risk management methodologies to identified program areas. • Working with our international partners, develop net-centric enterprise technologies to remove international sharing barriers identified with maritime information, intelligence, and data being collected by DoD and foreign governments. • Research military competition among nations in the Far and Middle East and highlight potential capabilities and policies each nation may utilize in future armed conflicts. • Continue to enhance strategies and relationships with European nations based on the exchange of information through education opportunities and existing policies.

A. Mission Description and Budget Item Justification

This program supports the Department's initiatives to deter aggression, defend the homeland, and build enduring advantage by modernizing command, control, and communications (C3) capabilities.

The DoD CIO provides strategic direction and oversight for C3 capabilities, including tactical communications, infrastructure, satellite communications (SATCOM), electromagnetic spectrum (EMS) management, positioning, navigation, and timing (PNT), Defense Information Systems Network infrastructure, commercial mobile devices, and emerging 5G capabilities.

The C3 modernization (C3M) program provides technical analysis and systems engineering to ensure warfighters have information advantage through C3 systems and shapes the Combined Joint All Domain Command and Control (CJADC2) technology foundation.

Specifically, this program enables the research, analysis, evaluation, and management of communication networks in a contested spectrum environment. This includes providing secure information access and services (e.g., cryptographic modernization) and supporting CJADC2 efforts by refining joint protocols.

Change Summary Explanation						
The FY 2026 request includes \$20M of mandatory funding (low-cost weapons for Joint Modular Emitter Interface Standards and System Proliferation (JMEIS) requirements) for a total of \$37.114M. Further information for this reconciliation request is provided in Chapter 6 of the Reconciliation Exhibit.						
C. Accomplishments/Planned Programs (\$ in Millions)				FY 2024	FY 2025	FY 2026
Title: Net Centricity Plans and Accomplishments				21.797	15.465	17.114
Description: Same as program level mission description.						
FY 2025 Plans:						
FY 2025 Plans:						
– Continue base program initiatives from prior budget year.						
– Continue to refine Commercial mobile devices (CMD) certification processes, mobile application management/mobile device management guidelines, and personal user-based enforcement guidelines; update approved CMD product matrix.						
– Continue implementation assessments to refine mobile application and device strategies.						
– Develop EMS statistical and associative modeling and simulation techniques.						
– Modernize DoD’s spectrum dependent systems to a fully integrated information and decision support architecture for all-domain maneuver and fires superiority.						
– Modernize spectrum data, data collection, databases, storage retrieval, and aggregation.						
– Develop artificial intelligence-enabled spectrum data analytics.						
– Modernize electromagnetic battle management, situational awareness, and command and control integration.						
– Continue developing interoperable land mobile radio (LMR) standards to support public safety communications.						
– Continue technical analysis to improve DoD’s commercial SATCOM capabilities usage.						
– Continue technical analysis for network management interoperability, architecture, and data artifacts.

A. Mission Description and Budget Item Justification

IAW Section 1401 of the Bob Stump National Defense Authorization Act for Fiscal Year 2003 (Public Law 107-314), the Homeland Defense Technology Transfer Program is a congressional program mandated to identify, evaluate, and transfer DoD dual-use technologies that have application to first responders at federal, state, and local levels, in support of homeland security.

The program ensures a successful and balanced transfer of dual-use technology equipment and information to first responders without impeding military readiness by (a) accelerates development technologies, (b) increases effectiveness of equipment transfers, (c) transfers technology through a transitional effort that has dual utility to improve homeland security, and (d) enhance public safety without degrading military readiness. The HD Tech Transfer program meets Congress' intent and supports the interim National Defense Strategy through continuously delivering viable dual-use technologies to enhance first responder critical mission requirements during major crises and steady-state operations.

Homeland Defense Technology Transfer Program works closely with Homeland Defense Integration and Defense Support of Civil Authorities leadership as well as intra- and inter-agencies on potential technologies and excess equipment that provide long-term sustainable support to the first responder with the intent to lessen the number of "request for assistance" from Federal and State partners. This approach not only bolsters first responder support during civil unrest and natural disasters, it enables the Department to focus on it's strategic national security objectives.

In addition to the transferring emerging DoD dual-use technologies in support of the first responder community, HD Tech Transfer works aggressively to build partnership capacity with agencies and stakeholders that have shared equities. As such, HD Tech Transfer works in partnership with the Naval Postgraduate School, Center for Homeland Defense and Security and the National Security Innovation Network to conduct academic research projects to assess gaps and shortfalls in areas such as border security and wildland fires. Each comprehensive study project culminates in a formal "final report" that provides proposed technology solutions and policy recommendations for senior leaders to consider in relations to the grand challenges within their respective communities. Moreover, HD Tech Transfer works with a variety of DoD activities, defense laboratories, private vendors, and first responders when conducting "test and evaluation" to determine technology modifications and application for product end-users i.e., law enforcement, firefighters, and emergency medical service personnel. DoD's excess property program, HD Tech Transfer coordinated with the Defense Logistics Agency to ensure that appropriate excess military equipment and property is made available to the first responder community on an expedited basis.

Note

New Start (Y/N): No

Following FY 2024 the PE name "Domestic Prepare Against WMD" changed to "Radiological and Nuclear Defense Modernization Operational System Development" and the PE number changed from 0505167D8Z to 0607757D8Z to more accurately reflect the prescribed purpose of the Program Element.

A. Mission Description and Budget Item Justification

As a FY 2024 new start, this program supports the Department's initiatives to Deter Aggression, Defend the Homeland, Provide Nuclear Deterrence and being prepared to prevail, and Build Sustainable and Long-Term Advantage.

The Radiological and Nuclear (R/N) Detection Gear Modernization and Procurement for the Joint Force research and development activities (RDAs) enhance DoD's capabilities to campaign across the domains of threats and spectrums of conflict by: improving the Department's capability to survive and operate in the Radiological and Nuclear environment – including in the information and early warning domain; reinforcing our own warfighting advantages by providing increased capability to detect and identify radiological and nuclear threats; and enhancing our interoperability and access to address acute forms of coercion. This program is specifically geared to provide modern improved networked R/N detection, indications and identification capability to the warfighter and to upgrade obsolete equipment and increase capability to continue to operate in the R/N environment (Interim National Defense Strategic Guidance and the 2023 CWMD Strategy).

RDAs provide enhanced R/N capabilities. The Radiological and Nuclear Defense Capability Development portfolio enables DoD to provide Joint Force and National Guard capability development, acquisition and modernization funding to prepare for and respond to any emergency involving nuclear and/or radiological events in the United States; provide a capability for the Joint Force to withstand, operate through, and recover from an R/N event and will ensure DoD strategic direction aligns with the National Defense Strategy's priorities; is a necessary action to improve resilience; and promotes integrated deterrence of WMD with state, local and other federal agencies. This funding line is the only BA7 funding in the Department dedicated to providing improved R/N capability to the warfighter.

The Radiological and Nuclear Defense Capability Development portfolio is executing along cohesive lines of effort (LOEs) designed to prepare the Joint Force for a Future Operating Environment in which adversary pursuit or possession of WMDs pose threats ranging from existential to tactical, and limit U.S. strategic choices.

The Office of the Secretary of Defense uses the Radiological and Nuclear Defense Capability Development portfolio to invest strategically in projects across the Military Services, Combatant Commands, and Defense Agencies. Funding is prioritized for projects that close Joint Force warfighter capability gaps. An annual investment

strategy is used to meet emergent operational and capability needs validated by the Joint Force and the National Guard Bureau, yielding new fielded capabilities within one to two years.						
The Radiological and Nuclear Defense Capability Development portfolio: Systems Development and Demonstration program invests in maturation of prototypes; integration of technologies, systems and components; developmental and operational test and evaluation; and transition to fielded capabilities that improve capability to detect and identify radiological and nuclear threats. This program bridges the gap between basic research to accelerate and enable transition of technologies to fielded capabilities by leveraging significant science and technology (S&T) investments made by the Department of Defense, other Federal agencies, and industry.						
This program funds labor, materials, and travel to support the requirements of this program, performed by a government agency or by private individuals or organizations under a contract with the government, for activities and acquisitions including RDT&E, assessments and analyses, research studies, education, and other activities related to capability development and fielding.

Note

Following FY 2024 the PE name "Domestic Prepare Against WMD" changed to "Radiological and Nuclear Defense Modernization Operational System Development" and the PE number changed from 0505167D8Z to 0607757D8Z to more accurately reflect the prescribed purpose of the Program Element.

A. Mission Description and Budget Item Justification

As a FY 2024 new start, this program supports the Department's initiatives to Deter Aggression, Defend the Homeland, Provide Nuclear Deterrence and being prepared to prevail, and Build Sustainable and Long-Term Advantage.

The Radiological and Nuclear (R/N) Detection Gear Modernization and Procurement for the Joint Force research and development activities (RDAs) enhance DoD's capabilities to campaign across the domains of threats and spectrums of conflict by: improving the Department's capability to survive and operate in the Radiological and Nuclear environment – including in the information and early warning domain; reinforcing our own warfighting advantages by providing increased capability to detect and identify radiological and nuclear threats; and enhancing our interoperability and access to address acute forms of coercion. This program is specifically geared to provide modern improved networked R/N detection, indications and identification capability to the warfighter and to upgrade obsolete equipment and increase capability to continue to operate in the R/N environment (National Defense Strategic Guidance and the 2023 CWMD Strategy).

RDAs provide enhanced R/N capabilities. The Radiological and Nuclear Defense Capability Development portfolio enables DoD to provide Joint Force and National Guard capability development, acquisition and modernization funding to prepare for and respond to any emergency involving nuclear and/or radiological events in the United States; provide a capability for the Joint Force to withstand, operate through, and recover from an R/N event and will ensure DoD strategic direction aligns with the National Defense Strategy's priorities; is a necessary action to improve resilience; and promotes integrated deterrence of WMD with state, local and other federal agencies. This funding line is the only BA7 funding in the Department dedicated to providing improved R/N capability to the warfighter.

The Radiological and Nuclear Defense Capability Development portfolio is executing along cohesive lines of effort (LOEs) designed to prepare the Joint Force for a Future Operating Environment in which adversary pursuit or possession of WMDs pose threats ranging from existential to tactical, and limit U.S. strategic choices.

The Office of the Secretary of Defense uses the Radiological and Nuclear Defense Capability Development portfolio to invest strategically in projects across the Military Services, Combatant Commands, and Defense Agencies. Funding is prioritized for projects that close Joint Force warfighter capability gaps. An annual investment strategy is used to meet emergent operational and capability needs validated by the Joint Force and the National Guard Bureau, yielding new fielded capabilities within one to two years.

Exhibit R-2A, RDT&E Project Justification: PB 2026 Office of the Secretary Of Defense		Date: June 2025	
Appropriation/Budget Activity 0400 / 7	R-1 Program Element (Number/Name) PE 0505167D8Z / <i>Domestic Prepare Against WMD</i>	Project (Number/Name) 785 / <i>Domestic Prepare Against WMD</i>	
The Radiological and Nuclear Defense Capability Development portfolio: Systems Development and Demonstration program invests in maturation of prototypes; integration of technologies, systems and components; developmental and operational test and evaluation; and transition to fielded capabilities that improve capability to detect and identify radiological and nuclear threats. This program bridges the gap between basic research to accelerate and enable transition of technologies to fielded capabilities by leveraging significant science and technology (S&T) investments made by the Department of Defense, other Federal agencies, and industry. This program funds labor, materials, and travel to support the requirements of this program, performed by a government agency or by private individuals or organizations under a contract with the government, for activities and acquisitions including RDT&E, assessments and analyses, research studies, education, and other activities related to capability development and fielding.			
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
Title: Domestic Prepare Against WMD Operational Systems Dev Description: Domestic Prepare Against WMD Operational Systems Development program invests in maturation of prototypes; integration of technologies, systems and components; developmental and operational test and evaluation; and transition to R/ N Defense fielded capabilities. Significant S&T investments in prototype development by the Department of Defense, other Federal agencies, and industry are leveraged, capitalizing on mature technologies to accelerate and enable transition to fielded capabilities. Resulting fielded capabilities protect the warfighter, support indications and early warning, command and control, defend vulnerabilities in networks, programs, facilities, and weapons systems; and enable the disablement or defeat of WMD and their delivery systems.		1.715	-

Note

New Start (Y/N): No - This new PE consists of funding and activities funded in prior years under RDT&E PE 0604123D8Z Dem/Val Foundation Enablers and O&M BA04 to provision the Advana enterprise data, analytics, and AI platform. It combines these activities into one BA08-funded PE to enable more effective management of Advana as an enterprise software-centric capability.

A. Mission Description and Budget Item Justification

This PE funds capabilities and activities to make disparate DoD datasets more widely accessible, understandable, interoperable, and actionable across the DoD enterprise by providing the government-owned, contractor operated enterprise data stack, analytic and AI tools, and data and AI engineering expertise to improve DoD decision making across multiple functional areas and organization levels. It includes the ability to develop, train, and support the DoD workforce to effectively leverage the data, analytics, and AI capabilities provided through Advana.

Description: Requested funding supports continued development and sustainment of the Advana enterprise data, analytics, and AI platform. This includes maintaining core infrastructure and platform services to support a rapidly growing userbase including new applications, data sources, customers, and capabilities. In addition to vital compute infrastructure, funding procures commercial tooling licenses and engineering support to digitize business, readiness, and warfighting functions, including audit, real-world incident response, and data and AI enablement of Combatant Commands and OSD Principal Staff Assistants. In FY25, CDAO focused on modernizing and scaling Advana architecture to support more self-service data and analytic work, including enabling push-button deployments via infrastructure as code (IaC) and configuration as code (CaC) pipelines, natively integrated security features, and multi-cloud deployment support to promote parity and reduce technical debt.												
FY 2026 Base Plans: Funding will maintain core compute infrastructure, data and AI tooling, and engineering support to support a rapidly growing userbase including new applications, data sources, customers, and capabilities. CDAO will continue to invest in driving a scalable self-service architecture. FY26 funding will support the follow on Advana acquisition and contracting strategy, which will diversify the vendor base while procuring and integrating best of breed commercial capabilities.

D. Acquisition Strategy					
CDAO is working with OUSD(A&S) to develop an acquisition strategy to scale Advana. CDAO currently procures Advana capabilities through assisted acquisition partners. Several bridge contracts are in place, through which CDAO procures cloud computing, commercial tools, and data and other engineering support to run the platform. Several DoD organizations also self-fund Advana capabilities and engineering support to develop and sustain their own use cases leveraging core Advana infrastructure and tools. Other organization funding to leverage Advana is reflected in their organic budgets.

Note

In FY 2026, Data Reform Initiative/Analysis Working Group (AWG) was created to provide visibility on AWG activities for reporting and tracking purposes. While this is a new project code, the program has existed since PB 2023 under O&M and RDT&E projects.

A. Mission Description and Budget Item Justification

The Analysis Working Group (AWG) assists the Secretary and Deputy Secretary of Defense in guiding the analytic community to ensure analysis products are robust and of the highest quality. The end goal is an analytic enterprise that is agile, responsive, and provides sound decision support for the Secretary and Deputy Secretary. Funding for this project supports analytic research across the Department to guide reform of the Department's analytic enterprise. Projects that support this effort help develop a high performing and innovative analytic enterprise with the right policies, structures, people, and tools to support timely strategic decisions that create an advantage for the U.S Military now and into the future.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2024	FY 2025	FY 2026 Base	FY 2026 OOC	FY 2026 Total
Title: Data Reform Initiative (AWG)	-	-	4.500	-	4.500
Description: The Analysis Working Group (AWG) was established to marshal and guide the Department's analytic capabilities. This group is advancing key strategic priorities by improving the analytic underpinning available for senior leader decisions and addressing necessary enterprise reforms (e.g., data sharing and knowledge management) across the analytic community. CDAO funding supports data access and interoperability, new analytic tools, training, and studies to advance DoD data and AI adoption.					
FY 2026 Base Plans: Prioritized studies and reform the analytic enterprise through enhanced modeling and simulation (M&S) and infrastructure improvements (facilities, hardware, software, and data) as agreed upon and allocated by Analysis Working Group.

Note

1. New Start (Y/N): No.
2. Budget Activity 08 (BA-8) is the Software and Digital Technology Budget Activity Pilot Appropriation; Acquisition Visibility is not a pilot capability.

A. Mission Description and Budget Item Justification

The FY 2026 request for Acquisition Visibility includes \$17.549 thousands of discretionary and \$0 thousands of mandatory (reconciliation) for a total of \$17.549 thousands. Acquisition Visibility supports two distinct yet interdependent projects enabling a resilient ecosystem supporting acquisition programs across the Department of Defense (DoD): 1) Data Visibility identifies, matures, and publishes acquisition data standards (definitions and metadata) for enterprise-wide transparency and alignment and implements the Acquisition Data Strategy. Data Visibility helps to make acquisition data visible, accessible, understandable, linked, trustworthy, and interoperable. 2) The Defense Acquisition Visibility Environment (DAVE) provides data access via software applications to enable data analytics, lead the Department's statutory reporting required by 10 USC §4372 and §4373, share authoritative data with integrated systems, including Advana , and develop, deploy, and maintain acquisition data collection for major programs' statutory reporting and performance measurement of Acquisition Pathways.

A. Mission Description and Budget Item Justification												
Data Visibility delivers data standards via the Acquisition Visibility Data Framework (AVDF). Data Visibility supports the acquisition data strategy requirements of Section 836 of the NDAA for FY 2021 and data collection and sharing for additional Acquisition Pathways, Defense Business Systems, and Software Acquisition. AV enables the integration and interoperability of defense acquisition, building an enduring strategic mission advantage by aligning the Department's processes to design, develop, and deliver the acquisition data to enable the Office of the Under Secretary of Defense for Acquisition and Sustainment (OUSD(A&S)) to meet the Digital Acquisition & Sustainment and Transparency objectives of the Department and the requirements of Congress. Comprehensive digital acquisition, data science and analytics, and increased data transparency and access will improve acquisition decisions, enable sophisticated analysis, and inform innovative ways of doing business so that the OUSD(A&S), OSD staff, and the Services and Components can quickly inform policy and budget decisions with accurate, authoritative data.												
B. Accomplishments/Planned Programs (\$ in Millions)									FY 2024	FY 2025	FY 2026	
Title: Data Visibility									9.690	9.042	9.200	
Description: The Data Visibility project aligns Acquisition domain data and analytic operations relative to OUSD(A&S) priorities and Chief Digital and Artificial Intelligence Office (CDAO) strategy and guidance, to identify, mature, and publish Acquisition data standards (definitions; metadata) for enterprise-wide transparency and alignment. Data Visibility ensures data collection and analysis capabilities support leadership's priorities; maintains A&S alignment with data management policies, guidance, and standards; ensures the transparent alignment of data to the major defense acquisition use cases; improves data quality through OSD and Services data collection system compliance with the data standards; maintains a single source of truth on data definition, ownership, and appropriate use; and establishes a foundation for insight, decision-making, and reporting on acquisition programs and portfolios.												
FY 2025 Plans:												
• Enable Capability Portfolio Management and Integrated Acquisition Program Review (IAPR) data identification and alignment												
• Identify analytics use cases and prepare customer needs statements to support new information requirements												
• Develop dashboards, visualizations, and reports for acquisition decisionmakers using data science tools												
• Deploy analytic products in Advana (or an approved Analytic Layer) for access by the end users												
• Expand the AVDF to add new data definitions and business rules												
• Track Acquisition pathway health/policy support												
FY 2026 Plans:												

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2026 Office of the Secretary Of Defense		Date: June 2025	
Appropriation/Budget Activity 0400 / 8	R-1 Program Element (Number/Name) PE 0608648D8Z / <i>Acquisition Visibility - Software Pilot Program</i>	Project (Number/Name) 059 / <i>DAVE and Data Visibility</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2024	FY 2025
For FY 2026 Data Visibility will continue to deliver and maintain acquisition data management and data standards to enable decision making, supporting leadership priorities with data collection and analysis and maintaining A&S alignment with data management policies, guidance, and standards.			
FY 2025 to FY 2026 Increase/Decrease Statement: Increase of \$0.438 million due to Advana data visualization development cost increase.			
Title: Defense Acquisition Visibility Environment (DAVE)		10.882	8.865
Description: The Defense Acquisition Visibility Environment (DAVE) delivers access to the Department's authoritative acquisition data through Non-secure Internet Protocol (NIPR) and Secure Internet Protocol (SIPR) instances. Multiple acquisition data collection and analysis platforms rely on DAVE for authoritative acquisition data, including but not limited to: the Office of the Secretary of Defense (OSD) Comptroller Advanced Analytics (ADVANA), OSD Cost Analysis and Program Evaluation (CAPE) Cost Assessment Data Enterprise, Air Force and Army Project Management Reporting Tools, Navy Research, Development and Acquisition Information System, and the Earned Value Management Central Repository. DAVE implements Section 805 of the National Defense Authorization Act (NDAA) for Fiscal Year (FY) 2023 which reinstated the requirement to report Selected Acquisition Reports (SAR) (Title 10 of the US Code Section 2423), as well as the FY21 and FY22 NDAA's which provided Congressional direction to modernize the SAR process. DAVE is an authoritative source for acquisition data inside the Department of Defense (DoD) and for Congress, the Government Accountability Office (GAO), and the Inspectors General (IG) for multiple Adaptive Acquisition Framework (AAF) Acquisition Pathways including all Acquisition Category (ACAT) I – IV programs, Middle Tier of Acquisition programs, as well as National Command, Control, and Communications covered programs.			
FY 2025 Plans: • Update the Modernized Selected Acquisition Report (MSAR) capability IAW FY 2022 NDAA Section 805 and FY21 NDAA Section 836 • Manage OSD acquisition enterprise data platforms and share data to Advana (or an approved Analytic Layer) and other integrators for access by the end users • Begin migration of SIPR DAVE from MilCloud to Azure environment			
FY 2026 Plans: For FY 2026 AV will continue to deliver acquisition data capabilities to enable decision making and deliver new functionality to support FY 2021 NDAA Section 836. This will include adding new features and functions to the MSAR, identifying data collection use cases based on customer engagements, changes in statutory requirements, and changes in policy, developing additional reporting capabilities. SIPR DAVE will be migrated from MilCloud to Azure and brought in line with current NIPR capabilities.			
FY 2025 to FY 2026 Increase/Decrease Statement:
