Mandatory Total		\$610,000	\$20,970,392	\$100,507,225

MANDATORY FUNDING JUSTIFICATION: The FY 2027 request for Research, Development, Test & Evaluation, Defense-Wide includes \$22,156,517 thousand of discretionary and \$100,507,225 thousand of mandatory (reconciliation) for a total of \$122,663,742 thousand.

The FY 2026 spend plan amount for Research, Development, Test & Evaluation, Defense-Wide includes \$10,224,686 thousand of discretionary and \$20,970,392 thousand of mandatory (reconciliation) for a total of \$31,195,078 thousand.

The FY 2025 spend plan amount for Research, Development, Test & Evaluation, Defense-Wide includes \$9,396,046 thousand of discretionary and \$610,000 thousand of mandatory (reconciliation) for a total of \$10,006,046 thousand.

Defense Industrial Base

0603055D8Z - The mandatory funds provide the advancement of Golden Dome and High-Power Energy Requirements by integrating directed energy component technologies into platforms and weapons systems, conducting power conditioning, increasing the domestic supply chain for advanced propulsion and energy storage of air platforms (including one-way kinetic effects), and advancing coupled thermal energy storage and advanced power controls for high-power applications.

0604400D8Z - The mandatory funds will be used by Joint Energetics Transition Office for systems engineering and the rapid, full-scale prototyping of weapons systems with new energetic materials. The funding also expedites the maturation and validation of advanced Modeling and Simulation tools and modernizes Test and Evaluation activities to improve the quality of future qualification work. Additionally, the funds will provide contractor support to advance Unmanned Systems (UAS) development and integration across the department. This will establish a framework to procure and experiment with commercial drones, fostering industry collaboration and informing large-scale acquisition decisions in direct support of the "Unleash Drone Dominance" directives by the Secretary of War and the President.

0604538D8Z - The mandatory funds the further development of the economic targeting and data platform. Funds will be used to acquire additional data that maps the supply chains of key Department of War capabilities, generate new targets for investment, and other novel economic competition capabilities.

0604771D8Z - The mandatory funds will provide additional contractors to support major acquisition programs, including the establishment of the Joint Fires Network (as part of CJADC2) and a Golden Dome program office. This increase in funding enables the implementation of key Presidential and Departmental directives focused on modernizing defense acquisitions, improving program execution, and leveraging multi-year procurement contracts to secure major deals.

0604797D8Z - The mandatory funds will be used by Joint Energetics Transition Office for systems engineering and the rapid, full-scale prototyping of weapons systems with new energetic materials. The funding also expedites the maturation and validation of advanced Modeling and Simulation tools and modernizes Test and Evaluation activities to improve the quality of future qualification work. Additionally, the funds will provide contractor support to advance Unmanned Systems (UAS) development and integration across the department. This will establish a framework to procure and experiment with commercial drones, fostering industry

collaboration and informing large-scale acquisition decisions in direct support of the "Unleash Drone Dominance" directives by the Secretary of War and the President.

0605210D8Z - The mandatory funds will accelerate Acquisition Transformation initiatives in compliance with recent Executive and Secretarial directives to prioritize the warfighter. Resources will be used to stabilize industrial base demand signals, operate a Wartime Production Unit, enhance rapid acquisition services, and provide the workforce with new AI-enhanced tools for contract negotiations, pricing, and supply chain analytics.

0605649D8Z - This mandatory funding supports the Joint Operational Integration Program (JOIP) to accelerate the delivery of joint capabilities by integrating systems and rapidly operationalizing technologies, particularly from non-traditional vendors. As a key part of the Acquisition Transformation Strategy, JOIP aims to lower costs by incentivizing integration earlier in the development cycle, with a proven history of accelerating capability delivery to the warfighter.

0605772D8Z - These funds will extend the NC3 Next Trade Space Study to analyze and model the complex requirements for future nuclear decision-making, supporting both USSTRATCOM and the Golden Dome initiative. The funding will also establish a continuous, independent "Red Team" review of the NC3 enterprise, create a model-based analytical environment for portfolio reviews, and expand efforts to protect critical NC3 information from growing cyber threats.

0607210D8Z - The mandatory funds support the Strategic & Critical Minerals, Kinetic Capabilities, Microelectronics, Manufacturing (Castings & Forgings, Extended Deterrence), Workforce, and Energy Storage & Batteries.

0608648D8Z - The mandatory funds provide Acquisition Visibility to scale the Department's use of digital and AI tools within the acquisition system. This funding is designed to reduce administrative workloads and accelerate the planning and delivery of weapons, ensuring a faster pace than our adversaries. It will automate the preparation, verification, and approval of program strategies, which allows acquisition professionals to focus on delivering capabilities and achieving mission outcomes with improved speed and quality. Additionally, the funds will support risk-informed, mission-based analysis and kill chain analysis for mission threads.

Munitions

0603000D8Z - The mandatory request for Joint Munitions Advanced Technology will assist the Army in the development of a low cost, long-range precision hypersonic strike weapon and integration with launcher systems commonly found in the Army inventory. This weapon will be both low-cost and suitable to production at scale, enabling large inventories. Efforts under this activity will support platform integration, qualification, validation, flight testing, manufacturing readiness assessments, technical upgrades, and additional test rounds with which the Army will evaluate operational effectiveness. The delivery of 124 low-cost hypersonic strike weapons is associated with this FY 2027 funding.

0604331D8Z - The mandatory funds the Low-Cost Containerized Munition - Ground Launch (LCCM-GL) effort, which is a rapid, competitive prototyping effort to support critical munitions acceleration. The FY 2027 mandatory funds continue efforts from FY 2026 to deliver integrated and resilient munitions for ground launch applications.

Next Generation Technology and Autonomy

0604133D8Z - The mandatory funds Artificial Intelligence (AI) Pace Setting Projects to Transform the War Department into an AI-first organization; execute the DoW's AI Strategy aligned with America's AI Action Plan; scale adoption of data, analytics, and AI to generate a decisive warfighter advantage in all domains of warfare; and eliminate or overcome bureaucratic barriers impeding speedy delivery of AI solution.

0604539D8Z - The mandatory the development and deployment of artificial intelligence (AI)-powered autonomous weapon systems and Next Generation Technology and Autonomy for Artificial Intelligence (AI) – Enabled Deterrence.

0604791D8Z - The mandatory the development and deployment of artificial intelligence (AI)-powered autonomous weapon systems and Next Generation Technology and Autonomy for Artificial Intelligence (AI) – Enabled Deterrence.

A. Mission Description and Budget Item Justification

This program is executed via Scaled Directed Energy (SCADE) Science and Technology and in alignment with the Department of War Directed Energy Roadmap, as well as other strategic guidance. The goal of this program is to support the Department's initiatives in directed energy to build a sustainable and long-term advantage.

This program funds research in directed energy to enable game-changing high energy laser and high power microwave technologies. These efforts provide fundamental scientific knowledge to support future Department of War directed energy weapon systems. In practice, directed energy weapon systems have many potential advantages, including speed-of-light time-to-target, high precision, low incremental cost per kill, and a rechargeable magazine through on-board power and thermal management systems improving logistics requirements over stocks of munitions or warheads. As a result, directed energy weapon systems have the potential to perform a wide variety of military missions.

This program is executed via a technical program within the JDETO referred to as the Directed Energy Foundational Research Program which enables research in directed energy technology by (1) university partners and (2) international collaboration between universities in the United States and partner countries.

Change Summary Explanation The FY 2026 President's Budget submission did not include FY 2027 funding projections. Therefore, no comparison between budget positions is available for FY 2027.				
C. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026	FY 2027
Title: Directed Energy Foundational Research		16.046	16.720	17.667
Description: The Directed Energy Foundational Research Program is a technical program within the JDETO that enables (1) directed energy technology research with university partners and (2) international collaboration between universities in the United States and partner countries.				
FY 2026 Plans: Directed Energy Foundational Research: Investigate innovative high energy laser and high power microwave technologies that show potential to scale directed energy technologies for military applications. Monitor national and international efforts to leverage technology advancements. Conduct research on these technologies to gain a deeper perspective on scalability. Continue to determine long-term directed energy innovation gaps and identify state-of-the-art future initiatives. Leverage a new Joint Directed Energy Consortium and award new university efforts with an emphasis on innovative and enabling science and technology.				
International collaboration: Team with external organizations like the European Office of Aerospace R&D or Asia Office of Aerospace R&D of the Air Force Office of Scientific Research to fund university grants. These grants will emphasize collaboration between national and international universities to obtain synergy in basic/foundational research between partner nations.				
FY 2027 Plans: Directed Energy Foundational Research: Leverage the academia and industry gap assessment to implement the long-term needs with respect to the directed energy foundational research. Award new university efforts with an emphasis on state-of-the-art research initiatives through the Joint Directed Energy Consortium. Investigate innovative high energy laser and high power microwave technologies that show potential in scalability for military applications. Monitor national and international efforts to leverage technology advancements. Conduct research on these technologies to gain more understanding on scalability.				
International collaboration: Team with external organizations like the European Office of Aerospace R&D or Asia Office of Aerospace R&D of the Air Force Office of Scientific Research to fund university grants. These grants will emphasize collaboration between national and international universities to obtain synergy in basic/foundational research between partner nations.				
FY 2026 to FY 2027 Increase/Decrease Statement: The increase of \$0.349 million is due to an Economic Adjustment from FY 2026 to FY 2027.

A. Mission Description and Budget Item Justification

Basic research is a process of exploration and discovery, yielding disruptive, non-incremental advances that can improve or radically change military capabilities, strategy, and operations, towards realizing overwhelming technology advantage against competitors. It is a mission-oriented activity that provides the Department of War (DoW) with a deep and broad awareness of research areas to explore and invest in. These areas span a wide range of fundamental physical sciences (e.g., chemistry, biology, materials, mathematics, computer science, etc.) as well as fundamental research in engineering sciences that can catalyze the emergence of new technologies at scale (e.g., new materials or information systems). Basic research generates the critical technical knowledge that enables the ideation, design and realization of future DoW capabilities, including the exploration of new concepts of warfare. Basic research also sustains the scientific and engineering communities and creates new generations of a talented workforce that can support the DoW for the next decades. The Basic Research Initiatives Program includes programs and pilots designed to accomplish these objectives.

A. Mission Description and Budget Item Justification

The Basic Research Initiatives Project supports oversight of basic research throughout the Department, as well as initiatives and pilot programs, in order to create conditions for defense basic research investments to produce high-payoff, transformative scientific breakthroughs for the Department. The project supports five strategic goals for Basic Research in the Under Secretary for War-Research and Engineering (USW-R&E) Science and Technology (S&T)/Foundations (Foundations/BR): (1) support the technology priorities set by the Department of War (OSW); (2) coordinate and conduct oversight of DoW-wide basic research programs; (3) improve the science and engineering workforce via tailored programs and public outreach; (4) enhance university-industry and university-government collaboration; and (5) engage with the academic research community and international partners. This includes Strategic Support for Basic Research (SSBR), which sustains the operations of the Foundations/BR and creates conditions for research policies and initiatives to be formulated and instantiated. It also includes several pilot programs and initiatives, including international research collaboration and cross-agency joint programs.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Strategic Support for Basic Research (SSBR)	20.576	15.166	29.140
Description: SSBR is the core of the Basic Research Initiatives Project. It supports the operations of the Basic Research Office in the oversight of basic research, implementation of policies, and other activities to create and optimize the necessary conditions for defense basic research investments to produce high-payoff, transformative scientific breakthroughs for the Department. It provides essential support to accomplish the priorities of Foundations/BR. FY 2026 Plans: Continue the Bilateral Academic Research Initiative (BARI) with South Korea on advanced robotics, and build an academia-industry network to accelerate technology development, for new generations of humanoid and other robots to counter China's lead. Continue the BARI program with Finland on future wireless/IoT technology that could support Joint All-Domain Command and Control (JADC2). Continue trilateral security partnership between the US, Australia, and UK (AUKUS)-coordinated research efforts based on a BARI-like framework. Start university-government-industry collaboration program on selected research topics (current targets: quantum computing, analytical and AI-supported wargaming, optical meta-computing), leveraging Bush Fellows Research Study Team (BFRST) within the Vannevar Bush Faculty Fellowship (VBFF) program to create knowledge base of military operations and challenges from the COCOMS and define and execute research topics that need deep exploration by university researchers. SSBR includes a broad scope of continued activities to support DoW mission-oriented basic research, explore pilot programs aimed at accelerating the discovery and transition of scientific breakthroughs, and develop strategies for S&T workforce development. These activities include research programs, technical exchanges and workshops. FY 2027 Plans: • Expand the scale of FY 2026 efforts

<i>Congressional Add:</i> Hispanic Serving Research Cohort <i>FY 2026 Plans:</i> This add funds an existing cooperative agreement award to the Hispanic Serving Research Universities (HSRU) Consortium for DoW Research and STEM Graduate Pathways, led by the University of Texas at El Paso (UTEP), in collaboration with the University of Central Florida (UCF). It is designed to efficiently and effectively facilitate the multi-institutional programming model with the goal to enable continuation, scalability, overall sustainability and adaptability for evolving research needs. The project titled Advancing STEM Careers through Education, Networking, and Development + Research (ASCENDR) aims to effectively scale the components of the program across 28 HSRU institutions which include: (1) cohort-based, STEM graduate student application submission and fellowship advising, (2) graduate student fellowships, (3) faculty leadership and DoW-focused leadership programming (4) competitive DoW funded research opportunities, and (5) research-informed science practices and interventions and cross-cutting support activities. • Review applications and determine selections for ASCENDR graduate fellowship, mentorship, and research awards. • Launch ASCENDR faculty leadership development. • Scale ASCENDR efforts under the existing cooperative agreement award.		-	8.000

A. Mission Description and Budget Item Justification The Minerva Research Initiative supported social science research aimed at improving our basic understanding of security, broadly defined. All supported projects were university-based and unclassified. The goal was to improve DoW's basic understanding of the social, cultural, behavioral, and political forces that shape regions of the world of strategic importance to the U.S.												
B. Accomplishments/Planned Programs (\$ in Millions)									FY 2025	FY 2026	FY 2027	
Title: Minerva Research Initiative (MRI) Description: The Minerva Research Initiative included three primary components: (1) a university-based social science basic research grant program, funded in partnership with Air Force, Army, and Navy University Research Initiatives; (2) the Defense Education and Civilian University Research (DECUR) Partnership program for professional military education (PME) institutions; (3) a collaboration with the Congressionally-established USIP to award research support to advanced graduate students and early career scholars working on security and peace. Pursuant leadership guidance, the program was terminated for no longer effectuating agency priorities as found in 2 CFR 200.340(a)(4) as incorporated into the DoW Research and Development General Terms and Conditions. FY 2026 Plans: The program was terminated for no longer effectuating agency priorities as found in 2 CFR 200.340(a)(4) as incorporated into the DoW Research and Development General Terms and Conditions. MRI funds will used to support Basic Research Collaboration Awards pilots. FY 2027 Plans: • Program has terminated and thus no plans for FY 2027 FY 2026 to FY 2027 Increase/Decrease Statement: The decrease of \$17.199 million between FY 2026 to FY 2027 reflects re-baselining of DoW S&T funding.									17.053	17.199	0.000

A. Mission Description and Budget Item Justification

The Vannevar Bush Faculty Fellowship (VBFF) program supports world-class researchers in scientific areas of critical importance to the DoW and ensures the cultivation of exceptional talent. Fellows' research spans a broad set of emerging scientific areas with transformative potential, including quantum information science, novel engineered materials, cognitive neuroscience and human-machine interfaces, engineering biology, applied and computational mathematics, networks, machine learning and artificial intelligence, manufacturing science, and others. The prestigious research program delivers the most innovative and transformational scientific ideas of relevance to the DoW, from the top scientists in the Nation. The program fosters close connections between academia and the defense science and engineering (S&E) enterprise, a primary goal of Strategic Support for Basic Research (SSBR) efforts. Fellows provide the Department the deep scientific expertise from today's leading research universities and collaborate with defense scientists and engineers. This program is being sunset; awarded projects will run their course with no new VBFF awards being made.

The project includes support for the Laboratory-University Collaboration Initiative (LUCI) program, which is designed to team scientists in the DoW laboratories with top academic researchers from the programs sponsored or overseen by the Office of the Secretary of War (in particular, the VBFF and MURI fellows), in order to collaboratively perform research on a topic of their choice and explore early adoption of the scientific discoveries for military applications, platforms and systems, operations, and strategic roadmaps. Three-year grants allow a deep exchange of ideas between academic and DoW research communities, bring the most recent scientific breakthroughs closer to DoW relevance, and greatly expand the skills and knowledge of the S&E workforce within the laboratories.

The project also supports the Bush Fellows Research Study Team (BRFST) program, designed to allow selected leaders in the academic research community to engage with the DoW at high levels, including briefings from MAJCOMs and site visits to military installations. This program brings deeper understanding of military operations and strategic vision to selected US academic researchers, to enhance the creation of out-of-the-box, innovative solutions and the growth of intellectual talent attuned to DoW mission needs. Extension of this program will enhance relevance of university-based research to the military mission.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Vannevar Bush Faculty Fellowship (VBFF) Program	36.660	48.514	44.469
Description: The Vannevar Bush Faculty Fellowship (VBFF) Program ensures the DoW has a research portfolio that supports highly creative, innovative, and productive university researchers. The objectives of the program are to: (1) support scientific research that may lead to extraordinary outcomes of relevance to the DoW; (2) educate and train students and post-doctoral researchers for the defense and national security workforce; (3) foster long-term relationships between university researchers and the Department; (4) familiarize select university researchers and their students with DoW's current and future challenges through research and engagement with DoW-employed scientists; and (5) increase the number of exceptionally talented technical experts contributing to the DoW's mission.			

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2027 Office of the Secretary Of Defense		Date: April 2026		
Appropriation/Budget Activity 0400 / 1	R-1 Program Element (Number/Name) PE 0601110D8Z / Basic Research Initiatives	Project (Number/Name) 060 / Vannevar Bush Faculty Fellowship		
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026	FY 2027
The Laboratory-University Collaboration Initiative (LUCI) program incentivizes DoW laboratory researchers to explore fundamentally new areas of research by leveraging the ground-breaking scientific discoveries achieved by the best DoW academic research programs: the VBFF and the Multi-disciplinary University Research Initiative (MURI). Both provide the DoW laboratory scientists with radially new ideas, knowledge and expertise, and the collaboration ensures: a) transfer of such ideas and knowledge to the DoW eco-system; b) exploration of potential transition to the DoW mission; c) training and recruitment of DoW S&T workforce. Typical execution of the VBFF and LUCI programs include the following. Support of 46 Vannevar Bush Fellows and collaborative research efforts with 35 Laboratory-University Collaboration Initiative (LUCI) Fellows from DoW Service Laboratories. Regular review and update of research topic areas with input from DoW S&T community. Executing a competition to select new classes of Vannevar Bush and LUCI Fellows. Organizing and executing the Vannevar Bush annual meeting, along with science communication training. Organizing and conducting site visits to establish communication with new Vannevar Bush Fellows and explain the program objectives and opportunities. Conducting review of LUCI projects in DoW laboratories and evaluating the scientific progress and impacts. FY 2026 Plans: The VBFF program is being sunset. Plans include 1) supporting previously selected classes of the Vannevar Bush Faculty Fellowship (VBFF) program through the completion of their awards; 2) continuing the Laboratory University Collaboration Initiative (LUCI) program. Continue the BFRST program to create a systematic exchange of information under secure environment and procedures, to increase leverage of the VBFF Fellow scientific exploration for new technology solutions to DoW challenges, from near-term to far-term. Plans will also explore pilots and prioritize other mechanisms to accelerate the transition of high-impact research into DoW applications through earlier integration with service laboratories and expanded cross-program collaboration. FY 2027 Plans: • Continue FY 2026 efforts at a reduced scale. • Explore additional ways for bringing transformative scientific research into the DoW research environment. FY 2026 to FY 2027 Increase/Decrease Statement: The decrease of \$4.045 million between FY 2026 and FY 2027 reflects the DoW's scale down of the VBFF Program, specifically to focus department resources on essential technologies that will support our core national mission, the defense of our homeland.

A. Mission Description and Budget Item Justification

The Defense Experimental Program to Stimulate Competitive Research (DEPSCoR) is a capacity-building program designed to strengthen the basic research infrastructure at institutions of higher education in underutilized states and territories.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Defense Experimental Program to Stimulate Competitive Research (DEPSCoR)	-	-	13.482
Description: The DEPSCoR objectives are to enhance the participation in the DoW-funded scientific research activities, by institutions of higher education (IHE) from States and Territories that are under-represented in that DoW research ecosystem. The DEPSCoR program aims to support IHEs in eligible States/Territories to: 1) develop, plan, and execute competitively-based science and engineering (S&E) research that is relevant to the DoW mission; 2) to increase the number of university researchers in eligible States/Territories capable of performing this research; 3) increase the probability of long-term growth in S&E capability in the eligible States/Territories. The current DEPSCoR program has three components: 1) a Research Collaboration competition for individual researcher development; 2) a Capacity Building DEPSCoR competition for long-term growth; 3) outreach events to explain the program and encourage engagement with DoW.			
FY 2027 Plans: • Continue FY 2026 DEPSCoR efforts • Explore additional ways to develop capacity of DEPSCoR IHEs to engage with the DoW research ecosystem			
FY 2026 to FY 2027 Increase/Decrease Statement: The increase of \$13.482 between FY 2026 to FY 2027 will allow program predictability and stability, therein regularizing engagement with broader DoW research ecosystem to strengthen collaboration to support mission priorities.			
Accomplishments/Planned Programs Subtotals		-	13.482

	FY 2025	FY 2026
Congressional Add: Defense Established Program to Stimulate Competitive Research [DEPSCoR]	-	20.000
FY 2026 Plans: Execution of the three program components and extend the outreach activities, including program reviews and activities for extending the collaboration network.

A. Mission Description and Budget Item Justification

This program supports the Department's priorities to improve lethality, warfighting, and readiness by developing America's future technical workforce poised to create advanced technologies, tools, and capabilities necessary to ensure the U.S. military remains the most powerful and advanced, capable of deterring adversaries and protecting American interests at home and abroad.

NDEP is executed by the Office of the Under Secretary of War for Research and Engineering (OUSW(R&E)), and specifically:

- (1) Ensures the Department's ability to develop and access high-quality science, technology, engineering, and mathematics (STEM) talent vital to addressing key areas of national defense and supporting the warfighter;
- (2) Supports the National Defense Strategy to ensure the U.S. maintains its edge in DoW science and technology (S&T) critical technology areas, such as hypersonics, artificial intelligence, and advanced manufacturing;
- (3) Provides programming across the Pre-K to career education continuum to address critical STEM education and talent development challenges through evidence-based approaches;
- (4) Engages in assessment and evaluation practices as outlined by the Office of Management and Budget and the Government Accountability Office to ensure efficiency and meritocracy of programming; and
- (5) Provides open, merit-based programs available to all American learners and educators, to include military-connected students and veterans, ensuring they receive quality education and support and allowing our Nation's armed service members to remain focused on their warfighting mission.

NDEP activities provide authentic DoW-relevant learning experiences through a variety of initiatives in the form of scholarships, internships, enrichment activities, project/research-based competitions, and mentorships. NDEP programs span across all age groups, including Pre-kindergarten through twelfth grade (PreK-12), postsecondary, undergraduate, and graduate students and educators (holistically termed "Pre-K to Career"). The NDEP portfolio includes: the Science, Mathematics, and Research for Transformation (SMART) scholarship-for-service program; joint K-12 STEM education initiatives managed in conjunction with the Tri-Services (New NDEP Pcode Pending); STEM Education and Workforce Development (EWD) efforts at post-secondary levels; and specific Congressionally directed programs, to include the Manufacturing Engineering Education Program (MEEP) per 10 U.S. Code 4843 and additional NDEP funding opportunities in STEM education and workforce development.

A. Mission Description and Budget Item Justification

NDEP activities provide authentic DoW-relevant learning experiences through a variety of initiatives in the form of scholarships, internships, enrichment activities, project/research-based competitions, and mentorships. NDEP programs span across all age groups, including kindergarten through twelfth grade (K-12), postsecondary, undergraduate, and graduate students and educators (holistically termed "Pre-K to Career").

The SMART Program enables the Department to transform its STEM workforce while addressing near-term workforce demands. Per 10 U.S. Code 4093, the SMART program awards highly competitive scholarships to undergraduate and graduate students in any of the 22 STEM academic disciplines critical to national security, and hires the students, upon graduation, into DoW's civilian workforce for a one-for-one service commitment. SMART scholars are hired to perform many aspects of the national security mission including S&T/R&D, manufacturing, test and evaluation, maintenance and in-service support, medical research, warfighter support, infrastructure and construction, material decommission and disposal, and intelligence gathering and analysis activities. The SMART program ensures the Department has a steady infusion of high-quality technical talent, prepared in areas of critical importance, and ready to apply their technical knowledge, skills, and abilities to fulfill the DoW mission.

As part of the SMART experience, scholars engage in internships that allow for relevant hands-on research and work experiences in DoW facilities and international partner research institutions, thereby enhancing their educational experience. Through an annual competitive SEED award, SMART offers transitioning Ph.D. scholars an opportunity to establish a foundational research and engineering effort in their area of expertise aligned with a DoW mission or critical technology area and supporting their development into subject matter experts. Additionally, per FY 2021 NDAA Sec. 250, SMART also offers a competitive funding opportunity through the Creative Research & Engineering Advancing Technical Excellence in STEM (CREATES) award to expand and enhance connections and opportunities between the SMART program, SMART scholars, SMART sponsoring facilities, and students and faculty at Historically Black Colleges and Universities (HBCUs).

Since its inception in FY 2005, SMART has awarded approximately 5,800 scholarships to students pursuing undergraduate and graduate STEM degrees. To date, over 3,400 scholars have completed their academic pursuit and transitioned into DoW Workforce. Just under 1,500 scholars are currently pursuing their SMART-funded degrees. Over 2,500 scholars have successfully completed the program through their DoW Service commitment.

NDEP's STEM Education and Workforce Development (EWD) activities engage post-secondary learners and educators, directly supporting the development of our Nation's near-term technical STEM talent and workforce. These initiatives are largely executed through grants and cooperative agreements awarded to non-governmental partners such as non-profits and institutions of higher education. These partners and programs have both a national reach, as well as regionally focused

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2027 Office of the Secretary Of Defense		Date: April 2026
Appropriation/Budget Activity 0400 / 1	R-1 Program Element (Number/Name) PE 0601120D8Z / <i>National Defense Education Program (NDEP)</i>	Project (Number/Name) 120 / <i>National Defense Education Program (NDEP)</i>
activities, and are built on evidence-based approaches. These investments are designed to evolve over time, periodically incorporating new investment priorities to address emerging issues in STEM education and talent development, and to align to the Department's priorities. Additionally, where feasible, NDEP EWD activities will support military-connected students and veterans and their spouses, per 10 U.S. Code 2192(b) and the Supporting Veterans in STEM Careers Act (FY 2020), respectively. The Biotechnology Education and Workforce Development (BIOTECH) efforts concluded in FY 2025. The Joint K-12 STEM Education initiatives will represent the Departments' collective K-12 STEM education and talent development initiatives. In collaboration with the research and engineering arms of the military departments, this effort will enable the Department to make strategic investments that (1) Develop a strengthened and more resilient national security STEM talent pipeline; (2) Enhance fiscal efficiency and resource optimization; (3) Unify and amplify the Department's STEM brand and message; and (4) Incorporate a comprehensive approach to program performance monitoring and data tracking. This centralized and consolidated effort ensures that Department-wide talent development priorities are met, while allowing for select service-specific programs designed to address the unique recruiting and outreach needs of the individual Services. Operating under the 10 U.S. Code 2192, NDEP's Joint K-12 STEM education activities support a cohesive and coordinated approach by providing a continuum of K-12 STEM opportunities that intentionally bridge to near-workforce initiatives at the post-secondary levels and engagement. These programs directly support students, educators (formal and informal learning environments), administrators, and schools. The value of these K-12 investments is exemplified by data in FY 2025 showing that >40% of SMART Scholarship recipients previously participated in DoW K-12 STEM programs. These activities will continue to engage military-connected students in collaboration with the Department of War Education Activity (DoWEA), external partners, and other stakeholders to support the preparation of dependents of members of the armed forces for careers in STEM as enacted under 10 U.S. Code 2192(b). Joint Science, Technology, Engineering, and Mathematics (STEM) K-12 Education will be re-vectored into newly established project 290.		
B. Accomplishments/Planned Programs (\$ in Millions)		
Title: Science, Mathematics, and Research for Transformation (SMART) Defense Education Program		FY 2025
Description: Description: SMART is a scholarship-for-service program that provides support to high performing U.S. graduate and undergraduate students in 22 academic science, technology, engineering, and mathematics (STEM) disciplines identified as critical to the national security mission. SMART Scholars receive full tuition, a stipend, allotments for books and health insurance, internships at a sponsoring DoW laboratory, engineering center, or agency, and guaranteed employment with the DoW upon degree completion. Students fulfill a one-for-one service commitment to the Department as a civilian employee for every year of scholarship provided.		FY 2026
The disciplines awarded to align with the Department's Science and Technology (S&T) priorities and emerging scientific research areas, such as: Aeronautical and Astronautical Engineering; Biomedical Engineering; Biosciences; Chemical Engineering; Chemistry; Civil Engineering; Cognitive, Neural, and Behavioral Sciences; Computer Science and Engineering; Data Science;		FY 2027

Electrical Engineering; Environmental Sciences; Geosciences; Industrial and Systems Engineering; Information Sciences; Materials Science and Engineering; Mathematics; Mechanical Engineering; Naval Architecture and Ocean Engineering; Nuclear Engineering; Oceanography; Operations Research; Physics; and Software Engineering. Two types of individuals participate in the program: (1) retention scholars who are current DoW employees; and (2) recruitment scholars who are students enrolled in undergraduate and graduate programs and represent new technical expertise for the Department. Internships provide SMART scholars with the opportunity to engage in the DoW science and technology enterprise through research and work experiences in defense laboratories, thereby enhancing their educational experience and understanding the relevance of DoW research priority areas. The SMART program is executed through an existing five-year cooperative agreement awarded in FY 2022. FY 2026 Plans: • Continue FY 2025 efforts. • Award up to 700-750 new scholarships to meet DoW sponsoring facility demand. • Maintain the number of awards for the SMART SEED award. • Continue the SMART Creative Research and Engineering Advancing Technical Excellence in STEM (CREATES) award to support SMART scholar graduates of and collaborations with historically Black colleges and universities, and enhance partnerships with DoW Sponsoring Facilities (HBCUs). FY 2027 Plans: • Continue FY 2026 efforts. • Award up to 450-500 new scholarships to meet DoW sponsoring facility demand. • Projected to have ~816 SMART scholars intern at DoW facilities in summer 2027 • ~447 SMART scholars projected to begin their service commitment to the DoW civilian workforce in 2027, transitioning to full-time DoW civilian scientists and engineers. • Continue the SMART SEED grant. • Continue the SMART CREATES effort. B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026	FY 2027
The increase between FY 2026 and FY 2027 of \$10.023 million enables the DoW to create opportunities through the Creative Research & Engineering Advancing Technical Excellence in STEM (CREATES) awards and expand SEED and SMART scholarships for service awards while continuing to support international internships.				
Title: Science, Technology, Engineering, and Mathematics (STEM) Education and Workforce Development Description: The NDEP STEM Education and Workforce Development activities provide learners and educators across all post-secondary levels with unique DoW-relevant STEM opportunities, in order to build a workforce that solves national defense needs and challenges. Investments are made to promote participation in national-level STEM programs and initiatives and provide authentic learning and work experiences for participants. STEM EWD activities are primarily executed through a 10-year DSEC cooperative agreement awarded in FY 2024. Other activities are executed through internal calls for proposals and/or external Notices of Funding Opportunities, competed as grants or cooperative agreements FY 2026 Plans: • Continue strategic partnerships and collaboration under the Defense STEM Education Consortium and National Defense Education Program awards to inspire, attract, and develop the Nation's STEM talent pool. • Continue to cultivate and incentivize Components' innovative approaches to STEM talent development through intramural activities. FY 2027 Plans: • Conclude the Defense STEM Education Consortium cooperative agreement award and re-vector K-12 STEM Education activities to a new pending NDEP Pcode • Continue strategic partnerships and collaboration through National Defense Education Program awards to inspire, attract, and develop the Nation's STEM talent pool to advance defense superiority, global technological leadership, and economic strength. • Identify activities and partners in AI Education to support the Administration's Executive Order on AI Education and the AI Action Plan. FY 2026 to FY 2027 Increase/Decrease Statement: The decrease between FY 2026 and FY 2027 of - \$18.840 million reallocates K-12 STEM Education efforts into a new pending NDEP Pcode. The remaining \$4.500 million will focus on postsecondary STEM education and workforce development activities.		25.046	23.340	4.500

Note

New Start (Y/N): No

A. Mission Description and Budget Item Justification

The Historically Black Colleges and Universities and Minority-Serving Institutions (HBCU/MI) program provides support in fields of science and engineering that are important to national defense. The Department of War (DoW) HBCU/MI Program encourages participation of eligible research institutions. The program is authorized by 10 U.S.C. § 4144. This competitive program provides support through grants, cooperative agreements, or contracts for research, education assistance, and instrumentation purchases.

Work in this program provides a foundation to enhance participation of HBCUs/MIs in DoW research. Programs are structured to: build infrastructure; strengthen research and educational opportunities at HBCUs/MIs and increase the number of graduates in the science, technology, engineering, and mathematics (STEM) disciplines; and expand the pool of scientists and engineers to meet future workforce needs.

The DoW HBCU/MI Program aligns investments to address the objectives and priorities of the National Security Strategy (NSS), the National Defense Strategy (NDS), and the Under Secretary of War for Research and Engineering memorandum titled “New Vision” for Critical Technology Areas, dated November 13, 2025. The NDS calls for "adopting new advances in technology, like artificial intelligence (AI)" and "reinvest[ing] in U.S. defense production." By training students in critical areas, HBCU/MI Centers of Excellence (COEs) are directly building the expert workforce required to revitalize the U.S. defense industrial base. The DoW HBCU/MI Program further helps to increase the workforce required for DoW through providing internships and fellowships to students and faculty from HBCUs/MIs. The DoW HBCU/MI Program aligns with the Secretary of War “Message to the Force” memorandum and the Under Secretary of War for Research and Engineering critical technology vision (as indicated in the November 2025 memorandum) by establishing Centers of Excellence and awarding research grants in critical technology areas. The DoW HBCU/MI Program has established COEs in biotechnology, quantum science, advanced materials, fully networked C3, aerospace education, research, and innovation, artificial intelligence and machine learning, energy resilience, advanced computing and software, integrated sensors and cyber, and future generation wireless technology. The DoW HBCU/MI Program awards research grants in critical technology areas contributing to the defense industrial base and the development of emerging technologies.

A. Mission Description and Budget Item Justification The Historically Black Colleges and Universities and Minority-Serving Institutions (HBCU/MI) program provides support in fields of science and engineering that are important to national defense. The Department of War (DoW) HBCU/MI Program encourages participation of eligible research institutions. The program is authorized by 10 U.S.C. § 4144. This competitive merit-based program provides support through grants or contracts for research, education assistance, instrumentation purchases, and technical assistance as described below. • Research: The research grants further knowledge in the basic scientific disciplines through theoretical and experimental activities. Collaborative research allows university professors to work directly with military laboratories or other universities • Education: Education assistance funds are used by eligible institutions to strengthen their academic programs in science, technology, engineering, and mathematics (STEM), thereby increasing the number of students obtaining undergraduate and graduate degrees in these fields. These grants provide equipment, scholarships, cooperative work/study opportunities, visiting faculty programs, summer internship programs, and a variety of other enhancements designed to encourage students to pursue careers in STEM. • Instrumentation purchases: The program allows universities to purchase basic laboratory equipment, such as lasers and spectrometers, for enhancements to the basic research efforts. • Technical assistance: The funds are used to design programs that expose institutions to DoW funding opportunities to successfully compete for future Defense funding by assisting in areas such as proposal writing and administration of grants and contracts.												
B. Accomplishments/Planned Programs (\$ in Millions)									FY 2025	FY 2026	FY 2027	
Title: Historically Black Colleges and Universities and Minority-Serving Institutions (HBCU/MI)									96.047	97.992	99.706	
Description: The HBCU/MI program provides support for research, education, and collaboration with DoW facilities and personnel. The research grants further knowledge in the basic scientific and engineering disciplines through theoretical and empirical activities. Collaborative research allows university professors to work directly with DoW laboratories or other universities.												
FY 2026 Plans:

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Conduct annual merit-based competitions for HBCUs, TCUs, and MIs for basic research grants that align with the National Security Strategy, the National Defense Strategy, the Secretary of War "Message to the Force" memorandum, USW(R&E) Critical Technology Areas memorandum, and Section 223 of the FY 2026 National Defense Authorization Act (NDAA). Section 223 of the FY 2026 NDAA requires the HBCU/MI Program to issue separate funding solicitations for HBCUs/TCUs and MIs. Continue research and education collaboration with the DoW laboratories to prepare future DoW scientists to conduct research that will match threats to capabilities. Continue to fund Centers of Excellence that conduct foundational research of critical technologies for the future deployment of emerging technology to maintain U.S. deterrence. Continue the summer internship and faculty fellowship programs to encourage interest in STEM fields and increase domestic talent at DoW. Conduct outreach activities to include webinars and one technical assistance workshop to expose HBCUs/MIs to DoW funding opportunities to conduct research to address and solve Defense science and technology challenges. Continue to implement recommendations provided by the National Academies of Science, Engineering, and Medicine in the report to Congress on defense research at HBCUs and other MIs as required by Section 262 of the NDAA for FY 2020. Establish the pilot program and activities required by Section 223 of the FY 2023 NDAA to increase the capacity and capability of eligible institutions to achieve R1 status (very high research) on the Carnegie Classification scale. Issued the pilot program funding opportunity in February 2026. Five grant awards are planned with each award ranging up to \$10 million over a five-year period. Continue collaboration with the Air Force for the sustainment of the tactical autonomy university affiliated research center at Howard University. Maintain the SciTechCONNECT portal to serve as a centralized hub to demystify complex acquisition processes and to provide a unified entry point. FY 2027 Plans: Conduct annual merit-based competitions for HBCUs, TCUs, and MIs for basic research grants and/or equipment/ instrumentation grants that align with the National Security Strategy, the National Defense Strategy, the Secretary of War "Message to the Force" memorandum, USW(R&E) Critical Technology Areas memorandum, and Section 223 of the FY 2026 National Defense Authorization Act (NDAA). Section 223 of the FY 2026 NDAA requires the HBCU/MI Program to issue separate funding solicitations for HBCUs/TCUs and MIs. Continue research and education collaboration with the DoW laboratories to prepare future DoW scientists to conduct research that will match threats to capabilities. Continue to fund Centers of Excellence that conduct foundational research of critical technologies for the future deployment of emerging technology to maintain U.S. deterrence. Continue the summer internship and faculty fellowship programs to encourage interest in STEM fields and increase domestic talent at DoW. Conduct outreach activities to include webinars and one technical assistance workshop to expose HBCUs/MIs to DoW funding opportunities to conduct research to address/solve Defense science and technology challenges. Continue to implement recommendations provided by the National Academies of Science, Engineering, and Medicine in the report to Congress on defense research at HBCUs and other MIs as required by Section 262 of the National Defense Authorization Act (NDAA) for FY 2020. Continue pilot program and activities required by Section 223 of the FY 2023 NDAA to increase the capacity and capability of eligible institutions. A. Mission Description and Budget Item Justification

This program supports the Department's priorities to reestablish deterrence by building munitions technology advantages that solve operational and mission-focused challenges.

The Joint Enhanced Munitions Technology Program (JEMTP), within the Office of the Under Secretary of War for Research and Engineering (OUSW(R&E)) was established to develop and demonstrate joint munitions enhancing technologies (energetics, warheads, propulsion systems, advanced lethality mechanisms, fuzes and fuze components, and target detection) to provide future kinetic fires capabilities and ensure advantage for U.S. warfighters. The program's plans and investments are informed by threat-opportunity based analyses from Joint Force campaign scenarios. The advancements through JEMTP provide foundational capabilities that impact a wide range of munitions including One-Way Attack, Counter-small UAS technologies, and munitions that may be utilized for Homeland Missile Defense. The JEMTP program also provides technologies that support munitions and energetics organic Industrial Base resiliency and increased production rates.

The Enhanced Munitions Project focuses on investments of novel fuzing, power sources, target detection sensing technologies, and counter-countermeasure technologies that are enablers for enhancing future munition lethality and survivability. Alternative Positioning, Navigation, & Timing (Alt-PNT) is a new project starting in FY 2026, that reflects Department priority to develop technologies to address challenges to the Joint Force's contested navigation warfare (NAVWAR) environment. Alt-PNT technology investments will enable munitions to maintain effective operations in contested scenarios.

The Energetics Technologies Project focuses on investigation and research of energetic materials (ingredients and formulations) to enhance munitions capability and address supply chain resilience. The Energetics Technology Project supports and enables DoW Service strategies and roadmaps for advanced energetics material synthesis and formulation development; to accelerate the application and transition of advanced energetics materials into DoW munitions and the energetics manufacturing base; and to apply modern, agile energetics processing and manufacturing technologies.

The FY 2026 spend plan amount for Research, Development, Test & Evaluation, Defense-Wide for Joint Munitions Technology includes \$18,228 thousand of discretionary and \$5,940 thousand of mandatory (reconciliation) for a total of \$24,168 thousand.

A. Mission Description and Budget Item Justification

The Enhanced Munitions project develops cross-cutting, enabling munitions technologies that are broadly applicable across service munitions. The project invests in sensors, sensor data fusion for navigation, propulsion, warheads, and fuzing that enable enhanced performance of U.S. munitions in both permissive and denied environments.

The Enhanced Munitions project continues to address other critical munitions technologies outside of advanced energetics that enable the Energetics Technology project investments to be effectively incorporated into munitions systems. Lethality increases are not only dependent on advanced energetics but also depend on optimized munitions placement and burst point optimization. Munitions investments in survivability against harsh environments and adversary countermeasures are necessary to allow the munition to reach and prosecute its intended target.

Starting in FY 2026, the Alternative Positioning, Navigation, and Timing (PNT) project will accelerate critical PNT technologies and PNT data needs to ensure munitions are accurate and lethal in GPS-denied or contested environments. Investments in munitions-specific PNT will be leveraging a modular open systems approach, which will increase technology development and flexibility to have specific PNT solutions for any given munition.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Enhanced Munitions	5.812	5.720	10.173
Description: Project investments are derived from the operationally informed, Department of War Munitions S&T Strategic Priorities, focused on developing enabling technologies to enhance warhead lethality, propulsion performance, target detection and burst point control, and weapon survivability. Technologies under investigation apply machine learning and artificial intelligence for terminal target sensing and recognition that enable the next generation of kinetic weapons capabilities.			
FY 2026 Plans: - Conduct proof of concept tests of Adaptable Proximity Fuzing capability to more accurately detect moving targets at engagement terminal velocities. - Develop and begin laboratory testing of advanced thermal battery high energy cathode materials for high energy density munitions power sources. - Research and develop fuze architecture for advanced processing techniques using machine learning (ML) to enable detection and fuzing of fast-moving targets.			
FY 2027 Plans:

Exhibit R-2A, RDT&E Project Justification: PB 2027 Office of the Secretary Of Defense		Date: April 2026	
Appropriation/Budget Activity 0400 / 2	R-1 Program Element (Number/Name) PE 0602000D8Z / <i>Joint Munitions Technology</i>	Project (Number/Name) 076 / <i>Enhanced Munitions</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
- Combine AI fuzing algorithms with a munitions fuze radar configuration to increase lethality in variable target encounter engagement conditions. - Investigate novel low-cost technology protection for munitions advanced electronics which can be applicable to multiple weapons systems and multiple electronic systems within those weapons. - Increase funding enables the development of high power and high energy density thermal batteries to extend run time versus baseline technology in the same form factor to support increased weapon system range. - Increase funding enables development and validation testing of adaptive, AI-Enabled missile design features for highly maneuverable weapon systems. FY 2026 to FY 2027 Increase/Decrease Statement: The increase of \$4.453 million reflects the Department priority to accelerate maturing and applying munitions technology including lethality enhancing munitions and fuzing technologies.			
Title: Alternative Positioning, Navigation and Timing (PNT) for Weapons Description: Alternative Positioning, Navigation and Timing investments are operationally informed and will address Department munitions and PNT S&T strategies, which will accelerate Modular Open Systems Approach (MOSA)-compliant PNT technologies optimized for munitions lethality and form factors, enabling technology development with transition into operational systems. The technical objective will involve fusing PNT sensor data from multiple non-GPS sources to assure munition performance in all conditions. FY 2027 Plans: -Develop and evaluate sensors, data fusion techniques and algorithms to apply and deliver more accurate and robust alternative PNT technologies for munitions. - Develop and evaluate software defined radios (SDR) that provide communications and navigation information needed to enable high-value Alt-PNT concepts. - Develop electronically tunable weapon surface mount antennas enabling multi/wide band RF operation for navigation tracking. FY 2026 to FY 2027 Increase/Decrease Statement: FY 2027 increase of \$6.120 million is due to investment in high-priority Alternative Position, Navigation, and Timing technologies for munitions.		-	-

A. Mission Description and Budget Item Justification

U.S. weapons systems still largely rely on decades-old explosive and propellant technologies that limit Joint Force options to deter, and if necessary, defeat adversaries in conflict. The Energetics Technology project was established to expedite investigation, research, and transition of novel energetics materials, chemicals, and processes that enable improvements to existing and future munitions performance. The investments and efforts under this project enable modern manufacturing and processing while helping to bolster U.S. energetics supply chain resiliency.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Energetics Technology	13.467	12.508	15.852
Description: Description: Energetics Technology project investments are focused on advanced energetics ingredient development and formulation research focused on improving munitions propulsion and warhead performance. The project collaborates with the energetics systems development and manufacturing base to facilitate and accelerate munitions technology development, demonstration, and transition. Technology efforts include energetics development for high efficiency propellants, high performance explosives (e.g. enhanced blast and fragmentation, target penetration, and underwater effects), use of efficient, flexible, and adaptable processes, and application of bio-technology developed critical energetics chemicals. Funded efforts are driven by program office, service, and operational needs as outlined and planned within the DoW Munitions S&T Strategic Priorities and cross-cutting technology gaps identified through rigorous threat assessment and operational evaluation. FY 2026 Plans: - Conduct scale up process development of printable minimum smoke propellants which will deliver printed propellants for validation testing. - Develop and begin testing of advanced energetics formulations that increases metal pushing capability performance of shaped charge & explosively formed penetrator warheads - Continue to apply artificial intelligence and machine learning that enables accelerated energetics materials development, processing and testing. - Conduct performance evaluation of Hexanitrohexaazaisowurtzitane (CL-20) based explosives and propellant formulations to validate application in targeted warhead and propulsion systems. A. Mission Description and Budget Item Justification

The Promotion and Protection Strategies program executes activities providing visibility, fostering partnerships, incentivizing industry transition partners, and supporting a developmental network that serves as a nucleus of the defense industrial base for biomanufacturing.

The program centralizes transition planning efforts for the Distributed Bioindustrial Manufacturing Program (DBIMP) by coordinating the Acquisition (e.g., Program Executive Officers, Program Managers, technology warrant officers, etc.), Policy, and Research and Engineering communities, including the Tri-Service Biotechnology for a Resilient Supply Chain (T-BRSC) program. This efforts streamlines acquisition for transition of non-pharmaceutical biomanufactured materials and chemicals by integrating innovative biomanufactured products into DoW's systems and platforms through holistic informed investment, research & development, and acquisition strategies.

The effort represents the Department's first coordinated effort to centralize acquisition efforts for biomanufacturing. By providing visibility, fostering partnerships across the DoW, and incentivizing industry transition partners, this work supports a developmental network in which new technologies are not only pushed to higher budget activities from lower ones, but where DoW and industry partners at higher budget activities pull on technologies being developed at lower ones. This will serve as the nucleus of a defense industrial base for biomanufacturing that delivers innovative biomanufactured products into DoW's systems and platforms.

This directly supports the rebuilding of our military by providing capabilities matched with the threat, reviving our defense industrial base, and rapidly fielding emerging technologies. It also re-establishes deterrence by providing capabilities closer to the threat other logistically advantageous locations. Activities focus on efforts to supply DoW priority systems with critical chemicals and materials in support of production of materiel including munitions, hypersonics, and Unmanned Aerial Systems (UASs), as well as geographically distributed biomanufacturing capabilities, including point-of-need biomanufacturing in the United States Indo-Pacific Command (INDOPACOM) theater.

Promotion and Protection Strategies executes landscape and subject matter assessments to facilitate transition, align acquisition, policy, and research and engineering communities, to inform DBIMP investments to ensure integration of innovative biomanufactured products into DoW's systems and platforms through current and holistic informed investment, research and development, and acquisition strategies.

A. Mission Description and Budget Item Justification

The Promotion and Protection Strategies program executes activities providing visibility, fostering partnerships, incentivizing industry transition partners, and supporting developmental network that serves as a nucleus of the defense industrial base for biomanufacturing.

The program centralizes transition planning efforts for the Distributed Bioindustrial Manufacturing Program (DBIMP) by coordinating the Acquisition (e.g., Program Executive Officers, Program Managers, technology warrant officers, etc.), Policy, and Research and Engineering communities, including the Tri-Service Biotechnology for a Resilient Supply Chain (T-BRSC) program. The programs plans for transition of non-pharmaceutical biomanufactured materials and chemicals by integrating innovative biomanufactured products into DoW's systems and platforms through holistic acquisition and investment strategies.

Promotion and Protection Strategies represents the Department's first coordinated effort to centralize acquisition efforts for biomanufacturing. By providing visibility, fostering partnerships across DoW, and incentivizing industry transition partners, the program will support a developmental network in which new technologies are not only pushed to higher budget activities from lower ones, but where personnel and industry partners at higher budget activities pull on technologies being developed at lower ones. This will serve as the nucleus of a defense industrial base for biomanufacturing that delivers innovative products into DoW's systems and platforms.

This directly supports the rebuilding of our military by providing capabilities matched with the threat, reviving our defense industrial base, and rapidly fielding emerging technologies. It also re-establishes deterrence by providing biomanufacturing capabilities closer to the threat or other logistically advantageous locations. Activities focus on efforts to supply DoW priority systems with critical chemicals and materials in support of production of material including munitions, hypersonics, and UASs, as well as point-of-need biomanufacturing in the INDOPACOM theater.

Promotion and Protection Strategies executes landscape and subject matter assessments to facilitate transition, align acquisition, policy, and research and engineering communities, to inform DBIMP investments to ensure integration of innovative biomanufactured products into DoW's systems and platforms through current and holistic informed investment, research and development, and acquisition strategies. The Promotion and Protection Strategies program executes activities providing visibility, fostering partnerships, incentivizing industry transition partners, and supporting a developmental network that serves as a nucleus of the defense industrial base for biomanufacturing.

The program centralizes transition planning efforts for the Distributed Bioindustrial Manufacturing Program (DBIMP) by coordinating the Acquisition (e.g., Program Executive Officers, Program Managers, technology warrant officers, etc.), Policy, and Research and Engineering communities, including the Tri-Service Biotechnology for a Resilient Supply Chain (T-BRSC) program. The program plans for transition of non-pharmaceutical biomanufactured materials and chemicals by integrating innovative biomanufactured products into DoW's systems and platforms through holistic acquisition and investment strategies.

Exhibit R-2A, RDT&E Project Justification: PB 2027 Office of the Secretary Of Defense		Date: April 2026		
Appropriation/Budget Activity 0400 / 2	R-1 Program Element (Number/Name) PE 0602128D8Z / Promotion and Protection Strategies	Project (Number/Name) 231 / Promotion and Protection Strategies		
Promotion and Protection Strategies represents the Department’s first coordinated effort to centralize acquisition efforts for biomanufacturing. By providing visibility, fostering partnerships across DoW, and incentivizing industry transition partners, the program will support a developmental network to integrate new technologies into our weapon systems in two keyways: first, by fostering promising innovations developed in laboratories and transitioning them into novel, practical applications (technology push). Second, engaging with existing weapon system programs who are actively seeking out and incorporating cutting-edge technologies from industry, universities, and the Service laboratories to meet their evolving needs (requirements pull). This will serve as the nucleus of a defense industrial base for biomanufacturing that delivers innovative products into DoW’s systems and platforms. This directly supports the rebuilding of our military by providing capabilities matched with the threat, reviving our defense industrial base, and rapidly fielding emerging technologies. It also re-establishes deterrence by providing capabilities closer to the threat or other logistically advantageous locations. Activities focus on efforts to supply DoW priority systems with critical chemicals and materials in support of production of material including munitions, hypersonics, and UASs, as well as point-of-need biomanufacturing in the INDOPACOM theater. Promotion and Protection Strategies executes landscape and subject matter assessments to facilitate transition, align acquisition, policy, and research and engineering communities, to inform DBIMP investments to ensure integration of innovative Bioindustrial manufactured products into DoW’s systems and platforms through current and holistic informed investment, research and development, and acquisition strategies.				
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026	FY 2027
Title: Promotion and Protection Strategies (P&PS)		3.170	3.158	4.260
Description: Transition planning to integrate non-pharmaceutical biomanufactured materials and chemicals into DoW’s systems and platforms through holistic informed investment, research and development and acquisition strategies.				
FY 2026 Plans:				
• Engage proactively with other Departments and Agencies to create and advance synergistic relationships promoting collaborative solutions to identified gaps and weaknesses by matching threats to biomanufacturing capabilities, investing in the bioindustrial manufacturing base, leveraging and improving existing acquisition processes, and rapidly fielding biomanufacturing capabilities.				
•Continue to assess vulnerabilities in Biomanufacturing of critical chemicals and materials that present logistical challenges in contested regions and austere environments to inform biomanufacturing industrial base investment strategy.				
• Continue to sustain DoW Biotechnology and Biomanufacturing investment strategy development through engagement with subject matter experts as well as the Defense Industrial Base, Academic, and U.S. Government (USG) stakeholders to shape and manage the \$1B+ DoW investment from feedstock to final product in modernizing non-pharmaceutical Biotechnology and Bioindustrial manufacturing infrastructure, products, and services for the benefit of the warfighter.

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
Explore additional solutions to key identified barriers that are preventing wider adaptation of Bioindustrial products (e.g., high-performance fuels, feedstocks, highly nutritional food components) within the DoW, including logistical implications associated with adapting more Bioindustrial products into DoW systems and evaluate solutions for implementation into operational use. • Map domestic and foreign Bioindustrial manufacturing networks and measure key indicators and trends occurring over time to inform data analytics and predictive models, including artificial intelligence. Identification and tracking of the metrics necessary and sufficient to support future investments through enhancement and refinement of the DoW Biomanufacturing Strategy. <i>FY 2027 Plans:</i> DBIMP uses authorities across budget areas to rapidly field emerging capabilities and streamline acquisition. Promotion and Protection Strategies (P&PS)(formerly known as Biotechnology Acquisition and Investment Coordination Effort (BAICE) is the 6.2 line that supports DBIMP by bringing together communities across the DoW to execute assessments ahead of DBIMP investments to ensure integration of innovative Bioindustrial manufactured products into DoW. P&PS does this by: • Proactive interagency collaboration to create and advance relationships that promote synergistic solutions to key gaps and weaknesses in Bioindustrial manufacturing for DoW systems • Assessing unique risks and manufacturing vulnerabilities for critical chemicals and materials in contested regions and austere operating locations • Strategic DoW biotechnology and Bioindustrial manufacturing guidance through subject matter experts representing the DIB, Venture Capital, Academic, and USG stakeholders to shape DBIMP investments • Exploring solutions to key barriers preventing wider adaptation of Bioindustrial manufacturing products in the DoW, leveraging various emerging technologies across the RDT&E cycle for operational implementation • Mapping domestic/foreign Bioindustrial manufacturing networks, measuring key indicators and trends to inform data analytics and predictive models, including Artificial Intelligence (AI). Identifying and tracking of the metrics necessary and sufficient to support future investments. <i>FY 2026 to FY 2027 Increase/Decrease Statement:</i> The increase of \$1.102 million between FY 2026 and FY 2027 reflects a ~\$32% increase allowing critical assessments supporting technology protection efforts.

A. Mission Description and Budget Item Justification

This program supports the Department's priorities to rebuild our military by matching capabilities to threats, and to reestablish deterrence by defending the Homeland.

Today's mobile and tactical communications are stove-piped and limit the force from fully executing Combined Joint All-Domain Command and Control (CJADC2) concepts of tomorrow. Warfighters require integrated network mission solutions utilizing 6G wireless technologies to support the future battle. Beyond 5G delivers unified solutions in mobile and tactical networks to give U.S. Department of War (DoW) an asymmetric advantage. Through strategically architected lines of effort in Resilient and Open Commercial Solutions (ROCS), Integrated Sensing and Communications (ISAC), Expeditionary and Tactical Use (ETU), Agile Spectrum Operations (ASO), and Ubiquitous, Secure and Instant Access (USIA), this program enables DoW to keep pace with warfighter capability requirements and remain agile on a rapidly changing battlefield. The net benefit is a reduction in the technical and tactical burden on DoW network operators via implementations of high performing mission solutions which are situationally aware and can rapidly and autonomously adapt to changing battlefield conditions. By maximizing the use of dual-use technologies as the foundation of more capable military solutions. This research and development enables a force to fight and win with agile spectrum operations where novel and asymmetric capabilities are matched to threats.

Integrated Sensing and Communications research and engineering in this program continues critical research activities which enable the utilization of existing wireless infrastructure as a sensor for object and environmental detection. When integrated, this sensor network becomes a key component of the Golden Dome for America initiative and other military C2 and intelligence systems.

The FY 2026 spend plan amount for Research, Development, Test & Evaluation, Defense-Wide for Defense Technology Innovation (Beyond 5G) includes \$40,051 thousand of discretionary and \$351,380 thousand of mandatory (reconciliation) for a total of \$391,431 thousand.

A. Mission Description and Budget Item Justification												
The Defense Technology Innovation (Beyond 5G) effort builds upon the technology foundation that underpins future generation wireless network systems as a basis to create dual-use wireless cellular network infrastructure and security technologies in support of military applications. Working in concert with other U.S. Government science and technology agencies, Beyond 5G is successfully conducting applied research to adopt, adapt, advance, and integrate technologies to create asymmetric advantages. Our approach is to replace cost-prohibitive, single-function stovepipes that limit the force from fully executing the Combined Joint All-Domain Command and Control (CJADC2) concepts of tomorrow. This approach is integrated within the ROCS LOE where open source and Open RAN systems and software are made commercially viable, then leveraged by the other Beyond 5G LOEs as a delivery platform for innovative capabilities.												
B. Accomplishments/Planned Programs (\$ in Millions)									FY 2025	FY 2026	FY 2027	
Title: Beyond 5G									27.554	40.051	43.405	
Description: In the domain of future generation wireless networks, the warfighter requires complex system-of-systems solutions equipped with features and attributes unique to battlefield challenges. These solutions must be developed with DoW mission-level capability requirements at the foundation of the developmental process.												
To address this need, Beyond 5G is: • Collaborating with wireless industry on dual-use solutions and driving the adoption of Open Radio Access Network (ORAN) interfaces and open software and standards. • Developing uses of spatially distributed and intelligent radio systems to complement and supplement essential DoW missions. • Identifying and developing methods, tools, and policies for military operations in complex spectral environments • Delivering high availability wireless systems with security assurance in all DoW operational settings												
Beyond 5G is driving targeted open-source software to drive wireless innovations in hardware and standards to provide our soldiers a fully programmable, AI-enabled network architecture. The resulting holistic end-to-end mission solution includes mobile end points, telecom base stations, tactical radios, network infrastructure and compute fabric for zero-touch deployments of fully automated DoW network systems. Under this approach, we enable the U.S. to regain leadership in future wireless technologies including sixth generation (6G) and beyond.												
FY 2026 Plans: The Open Centralized Unit Distributed Unit (OCUDU) initiative continues to be a primary focus in FY 2026. This is a seminal year for OCUDU and is the first full year of a three-year program. The OCUDU Software award in FY 2025 sets the stage for feature

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2025	FY 2026	FY 2027
development and software components of a commercial grade Open Radio Access Network. These features will build on security, reliability, and mobility of the network to be open-sourced, resulting in open architecture CU/DU with an expanded DoW feature set. DoW unique capabilities will be built on top of the open-source infrastructure and will be available through the FutureG.mil portal for use across the force. In FY 2026, OCUDU software will demonstrate an open-source, interoperable CU/DU set. Commercial hardware advances in FY 2025/26 have advanced dual-use capabilities and form a solid basis for FY 2027 open source RAN software integration. The OCUDU Software program, along with commercial hardware, are brought together under the OCUDU Battle RAN program, which acts as a systems integrator to create a DoW Open RAN/open-source reference architecture for use as a base for multiple deployment scenarios. This forms the reference program for integration of DoW unique capabilities for spectrum management and artificial intelligence (AI) components for security, mobility, and access management. Preliminary demonstrations of the OCUDU Battle RAN architecture are planned to support Combined Joint All-Domain Command and Control (CJADC2) scenarios. Integrated Sensing and Communications (ISAC) programs will launch around major topic areas. These topic areas are selected through extensive collaboration with both industry and academia to understand the current state of technology. Generally, those areas are built around fixed infrastructure ISAC, airborne ISAC, and mobile ISAC Research continues into capabilities utilizing ambient signals for object and event detection, and how to apply the capability at network and enterprise levels. Lab-based and field research demonstrations are planned to assess ISAC utility within DoW. Capabilities developed under the ISAC portfolio will directly support emerging requirements around Golden Dome for America. Research continues into spectrum sharing and management. Demonstrations are planned for two efforts: 1) Mobile Distributed Multiple Input Multiple Output (dMIMO), which correlates user equipment into groups acting as phased array antennas for low probability of detect/low probability of intercept/anti-jam capabilities, while also avoiding interfered spectrum; 2) Novel interference cancelling capabilities. We continue to support DoW workforce development needs through collaboration with the Naval Postgraduate School and several state National Guard organizations. We additionally support US Service Academies with summer internships in the beyond 5G projects around the world. FY 2027 Plans: Beyond 5G projects for FY 2027 span all Lines of Effort (LOE) for FutureG. Within the Expeditionary and Tactical LOE, projects focus on the maturation of distributed tactical wireless communications and AI-native RAN, including research for AI-defined waveforms in tactical environments. The Ubiquitous, Secure, and Instant Access LOE focuses on security and privacy through encryption in wireless networks and matures non-terrestrial 6G architectures. The Resilient and Open Commercial Solutions

Note

New Start (Y/N): No

A. Mission Description and Budget Item Justification

This program supports the Department's initiative to Build Sustainable and Long-Term Advantage.

The MIT Lincoln Laboratory (MIT LL) research program element is focused on advanced technology research and development effort conducted through a cost reimbursable contract with the Massachusetts Institute of Technology (MIT). The MIT LL project supports innovative, multi-disciplined research that addresses critical national security problems. The project funds innovations that directly lead to the development of new system concepts, technologies, components, and materials in support of Department of War (DoW) missions.

As of FY 2023, the program element funds nine technology areas. Of the nine areas, five are core-technology areas, three are emerging-technology initiatives and one Integrated Systems technology area. The four core-technology areas are Advanced Devices; Optical Systems and Technology; Information, Computation and Exploitation Sciences, Radio-Frequency (RF) Systems and Technologies, and Cyber Security Science and Engineering. The three emerging-technology areas are Advanced Materials and Processes; Quantum System Sciences; and Autonomous Systems. The one Integrated Systems technology area focuses on combining novel component-level technologies to create system-level technology solutions for important DoW problems. These technology areas provide critical capabilities that support all DoW mission areas pursued at the Laboratory. The categories are selected in consultation with the Office of the Under Secretary of War for Research and Engineering (OUSW(R&E)) aligned with the DoW Communities of Interest (ColS), and with guidance from other DoW agencies to address technology as well as system needs. The research in these categories adapts to solve emerging DoW problems as well as long-standing problems to which new technology advances can be applied. The individual efforts in each area are selected with the goal of enhancing DoW capabilities significantly, rather than incrementally.

A. Mission Description and Budget Item Justification

This project supports and focuses on high risk, high-payoff research that addresses critical national security problems, leading to innovative new system concepts, technologies, components and materials in support of current and emerging Department of War (DoW) missions. Each year, Massachusetts Institute of Technology, Lincoln Lab (MIT LL) in coordination with the Office of the Under Secretary of War for Research and Engineering (OUSW(R&E)) reviews and selects projects focusing on addressing technology gaps in critical problems facing national security, oriented not toward incremental improvements in current technology but transformative capabilities to provide asymmetric advantage. Factors considered in the selection include mission impact, capability and development acceleration, and ability to provide innovation in the DoW critical technology areas. Selection of projects derives from an annual, highly competitive proposal process in which demand for funding exceeds supply by nearly a factor of three. Successful projects often result in advanced capabilities that lead to further sponsored-program development, operational prototypes, technology insertion into existing programs and/or technology licensing to commercial companies.

As of FY 2026 the program element has been adjusted to focus on consolidated, core technologies in Microelectronics; Sensing and Communication; Intelligent Systems; and Quantum Computing and Interconnects. The program element continues to include a system level technology area of Integrated Systems aimed at mission-oriented advanced prototype development.

The Lincoln Laboratory (LL) research areas that comprise this overall research and development portfolio are described below. Core-technology areas:

- The Microelectronics Line focuses on turning bold, early-stage concepts in materials and processes into component prototypes to enable new system-level solutions to national security problems. Leveraging a wide range of fabrication capabilities, the portfolio aims to create foundational mission-focused technologies spanning applications in imaging; analog, mixed-signal, and digital electronics; and photonics, opto-electronics, and laser technologies. It also seeks to take advantage of unexpected and unusual properties of materials engineered at scales from nanometers to millimeters. Areas of emphasis include materials for hypersonics and extreme environments, and technology to onshore, strengthen, and revitalize the U.S. commercial and industrial base. An additional suite of projects is tackling the enhancement of both fiber-based and semiconductor laser systems to be lower-SWaP (size, weight, and power), higher-power, more broadband, and more tailorable for specific DoW applications.
- Sensing and Communications emphasizes RF, optical and quantum systems technologies to address critical sensing and communication needs in C5ISR, alt-PNT (GPS-denied environment), space control, and ballistic missile defense applications. Focus areas aim towards enabling technologies and systems for imaging, sensing, and communications; quantum and quantum-inspired sensors/clocks; advanced laser and non-traditional light sources; next-generation precision navigation and timing solutions; mixed analog/digital/photonics signal processing; and measurement of phenomenology in support of advanced concepts. Together, these efforts advance the state of the art in multidomain sensing and resilient communications, ensuring enduring operational advantage. Specific projects look to advance high-performance optical clocks for GPS-denied navigation, high-precision mobile radars, compact photonic circuits and mixed lidar-radar systems for next-generation over-the-horizon radar.
- Intelligent Systems achieves significant technical gains in applying advances in artificial intelligence, data processing, graph algorithms, multi-intelligence analytics, computation, and autonomous systems control, optimization, learning and adaptation for specific DoW mission needs. Leveraging unique sensors and data sets

Exhibit R-2A, RDT&E Project Justification: PB 2027 Office of the Secretary Of Defense		Date: April 2026
Appropriation/Budget Activity 0400 / 2	R-1 Program Element (Number/Name) PE 0602234D8Z / <i>Lincoln Laboratory Research Program</i>	Project (Number/Name) 534 / <i>Lincoln Laboratory</i>
generated through Lincoln research and experimentation in broader Laboratory programs, this project area focuses on AI and autonomy in contested and data challenged environments, Counter-AI and Counter-UAS technologies to defeat adversaries at scale, and AI-enabled Design/Discovery accelerating progress in other Line research areas. The Intelligent Systems work is tightly coupled with industry through CRADAs and other partnership arrangements to identify gaps in current autonomy offerings and accelerate the transfer of advanced AI technology into DoW solutions. - Quantum Computing and Interconnects focuses on developing advanced capabilities using quantum mechanical systems that manipulate information in ways that are not possible classically. Full-scale quantum computers would unlock important capabilities in cybersecurity, catalysis, optimization, and other applications of importance to national security. Quantum interconnects enable the development of such computers and open the door to applications such as space-to-ground links that require transmitting quantum states over long distances. These quantum devices and then be combined with other classical and semiclassical computational and communication systems to provide an unique competitive advantage for quantum and battlefield information dominance. System Level Technology: - Integrated Systems technology efforts focus on combining novel technologies from Lincoln Laboratory's R&D, as well as from commercial R&D, with Lincoln Laboratory's system architecture and engineering prototyping expertise to create breakthrough system-level technologies and prototypes for the Department of War (DoW) including in areas of hypersonics, directed energy, novel sensing and communication systems, and intelligent systems. Such technologies include a first-of-its-kind focal plane array with on-chip image processing, subsurface profiling lidar and a spectral imaging system optimized for remote observation of the upper-ocean subsurface. Success in these endeavors will enable vast improvements in global persistent ISR across air, land and maritime domains.		
B. Accomplishments/Planned Programs (\$ in Millions)		
Title: Microelectronics		FY 2025
Description: The Advanced Devices project targets the research and development of unique and innovative components, subsystems, and sensing concepts or methodologies that will enable new solutions to important DoW problems.		FY 2026
Activities under this technology area include revolutionary imaging technologies, specialized silicon and compound semiconductor-based devices for radio frequency (RF), analog, mixed-signal, and digital electronics; photonics, optoelectronics and laser technologies; microsystems; components and subsystems enabling advanced computing; and novel devices and concepts for chemical, biological, and radiation sensing.		FY 2027
FY 2026 Plans: Advanced Devices will change to Microelectronics and invest efforts in: - High Temperature Electronics for Hypersonics - Ultra-Low Power Electronics for AI Edge Computing with superconducting memory - Physics-informed AI for Material Engineering to accelerate materials design, and develop novel materials that enable advanced structures		5.677
FY 2027 Plans: - Demonstrate and benchmark performance for superconducting electronics-based compute and memories technologies - Extend AI-enabled materials development and experimentation to hypersonics and critical materials		2.821
		3.720

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026	FY 2027
Key RF challenges include a rapidly expanding threat spectrum, platforms with severely constrained payloads, operations in strong clutter and interference environments, detection of difficult targets, and robustness against sophisticated electronic attack.				
RF technologies of interest include antennas, filters, transmit/receive modules (high-power amplifier, low-noise amplifier, phase shifter, time domain up-sampling), beamformers (analog, digital, photonic), receivers/exciters (local oscillator, mixers, filters, analog-to-digital converter, digital-to-analog converter), and novel RF packaging concepts.				
RF systems concepts that address novel analog/digital/photonic architectures and signal processing techniques for improved RF performance are also of interest.				
All funding has been terminated in FY 2026.				
Title: Intelligent Systems		6.986	1.781	4.000
Description: This project area achieves significant technical gains in artificial intelligence, data processing, computation, and autonomous systems control, optimization, learning and adaptation for unique DoW mission needs.				
Emerging artificial intelligence (AI)/machine learning (ML)-based technologies have the potential to significantly improve military capabilities in traditional domains such as Intelligence, Surveillance, and Reconnaissance (ISR), Command and Control (C2) and Space Situation Awareness (SSA), Air and Missile Defense and Undersea Dominance.				
To address mission needs in these domains, Intelligent Systems research leverages unique sensors and data sets generated through Lincoln research and experimentation in broader Laboratory programs. The project area is structured around a canonical AI-based decision support architecture that addresses the end-to-end processing chain, which includes data conditioning, algorithms, and human-machine teaming to determine courses of action, as well as the advanced heterogeneous computing required to convert raw data into insight.				
Research is also aimed at multimodal AI at the tactical edge given compute and environmental constraints. Technology areas include perception and world modeling, safe-by-construction vehicle planning and tasking algorithms to ensure resilient large-scale operations, as well as advanced guidance, navigation and control for SSA, Counter-UAS and Missile Defense applications. Research goals include prototyping on industry platforms and field demonstration in mission-relevant scenarios to facilitate technology transfer and rapid adoption for operational use.				
FY 2026 Plans:				
Information, Computation and Exploitation Sciences will be changed to Intelligent Systems in FY 2026.

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
Invest efforts in the following technical areas - Distributed Tactical Edge AI to build novel hardware and algorithms enabling tactical advantage in deploying AI at the edge - Human-Machine Teaming to create hybrid cognitive architectures to enable effective and rapidly adaptable team and evaluation of team effectiveness in mission scenarios - Autonomy Applications to extend autonomy solutions into space-based proximity operations and electronic warfare sensing applications - Interceptors to bridge the gap between interceptor planning and execution by solving a faster control loop FY 2027 Plans: Mature and demonstrate capability in: - Tactical Edge AI enabled by novel algorithms for complex DoW environments - Expanded Autonomy solutions for resiliency in electronic warfare applications - Multimodal foundation models to enhance sensing capabilities in radar, sonar and ISR modalities - Extreme scale collaborative, intelligent Counter-UAS swarms FY 2026 to FY 2027 Increase/Decrease Statement: The \$2.219 million increase between FY 2026 and FY 2027 is strategically allocated to both improve program efficiencies and support a meaningful, albeit modest, expansion of program activities while advancing the policies of the administration.			
Title: Autonomous Systems Description: The Autonomous Systems project area performs applied research in autonomous robotics to address current and anticipated national security needs. One project area goal is to enable unmanned systems to perform useful tasks in uncertain environments as trusted, capable agents without continuous human operator control. Project elements include the development of autonomy algorithms and technologies, and of infrastructure to quickly develop autonomous systems. Lincoln Laboratory also collaborates with research universities to transfer promising autonomy concepts from academia into prototype systems. Technology areas include perception and world modeling, planning, human-robot interaction, manipulation, learning and adaptation, and robotic platforms.		4.472	-

Efforts range in scope from simulation-based seedlings to prototype efforts demonstrating autonomous system capabilities in relevant environments. All funding has been terminated in FY 2026.				
Title: Quantum Computing & Interconnects Description: This project area develops methods for computing and interconnecting using quantum mechanical manipulation, that is not possible with classical techniques. This area invests in advanced testbeds to help DoW assess and validate technology developed by university and industrial performers, as well as to provide unique component technologies that support a number of large national quantum computing initiatives information. FY 2026 Plans: In FY 2026 Quantum Systems will be changed to Quantum Computing and Interconnects Invest efforts in: - Quantum Error Correction to increase operational utility and permit interoperability across multiple commercial quantum hardware. - Quantum Interconnects to enable scaling quantum systems to larger qubits and processor sizes. In parallel, analyze computing architectures for different quantum processing modalities (e.g. superconducting qubits, photonic qubits, trapped ions) to identify regimes where interconnected approaches offer performance and implementation advantages. - Quantum Clocks for Next-Generation PNT to leverage quantum computing platforms for developing fieldable, liter-scale optical clock for month-long GPS-denied operations. FY 2027 Plans: -Demonstrate quantum interconnect technologies for distributed quantum sensing and computing applications -Investigate better predictive and forecasting tools for utility-scale quantum compute -Develop algorithms for efficient and convergent quantum computing operations FY 2026 to FY 2027 Increase/Decrease Statement: The decrease of \$0.281 between FY 2026 and FY 2027 is due to minor budget fluctuation.		5.573	1.781	1.500
Title: Advanced Materials and Processes Description: The Advanced Materials and Processes project area develops materials and processes that make a transformative impact on enduring national challenges.		4.370	-	-

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
Areas of strategic focus are material property customization and material enablers for highly-integrated, miniature platform. All funding has been terminated in FY 2026.			
Title: Integrated Systems Description: This project area combines multiple new technologies to solve important national needs. This is in the form of mission-driven Moonshots and challenge problems that bring together Laboratory experts to tackle interdisciplinary programs that span multiple groups, Divisions and expertise areas. Projects selected for funding have an applied research component focused on integrated technology capability or technologies that facilitate greater levels of integrated capability. Projects target key DoW warfare domains, including space, air, land, sea surface, and undersea. The intent is to support early work on systems that cut across the conventional categories. FY 2026 Plans: Invest in the following areas: - Technology for Golden Dome that demonstrates novel technologies and systems in support of the Golden Dome missile defense initiative. - Technology for Global Electro-Optic Persistent ISR that demonstrates real-time end-to-end wide-area ISR scanning with camera prototype and advanced algorithms in laboratory and outdoors; optimize camera design for increased performance and yield to enable technology transition. - Technology for Undersea Surveillance that ensures command of the sea by changing the paradigm from point sensing of the ocean to low-cost autonomous volume sensing through use of space-based multispectral imaging, an airborne or spaceborne LiDAR system, and distributed vehicles/sensors for undersea environment profiling and communications. FY 2027 Plans: - Demonstrate blue laser remote temperature sensing in airborne experiments with autonomous undersea and surface sensors to further mission moonshot in transparent oceans for INDOPACOM - Advance multi-function directed energy systems for Counter-UAS and Golden Dome applications - Develop and demonstrate novel sensing technologies and techniques to enable low-cost seekers and fire control in support of Golden Dome - Initiate technology transfer of novel compact imaging chip to enable low-cost global electro-optic persistent surveillance with proliferated LEO satellite constellation FY 2026 to FY 2027 Increase/Decrease Statement:		4.642	1.781

A. Mission Description and Budget Item Justification

The Cyber Security, Science and Engineering research project focuses on the development of technologies and new techniques for the protection of systems against cyber- attack and exploitation.

Efforts include research into technologies for cyber situational awareness, command and control; technology to improve resilience of systems to cyber-attack; and technologies for system exploitation research.

The Cyber Security, Science and Engineering research project supports innovative research that addresses critical national security problems in cyber. The project funds innovations that directly lead to the development of new system concepts, technologies, and algorithms in support of DoW missions. Funding supports high-risk, high-payoff research, which provides unique and specialized capabilities for the current and emerging needs of the Department.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Cyber Security, Science and Engineering	3.628	0.876	-
Description: The Cyber Security, Science and Engineering project conducts research and development, including design, analysis, evaluation, and deployment, of prototype systems to improve the security of computer hardware, software, and networks.			
Its goal is to assure the resilience of Department of War (DoW) missions against cyber-attack and cyber-exploitation, with particular emphasis on the overlap between traditional Laboratory mission areas and the cyber domain.			
Ongoing efforts and areas of concentration include: foundational approaches for integrating traditional and cyber domains, tools and methods to compute threat-based cyber metrics, artificial intelligence (AI) and machine learning-based capabilities supporting cyber analysis and decision making, building trustworthy and resilient mission systems even with untrustworthy components, new cryptographic systems and prototypes, side-channel prevention and exploitation techniques in cyber and cyber-physical systems, and techniques for exploit repurposing.			
Integral to these efforts are demonstrations of the impact of cyber effects on traditional kinetic systems, the quantitative and repeatable evaluation of prototypes, and deployment of prototype technology to national-level exercises.

A. Mission Description and Budget Item Justification

The Applied Research for the Advancement of Science and Technology (S&T) Priorities (ARAP) Program directly supports the Interim National Defense Strategy and aligns with DoW critical science and technology priorities, strengthening broadly applicable technical capabilities and fostering emerging technologies within the Department of War laboratories to enhance warfighter advantages. By funding foundational enabling technologies, the ARAP Program facilitates the design, development, advancement and transition of early-stage technologies and novel ideas, translating promising research into solutions for critical military needs that directly improve situational awareness through advanced sensors, enhanced lethality with precision weaponry, and more effective communication and coordination. Continuous infusion of new technology ensures our forces maintain a decisive edge and have the flexibility needed to adapt to diverse and rapidly changing operational environments. Furthermore, the ARAP Program fosters increased collaboration and partnership among science and engineering teams of subject matter experts across the DoW enterprise, providing funding to recruit top national talent from universities, and bolsters the in-house scientific and technical research capabilities of DoW laboratories, ultimately accelerating the delivery of advanced capabilities to our warfighters.

The ARAP Program funds the activities of the DoW Reliance 21 collaborative framework. This framework's core strength lies in its strategic planning and the DoW Science & Technology (S&T) Executive Committee's (EXCOM) robust leadership, comprised of senior-level executives from across the Department. The S&T EXCOM ensures coordinated resource allocation by convening regularly to align resources and proactively address emerging challenges. For example, the S&T EXCOM recently awarded funding to accelerate the development of long-range strike capabilities that pushes the boundaries of several technological domains in response to evolving battlefield threats, and strategically prioritized investments in Quantum technology to enhance decision-making speed. This leadership is powered by a robust ecosystem of 16 S&T Communities of Interest (COIs). These COIs, spanning cross-cutting topics like advanced materials, cyber warfare, biomedical and biotech, energy and power, warfighter and space platforms, and other critical technology areas, maintain a global perspective on technological advancements. They strategically guide investment through detailed technology roadmaps that inform and identify candidate ARAP projects, ensuring resources are directed towards the most promising and impactful areas.

The Applied Research for the Advancement of Science and Technology (S&T) Priorities program strategically implements and executes Department-wide technology development portfolios, ensuring the timely availability of emerging capabilities that will transition and enhance the effectiveness of both near- and far-term weapon systems. Collaboration across multiple technical and technology areas is essential for increasingly complex modern weapons systems development. For example, a next-generation fighter jet might require advancements in materials science, artificial intelligence, sensor technology, propulsion, and cyber security. Progress in one area can be heavily dependent on breakthroughs in others. Collaboration across the DoW scientific and engineering communities allows subject matter experts from

A. Mission Description and Budget Item Justification

The Applied Research for the Advancement of Science and Technology (S&T) Priorities program was established to implement Department-wide technology development portfolios and foster tri-Service research areas of common interest within cross-cutting S&T efforts. The program has three investment areas: (1) three-year applied research projects selected by the S&T Executive Committee (EXCOM); (2) two-year technology projects nominated by the S&T Communities of Interest (Cols) to address technology gaps or opportunities; and (3) technology assessment and study support to the Cols. The execution of the ARAP Program by the Office of the Secretary of War and the support it provides to the Cols inspires and ensures joint strategic S&T oversight and multi-Service, multi-agency collaboration and coordination. The Applied Research for the Advancement of Science and Technology (S&T) Priorities (ARAP) Program directly supports the National Defense Strategy and aligns with DoW critical science and technology priorities, strengthening broadly applicable technical capabilities and fostering emerging technologies within the Department of War laboratories to enhance warfighter advantages. By funding foundational enabling technologies, the ARAP Program facilitates the design, development, advancement and transition of early-stage technologies and novel ideas, translating promising research into solutions for critical military needs that directly improve situational awareness through advanced sensors, enhanced lethality with precision weaponry, and more effective communication and coordination. Continuous infusion of new technology ensures our forces maintain a decisive edge and have the flexibility needed to adapt to diverse and rapidly changing operational environments. Furthermore, the ARAP Program fosters increased collaboration and partnership among science and engineering teams of subject matter experts across the DoW enterprise, providing funding to recruit top national talent from universities, and bolsters the in-house scientific and technical research capabilities of DoW laboratories, ultimately accelerating the delivery of advanced capabilities to our warfighters.

The ARAP Program funds the activities of the DoW Reliance 21 collaborative framework. This framework's core strength lies in its strategic planning and the DoW Science & Technology (S&T) Executive Committee's (EXCOM) robust leadership, comprised of senior-level executives from across the Department. The S&T EXCOM ensures coordinated resource allocation by convening regularly to align resources and proactively address emerging challenges. For example, the S&T EXCOM recently awarded funding to accelerate the development of long-range strike capabilities that pushes the boundaries of several technological domains in response to evolving battlefield threats, and strategically prioritized investments in Quantum technology to enhance decision-making speed. The execution of the ARAP Program by the Office of the Undersecretary of War and the support it provides to the S&T COIs inspire and ensure joint strategic S&T oversight and multi-Service, multi-agency, collaboration and coordination.				
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026	FY 2027
Title: Applied Research for the Advancement of S&T Priorities (ARAP)		48.544	45.345	56.060
Description: The program focuses on cross-cutting S&T efforts that foster multi-service agency research areas of common interest that give the joint warfighter a technological advantage. It focuses on emerging areas of science, building expertise within the DoW laboratories, including investment in laboratory infrastructure and people, and on research areas that are a foundation for further investments by the Services following the completion of the projects.				
Cross-cutting efforts are aligned with DoW S&T Priorities, such as Electromagnetic Warfare, Human Systems, Autonomy, Space, Kinetic Weapons, Directed Energy and Non-Lethal Weapons, Cyber, Sensors and Processing, Command, Control, Communications, Computers and Intelligence, Air Platforms, Ground and Sea Platforms, as well other focus areas, such as Materials and Manufacturing Processes.				
FY 2026 Plans:				
To ensure continued progress on critically relevant, high-priority long-term hard problems identified on the DoW Services and Agencies research and engineering technology roadmaps, sustained funding is essential for the ARAP program’s four ongoing projects. Projects are jointly selected due to their direct impact on closing key technological gaps, making their continued support a strategic imperative for future advancements. Rapidly evolving global threats demand that our forces possess the most advanced technology to outpace adversaries. Investing in new technologies (high-temperature materials; sophisticated guidance and control systems; scramjets and dual-mode ramjets; quantum hybrid constructs) is not just about modernization; it’s about equipping our warfighters with the critical tools they need to deter threats, succeed in their mission, and return home safely. The four high-priority ARAP projects supported in FY 2026 are vital steps in this direction, directly addressing identified gaps and ensuring our warfighters have the technological superiority they need.				
• Distributed Collaborative Multistatic Radar for Long-range Information-fusion (DC-MURALI) address the challenges of autonomously detecting, locating, and identifying surface targets using radars on low cost, size, weight and power systems. DC-MURALI is pursuing a revolutionary approach to target sensing by using these radars as a collaborative “team” to enhance resilience of mission in a contested environment and to improve target location accuracies.

A. Mission Description and Budget Item Justification

Cyber Security Research supports the Department's 2026 National Defense Strategy priorities to Defend the U.S. Homeland including America's skies and borders, Deterring China in the Indo-Pacific, and Supercharging the DIB. It does so by developing cyber capabilities that integrate functionally with electromagnetic spectrum operations to increase readiness and deterrence, particularly in priority areas such as USINDOPACOM. It builds a cyber and electromagnetic spectrum talent pathway to prepare the defense industrial base and government workforce for technical and operational success starting on their very first day on the job.

This program explores technical and scientific concepts to overcome challenges in the Joint Warfighting Environment with cyber effects and integrated non-kinetic options through applied research for an asymmetric advantage across all domains (maritime, land, air, cyberspace, and space).

It applies the Joint Publication (JP) 3-0 principles of Mass, Maneuver, and Unity of Command to achieve specific outcomes with minimal collateral damage and unforeseen consequences for integrated non-kinetic effects development Efforts are focused to support the Joint Warfighting Environment through intended cyber effects execution without perturbing the unintended kinetic and non-kinetic entities through disruptive integration of cyberspace operations with electromagnetic spectrum operations (EMSO) and sensing.

The program accelerates cyber S&T capability development to directly address INDSG priorities to defend the homeland and deter aggression/prepared to prevail in U.S. Indo-Pacific Command (USINDOPACOM) area of responsibility against the People's Republic of China (PRC).

Adversaries are increasingly leveraging asymmetric tactics in the Joint Warfighting Environment. The Department of War (DoW) needs to evolve its approach to warfare, integrating cyber and non-kinetic effects to maintain a decisive advantage across all domains.

The Non-Kinetic Advantage (NKA) project is a collaborative effort aimed at revolutionizing how the Joint Force employs non-kinetic capabilities. By focusing on four key pillars – Protect, Process, Visualize, and Align & Shape – NKA will deliver a decisive advantage in the information battlespace.

NKA will enable the Joint Force to conduct faster, more effective operations across all domains, even in contested environments. Will provide Asymmetric Advantage by mastering the information battlespace, NKA will provide a decisive edge against adversaries, deterring aggression and ensuring US dominance. Will enable Rapid Decision Making by NKA empowering commanders with the information and tools needed to make rapid, well-informed decisions in complex, dynamic environments.

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2025	FY 2026	FY 2027
FY 2026 Plans: Non-Kinetic Effects Gap Analysis and Investment Plan. This activity will apply the FY 2025 NKE Decision Support Framework in a fully-informed manner across the DoW NKE investments and identify priority gaps for investment and acceleration of capability. Investments to address priority gaps will complement Service Cyber investment lines and seek to focus them to meet and influence early concepts. Rapid Prototyping and Maturation of Non-traditional At-scale Cyber Engagement. Leverage FY 2025 design and prototyping efforts to rapidly accelerate development, integration, and capability assessment to hold non-traditional targets persistently at risk at strategic levels of engagement. Conduct initial planning of demonstration, targeted for late FY 2026. FY 2027 Plans: Pivot toward big-bet investments addressing strategic threats to Department of War cyber-EMSO convergence and overmatch: - Strategic EMS and Cyber Dominance enabling blue kill chains while disrupting adversary surveillance and targeting - Seamlessly integrated cyberspace, EMSO, and OIE - Fluidly delivering effects across all domains of operation in all phases of warfare Non-Kinetic deterrence and de-escalation options FY 2026 to FY 2027 Increase/Decrease Statement: The FY 2026 President’s Budget submission did not include FY 2027 funding projections. Therefore, no comparison between budget positions is available for FY 2027.

Exhibit R-2A, RDT&E Project Justification: PB 2027 Office of the Secretary Of Defense		Date: April 2026	
Appropriation/Budget Activity 0400 / 2	R-1 Program Element (Number/Name) PE 0602668D8Z / <i>Cyber Security Research</i>	Project (Number/Name) 003 / <i>Cyber Applied Research</i>	
		FY 2025	FY 2026
Modern vehicles have evolved into complex computing systems featuring numerous interfaces, both wired and wireless, that support a wide range of applications. As a result, the threat of cyber-attacks has become increasingly pressing, especially concerning the cybersecurity of automotive and vehicle systems. To enhance security for both civilian and military fleets, it is essential to prioritize protecting communication systems, including vehicle-to-vehicle, vehicle-to-infrastructure, intra-vehicle, in-vehicle wireless interfaces, and Engine Control Unit (ECU) interfaces. Equally important is addressing supply chain vulnerabilities, particularly those related to counterfeit components. The University of Detroit Mercy offers a specialized Vehicle Cyber Engineering Program designed to address these critical vehicle security challenges. This program goes beyond traditional academic curricula by providing hands-on, mission-focused experiential learning and internship opportunities that align with the workforce needs of various sectors, including Industry, the Armed Services, the Department of War, and the Defense Industrial Base. The University of Detroit Mercy (UDM) maintains robust partnerships with the US Army Ground Vehicle Systems Center (GVSC) and the US Army Combat Capabilities Development Command (DEVCOM), positioning UDM as a key collaborator in national defense initiatives. Notably, UDM is playing a pivotal role in launching the Connected Vehicle Cyber Center (CVCC) at Selfridge Air Force Base in Michigan, directly addressing the specialized workforce challenges facing the military's next-generation technology sectors. Additionally, as the lead university for the Metro Detroit Vehicle Cyber Virtual Institute under the Department of War (DoW) Virtual Institutes for Cyber and Electromagnetic Spectrum Research and Employ (VICEROY) Program, UDM has demonstrated proven expertise in coordinating universities and community colleges to successfully implement DoW initiatives.

A. Mission Description and Budget Item Justification												
The NDS identifies PRC as a peer challenger. Credible deterrence in INDOPACOM and OPLAN 5077 requires a ready DoW and DIB workforce in Cyber, IT, EW, Data Science, and Intelligence.												
P3I's mission is to be a critical enabler to meet the skilled workforce demand for DoW's evolving and emerging requirements in IT, Cyber, Intelligence, Electronic Warfare (EW), and Data Science. Primarily supporting DoW/USINDOPACOM and its requirement to accelerate innovation and modernization of USINDOPACOM's Joint Force advancements supporting a robust integrated defense.												
P3I capitalizes on the trusted network of the Hawai'i Defense Alliance / Military Affairs Council, DoW, business community, and academic institutions. Expand the Cyber, Data Science, Intelligence programs and certificate offerings across K-12 and post-secondary institutions. Partner with ROTC programs, Hawai'i National Guard, and transitioning Service members.												
The Payoff is enhanced USINDOPACOM mission readiness and workforce resilience by creating job pathway opportunities for Hawaii's youth, mid-career military, and businesses.												
B. Accomplishments/Planned Programs (\$ in Millions)								FY 2025	FY 2026			
Congressional Add: Pacific Intelligence and Innovation Initiatives (P3I)								4.000	-			
FY 2025 Accomplishments: • Expanded intern partnerships with military organizations and industry partners 217 interns placed with 30 participating employers across DoW and DIB 22 year-round interns in the HII Internship Program • Established an electronic technology career pipeline from high school ->two-year degree -> internship -> placement at the Pacific Missile Range Facility • Developed and expanded three new career pathways • Attracted Defense Innovation Unit co-sponsorship to double size of VICEROY MAVEN pilot cohort in O'ahu in Summer 2025 to 30 interns*												
In FY 2025 VICEROY and P3I launched the VICEROY MAVEN powered by P3I internship. A multi-agency, mission-aligned experience at DoW labs and facilities across the Indo-Pacific, allowed 30 interns to contribute

A. Mission Description and Budget Item Justification

Section 1640 of the NDAA for 2019 authorizes the Secretary of War to carry out a program to establish Academic Cyber Institutes (ACI) for the purposes of accelerating and focusing the development of foundational expertise in critical cyber operational skill for future military and civilian leaders. OUSW(R&E) executes the ACI program on behalf of SECWAR and coordinates with DoW CIO Cyber Academic Engagement Office in support of FY 2024 NDAA Section 1531.

Establishes a mission-focused cyber-spectrum leadership development pathway that attracts and retains cyber and electromagnetic spectrum STEM talent by exposing them to priority applied national security problems. Establishes academic cyber virtual institutes at schools of higher learning, to develop foundational expertise in critical cyber operational skills for future military and civilian leaders of the Armed Forces and the DoW, including such leaders of the reserve components. Provide critically-needed mission-aligned internships to develop required skills, while eliminating logistic and financial barriers impeding pursuit of a DoW career.

Increases mission readiness of military and civilians supporting the Cyber Mission Forces, Service Cyber Components, DoDIN Ops, Cyber S&T Enterprise, and the Defense Industrial Base.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026
Congressional Add: Academic Cyber Institute	5.000	-
FY 2025 Accomplishments: - Created single cohesive VICEROY Virtual Institute (VI) uniting 42 Institutions of Higher Education nationwide • 2000+ VICEROY Scholars to date with approximately 660 in the FY 2025 pipeline • 17 internship host organizations spanning the tri-services and MDA: • 356 MAVEN and ENVOY interns to date with 200+ experiences planned in summer FY 2026. • Summer 2025 – VICEROY employed 160 interns as 501c(3) contractors, who produced valuable analyses and prototypes that solved critical mission problems of the DoW. • VICEROY Scholars have completed 162 DoW projects leading to 54 published papers • 235 VICEROY ROTC Cadets, 70 of which were also interns, across 67 affiliated ROTC units • Expanded mission-focused VICEROY National Cyber-Spectrum Competition - o 780 competitors across 205 teams spanning 5 competition events - More than 50% of 128 VICEROY verified completers are now working in DoW or DIB

New Start (Y/N): No

FY 2023 - 2025 program funding is transferred from the Creating Helpful Incentives to Produce Semiconductors (CHIPS) for America Defense Fund to the Research, Development, Test and Evaluation, Defense-Wide appropriation for proper execution. Funding from FY 2023 through 2027 were appropriated by, and are transferred using special transfer authority provided by, section 102(b) of the CHIPS Act of 2022, division A of Public Law 117-167.

A. Mission Description and Budget Item Justification

This Program supports the Department's initiatives to Build Sustainable and Long-Term Advantage, Defend the Homeland, and Deter Aggression.

The Office of the Under Secretary of War for Research and Engineering (OUSW(R&E)) is executing the Microelectronics Commons (the Commons) activity pursuant to the Fiscal Year (FY) 2021 National Defense Authorization Act (NDAA) (Pub. L. 116-283), including and funded through the CHIPS for America Defense Fund established by the CHIPS Act of 2022. The FY 2021 NDAA legislation significantly emphasizes solutions that promote the domestic on-shoring of capabilities to address economic and technology security concerns. Under FY 2021 NDAA Sec. 9903(b), the Department is directed to establish a National Network for Microelectronics Research and Development (NNMRD) to enable the laboratory-to-fabrication transition of microelectronics innovations in the United States and to expand the global leadership in microelectronics of the United States. Specifically, DoW is addressing a component of the NNMRD, the Commons, through a public-private partnership consisting of regional innovation hubs distributed across the U.S. to foster a pipeline of innovative ideas and talent residing in, for example, university labs and small business R&D teams.

U.S. technological dominance in microelectronics materials, processes, devices, and architectural designs can only be sustained through the development of a robust domestic innovation ecosystem that fosters the rapid development and transition of novel concepts into commercially viable manufacturing processes. The U.S. innovation ecosystem has long been the driver of our nation's technology leadership throughout the world. U.S. R&D kick-started the enormous semiconductor industry and continues to lead the world in developing the next generation of disruptive technologies including new materials, devices, circuits, architectures, and design tools.

In recent years, the efficient domestic adoption of U.S. chip innovation has been threatened as emerging hardware technologies have become increasingly reliant on offshore sources for State of the Art (SOTA) manufacturing, prototyping, and investment. There are several significant hurdles that hardware startups face, including limited or expensive access to necessary facilities and design infrastructure, high costs of design intellectual property, limited expertise with hardware engineering, and high costs of prototyping. As a result, the number of U.S. hardware startups has dropped significantly and foreign investment in U.S.-based technology startups has enabled offshore fabrication and maturation of emerging technologies.

UNCLASSIFIED

Exhibit R-2, RDT&E Budget Item Justification: PB 2027 Office of the Secretary Of Defense				Date: April 2026		
Appropriation/Budget Activity 0400: Research, Development, Test & Evaluation, Defense-Wide I BA 2: Applied Research		R-1 Program Element (Number/Name) PE 0602669D8Z I Microelectronics Commons - 0400D				
To address these needs, OUSW(R&E) stood up the Commons as a public private partnership, consisting of regional innovation hubs distributed across the U.S. to foster a pipeline of innovative ideas and talent residing in university labs and small business R&D teams. The partnership provides resources for and access to specialized lab equipment, technical expertise, and connections to existing or upgraded prototyping facilities. Fabrication facilities (fabs) will help mature promising technologies and demonstrate the manufacturing and economic benefits of these innovations for dual-use application for defense and commercial sectors. The Commons focuses on critical, on-shore prototyping to transition innovation from universities, start-ups, and small companies to fabrication facilities (lab-to-fab transition). Key features are: • Creates and connects “Lab-to-Fab” testing/prototyping hubs to form a network focused on maturing emerging microelectronics technologies • Provides broad access to these prototyping hubs, potentially by augmenting facilities and enabling access to facilities within local semiconductor companies or FFRDCs. • Facilitates microelectronics education and training of students at local colleges and universities and grows a talent pipeline to bolster local semiconductor economies and contribute more broadly to the growth of a domestic semiconductor workforce. This program element focuses on the applied research activities of the Commons, including staffing at Commons hub facilities, early technology identification, preliminary microelectronics prototyping planning, and experimental tools.

A. Mission Description and Budget Item Justification

This project focuses on the applied research activities of the Commons including the early research and development of new microelectronics materials, processes, devices, and architectural designs. It seeks to answer how new models, science, and technology can be leveraged to create a different manufacturing paradigm based on proven process tools in agile microelectronics fabrication facilities (fabs). The project also supports the establishment of the Commons Hubs, which will be networks of regional capabilities organized in collaboration with the Commons Consortium Manager (CM) to address DOW and commercial needs and requirements. The Hubs may include existing facilities augmented to enhance intrinsic specializations in emerging areas of microelectronics. Each Hub will concentrate on one of six technical areas including: Secure Edge Computing, 5G/6G Technology, Artificial Intelligence Hardware, Quantum Technology, Electromagnetic Warfare, and Commercial Leap Ahead Technologies. Core Facilities (i.e., fabs) are integral parts of the Hubs network that will provide key fabrication capabilities that are required to demonstrate prototypes with the volume and characteristics required to ensure reduced risk for full manufacturing production. This effort also includes early workforce development activities through the Commons network. Activities may span K-12, undergraduate, graduate and continuing education and may include, for example, establishment of PhD internships and post-doc training at Hub facilities and internships with Hub members.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Microelectronics Research Maturation – Development	72.188	-	-
Description: This effort focuses on the identification of promising new microelectronics materials, processes, devices, and architectural designs with potential DoW applications, and early, applied research into these technologies. It will also support operation of regional Commons Hubs and initial selection and execution of Commons Projects in conjunction with activities funded by PEs 0603669D8Z and 0604669D8Z.			
Accomplishments • Awarded 8 Innovation Hubs • Hub Operations Investments: Approximately \$374M • \$38M in Electronic Design Automation (EDA) investments. • Hub Membership includes more than 1,300 hub members from 45 states, FY24 QTR4 • Hub Projects:34 projects awarded in FY24 QTR4 totaling \$226M in funding across the 8 Microelectronics Commons Hubs

Note

New Start (Y/N): No

A. Mission Description and Budget Item Justification

This program supports the Department's initiative to Build Sustainable and Long-Term Advantage.

This program funds Department of War (DoW) physical climate and social science applied research. Climate and environmental change will impact the full range of U.S. military operating environments. DoW capabilities, until recently, have been aligned toward the historical environmental and geopolitical record; failure to anticipate and plan for the security effects of climate and environmental change holds significant potential to not only degrade DoW readiness and effectiveness but also compound the frequency and scope of novel geostrategic risks and surprises. Efforts under this program will focus on interdisciplinary science and technology that spans physical climate modeling and forecasting and social sciences capable of yielding tangible decision support tools that empower operational planners to prepare for and adapt to the complicated, interconnected security and stability challenges of climate and environmental change. Insights derived from this program will enable Combatant Commands to better engage key partners and allies in efforts to plan for and mitigate risks and promote global peace and stability.

The program includes studies, investigations, and non-system specific technology efforts directed toward general military needs with a view toward developing and evaluating the feasibility and practicality of proposed solutions and determining their parameters.

A. Mission Description and Budget Item Justification

This program leveraged and integrated expertise from operational end users, physical climate scientists and models, tools, and datasets, and social scientists with deep understanding of designated regional and local communities to anticipate and respond more quickly and precisely to climate and environmental change risks and opportunities. The program explored how specific environmental and social indicators might inform strategic reviews to adapt warfighter training and planning in anticipation of climate global trends. The research program built upon the products of the Minerva Research Initiative with a focus on end-user defined mission, geographic, and timescale priorities to forecast local and regional climate and environmental change effects, assess and predict likely societal impacts and responses, and ultimately provide operations planners technically-relevant and operationally precise scenarios to incorporate into Contingency Plans (CONPLANS) and Operational Plans (OPLANS) and Intelligence, Surveillance, and Reconnaissance (ISR) requirements related to climate change.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Providing Research and End-user Products to Accelerate Readiness and Environmental Security (PREPARES)	3.783	0.000	-
Description: PREPARES leveraged and built upon Minerva products by incorporating their findings into operationally-relevant planning scenarios that accelerate the Department's understanding of the social, cultural, behavioral, and political dynamics most likely to be affected by climate and environmental change in strategically important areas of the world. By aligning research objectives with the priorities of operational end users who can apply the tools and knowledge products to their areas of responsibility, the proposed enhancement would translate and integrate results from basic research strategic and global-centric analyses to provide operational and tactical assessments to inform CONPLAN and OPLAN, focusing on specific regions and detailed scenarios for the warfighter. PREPARES uniquely applies research to integrate physical climate and social sciences and accelerate "research to operations", directly impacting military operational planning and preparations to mitigate the security risks from climate and environmental change. This effort also rapidly produced the tools and products the end-users need to sustain data-informed planning and analysis for operations and engagements with partners and allies.			
FY 2026 Plans: This program has been terminated beginning FY 2026.

Note

New Start (Y/N): No

The Software Engineering Institute (SEI) Applied Research program develops and evaluates the feasibility and practicality of software and computer science concepts at the applied research level, with the potential to improve future DoW systems through research, development, and application in the SEI Advanced Technology Development program. Promising projects proceed into advanced technology development through this program.

A. Mission Description and Budget Item Justification

This program supports the Department's initiative to Build Sustainable and Long-Term Advantage.

The Carnegie Mellon University Software Engineering Institute (SEI) Federally Funded Research and Development Center (FFRDC) was established in 1984 as an integral part of the DoW's initiative to identify, evaluate, and transition software engineering technologies and practices. The mission of the SEI is to provide the DoW with technical leadership and innovation through research and development to advance the practice of software engineering and technology. The SEI works across government, industry, and academia to improve the state of software engineering from the technical, acquisition, and management perspectives. The SEI engages in research and development of critical software technologies and tools and collaborates with the larger software engineering research community. It facilitates the rapid transition of software engineering technologies into practice and evaluates emerging software engineering technologies to determine their potential for improving software-intensive Department of War (DoW) systems. Since its inception, the SEI has helped to transform the fields of software engineering and acquisition, network security, real-time systems, software architectures, and software-engineering process management.

Software is critical to meeting the Department of War's (DoW) increasing demand for national defense systems that are high quality, affordable, and deployed in a timely way. With growing global parity in software engineering, the DoW must maintain leadership in all aspects of softwarebased system development, operation, defense, and evolution to avoid strategic surprise. To assist the DoW in retaining a long-term differential advantage over potential adversaries, the Software Engineering Institute (SEI) Applied Research program develops and evaluates the feasibility and practicality of software and computer science concepts, with the potential to improve future DoW systems. The research conducted by this program directly benefits the technical domains Autonomous Systems and Artificial Intelligence (AI), Cyber, and Engineered Resilient Systems.

A. Mission Description and Budget Item Justification

Work conducted under this program will enable resilient mission assurance in heterogeneous and contested environments through the verification and validation of system performance and architecture. The program will also assist the Department of War (DoW) in retaining a long-term advantage in the areas of software-intensive systems and cyber security by enhancing assurance, exploiting automation and Artificial Intelligence (AI), and understanding human-computer interaction.

Software Engineering Institute (SEI) Applied Research has two main research thrusts with known military applications: (1) Software Engineering, Systems Verification and Validation, and Mission Assurance (formerly Mission Assurance); and (2) Information Assurance. This area is increasingly being applied to AI and autonomous systems.

B. Accomplishments/Planned Programs (\$ in Millions)	FY 2025	FY 2026	FY 2027
Title: SEI Applied Research in the Area of Software Engineering, Systems Verification and Validation, and Mission Assurance Description: Increasingly complex and (Artificial Intelligence) AI-enabled systems will require a commensurate increase in sophistication of verification and validation mechanisms. This thrust seeks to develop verification techniques for requirements identification, systems of systems architectures, and virtual integration of components. Additionally, research in this area will enable requirements verification for software assurance, analysis and control of unverified code, and automated repair of damaged code. Software production and code analysis methods developed through this program will also improve the accuracy of behavior prediction of complex software, including AI-enabled systems, in untested environments. FY 2026 Plans: Leverage AI generated software methods to assess feasibility for systems composition. Enable extensions of verification and validation methods for code composition to system composition. FY 2027 Plans: Work toward hybridizing AI methods for software generation for different classes of software, cloud, and information systems so that real time assessment and updating of system architectures can be automated, verified and validated as part of the software Development and Operations lifecycle. FY 2026 to FY 2027 Increase/Decrease Statement: The Decrease of \$1.689 million between FY 2026 and FY 2027 reflects a realignment to National Defense Education Program.	7.677	5.757	4.068

B. Accomplishments/Planned Programs (\$ in Millions)										FY 2025	FY 2026	FY 2027
Description: To gain full advantage from data and information generated by software for use in missions, DoW needs to assure its software is free of vulnerabilities. In its complex systems, DoW may use software developed from an unknown supply chain that may include intentionally or unintentionally introduced vulnerabilities. This thrust seeks to develop scalable automated methods to locate, understand, and mitigate the effects of these vulnerabilities. Automated solutions developed through this thrust will be used to discover vulnerabilities in system software source code and to generate proofs of correctness or fault. Additionally, these solutions will be used to model and simulate operational environments to support software and cyber tactics, techniques, and procedures testing. FY 2026 Plans: Develop methodologies to safeguard training data for automated code generation and vulnerability analysis and identify how such training sets can lower overall risk of errors and security vulnerabilities in software. FY 2027 Plans: Develop AI methods that enable graph-based verification and validation of software and test the methods on AI generated software and system design. FY 2026 to FY 2027 Increase/Decrease Statement: No change between FY 2026 to FY 2027 funding.

Remarks												
SEI Applied Research represents a pivot toward more fundamental research that enables the DoW to address longer-term challenges in software technology and engineering. SEI Applied Research bolsters the organic research at the SEI Federally Funded Research and Development Center (FFRDC), enables stronger collaborations between the SEI FFRDC and academia, attracts top researchers to the SEI, and gives the DoW access to top experts in information science, which generally enhances the DoW's ability to benefit from the military applications of research in software and computer science.

A. Mission Description and Budget Item Justification

This program is executed via Scaled Directed Energy (SCADE) Science and Technology and in alignment with the Department of War Directed Energy Roadmap, as well as other strategic guidance. The goal of this program is to support the Department's initiatives in directed energy to build a sustainable and long-term advantage.

This program funds applied research in directed energy to enable future defense capabilities realized by the Services and Agencies. These efforts include studies, investigations, and component and subsystem design and development to further the knowledge base of high energy laser and high power microwave technologies. In practice, directed energy weapon systems have many potential advantages, including speed-of-light time-to-target, high precision, low incremental cost per kill, and a magazine that is recharged through on-board, fuel-based power and thermal management systems that reduce logistics requirements in contrast to stocks of munitions or warheads. As a result, directed energy weapon systems have the potential to perform a wide variety of military missions. Activities conducted under this program are generally chosen for their potential to have an impact on multiple directed energy weapon systems and multiple military missions while complementing specific Service and Agency needs.

A. Mission Description and Budget Item Justification												
This program is part of an overall Department of War strategy in Joint directed energy applied research. Efforts within will focus on the advanced technologies necessary to increase lethality, expand the mission set, and counter future adversaries. Advancements are essential to improve the performance of existing and new directed energy weapon systems. This builds upon other investments in directed energy applied research by the Services and Agencies and eliminates duplication.												
This work is executed via technical program managers within the Directed Energy Technology Development Program, which enables (1) applied research in high energy laser and high power microwave technologies that support eventual system-level integration and (2) proof of concept tech demonstrations in a laboratory environment with Joint-international participation.												
B. Accomplishments/Planned Programs (\$ in Millions)									FY 2025	FY 2026	FY 2027	
Title: Directed Energy Applied Research									47.374	-	-	
Description: Develop technologies that improve component-level performance and enable fieldable directed energy weapon systems. Develop technologies that support improving beam control and beam propagation for directed energy weapon systems. Conduct directed energy vulnerability experiments on materials, components, and targets. Develop technology to enable future integration into system-level architectures.												
Title: Directed Energy Technology Development									-	47.110	50.408	
Description: Directed Energy Technology Development enables (1) applied research in high energy laser and high power microwave technologies that support eventual system-level integration and (2) proof of concept tech demonstrations in a laboratory environment with Joint-international participation.												
FY 2026 Plans:												
High Energy Laser Technology: Develop technologies that improve component-level performance and enable fieldable directed energy systems. Some of these include: cameras, illuminators, fast-steering mirrors, deformable mirrors, and high-power coatings needed for advanced prototypes such as the Joint Laser Weapon System. Utilize government and industry labs to perform proof of concept tech demonstrations.												
High Power Microwave Technology: Study high power microwave effects and techniques for improved lethality and, in turn, develop high power microwave sources with agile waveforms. Effort will utilize government and industry labs to perform proof of concept technology demonstrations. The effort will investigate next-generation, high-power, multi-frequency antenna

Note

New Start (Y/N): No.

The FY 2027 request for \$6.635 million is for FSRM Modeling and Golden Dome Cyber Resilience and Readiness Exercises.

A. Mission Description and Budget Item Justification

The Facilities Sustainment, Restoration, and Modernization (FSRM) Modeling requirement is inclusive of the development of a computer system, development of software, and development of standards for the FSRM prioritization. This will aid in the establishment metrics for adjudicating FSRM funding sufficiency for use in future program and budget reviews.

Of the \$6.635 million, Golden Dome Cyber Resilience and Readiness Exercises make up a total of \$5 million. Golden Dome Cyber Resilience and Readiness Exercises funding of \$5 million supports the assessment of the control systems which allow for the Golden Dome mission execution. The allocated \$5 million will be used to develop "live fire" cyber resilience exercises to assess the readiness and resilience of the control systems at four (4) additional Golden Dome installations. These live exercises will afford the system owners and operators hands on experience in detecting, protecting and responding to Advanced Persistent Threat- actor and zero-day cyber-attacks, and the physical disruptions that can result. Four (4) different installations will be selected each year in coordination with the Missile Defense Agency (MDA) and Golden Dome for America (GDA) offices.

A. Mission Description and Budget Item Justification

This program supports the Department's priority to reestablish deterrence through developing and demonstrating munitions technologies that deliver crosscutting capabilities to the Services to solve operational and mission-focused challenges.

The Joint Enhanced Munitions Technology Program (JEMTP), within the Office of the Under Secretary of War for Research and Engineering (OUSW(R&E)), was established to develop and demonstrate munitions enhancing technologies (energetics, warheads, propulsion systems, advanced lethality mechanisms, fuzes and fuze components, and target detection), to transition in support of future kinetic fires capabilities and ensure lethality advantage for U.S. warfighters. The JEMTP concentrates on cross-cutting, all-domain munitions technology needs that benefit multiple services. JEMTP investments focus on increasing and improving the performance, lethality, range, and survivability of existing and future weapons systems. The program's technology investment and munitions application strategy are informed by threat-opportunity based analysis from Joint Force campaign scenarios. The advancements through JEMTP enable capabilities that impact a wide range of munitions including One-Way Attack, Counter-small UAS technologies, and munitions that may be utilized for Homeland Missile Defense. The JEMTP program also delivers technologies that support munitions and energetics organic industrial base resiliency and increased production rates of critical weapon systems.

The Enhanced Munitions Advanced Technology Project demonstrates critical munitions technologies including advanced fuzing, power sources, seeker technologies, and counter-countermeasure technologies that combine with Energetics Advanced Technologies to enhance munitions performance and survivability against future advanced threats.

The Energetics Advanced Technology Project supports DoW strategies for advanced energetics and enables the transition of higher performance explosives and propellants for U.S. munitions and delivers new technologies supporting a resilient manufacturing base. The project enhances weapon capabilities through highly lethal warheads and propulsion systems with greater range and speed. The project continues investment in area effects, focusing on maturing High Reliability Cluster Munitions technology.

---	--

The Energetics Maturation project continues investments in FY 2027 of Hexanitrohexaazaisowurtzitane (CL-20) advanced energetics development and formulation scale-up for incorporation into weapon systems.

The FY 2027 request for Research, Development, Test & Evaluation, Defense-Wide for Joint Munitions Advanced Technology includes \$64,251 thousand of discretionary and \$415,000 thousand of mandatory for a total of \$479,251 thousand.

The mandatory funds Joint Munitions Advanced Technology is for a program that will assist the Army in the development of a low cost, long-range precision hypersonic strike weapon and integration with launcher systems commonly found in the Army inventory. This weapon will be both low-cost and suitable to production at scale, enabling large inventories. Efforts under this activity will support platform integration, qualification, validation, flight testing, manufacturing readiness assessments, technical upgrades, and additional test rounds with which the Army will evaluate operational effectiveness. The delivery of 124 low-cost hypersonic strike weapons is associated with this FY 2027 funding.

The FY 2027 mandatory funds continue efforts from FY 2027 to FY 2028.

A. Mission Description and Budget Item Justification

The Enhanced Munitions Advanced Technology project demonstrates advanced technologies that improve the performance, range, and lethality of existing and future weapons systems. This effort takes promising technologies demonstrated at the laboratory scale and matures them into demonstration programs with a focus on operationally relevant key munitions. Enhanced Munitions technologies that are matured and demonstrated in relevant environments to inform service requirements and transition into products for operational use, thereby decreasing program executive office program cost and risk. In FY 2026, the project continues the development of critical munitions technologies, such as advanced materials and designs, fuzing, power sources, seeker technologies, and counter countermeasure technologies that, when combined with advanced energetics, provide significant performance enhancements in range, speed, and target damage effects.

This project applies machine learning, artificial intelligence, and advanced material technologies to inform and refine research efforts and enable next-generation kinetic weapons capabilities, including advances in propulsion, warhead effects, fuze technologies, and targeting technologies.

The Munitions Advanced Technology project continues to address the critical munitions technologies and transition into munitions manufacturing base at scale with the following enhancements. Increases in weapon range and run time require higher energy density power sources for guidance, seekers, and other subsystems. Lethality increases are not only dependent on advanced energetics, but also depend on optimized munitions placement, burst point control, and survivable fuzing. Operations in highly contested scenarios also require technical resiliency, with systems capable of defeating adversary kinetic and non-kinetic countermeasures.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Enhanced Munitions Advanced Technology	7.913	7.433	10.288
Description: The project investments are focused on advancing technologies to enhance munitions capabilities in kinetic lethality effects, propulsion systems, target detection and burst point control, and weapon survivability. The selected efforts are derived from the operationally informed, Department of War Munitions S&T Strategic Priorities, focused on cross-cutting technologies that are broadly applicable including low-cost, high-volume production munitions.			
FY 2026 Plans: - Conduct demonstration testing of target tracking proximity fuze RADAR technology that enhances weapon fuzing and timing accuracy against air targets. - Develop and evaluate additively manufactured reserve liquid battery technology demonstrators for enhancing munition power source operation time and reliability.

A. Mission Description and Budget Item Justification

U.S. weapons systems still largely rely on decades-old explosive and propellant technologies that limit Joint Force options to deter, and if necessary, defeat adversaries in conflict. The Energetics Technology project was established to expedite investigation, research, and transition of novel energetics materials, chemicals, and processes that enable improvements to existing and future munitions performance. The investments and efforts under this project enable modern manufacturing and processing while helping to bolster U.S. energetics supply chain resiliency. The Joint Enhanced Munitions Technology Program, Services, and OUSW(R&E) munitions stakeholders collaborate to generate technology roadmaps for advanced energetic research and development that include high-energy materials, such as Hexanitrohexaazaisowurtzitane (CL-20), and missile delivered submunitions and payloads.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Energetics Advanced Technology	31.175	20.892	27.963
Description: Funded efforts are driven by program office, service, and operational needs as outlined and planned within the DoW Munitions S&T Strategic Priorities and technology gaps identified through rigorous threat assessment and operational evaluation. The project investments are focused in advanced energetics formulation, material scale-up, and demonstration of enhanced performance of propulsion and warhead systems. The project is partnered with the energetics industry and manufacturing base to accelerate new high energy explosives and propellant demonstration and transition. Efforts include advanced energetics formulation maturation using efficient, flexible, and adaptable processes; manufacturing at pilot-scale to deliver quantities for prototype scale testing and demonstration; and targeted munitions demonstrations using advanced energetics to quantify performance. FY 2026 Plans: - Demonstrate and deliver, for scale-up production, advanced energetic materials for munitions evaluation testing using end to end laboratory and pilot scale manufacturing through modern, continuous methods. - Conduct validation testing of advanced energetics combined with novel propulsion and warhead designs and demonstrate increased performance in lethality, range and speed. - Develop and test multiple effects explosives and warhead design to enhance overall weapon to target lethality. - Develop and test topology-optimized additively manufactured propellants that reduces rocket motor volume by 30% while maintaining performance. - Develop and conduct sub-scale testing of novel pulsed motors that enhance missile range and speed.			

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2027 Office of the Secretary Of Defense		Date: April 2026		
Appropriation/Budget Activity 0400 / 3	R-1 Program Element (Number/Name) PE 0603000D8Z / Joint Munitions Advanced Technology	Project (Number/Name) 356 / Energetics Advanced Technology		
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026	FY 2027
- Begin to develop advanced energetics filled, minimum signature propellants for extended range tactical missiles. - Conduct in-water testing of survivable anti-maritime missile ordnance packages. - Complete lethality validation testing of submunitions with advanced energetics and CL-20 explosives. FY 2027 Plans: - Develop methods via AIREX to create Maritime Fire Initiation and Fire Damage. - Demonstrate PBXIH-19 Reactive Material against dynamic targets showing improvements in blast effects. - Develop and demonstrate high energy pulse propulsion technology in tactical rocket motor configuration. - Develop an enhanced preformed fragmenting warhead integrated within cast bodies to demonstrate increased lethality. - Demonstrate extruded rocket motor technology to increase loadout of 4.75” rockets to support affordable mass missile fires. - Increased funding will deliver flight test demonstration of a full up Solid Fuel Ramjet Projectile. FY 2026 to FY 2027 Increase/Decrease Statement: The increase of \$7.071 million between FY 2026 and FY 2027 reflects budget fluctuations.				
Title: CL-20 Development, Production, and Integration Description: Compared to current energetics/explosive ingredients used in U.S. munitions, CL-20 is a higher energy, more powerful explosive ingredient. CL-20 presents opportunities for U.S. Weapon designers to create more lethal, longer-reaching munitions that out-pace adversary capabilities. Efforts under this activity will close the knowledge gaps and mature CL-20 explosive and propellant formulations through material qualification for transition to munitions prototyping, demonstration and manufacturing. FY 2026 Plans: - Provide weapon designers the most capable, safe, and reliable CL-20 material as a critical component and the technical data and material models to support its incorporation into systems. Conduct the chemistry and materials science of CL-20, which requires a planned effort to fully determine basic physical properties and to mature propellant and explosive formulations using CL-20. - Develop U.S. Military Specifications for CL-20 that meets broader Department of War requirements and defines the necessary parameters to produce high quality, low sensitivity CL-20 feedstocks for reproducible explosive and propellant formulations at production scales. - Mature CL-20-based formulations for qualification in preparation for their incorporation into munitions. Conduct assessments of the most promising formulations to inform focused efforts and scale up for development. FY 2027 Plans:		-	12.000	14.000

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2027 Office of the Secretary Of Defense		Date: April 2026		
Appropriation/Budget Activity 0400 / 3	R-1 Program Element (Number/Name) PE 0603000D8Z / Joint Munitions Advanced Technology	Project (Number/Name) 356 / Energetics Advanced Technology		
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026	FY 2027
- Complete and deliver CL-20 Military Specifications to developers and manufacturers that meets broader Department of War requirements and defines the necessary parameters to produce high quality, low sensitivity CL-20 feedstocks for reproducible explosive and propellant formulations at production scales. - Deliver two CL-20-based explosive formulations and begin qualification testing for incorporation into munitions. - Mature and develop CL-20 formulations into Industry-Government collaborative pilot scale up efforts. FY 2026 to FY 2027 Increase/Decrease Statement: The increase of \$2.000 million between FY 2026 and FY 2027 reflects the Department’s continued emphasis on developing and fielding CL-20 as a primary ingredient in explosives and propellants.				
Title: High Reliability Cluster Munitions (HRCM) Development and Prototype Demonstration Description: The project conducts technology maturation and applies advanced energetics submunitions payloads concepts in High Reliability Cluster Munitions (HRCM) for transition into advanced missile prototype demonstration. The effort incorporates modular architecture and expulsion design capable of delivering and dispensing multiple munitions against various targets from a single missile. FY 2027 Plans: - Deliver missile submunition system test units for validation lethality and flight testing. - Conduct validation tests on submunition expulsion, dispersion and target lethality. FY 2026 to FY 2027 Increase/Decrease Statement: Increase of \$3.000 million from FY 2026 to FY 2027 is due to additional investment in High Reliability Cluster Munitions technology development.		-	-	3.000
Title: Munitions - Affordable Cruise Missile Development (U) Description: This advanced technology project supports Department priorities for affordable mass munitions and acceleration of next-generation combat technologies via coordinated technology acceleration between OSW(R&E), Navy, and Air Force. Collaborative development across multiple Program Elements will mature air-breathing rotating detonation engines in tactical form factors for long-range, responsive, affordable weapons. FY 2027 Plans: Specific activities in this project include: development activities for novel propulsion components and electronic support systems; battery reliability and production risk mitigation; flight control and aerodynamic performance optimization; fuel system and kinetic energy management; advanced payload, fuzing, and target detection design; affordable and mass-manufacturable boost motor		0.000	-	9.000

New Start (Y/N): No

Starting in FY 2026, funding was realigned into PE 0603342D8Z as part of Defense Innovation Unit's (DIU) core mission.

A. Mission Description and Budget Item Justification

This program supports the Department's initiatives to Build Sustainable and Long-Term Advantage and Build a Resilient Joint Force Defense Ecosystem.

The FY 2026 spend plan amount for 0603021D8Z includes \$0 of discretionary and \$15,001 thousand of mandatory (reconciliation) for a total of \$15,001 thousand.

Note
P-code changed from 834: National Security Innovation Capital (NSIC) in FY 2026.

A. Mission Description and Budget Item Justification
 The mission of NSIC is to accelerate the development of dual-use hardware technologies critical to our national security and economic competitiveness. It is an initiative that enables dual-use hardware startups to advance key milestones in their product development by addressing the shortfall of private investment from trusted sources. NSIC's support enables companies to develop their technologies and products more rapidly. The resulting reductions in technical risk, along with the signaling of DoW interest in such dual-use companies, attracts trusted private investment that might otherwise sit on the sidelines. The overall result is more rapid and robust development of hardware in the United States, the expansion of the defense industrial base, and reduction of technology flow to adversaries.

Areas of focus are autonomy, communications, power, sensors and space.

Note

New Start (Y/N): No

The Operational Energy Capability improvement program element was established in FY 2026 to improve differentiation from the Operational Energy Prototyping program, PE 0604555D8Z, which advances BA-4 workload. OECI updates for accomplishments and past work appear in the budget exhibit for PE 0604055D8Z (the old PE).

Additionally, in FY 2026, the project code names were updated to align to the Department's priority of achieving peace through strength. The new project codes include: (1) P455 Operational Energy Dominance; (2) P456 Operational Energy Surety is changing its name to Advanced Operational Energy Mobility in FY 2027; (3) P457 Operational Energy and Power Projection; and (4) P458 Nuclear Power.

The reduction of \$9,040 thousand in funding for contract services is undertaken in direct support of Executive Order 14222 "Implementing the President's 'Department of Government Efficiency (DOGE)' Cost Efficiency Initiative", which prioritizes cost efficiency, transparency, and the consolidation of services. This measure represents a deliberate workforce optimization strategy designed to streamline resources while safeguarding against adverse impacts to modernization initiatives and overall mission effectiveness.

A. Mission Description and Budget Item Justification

The Operational Energy Capability Improvement program funds innovation that improves the DoW's operational effectiveness via targeted operational energy (OE) science and technology (S&T) investments. The Operational Energy Capability Improvement Fund (OECIF) incentivizes S&T that promotes long term change in DoW capabilities, so they are better aligned with the National Defense Strategy. OECIF fosters Joint, not Service specific, innovation that improves operational energy performance and has two key mission aspects: first, to develop operational energy technologies and practices that improve DoW military capabilities and possibly reduce costs; and second, to establish within and among the military Services institutional momentum to transition those innovations.

UNCLASSIFIED

Exhibit R-2, RDT&E Budget Item Justification: PB 2027 Office of the Secretary Of Defense		Date: April 2026
Appropriation/Budget Activity 0400: <i>Research, Development, Test & Evaluation, Defense-Wide / BA 3: Advanced Technology Development (ATD)</i>		R-1 Program Element (Number/Name) PE 0603055D8Z / <i>Operational Energy Capability Improvement</i>
OECIF funds serve as “seed money” to start or consolidate promising first-of-a-kind operational energy innovation. OECIF investments also lead in areas of Departmental level interest. The overall goal is to improve the operational effectiveness of the Joint Force. OECIF powers this future by investing in early-stage (pre-commercial) energy innovation for military capabilities, incentivizing the Components to achieve energy superiority for U.S. Joint Forces and missions. The OECl program accelerates the transition of pre-commercial, military-unique technologies, promoting rapid fielding to warfighters. OECl is innovating today for energy superiority tomorrow, delivering unmatched value to the DoW warfighter by: • Boosting lethality and supportability • Enhancing operational readiness and responsiveness • Extending operational capabilities and endurance for advanced platforms and weapons OECIF prioritizes technology development for multiple-Service use-cases, deconflicts across Service investments reducing duplication, and increases auditability of funding both within the program and community-wide from 6.2 through warfighter transition. OECIF maintains and advances use of accountability tools and process development. OECI's technical thrust areas are: • Operational Energy Dominance: Providing energy capability and battlespace awareness technologies for collecting, camouflaging, and controlling power and energy data. These investments leverage Artificial Intelligence and machine learning (AI/ML) for integrating U.S., allied, and adversary energy information into the combined joint all-domain command and control (CJADC2) architecture. Additional information is available in a classified addendum for this budget exhibit. Dominance supports solutions to power and energy vulnerabilities and threat reduction at home and abroad. • Advanced Operational Energy Mobility: Accelerating Joint Force freedom of maneuver by transforming assured energy access into operational reach, tempo, and sustained movement across contested, austere, and denied environments. Investments prioritize next generation propulsion for crewed/uncrewed platforms, power and energy mission planning / in-route visibility, integrating energy technologies across domains, platforms and electrical grids, and operationalizing energy for high-powered applications (Golden Dome), producing energy at the tactical edge, and enabling energy prepositioning and storage. • Operational Energy and Power Projection: Giving U.S. forces operational flexibility, freedom to operate at will, and a qualitative edge in all domains (including air, space, and cyber), through implementation of advanced energy technologies. Investments enable and enhance Space maneuver without regret (including next-generation power and energy delivery/resupply), terrestrial and space wireless power transfer, and counter-unmanned aerial system capabilities. • Nuclear Innovation: Developing power and energy solutions for the battlespace including assured power for critical missions at home, underway, and abroad. Nuclear innovations do not overlap efforts covered by the Chief of Naval Reactors (CNR) but are broadly applicable in all domains from sub-sea to space. The OECIF program demonstrates its commitment to innovation by maturing first-of-their-kind advanced OE technologies across warfighting platforms and domains. OECIF's competitive execution approach, which funds DoW and defense-related DOE laboratories, not only strengthens technical depth within the DoW and secures government purpose rights but also drives down acquisition costs and fosters academic and initial industry engagement. Furthermore, it expedites technology development and capability delivery to warfighters through the implementation of other transaction and rapid acquisition authorities. Current/ongoing OECl investments (initiated under PE 0604055D8Z) focus on providing agile OE solutions that address insights from current operations.		

UNCLASSIFIED

Exhibit R-2, RDT&E Budget Item Justification: PB 2027 Office of the Secretary Of Defense		Date: April 2026
Appropriation/Budget Activity 0400: <i>Research, Development, Test & Evaluation, Defense-Wide I BA 3: Advanced Technology Development (ATD)</i>		R-1 Program Element (Number/Name) PE 0603055D8Z <i>I Operational Energy Capability Improvement</i>
Technical advancements include: • Advanced Algorithms & Analytics: Developing AI/ML algorithms for anomaly detection, predictive power analysis, energy optimization, and pattern-of-life analysis • Joint All-Domain Command and Control (JADC2) Integration: Developing data models, user interfaces, and communication protocols to integrate and visualize OE assets and data into the JADC2 architecture • Power Electronics & Microgrids: Designing high-efficiency power converters, inverters, and microgrid controllers for tactical applications, with a focus on vehicle-centric microgrids and integration with Joint and Coalition energy sources • Energy Storage & Generation: Developing advanced battery chemistries (Li-ion, Lithium Sulfur, fuel cells (hydrogen)), and waste-to-energy systems for mobile and expeditionary power • Wireless Power Transfer Technologies: Advancing RF, mm-Wave and laser power beaming systems, including rectenna design, beam steering, and integration with UAVs and other platforms • Space-Based Solar Power: Space assembly, mobility, and logistics (including refueling); maneuver without regret; and wireless power transfer • Nuclear Reactor Technology: Developing small modular reactors (SMRs), TRISO fuel, and advanced reactor materials for both space and terrestrial applications • Increasing Range and Survivability: Developing longer-range architectures for tactical vehicles, aircraft, and naval vessels, enabling new mission sets The President's mission to the DoW is clear: achieve peace through strength and remain the World's greatest military. Advancing this mission, FY 2026 OECIF investments focus on those technology advancements required to increase OE Readiness. Investment priorities include: 1) OE-Informed Planning and Decision Making; 2) Readiness to Fight in Emerging Battlefields; 3) Next-Generation Platforms and Weapons Systems; 4) OE and Installation Energy Convergence with a focus on Homeland Defense; and 5) Focused investments advancing resilient, long-lived, and low-profile spaceflight radioisotope power system (RPS) technologies available for national security needs. FY 2027 OECI investments focus on technologies that enhance the operational effectiveness of the DoW and its allies specifically within the context of deterring aggression in the Indo-Pacific region and bolstering homeland defense. The program recognizes that energy security is a critical component of both forward-deployed forces and continental U.S. operations, and that investments in distributed, resilient, and efficient energy solutions are essential for maintaining military readiness, being resilient in contested environments, and projecting power in key strategic theaters. Specific investment priorities include: • Energy Sensing and Characterization – Critical infrastructure protection and exploitation (Bison Herd expansion) • Radioisotope Power Systems (RPS) and Nuclear Supply Chain innovations – advanced reactor acceleration • In-transit fuel/power visibility and mission planning – solutions that optimize, communicate, and operationalize energy data across the mobility enterprise • Space-based refueling and robotics – dynamic, serviceable architecture, ensuring ability to resupply, refuel, augment, and defend critical space assets • Classified efforts – technology fusion and integration efforts acceleration energy solutions for SOF requirements

Appropriation/Budget Activity 0400: <i>Research, Development, Test & Evaluation, Defense-Wide I BA 3: Advanced Technology Development (ATD)</i>	R-1 Program Element (Number/Name) PE 0603055D8Z <i>I Operational Energy Capability Improvement</i>	

The OECI program has a long history of successfully transitioning emerging OE capabilities (greater than 80%). As the department rebuilds the military, OECI continues accelerating technology development for critical OE capabilities required for defense of the homeland and deterring Chinese aggression in the Indo-Pacific theater.

The FY 2027 request for PE 0603055D8Z includes \$165,060 thousand of discretionary and \$93,888 thousand of mandatory for a total of \$258,948 thousand.

The mandatory funds advance Golden Dome and High-Power Energy Requirements - Integrating directed energy component technologies into platforms and weapons systems, conducting power conditioning, increasing the domestic supply chain in support of advanced propulsion and energy storage of air platforms (including one-way kinetic effects), and advancing coupled thermal energy storage and advanced power controls for high-power applications. The FY 2027 mandatory funds are different from the FY 2026 mandatory funds that 1) Advance aviation and space propulsion and space to ground power beaming – delivering reliable power to warfighters and using a robotic assembly demonstrating scalability for a variety of national security applications (\$60,000) and 2) Expand Joint All-Domain Command and Control (JADC2) Power and Energy Sensor Enabled Effects – protecting high-valued assets and personnel in contested regions and equipping Commanders with a deep-magazine of effects that dominate the energy battlespace (\$22,000).

The FY 2026 spend plan amount for Operational Energy Capability Improvement (PE 0603055D8Z) includes \$216,497 thousand of discretionary and \$82,000 thousand of mandatory (reconciliation) for a total of \$298,497 thousand.

A. Mission Description and Budget Item Justification

The Operational Energy Dominance (OED) project enhances DoW operational effectiveness through pre-commercial targeted Science & Technology (S&T) investments, transforming energy data into a battlefield advantage across both homeland defense and Indo-Pacific deterrence missions. By embedding energy situational awareness into command and control (C2) architectures, OED enables warfighters to outpace adversaries with smarter, faster decisions in contested environments. The OED portfolio achieves this mission through three strategic thrusts: Collect, Camouflage, and Control.

- Collect: OED digitizes legacy power systems (generators, batteries, and distribution nodes), integrating them into the operational data environment to eliminate blind spots and enhance situational awareness while simultaneously developing and deploying first-of-a-kind sensing capabilities to the front lines
- Camouflage: OED leverages power intelligence products from the Collect thrust to locate and mitigate threat surfaces within the power systems of critical military systems
- Control: OED exploits both power intelligence products and identified threat surfaces to create tactics, techniques and procedures (TTPs) that expose the pacing threats and deliver overmatch opportunities for U.S. Forces operating in the Indo-Pacific and homeland environments

OED portfolio investments yield:

1. Enhanced mission-planning tools with integrated energy analytics
2. Increased operational control of energy assets at every echelon
3. Advanced metering and monitoring across modern and legacy platforms
4. Modeling and simulation tools translating energy impacts into operational outcomes
5. Actionable energy insights informing acquisition, sustainment, and budget decisions
6. Foundational training embedding energy innovation across warfighters and the S&T community

All focus areas align with the DoW's OE Strategy, ensuring energy data informs operations, logistics, and readiness. Program-wide efforts prioritize transparency tools, warfighter inclusion, and subject matter expertise that accelerate the adoption and impact of OECIF investments. FY 2027 priorities emphasize energy technologies that support homeland energy resilience, forward-deployed power awareness, and extended-range operations under contested logistics conditions.

There is a classified addendum to this PE.

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
Description: OED is set to revolutionize operational energy management, delivering critical capabilities that ensure energy becomes a decisive enabler for Joint Force operations from the homeland to the Indo-Pacific. FY 2027 efforts prioritize energy resilience, extended range operations, and deterrence missions in contested and distributed environments. OED competitively awards new efforts across sensing, data integration, predictive modeling, and resilient infrastructure. Multiple OED projects are scheduled to close out, delivering tangible capabilities to the warfighter that strengthen homeland defense and Indo-Pacific deterrence. FY 2026 Plans: In FY 2026, the OED portfolio continues development of 14 ongoing efforts and initiates 5 new start projects—each designed to scale energy sensing, secure data integration, and decision support across Joint and Service workflows, enabling warfighter-informed planning and resilient energy operations across multiple CCMDs. 1. Integrating Energy Data Across the Force: Delivering a fully integrated energy ecosystem with sensing, metering, real-time analytics, and cyber-secure data exchange at every echelon 2. Predictive Energy Management: Advancing modeling and simulation tools for standardizing OE data, enhancing decision support, and forecasting consumption and resupply for extended-range operations and campaign-level planning across multiple theaters 3. Enterprise Energy Visibility: Scaling digitization of legacy systems and tactical microgrids to ensure complete energy asset visibility across Services, mission partners, and advanced basing nodes in contested Indo-Pacific and homeland environments 4. Resilient Infrastructure and Protection: Hardening electrical systems in forward operating locations and critical homeland infrastructure—including island and atoll environments—using post-quantum encryption to secure energy data and control systems against advanced cyber threat FY 2027 Plans: In FY 2027, OED continues operational energy integration by scaling global reach, institutionalizing decision tools, and strengthening survivability across strategic theaters: 1. Scaling Enterprise-Wide Energy Visibility (EWEV): Expanding OE data integration across JADC2 workflows, enabling a unified operational energy picture for Joint, Combined, and Coalition commanders operating in homeland and Indo-Pacific theaters. 2. Operationalizing Power ISR: Advancing OE and ISR data fusion to support campaign-level maneuver, targeting, and sustainment across all domains. 3. Energy-Informed Wargaming and Training: Embedding predictive energy analytics into Joint training, wargaming, and OPLAN development to institutionalize OE across readiness and strategic planning cycles.

A. Mission Description and Budget Item Justification

The Advanced Operational Energy Mobility (OEM) portfolio accelerates Joint Force freedom of maneuver by transforming assured energy access into operational reach, tempo, and sustained movement across contested, austere, and denied environments. Building on prior Operational Energy Surety investments, P-456 shifts emphasis toward operationalized mobility outcomes, enabling forces to move farther, persist longer, reduce identifying heat and acoustic signatures, and maneuver with reduced logistical burden across air, land, and maritime domains. These efforts directly align with National Defense Strategy priorities, including Indo-Pacific operations, contested logistics, Arctic access, and distributed air, maritime, and land maneuver.

The portfolio emphasizes 1) Air Mobility 2) Land and Maritime Mobility, and 3) integrating multi-domain operational energy solutions. Together these elements triangulate operational energy innovation into a maneuvering advantage, increasing operational tempo, duration, and force employment. OEM delivers critical enablers for operational flexibility by expanding freedom of maneuver through:

- Aviation Mobility - advances energy delivery, airframes, propulsion, and intelligent power management extending range, persistence, and freedom of action of crewed and uncrewed aviation platforms, reducing sortie demand while enabling operational mobility and aviation overmatch.
- Land and Maritime Mobility - advances operational duration for ground/maritime platforms including extending operational reach, enabling silent watch and silent mobility, and maintaining power in austere and contested environments. These efforts ensure energy availability at the tactical edge while enabling crewed, uncrewed, and autonomous maneuver across land, sea, and sub-surface domains.
- Operational Energy Integration – advances and enables energy technologies across domains, platforms, and electrical grids, enhancing lethality, mobility, and maneuver in contested environments. OE integration includes operationalizing energy for high-powered directed energy weapons and radar systems in support of Golden Dome, producing energy at the tactical edge, and enabling energy prepositioning and storage.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Operational Energy Surety	-	39.841	39.723
Description: OEM accelerates Joint Force freedom of maneuver by transforming assured energy access into operational reach, tempo, and sustained movement across contested, austere, and denied environments.			
The Operational Energy Mobility portfolio is managing 49 active projects and on-boarding three new starts in FY 2026 including performers from DoW labs (27), Services (7), CCMDs (7), DOE labs (3), Industry (67), Academia (6), and FFRDCs/UARCs (5).

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
OEM is committed to providing uninterrupted operational capabilities for the DoW, even in the face of energy supply disruptions. This commitment is achieved through the development and integration of innovative energy solutions across all platform types – fixed, mobile, autonomous, and crewed. OEM's 49 active projects are focused on developing and transitioning technologies that directly support the Warfighter's ability to maneuver, operate, survive, and be more lethal. The three FY 2026 new starts continue this focus by developing directed energy, and grid shaping and manipulation capabilities for the warfighters. In FY 2026, OEM is transitioning/closing 31 projects whose technologies and capabilities strengthen operational readiness, secure strategic advantages in complex conflict scenarios, and empower warfighters to successfully execute missions by: • Golden Dome and High-Power Energy Requirements: Innovating energy storage, power controls, energy-dense inverters, power distribution, and thermal management for radars, directed energy weapons, and other high-power applications • Energy Sustainment in Contested Logistics: Expanding Arctic battery and microgrid performance envelopes to –60C and expanding energy options for the warfighter in austere and contested regions • Mission Endurance and Interoperability: Extending resupply range and aircraft standoff distance through advanced aerial delivery systems, and ensuring interoperability of systems through microgrid standards • Enabling Advanced Maneuver, Lethality, and Survivability: Scaling autonomous platforms for refueling, reconnaissance, and decoy operations, advancing hybrid platforms to improve maneuverability, silent mobility, and endurance, and deploying modular and interoperable power systems for sharing exportable power in crewed/uncrewed teams • Extending the Reach of Air Power: Advancing aerial autonomous concepts such as tankers, swarms, high-altitude balloons, and novel Uncrewed Aerial Systems (UAS), while applying innovative designs, composites, low-signature enhancements, and AI/ML flight management to achieve ultra-high endurance in contested environments FY 2027 Plans: In FY 2027, OEM strengthens operational readiness and empowers warfighters to successfully execute missions by: • Golden Dome and High-Power Energy Requirements: Integrating directed energy component technologies into platforms and weapons systems, conducting power conditioning, increasing the domestic supply chain in support of advanced propulsion and energy storage of air platforms (including one-way kinetic effects), and advancing coupled thermal energy storage and advanced power controls for high-power applications • Securing Strategic Advantages: Improving Joint Force lethality by denying adversaries access to their own electrical infrastructure and advancing ability to harvest power from host infrastructure • Increasing Power Availability: Implementing aviation weight and drag reductions, advancing next-generation powerplants, efficient on-board power, wireless energy transfer, advanced energy electronics, and energy harvesting for extending mission endurance and preserving overmatch

A. Mission Description and Budget Item Justification

The Operational Energy and Power Projection (OE&PP) project powers the future of the DoW by delivering energy at the point of need, enabling mission success anywhere on earth and in space. The portfolio strategically invests in three critical areas: Power Beaming, Space, and Counter-Uncrewed Aerial Systems.

- **Power Beaming: Projecting Energy Across the Battlespace:** This area is pushing energy forward with high-efficiency wireless power technology, including transmitters, relays, and receivers, and providing on-demand power to remote locations including space and uncrewed applications.
- **Space: Unleashing the Power of Space-Based Energy:** This area is developing state-of-the-art (lighter, lower cost) solar cells and battery technology maximizing energy generation and storage capabilities in space. It also leverages robotics for on-orbit assembly of large solar arrays and refueling of satellites, dramatically increasing the availability of energy in the space domain for maneuver without regret and energy magazine.
- **Counter-Uncrewed Aerial Systems: Enhancing the operational resilience of critical energy infrastructure** by integrating a Laser Systems and High-Power Microwave (HPM) counter-Unmanned Aerial System (cUAS) capability into existing power beaming transmitters. This leverages the dual-use potential of power beaming, enabling a seamless transition between power delivery to vital assets and directed energy threat neutralization. This approach mitigates the increasing vulnerability of Operational Energy (OE) assets to UAS attacks, particularly those that utilize advanced technologies resistant to conventional electronic warfare

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Operational Energy & Power Projection	-	45.972	45.486
Description: OE&PP is set to revolutionize power projection, delivering critical capabilities that will reshape the future battlespace. OE&PP competitively awards new efforts across the space, counter uncrewed aerial systems (C-UAS), and power beaming areas. OE&PP has a total 52 active projects partnering with 5 DoW laboratories, 27 Service Organizations, 6 CCMDs, 8 Academia partners, and 2 FRDC/UARCs.			
FY 2026 Plans: In FY 2026, OE&PP continues 40 active projects, 9 being new starts, and will close 12 projects. The 12 closing projects advanced the TRL levels of critical Space and Power Beaming components. Technologies being advanced in FY 2026 include: 1. Revolutionizing Power Delivery: Integrating power beaming technologies into fielded air, ground, sea, and space platforms to efficiently deliver energy across the battlespace, enabling on-demand power for a more agile and resilient force. Additionally, power beaming provides dual use technologies through continued integration with Directed Energy (DE) systems.

A. Mission Description and Budget Item Justification												
This project is revolutionizing DoW operations by spearheading innovations in nuclear power in advanced nuclear reactors and radioisotope power systems (RPS) for Joint operations and across all domains. As a strategic priority for the Administration, nuclear power is poised to transform energy surety by: • Unleashing Unprecedented Energy Density: Increasing the energy density of existing fossil fuel systems by approximately 1,000,000x, enabling longer mission durations and reduced logistical dependencies. • Extending Power Lifetimes in Extreme Environments: Dramatically extending power system lifetime in remote and austere locations, ensuring reliable power for critical operations in challenging environments. • Reducing the Risk and Burden on Personnel: Decreasing operational risk and burden on personnel compared to traditional power systems (e.g., chemical batteries and fossil fuels), lessoning high risk re-supply logistics and freeing up military resources for other mission-critical tasks. The nuclear power portfolio's investments are focused on making nuclear technologies safer, lighter, more secure, more efficient, more economical, and more operational for the DoW. To achieve these goals, this project is driving technology improvements in the supply chain and power conversion efficiency of RPS and fission subsystems and components, as well as de-risking complete fission mobile nuclear reactor systems. These technology development efforts include investments in cutting-edge materials like efficient carbon/carbon, shielding optimizations, betavoltaics, alphavoltaics, alpha photovoltaics, Stirling energy conversion technology, and supercritical CO2 energy conversion systems (sCO2). The nuclear power portfolio also funds studies exploring the regulatory needs and warfighter training for safely and efficiently deploying nuclear technologies.												
B. Accomplishments/Planned Programs (\$ in Millions)									FY 2025	FY 2026	FY 2027	
Title: Nuclear Power									-	29.800	29.142	
Description: The nuclear power portfolio spearheads DoW innovations in nuclear power (fission reactors and radioisotope power systems) for joint operations across all domains, paving the way for a new era of energy dominance. The nuclear power portfolio is managing 20 Active Projects including performers from DoW labs (5), Service orgs (5), CCMDs (3), DOE labs (5), Industry (17), Academia (13), and FFRDC/UARC (2).												
FY 2026 Plans: In FY 2026, the nuclear power portfolio is undergoing a strategic transformation and delivering game-changing capabilities for the DoW. By concentrating resources on fewer, higher-impact projects directly aligned with critical military operations, the portfolio is

poised to accelerate the development and deployment of transformative nuclear energy solutions. This includes streamlining the proposal process and prioritizing urgent nuclear technology needs: • Operational Radioisotope Power Systems (RPS): Enabling long-duration, reliable power for remote and autonomous systems • Operational Fission Systems: Providing scalable and resilient power for forward operating bases and other critical infrastructure • Subsystems and Components for Small Modular Reactors (SMRs), and Microreactors: Driving innovation in reactor design and performance • Safety and Security Studies: Ensuring the responsible and secure deployment of nuclear technologies A key focus area for FY 2026 is developing resilient, long-lived, and low-profile spaceflight RPS for defense use cases, enabling persistent situational awareness, maneuver capabilities, and communications in the contested space domain resulting in one (1) new project with three workstreams: an industry design competition for a power system, an interagency Pu238 fuel supply chain roadmap, and DoW PI-led P&E information management and decision activities. Building upon previous successes, the nuclear power portfolio is continuing 15 technology projects that improve the supply chain and power conversion efficiency of both small and large RPS and fission subsystems and components, as well as de-risking complete fission mobile nuclear reactor systems. These critical technology development efforts include investments in advanced materials like optimized nuclear carbon/carbon, Stirling energy conversion technology, and moderator materials, driving innovation and enhancing performance. To ensure the safe, secure, and effective integration of nuclear power into military operations, the portfolio is also overseeing 4 studies into: • Multipurpose nuclear reactors • Regulatory and technology gaps for DoW nuclear applications • Cybersecurity of nuclear microgrids • Training and education for the nuclear battlefield of the future, driven by lessons learned from current conflicts This strategic realignment in FY 2026 ensures that the nuclear power portfolio is delivering the most impactful and relevant capabilities to meet the evolving needs of the DoW including closure of 7 projects. FY 2027 Plans: In FY 2027, OECIF advances DoW's nuclear energy dominance and bolsters national security by using the same process of FY 2026, but focusing on the key topics of:

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
- Fortifying the Domestic Nuclear Supply Chain: Conducting comprehensive supply chain gap analyses in collaboration with service branch nuclear offices and interagency partners (e.g., DOE, NNSA, etc.) and identifying critical vulnerabilities and strategic investment points within the advanced reactor market for DoW efforts. - Prioritizing Executive Order Alignment: Directly supporting recent executive orders focused on nuclear energy leadership by ensuring OECIF's investment strategies are optimally aligned with national priorities and DoW's unique energy needs. OECIF is proactively shaping the future of DoW's nuclear energy landscape through collaborative investments and strategic analyses, ensuring a secure, resilient, and technologically advanced nuclear power infrastructure that underpins warfighter capabilities and strengthens national defense and energy dominance. <i>FY 2026 to FY 2027 Increase/Decrease Statement:</i> The \$0.658M reduction is undertaken in direct support of the President's executive order, which prioritizes cost efficiency, transparency, and the consolidation of services. This measure represents a deliberate workforce optimization strategy designed to streamline resources while safeguarding against adverse impacts to modernization initiatives and overall mission effectiveness.

A. Mission Description and Budget Item Justification

FY26 SO/LIC Advanced Development has been realigned into the CTTS 122. No funds in FY26 and out.

This program supports the Department's initiatives to Deter Aggression, Defend the Homeland, and Build Sustainable and Long-Term Advantage.

The Advanced Development (AD) subgroup within IWTSD built on lessons learned from more than a decade of developing, managing, and overseeing the Secure Unclassified Network (SUNet) and is now developing, testing, and delivering advanced tools and capabilities for the Department of War (DoW) to campaign in and through cyberspace, maximize cyber capabilities in support of integrated deterrence, and effectively use cyber operations to generate asymmetric advantages. The AD subgroup streamlines the implementation and validation of Artificial Intelligence and cybersecurity requirements across IWTSD's project portfolio as well as develops novel tools and capabilities in collaboration with our partners across the cyber domain.

<u>Change Summary Explanation</u> In FY 2026, funds will be returned to the source portfolio from which it originally came_PE0603122D8Z. IWTSD uses this RDT&E funding in PE 0603122D8Z to execute its charter and rapidly develop, deliver, and transition secure and resilient irregular warfare capabilities for USSOCOM, the broader Department of War, its International Partners, and deliver operational capabilities in support of the National Defense Strategy. This realignment action will enable IWTSD to retain critical knowledge and continue to support enhanced cyber hardening and information assurance across IWTSD's portfolio, as well as develop and deploy new tools and capabilities to protect, support, and enhance DoW and joint operations in the cyber domain. The new subgroup created in PE0603122D8Z is the Advanced Development subgroup.

Note

New Start (Y/N): No

A. Mission Description and Budget Item Justification

The U.S. Department of War (DoW) has launched the Secretariat for Special Operations (SSO) to modernize the oversight and administration of U.S. Special Operations Command and the department's irregular warfare (IW) capabilities. Directed by Congress, this initiative aims to address evolving global security challenges while preserving decades of operational legacy. A key component of this effort is the transformation of the Irregular Warfare Technical Support Directorate (IWTSD) into the newly named Capability Development and Innovation (CD&I) directorate during FY 2025. While the transition maintains the organization's longstanding commitment to rapid research and development (R&D) solutions and innovation, it incorporates structural updates for enhanced agility and focus across four specialized divisions: Operational Demands and Threat Analysis (ODTA), Irregular Warfare Capability Development (IWCD), Assessment of Prototypes and Experimentation (APEX), and Global Innovation Partnerships (GIP). These divisions bring streamlined processes to threat analysis, capability development, prototype testing, and international collaboration, underscoring a holistic approach to irregular warfare. CD&I maintains the IWTSD's structure to rapidly fill capability gaps, to include sensitive activity support, force protection and subterranean activities, lethality, information dominance, counter-unmanned systems and unmanned systems, and personnel protection and human optimization. Though this strategic restructuring reflects an intentional modernization effort, it remains a work in progress, with ongoing adjustments to align emerging priorities, refine operational frameworks, and address the ever-changing landscape of global security needs.

During FY 2026 and into FY 2027, CD&I will continue to focus its R&D activities to rapidly fill the immediate, emerging, and critical capability gaps for those at the tactical edge to include our nation's special operations forces, other military operators, intelligence analysts, and first responders.

The number of capability gaps CD&I can address are reduced due to the increased cost of incorporating artificial intelligence, machine learning, cyber hardening, and DoW safety testing of prototype systems prior to operational test and evaluation (OT&E). For instance, the focus on increased lethality has driven up costs to meet DoW safety and testing requirements.

With the change from IWTSD to CD&I and starting in FY27, projects will be distributed between two divisions:

- Irregular Warfare Capability Development (IWCD)
- Assessment, Prototyping, and Experimentation (APEX)

Each of the 11 legacy IWTSD subgroups have enduring R&D partnerships with USSOCOM and its components, the Services, and many DoW agencies. During FY 2025, IWTSD partnered with USSOCOM, the Services, and DoW agencies to transition or commit to transition over 28 products to a Program of Record and provided over 42 prototypes to users for OT&E. IWTSD's International R&D program has helped other DoW Components and organizations initiate task plans, which support execution of over about \$70 million dollars to rapidly develop and prototype new technology and innovation through collaboration and cost sharing with Israel.

Exhibit R-2, RDT&E Budget Item Justification: PB 2027 Office of the Secretary Of Defense	Date: April 2026
---	-------------------------

Appropriation/Budget Activity 0400: <i>Research, Development, Test & Evaluation, Defense-Wide I BA 3: Advanced Technology Development (ATD)</i>	R-1 Program Element (Number/Name) PE 0603122D8Z I <i>Combating Terrorism Technology Support</i>
---	---

While supporting the National Defense Strategy (NDS) by filling capability gaps to address our adversaries, the CD&I program will continue to identify capabilities to combat terrorism and irregular adversaries, and quickly deliver these capabilities to U.S. DoW, interagency, and international partners through rapid research and development, advanced studies, and technical innovation. CD&I is unique in its approach, annually obtaining joint requirements directly from major Commands, Services, military operators, intelligence analysts, and first responders, and discussing those requirements with industry before the requirements are released in Broad Agency Announcements (BAA).

The CD&I program, justified in the R-2 exhibit, identifies the projects that are fully or partially funded by Congressional appropriations for the CD&I program. However, CD&I also develops technology and provides support using external funds provided by other DoW, federal departments and international partnerships. These external funds are not reflected in this R-2 justification. However, the number of activities does reflect positively on the trust and competence that CD&I has earned throughout the Department of War, its international partners, and other federal organizations to rapidly conduct critical RDT&E and provide innovative products to fill their capability gaps.

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026	FY 2027
Title: Advanced Analytic (AA) Description: The Advanced Analytics (AA) subgroup's objective is to develop and deploy integrated analytic capabilities; enabling commanders, warfighters, and mission partners to share information and make better/faster decisions at the strategic, operational, and tactical levels. AA projects improve sense-making, decision-making, and data management across a range of mission areas. FY 2026 Plans: In FY 2026, the Advanced Analytic (AA) subgroup plans to initiate funding for four (4) projects in the area focused on 1) developing key enabling capabilities and deepen interoperability and 2) trusted artificial intelligence (AI) and autonomy, integrated network system-of-systems, microelectronics, and human-machine interfaces. Examples include, but are not limited to: • A capability to generate collision events from a curated Order of Battle (OOB) based on advertising technology (AdTech) data concerning key adversarial nations. • Develop a full package software version of the Exploitable Conditions Model and process, utilizing the existing "paper ECM" to develop an interactive web-application and enhance the model's utility (e.g., number of users, currency, analytic products) to output fully unclassified, shareable analytic pieces. • Develop an enterprise continuity software that facilitates tracking of Principals eligible for succession, provides executable rapid contingency plans for the Secretary of War and the OSW, ensures readiness of alternate sites, provides a relational database, leverages existing data on pre-existing rapid contingency plans, provides continuity program readiness status, identifies risks, and recommends actions to mitigate risks. In FY 2026, the AA subgroup plans to continue funding two (2) projects in areas focused on 1) developing key enabling capabilities and deepen interoperability and 2) trusted artificial intelligence (AI) and autonomy, integrated network system-of-systems, microelectronics, and human-machine interfaces. These projects are:		8.065	7.882	-

Appropriation/Budget Activity 0400 / 3		R-1 Program Element (Number/Name) PE 0603122D8Z / <i>Combating Terrorism Technology Support</i>		Project (Number/Name) 484 / <i>Combating Terrorism Technology Support (CTTS)</i>	
B. Accomplishments/Planned Programs (\$ in Millions)			FY 2025	FY 2026	FY 2027
• An enterprise tool for the Joint Force to develop competitive strategies and plans supporting on-going, integrated campaigns designed to deter aggression and provide the United States with influence, advantage, and leverage to secure strategic objectives. • Investigate methods of information extraction via Large Language Models (LLMs) that don't rely on visual cues, fine-tune LLMs to still ignore the noise and generalize out obfuscated input, and develop algorithms that help the LLM identify textual cues instead of breaking on visual noise. In FY 2026, the AA Subgroup plans to complete funding of six (6) projects in areas focused on 1) developing our warfighting capabilities with Allies and partners, and 2) trusted artificial intelligence and autonomy, integrated network system-of-systems, microelectronics, and human-machine interfaces. Examples include, but are not limited to: • A GIS-based terrain analytics module which employs AI / ML tools to automate mission planning and provides a first level analysis on terrain for the commander based on information from a data management and fusion engine. • An integrated operational planning and decision aid tool that leverages modern artificial intelligence and machine learning (AI/ML) to provide advance operational planning and decision aid (e.g., near-real-time route planning, engagement strategies, targeting recommendations, fires coordination, sensor fusion, and courses of action). • Improve the detection and geolocation of Unknown RF signals. Currently Adversarial Covert Communications Detection lack the fluidity required across different environments and post-mission reporting and analysis. This requires an enhanced version of the STORM/EWST/MELIAN Electronic Warfare Support System. • A forward deployed threat detection system to support detection of enemy radio frequency (RF) targeting and tracking capabilities. Special Forces detachments require distributed RF sensors to provide ubiquitous electronic warfare/electronic intelligence (EW/ELINT) sensing and geo-location. • An AI-based solution will detect and plug firewall breaches, and search for compromised data including: identification of relevant threat surfaces and dark web sources; automated scanning of identified sources; analysis techniques to identify data dump locations; alerting tools for new or likely data dumps; potential methods for data dump removal; consideration of additional techniques providing advanced warning of data breaches. FY 2026 to FY 2027 Increase/Decrease Statement: This decrease is a direct result of the transition of legacy Irregular Warfare Technical Support Directorate (IWTSD) subgroup activities to the newly established Capability Development and Innovation (CD&I) directorate. In FY 2027, ongoing and future research and development related to Advanced Analytic (AA) will be integrated and managed within either the Irregular Warfare Capability Development (IWCD) or Assessment, Prototyping, and Experimentation (APEX) division, ensuring alignment with broader strategic priorities and streamlined resource allocation. While direct funding for this specific subgroup ceases, the underlying capabilities and focus areas are maintained and enhanced through the CD&I structure,

contributing to the organization's commitment to rapidly fill critical capability gaps for U.S. Special Operations Forces, other military operators, intelligence analysts, and first responders.					
Title: Advanced Development (AD) Description: The Advanced Development (AD) Subgroup's objective is to protect, support, and enhance the Department of War (DoW) and joint operations resiliency in the cyber domain. The AD subgroup focuses on cybersecurity and not only develops, tests, and delivers emerging technology to enhance defensive cyber operations, but also provides technical advice and security assessment support to the other IWTSD subgroups. Nearly every capability that Irregular Warfare Technical Support Directorate (IWTSD) develops has an information technology component to it, which means nearly every capability also has a cybersecurity aspect to it as well. The AD subgroup works across IWTSD to iteratively integrate cybersecurity throughout capability development, facilitating delivery of hardened and resilient systems to our end users. FY 2026 Plans: In FY 2026, the Advanced Development (AD) subgroup plans to continue funding five (5) projects focused on 1) building resilience in the cyber domain; 2) developing our warfighting capabilities with Allies and partners; and 3) developing key enabling capabilities and deepening interoperability. These projects include: • A secure development, testing, and assessment environment to facilitate enhanced cyber hardening of IWTSD sponsored capabilities. • A security analysis and reliability evaluation tool that virtualizes target hardware systems and emulates embedded software systems to facilitate penetration testing and vulnerability detection. • A cyber range that simulates advanced persistent threat (APT) communications to facilitate the development and testing of detection algorithms. • An unintrusive vulnerability and anomaly detection tool for operational technology in air-gapped environments. • Technical and cybersecurity support for IWTSD capability development to enable accelerated testing, fielding, integration, accreditation, and transition of secure prototypes and systems to end users. FY 2026 to FY 2027 Increase/Decrease Statement: This decrease is a direct result of the transition of legacy Irregular Warfare Capability Development (IWTSD) subgroup activities to the newly established Capability Development and Innovation (CD&I) directorate. In FY 2027, ongoing and future research and development related to Advanced Development (AD) will be integrated and managed within either the Irregular Warfare Capability Development (IWCD) or Assessment, Prototyping, and Experimentation (APEX) division, ensuring alignment with broader strategic priorities and streamlined resource allocation. structure, contributing to the organization's commitment to rapidly fill critical capability gaps for U.S. Special Operations Forces, other military operators, intelligence analysts, and first responders.			
Title: Chemical, Biological, Radiological, Nuclear, and Explosives (CBRNE) Description: The Chemical, Biological, Radiological, Nuclear, and Explosives (CBRNE) Subgroup's objective is to improve defense capabilities to meet tomorrow's CBRNE threats. The subgroup focuses on threat characterization; materials attribution; personal protective equipment; detection of CBRNE materials at trace and bulk levels at point, proximity and stand-off distances; development of information resources and decision support tools to assist response elements with risk-based decision making; and consequence management for post-event activities. FY 2026 Plans: In FY 2026, the Chemical, Biological, Radiological, Nuclear, and Explosives (CBRNE) Subgroup plans to continue funding 12 projects in areas focused on: 1) Integrated deterrence in close collaboration with our counterparts across the U.S. Government and with Allies and partners; 2) Developing key enabling capabilities, and deepening interoperability; 3) Contributing to a future force that must be lethal, sustainable, resilient, survivable, agile, and responsive; 4) Seeding opportunities in biotechnology, quantum science, advanced materials, and clean-energy; 5) Rapid experimentation, acquisition, and fielding. Examples include, but are not limited to: • Development of a mobile system capable of rapidly decontaminating the interior of aviation platforms with minimum man-power in far forward base operations. • Development of next generation system for the rapid detection of explosives and weapons in a variety of CONOPS. In FY 2026, the CBRNE Subgroup plans to complete funding 32 projects in areas focused on: 1) Integrated deterrence in close collaboration with our counterparts across the U.S. Government and with Allies and partners; 2) Developing key enabling capabilities, and deepening interoperability; 3) Contributing to a future force that must be lethal, sustainable, resilient, survivable, agile, and responsive; 4) Rapid experimentation, acquisition, and fielding; and 5) Seeding opportunities in biotechnology, quantum science, advanced materials, and clean-energy technology. Examples include, but are not limited to: • Development of disposable, low size, weight, power, and cost (SWAP-C), and networked chemical sensors for the autonomous detection of CWAs, TICs, LEL, and oxygen deficient environments at stand-off. • Development of a single-plex microfluidic device based on CRISPR-Cas detection mechanism to provide a cost effective, sensitive, and rapid point-of-need testing platform that is field-forward and doesn't require cold chain storage of components • Development of a canine training aid for the detection of fentanyl and the evaluation of generalized detection across analogs of fentanyl. • Development of an antibody based explosive trace detector with the selectivity and sensitivity of a desktop system, but with the light logistic burden of colorimetric detection systems		9.032	9.117

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
• Development of an unmanned aerial system payload to automatically detect, identify, and map chemical plumes for a wide variety of chemical threats and across large areas FY 2026 to FY 2027 Increase/Decrease Statement: This decrease is a direct result of the transition of legacy Irregular Warfare Capability Development (IWTSD) subgroup activities to the newly established Capability Development and Innovation (CD&I) directorate. In FY 2027, ongoing and future research and development related to Chemical, Biological, Radiological, Nuclear, and Explosives (CBRNE) will be integrated and managed within either the Irregular Warfare Capability Development (IWCD) or Assessment, Prototyping, and Experimentation (APEX) division, ensuring alignment with broader strategic priorities and streamlined resource allocation. While direct funding for this specific subgroup ceases, the underlying capabilities and focus areas are maintained and enhanced through the CD&I structure, contributing to the organization's commitment to rapidly fill critical capability gaps for U.S. Special Operations Forces, other military operators, intelligence analysts, and first responders.			
Title: Expeditionary Force Protection (EFP) Description: The Expeditionary Force Protection (EFP) subgroup's objective is to rapidly develop and transition expeditionary force protection capabilities and technologies to support forward deployed and domestic military, international partners, interagency and first responders for force protection and subterranean activities. The technology development efforts will focus on expeditionary advance based operations, forward operating bases, subterranean operations, counter-tunnel, and maritime port and littoral environments. FY 2026 Plans: In FY 2026, the Expeditionary Force Protection (EFP) subgroup plans to initiate funding two (2) projects in areas focused on 1) Gaining and sustaining military advantages, 2) Developing warfighting capabilities together with those of our Allies and partners, 3) Develop key enabling capabilities, and deepen interoperability, and 4) Integrated deterrence with counterparts across USG and Allies and Partners. Examples include, but are not limited to: • A joint project to collaboratively characterize adversary weapons, evaluate simulation tools for predicting their effects, assess risks to key assets, and identify gaps for future research. • A floating system that can automatically deploy and recover a subsurface barrier capable of stopping Group 1 and Group 2 Unmanned Underwater Vehicles (UUVs) for homeland defense In FY 2026, the Expeditionary Force Protection (EFP) subgroup plans to continue funding three (3) projects in areas focused on 1) Integrated deterrence with counterparts across USG and Allies and Partners, 2) Gaining and sustaining military advantages, 3) Developing our warfighting capabilities together with those of our Allies and partners, 4) Sharpening the Joint Force's technological edge, 5) Developing key enabling capabilities, and deepening interoperability, 6) Developing new capabilities, including long-range strike, undersea, hypersonic, and autonomous systems, and improving intelligence and information sharing,		6.475	6.032

devices. The EOD/EXO Subgroup identifies and prioritizes multi-agency end-user requirements in collaboration with military units. EOD/EXO actively works with vendors and end-users to deliver advanced prototype systems that provide greater efficiency and increased safety for Bomb Technicians who investigate, access, evaluate, and if needed, render safe or dispose of suspect devices. FY 2026 Plans: In FY 2026, the Explosive Ordnance Disposal / Explosive Operations (EOD/EXO) Subgroup plans to continue funding four (4) projects in the area focused on: 1) Integrating data, software, and artificial intelligence efforts and speed their delivery to the warfighter. Examples include, but are not limited to: • Development of a comprehensive and shareable dataset that will include multi-angle photographs and x-ray images of IEDs and IED components to augment future development of artificial based IED threat recognition software. • Development of an EOD/UXO HUD that provides the EOD technician with an efficient and effective means for conducting post-conflict, wide area remediation and clearance of landmines, unexploded ordnance, bulk explosives, IEDs and other ERW. The HUD provides the EOD technician with the ability to receive information on UXOs, ordnance items, and ERW while operating down range. • Development of an AI software tool to reverse engineer a PCB to exploit the IED. The tool enhances the EOD technician's decision-making process when faced with an unknown PCB and provides the ability to understand unknown PCBs and circuit functionality in an IED before attempting a render safe procedure (RSP). • Development of an AI hardware tool to assist EOD technicians in analyzing, rendering-safe, storing, replicating, and manipulating conventional ordnance and IEDs circuits through hardware-in-the-loop connections. In FY 2026, the EOD/EXO Subgroup plans to complete funding five (5) projects in areas focused on: 1) Integrating data, software, and artificial intelligence, and speed their delivery to the warfighter; 2) Developing key enabling capabilities and deepening interoperability. 3) Developing our warfighting capabilities together with those of our Allies and partners. Examples include, but are not limited to: • Develop tools and procedures used to explosively breach structures and dispose of ordnance items without causing a high order detonation. • Design and develop a remote exploitation and disassembly system (REDS) to x-ray, manipulate, and interrogate an improvised explosive device (IED) in a controlled environment. FY 2026 to FY 2027 Increase/Decrease Statement: This decrease is a direct result of the transition of legacy Irregular Warfare Capability Development (IWTSD) subgroup activities to the newly established Capability Development and Innovation (CD&I) directorate.

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2025	FY 2026	FY 2027
In FY 2027, ongoing and future research and development related to Explosive Ordnance Disposal / Explosive Operations (EOD/EXO) will be integrated and managed within either the Irregular Warfare Capability Development (IWCD) or Assessment, Prototyping, and Experimentation (APEX) division, ensuring alignment with broader strategic priorities and streamlined resource allocation. While direct funding for this specific subgroup ceases, the underlying capabilities and focus areas are maintained and enhanced through the CD&I structure, contributing to the organization's commitment to rapidly fill critical capability gaps for U.S. Special Operations Forces, other military operators, intelligence analysts, and first responders.					
Title: Human Performance and Training (HPT) Description: The Human Performance and Training (HPT) subgroup's objective is to provide Special Operations Forces (SOF), Department of War, and interagency partners with agile, rapid response, research and development capabilities for optimizing performance in the operational environment and increasing readiness for tomorrow's threats. To meet this objective, the subgroup develops human-centered technologies that are performance outcome focused in the areas of immersive learning technology, human performance optimization, and innovative training and educational concepts. HPT's capabilities are implemented globally to prepare for critical missions in any operational environment to identify, disrupt, and defeat threats. FY 2026 Plans: In FY 2026, the Human Performance and Training (HPT) subgroup plans to initiate funding five (5) projects in areas focused on gaining and sustaining military advantages. Examples include, but are not limited to: • A course that provides technical expertise in leading efforts and advising leadership in tactics and training related to robotics and UXS systems for Special Operations Forces. • A small man portable storage device that keeps blood viable for transfusions for 96 hours during combat missions. In FY 2026, the HPT subgroup plans to continue funding two (2) projects in areas focused on 1) gaining and sustaining military advantages, and 2) developing our warfighting capabilities together with those of our Allies and partners. Examples include: • A specialized tactical cUAS training program that provides a variety of training courses on original equipment, non-original equipment, and foreign mobile and dismounted cUAS equipment within a realistic and genuine tactical setting. • A virtual reality-based training system for Military Working Dog Handles that includes complex scenarios to develop individual skills and enhance operational readiness. In FY 2026, the HPT subgroup plans to complete funding six (6) projects in areas focused on gaining and sustaining military advantages and developing our warfighting capabilities together with those of our Allies and partners. Examples are: • An augmented reality system for increased training realism of high-risk scenarios through the mixing of real-world environments and virtual objects/entities. • A program of instruction (POI) that teaches basic jungle tactics and provides a common-core institutional knowledge base regarding the type of warfare encountered against peer threats in SOUTHCOM and INDOPACOM. FY 2026 to FY 2027 Increase/Decrease Statement:			7.590	7.645	-

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
This decrease is a direct result of the transition of legacy Irregular Warfare Capability Development (IWTSD) subgroup activities to the newly established Capability Development and Innovation (CD&I) directorate. In FY 2027, ongoing and future research and development related to Human Performance and Training (HPT) will be integrated and managed within either the Irregular Warfare Capability Development (IWCD) or Assessment, Prototyping, and Experimentation (APEX) division, ensuring alignment with broader strategic priorities and streamlined resource allocation. While direct funding for this specific subgroup ceases, the underlying capabilities and focus areas are maintained and enhanced through the CD&I structure, contributing to the organization's commitment to rapidly fill critical capability gaps for U.S. Special Operations Forces, other military operators, intelligence analysts, and first responders.			
Title: Influence and Information Capabilities (I2C) Description: The Influence and Information Capabilities (I2C) subgroup's objective is to develop new concepts and capabilities for warfighters and interagency partners. In accordance with the National Defense Strategy, projects emphasize preparation to defeat adversaries, including great powers' proxies and irregular surrogates, and succeed in a wide range of contingencies in both physical and informational domains. To establish and reinforce irregular warfare (IW) as a core competency, I2C will pursue innovative projects to enhance information forces' abilities to assess, monitor and evaluate influence activities, deliver information and influence, and integrate information and influence activities from tactical to strategic levels. FY 2026 Plans: In FY 2026, the Influence and Information Capabilities (I2C) subgroup plans to initiate funding four (4) projects in areas focused on 1) integrating data, software, and artificial intelligence (AI) efforts and speed their delivery to the warfighter, 2) sustaining and strengthening U.S. deterrence, with the People's Republic of China as the pacing challenge, and 3) Develop new capabilities, including long-range strike, undersea, hypersonic, and autonomous systems, and improve intelligence and information sharing, and the integration of non-kinetic tools. Examples include, but are not limited to: • Designing, testing, and evaluating a tool with the capability to precisely deliver small payloads to specified areas would allow operators to inform and influence targeted audiences that currently cannot be accessed with allied messages. • Designing, testing, and evaluating a system to measure effects in the information environment by leveraging advanced AI techniques, primary data collection, and multi-source data integration. In FY 2026, the I2C subgroup plans to complete funding five (5) projects in areas focused on 1) integrating data, software, and artificial intelligence (AI) efforts and speed their delivery to the warfighter, and 2) sharpening the Joint Force's technological edge. These projects include: • Developing a prototype system that enables the generation of highly targeted, effective, and adaptable content at unprecedented speed and scale		5.962	6.687

• Evaluating the effectiveness and efficiency of AI-powered content creation and survey development tools, compared to traditional human-developed content and surveys FY 2026 to FY 2027 Increase/Decrease Statement: This decrease is a direct result of the transition of legacy Irregular Warfare Capability Development (IWTSD) subgroup activities to the newly established Capability Development and Innovation (CD&I) directorate. In FY 2027, ongoing and future research and development related to Influence and Information Capabilities (I2C) will be integrated and managed within either the Irregular Warfare Capability Development (IWCD) or Assessment, Prototyping, and Experimentation (APEX) division, ensuring alignment with broader strategic priorities and streamlined resource allocation. While direct funding for this specific subgroup ceases, the underlying capabilities and focus areas are maintained and enhanced through the CD&I structure.			
Title: Protection, Survivability, and Recovery (PSR) Description: The Protection, Survivability, and Recovery (PSR) subgroup's objective is to develop new equipment, standards, reference tools, and emerging counter-uncrewed system (C-UxS) technologies, to improve the protection of personnel and critical infrastructure. Projects focus on leveraging innovative technologies such as automated information management systems, communication devices, tagging, tracking, and locating devices, mobile surveillance systems, personal and vehicle protection equipment, as well as UxS detection and mitigation systems included directed energy (DE) to enhance protection and survivability of personnel. FY 2026 Plans: In FY 2026, the Protection, Survivability, and Recovery (PSR) subgroup plans to continue funding six (6) projects in areas focused on 1) integrated deterrence means using every tool at the Department's disposal, in close collaboration with our counterparts across the U.S. Government and with Allies and partners, 2) gaining and sustaining military advantages, and 3) sharpening the Joint Force's technological edge. Examples include, but are not limited to: • Develop a UAS platform that can detect UAS up and down links that will utilize seeker aided guidance to interdict adversary UAS or the remote operator with a lethal payload. • Develop a tactical range force protection HPM system with harmonic detection designed to be towed/transported by a NATO vehicle platform for hard kill defeat of CUAS. For FY 2026, the PSR subgroup plans to complete funding fifteen (15) projects using in areas focused on 1) gaining and sustaining military advantages, 2) developing our warfighting capabilities together with those of our Allies and partners, 3) sharpening the Joint Force's technological edge, 4) improving the speed and accuracy of detection and targeting, 5) the future force must be lethal, sustainable, resilient, survivable, agile, and responsive, 6) rapid experimentation, acquisition, and fielding,		5.065	5.696

Title: Surveillance, Collection and Operations Support (SCOS) Description: The Surveillance, Collection, and Operations Support (SCOS) Subgroup's objective is to identify high-priority user requirements and special technology initiatives. SCOS projects enhance U.S. intelligence capabilities to conduct retaliatory or preemptive operations and reduce the capabilities and support available to our adversaries with China as the Pacing Threat, Russia as the Acute Threat, and Violent Extremist Organizations. FY 2026 Plans: In FY 2026, the Surveillance, Collection, and Operations Support (SCOS) Subgroup plans to initiate thirteen (13) projects in areas focused on: 1. Gain and sustain military advantages; 2. Developing our warfighting capabilities together with those of our Allies and partners; 3. Improving the speed and accuracy of detection and targeting; 4. Information and Decision Advantage; 5. Command, Control, Communications and Computer Systems; 6. Information and Decision Advantage; 7. Key Operational Problems; and 8. Integrated Electronic Warfare and Directed Energy. Examples include, but are not limited to: • A project to develop a concealable and water-resistant system capable of collecting and exploiting signals of interest.		11.214	-

Title: Tactical Offensive Support (TOS)			12.093	12.680	-

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2027 Office of the Secretary Of Defense			Date: April 2026		
Appropriation/Budget Activity 0400 / 3		R-1 Program Element (Number/Name) PE 0603122D8Z / Combating Terrorism Technology Support		Project (Number/Name) 484 / Combating Terrorism Technology Support (CTTS)	
B. Accomplishments/Planned Programs (\$ in Millions)			FY 2025	FY 2026	FY 2027
Description: The Tactical Offensive Support (TOS) Subgroup's mission is to execute rapid research and development projects and deliver superior capabilities with training to DoW and Interagency special operations tactical teams. The development focus is enabling small tactical units by providing state of the art overmatch capabilities in: Offensive Systems; Tactical Communications; Tactical Reconnaissance, Surveillance, and Target Acquisition Systems; and Specialized Infiltration, Access and Exfiltration Systems. FY 2026 Plans: In FY 2026 the Tactical Offensive Support (TOS) Subgroup plans to initiate six (6) new projects in areas focused on increasing lethality and enhancing survivability by: 1. Sharpening the Joint Force's technological edge; 2. Contributing to a future force that must be lethal, sustainable, resilient, survivable, agile, and responsive; 3. Gaining and sustaining military advantages; 4. Development of key enabling capabilities and deepening interoperability, and 5. Developing our warfighting capabilities together with those of our Allies and partners. These projects are: • An advanced, cyber-hardened, AI-enabled scalable and modular drone kit. • An armor piercing incendiary round with greater accuracy than current inventories. • A field ballistic lab that deploys with Operators that provides small arms performance data. • Enhanced sniper rifle barrels that maintain accuracy while providing longer lifespan. • An offensive, cyber-hardened electric switch for small UAS to accurately drop lethal payloads. • A conversion kit that allows a new caliber rifle to use strategic stockpiles of 5.56 NATO ammo. In FY 2026 the TOS Subgroup plans to continue funding eight (8) projects in areas focused on increasing lethality and enhancing survivability by: 1. Improving the speed and accuracy of detection and targeting; 2. Developing our warfighting capabilities together with those of our Allies and partners; 3. Gaining and sustaining military advantages; 4. Fueling research and development for advanced capabilities, including directed energy, hypersonics, integrated sensing, and cyber; 5. Sustaining and strengthening U.S. deterrence, with the People's Republic of China as the pacing challenge; 6. Trusted artificial intelligence and autonomy, integrated network system-of-systems, microelectronics, space, renewable energy generation and storage, and human-machine interfaces; 7. Development of key enabling capabilities and deepening interoperability and 8. Contributing to a future force that must be lethal, sustainable, resilient, survivable, agile, and responsive. Examples include, but are not limited to: • A low cost, hand-launched and recovered, fast Vertical Take-off and Landing (VTOL) loitering munition that employs Electro-Optical and Infrared sensors for both day and night operations to improve SOF force protection and rapid attack capability. • A tailored, portable laser with an internal power source and cooling system, optimized for weight and accurate target engagement, capable of multiple aimed energy pulses at varying strengths that create damaging or disorienting effects on specified materials or infrastructure nodes and systems at close, medium and long ranges, without the threat of being detected by the enemy.

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026	FY 2027
• A next-generation NDAA compliant, cyber-hardened offensive UAS using assured navigation and network communications, integrated AI, operator-controlled autonomy and advanced-lethality payloads that can fly, identify and destroy targets unhindered by current and evolving counter-UAS defenses. • An unmanned quadruped platform integrated with weapon payloads and advanced external optics to provide remote ground reconnaissance, surveillance, close to medium-range AI-enabled target acquisition, and direct action using 40mm and 12-gauge ammunition. In FY 2026 the TOS Subgroup plans to complete sixteen (16) projects in areas focused on increasing lethality and enhancing survivability by: 1. Developing our warfighting capabilities together with those of our Allies and partners; 2. Gaining and sustaining military advantages; 3. Improving the speed and accuracy of detection and targeting; 4. Sustaining and strengthening U.S. deterrence, with the People's Republic of China as the pacing challenge; 5. Development of key enabling capabilities and deepening interoperability; 6. Contributing to a future force that must be lethal, sustainable, resilient, survivable, agile, and responsive; 7. Sharpen the Joint Force's technological edge; and 8. Integrating data, software, and artificial intelligence efforts and speeding their delivery to the warfighter. Examples include, but are not limited to: • A next-generation lightweight machine gun tripod that facilitates rapid emplacement, increased accuracy with improved traverse and elevation, reduces overall operational load and is compatible with all current and future weapons platforms. • An advanced intermediate-caliber cartridge, side-fed Assault Machine Gun (AMG) that allows machine gunners to provide improved effective volumes of fire and on-target performance at increased ranges. • A ballistically matched Multi-Purpose Round (MPR) that allows shooters to transition from match grade rounds to MPR ammunition. • An unmanned quadrupedal system that provides operators with the ability to detect, track and accurately engage targets at extended ranges with small arms in hostile environments. FY 2026 to FY 2027 Increase/Decrease Statement: This decrease is a direct result of the transition of legacy Irregular Warfare Capability Development (IWTSD) subgroup activities to the newly established Capability Development and Innovation (CD&I) directorate. In FY 2027, ongoing and future research and development related to Tactical Offensive Support (TOS) will be integrated and managed within either the Irregular Warfare Capability Development (IWCD) or Assessment, Prototyping, and Experimentation (APEX) division, ensuring alignment with broader strategic priorities and streamlined resource allocation. While direct funding for this specific subgroup ceases, the underlying capabilities and focus areas are maintained and enhanced through the CD&I structure, contributing to the organization's commitment to rapidly fill critical capability gaps for U.S. Special Operations Forces, other military operators, intelligence analysts, and first responders.

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2025	FY 2026	FY 2027
Description: Conduct operational testing and evaluation of innovative technologies for Secretariat for Special Operations (SSO) Capability Development and Innovation (CD&I). Support SOF, DoW, the interagency, and international partners through live demonstrations and structured assessments. Provide insight and input into DoW-wide exercises and identify opportunities to inject SSO CD&I prototypes and capabilities. FY 2027 Plans: Establish a functional framework for planning, executing, and evaluating prototypes and software developed assessments under Secretariat for Special Operations (SSO) Capability Development and Innovation (CD&I), supporting SOF and partner force capability integration. • Integrate prototypes into recurring global test events. • Align assessment events with the IWCD project development cycle. • Build partnerships and expand networks with partner nations in collaboration with GIP. • As necessary, facilitate live demonstrations and structured data collection reports to inform acquisition or refinement. • Conduct algorithm and software evaluations. FY 2026 to FY 2027 Increase/Decrease Statement: This increase is a direct result of the transition of legacy Irregular Warfare Capability Development (IWTSD) subgroup activities to the newly established Capability Development and Innovation (CD&I) directorate and the strategic realignment of R&D efforts within the IWCD and APEX divisions. The consolidation of resources previously allocated to individual subgroups allows for a more integrated and efficient approach to capability development and experimentation. This includes the absorption of key focus areas from legacy subgroups, ensuring the continued advancement of critical capabilities for U.S. Special Operations Forces, other military operators, intelligence analysts, and first responders, while optimizing resource allocation and streamlining processes.

with those of our Allies and partners, 4) Sharpening the Joint Force's technological edge, 5) Developing key enabling capabilities, and deepening interoperability, 6) Developing new capabilities, including long-range strike, undersea, hypersonic, and autonomous systems, and improving intelligence and information sharing, and the integration of non-kinetic tools, 7) Improving the speed and accuracy of detection and targeting. Examples include, but are not limited to: • Development of a subterranean tactical room clearing marker with additional sensors and communications reach back for force protection. • Development of a Small Autonomous Unmanned Aerial System (S-UAS), delivered through a borehole and capsule, or by hand launch, to reconnoiter and map large expanses of subterranean facilities. • Development of an advanced exothermic capability, providing a Liquid Oxygen conversion to pure oxygen for exothermic entry into specific subterranean/hard target defeat targets. • Development, integration and operational test and evaluation of an extended coverage system for border protection. • Development of an aerial magnetic system for detection of subterranean targets.			
Congressional Add: US-Israel Cooperation to Counter Unmanned Aerial Systems (CUAS) including Directed Energy and Laser Technology FY 2025 Accomplishments: In FY 2025, the team funded seven (7) projects using FY25 Counter Unmanned Aerial Systems (CUAS) funding in areas focused on 1) developing our warfighting capabilities together with those of our Allies and partners, 2) developing key enabling capabilities, and deepen interoperability, 3) fueling research and development for advanced capabilities, including DE, hypersonics, integrated sensing, and cyber, and 4) trusted artificial intelligence and autonomy, integrated network system-of-systems, microelectronics, space, renewable energy generation and storage, and human-machine interfaces. Examples include, but are not limited to: • Develop a miniaturized missile for use in dismounted C-UAS operations. "Mini Missile" will be designed to remain at low costs and with enhance maneuverability. • Develop, test, and evaluate ammunition solutions that will defeat adversary UAS. This technology will provide a capability for deployment with small combat units that enable flexibility and a defense in depth. • Test and evaluate a system's ability to detect, classify, and geolocate UAS frequencies and signals emitted at low power in a deployed environment. In FY 2025, the team funded nine (9) projects using FY25 CUAS funding in areas focused on 1) developing our warfighting capabilities together with those of our Allies and partners, 2) developing key enabling capabilities,		55.000	75.000

and deepen interoperability, 3) fueling research and development for advanced capabilities, including DE, hypersonics, integrated sensing, and cyber, and 4) trusted artificial intelligence and autonomy, integrated network system-of-systems, microelectronics, space, renewable energy generation and storage, and human-machine interfaces. Examples include, but are not limited to: • Develop an organic low SWAP-C capability that counters UxS regardless of communication and navigation modality by degrading or destroying the immutable characteristic of all robotic systems. • Develop a dual-capability C-UAS system onto an RWS. • Develop a UAS platform that can detect UAS up and down links that will utilize seeker aided guidance to interdict adversary UAS or the remote operator with a lethal payload. FY 2026 Plans: In FY 2026, the Protection, Survivability, and Recovery (PSR) subgroup plans to initiate funding seventeen (17) projects using FY26 CUAS funding in areas focused on 1) developing our warfighting capabilities together with those of our Allies and partners, 2) developing key enabling capabilities, and deepen interoperability, 3) fueling research and development for advanced capabilities, including DE, hypersonics, integrated sensing, and cyber, and 4) trusted artificial intelligence and autonomy, integrated network system-of-systems, microelectronics, space, renewable energy generation and storage, and human-machine interfaces. Examples include, but are not limited to: • Detect and Defeat CUxS system to defeat UxS Systems operating without transmissions. • Sensor fusion capability to unite multiple sensors to ease burden on operator. • Enhance high altitude airborne C-UAS capability. Conduct OT&E on SW Border. • Enhance littoral security utilizing UAS platform to counter USV and UAVs. In FY 2026, the PSR subgroup plans to continue funding thirteen(13) projects using FY26 CUAS funding in areas focused on 1) integrated deterrence means using every tool at the Department's disposal, in close collaboration with our counterparts across the U.S. Government and with Allies and partners, 2) gaining and sustaining military advantages, and 3) sharpening the Joint Force's technological edge. Examples include, but are not limited to: • Develop a low SWAP-C localized C-UAS HPM capability that disables or destroys adversarial sUAS. Form factor will meet modular design requirements to serve as a platform agnostic capability. System will provide operators with a non-kinetic defeat option for engaging adversarial sUAS while maintaining friendly elements composition and disposition.

A. Mission Description and Budget Item Justification

This program supports the Department of War (DoW) initiatives to Defend the Homeland, Deter Strategic and Regional Aggression, rebuild the Joint Force and rebuild a resilient defense ecosystem.

The Foreign Comparative Testing (FCT) program supports the department's initiatives by testing mature equipment, munitions, and technologies of U.S. allies and partners. The program verifies the performance and validates the ability of foreign products to; satisfy U.S. military requirements, correct operational deficiencies, or meet other U.S. requirements. By leveraging the Research & Development (R&D) investments of international allies and partners, FCT program enables U.S. RDT&E funding to be applied to critical technology areas avoiding duplicative R&D efforts and accelerates delivery of capability to the warfighter. The results of the programs testing informs and accelerates the Services and Agencies acquisition decisions. Additionally, participation in the FCT program conveys the legal authority (Title 10, U.S. Code, Section 2350a(g)) for the Service or Agency to move immediately to procurement where appropriate, which further accelerates the DoW acquisition process.

The FCT Program's broad reach across our allies and friendly foreign countries enables the acquisition of innovative, cost effective, and interoperable solutions to meet the needs communicated by the Military Services, US Special Operations Command (USSOCOM), Joint Chiefs of Staff and Combatant Commanders, and other US Government Agencies.

FCT strengthens alliances by evaluating technologies that increase military interoperability with our allies. The program serves as a catalyst for teaming between the militaries and business sectors of the U.S. and each participating partner nation. To date, companies from 35 states have benefited from FCT projects by partnering for licensed production of a qualified foreign item in the United States creating jobs, contributing to local economies, and strengthening the U.S. defense production base.

Measurable Outcomes: Over its 47-year history, FCT has a transition rate of 60 percent (535 out of 891) for completed projects. Of the 535 projects that tested successful, 384 or 71.8 percent resulted in follow-on procurements of over \$15 billion. The remaining 151 updated Military Specifications, Military Standards, Requirements Documents for Programs of Record (POR), and for future/developmental acquisition efforts.

In FY 2026, FCT organized sub-projects by focus areas aligned to specific, persistent capability gaps. Aligning investments by focus areas allows Prototyping and Experimentation (P&E) to rapidly respond to urgent and emergent requirements at the speed of relevance. Focus areas include:

UNCLASSIFIED

Exhibit R-2, RDT&E Budget Item Justification: PB 2027 Office of the Secretary Of Defense		Date: April 2026
Appropriation/Budget Activity 0400: Research, Development, Test & Evaluation, Defense-Wide / BA 3: Advanced Technology Development (ATD)	R-1 Program Element (Number/Name) PE 0603133D8Z / Foreign Comparative Testing	
- Kill Web Interoperability: The processes by which Joint Force Commanders plan, direct, coordinate, and control forces to accomplish assigned missions and enable Joint Kill webs. - Resilient Communications: The ability to maintain hardened mission-capable systems that allow for secure freedom of communications in contested electromagnetic spectrum environments. This includes alternate position, navigation, and timing. - Sensors and Data Analytics: Networks of sensors and data collection assets, data analysis, and dissemination resources used to provide information to the Joint Force about strategic and tactical threats. - Collaborative Multi-Domain Autonomy: The use of multi-domain uncrewed systems and autonomy to increase warfighting capabilities and to mitigate/negate risk to warfighters. - Contested Logistics / Sustainment: The coordinated use, synchronization, and often sharing of logistics resources to deploy, support, and sustain highly dispersed Joint Forces in highly contested environments. This also includes other sustainment areas such as supply chain reduction efforts; additive manufacturing; operational/tactical water purification; and sustainment and transportation innovations. - Weapons Kinetic/Non-Kinetic Effects: The delivery of weapon systems and long-range kinetic and non-kinetic effects in support of Joint offensive and defensive tasks to create specific lethal effects on a target. This area includes counter position, navigation, and timing; and techniques designed to deceive enemy observers and/or mitigate, disrupt, or negate adversary capabilities. - Emerging Prototypes and Enablers: Supports the acceleration of DoW, Combatant Command (CCMD), and Service priority efforts which provide unique capability and/or address critical gaps. This focus area incorporates Combat Support/Combat Enablers; Special Forces Capabilities; Medical Technologies/Devices; Special Access Program assimilation and operational management; prototyping through small business and non-traditional pathways; and the rapid development of technologies for inclusion in experimentation venues.

A. Mission Description and Budget Item Justification

The Foreign Comparative Testing (FCT) Program supports projects evaluating already developed technologies by Partner Nations, verifying performance and validating capability to meet U.S. needs. In doing so, the FCT program directly aligns to the National Defense Strategy (NDS) through increasing joint lethality in contested environments, strengthening partnerships, and fostering reform through delivery of capability at the speed of relevance. FCT individual projects typically average less than \$1.00 million each and complete within 12-36 months. Projects are proposed by the Military Services and U.S. Special Operations Command (USSOCOM), and other U.S. Government agencies. Projects are selected using a merit-based process that identifies the most promising, innovative, and cost-effective solutions to meet warfighter requirements. Project selection process emphasizes transitioning technologies into current or future programs of record. Selection is also based on the potential to yield cost, schedule, or performance improvements over existing capabilities.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: International Collaboration and Experimentation (ICE) (formerly ICE Focus Areas)	2.214	0.000	0.000
Description: The FCT program continues the campaign of cooperative and collaborative experimentation with allies and partners to evaluate applications of innovative foreign capabilities in response to changes in the global security environment. The focus and intent of these efforts are to develop flexible deterrent options and increase resiliency in the defense ecosystem by working even more closely with our network of allies and partners around the globe. The ICE effort will extend FCT testing into operational relevant environments to evaluate allied/partner nation technologies that address emerging DoW capability gaps and provide substantial cost, schedule, and/or performance benefit to the warfighter. Cooperative and collaborative experimentation will be aligned to the NDS and the OUSW R&E technology focus areas. ICE engagement efforts will concentrate on the NDS and Combatant Command priority nations.			
FY 2026 Plans: Funding decreases to zero as efforts be transition / listed by the Prototyping & Experimentation (P&E) focus areas.			
FY 2027 Plans: Funding decreases to zero as efforts be transition / listed by the P&E focus areas.			
FY 2026 to FY 2027 Increase/Decrease Statement: Funding decreases to zero as efforts be transition / listed by the P&E focus areas.			
Title: Kill Web Interoperability Focus Area	0.000	0.000	0.400

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2027 Office of the Secretary Of Defense			Date: April 2026		
Appropriation/Budget Activity 0400 / 3		R-1 Program Element (Number/Name) PE 0603133D8Z / <i>Foreign Comparative Testing</i>		Project (Number/Name) 313 / <i>Foreign Comparative Testing</i>	
B. Accomplishments/Planned Programs (\$ in Millions)			FY 2025	FY 2026	FY 2027
Description: FCT will select new projects to evaluate allied / partner nation technologies that address emerging DoW capability gaps, and typically provide substantial cost, schedule, and/or performance benefit to the warfighter. Evaluation will be aligned to the National Defense Strategy (NDS) and OUSW R&E focus areas. Kill Web Interoperability Focus Area explores the process by which Joint Force Commanders plan, direct, coordinate, and control forces to accomplish assigned missions and enable Joint kill webs. Individual efforts are identified and refined throughout the year of execution through interactions with international partners, industry, academia, Service representatives, and CCMDs. Prospective efforts are closely coordinated with the CCMDs and Services to deconflict, improve jointness, and increase transition to Service acquisition programs. Candidate prototype projects undergo a selection process that assesses joint warfighter impact, transition potential, and technical merit/feasibility. Selected sub-projects target key capabilities that enable leap-ahead improvements in Kill web Interoperability. FY 2026 Plans: No increase in funding as no suitable technologies were selected as FCT projects in FY 2026. FY 2027 Plans: Increase provides funding for critical Kill Web proposals, currently under assessment for FY 2027, which support Joint Kill Web Interoperability. FCT project selection for FY 2027 will occur May thru September 2026 enabling selection of emerging technologies for evaluation commencing in FY 2027. FY 2026 to FY 2027 Increase/Decrease Statement: In FY 2027, funding for Kill Web Interoperability efforts may increase if suitable projects that support this focus area are competitively selected.					
Title: Resilient Communications Focus Area Description: FCT will select new projects to evaluate allied/partner nation technologies that address emerging DoW capability gaps, and typically provide substantial cost, schedule, and/or performance benefit to the warfighter. Resilient Communications explores the ability to maintain hardened mission-capable systems that allow for secure freedom of communications in contested electromagnetic spectrum environments. This includes alternate positioning, navigation, and timing. Individual efforts are identified and refined throughout the year of execution through interactions with international partners, industry, academia, Service representatives, and CCMDs. Prospective efforts are closely coordinated with the CCMDs and Services to deconflict, improve jointness, and increase transition to Service acquisition programs. Candidate prototype projects undergo a selection process that assesses joint warfighter impact, transition potential, and technical merit/feasibility. Selected sub-projects target key capabilities that enable leap-ahead improvements in Resilient Communications.			2.804	1.075	2.896

Exhibit R-2A, RDT&E Project Justification: PB 2027 Office of the Secretary Of Defense		Date: April 2026	
Appropriation/Budget Activity 0400 / 3	R-1 Program Element (Number/Name) PE 0603133D8Z / <i>Foreign Comparative Test ing</i>	Project (Number/Name) 313 / <i>Foreign Comparative Testing</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
PNT Sensor Soldier Integration (Army): This project evaluates a wearable Position Navigation Timing (PNT) sensor, providing inertial measurement data to the DEVCOM C5ISR Soldier integrated Positioning system. This technology will provide dismounted soldiers position information in GPS degraded / denied environments. FASST - Fast-Mover Airborne Low Signature Services Transport (Navy/United States Marine Corps (USMC)): This project evaluates a Free Space Optics (FSO) air to ground link to assess future implementation on tactical aircraft. Objective of demonstration will be to assess throughput, latency, link stability under maneuvers to understand design trades on a surrogate aircraft (NAVAIR or NRL test Aircraft). Capability may provide low probability of intercept/low probability detection (LPI/LPD) in a high RF or Jamming environment for tactical aircraft or weapon in support of Long-Range Fires (LRF). If successful, this technology could transition via engineering change proposals for various tactical aircraft types. Deep Purple-Compact Optical Communications for the Undersea warrior (Navy): Evaluate a Commercial off the shelf low power handheld underwater optical communications transceiver with specific filters. If successful, this project will provide high speed/ bandwidth data transfer with low latency, and low probability of detection in the field. Transparent Wideband Antennas (USSOCOM): Evaluate the integration of wideband transparent antennas into the windshield/ mirrors of tactical platforms. The goal of the proposed effort is to reduce the visual signature of antennas on tactical vehicles, thereby reducing soldier vulnerability and minimizing the risk of the vehicles being geolocated, intercepted or jammed. Currently, primary communication vehicles can be easily identified due to multiple identifiable antennas integrated on top of the vehicle platforms. These high-profile antennas pose a risk of being geolocated, intercepted or jammed leaving the soldiers vulnerable. Multiple antennas on vehicles allow for easy profiling of high-profile assets such as command vehicles. Transparent antennas can be integrated on vehicles leaving the primary communications vehicle unidentified by physical signature. Visually undetectable antennas could be used by the Army and its partners for covert operations where it becomes necessary to have low profile antennas. Transparent antennas enable integration on spaces that were previously unavailable such as windows and windshields therefore increasing the available Size, Weight and Power (SWaP) for other systems on the vehicle platforms. Discreet Subsurface to Air Communications (USSOCOM): This project evaluates a foreign capability that provides surface to subsurface to surface communication capability for littoral and seabed warfare. Project will assess a diver-launched UAV that pairs with a subsurface launched buoy for communication. Currently tested to 98ft and can carry payloads up to 11lbs. Testing will evaluate buoy deployment via tether, UAV launch, ability to achieve line-of-sight for flight and send live video to a subsurface tablet under varying atmospheric conditions. MIL-GNSS Anti Jam Integration (MAJI) (United States Air Force (USAF)/Space Force (SF)): Assess minimum 5 GNSS Anti-Jam (AJ) Controlled Reception Pattern Antenna (CRPA) systems using world-class US laboratory assets for spectral analysis,

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
M&S, hardware in the loop, anechoic chamber, ground and flight testing. Create informed way forward for platform integration of resilient multi-Global Navigation Satellite System (GNSS) Position Navigation & Time (PNT) on AF/SOCOM platforms that addresses near and midterm military needs as well as influence long term PNT avionics development planning. FY 2026 Plans: Resilient Communications will continue to support the execution of efforts selected in previous fiscal years. As new projects are selected, they will be aligned to the focus area based on the technology and transition plan. FY 2027 Plans: Resilient Communications will continue to support the execution of efforts selected in previous fiscal years. As new projects are selected, they will be aligned to the focus area based on the technology and transition plan. FCT project selection for FY 2027 will occur May thru September 2026 enabling selection of emerging technologies for evaluation commencing in FY 2027. FY 2026 to FY 2027 Increase/Decrease Statement: FY 2027 increase is due to anticipated increase of the number of projects selected and project tails from previous fiscal years.			
Title: Sensors and Data Analytics Focus Area Description: Continuously funded effort. FCT will select new projects to evaluate allied/partner nation technologies that address emerging DoW capability gaps, and typically provide substantial cost, schedule, and/or performance benefit to the warfighter. Sensors and Data Analytics explores networks of sensors and data collection assets, data analysis, and dissemination resources used to provide information to the Joint force about strategic and tactical threats. Individual efforts are identified and refined throughout the year of execution through interactions with international partners, industry, academia, Service representatives, and CCMDs. Prospective efforts are closely coordinated with the CCMDs and Services to deconflict, improve jointness, and increase transition to Service acquisition programs. Candidate prototype projects undergo a selection process that assesses joint warfighter impact, transition potential, and technical merit/feasibility. Selected sub-projects target key capabilities that enable leap-ahead improvements in sensors and data analytics. Autonomous Threat Response (Army): This project will evaluate a fused situational awareness capability for the next generation ground combat vehicle. Threat Response Automation & Decision Support Systems (TRADSS) assesses and certifies proposed XM30 situational awareness components toward Modular APS Framework (MAF 2.0) compliance to unlock maximum component utility and threat detection capability with other sensor suites on the XM30. The project will conduct a series of verification events assessing if several foreign capabilities mee the TRADSS and MAF Standards. If successful, these capabilities will be listed as acceptable components of various manufactures XM30 prototype offerings.		2.924	4.845

Exhibit R-2A, RDT&E Project Justification: PB 2027 Office of the Secretary Of Defense		Date: April 2026	
Appropriation/Budget Activity 0400 / 3	R-1 Program Element (Number/Name) PE 0603133D8Z / <i>Foreign Comparative Test ing</i>	Project (Number/Name) 313 / <i>Foreign Comparative Testing</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
Anti-Submarine Warfare Sensor (ASW) for Unmanned Surface Vehicles (USVs) (Navy/USMC): This project tests compact sonar sensors (towed and hull mounted sensors) for potential application on U.S. Navy Unmanned Surface Vehicles (USVs). This project provides new capabilities for USVs to conduct ASW operations which are currently conducted by manned platforms. This project addresses the Autonomous Systems Critical Technology Area. A Successful demonstration of the towed sensor was completed at NATO's REPMUS annual military exercise in Portugal during 4Q FY 2022. The Hull mounted sensor test article contract was awarded in 1Q FY 2023, test planning occurred in 2/3Q FY 2023, and the test report is expected to be delivered in 4Q FY 2024. If successful, this technology transitions to the Navy's Unmanned Maritime Systems Program Office for follow on acquisition and fielding. Expeditionary 360° Situational Awareness (USMC): This project evaluates the integration of multiple partner nation technologies into a ground combat vehicle sensor suite that fuses multispectral 360° targeting sensors, AI-based aided target recognition (AiTR), threat warning sensors, and soft kill countermeasures to provide a complete SA picture to the crew via ultra-low latency AR headsets. This 360-degree SA capability will address multiple requirements for both the Army and Marine Corps and will support the development of the Army's Optionally Manned Fighting Vehicle (OMFV) and the USMC's Advanced Reconnaissance Vehicle (ARV), both of which are intended to meet service requirements for future combat vehicles. These technologies may transition as spiral development via additional systems integration and testing funded under the Army and Marine Corps PoRs for the Optionally Manned Fighting Vehicle (OMFV) and Advanced Reconnaissance Vehicle (ARV). Passive Radar for Air Surveillance (Navy): This project will conduct a comparison of expeditionary passive radar systems that use external, non-cooperative illuminators of opportunity to locate and track airborne targets and provide a common 360-degree air-space operating picture. Future Joint force operations require the capability to operate in highly contested environments. Survivability in these environments will require threat detection systems that can operate in Emissions Control (EMCON) and contested (i.e. jamming) electromagnetic environments. The selected technologies could transition as a spiral development to current US Army and USMC passive radar RDT&E programs. Both programs have a direct transition path to service Programs of Record. Littoral Warfare LiDAR Sensor (Navy/USMC): This project will evaluate a low Size Weight and Power (SWaP) capability to capture littoral bathymetric & topographic data. The technology is a single sensor package that collects and displays bathymetric & topographic data enable rapid maneuver in the littorals. The capability will be evaluated by Marines and technical staff for its ability to locate mines, obstacles, reefs, beach configurations and other underwater & terrestrial features to support enhanced maneuver through the littorals. Passive Aerial Surveillance (Navy): The project will evaluate a passive aerial surveillance technology for improved medium range detection. This test event would evaluate the ability of the technology to establish

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
passive aerial surveillance over tens of Km including detecting, tracking, and managing multiple targets simultaneously. The system will enhance current tactical capabilities to operate in an all-weather/all-adversary environment. Airfield Flight Inspection (USAF/SP): This project evaluates a UAS capability to rapidly deploy, test, and validate expeditionary aids to navigation while reducing hazards to manned aircraft. Project will test a UAS payload that can characterize precision approach systems for aircraft in deployed locations. Using a UAS will enable faster set up times, flight safety validation of critical navigational aids in deployed locations, while decreasing risks to manned flight inspection aircraft and crews. Additionally, this system has the potential to provide real time indications of RF interference with landing systems. Enhanced Laser Director for Space Domain Awareness (SDA) (USAF/SP): This project will evaluate a foreign produced laser range finder with integrated atmospheric correction capability. This technology is designed to be an integrated capability for SDA, as an off-axis laser beam director for SDA telescopes. It will be used to improve the utility of laser beacons and mitigate image degrading effects of atmospheric turbulence for high-resolution imagery of satellites for space domain awareness. Portable Passive Radar for SDA (USAF/SF): This project evaluates a passive portable Low Earth Orbit (LEO) detection capability. The project will verify and validate the quality, latency, and data utilization of satellite track data against given adversary low earth orbit satellites using a passive bi-static FM radar system in an expeditionary form factor. If these tests are successful, the Department will acquire the prototype system for continued testing and suitability trials as a U.S. Space Command (USSPACECOM) expeditionary sensor in support of space superiority objectives, including potential application to Golden Dome. Agile Range Seismic Sensor (USAF): This project will evaluate a seismic sensor's ability to automatically detect and localize live/inert weapon impacts and explosions on ranges. Additionally, it provides the opportunity to use this capability on other impact ranges beyond those designated for munitions testing. This technology provides critical range safety enhancements to existing DOW weapons and impact ranges by providing accurate and rapid geolocation for errant weapon impacts. Laser Communications Terminal (USAF/SP): This project will evaluate a foreign produced Space Laser Communication Terminal. Optical Interoperability Testing (OIT) will be conducted with a commercially produced terminal to verify performance. Further testing will be conducted to evaluate performance against the standards and specific mission test parameters current SDA optical communication terminals (OCT) must achieve. Evaluation results will provide certification that the new technology units meet the SDA optical standard, providing alternate source for this capability. FY 2026 Plans:

Sensors and Data Analytics will continue to support the execution of efforts selected in previous fiscal years. As new projects are selected, they will be aligned to the focus area based on the technology and transition plan.				
FY 2027 Plans: Sensors and Data Analytics will continue to support the execution of efforts selected in previous fiscal years. In FY2027 as individual projects are identified and incorporated under the focus area, the available funding in this focus area may decrease or increase based on number of projects selected and project tails from previous fiscal years. FCT project selection for FY 2027 will occur May thru September 2026 enabling selection of emerging technologies for evaluation commencing in FY 2027.				
FY 2026 to FY 2027 Increase/Decrease Statement: For FY 2027 funding decreases from FY 2026 to FY 2027 due to overall PE Funding decrease and close out of previous fiscal year projects. The Department aims to accelerate fielding while reducing the total investment for domestic development. This strategic focus on transitioning existing foreign prototypes enables the Joint force to achieve leap-ahead improvements through high-impact, cost-efficient technology acquisitions.				
Title: Collaborative Multi-Domain Autonomy Focus Area		3.540	3.175	3.985
Description: Continuously funded effort. FCT will select new projects to evaluate allied/partner nation technologies that address emerging DoW capability gaps, and typically provide substantial cost, schedule, and/or performance benefit to the warfighter. Collaborative Multi-domain Autonomy explores the use of multi-domain uncrewed systems and autonomy to increase warfighting capabilities and to mitigate/negate risk to warfighters. Individual efforts are identified and refined throughout the year of execution through interactions with international partners, industry, academia, Service representatives, and CCMDs. Prospective efforts are closely coordinated with the CCMDs and Services to deconflict, improve jointness, and increase transition to Service acquisition programs. Candidate prototype projects undergo a selection process that assesses joint warfighter impact, transition potential, and technical merit/feasibility. Selected sub-projects target key capabilities that enable leap-ahead improvements in uncrewed/ multi-domain autonomy.				
AI for Off-Road Autonomy (Army): Project evaluates software that enables navigation on complex military scenarios, providing increased tactical advantage through terrain sensing and software that comprehends and continuously evaluates complex terrain through proprioceptive sensors. Integrates sensor information into navigation guidance to obtain goals compensating for terrain conditions. Software is capable of learning and integrating new information on the go. Capable of integrating previously trained specific scenarios to enhance probabilities of success through extensive virtual testing and iteration before deployment.				
Enhanced Unmanned Military Vehicle Mobility in Arctic Environments (Army): This project evaluates the mobility of a foreign Unmanned Ground Vehicle (UGV) for use on common Arctic surfaces such as snow, packed snow, and ice. This vehicle

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2025	FY 2026	FY 2027
addresses Arctic mobility needs as described in the U.S. Army's 2021 Arctic Strategy. If successful, this technology will transition to the Army's Robotic Combat Vehicle Program of Record for follow-on procurement and fielding.					
Multi-Domain UXV Path Planning (Navy/USMC): This project will evaluate a capability to rapidly develop optimized route planning and deployment of uncrewed vehicles. Project builds on an application that uses a foreign developed Software Development Kit (SDK) and geo-spatial data to optimize routes for uncrewed vehicles based on vehicle, payload, domain (sea, air, land), and mission constraints that can be configured by the user. Marines will test the application in a contested logistics experiment & exercises, to verify pat accuracy, obstacle avoidance, and ease of use for the operators.					
Optically Guided Remote Effect (Navy): This project will evaluate an optical navigation and terminal guidance capability using low-cost COTS sensor inputs (both visible and infrared cameras). Capability can be employed a wide variety of platforms for the sea, air, and land domains. The technology is designed to be software-focused and platform - independent so that it can be rapidly and inexpensively implemented on a variety of drones/munitions to add autonomy while avoiding vendor lock.					
Large Uncrewed Underseas Vessel (UUV) for Crewed- Uncrewed Teaming (Australia/United Kingdom/United States of America (AUKUS) Pillar II(USN)): Project evaluates a mature Low-Cost Large Diameter UUV platform with long endurance, autonomous navigation, and significant payload capacity for enabling underwater logistics in contested environments. This effort will strengthen collaboration with AUKUS allies in developing advanced underwater technologies for Maritime Special Operations.					
Uncrewed Surface Vessel (USV) for Crewed – Uncrewed Teaming (USSOCOM): Provides Naval Special Warfare (NSW) an opportunity to test and evaluate a foreign developed craft. The craft is a versatile and cost-effective platform co-developed by AUKUS partners and co-sponsored by AUKUS Pillar II Maritime Big Play. The capability is designed to augment SOF maritime capabilities in contested environments by enabling remote deployment of effects and facilitating manned-unmanned teaming (MUM-T). Potentially a capability that could support the Maritime Remote Attack Missile.					
Automated Launch/Recovery System (US Coast Guard (USCG)): This project evaluates a foreign produced autonomous launch and recovery system for small craft on the USCG Maritime Security Cutter Large (WMSL). This technology would upgrade the existing small boat stern ramp launch and recovery (L&R) system to a fully autonomous recovery system supporting crewed and uncrewed craft. The technology can be integrated with the existing L&R system, with minimal impact to cutter configuration, increasing operational envelopes and decreasing risk to small boat crews. This technology would greatly enhance USCG boat operations in the Artic and Sub-Artic by enabling operations in higher sea states that current operational limitations for crew safety allows.					
FY 2026 Plans:

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026	FY 2027
Collaborative Multi-Domain Autonomy will continue to support the execution of efforts selected in previous fiscal years. As new projects are selected, they will be aligned to the focus area based on the technology and transition plan. FY 2027 Plans: Collaborative Multi-Domain Autonomy will continue to support the execution of efforts selected in previous fiscal years. As new projects are selected, they will be aligned to the focus area based on the technology and transition plan. FCT project selection for FY 2027 will occur May thru September 2026 enabling selection of emerging technologies for evaluation commencing in FY 2027. FY 2026 to FY 2027 Increase/Decrease Statement: The FY 2027 funding increase is due to an anticipated rise in the number of selected prototype projects and the continuation of project tails from previous fiscal years. These funds are essential for continuously evaluating and rapidly transitioning advanced allied and partner nation technologies that address emerging Department of War capability gaps in contested logistics and sustainment.				
Title: Contested Logistics / Sustainment Focus Area Description: Continuously funded effort. FCT will select new projects to evaluate allied/partner nation technologies that address emerging DoW capability gaps, and typically provide substantial cost, schedule, and/or performance benefit to the warfighter. Contested Logistics/Sustainment explores the coordinated use, synchronization, and often sharing of logistics resources to deploy, support, and sustain highly dispersed joint forces in highly contested environments. Individual efforts are identified and refined throughout the year of execution through interactions with international partners, industry, academia, Service representatives, and CCMDs. Prospective efforts are closely coordinated with the CCMDs and Services to deconflict, improve jointness, and increase transition to Service acquisition programs. Candidate prototype projects undergo a selection process that assesses joint warfighter impact, transition potential, and technical merit/feasibility. Selected sub-projects target key capabilities that enable leap-ahead improvements in contested logistics/sustainment. Qualification of Low-Pressure Cold Spray System (Navy): Project evaluates a backpack sized low pressure cold spray metal depositing technology to give the Navy, other Services, and our allies a deployable repair capability as an alternative to the current qualified system. The new technology will undergo a series of mechanical tests and then be validated in a fleet exercise for forward deployed capability, such as RIMPAC. If successful, this capability will transition to the allowed military equipment list and be available for acquisition by Military units. Rapid Molten Metal Deposition (Navy): The project evaluates a Molten Metal Deposition (MMD) additive manufacturing technology that will allow rapid manufacturing of near-net shape metal parts at the tactical point of need. This technology doesn't require the use of powder material or use of debinding or sintering support equipment. Laser free technology translates to low power consumption and utilizes available standardized welding wire as feedstock material, allowing use in deployed and expeditionary		5.852	5.494	5.215

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
settings. If successful, this capability will transition to the allowed military equipment list and be available for acquisition by expeditionary forces. Vertical Launch System Reloading (Navy): Project evaluates a Missile Canister Loading Equipment (MCLE) capability to conduct Vertical Launch System (VLS) reload at austere ports and piers for U.S. Naval surface vessels. The MCLE facilitates a safer VLS reload in elevated environmental conditions (up to sea state 4) by receiving the VLS canister horizontally, up righting independently of a shore-based crane, and presenting the canister to the launch cell for reload. The capability is compatible with any U.S. Mk-41 VLS equipped ship, providing minimal impact to the ship other than 4 bolting pads which use existing bolt holes on the launcher. If successful, this capability would be deployed to strategic forward ports and ships would receive the required modifications as via engineering change proposals for the bolting pads. Alternate at Sea Refueling (Navy): This project will comparatively test a dual hose (two diameters) modular reel at sea refueling system that allows for astern refueling operations. Current US Navy refueling systems are designed for alongside refueling only and operations can only occur with specifically designed ships. This technology will allow for operations from maritime platforms of opportunity e.g. Offshore Support Vessels (OSV) and other platforms. If successful, the testing results and data will be incorporated into future Combat Logistics Force (CLF) Requirements documents for modular refueling systems. Lightweight Expeditionary Airfield-Surfacing System (Navy/USMC): This project will evaluate a lightweight aircraft landing mat to replace legacy matting. This technology reduces the logistical footprint and increases installation efficiency for rapid deployment in austere locations. If Successful, this technology will transition to the Navy and Marine Corps Expeditionary Airfields Program Office for follow on procurement and fielding. Stern Landing Vessel (Navy/USMC): This project will evaluate a 236' foot stern landing vessels' capabilities for beaching and on/off loading military vehicles and equipment in varying conditions in the INDOPACOM AOR. The vessel will be co-leased between the Marine Corps and the Australian Army to provide an evaluation platform for both services (an organic capability) to evaluate littoral maneuver concepts and provide data for design of Marine Littoral Regiments (MLR) and the concept of Stand in Forces (SIF) future support capability requirements. If successful, this capability may transition to US acquisition if the vender opened a U.S. based company or created a joint venture with a US manufacture. Robotic Hull Repairs (Navy): Evaluate a robotic hull repair tool with the capability to perform detailed inspections and perform welding repairs in open sea, in a controlled/sheltered environment. Technology currently in operation in Middle East and Asian oil fields conducting repairs at up to 1KM depth. This technology incorporates an atmospheric habitat (controlled environment) and automatic robotic repair technologies allowing for 'drydock level' repairs occurring on steel structures in the water, either pier side or at sea. Technology has the potential to reduce the need for utilization of fixed location dry-docks. Provides a capability to

conduct real-time capture of non-destructive testing information and provide robotized repairs with 100% repeatability. Capability can provide accurate duration estimates provided by repair modeling, reduced need for equipment and resources in remote repair locations. Additionally, all contaminants retrieved topside for safe disposal. Should this project be successful it will be deployed to Regional Maintenance Center (RMC) for real-world repair in a controlled environment, and to Naval Shipyards, and forward operation locations.					
AC Drag Reduction (USAF/SF): Project will evaluate a passive film that reduces skin friction drag on flight surfaces for crewed and uncrewed aircraft. The film Increases aircraft range and endurance at minimal weight (<300 lbs. for C-130J). Project will validate if reduced fuel consumption is attainable. Expected fuel cost savings up to 5%, increased range (160+ miles for C-130J). This technology way provide access to previously out-of-range targets, Increased mission endurance and time-on-station, increased lift-to-drag ratio, may improve short-field takeoff performance, and is stackable with other fuel saving initiatives.					
Elemental Water Response (USSOCOM): This project comparatively evaluates technology capable of producing 50 liters per hour of potable water from any water source, including seawater. Unit has a solar-power add- on available, making it power source independent. Size weigh and performance make it valuable as a tactical, dispersed, water source. The technology will be evaluated against us standards for removal of salt, contaminants, microbes, and other harmful substances found in many water sources. If successful, this technology would become available for direct purchase under FCT authorities, providing foreign suppliers/vendors opportunity to form a US joint venture or subsidiary.					
Improved Airdrop Rigging Kit (USSOCOM): This project will evaluate an improved airdrop rigging capability that takes advantage of new hardware and materials to decrease both rigging and derigging time and increase flexibility for securing payloads, including non-standard payloads. Capability minimizes potential impact damage and payload weight when compared to metal clevises. The combination of modern ratchets and improved strength textiles may reduce the number of lashings that need to be applied to properly secure a payload. The minimal stretch characteristics of the textiles will also reduce or eliminate the need to retighten the lashings in flight after takeoff, which is common when using current lashing equipment. Most importantly, the quick disconnects, reduced lashing numbers, and easier to use components make derigging on the drop zone faster. This is a critical operational benefit as immediately after landing is a vulnerable time for the operators. The faster derigging can occur, the less threat exposure they face and the faster they can start their mission.					
High-Speed Hybrid-Hydrofoil for surface transport (USSOCOM): This project evaluates a Hybrid propulsion high speed craft for Special Operations Support. Advanced propulsion and Hydrofoil drive will increase range, decrease transit times and drastically reduce repetitive impact loading injuries to the craft operators and embarked SOF Operators. Project will conduct operator evaluation of a dual propulsion hybrid platform. The vessel includes advance active hyrdofoiling, electric propulsion and hybrid

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
electric/ diesel energy generation technologies. If successful technology will be transitioned to Program Executive Office-Maritime (PEO-Maritime) for inclusion into the replacement program for special operations small craft programs.			
FY 2026 Plans: Contested Logistics / Sustainment will continue to support the execution of efforts selected in previous fiscal years. As new projects are selected, they will be aligned to the focus area based on the technology and transition plan.			
FY 2027 Plans: Contested Logistics / Sustainment will continue to support the execution of efforts selected in previous fiscal years. As new projects are selected, they will be aligned to the focus area based on the technology and transition plan. FCT project selection for FY 2027 will occur May thru September 2026 enabling selection of emerging technologies for evaluation commencing in FY 2027.			
FY 2026 to FY 2027 Increase/Decrease Statement: The FY 2027 decrease reflects overall Program Element reductions and an anticipated decrease in project tails from previous fiscal years. Consequently, the program is executing a strict strategic prioritization to focus remaining funds on the most critical allied technologies that enable leap-ahead improvements in contested logistics.			
Title: Weapons Kinetic/Non-Kinetic Effects Focus Area		6.690	7.930
Description: Continuously funded effort. FCT will select new projects to evaluate allied/partner nation technologies that address emerging DoW capability gaps, and typically provide substantial cost, schedule, and/or performance benefit to the warfighter. Weapons Kinetic / Non-Kinetic Effects explores the delivery of weapon systems and long-range kinetic and non-kinetic effects in support of joint offensive and defensive tasks to create specific lethal effects on a target. This area includes counter positioning, navigation, and timing, and techniques designed to deceive enemy observers and/or mitigate, disrupt, or negate adversary capabilities. Individual efforts are identified and refined throughout the year of execution through interactions with international partners, industry, academia, Service representatives, and CCMDs. Prospective efforts are closely coordinated with the CCMDs and Services to deconflict, improve jointness, and increase transition to Service acquisition programs. Candidate prototype projects undergo a selection process that assesses joint warfighter impact, transition potential, and technical merit/feasibility. Selected sub-projects target key capabilities that enable leap-ahead improvements in weapons effects.			4.864
Additional Competition for Mortar Turret (Army): This project comparatively evaluates a foreign produced, low-cost alternative turret for the Army's Turreted Mortar system. The system selected has significant capabilities, meeting most of the threshold requirements for the Program of Record for Turreted Mortar system requirements document. This effort gathers and analyzes information about the system relative to the US requirements and evaluates the compatibility with US platforms and ammunition. If successful, this technology will transition to the Program Executive Office Ground Combat Systems (PEO-GCS) for potential incorporation on the competitively selected platform.

B. Accomplishments/Planned Programs (\$ in Millions)		
		FY 2025
		FY 2026
		FY 2027
Dual Anti-Tank Guided Missiles (ATGM) and Unmanned Aerial Systems (UAS) Defeat (Army): (Weapons Kinetic/Non-Kinetic Effects): This project comparatively evaluates a high speed (over 100 mph) fly out drone to engage both ATGMs and UAS threats at long standoff ranges from vehicles. System eliminates the threat and reduces collateral hazard to the platform and crew after intercept. These low weight systems (under 100kg) can be used on multiple combat and support platforms. If successful, this capability will transition would occur as a field modification applied to select US Army Brigades (Armored, Stryker, Infantry, Support) and selected United States Marine Corps (USMC) platforms. Next Generation – Explosive Reactive Armor (Army): The project comparatively evaluates a foreign produced composite/frangible material for threat defeat. New technology is lighter weight, increased vehicle survival, reduces collateral damage and fratricide effects, and improves vehicle mobility. If successful, this capability will transition as a replacement kit to current add on explosive reactive armor on US Army and USMC ground vehicles. 66mm Vehicle Launched Smoke Grenade (Army): This project evaluates two vehicle launched smoke grenades and compare their reliability and performance to the current Army procured equivalents (M76 IR-screening grenade and the M81 MM-wavelength screening grenade). If the munitions demonstrate improved reliability and robustness in adverse functioning environments, Army Combat Capabilities Development Command (DEVCOM) Armaments Center and the Program Manager will collaborate to license the foreign TDP and integrate subsystem improvements into the Army's 66mm vehicle launched smoke grenade portfolio. Next Generation Counter UAS (Army/USSOCOM (co-funded with Irregular Warfare Technical Support Directorate (IWTSD))): Evaluate a man portable Electronic Warfare Counter UAS system employing a universally effective Global Navigation Satellite System (GNSS) / Global Positioning System (GPS) manipulation to stop single or swarm UAS threats. The project will evaluate deployed (TRL 9), and prototype components (TRL5) linked and integrated with an active radar in an operationally realistic scenario. Evaluation will identify effective operational capability and minimal training requirements. If successful, this technology could transition to the Army and USSOCOM for deployment to high UAS threat locations. Enhanced Integrated Fire Control System for M3E1 (Army): This project comparatively tests advanced fire control systems for the 84-millimeter shoulder fired reloadable recoilless M3E1 Multi-purpose Anti-armor Anti-personnel Weapon System. This technology provides enhanced targeting in both day and night operations at extended ranges. If successful, this technology will transition to the Army's Program Manager for Soldier Lethality for follow-on procurement and fielding. Army looking to determine from data collected here if system can be utilized on M2 and MK19 in future system upgrades allowing for one Fire control System for multiple weapon systems saving cost and increasing unit level lethality.

Appropriation/Budget Activity 0400 / 3	R-1 Program Element (Number/Name) PE 0603133D8Z / <i>Foreign Comparative Test ing</i>	Project (Number/Name) 313 / <i>Foreign Comparative Testing</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
84MM SMOKE 469C Round (Army): The project evaluates improvements to the legacy 469B smoke round fired from Carl-Gustaf M3A1 recoilless rifle (MAAWS) to provide screening, blinding, and obscuration of personnel, equipment, and structures during tactical situations and kinetic maneuvers. The 469C round incorporates a proven dual-safe fuze design which improves safety and increases operational reliability, and as importantly, the 469C will fulfill a predicted capability gap for MAAWS operators as the 469B is currently phasing out of production and no other 84mm rounds are available that can meet its unique requirements. If successful, this technology will be incorporated into the MAWS Program of Record allowed munitions list and be available to military units under normal munitions procurement processes. Direct Support Artillery Rocket (Army): This project evaluates cost effective 122MM operational and reduced range training rockets for mobile launching systems for the US ARMY. USMC, as well as Allied and Partner Nations. Project will demonstrate/evaluate the warfighting capability of the 122mm ACCULAR Rocket from an Israeli Defense Force (IDF) M270 launch platform by the end of FY24. Evaluate the 122mm ACCULAR Training Rocket from the U.S. HIMARS launch platform by the end of FY26 in the U.S., as a possible solution to the Joint Reduced Range Rocket (JR3) A-CDD Requirement. If successful, the data and evaluation will be transitioned to two organizations. Warfighting Round (122mm ACCULAR Rocket) results will be transitioned to the Fires Center of Excellence's (FCoE) Capabilities Development and Integration Directorate (CDID) to mature the Capabilities Development Documents addressing the need for a Direct Support Fires capability that resides in the Rocket and Missile formation. Training Round: Results will be transitioned to PM STORM in support of their Acquisition Strategy to develop and field an updated Training Rocket. The Program Manager (PM) plans to solicit proposals for the JR3 Development contract. EW payload for UAS (Army): This project evaluates two mature foreign EW systems against threat radar systems. The project will conduct testing of two digital radar frequency memory payload modules (DRFM) integrated into the US Army Launched Effects Module air launched unmanned system. If successful, this technology will provide manned vertical lift platforms an onboard capability to detect and counter threat Integrated Air Defense Systems (IADS) RF detection. Technology will also provide decoy and disruption capability at standoff ranges. M3A1 Munition Cartridge Upgrade (Army): This project evaluates a "load and shoot capability" for varying munition types. The Firebolt Common Communication is an electrical system that enables the Multi-Role Anti-Armor Anti-Personnel Weapon System (MAAWS) [Carl Gustoff] family of ammunition to transmit and receive critical cartridge information via physical contact connectors with the M3A1 weapon. This advanced technology reduces cognitive burden, improves accuracy, and decreases target engagement time, while increasing Soldier's survivability and mission success. Network Guided Missile System (Army): This project evaluates a cost-effective, longer range (8km ~ 2x the current TOW) precision guided strike capability. Evaluation of a foreign produced precision-guided, cost-effective strike solution designed for

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
battalion-level firepower, delivering lethality, rapid deployment, and pinpoint accuracy to neutralize high-value targets with minimal collateral damage, ensuring maximum operational impact at a fraction of traditional costs. Precision Launched Effects (Army): This project evaluates a Long-Range Precision Munition and Long Range Launched Effects (LR-LE). Effort will evaluate a jet-powered missile/launched effects dropped from a medium altitude, long endurance (MALE) Army and SOCOM drone to assess its range and maneuverability. This innovative and unique capability may address the validated multi-service requirements for Long Range Launched Effects (LR-LE) at extended ranges providing kinetic and non-kinetic effects into rear echelon areas, at low/no risk to crewed platforms. Stun Grenade Modernization (Army): This project evaluates a potential replacement for current stun grenade inventory. Technology provides improved performance, lower cost solution for ground combat missions. The Stun Grenade Modernization FCT effort will evaluate a foreign produced Stun Grenade and compare their reliability and performance to the Army-qualified equivalent, M84. If successful, the capability offers improved performance, lower cost solution, and avoids the obsolescence issues associated with the M84. Tactical Smoke Pot Grenade (Army): The project evaluates a foreign produced replacement Visual/IR Screening capability for ground maneuver. The Tactical Smoke Pot Grenade effort will evaluate two smoke pots and compare their reliability and performance to the current limited and out of production Army inventory. Current inventory components present health hazards and are no longer in production due to health, safety and environmental hazard concerns. Army Combat Capabilities Development Command (DEVCOM) Armaments Center and Project Manager Close Combat Systems (PM CCS) will collaborate to license the foreign TDP and integrate subsystem improvements into the Army's smoke pot grenade portfolio, which currently lacks tactical capability due to obsolete and out-of-service smoke pot designs. Mine Threat Neutralizer Payload (Navy): This project evaluates and characterize attachable neutralizer payloads, including attachment, disruptor and firing subsystems performance and suitability for ROV delivery, attachment, and neutralization of underwater threats. Additionally, this project will evaluate performance of the technology in varying depths/sea states to assess operational capability and utility for the fleet. If successful, this capability will transition as an Engineering Change Proposal (ECP) to integrate the VMDS as a MESR Increment III Payload update. Mining Advanced Development for Operational Gains (Navy): Evaluate the performance, and develop new algorithms, and simulated mine engagement results between a notional surface vessel and the proposed mine. The project will test the final algorithm in an operationally relevant environment, and asses the safety posture of this mine. The results will be compared to existing Quickstrike ORD performance requirements. A successful outcome will be if the mine, using the developed algorithm, can meet or exceed ORD performance requirements.

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
Swarm Swatter Counter Uncrewed Aerial System (CUAS) Electro Optical (EO) Missile (Navy): Evaluate the lower cost IR capable Korean missile for Helicopter launched CUAS, assessing the feasibility of leveraging helicopter radar target data to provide location and effectiveness of the IR seeker to close/kill target. Testing will assess capability of LAU-61G/A DRL system to launch the Korean rocket and assess capability to engage up to 30 class III UAVs targets to determine at a high level the effectiveness of the capability against UAS threats. If successful transition is planned as full integration of the rocket onto the MH-60R/S platforms to improve the MH-60R/S ability to meet the mission requirements for CUAS or increase FAC/FIAC performance. Future Remote Weapons System (RWS)(Navy): This project evaluates a wireless, small arms remote weapons control system, providing improved SWAP, improves emplacement configuration capability for self-defense systems. This effort will conduct a comparison between existing DoW remote small arms weapon systems and new emerging wireless remote-controlled systems. From the results, future remote weapon system requirements and acquisition can be expanded that may add to increase self-defense weapons' capabilities across not only maritime platforms but also potentially on land equivalent assets. Automated Special Forces Mortar System (USSOCOM): This project comparatively tests modern mobile mortar systems that automates the mortar setup and aiming to reduce mortar crew size, improve accuracy, eliminate error, and improve speed, survivability of mortar crew and expedites deploying and redeploying of mortar systems. The technology from both systems reduces employment /redployment time for a fire mission by 80 percent (30 seconds vice 3 minutes). This reduces the time at a firing location by 72 percent to conduct a 15 round fire mission (2 minutes vice 7 minutes), greatly improving the survivability. of the mortar crew while improving accuracy and fire support for SOF ODA commanders. If successful, as non-standard hardware by PEO SOF in advance of a program of record. Should capability be desired by other services both vendors have US partners who may be able to support US production quantities. Next Gen Offensive UAS long-Range Aerial Loitering Munition (USSOCOM). Evaluate the capability of the HERO 400 Long Range Aerial Loitering Munition (LRALM) to provide small tactical teams with an organic advanced pneumatically launched Loitering Munition capable of 150km range, with high, medium, and low attack angles; 120-minute endurance with integrated anti-armor HEAT-BF warhead, advanced optics, and optimized Height of Burst (HOB) sensor package enabling 1-meter precision strike accuracy. If successful, this technology would transition to USSOCOM PEO SW PM Lethality Ground Organic Precision Strike Systems (GOPSS) Program of Record for Special Operations forces and potentially USMC and US Army maneuver units. Maritime Remote Attack Missile (USSOCOM): This project will evaluate two foreign produced lightweight, remotely launched missiles for uncrewed platforms. Provides precise remote engagement of maritime and littoral targets in contested/degraded environments via fiber optic communication link. Link provides non-jammable updates during terminal engagement improving target acquisition. Project will evaluate the capability to engage a beyond-Line-of-Sight (BLOS) target enabling a remote operator to engage targets that are not directly visible to the launcher from sanctuary. The project will culminate in a live-fire demonstration

Appropriation/Budget Activity 0400 / 3	R-1 Program Element (Number/Name) PE 0603133D8Z / Foreign Comparative Test ing	Project (Number/Name) 313 / Foreign Comparative Testing		
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026	FY 2027
of the technologies under realistic simulated sea states. If successful USSOCOM will procure a small quantity (~10s) of follow-on assets for development and adaptation to specific mission sets to occur over FY27 and FY28. Following successful adaptation, a procurement of assets for User operator assessment and Combat evaluation will be made (~30-50 assets, quantity dependent on adaptation success and funding availability). Procurements for fielding will be accomplished through the appropriate USSOCOM Project office (i.e., PEO-SW) under a validated requirement as appropriate which is anticipated to be the Ground Organic Precision Strike System for Echelon 2 Vehicle Mounted or another classified requirements.				
FY 2026 Plans: Weapons Kinetic/Non-Kinetic Effects will continue to support the execution of efforts selected in previous fiscal years. As new projects are selected, they will be aligned to the focus area based on the technologies and transition plan.				
FY 2027 Plans: Weapons Kinetic/Non-Kinetic Effects will continue to support the execution of efforts selected in previous fiscal years. As new projects are selected, they will be aligned to the focus area based on the technology and transition plan. FCT project selection for FY 2027 will occur May thru September 2026 enabling selection of emerging technology for evaluation commencing in FY 2027.				
FY 2026 to FY 2027 Increase/Decrease Statement: The FY 2027 decrease is due to overall Program Element reductions and the planned closeout of previous fiscal year projects. Moving forward, the program is executing a strategic down-select to focus remaining resources on the most critical leap-ahead capabilities in kinetic and non-kinetic weapon effects.				
Title: Emerging Prototype and Enablers Focus Area		5.440	5.143	4.362
Description: Continuously funded effort. FCT will select new projects to evaluate allied/partner nation technologies that address emerging DoW capability gaps, and typically provide substantial cost, schedule, and/or performance benefit to the warfighter. Emerging Prototypes and Enablers supports the acceleration of DoW, CCMD and Service priority efforts, to include urgent and emergent requirements, which provide unique capability and/or address critical gaps; Special Access Program assimilation and operational management; prototyping through small business and non-traditional pathways; and the rapid development of technologies for inclusion in experimentation venues. Individual efforts are identified and refined throughout the year of execution through interactions with international partners, industry, academia, Service representatives, and CCMDs. Prospective efforts are closely coordinated with the CCMDs and Services to deconflict, improve jointness, and increase transition to Service acquisition programs. Candidate prototype projects undergo a selection process that assesses joint warfighter impact, transition potential, and technical merit/feasibility. Selected sub-projects target key capabilities that enable leap-ahead improvements in joint warfighter capability.

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
M2A1 Blank Firing Adapter (Army): This project evaluates a 50-caliber modular, quick change blank firing adaptor for the operation, safety, durability, maintainability, and ease of use. FCT project is relatively low-cost effort to expand engagement with Estonia, opening the door to further work with other Baltic Nations. Additionally, the Vendor willing to provide CONUS training at no cost to USG. If successful, the technology will be qualified and receive a NSN and be available in the DLA supply system for unit purchase as a replacement adaptor. Mask for Improved Soldier Lethality (Army): Evaluate a lightweight Full Face Chem BIO protective mask for breathing resistance, field of view, thermal load increases, and physical space as compared to current issue mask. Additionally, the testing will evaluate soldier lethality while wearing a chemical mask, to provide a baseline, identify gaps in current mask requirements, and improve the acquisition process. If successful, this mask will transition to the allowed military equipment list and be available for acquisition as a replacement item for the current issued mask. Bridge Connector (Army): This project evaluates an adaptor that allows floating bridges used by the U.S. Army to be used by German and British amphibious bridging systems. This technology enables enhanced joint multinational bridge operations in the European theatre to maximize limited resources. Primary testing on load and operational testing to prove the system meets US Military Standard (MILSTD) before purchasing for Engineer Units in Europe and adding to Defense Logistics Agency (DLA) Authorized List. Advanced Fragment Measurement (Army): This project evaluates a millimeter wave radar that provides nearly instantiations tracking reports on fragmentation patterns, fragment penetration, and fragment velocity profiles. This data accelerates evaluation of asymmetric weapons (hypersonic), UAV air-detonation fragmentation, safety characterization, collateral damage assessment, penetration performance calculations. Accelerating the development of Artillery, Munitions, Hypersonic warheads, Advanced and Complex Fragmentation Warheads. Next Generation Explosive Reactive Armor (Army): This project evaluates next-generation explosive reactive armor designed to reduce collateral hazard to platform and crew after defeating the incoming threats, and have low collateral effects to the host platform, dismounted Soldiers, and the operating environment. The project will evaluate foreign produced reactive armor that utilizes advanced materials in multiple elements of the design. This project directly supports the US Army's and Optionally Manned Fighting Vehicle (M2 Bradley replacement) program. If successful, the technology will transition with a host platform into a Program Executive Office (PEO) Ground Combat Systems program of record to be initially managed by the Product Manager for Optionally Manned Fighting Vehicle (OMFV) and transitioned to Project Lead Capability Transition & Product Integration Office (PL-CTPI) for enduring item management.			

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2027 Office of the Secretary Of Defense			Date: April 2026		
Appropriation/Budget Activity 0400 / 3		R-1 Program Element (Number/Name) PE 0603133D8Z / <i>Foreign Comparative Test ing</i>		Project (Number/Name) 313 / <i>Foreign Comparative Testing</i>	
B. Accomplishments/Planned Programs (\$ in Millions)			FY 2025	FY 2026	FY 2027
Next Generation Signature Management (Army): This project evaluates next generation multi-spectral camouflage technologies for ground and maritime platforms that employ advanced textiles and coating materials to provide concealment from visual, infrared, and electromagnetic detection while on-the-move. Project translates to Next Generation Combat Vehicle development. These technologies have the potential to be incorporated by OMFV Platform offerors Phase 4: Prototype Build and Test. Testing will reduce program risk and accelerate the program schedule through the application of empirical design and integration data in Phase 4, accelerating acceptance testing two years in advance of current planned receipt of the technology under existing OMFV contract and acquisition program plans. After fully characterization testing all materials will be available for transition into protecting US military hardware, both Army hardware as well as U.S. Navy surface and aviation platforms. Reliable and Low Maintenance Autonomous Systems Power Generation (Navy): This project will comparatively test a TRL9 Stirling power system designed for unmanned platforms with high reliability, low noise, and operates independent of an air source. These platforms will be required to perform multiple mission operations and play a primary role in deployment of modular payloads and an increasing factor supporting the Navy's Distributed Maritime Operations (DMO) concept, being able to forward deploy and operate both independent and attached with Surface Action Groups (SAG), Carrier Strike Groups (CSGs), and Expeditionary Strike Groups (ESG). If successful, this technology will transition to Program Management Surface (PMS)406, uncrewed maritime systems, Orca Extra Large Uncrewed Undersea Vehicle (XLUUV) Program Office. High Power Electrical Isolation (Navy): This project tests high power electrical disconnect switches to isolate next generation electronic carrier-based aircraft launch and recovery equipment for maintenance and repairs. This technology increases readiness by enabling concurrent operations and maintenance on complex mission critical systems. If successful, this technology will transition to the Navy's Aircraft Launch and Recovery Equipment program office for follow-on procurement and fielding through an Engineering Change Proposal to the Electromagnetic Aircraft Launch System and Advanced Arresting Gear programs of record. Novel Cannula Device with Unambiguous Visual Indication (Navy): Evaluate a battery powered Commercial Off the shelf (COTS) device which indicates when a cannula/catheter needle tip is within a vein. The rapid delivery of blood plasma, fluids or medications via IV is critical in treating casualties in the field. PIVC is the single most common invasive procedure with up to 2 billion performed globally per annum. The procedure has a high 30-70% failure rate. This capability can reduce the failure rate and negative consequences that follow. The capability can assist both trained medics and untrained combatants with PIVC for life saving IV and blood plasma infusions under difficult field conditions. Littoral Watercraft Simulator (Navy): This project will evaluate a foreign produced responsive, visually representative simulation environment to train small craft operators. Project will analyze the capabilities of the established and well utilized ship simulation

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
software suite compared to current COTS software, using Navy and Army craft and ship handlers' evaluations as a central element of the evaluation effort. Evaluation will collect data on display realism, ease of use, cognitive load and effectiveness. Carrier Seal Tactical Delivery Vehicle for Maritime Littoral Exploitation (USSOCOM): This project evaluates an 8-person low vis low profile over the horizon submersible craft for tactical insertion/extraction of Combat divers/Naval Special Warfare Operators in the littoral environment. Capability can accommodate sensors, radio equipment, ammunition & explosives, survival equipment, and supplies. Additional fuel and battery capability can provide additional range and duration with reduced passenger numbers. If successful, this technology will generate further CONOP/CONEMP and TTP development. Requirements generation may lead to a transition to LRIP & procurement to meet validated requirements. Parachute Dereefer (USSOCOM): This project comparatively evaluates of a non-pyrotechnic dereefer (controlled opening for cargo parachutes) to replace M21 Pyrotechnic Cutter which is no longer viable due to cost and lack of industrial base. The capability will be evaluated for use with the Army's Advanced Low Velocity Airdrop System - Light/ Heavy (ALVADS-L/H). If successful, the technology/capability will be available for direct procurement by units via DLA and transitioned into ALVADS Program of Record. Mobility Over Snow Terrain (USSOCOM): This project will enable a quick reaction evaluation for an interoperable snowmobile with coalition and joint forces within the northern European Areas of Operations. Market research has been conducted and Joint Force working groups have identified the Norwegian SOF have a snowmobile capability worth being assessed by US SOF. If successful, transition to the Program of Record for further development and qualification, this system could be manufactured in the United States. Next Generation Body Armor (USSOCOM): Evaluate a TRL 7 body armor for improved ballistic protection compared to US legacy body and vehicle armor at lighter weight by employing commercial components and novel thermo-mechanical processing that encases the ceramic strike face. Evaluation is to determine if this new technology provides improved soldier mobility (30% to 50%) weight reduction while matching ballistic performance of legacy body armor and vehicle protection systems. Additionally, the technology will be evaluated on ability to be tailored to meet and exceed 5.56 to 7.62 mm protection levels: e.g., NIJ level RF3, SOCOM pattern, ESAPI, XSAPI protection levels, STANAG 2-3 Technology currently in use by Special Forces units in Israel Defense Force. Multi Mission Module System-Cube (USCG): Evaluate modular shelter system designed for shipboard use. Technology provides a modular, reconfigurable, portable (cross deck) system to support diverse US Coast Guard (USCG) operations. The project will evaluate an Armory module_27062025; Berthing module_27062025; and a Climate Controlled module_27062025; for durability, corrosion resistance, power requirements, onboard power stability, Weather resistance under sub arctic and arctic conditions. If

successful, USCG will add this capability to the allowed equipment and material allowance listing for USCG Support regions as a regional asset for mission specific and cross deck requirements. Enterprise Project Management Platform (EPMP) (OUSW Prototypes and Experiments (P&E)): This project will evaluate a software tool already in use with NATO (over a decade) that allows collaborative planning, assessment, workflow, and project management in one single, accessible version /location providing verified, validated, source data for P&E programs. <i>FY 2026 Plans:</i> Emerging Prototype and Enablers will continue to support the execution of efforts selected in previous fiscal years. As new projects are selected, they will be aligned to the focus area based on the technology and transition plan. <i>FY 2027 Plans:</i> Emerging Prototype and Enablers will continue to support the execution of efforts selected in previous fiscal years. As new projects are selected, they will be aligned to the focus area based on the technology and transition plan. FCT project selection for FY 2027 will occur May thru September 2026 enabling selection of emerging technologies for evaluation commencing in FY 2027. <i>FY 2026 to FY 2027 Increase/Decrease Statement:</i> The FY 2027 decrease reflects overall Program Element reductions, the planned closeout of previous fiscal year projects, and a structured reduction in new project starts. This planned profile ensures remaining resources are strategically prioritized to accelerate the most urgent Emerging Prototypes and Enablers that address critical joint warfighter capability gaps.

Remarks			
D. Acquisition Strategy			
Successful FCT projects support capability acquisition in several ways. Technology upgrade insertion into a current platform or program providing greater capability or prolonging the life of the weapon system. Informed/refined requirements for future planned systems, direct transition/procurement. FCT leverages the Services' and Defense Agencies' most efficient and effective acquisition approaches for rapid prototyping. This includes using Other Transaction Authorities and new or existing contract vehicles using the middle-tier acquisition strategy. The FCT Program supports the Service Executive Acquisition strategies and works with each Service, U.S. Special Operation Command, and Combatant Commands to enhance the speed of new technology infusion to maintain overmatch on tomorrow's battlefield.

Project Code 123 = \$13.624M

Project Code 124 = \$76.498M

Project Code 953 = \$10.977M

A. Mission Description and Budget Item Justification

Mission Engineering and Integration (ME&I) is a strategically driven, mission-focused DoW framework to synchronize resources and integrate cross-service capabilities to achieve timely and accurate mission effects. It fulfills responsibilities outlined in the National Defense Authorization Act (NDAA) for FY17, Section 855 by prioritizing investments in capabilities that address warfighting needs, interoperability, and joint operational problems through rigorous mission engineering activities.

To achieve its goals, ME&I conducts Joint Force Integration Mission Engineering studies that align with the National Defense Strategy, Defense Planning Scenarios, and Key Operational Problems. These studies assess the impact of integrating new technologies and capabilities into critical warfighter missions. Furthermore, ME&I utilizes advanced modeling and simulation tools to develop and analyze Joint Mission Engineering Threads (METs), also known as "Kill Webs," in operational scenarios, ultimately informing technology investment decisions by DoW leadership. This integrated approach ensures the effective incorporation of new technologies and capabilities that address current and future warfighting demands.

The FY 2026 spend plan amount for Mission Engineering and Integration includes \$76,768 thousand of discretionary and \$32,000 thousand of mandatory for a total of \$108,768 thousand.

New Start (Y/N): N

A. Mission Description and Budget Item Justification

Mission Engineering and Integration is a strategically driven, mission-focused framework designed to synchronize concepts, requirements, research and engineering, budget, and programs across the DoW, integrating cross-Service capabilities to deliver timely and accurate end-to-end mission effects.

It performs the following functions:

- Carries out responsibilities described in the National Defense Authorization Act for FY 2017, Section 855 (Mission Integration Management) by conducting rigorous mission engineering activities to identify and prioritize investments in capabilities with the greatest potential to meet current and future warfighting needs, address warfighting gaps and joint operational problems, and enable Joint Force interoperability and integration.
- Executes a variety of Joint Force Integration Mission Engineering analyses and studies in support of the National Defense Strategy—aligned with Defense Planning Scenarios and Key Operational Problems—that evaluate the mission impacts of integrating new technologies and capabilities into critical warfighter missions.
- Harnesses modeling and simulation (M&S) tools and advanced techniques to develop and analyze critical Joint Mission Engineering Threads (METs)/“Kill Webs” in operational scenarios, enabling DoW leaders to make informed technology investment decisions.
- Develops digital, reusable, enterprise-level Joint METs that are used to assess and evaluate system-of-systems dependencies and risks in executing end-to-end missions.
- Maintains the Mission Engineering Guide and related guidance, and leads the Mission Engineering Practitioners Forum to share lessons learned, pain points, and advance the state of the practice of Mission Engineering.
- Increases collaboration with industry by utilizing technical information exchange agreements to share sensitive data. These efforts identify material solutions that address operational gaps and mission requirements, building public-private partnerships that inform technology, modernization, research, and applied engineering investments.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Mission Engineering and Integration	0.000	15.069	13.597
Description: Conducts Mission Engineering analyses and studies to evaluate recommended technologies that eliminate or disrupt adversary kill chains or deliver superior Blue Force kill chains. Leverages modeling and simulation to identify and assess current and emerging systems, systems of systems, technologies, capabilities, and warfighting concepts.			

UNCLASSIFIED

Appropriation/Budget Activity 0400 / 3		R-1 Program Element (Number/Name) PE 0603142D8Z / <i>Mission Engineering and Integration (ME&I)</i>		Project (Number/Name) 123 / <i>Mission Engineering and Integration</i>	
B. Accomplishments/Planned Programs (\$ in Millions)			FY 2025	FY 2026	FY 2027
• Executed a variety of Mission Engineering analyses and studies focused on Joint Force Integration and the assessment of allied/partner capabilities within the USINDOPACOM (Maritime Strike; C-C5ISR) and USEUCOM (C-IADS; Eastern Flank Deterrence Line) Areas of Responsibility. The results informed emerging technology and capability investments, improvements to mission outcomes, cross-service interoperability, and the design of joint warfighting concepts. • Decomposed critical operational scenarios to develop digital representations of various Joint Mission Engineering Threads. These threads focused on mission areas such as Maritime Strike, Air Superiority, and Space Control and included technology areas like autonomy, assured positioning, navigation, and timing (APNT), and directed energy. • Executed complex and robust Mission Engineering analyses that identified warfighter capability gaps and assessed the mission impacts of innovative technologies and capabilities in countering adversarial threats. The results supported DoW leadership's funding and transition decisions. • Established Information Exchange Agreements through a Broad Other Transaction Announcement (BOTA) and hosted classified Mission Engineering Forums with industry partners to promote and enable information sharing that addresses critical warfighter problems and informs R&D decisions. • Developed enhanced analytic toolsets and visualizations to rapidly, efficiently, and effectively convey mission engineering data, results, and products. • Advanced the state of practice for Mission Engineering through the Mission Engineering Practitioners Forum, which comprises of key DoW organizations. This was achieved by promoting awareness and sharing best practices for implementing ME methodology, developing mission architectures, enhancing training and competency, and executing ME analytics. • Established Mission Integration Teams (MIT) focused on specific operational vignettes and mission areas to collaborate, share, and align mission engineering analytic, data, and modeling efforts across the DoW stakeholders. FY 2026 Plans: • Enable and support the establishment of the new DoW Mission Engineering and Integration Activity (MEIA) as part of the SecWar and DepSecWar Joint Requirements Reform mandate. • Continue and scale the implementation of Mission Engineering to guide the Under Secretary of Defense for Research and Engineering's investment portfolio. Operational scenarios will explore a variety of mission areas across different geographical regions—including USINDOPACOM, USEUCOM, USSPACECOM, and USNORTHCOM—and all domains to identify technologies that close capability gaps and inform requirements, prototypes, experimental design, and concept transitions. Areas of focus for these studies will include Battlespace Management, Joint Command and Control, counter-C5ISR, counter-unmanned systems, Sensors and Non-Kinetic Effects, Joint Fires, and Unmanned/Multi-Domain Autonomous operations. • Maintain and develop new Joint Mission Engineering Threads (METs)/"Kill Webs" to inform broad, Joint-level capability, concept, and technology design, as well as to guide broader force-level systems integration.

Note

New Start (Y/N): N

The Advanced Analysis and Capability Development effort continues work transitioned in FY 2025 from the Defense Advanced Research Project Agency's (DARPA) Assault Breaker II program to support efforts to integrate data, tools, and techniques accelerating delivery of capabilities to the warfighter, which addresses a key National Defense Strategy (NDS) goal – Building on our Enduring Advantages. Assault Breaker II (ABII) renamed Joint Lethality Engineering (JLE) to mark the transition from DARPA to the Office of the Undersecretary of War for Research & Engineering (OUSW(R&E)).

A. Mission Description and Budget Item Justification

Advanced Analysis and Capability Development (A2CD): Continues the execution of advanced analysis under the JLE initiative and development and use of an advanced hardware, software, and Top Secret/Sensitive Compartmented Information/Special Access Program (TS/SCI/SAP) network architecture to conduct fully informed analysis, experimentation, and process improvement to accelerate the Department's capability development and fielding efforts.

Effort focuses on two areas.

1. Joint Lethality Engineering (JLE) (formerly designated as Advanced Concept Development): Research and analysis efforts to solve specific critical military challenges and drive Department investment decisions that enhance the effectiveness of systems against adversarial threats. Activities span across all security levels, domains, and Service warfighting architectures. Additional classified information available upon request. (**FY 2026 only; in FY 2027 realigning to MDJO PE 0604791D8Z)
2. Joint Capability Development Environment (JCDE): Advanced Modeling and Simulation (M&S) Technology and Tool Development and Modeling and Simulation Big Play – have been consolidated into an effort entitled Joint Capability Development Environment (JCDE) to provide a more unified and efficient development approach, afforded by previous accomplishments; advances in fully informed, all domain modeling and simulation (M&S) capabilities; and improved analysis and experimentation methods.

JCDE provides a hardware, software, and TS/SCI/SAP network architecture designed to accelerate the Department's ability to conduct rapid capability development and fielding. The JCDE provides industry, the DoW, FFRDC/UARCs, and international partners access to advanced modeling and simulation (M&S) tools and a multi-level security (MLS) enabled data/knowledge repository to enable rigorous, rapid analysis and experimentation in support of capability development and military utility analysis and experimentation. The JCDE also includes a development environment that enables the continuous creation and improvement of advanced M&S tools and corresponding analysis/experimentation processes.

UNCLASSIFIED

Appropriation/Budget Activity 0400 / 3	R-1 Program Element (Number/Name) PE 0603142D8Z I Mission Engineering and Integration (ME&I)	Project (Number/Name) 124 I Advanced Analysis and Capability Development		
These activities will accomplish the following: • Continue the execution of all-security level, all-domain, and all-Service advanced analysis to explore new warfighting architectures, alternative operational concepts, and inform rapid prototyping activities and capability investment decisions. • Significantly advance the Department’s ability to conduct fully informed analysis and experimentation in support of capability development. • Sustain and operate the necessary infrastructure, hardware, and software processes to ensure the continued development of advanced M&S tools to support evolving defense challenges. • Extend and sustain an existing knowledge repository that enables cooperative analysis and sharing of data at all security levels, dramatically improving analysis efficiency throughout the Department. • Continue development of new analytic processes through experimentation that leverage new and existing M&S tools, provide user support for new and existing tools and processes, and integrate user feedback to inform the continued development of advanced M&S tools. • Continue providing an enduring analytic support capability that can be used by the DoW, FFRDC/UARCs, industry, and partner nations at all classification levels, from UNCLASSIFIED to Top Secret, Sensitive Compartmented Information, Special Access Program (TS/SCI/SAP).				
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026	FY 2027
Title: Joint Lethality Engineering (formerly designated as Advanced Concept Development)		19.320	9.478	0.000
Description: Realigns key elements of the Joint Lethality Engineering program to enable the continued all security level, all domain advanced Joint concept development effort centered on new warfighting concepts. • Produced strategically informed technical analysis that supports the development of future warfighting concepts and identify opportunities for investment in key enabling technologies that enhance the lethality of systems against adversarial threats. • Produced investment recommendations in capabilities oriented toward increasing warfighter effectiveness.				
FY 2026 Plans: • Continue JLE initiative focusing on distinct military challenges related to advanced warfighting architectures, operational concepts, and associated capability development. Additional classified information available upon request. • Continue executing the Eloquent Omen (EO) analytic campaign to inform the development of non-kinetic capabilities in a strategically informed way, focused on de-escalation and preserving decision space. Additional classified information available upon request. • Continue fully informed, all-security level, faster-than-real time, theater-wide, multi-domain, sea floor to space mission level analysis to enable the exploration of adaptive Joint warfighting concepts.				
FY 2027 Plans:

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026	FY 2027
Starting in FY 2027, Joint Lethality Engineering (JLE) activity (previously Assault Breaker II (ABII)), will be realigned to Multi-Domain Joint Operations (MDJO) (PE 0604791D8Z).				
FY 2026 to FY 2027 Increase/Decrease Statement: Decrease reflects activity realignment to MDJO PE 0604791D8Z in FY 2027.				
Title: Advanced Modeling and Simulation (M&S) Technology and Tool Development		49.481	0.000	-
Description: Enhances the Top Secret, Sensitive Compartmented Information, Special Access Program (TS/SCI/SAP) Modeling and Simulation (M&S) software and hardware development environment established by the Secure Advanced Framework for Simulation and Modeling (SAFE-SiM) program. Focus areas includes the Continuous Integration / Continuous Delivery (CI/CD) software pipeline infrastructure and Multi-Level Security (MLS). This work matures the Secure Advanced Framework for Simulation and Modeling (SAFE-SiM) modeling and simulation (M&S) program and suite of analytic tools to continually deliver new capabilities, based on user feedback, and transition new modeling and simulation (M&S) tools for defense analysis.				
Accomplishments/Planned Programs (\$ in Millions)				
• Released new builds for SAFE-SiM and SMART-KM that included patches and new enhancements, and provided Continuous Integration/Continuous Delivery (CI/CD) support for SAFE-SiM.				
• Developed content for priority USINDOPACOM scenarios and missions and executed a variety of joint analyses.				
• Provided familiarization training to organizations external to R&E, including the Military Services.				
• Collected and tagged classified data at various levels in a central repository using SMART-KM to enable reuse and traceability.				
• Initiated the transition of the Modeling and Simulation Integration Environment (MSIE) infrastructure and the Smart Integrated Toolsets and Repository (SmartKM) from DARPA to R&E. This infrastructure supports all-domain MS&A at all classification levels.				
FY 2026 Plans:				
Starting in FY 2026, the funding allocated to Advanced Modeling and Simulation (M&S) Technology and Tool Development will be realigned and consolidated into a new project code [within this PE] titled the Joint Capability Development Environment (JCDE) to support an integrated environment between advanced tools and distributed environment.				
FY 2026 to FY 2027 Increase/Decrease Statement:				
Not applicable.				
Title: Modeling and Simulation Big Play		7.697	0.000	-
Description: Delivers and sustains a Multi-Level Security (MLS) enabled, modeling and simulation (M&S) ecosystem to support both local and distributed collaborative analysis via networks that can be accessed by U.S. government, Department of War, Academic, and Industry stakeholders; results of this work include:

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2025	FY 2026	FY 2027
• Scale JCDE by planning and establishing a virtual private network (VPN) over JWICS for remote desktop access and access to additional High-Performance Computing (HPC) resources to include Authority to Connect to MSIE. • Establish new JCDE nodes and sites by expanding its infrastructure to Government facilities, such as the USINDOPACOM Vanguard Force Command Capability (VFCC). • Continue the research and development of MSIE hardware, SAFE-SiM, and Smart KM software, along with rigorous processes to scale all-domain scenario modeling and analyses that integrate higher levels of fidelity and resolution. • Expand the availability of this capability to additional users from Services, Agencies, and Industry across classified networks through increased connectivity, with the ability to extend infrastructure to different sites. • Develop, mature, and maintain multi-level security capabilities throughout the ecosystem and enhance the knowledge repository (Smart KM) with curated models linked to fully informed threat, scenario, and technology information. • Integrate new toolsets and visualizations within SAFE-SiM, including Artificial Intelligence and Machine Learning (AI/ML) capabilities. • Build out content for priority threat environments and missions, beginning with the USEUCOM threat environment as a sandbox for COCOM concept development and continuing with priority USINDOPACOM scenarios. FY 2027 Plans: • Increase the availability of tools and enhance the performance of the JCDE infrastructure to accommodate new users, expand secure connectivity, deploy to new government and industry sites, and meet growing data processing demands. • Expand the JCDE boundary by integrating with the High-Performance Computing Modernization Program (HPCMP). • Expand the JCDE and SAFE-SiM user base and extend support to additional Combatant Commands to address critical mission requirements. • Continue to enhance the SMART-KM knowledge repository by populating and curating data and models, including expansion to other Combatant Commands. • Promulgate additional training and familiarization courses for JCDE and SAFE-SiM across the DoW and its innovation ecosystem. • Continue to develop, integrate, and test new advanced plug-ins and tools. • Establish a Data and Model Configuration Control Board to verify and adjudicate model pedigree and tagging, including security, Intellectual Property (IP), and data rights. • Enhance cloud service offerings by expanding the dedicated circuit to increase speed and compute resources. FY 2026 to FY 2027 Increase/Decrease Statement: Decrease in RDT&E, DW for \$2.364 million for savings and efficiencies resulting from SAFE-SiM transitioning out of DARPA to OUSW (R&E).

Title: Warfighter Analysis & Rapid Prototyping through Applied Technology Hubs (WARPATH)									-	-	81.000	
Description: The Mission Engineering and Integration Activity (MEIA) is the Department’s mechanism for delivering decision-grade analytics, experimentation, and capability recommendations to solve Joint Operational Problems at speed. To operationalize the Secretary’s MEIA directive and enable broader Department of War reform, the Assistant Secretary of War for Mission Capabilities (ASW(MC)) proposes: WARPATH – Warfighter Analysis & Rapid Prototyping through Applied Technology Hubs – to scale MEIA access across government and industry. It’s a scalable multi-cloud, multi-classification distributed platform that integrates with JCDE to support the MEIA stakeholders and establish additional analytic hubs across CONUS and OCONUS locations.												
FY 2027 Plans: WARPATH will be distributed through Applied Technology Hubs to enable nationwide access for industry innovation, experimentation, and defensible business-case analysis in support of MEIA. In FY 2027 this includes:												
• Develop and test the initial data federation services and API-driven architecture for multi-cloud service providers. • Instantiate a minimal viable product (MVP) of a cloud-based digital environment with access to data and tools. • Integrate with and leverage the Strategic Capabilities Office (SCO) Cloud Enabled Transport Architecture (CETA). • Procure and install software into platform to enable users to test and execute for MEIA. • Distribute accounts to Government and industry partners for MEIA purposes.												
FY 2026 to FY 2027 Increase/Decrease Statement: Increase in RDT&E, DW for \$81.000M for Warfighter Analysis & Rapid Prototyping through Applied Technology Hubs.

A. Mission Description and Budget Item Justification

This program supports the Department's initiatives to Build Sustainable and Long-Term Advantage, and Build a Resilient Joint Force and Defense Ecosystem.

The Joint Hypersonics Transition Office (JHTO), within the Office of the Assistant Secretary of War for Science and Technology (ASW(S&T)), was created to establish a university consortium for hypersonics research; support workforce development; expedite testing, evaluation, and acquisition of hypersonic technologies to meet the stated needs of the warfighter; ensure that prototyping demonstration programs on hypersonic systems integrate advanced technologies to speed the maturation and deployment of future hypersonic systems; develop strategies, roadmaps, and technology protection measures for hypersonics to enable the transition of such technologies to future operational capabilities for the warfighter; and develop and implement a strategy for enhancing the current and future hypersonics workforce.

The FY 2026 spend plan amount for Research, Development, Test & Evaluation, Defense-Wide for Joint Hypersonic Technology Development & Transition includes \$59,515 thousand of discretionary and \$367,000 thousand of mandatory for a total of \$426,515 thousand.

A. Mission Description and Budget Item Justification

This program supports the Department's initiatives to Build Sustainable and Long-Term Advantage and Build a Resilient Joint Force and Defense Ecosystem.

The Joint Hypersonics Transition Office (JHTO), within the Office of the Assistant Secretary of War for Science and Technology (ASW(S&T)), was created to establish a university consortium for hypersonics research; support workforce development; expedite testing, evaluation, and acquisition of hypersonic technologies to meet the stated needs of the warfighter; ensure that prototyping demonstration programs on hypersonic systems integrate advanced technologies to speed the maturation and deployment of future hypersonic systems; develop strategies, roadmaps, and technology protection measures for hypersonics to enable the transition of such technologies to future operational capabilities for the warfighter; and develop and implement a strategy for enhancing the current and future hypersonics workforce.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: University Consortium for Applied Hypersonics (UCAH)	27.107	21.933	37.512
Description: The Joint Hypersonics Transition Office (JHTO) established the University Consortium for Applied Hypersonics and solicits research projects through the Consortium that address hypersonic priorities and challenges that were identified by the hypersonics community. The JHTO Science and Technology (S&T) team prepares multiple topics for solicitation each year across materials, propulsion, navigation, guidance, control, modeling & simulation, aerodynamics, ground testing, algorithms, and planning. These research projects are typically 1-3 years in duration. The UCAH hosts Consortium Industry Days, Project Industry Days, and participates in career/internship fairs to cross-level information and enhance workforce development. The JHTO leverages the Consortium to fund summer research internships for undergraduate and graduate students who are focusing on key hypersonic development areas. FY 2026 Plans: FY 2026 base plans for the UCAH continues the path identified in the S&T roadmap and pursues flight experimentation for promising technologies. Projects include continuation of those started in FY 2023 and FY 2024, as well as new projects selected in FY 2025 through the annual UCAH project solicitation. In FY 2026, new research will explore advanced aerodynamics, novel propulsion systems, integration materials, high-speed aero-optics and non-kinetic interactions. FY 2027 Plans: FY 2027 base plans for the UCAH continues the path identified in the S&T roadmap and continues efforts towards flight experimentation for promising technologies. These funds will support projects selected from the FY 2026 UCAH project solicitation

Exhibit R-2A, RDT&E Project Justification: PB 2027 Office of the Secretary Of Defense		Date: April 2026		
Appropriation/Budget Activity 0400 / 3	R-1 Program Element (Number/Name) PE 0603183D8Z / Joint Hypersonic Technology Development & Transition	Project (Number/Name) 066 / Joint Hypersonic Transition Office (JHTO)		
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026	FY 2027
and continue those started in FY 2024, FY 2025, and FY 2026. Technologies will be matured and demonstrated in the areas of air breathing propulsion test capabilities, air breathing propulsion digital twin architectures, collaborative communications and networking, additive manufactured material properties, endothermic fuel applications, ceramic materials for reusable vehicles, and optics testing for sensor and seeker windows. FY 2026 to FY 2027 Increase/Decrease Statement: The increase of \$15.579 million between FY 2026 and FY 2027 reflects funding towards flight test experimentation in support of the FY 2025 Grand Challenge project, application of existing technology developments toward more complex problems at higher classification levels, and increased consortium management costs.				
Title: Navigation, Guidance and Controls (NGC) Science and Technology (S&T) Development Description: In alignment with the jointly developed Hypersonics Science and Technology (S&T) Roadmap, the Joint Hypersonics Transition Office (JHTO) funds NGC S&T projects to improve the operational capabilities of both offensive and defensive hypersonic systems. These projects focus on navigation in contested environments, on-vehicle trajectory generation, communications risk reduction, guidance electronics, and conformal antenna development. Additional details regarding these projects are sensitive and/or classified and can be provided upon request.		4.786	-	-
Title: Propulsion Science and Technology (S&T) Development Description: In alignment with the jointly-developed Hypersonics S&T Roadmap, the Joint Hypersonics Transition Office (JHTO) funds propulsion S&T projects designed to enhance propulsion capabilities for both offensive and defensive hypersonic systems. These efforts will close critical gaps in the development of hypersonic cruise missiles and enhance range and/or payload capacity of boost-glide systems. Focus areas for these projects include solid rocket motor component technologies, expanding the operating envelope of Dual-Mode Ramjet/Scramjet propulsion systems, developing new actuator technologies for axial thrusters, and establishing a proof-of-principle for an improved endothermic fuel for hypersonic applications. Additional details regarding these projects are sensitive and/or classified and can be provided upon request.		3.104	-	-
Title: Systems Engineering, Design and Analysis (SEDA) Science and Technology (S&T) Development Description: In alignment with the Hypersonics S&T Roadmap continue to improve the modeling and prediction of hypersonic vehicle plumes, wakes, and signatures in addition to providing performance baselines for offensive and defensive systems. Additional details regarding SEDA projects are sensitive and/or classified.		1.832	-	-
Title: Materials, Structures and Manufacturing (MSM) Science and Technology (S&T) Development Description: In alignment with the jointly-developed Hypersonics S&T Roadmap, the Joint Hypersonic Transition Office (JHTO) funds MSM S&T projects essential to develop new high-temperature materials for hypersonic applications and to design more		1.577	-	-

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026	FY 2027
efficient and effective manufacturing methods for hypersonic structural components. Specific projects seek to characterize alternative ceramic matrix composites for hypersonics, improve the ability to produce multi-phase monolithic ceramic dielectric materials, test and characterize the performance of leading edge coatings, and improve manufacturing processes to build cruiser fins. Additional details regarding these projects are sensitive and/or classified and can be provided upon request.				
Title: Ordnance Science and Technology (S&T) Development Description: In alignment with the jointly-developed Hypersonics S&T Roadmap, the Joint Hypersonics Transition Office (JHTO) funds ordnance S&T projects to better understand hypersonic ordnance effects and improve those effects across a broad range of target sets. Projects will develop and demonstrate a survivable fuze system designed to function under extreme hypersonic terminal conditions, model shock loads associated with a multi-mission warhead, and conduct high-fidelity modeling to analyze and optimize the effects of hypersonic munitions. Additional details regarding these projects are sensitive and/or classified.		3.449	-	-
Title: Aerodynamics and Aerothermodynamics Science and Technology (S&T) Development Description: In alignment with the jointly-developed Hypersonics S&T Roadmap, the Joint Hypersonics Transition Office (JHTO) funds aerodynamics and aerothermal S&T projects to enhance aero optics modeling and simulation testing. This project seeks to increase the fidelity of infrared aero optics modeling and simulation data while driving down man-hours through creation/validation of a more useful and collaborative collection format. Additional details are sensitive and/or classified.		4.036	-	-
Title: Joint Hypersonics Transition Office (JHTO) Systems Engineering Field Activity at Naval Surface Warfare Center Crane Division (NSWC Crane) Description: Supports systems engineering and integration for hypersonics development to generate efficiencies and facilitate technology transition. Support will include coordinating with systems engineering teams across the Services and programs; negotiating more modular Government Reference Architectures to support individual programs; define and execute system on-ramping plans, and guide accelerated development plans. Additionally, the activity will represent the Joint Hypersonics Transition Office (JHTO) as a technical execution area co-lead for workforce development.		4.854	-	-
Title: Workforce Development Projects Description: The Joint Hypersonics Transition Office (JHTO) will invest in undergraduate and graduate internships directly working with ongoing hypersonic research at national labs, service academies, and universities. JHTO will create opportunities to connect with mid-career and executive, such as trainings and veteran career opportunities, technician and community college partnerships, university design challenges and hypersonics-specific STEM outreach. FY 2026 Plans:		-	2.851	15.851

UNCLASSIFIED

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026	FY 2027
Continue activities from FY 2025. Expansion of workforce development actions and hands-on activities will include furthering graduate and undergraduate internships, reaching additional universities/service academies and their students, who are not yet fully immersed in hypersonic research and courses. In addition, increase the number of national labs internship partners as well as number of intern opportunities funded per location. This will include expansion to states not yet involved in DoW hypersonics. Increase the number and reach of training and veteran events to extend impact and accessibility to the workforce. FY 2027 Plans: Continuing activities from FY 2026, the expansion of workforce development actions and activities will include furthering graduate and undergraduate research internships, reaching additional universities and service academies, and their students who are not yet fully immersed in hypersonic research and courses. JHTO is also creating and executing a joint Strategic Plan for Workforce Development with other DoW partners. In addition, we will increase the number of national lab internship partners as well as the number of intern opportunities funded per location. This will include expansion to states not yet involved in DoW hypersonics and expanding relationships with our international partners. JHTO will expand the university student Design Challenge, a 3-tier hypersonic design challenge connecting student teams with direct access to hypersonic vehicle testing and data evaluation at industries and national labs. We also will increase training opportunities by creating hypersonic on-line courses for the hypersonic community and increase the number and reach of training and veteran events to extend impact and accessibility to the workforce. Hypersonic specific STEM activities will be supported. FY 2026 to FY 2027 Increase/Decrease Statement: The increase of \$13.000 million between FY 2026 and FY 2027 provides more student internship opportunities and implements larger, scalable workforce development programs for hypersonics Science & Technology and the design and integration of complex systems.				
Title: Science & Technology Acceleration Projects Description: The JHTO-developed Hypersonics S&T Roadmap guides JHTO-internal investments and informs external hypersonics S&T investments. Internal investments include science and technology projects to improve capabilities of both offensive strike, defense against hypersonics and reusable hypersonic systems. Capability themes across the three operational systems include piloting to the target, range and maneuverability increases through novel aerodynamics and propulsion, increased effectiveness of hypersonic systems, and improvements to mission planning and implementation of hypersonic weapons. These projects focus on technological gaps critical to the technological realization, manufacture, and cost-effectiveness of systems in development. These projects have strong transition potential and may include direct insertion, risk reduction technologies, or informing future requirements. FY 2026 Plans:		-	20.731	284.059

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026	FY 2027
These funds will support projects selected from the FY 2025 JHTO S&T solicitation and those identified through the FY 2025 technology demonstration plans developed by JHTO cross-service Integrated Product Teams. Technologies will be matured and demonstrated in the areas of robust navigation (to ensure that hypersonic systems arrive at the target), target seeking and target recognition (to increase the hit probability), thermal management and power generation (to reduce hypersonic system size and weight), highly manufacturable heat shields and structures (to improve hypersonic system affordability), scramjet propulsion technologies and design tools (to decrease the development timelines of novel propulsion systems), enhanced weapon effects and warhead system design (to enhance the lethality of hypersonic weapons), and kill chain analysis and demonstration (to better support warfighting objectives). FY 2027 Plans: These funds will support projects selected from the FY 2026 JHTO S&T solicitation and those identified through the FY 2026 technology demonstration plans developed by JHTO cross-service Integrated Product Teams. Technologies will be matured and demonstrated in the areas of collaborative engagement with multi-payload deployment mechanisms, novel detonation-based propulsion technologies, rigorous thermal protections system material testing, robust and integrated alternative navigation technologies, additively manufactured radomes and apertures, and utilizing simulation environments to support mission or systems engineering analyses. FY 2026 to FY 2027 Increase/Decrease Statement: The \$263.330 million increase from FY 2026 and FY 2027 supports a greater emphasis on operational technology demonstrations that accelerate the integration of advanced capabilities into emerging programs, including enhanced lethality, air-breathing propulsion technologies, and improved navigation. An increase of \$45.000 million designated as Munitions - Joint Hypersonics Transition Office Technology Maturation will make investments in assured position, navigation and timing, cooperative engagement, and other classified technologies. A \$5.000 million increase for Next Generation Hypersonic Concepts Studies will provide robust analysis based on modeling and simulation to derive technical requirements and drive effective technical trade decisions. An additional \$0.330 million accounts for inflation adjustments for non-pay and non-fuel purchases.				
Title: Munitions - Affordable Hypersonic Boost Glide Development (U) Description: The President’s Budget Request FY 2027 includes the demonstration and development of production-scalable strike concepts. This will equip the Services with additional options to strike time-critical targets at greater ranges than current capabilities. This effort will advance technology candidates for future Service programs and enable the integration of emerging technologies and manufacturing techniques. FY 2027 Plans: These funds will support project milestone payments for Hypersonic Glide Boost Development. FY 2026 to FY 2027 Increase/Decrease Statement:		0.000	-	87.000

A. Mission Description and Budget Item Justification

This program supports the Department's initiatives to Reestablish Deterrence, Prevail in Conflict, Defend the Homeland, and Build Sustainable and Long-Term Advantages.

The mission of the Joint DoW/DOE Munitions Technology Development Program (JMP) is to develop new and innovative science and technology (S&T) to enable significant advancements in the state-of-the-art for conventional munitions. The JMP portfolio comprises essential, cross-cutting, and foundational S&T investments that enable future force operational capabilities in the near, mid, and far term. Additionally, JMP's efforts form the foundation of Department of War (DoW) munitions research design, testing, and manufacturing.

A memorandum of understanding signed in 1985 between the Department of War (DoW) and the Department of Energy provides the basis for the cooperative effort and for cost sharing the mutually beneficial technology munitions advancements. The funding budgeted by the DoW to the primary JMP effort within this program are matched, at a minimum, dollar for dollar by the DOE. Through this interdepartmental cooperation, the DoW leverages DOE's substantial investments in intellectual capital, highly specialized skills, advanced scientific equipment and facilities, and computational tools not available within the DoW. This includes developing computational tools, which leverage AI technologies to aid munitions designers in developing novel high entropy alloys, advanced energetics, and fast running damage models for improved assessment of maritime lethality. These advancements through JMP provide foundational capabilities that impact a wide range of munitions including One-Way Attack, counter-small Unmanned Aerial System (UAS) technologies, and munitions that may be utilized for Homeland Missile Defense. The integration of DOE technologies with DoW Joint Services' needs has provided major advances in munition capabilities over many years and continues to play a crucial role in the exploration, development, and transition of new technologies needed by the services.

The JMP has established a successful collaborative munitions community of DoW and DOE scientists and engineers that develop technologies of interest to both Departments. A structured cadence of threat informed requirements development, Joint Service informed portfolio development, and bi-annual technical reviews ensure that the JMP's investments address high-priority DoW gaps, needs, and challenges. The JMP portfolio is organized into four Technology Coordination Groups (TCG), led by DoW Service laboratory subject matter experts, which evaluate each project's technical progress and continued relevance to the mission.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Joint DoW/DOE Munitions Technology Development	19.201	18.292	22.675
Description: Joint DoW/DOE Munitions Technology Development focuses on the following key areas: - Decision tools, diagnostics, and datasets for munition design and evaluation. - Munition delivery technology enabling advanced weapon bodies, propulsion systems, and survivability to extreme conditions. - Munition controls for fuzing, microelectronics, power, sensors, kill chains, and survivable components. - Lethal effects innovations enabling novel explosive materials, formulations, warhead designs, and target damage advancements.			
FY 2026 Plans:			

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2027 Office of the Secretary Of Defense		Date: April 2026	
Appropriation/Budget Activity 0400 / 3	R-1 Program Element (Number/Name) PE 0603225D8Z / <i>Joint DoD-DoE Munitions Technology Development</i>	Project (Number/Name) 225 / <i>Joint DOW DOE Munitions</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
• Develop physics-based models enabled by machine learning technology against hard and deeply buried targets. • Develop optical fragment measurement techniques with higher-fidelity, lower cost, higher throughput for DoW munition design and testing • Improve advanced reactive flow modeling capabilities to capture physics critical to assessing munition survivability and performance in extreme conditions. • Develop AI-informed additive manufactured Multi-Principal Element Alloys (MPEAs) possessing enhanced material and functional properties for munition structure performance under extreme conditions. • Improve material models and codes applicable for metallic materials for reliable simulations and warhead performance and lethality assessment. • Design multi-fidelity aerodynamics capability that uses techniques to construct an aerodynamics database that concentrates on calculations that will significantly speed up design work. • Demonstrate the use of X-Ray Diffraction to measure the thermodynamic behavior and late time burn of combined effect explosives to enable optimization of munitions with advanced energetics warheads. • Simplify the process to build robust fast-running models for lethality of emerging targets, munitions, and engagement scenarios and enable the rapid assessment of munition & target effects. • Develop a rapid, computation-driven capability to accelerate discovery and development of alloys that satisfy performance and manufacturing scale-up needs. • Design and fabricate supercapacitors with significantly improved performance and boost power available to munitions' electronics, freeing up space for other advances in munitions function. FY 2027 Plans: • Continue discovery and development of advanced energetic materials. • Continue development of fast running modeling capabilities for fire initiation and cascading ignition for maritime applications • Advance modeling & simulation capabilities for munitions analyses; refine high-fidelity capabilities in simulating lethality scenarios; and develop high-fidelity models to rapidly design, optimize and assess new munitions concepts. • Develop artificial intelligence models for predicting damage models for munitions and predicting the survivability of different explosives in extreme conditions. • Model and develop high-performance high-power fuzing technologies, increasing reliability and enabling more complex munitions and engagements. • Continue execution of classified technology development project. FY 2026 to FY 2027 Increase/Decrease Statement:

A. Mission Description and Budget Item Justification

This program element supports the Department's initiatives to Revive the Warrior Ethos, Rebuild Our Military, and Reestablish Deterrence.

This program directly supports the Joint Assured Technical Overmatch Center (JATOC) - renamed from the Office of Strategic Intelligence and Analysis (OSI&A) in FY 2026 - for the Office of the Under Secretary of War for Research and Engineering (OUSW(R&E)). JATOC's campaign of analysis integrates intelligence reporting and independent technical expertise to execute comparative assessments and will be increasingly supported by the curation of data and application of artificial intelligence (AI) tools. These assessments rapidly inform investment decisions and shape the development of innovative capabilities to address emerging threats from a diverse range of state and non-state actors as outlined in the National Defense Strategy (NDS) and as reported through the Intelligence Community (IC). The complexity of identifying capability gaps in the future operating environment—combined with the speed of emerging threat and global commercial development—requires a broadly-scoped approach. This approach provides integrated baselines for OUSW(R&E) analyses and investment decisions that reflect cross-cutting Joint Force plans, missions, and concepts. Trends and potential impacts related to global critical and emerging technology developments are analyzed and integrated with IC reporting to identify potential gaps and assess opportunities to fill those gaps, enabling decision advantage in OUSW(R&E) and informing strategies for maintaining technological superiority and modernizing key capabilities for the Joint Force.

Analyses and assessments are focused on challenges related to NDS objectives and competitors' research and development trends. Two lines of effort accomplish this mission:

1) Assured Technical Overmatch (ATO). This project integrates information from the acquisition, intelligence, operational, and scientific and technical (S&T) communities to quantify key attributes of emerging critical challenges and assess counter technology opportunities. The framework includes execution of the following activities:

- Technology Overmatch. JATOC partners OUSW(R&E) subject matter experts with Federally Funded Research and Development Centers and University Affiliated Research Centers to identify potential future military capability gaps and propose technological solutions for OUSW(R&E) and broader Department consideration. These efforts are conducted in overlapping six-month sprints and are informed by intelligence reporting, operational plans, service requirements, and Department-funded R&D as well as commercial and academic research activities. Results are consolidated in a graphical overview of the problem and potential solutions, along with white papers outlining details for proposed solutions to help assure technology overmatch.

UNCLASSIFIED

Exhibit R-2, RDT&E Budget Item Justification: PB 2027 Office of the Secretary Of Defense		Date: April 2026
Appropriation/Budget Activity 0400: <i>Research, Development, Test & Evaluation, Defense-Wide / BA 3: Advanced Technology Development (ATD)</i>		R-1 Program Element (Number/Name) PE 0603288D8Z / <i>Science and Technology (S&T) Analytic Assessments</i>
- Competitive Landscape Assessments (CLA). JATOC partners with Federally Funded Research and Development Centers, University Affiliated Research Centers, industry, and academia to conduct comparative assessments of critical technologies to determine technological advantage and inform investment decisions across the Department of War (DoW) S&T Enterprise. Critical technologies of interest to the DoW and strategic context drawn from the NDS, National Defense Science and Technology Strategy (NDSTS), and other DoW planning efforts set the bounds for the assessment of technological applications that could deliver operational advantage to the Joint Force along future development and deployment timelines. - Operational and Technical Assessments. Evaluations of DoW operational scenarios and warfighting concepts that identify operational gaps, incorporating IC-derived adversary threat trends and the technical demands of the future operational environment to determine challenges that could be mitigated or eliminated through the application of emerging and disruptive technologies. - Technology-based Wargames. Execution of an array of purpose-built games and workshops that integrate the operational, technology, and intelligence communities to characterize emerging technologies in the context of the future operational environment, evaluate their disruptive potential, and identify opportunities and challenges. Insights from these efforts inform programmatic and policy decisions related to the development of operational concepts across the Department. 2) Global Research Watch (GRW). This project combines analyses of complex, unstructured, open-source data sets with intelligence reporting to enable monitoring and analyses of global research and development activities, underpinning characterization of the global technology environment and informing portfolio investment decisions across the DoW S&T Enterprise. These characterizations enable GRW activities and establish the global technology landscape that informs JATOC S&T analytic assessment efforts and frames the larger campaign of analysis. The framework includes the following activities: - Technology Watch. Analysis of global open-source science, technology, research, and development efforts and in-person conference, symposium, and workshop attendance to characterize the global landscape of known science, technology, and concepts and to identify trends that can provide indicators and warnings of disruptive technology advances. Integrating the methodologies and findings from technology forecasting, maturation assessments, and CLA efforts to identify technological development areas for research and investment. - Horizon Scanning. Systematic execution of analytic techniques applied to large, complex open-source data for the identification of emerging science and technology capable of altering the future operating environment. - Intelligence Integration. Structured execution of recurring technical exchanges between OUSW(R&E) stakeholders and S&T intelligence subject matter experts. These engagements enable the direct exchange of OUSW(R&E) intelligence needs and IC finished intelligence products to complement open-source findings and establish a comprehensive understanding of the global technology landscape. Additionally, OUSW(R&E) input and perspectives support IC S&T intelligence initiatives and inform IC priorities, investment decisions, and strategic direction. - International Partner Collaboration. Cooperative identification and early-stage investigation of emerging technologies that generate opportunities and solve critical challenges common to the national security of the U.S. and our international partners. Due to the emergent nature of challenges and threats, specific analytic foci are unlikely to be identified beyond the current budget year. The process for developing and executing assessments can span fiscal years and may have multiple phases as trends progress and new information arises through open-source technology trend analysis and intelligence reporting.

A. Mission Description and Budget Item Justification

The Assured Technical Overmatch project funds comparative assessments that integrate Intelligence Community (IC) insights and independent technical analysis to shape the development of innovative capabilities and address emerging threats from a diverse range of state and non-state actors as outlined in the National Defense Strategy (NDS) and as reported through the IC.

Engineering and technology analysis is performed by Federally Funded Research and Development Centers, University Affiliated Research Centers, industry, and academia partners focused on analysis of critical Department of War (DoW) scientific and technical investments and breakthroughs by U.S. strategic competitors. These assessments compare global science, technology, research and development efforts, and current state-of-the-science, and identify technology development strategies. Main lines of effort include:

- Technology Overmatch products leverage OUSW(R&E) subject matter expertise with Federally Funded Research and Development Center and University Affiliated Research Center expertise to identify potential future military capability gaps and propose technological solutions for OUSW(R&E) and broader Department consideration. These efforts are conducted in overlapping six-month sprints and are informed by intelligence reporting, operational plans, service requirements, and Department-funded R&D as well as commercial and academic research activities. Results are consolidated in a graphical overview of the problem and potential solutions, along with white papers outlining details for proposed solutions to help assure technology overmatch. Competitive Landscape Assessments that characterize the technical state-of-the-art, measure relative national standing, and identify and assess the applications of emerging technologies to strategically important military capabilities to inform OUSW(R&E) technology development and investment decisions.
- Quantitative, engineering-level analyses of novel technologies and concepts that identify potential areas of future technology overmatch.
- Independent assessments of critical technology research and development efforts that compare U.S. and competitor nations.

Operational and technical assessments identify prioritized operational issues and associated technology focus areas through comprehensive kill chain analysis across all domains through the year 2040. Characterizations of future operating environments and associated challenges inform the scoping and design efforts of S&T and engineering analyses for DoW. Main lines of effort include:

- Technology-based Wargames that integrate information from the intelligence, technology, and operational communities to identify opportunities stemming from emerging technologies and evaluate the demands of the future operational environment. The outputs inform future concept and capability development, prototyping and experimentation activities, threat forecasting, and DoW S&T investments.
- Operational Analyses focused on the dynamic interaction of U.S., ally and partner, and adversary military capabilities in a future operating environment. This analysis fuses IC assessments of future threats and operational impacts to the Joint Force, to enable technology-specific analysis in areas of critical challenge or opportunity.

Description: The Assured Technical Overmatch (ATO) project supports the development of innovative capabilities to meet emerging threats from the diverse range of state and non-state actors confronting the Department. These capabilities support the objectives of the NDS. Throughout this process, ATO analyses will be tightly coupled with both the IC and the operational community. Operational and Technical Assessment: - Continue to update foundational data of U.S., ally and partner, and adversary capabilities to enable mission-oriented analysis of emerging threats. - Continue to assess anticipated U.S., ally and partner, and adversary capability solutions in the context of DoW-approved operational scenarios and associated timelines to illustrate areas of potential operational overmatch. - Continue to produce comparative assessments of existing and planned U.S. capabilities and weapons systems characterizing emerging threat systems and capabilities in future operating environments. - Continue to design and execute technology-based wargames to inform and align DoW modernization activities with joint concept and capability requirements and threat forecasting. Competitive Landscape Assessment: - Assess technological state-of-the art and trends to capture relative national standing for focal technologies. - Explore military operational implications to understand operational relevance, technology timeline, and uncertainties associated with the applications of the focal technologies. - Integrate key competitor perspectives through increased intelligence community engagement “AI-First” Transformation: - In partnership with the Defense Technical Information Center (DTIC), JATOC works to identify relevant data sets and develop a common data lexicon across the DoW, enabling the tagging, tracking, and analysis of data associated with technology investments across the defense enterprise. FY 2026 Plans: Engineering and Technology Analysis: - Continue to conduct engineering- and physics-based threat assessments informed by IC reporting to identify gaps in U.S. capabilities. - Continue to conduct analysis of novel technology and concepts to address capability gaps and potential counters to emerging technologies in future operating environments.

A. Mission Description and Budget Item Justification

In accordance with Congressional direction in 10 USC Sec 4066, the Global Research Watch (GRW) Project Code supports OUSW(R&E) and broader DoW activities through the identification of technology research trends and the forecasting of concepts and technology maturation with the potential for military application through 2040. GRW activities inform the Department's investment decisions to achieve global competitive advantage. The program provides tailored technical assessments that identify the military relevance, research opportunities, and investment targets for emerging S&T. The Joint Assured Technical Overmatch Center (JATOC) enables intelligence-informed decision advantage across the S&T enterprise portfolio and informs the U.S. S&T intelligence posture by establishing linkages across the OUSW(R&E) and IC entities.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Global Research Watch	8.010	8.130	8.569
Description: The Global Research Watch project utilizes multiple analytic methodologies to identify nascent technologies and characterize the future global S&T landscape. This characterization, in combination with other technical analysis performed by JATOC, will inform strategic technology development decisions across the OUSW(R&E) Enterprise. JATOC works in collaboration with international allies and partners to further the field of critical and emerging technology research and analysis.			
FY 2026 Plans: Technology Watch and Forecasting: - Continue to conduct systematic analysis of scientific research databases to identify emerging science, technology, and concepts. - Continue to characterize the global landscape of known science, technology, and concepts to identify trends that can provide indicators and warnings of disruptive technology advances. - Continue to integrate methodologies and findings from technology scanning and forecasting, maturation assessments, data analysis, and net technical assessment efforts to characterize global developments in science and technology research. - Advance the established U.S. – UK S&T Futures bilateral strategy through the continued discovery and early-stage exploitation of scientific breakthroughs to inform research and investment decisions that capitalize on burden sharing. - Collaborate with FVEY partner nations to advance the science, methodologies, and tools of technology foresight analysis, model Defense systems, and explore the operational implications of technology application at the strategic, joint all domain level. - Advance the collaborative campaign of analysis strategy with Australia, identifying emerging technologies, forecasting

A. Mission Description and Budget Item Justification

This program supports the Department's initiatives to Deter Aggression and Prevail in Conflict, Defend the Homeland, Build Sustainable and Long-Term Advantage, and Build a Resilient Joint Force and Defense Ecosystem.

The Strategic Capabilities Office (SCO) conducts analysis to identify and accelerate the development, demonstration, and transition of operationally impactful capabilities to shape and counter emerging threats and increase the lethality of the Joint Force in contested environments. In a partnership endeavor across the Office of the Secretary of War (OSW), Joint Staff, Combatant Commands (CCMDs), the Services, the Intelligence Community (IC), and other U.S. Government agencies, the SCO combines capability innovation with new concepts for warfighting that leverage new technology areas, including autonomy, artificial intelligence, and machine learning. SCO conducts projects on accelerated timelines, in all warfighting domains, at any classification or access level.

The Advanced Innovative Analysis and Concepts program supports development, study, and analysis of integrated concepts and prototypes, analysis in support of ongoing efforts to shape and counter emerging threats, cross-Service and cross-Defense/Intelligence concepts, and red-teaming. Projects focus on proving component and subsystem maturity prior to integration in major systems, and may involve risk reduction initiatives. This program also supports the development of concept proposals for assessment by the Technical and Transition Cross Functional Teams established in accordance with the National Defense Authorization Act (NDAA) for FY 2020 for development under the Advanced Innovative Technologies Program Element. Due to the nature of these projects, specific applications and detailed plans are available at a higher classification level.

A. Mission Description and Budget Item Justification

The Strategic Capabilities Office (SCO) conducts analysis in support of ongoing efforts to shape and counter emerging threats, with special emphasis on innovative and architecture-level concepts, cross-Service and cross-Defense/Intelligence concepts, red-teaming, and on a case-by-case basis, research and development projects to demonstrate new concepts. SCO identifies, analyzes, and accelerates the development, demonstration, and transition of selected capabilities to shape and counter emerging threats, and to improve U.S. security posture. In a partnership endeavor across the Office of the Secretary of War (OSW), Joint Staff, Combatant Commands (CCMDs), the Services, the Intelligence Community (IC), and other U.S. Government agencies, SCO combines capability innovation with concepts of operation to develop novel, high-leverage approaches to address pressing national security challenges. SCO conducts projects on accelerated timelines, at any classification or access level.

The Advanced Innovative Analysis and Concepts program supports development, study, and analysis of integrated concepts and prototypes, analysis in support of ongoing efforts to shape and counter emerging threats, cross-Service and cross-Defense/Intelligence concepts, and red-teaming. Projects focus on proving component and subsystem maturity prior to integration in major systems and may involve risk reduction initiatives. Due to the nature of these projects, specific applications and detailed plans are available at a higher classification level.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Innovative Analysis and Concept Generation	28.018	20.000	27.032
Description: The Strategic Capabilities Office conducts analysis, studies, demonstrations of integrated concepts and prototypes, component and subsystem maturation, and risk-reduction demonstrations in support of ongoing efforts to shape and counter emerging threats, and develops project proposals for prototyping under the Advanced Innovative Technologies program. Due to the nature of these projects, specific applications and detailed plans are available at a higher classification level.			
FY 2026 Plans: Continue to innovate in partnership with Services Program Offices and CCMDs to identify game-changing uses of existing and mature systems and technologies to prepare for presentation to the Cross Functional Teams.			
FY 2027 Plans:			

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2027 Office of the Secretary Of Defense		Date: April 2026	
Appropriation/Budget Activity 0400 / 3	R-1 Program Element (Number/Name) PE 0603289D8Z / <i>Advanced Innovative Analysis and Concepts</i>	Project (Number/Name) 329 / <i>Advanced Innovative Analysis and Concepts</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
Conduct modeling and simulation, mission engineering, and technical and operational analysis aligned to high priority operational problems. Focus areas for FY 2027 analysis include integrated air and missile defense, long range kill chains, and counter long range kill chains. Analysis will inform current and future SCO and Department of War programs. FY 2026 to FY 2027 Increase/Decrease Statement: The decrease will fund fewer studies and analysis to identify high-impact concepts for prototype development to solve highest priority Combatant Command challenges.			
Title: Formulation and Risk Reduction Description: Subsequent to review and recommendation of project concepts by the Technical and Transition Cross Functional Teams, the Strategic Capabilities Office performs engineering trade studies and conducts component tests to prepare selected projects to be ready to enter into full prototype development under the Advanced Innovative Technologies program. Activities, such as proving component and subsystem maturity prior to integration in major systems, are intended to finalize key requirements to reduce technical risk during prototype development. Due to the nature of these projects, specific applications and detailed plans are available at a higher classification level. FY 2026 Plans: Conduct formulation and risk reduction for five to six projects reviewed by the Cross Functional Teams and proposed to begin 6.4 work in FY 2027. FY 2027 Plans: Conduct formulation and risk reduction for five to six projects reviewed by the Cross Functional Teams and proposed to begin 6.4 work in FY 2027. FY 2026 to FY 2027 Increase/Decrease Statement: The increase will fund slightly higher costs for a similar number of formulation and risk reduction activities to allow projects selected to enter Formulation in FY 2027 to be ready to enter Execution in FY 2028.		24.458	36.007
Title: Small Business Innovative Research (SBIR)/Small Business Technology Transfer (STTR) Description: This project includes estimates of funds required for SBIR/STTR based upon planned extramural research and development spending. These funds are transferred to the SBIR/STTR programs in the year of execution. FY 2026 Plans: Funding will be transferred to the Department's SBIR and STTR programs in the year of execution. Note

New Start (Y/N): No

A. Mission Description and Budget Item Justification

This program supports the Department's initiative to Build Sustainable and Long-Term Advantage.

Quantum technology is at a point where current investments will determine its future impact. If the United States can stay on pace, many important outcomes for the DoW will be realized. Quantum Position, Navigation, and Timing (PNT) sensor technology will create robust position, navigation, and timing (PNT) for the freedom of operations having precision-strike capabilities even within contested spectrum, space, or cyber operations. Quantum magnetometers and gravimeters may improve standoff detection of buried and submerged mines, tunnels, and other objects and structures needed to improve warfighter operations in challenging environments. Quantum radio frequency (RF) sensors will greatly enhance capabilities in the spectrum giving the DoW significant advantages for electronic warfare; command, control, and communications and intelligence, surveillance, and reconnaissance (C3ISR). Quantum computing (QC) may revolutionize DoW's ability to develop advanced materials and potentially other computational problems. However, the transition of laboratory innovations to devices that are competitive with existing ones is hampered by immature quantum component technology and quantum lifecycle development from gaps in specialized fabrication, integration, packaging, and manufacturing processes needed to deploy quantum sensors at the functional capability and manufacturing scalability needed for deployment in future conflicts.

This funding will identify detailed component and quantum lifecycle requirements develop the most critical technology solutions. This effort will be coordinated with non-defense U.S. Government (USG) agencies to ensure their commercial viability. The resulting quantum lifecycle chain will enable defense and dual-use applications of quantum technology leveraging existing resources in academic institutions, national laboratories, private industries; and other DoW programs such as Manufacturing Innovation Institutes (DoW MIIs), the Microelectronics Commons, and the Defense Innovation Unit.

PNT, detection, and RF sensor technologies demonstrate substantial improvements in technical performance against their current fielded, classical counterparts. However, sustained research and development is needed to mature these technologies at the quantum system level as well as to mature their underlying components and fabricated systems to meet size, weight, power requirements and to validate their operation in the field. All these technologies require refinement of the concepts of operation to maximize impact to the DoW and accelerate the timelines to such impacts. Required research and development efforts are guided by OUSW(R&E) with input from the services for their technical requirements as a DoW-wide effort. These sensors are not yet at a maturity level for system integration by the services, but they have shown great progress under this program element. However, the relative cost and workforce barrier is too high for one service or agency alone to transition this complex and emerging technology for a single mission. DoW agencies working together, however, guided by OUSW(R&E), can overcome these barriers and impact

A. Mission Description and Budget Item Justification

The Department has pioneered and advanced classical sensor technology for decades. Over the past years, quantum sensing technology has shown the ability to meet program-level metrics throughout DoW R&D programs. Sustained development to create the specialized manufacturing requirements, workforce, and operation outside the laboratory is critical to bring these sensors to a maturity level at which the services can continue transition to programs of record. OUSW (R&E) centralized management and direction of this development will ensure that redundancy and a piecemeal approach is avoided, and that overall progress is accelerated.

This funding will allow OUSW(R&E) oversight of a multi-service program designed to develop quantum sensing technology capable of integration into multiple DoW applications in each of the Army (USA), Navy (USN), and Air Force (USAF). As structured, the program will be able to maximize the utilization of the military department's distributed technical expertise and capabilities. OUSW(R&E) will contribute connections to program of record and the joint force strategic goals, connectivity and integration between organizations. OUSW (R&E) will reduce risks to individual projects through coordinated work on technology challenges, and connectivity to other R&E capabilities including the other critical technology areas, basic science office, manufacturing innovation, and the Microelectronics Commons. OUSW(R&E) will confirm all developed quantum technology meets specified requirements ensuring a more diverse use case for all developed technology with an industry base that can sustain DoW needs. Projects will include testing and evaluation, device integration, and application analysis to aid in future acquisition and sustainment of innovative technologies developed in DoW research programs.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Quantum Technologies	23.401	58.723	60.333
Description: The DoW's research and development of quantum technologies is critical to maintaining the Nation's technological superiority. Part of this effort will focus on maturing, demonstrating, and transitioning quantum inertial sensors, gravity sensors, atomic clocks, and quantum electro-magnetic sensors. The specific quantum technologies efforts are: - Transitioning low-noise near-infrared (NIR) lasers for quantum sensors. - Multi-project wafer (MPW) service runs at AIM Photonics for novel quantum-specific component devices. - Joint (USAF/USN) Magnetic Navigation program led by the USAF using quantum magnetic sensors and magnetic maps to navigate aerial platforms without GPS. - Joint (USAF/USN) Inertial Sensing program utilizing accelerometer and gyroscopes to track position, orientation and velocity of a moving object in a non-jammable mode of operations: important for strategic platforms in multiple domains. - Joint (USN/USA) Magnetometer program led by the Office of Naval Research (ONR) to enable a new generation of unmanned vehicles to create magnetic anomaly detection capabilities for both land and sea. - Quantum accelerometer program led by ONR to calibrate guidance accelerometers at sea without having to come back to port.

Note

New Start (Y/N): Yes

This is a new start in FY 2027.

A. Mission Description and Budget Item Justification

The Future Generation Wireless Technologies program accelerates the development, integration, and testing of 6G technologies to ensure Department of War (DoW) dominance in future operating environments. This program bridges the gap between advanced research and operational deployment by rapidly maturing and integrating commercially driven 6G advancements into military systems and concepts of operation. The program will focus on key technologies such as AI-enabled Radio Access Networks (AI RAN), Integrated Sensing and Communications (ISAC), multi-access edge computing in Non-Terrestrial Network (NTN) platforms, and native spectrum sharing. The program will enable secure, resilient, and interoperable communications; improved sensing capabilities; and AI-driven resource optimization for enhanced warfighting capabilities in contested and denied environments in the combatant command areas of responsibility with emphasis on INDOPACOM.

Change Summary Explanation

As a new start in FY 2027, \$5M was transferred from PE 0604011D8Z project 724 and will fund preliminary efforts to develop and demonstrate AI optimized information access and resilient communications using Mobile Edge Computing.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
<i>Title:</i> Future Generation Wireless Technologies	-	-	5.000
<i>Description:</i> Accelerate the development, integration, and testing of 6G technologies to ensure Department of War (DoW) dominance in future operating environments.			
<i>FY 2027 Plans:</i> Develop and demonstrate an AI-defined/designed Mobile Edge Computing Prototype: This effort will explore the use of AI/ML to overcome the wide range of operating conditions in an expeditionary environment. When paired with radio hardware that maximizes the degrees of freedom available to the software, this approach transforms a previously overwhelming parameter space into an operational advantage for information access, performance, resilience, stealth, and interoperability. Expand development of warfighter targeting and surveillance from standard smartphone devices connected from aerial or orbit directly to other sensor platforms to speed detection to shooter notification time and deliver global resilient communications. Accelerate demonstrations and developmental employment of ISAC innovations to enable commercial cellular networks to detect Small Unmanned Aircraft Systems (sUAS), develop tip/queue tracking, and collaborate with military counter drone systems. Advance resilience of the communications infrastructure nested in the INDOPACOM Edge Theater Architecture (ETA) by integrating 5G and 6G communications suitable for expeditionary, tactical, and other operational environments.

Note

New Start (Y/N): No

A. Mission Description and Budget Item Justification

The Defense Innovation Unit (DIU) mission is to strengthen U.S. national security by accelerating the adoption of commercial technology and externally developed products--connecting American entrepreneurs and commercial technology companies to Department needs at speed. DIU serves as the Department's center of excellence for commercial technology adoption and product transition, available to Portfolio Acquisition Executives and program offices across the Department. DIU is the Department's primary interface with the nontraditional and commercial ecosystem for rapid product adoption and transition.

In support of the Secretary of War's directive to transform the Defense Innovation Ecosystem to Accelerate Warfighting Advantage, DIU will: 1) Focus on high technologies that produce overmatch domination; 2) Focus on technologies that reduce the number of Soldiers, Sailors, Airmen, Marines, and Guardians in harm's way; 3) Focus on capabilities that can scale quickly and dramatically reduce costs.

Funding in this Program Element is requested to support DIU's mission, including operational support, development of the nontraditional and commercial ecosystems, and for the development and integration of prototypes for rapid product adoption and transition.

DIU partners with Military Departments, organizations, and agencies across the Department of War (DoW) to rapidly prototype and field dual-use capabilities that solve operational challenges at speed and scale. By funding projects that augment commercial technologies, existing government capabilities, or new concepts, DIU increases the DoW's access to innovative, dual-use technology.

The FY 2026 spend plan amount for 0603342D8Z includes \$140,000 thousand of discretionary and \$1,735,861 thousand of mandatory (reconciliation) for a total of \$1,875,861 thousand.

A. Mission Description and Budget Item Justification

DIU increases the Department's access to commercial technologies and talent, with the ultimate goal of fielding technology at a pace that effectively deters our adversaries and helps ensure victory if we are forced to fight. Consistent with the Administration's 2026 National Defense Strategy and the National Defense Science and Technology Strategy, this new era of competition requires technological superiority to ensure the United States' ability to project power, maintain international norms and rule of law, provide credible deterrence, and prevail in conflict.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Defense Innovation Unit (DIU)	130.910	-	522.559
Description: The U.S. DoW relies on innovation to maintain our nation's ability to deter, and if need be, prevail in conflict. With Silicon Valley, Boston, Austin, Chicago, and the Pentagon, DIU serves as a bridge between those in the U.S. Military executing national security and defense missions with companies developing cutting-edge commercially derived technology. DIU continuously experiments with methods to identify, contract, prototype, and transition novel commercial solutions from leading companies to meet the most critical operational capability gaps identified by the Department with the focus, speed, and scale required to help deter major conflict and win if forced to fight. The end goal is to accelerate DoW adoption of cutting-edge technology and grow the national security innovation base to support U.S. military-technical superiority. FY 2027 Plans: Continue to increase the Department's access to commercial technologies and talent consistent with the Administration's 2026 National Defense Strategy and the National Defense Science and Technology Strategy. FY 2026 to FY 2027 Increase/Decrease Statement: The \$522.559 million funding request is necessary to support the Secretary's directive to focus on innovation that delivers asymmetric advantages while prioritizing commercial capabilities that will deliver immediate results. This is accomplished by awarding scalable contracts using agile processes and contracting authorities to companies offering solutions to national security challenges across a variety of technology areas and utilizing a diverse team of experts to reduce the time it takes the DoW to identify a problem, prototype a commercial solution, and implement it into the field to two years or less. The FY 2027 request includes realignments initiated in FY 2026 from PE 0603021D8Z: National Security Innovation Capital (\$15.014 million) and PE 0603950D8Z: National Security Innovation Network (\$21.644 million) to better support mission requirements.

A. Mission Description and Budget Item Justification

This program supports the Department's initiatives to Deter Strategic Attacks, Defend the Homeland, and Build a Resilient Joint Force and Defense Ecosystem.

In order to sustain technological superiority, the Department must take immediate advantage of the rapid evolution of emerging technologies that will be a source of battlefield advantage, when integrated with military systems and novel concepts of operation. This program focuses on rapidly moving these technologies to a Technology Readiness Level where they would then be ready to demonstrate in a prototyping or demonstration acceleration program to support warfighter needs. This funding is focused on supporting efforts within the Department's Critical Technology Areas that contribute to the broader joint mission needs.

Leveraging these technologies from both defense and commercial sources, to include non-traditional sources such as startup companies, has the potential to rapidly address warfighter problem sets in areas where commercial innovation outstrips government investment in the same technology areas.

A. Mission Description and Budget Item Justification

The Anomalous Health Incidents (AHI) Cross Functional Team (CFT) was established in 2022 using the authority provided pursuant to section 911(c) of the National Defense Authorization Act for Fiscal Year 2017 (Public Law 114–328; 10 U.S.C. 111 note) to conduct AHI research. This program was redirected to synchronize research efforts in coordination with the CFT as mandated by the Department in a memo from the Secretary of Defense in 2022.

Previously referred to as Havanna Syndrome or as an Unconventional Brain Injury, AHI is the term used to describe a group of sudden symptoms that occur after an unexplained sensory event or events that are not associated with a history of head trauma. Possible symptoms associated with an AHI event may include, but are not limited to: auditory symptoms, vestibular problems, cognitive decline, head pressure, headache, hearing changes, memory problems, nausea, dizziness, and insomnia. AHI events have been reported by several Department of War (DOW) and Federal Agency personnel since 2016.

This program supports the Department's research and development efforts to address causal mechanisms underlying AHI. The program focuses on independent validation of current bioeffects research and developing solutions for detection, protection, and mitigation to safeguard the DoW workforce against these threats. While mitigating AHI remains the highest priority, the program's strategy extends to address the broader threat of non-kinetic, anti-personnel capabilities.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Anomalous Health Incidents (AHI)	56.222	-	84.694
Description: The AHI Cross Functional Team (CFT) was established in 2022 using the authority provided pursuant to section 911(c) of the National Defense Authorization Act for Fiscal Year 2017 (Public Law 114–328; 10 U.S.C. 111 note) to conduct AHI research. This PE project line synchronizes research efforts in coordination with the CFT.			
FY 2027 Plans: The requested funding will enable the continuation, maturation, and validation of numerous research lines of effort that are building on work accomplished in FY 2024, FY 2025, and FY 2026 to safeguard our service members against AHI. The efforts work across medical research, detection, sensing, countermeasures, and attribution technical areas, and together will provide protection against this asymmetric threat and reestablish deterrence by minimizing threat impacts.			
FY 2026 to FY 2027 Increase/Decrease Statement: The increase of \$28.472 million between FY 2026 and FY 2027 is due to an internal funding realignment within the Critical Technologies portfolio. This funding increase supports high-priority DoW research for AHI.

Note

New Start (Y/N): No

A. Mission Description and Budget Item Justification

This program supports the Department's National Defense Strategy priorities to Defend the U.S. Homeland including America's skies and borders, and Deterring China in the Indo-Pacific. It also supports DODD 3222.04 - EW Policy, 8/31/2018, FY 2025 NDAA, Sec. 234, SECDEF Priorities, Classified Integrated Priority List(s) (IPL's) and Joint Requirements.

The Electromagnetic Superiority Strategy (EMSS) and EMSS Implementation Plan (I-Plan) highlight that the U.S. has entered an age of warfighting wherein U.S. dominance in air, land, sea, space, cyberspace and the electromagnetic spectrum (EMS) is challenged by peer and near peer adversaries and these challenges have exposed the cross cutting reliance of U.S. forces on the EMS and are driving a change in how the Department of War approaches activities in the EMS to maintain all domain advantage. EMS Superiority brings important advantages to any cost imposition strategy. By developing asymmetric EMS capabilities, the DoW can protect friendly fire capabilities from disruption and attrition, while simultaneously denying or degrading the effectiveness of adversaries high priced systems.

The EMS SS identifies key thrust areas and those thrust areas benefit from robust S&T investment:

1. Improve technologies to enable systems to sense, assess, share, maneuver and survive in complex Electromagnetic Operating Environments (EMOE) – noted “EMSO C2” (Electromagnetic Spectrum Operations Command and Control) from here on.
2. Leverage and Adapt Commercial Technologies (to include low cost and attritable options) – noted “Cost imposing EMSO” from here on.
3. Field Disruptive EMS Capabilities to counter and survive against Complex, distributed and rapidly proliferating effects – noted “Countering Complex Emitters’ from here on.

Adversary radars are evolving from fixed analog systems to programmable digital variants with agile waveforms and unknown behaviors making preprogrammed electronic countermeasure less effective. Cognitive, adaptive, and passive technologies figure prominently. Foreign developments include new generations of challenging threats ranging from small, unmanned air systems and easily transportable Man-Portable Air Defense Systems (MANPADS) to dedicated anti-access area denial (A2/AD) military systems including integrated air defense systems and increasingly capable cruise and ballistic missiles that have incorporated the most advanced sensors, communication and electromagnetic warfare (EW) technologies. Non-kinetic exploits against the Command and Control (C2) networks in the cyber domain or at an EMS/cyber interface are also relevant.

Exhibit R-2, RDT&E Budget Item Justification: PB 2027 Office of the Secretary Of Defense **Date:** April 2026

Appropriation/Budget Activity 0400: <i>Research, Development, Test & Evaluation, Defense-Wide I BA 3: Advanced Technology Development (ATD)</i>	R-1 Program Element (Number/Name) PE 0603618D8Z <i>I Joint Electronic Advanced Technology</i>
---	---

The Joint Electromagnetic Advanced Technology (JEAT) Program was established to address these challenges through efforts designed to substantially accelerate the development and maturing of innovative technologies to (1) address the aforementioned technical challenges and (2) provide new, leap ahead EMSO warfighting capabilities to ensure U.S. warfighters will always have decisive EMSO overmatch capabilities.

JEAT focuses on exploring and advancing emerging technologies to give the military an advantage in Electromagnetic Warfare (EW). It aims to develop new capabilities, address existing challenges, and provide tactical advantages in EW across all domains.

The JEAT program focuses on technologies that fall typically outside the Services' purviews, technologies that can be influenced with a joint (multi-Service) interest or technologies that are not being developed rapidly enough. JEAT investment influences all of these.

A. Mission Description and Budget Item Justification

Electronic Warfare (EW) Exploration and Innovation (E&I) research efforts focus on the Electromagnetic Spectrum Operations (EMSO) capabilities of electronic warfare (EW), sensing, communications; cyber capabilities, and the delivery platforms that are associated with them. The scope of the EW E&I research efforts is from a joint, multi-domain perspective over the broad range of potential non-kinetic effects, both real and virtual. The non-kinetic effects can overlap into the Electro-Optical and Infrared (EO/IR) phenomenologies, the electromagnetic nuances introduced by delivery platforms (e.g. hypersonics) and potentially, integration with directed energy subsystems.

New EW-related and EW/Cyber-related technologies are identified relative to current and projected EMSO challenges informed by the most current threat intelligence and from a joint and multi-domain perspective. Service operational perspectives are obtained through participation or facilitation of joint Communities of Interest (COIs). Potential solutions and technological synergies are explored through interaction with the research and practitioner communities. Considerable efforts are expended to avoid the potential for redundant efforts.

The Joint Electronic Advanced Technology program element (JEAT) supports large-scale, operationally-relevant, scenario driven multi-domain experimentation events focused on early development EMSO capabilities that are employed on platforms such as small unmanned systems (UxS) across multiple operational domains. The events are structured for technology developers to experiment within an operationally relevant environment and includes wide participation by DoW operational and technical subject matter experts. The program also explores coordination and interconnectivity of events to enable distributed, multi-domain operations training and experimentation.

Focus Areas include Distributed Electronic Attack, Deception, Digital Payload Delivery, Distributed Electronic Support and Electronic Protect with an emphasis on Swarming Algorithms, Artificial Intelligence, Machine Learning and Resilient Communications. These events started including AUKUS integration in FY-23 and increased Defense Industrial Base (DIB) participation. The FY-25 Silent Swarm event saw 54 DIB participants that utilized their Independent Research and Development (IRAD) dollars to advance Technology Readiness Levels (TRL) and to test the hypothesis that Electromagnetic Spectrum Operations (EMSO) capabilities employed on small unmanned systems (UxS) across multiple domains can have an outsized impact in the most challenging operational environments. These experiments provide the DIB an immediate and real time opportunity to refine their technologies on a test-fix-test basis in a complex Electromagnetic Environment. The experiments also offers a venue to demonstrate capabilities to transition partners.

B. Accomplishments/Planned Programs (\$ in Millions)		
Title: EW Enterprise Exploration and Innovation (EW E&I)		FY 2025
Description: The Electronic Warfare Exploitation and Integration (EW E&I) research program identifies, explores, and accelerates the development and demonstration of new electronic warfare (EW) and EW/Cyber technologies. Current EW E&I initiatives focus on Tech Enablers, EW-Cyber Effects, and Distributed Sensing.		FY 2026
Tech Enablers leverages advancements in materials, electronics (including photonics, plasmonics, spintronics, magnetronics, and quantum technology), RF and communication sciences, optical and laser sciences, and information and computational sciences. A key area is Artificial Intelligence and Machine Learning (AI/ML), which can enhance signal classification, optimize non-kinetic effects, improve data fusion, control autonomous systems, and enable dynamic spectrum access. This is crucial for maintaining the functionality of spectrum-dependent systems within the Electromagnetic Operational Environment (EMOE) and responding effectively to adversarial cognitive and adaptive systems. JEAT investment in FY-24 investigated the hypothesis that Department of War (DOW) electronic warfare (EW) machine learning (ML) research needs a centralized, scalable repository for data and model development to avoid redundant efforts and accelerate operationalization. EW-Cyber Effects research explores the intersection of EW and cyber warfare. Advances in digital EW and the increasing adoption of Internet of Things (IoT) technologies, particularly for networked sensing, have blurred the lines between RF and cyber domains. This thrust aims to address emerging cyber-enabled threats and develop technologies that exploit all relevant avenues of attack, sensing, and protection for US warfighters. JEAT investment in FY-24 investigated the premise that The Department of War (DOW) needs a persistent, distributed, virtual Electromagnetic Spectrum Operations (EMSO) and cyber test environment with high fidelity blue models to evaluate joint force effectiveness. Distributed Sensing, formerly addressed under EW Collaboration and Cognizance, focuses on networked sensors and collaborative EW capabilities. While not explicitly detailed in the original text, the implication is that this area explores improved situational awareness and coordinated responses through distributed sensor networks. JEAT investment in FY-23 performed a		FY 2027

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
limited proof of concept exploring complex emitters that need vast beam-bandwidth-product (BBP), exceeding current phased array capabilities and the premise that new array technology is required to enable simultaneous multi-beam operation across wide spectral ranges with agile beam steering and near-instantaneous tuning. The EW E&I program prioritizes areas where Service investments are lacking to accelerate the development and transition of multi-Service, multi-mission EW technologies. FY 2026 Plans: - Silent Swarm 26: Leverage lessons learned from Silent Swarm framework and transitions technologies for operational use. Increases participation within the Defense Industrial Base to 75 participants with more robust Electromagnetic Spectrum Operations (EMSO) contested environments. - Generative Artificial Intelligence (AI) for Non-Kinetic Operations (GAOPS) – Leverages significant DOW investment in Machine Learning techniques across multi-service and multi-disciplinary use cases. - PIKES: Classified Project to implement adversary kill chain detection using passive, low cost, sensor networks. Provide pervasive non-detectable sensing capability that holds targets at risk without active radiation methods. FY 2027 Plans: FY 2027 will see an advancement in the technology focus, building upon the successes and lessons learned from previous years, adapting to current global events, and aggressively exploring new frontiers. 1. Silent Disco Series: Next-Generation Warfare Concepts - The cornerstone of FY 2027 efforts is the advancement of the Silent Disco series. This initiative will leverage key insights and technological derived from Silent Swarm 26 (SC-26) and Southern Lightning (SL-26), particularly those related to EMSO experimentation. Silent Disco will explore innovative and potentially disruptive warfare concepts to tackle relevant missions such as nonkinetic UxS and counter-UxS. 2. Generative AI for Operations (GAOPS) – Transition and Knowledge Transfer The Generative AI for Operations (GAOPS) project, focused on the investigation of novel attack strategies, is nearing completion. FY 2027 will be a period of winding down GAOPS activities, with a strong emphasis on knowledge capture and documentation, archiving key findings and tech transfer. 3. Infinity : Resilient Waveforms for Multi-Domain Operations (Successor to Infinity) Building upon the foundations laid by the "Infinity" project, Beyond Infinity will be launched. This project will concentrate on developing and deploying resilient waveforms for multi-domain operations, ensuring secure and reliable communications in contested environments. Beyond Infinity will incorporate lessons learned from previous waveform development efforts and focus

A. Mission Description and Budget Item Justification

The Networked Communications Capability (NCC) plays a vital role in supporting the Department of War (DoW) and Defense Industrial Base (DIB) ecosystem. NCC focuses on maturing and demonstrating technologies that foster interoperable, resilient, and capable strategic and Joint Force communications capabilities. Given the critical reliance of DoW missions on command, control, and communications (C3) infrastructure, the NCC addresses challenges faced by the DoW's C3 infrastructure, including internal system-centric design approaches, as opposed to network- and data-centric ones, and external threats from aggressive adversary actions. The integration of both DoW and commercial embedded, virtualized, and cloud-hosted hybrid systems and networks underscores the increasing importance of the DoW's ability to rapidly reconfigure and reconstitute this infrastructure.

The NCC strategy employs secure and rapidly reconfigurable software-defined/hardware-supported solutions across the layers of the DoW communications stack (physical, network, information, and application layers). The technology integrates these layers to establish a highly agile, adaptable, and resilient C3 infrastructure. This approach ensures the DoW's ability to maintain critical communications in diverse mission domains such as terrestrial, maritime, air, space, and cyberspace. Additionally, it operates effectively in degraded, contested, or denied environments, supporting both tactical edge and strategic contexts. The NCC utilizes adaptive methods to dynamically analyze the operating environment. This includes considering parameter changes within individual waveforms and switching between high-data rate, low probability of detection techniques, and leveraging tunable waveforms for C3 across various scenarios. The integration of Software Defined Network (SDN) protocols facilitates routing the right information to the right users at the optimal speed and quality, aligning with the requirements of diverse warfighting missions. These advancements will leverage commercially available technologies where possible.

The NCC works in collaboration with the Joint Staff and Military Services, on new requirements and improved concepts of operations, to advocate for the proper testing, evaluation, verification and validation, and certification of all relevant solutions from DIB partners for the purpose of ensuring enduring interoperability / compatibility, resiliency, and capability advancement for the positive benefit of US DoW warfighters and as well those of Allied Nations.

The FY 2026 spend plan amount for Network Communications Capabilities includes \$19,658 thousand of discretionary and \$65,000 thousand of mandatory for a total of \$84,658 thousand.

A. Mission Description and Budget Item Justification

Threats to communication systems emanate from a variety of sources, encompassing electromagnetic, cyber, and kinetic elements, among others. The central objective of research and development in network communications is to guide the Services, partners, and industry towards the creation of fully networked and integrated capabilities that exhibit interoperability, resilience, and security. This involves the strategic identification and acceleration of critical technologies, leading to their transition to both strategic and tactical forces. The goal is to ensure that C3 systems are trusted, accessible, and reliable anywhere, anytime, and under any conditions for tactical to strategic missions, thereby enhancing the lethality of the warfighting force. In the face of peer aggressors armed with advanced kinetic and non-kinetic threats, the imperative for trusted and reliable C3 becomes even more pronounced. This capability is viewed not only as a critical deterrence measure but also as essential for providing a decisive and lethal response when required, spanning tactical to strategic missions.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Networked Communications Analysis Description: Modern nuclear threats from nuclear peer adversaries drastically shorten the U.S. decision-making timeline required to counter these threats, and specifically, threats that hinder timely execution of Presidential nuclear command and control. Analysis aims to achieve technological advantage against these modern threats to assure Presidential nuclear command and control. The NC3 Tech Accelerator provides technical leadership and oversight, establishes strategic priorities, and issues guidance relating to the supervision of all NC3 Tech Accelerator related programs and activities across DoW. Provides technical leadership and oversight, establishes strategic priorities, and issues guidance relating to the supervision of all NC3 Tech Accelerator related programs and activities across DoW. FY 2026 Plans: Continue to work with CSAs to identify and champion RDT&E prototype initiatives from CSA labs and industry partner IRAD projects with high potential to transition in 1–3 years. Continue funding Critical Technology Research and Development Portfolio Analysis and Accelerated NC3 Technology Research and Development. • Support experimentation and coalition demonstrations.	22.199	19.658	-

Note

New Start (Y/N): No

FY 2023 - 2025 program funding is transferred from the Creating Helpful Incentives to Produce Semiconductors (CHIPS) for America Defense Fund to the Research, Development, Test and Evaluation, Defense-Wide appropriation for proper execution. Funding from FY 2023 through 2027 were appropriated by, and are transferred using special transfer authority provided by, section 102(b) of the CHIPS Act of 2022, division A of Public Law 117–167.

A. Mission Description and Budget Item Justification

This program supports the Department's initiatives to Build Sustainable and Long-Term Advantage, Defend the Homeland, and Deter Aggression.

The Office of the Under Secretary of War for Research and Engineering (OUSW(R&E)) is executing the Microelectronics Commons (the Commons) activity pursuant to the Fiscal Year (FY) 2021 National Defense Authorization Act (NDAA) (Pub. L. 116-283), including the CHIPS for America Act, and funded through the CHIPS for America Defense Fund established by the CHIPS Act of 2022. The FY 2021 NDAA legislation significantly emphasizes solutions that promote the domestic on-shoring of capabilities to address economic and technology security concerns. Under FY 2021 NDAA Sec. 9903(b), the DoW is directed to establish a National Network for Microelectronics Research and Development (NNMRD) to enable the laboratory-to-fabrication transition of microelectronics innovations in the United States and to expand the global leadership in microelectronics of the United States. Specifically, the DoW is addressing a component of the NNMRD, the Commons, through a public-private partnership consisting of regional innovation hubs distributed across the U.S. to foster a pipeline of innovative ideas and talent residing in, for example, university labs and small business R&D teams.

U.S. technological dominance in microelectronics materials, processes, devices, and architectural designs can only be sustained through the development of a robust domestic innovation ecosystem that fosters the rapid development and transition of novel concepts into commercially viable manufacturing processes. The U.S. innovation ecosystem has long been the driver of our nation's technology leadership throughout the world. U.S. R&D kick-started the enormous semiconductor industry and continues to lead the world in developing the next generation of disruptive technologies including new materials, devices, circuits, architectures, and design tools.

In recent years, the efficient domestic adoption of U.S. chip innovation has been threatened as emerging hardware technologies have become increasingly reliant on offshore sources for State of the Art (SOTA) manufacturing, prototyping, and investment. There are several significant hurdles that hardware startups face, including limited or expensive access to necessary facilities and design infrastructure, high costs of design intellectual property, limited expertise with hardware engineering, and high costs of prototyping. As a result, the number of U.S. hardware startups has dropped significantly and foreign investment in U.S.-based technology startups has enabled offshore fabrication and maturation of emerging technologies.

UNCLASSIFIED

Exhibit R-2, RDT&E Budget Item Justification: PB 2027 Office of the Secretary Of Defense				Date: April 2026		
Appropriation/Budget Activity 0400: Research, Development, Test & Evaluation, Defense-Wide I BA 3: Advanced Technology Development (ATD)		R-1 Program Element (Number/Name) PE 0603669D8Z I Microelectronics Commons - 0400D				
To address these needs, OUSW(R&E) is standing up the Commons as a public private partnership, consisting of regional innovation hubs distributed across the U.S. to foster a pipeline of innovative ideas and talent residing in university labs and small business R&D teams. The partnership will provide resources for and access to specialized lab equipment, technical expertise, and connections to existing or upgraded prototyping facilities. Fabrication facilities (fabs) will help mature promising technologies and demonstrate the manufacturing and economic benefits of these innovations for dual-use application for defense and commercial sectors. The Commons will focus on critical, on-shore prototyping to transition innovation from universities, start-ups, and small companies to fabrication facilities (lab-to-fab transition). Key features are: • Creates and connects “Lab-to-Fab” testing/prototyping hubs to form a network focused on maturing emerging microelectronics technologies • Provides broad access to these prototyping hubs, potentially by augmenting facilities and enabling access to facilities within local semiconductor companies or FFRDCs. • Facilitates microelectronics education and training of students at local colleges and universities and grows a talent pipeline to bolster local semiconductor economies and contribute more broadly to the growth of a domestic semiconductor workforce. This program element focuses on the technology development activities of the Commons, including staffing at Commons hub facilities, advanced technology development, and significant prototyping activity. In addition, it provides for the establishment, staffing, and operation of the Microelectronics Commons Consortium Manager (CM), the overall management of the Commons, and will support the required physical, digital, and human infrastructure of the hubs.

Note

New Start (Y/N): No

FY 2024 program funding is transferred from the Creating Helpful Incentives to Produce Semiconductors (CHIPS) for America Defense Fund to the FY Research, Development, Test and Evaluation, Defense-Wide appropriation for proper execution. The funds were appropriated by, and are transferred using special transfer authority provided by, section 102(b) of the CHIPS Act of 2022, division A of Public Law 117–167.

A. Mission Description and Budget Item Justification

This project focuses on the advanced technology development activities of the Commons including prototyping of devices or components using new microelectronics materials, processes, device designs, and architectural designs. It will also enable the establishment and operation of a Commons Consortium Manager (CM), which will provide efficient coordination and administration of regional innovation hubs. The CM is tasked with operating the Commons network, in alignment with the OUSW(R&E) Commons vision to ensure DoW access to and benefit from resulting technologies. The project also supports the establishment of the Commons Hubs, which will be networks of regional capabilities organized in collaboration with the CM to address DoW and commercial needs and requirements. The Hubs may include existing facilities augmented to enhance intrinsic specializations in emerging areas of microelectronics. Each Hub will concentrate on one of six technical areas including: Secure Edge Computing, 5G/6G Technology, Artificial Intelligence Hardware, Quantum Technology, Electromagnetic Warfare, and Commercial Leap Ahead Technologies. Core Facilities (i.e., fabs) are integral parts of the Hubs network that will provide key fabrication capabilities that are required to demonstrate prototypes with the volume and characteristics required to ensure reduced risk for full manufacturing production. Additionally, the project will directly support early workforce development activities through the Commons network. Activities may span K-12, undergraduate, graduate and continuing education and may include, for example, establishment of PhD internships and post-doc training at Hub facilities and internships with Hub members.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Microelectronics Research Maturation – Prototyping	265.108	-	-
Description: This effort focuses on the development and prototyping of promising new microelectronics materials, processes, devices, and architectural designs with potential DoW applications, development of these technologies, and operation of the CM. It will also support operation of regional Commons Hubs and initial selection and execution of Commons Projects in conjunction with activities funded by PEs 0602669D8Z and 0604669D8Z.

A. Mission Description and Budget Item Justification This program supports the Department's initiatives to Build Sustainable and Long-Term Advantage and Build a Resilient Joint Force Defense Ecosystem. The Defense-wide Manufacturing Science and Technology (DMS&T) program is the joint, defense-wide component of the Department of War (DoW) Manufacturing Technology (ManTech) Program directed in Title 10 U.S.C. Section 2521. DMS&T addresses joint, cross-cutting, and high-risk/high payoff technologies; manufacturing challenges within the DoW critical technology areas; and many of the recommendations in the Executive Order Report "Assessing and Strengthening the Manufacturing and Defense Industrial Base and Supply Chain Resiliency of the United States" September 2018. The DMS&T program objective is to increase the speed at which innovation, inventions, and scientific discoveries are turned into equipment and capabilities through advances in manufacturing technologies and processes. The FY 2026 spend plan amount for Research, Development, Test & Evaluation, Defense-Wide for Defense-Wide Manufacturing Science & Technology includes \$555,108 thousand of discretionary and \$1,493,556 thousand of mandatory for a total of \$2,048,664 thousand.

A. Mission Description and Budget Item Justification

This project supports nine Department of War (DoW) led Manufacturing Innovation Institutes (MIIs) within the national Manufacturing USA network. The MIIs are an essential component of the DoW ManTech mission and unique resource to address DoW challenges through public/private partnerships with members from industry, academia, and federal and state governments - including small and medium as well as large manufacturers - that address both commercial and defense manufacturing needs within specific, defense-relevant technology areas to mature manufacturing processes, build out a supporting ecosystem, and provide for manufacturing education and workforce development. The MIIs' flexible business models and strong focus on enabling highly collaborative research and development (R&D) are catalyzing important new organizational relationships across government, industry, and academia. MIIs bring together both traditional defense and non-traditional sectors to accelerate key innovation cycles, expand U.S. industrial capability, and assist in creating resilient supply chains that will support innovative defense products. Each MII consortium attracts partner funding to match DoW investments at a one-to-one ratio (or greater) and some offer state-of-the-art pilot facilities. MIIs receive active participation and support from the military departments and defense agencies and their members. The nine MII technology domain focus areas are: (1) Additive Manufacturing Innovation; (2) Manufacturing Digital Innovation; (3) Materials Innovation; (4) Photonic Foundry and Packaging Innovation (5) Hybrid Electronics Innovation (6) Revolutionary Fabric and Textiles Innovation); (7) Medical Cell, Tissue, and Organ Manufacturing Innovation; (8) Robotic Automation Innovation; and (9) Bioindustrial Manufacturing Innovation.

MII funding is focused on:

- Developing and implementing education, training, and workforce recruitment courses, materials, and programs.
- Developing innovative methodologies and practices for supply chain integration and introduction of new technologies into supply chains.
- Engaging with small and mid-sized manufacturers, including women and minority-owned manufacturing enterprises, and larger-sized manufacturing firms.
- Providing DoW programs of records with access to advanced manufacturing technologies for demonstration, prototyping, and transition to production through MII ecosystems. Each MII has a different model, with the following core tenets:
 - Each MII is a public/private partnership with representatives from industry, academia, state and local governments, and the DoW that co-invest in world-leading technologies and capabilities.
 - Each MII provides facilities to allow collaborative, precompetitive development of promising technologies and to promote the creation of stable and sustainable innovation ecosystems for advanced manufacturing.
 - The partnership forming the MII must commit non-federal resources that equal or exceed the federal commitment.
 - Each institute participates in the national Manufacturing USA network.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Additive Manufacturing Innovation	45.870	36.346	7.017

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2027 Office of the Secretary Of Defense			Date: April 2026		
Appropriation/Budget Activity 0400 / 3		R-1 Program Element (Number/Name) PE 0603680D8Z / <i>Defense Wide Manufacturing Science and Technology Program</i>		Project (Number/Name) 350 / <i>Manufacturing Innovation Institutes</i>	
B. Accomplishments/Planned Programs (\$ in Millions)			FY 2025	FY 2026	FY 2027
Description: To improve quality and point-of-need availability of additive manufactured and adaptive manufactured parts for defense applications, the DoW has partnered with the America Makes Manufacturing Innovation Institute. Additive Manufacturing (AM) (i.e., 3D printing) is a process of joining materials to make objects from 3D model data, usually layer upon layer, as opposed to subtractive manufacturing methodologies such as traditional machining. AM benefits the DoW by enabling lifecycle cost savings and enhanced capabilities including: distributing supply chains to enable the right part in the right place at the right time; improving mission readiness by producing work aids for DoW depots; replacing long-lead time and out of production spares and enhancing lethality through production of lighter weight and higher performing parts than could otherwise be achieved with traditional manufacturing. FY 2026 Plans: Continue application of AM methods and standards for critical defense advanced manufacturing requirements and expand the AM workforce. Execute projects to fill previously identified technology gaps in the castings and forgings industrial supply base. Facilitate AM integration across DoW to improve force readiness, posture, and logistics capabilities. Fund an online learning portal as a foundational enabler. To expand qualification, certification and production options, the program will increase the workbench of materials allowable (including polymers), conduct quality control monitoring research, and support the Joint Additive Qualification for Sustainment (JAQS) project FY 2027 Plans: Continue application of AM methods and standards for critical defense advanced manufacturing requirements and expand the AM workforce. Execute projects to fill previously identified technology gaps in the castings and forgings industrial supply base. Facilitate AM integration across DoW to improve force readiness, posture, and logistics capabilities. These funds will be directed to derisk Advanced Manufacturing for additive through specific projects focused on the Maritime Industrial Base, the munition defense Industrial base and Organic Industrial Base. FY 2026 to FY 2027 Increase/Decrease Statement: A decrease of \$29.329 million between FY 2026 and FY 2027 reflects the realignment of DoW armed services requirements to Adoption of Defense Advanced Manufacturing (ADAM).					
Title: Manufacturing Digital Innovation Description: To improve the quality and quantity of suppliers within the DoW supply chain, a digital interface must exist between the DoW and its vendors. The DoW has partnered with the Manufacturing times Digital, Design and Cybersecurity (MxD) Manufacturing Innovation Institute to make available a defense. Digital Thread -- the unencumbered flow of data across the lifecycle of a manufactured product encompassing data from design, production, supply, sourcing, inventory, assembly, quality, maintenance, and sustainment. It includes analysis of data to reduce the time and cost of bringing new products to market. MxD			10.720	12.563	7.211

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026	FY 2027
eliminates barriers between design, manufacturing, and sustainment by using both product data and process data in a way that is seamless and transparent.				
FY 2026 Plans: Continue R&D projects to support the adoption and application of advanced digital and cybersecurity manufacturing solutions across the defense industrial base and grow the digital manufacturing workforce. MxD will translate FY 2025 planning efforts into specific projects for digital and cybersecurity solutions for the castings and forging supply chain.				
FY 2027 Plans: Continue R&D projects to support the adoption and application of advanced digital and cybersecurity manufacturing solutions across the defense industrial base and grow the digital manufacturing workforce. MxD will translate FY 2026 planning efforts into specific projects for digital and cybersecurity solutions for the castings and forging supply chain. The reconciliation funds will facilitate derisking operational technology and securing manufacturing data through the award of specific projects within the DoW Organic Industrial Base.				
FY 2026 to FY 2027 Increase/Decrease Statement: A decrease of \$5.352 million from FY 2026 to FY 2027 reflects the realignment of DoW armed services requirements to Manufacturing Modernization Sprints.				
Title: Materials Innovation		9.276	10.512	7.594
Description: To improve supply chain and hasten the adoption of emerging materials, the DoW has partnered with LIFT – the Advanced Materials Manufacturing Innovation Institute (for advanced materials development, processing, integration, and talent development). LIFT advances American materials manufacturing technology at the intersection of materials research, manufacturing processes, systems engineering, and talent development. LIFT’s technology pillars include Integrated Computational Materials Engineering (ICME) and Computational Engineering, Agile and Smarter Manufacturing, Advanced alloy and Process Development, and Multi-materials Joining. In addition, LIFT is filling the advanced manufacturing workforce pipeline with capable talent ready and willing to work in today’s in-demand jobs. LIFT is working across the education continuum to create robust pathways for the future materials workforce with the knowledge, skills, and abilities necessary to use the advanced technologies emerging from the LIFT institute.				
FY 2026 Plans: Continue advanced materials and materials manufacturing R&D and workforce development efforts. Support Defense, commercial and dual-use technology development through strategic and technology roadmaps for the ICME and Computational Engineering, Advanced Materials and Process Development, Agile and Smarter Manufacturing, and Multi-material Joining technology pillars, member and institute led technology projects, and maintaining and convening a collaborative ecosystem. Examples of specific

activities include engaging their ICME expertise for hypersonic materials development and testing, domestic titanium source research and development, bespoke metal powder and wire alloy development for cold spray and additive manufacturing applications, and roadmap-driven projects to support the evolution of casting and forging materials, drop-in replacements, and integration of new material advancements. Sustain LIFT’s Learning/Talent Development Lab, and continuing workforce development efforts targeting K-12, university and community college students, current workforce, and separating military personnel with targeted applications for the DoW’s organic industrial base, primes, and small/medium manufacturers. FY 2027 Plans: Continue advanced materials and materials manufacturing R&D and workforce development efforts. Support Defense, commercial and dual-use technology development through strategic and technology roadmaps for the ICME and Computational Engineering, Advanced Materials and Process Development, Agile and Smarter Manufacturing, and Multi-material Joining technology pillars, member and institute led technology projects, and maintaining and convening a collaborative ecosystem. The reconciliation funds will facilitate pilot manufacturing line integration and training workforce in support of the organic and defense industrial base for maritime and munition defense sectors. FY 2026 to FY 2027 Increase/Decrease Statement: A decrease of \$2.918 million from FY 2026 to FY 2027 the realignment of DoW armed services requirements to Manufacturing Modernization Sprints.				
Title: Photonic Foundry and Packaging Innovation Description: To hasten the availability of integrated photonic circuits – chips that move information faster and more efficiently than traditional electronic circuits while using less power – the DoW has partnered with the American Institute for Manufacturing Integrated Photonics (AIM) Manufacturing Innovation Institute and the electronic photonic design automation (EPDA) industry. Integrated photonic circuit manufacturing advances the promise of unprecedented interconnection between electronics and photonics that will deliver world-class performance in speed, density, and power consumption. Photonics provides differentiating benefits for defense applications such as high-speed signal processing; electronic warfare; position, navigation, and timing; information transport and computation; sensing; imaging; and targeting. AIM Photonics has established an end-to-end U.S. ‘ecosystem’ for advancing domestic integrated photonics manufacturing, including access to a responsive integrated photonic circuit fabrication foundry. AIM Photonics provides the world’s most accessible 300 mm silicon photonics multi-project wafer service, state-of-the-art process design, and a highly advanced test, assembly, and packaging (TAP), facility. FY 2026 Plans: Continue to develop and offer next generation integrated photonic circuit fabrication and test, assembly, and packaging (TAP) capabilities to the U.S. ecosystem. Extend design and training opportunities to continue to grow the overall integrated photonic circuit ecosystem. Perform targeted work to explore solutions for long-haul and short-haul photonic data networks with reduced		16.542	15.542	11.082

power consumption, improve the variety and performance of laser solutions, target heterogeneous integration opportunities, and expand accessibility to low-loss platforms for sensing and quantum applications.				
FY 2027 Plans: Continue to develop and offer next generation integrated photonic circuit fabrication and test, assembly, and packaging (TAP) capabilities to the U.S. ecosystem. Extend design and training opportunities to continue to grow the overall integrated photonic circuit ecosystem. Perform targeted work to explore solutions for long-haul and short-haul photonic data networks with reduced power consumption, improve the variety and performance of laser solutions, target heterogeneous integration opportunities, and expand accessibility to low-loss platforms for sensing and quantum applications.				
FY 2026 to FY 2027 Increase/Decrease Statement: A decrease of \$4.460 million from FY 2026 to FY 2027 realignment of the DoW armed services requirements being moved to Manufacturing Modernization Sprints.				
Title: Hybrid Electronics Innovation		9.416	9.416	6.908
Description: To increase electronic packing density and meet the demands of hazardous environments, the DoW has partnered with the NextFlex Manufacturing Innovation Institute (for flexible hybrid electronics (FHE) circuitry innovation. FHE manufacturing involves highly tailorable devices on non-traditional, compliant substrates that combine thinned components manufactured from traditional processes with components added via “printing” processes. NextFlex invests in prototyping and scale-up of manufacturing processes for high-speed pick-and-place, printed circuits, and hybrid fabrication to enable defense and commercial applications in wearable electronics, unattended sensors, integrated array antennas, medical devices, and soft robotics devices. NextFlex is also committed to continuous improvement in SWAPC (Size, Weight and Power plus Cost) for electronic systems.				
FY 2026 Plans: Support the development FHE capabilities including higher complexity and density circuits, qualifications of new materials and processes through manufacturing demonstrations of advanced components and prototypes. Facilitate the transition of mature capabilities, programs and prototypes into DoW applications to support improved SWAP-C performance and/or provide unique electronics capabilities and formfactors. Encourage the development of an FHE and broader electronics manufacturing talent pool through continued expansion of the EWD student programs while also developing new programs to support the development of FHE manufacturing skills through both upskilling workers and training of post-secondary students.				
FY 2027 Plans: Continue to support the development of FHE capabilities including higher complexity and density circuits, qualifications of new materials and processes through manufacturing demonstrations of advanced components and prototypes. Facilitate the transition of mature capabilities, programs and prototypes into DoW applications to support improved SWAP-C performance and/or provide unique electronics capabilities and formfactors. Encourage the development of a FHE and broader electronics manufacturing

talent pool through continued expansion of the EWD student programs while also developing new programs to support the development of FHE manufacturing skills through both upskilling workers and training of post-secondary students.				
FY 2026 to FY 2027 Increase/Decrease Statement: A decrease of \$2.508 million from FY 2026 to FY 2027 reflects the realignment of DoW armed services requirements being to Manufacturing Modernization Sprints.				
Title: Advanced Fiber and Fabric		6.288	6.288	5.281
Description: To modernize and increase innovation in the U.S. domestic fiber and textile industry, the DoW is partnering with industry to advance the state of the art for manufacturing of traditional fibers, yarns, and woven textiles. It is working to connect the domestic textile industry to emerging fiber and weaving technologies and improve producibility through automation and digital connection.				
FY 2026 Plans: Increase the value proposition to the Service acquisition offices and R&D centers through the targeting of OSW strategic investment funds towards technology transition and manufacturing scaling activities. These efforts will focus on projects that directly contribute to Programs of Record and/or DoW modernization efforts that align with the competencies of AFFOA and their members. Preserve and expand DoW access to ecosystem capabilities and technologies as a continuing priority. Technology projects and ecosystem development will focus on manufacturing modernization through digital engineering, prototype manufacturing of Warfighter enhancement and protective systems, and developing and scaling sustainable materials and processes. Develop, align, and certify EWD programs according to national education standards, and increase the AFFOA EWD national footprint.				
FY 2027 Plans: Continue investment in automation of soft good manufacturing, focusing on increasing productivity of manufacturing lines. Invest in technology that improves pre-composite fiber alignment and pilot manufacturing lines that reduce touch labor. Expand DoW access to controlled and secured filament, yarn and fabric manufacturing. De-risk soft goods technologies that can be domesticated.				
FY 2026 to FY 2027 Increase/Decrease Statement: A decrease of \$1.007 million from FY 2026 to FY 2027 reflects the realignment of DoW armed services requirements to Manufacturing Modernization Sprints.				
Title: Medical Cell, Tissue, and Organ Manufacturing Innovation		11.723	10.775	10.021
Description: To make practical the scalable, consistent, and cost-effective manufacturing of cells, tissues, and organs and develop the trained and ready workforce necessary for regenerative tissue manufacturing, the DoW has partnered with the

BioFabUSA Manufacturing Innovation Institute. BioFabUSA advances human tissue manufacturing innovations in cell and biomaterial processing, bioprinting, automation, and non-destructive testing technologies. BioFabUSA is establishing a collaboration to mature tissue-related technology across manufacturing readiness levels (MRL) 4-7, enabling post-delivery assurance of tissue identity, viability, function, and efficacy. This MII is assembling a diverse and currently fragmented collection of industry practices and institutional knowledge across many disciplines (e.g., cell biology, bioengineering, materials science, analytical chemistry, robotics, and quality assurance). FY 2026 Plans: Continue to improve manufacturing methods and capabilities for tissue engineered medical products and expand certification and credentialing programs for the biomedical manufacturing workforce. Build on successful automation and data collection efforts to improve advanced manufacturing processes and enhance process engineering abilities to evaluate the safety and efficacy of tissue engineered medical products. Expand and leverage BioFabUSA ecosystem engagement with the FDA to accelerate transition of critical medical technologies to the marketplace. FY 2027 Plans: Continue to improve manufacturing methods and capabilities for tissue engineered medical products and expand certification and credentialing programs for the biomedical manufacturing workforce. Build on successful automation and data collection efforts to improve advanced manufacturing processes and enhance process engineering abilities to evaluate the safety and efficacy of tissue engineered medical products. Expand and leverage BioFabUSA ecosystem engagement with the FDA to accelerate transition of critical medical technologies to the marketplace. The reconciliation funds will facilitate pilot manufacturing line integration of bio medical products directly applicable to current the warfighter need. Exhibit R-2A, RDT&E Project Justification: PB 2027 Office of the Secretary Of Defense		Date: April 2026		
Appropriation/Budget Activity 0400 / 3	R-1 Program Element (Number/Name) PE 0603680D8Z / Defense Wide Manufacturing Science and Technology Program	Project (Number/Name) 350 / Manufacturing Innovation Institutes		
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026	FY 2027
Continue R&D investments in advanced robotics and associated artificial intelligence (AI) technologies for manufacturing that support defense critical technology areas and develop/sustain a competent robotics and AI workforce. Planned technology projects to enhance casting and forging with combined AI and robotics technologies, and modernization (prototyping and integration) of energetics/munitions manufacturing. Additional planned technology projects in automation of manufacturing processes for Space systems/sub-systems, automotive and aerospace sustainment projects supporting the OIB. Enhance education and workforce development offerings via the roboticscareer.org virtual toolset with associated AI competencies, and the advance analytical studies to address the needs of the DIB and OIB. FY 2027 Plans: Continue R&D investments in advanced robotics and associated artificial intelligence (AI) technologies for manufacturing that support defense critical technology areas and develop/sustain a competent robotics and AI workforce. Planned technology projects to enhance casting and forging with combined AI and robotics technologies, and modernization (prototyping and integration) of energetics/munitions manufacturing. Additional planned technology projects in automation of manufacturing processes for Space systems/sub-systems, automotive and aerospace sustainment projects supporting the OIB. Enhance education and workforce development offerings via the roboticscareer.org virtual toolset with associated AI competencies, and the advance analytical studies to address the needs of the DIB and OIB. FY 2026 to FY 2027 Increase/Decrease Statement: A decrease of \$3.515 million from FY 2026 to FY 2027 reflects the realignment of DoW armed services requirements to Adoption of Defense Advanced Manufacturing (ADAM).				
Title: Bioindustrial Manufacturing Innovation Description: To develop bioindustrial manufacturing technologies that harness the power of biology to help create and domestically source manufactured goods for warfighter requirements, the DoW has partnered with the BioMADE Manufacturing Innovation Institute. BioMADE is hastening the adoption of bio-manufactured goods within the U.S. supply chain, bridging the gap between lab-scale research and at-scale manufacturing of biotechnology products, and will deliver a new class of manufacturing using domestic resources and capabilities to bio-manufacture critical products at scale with increased supply chain security. Bioindustrial manufacturing also has the potential to create entirely new classes of products with primary defense applications, such as chemicals and materials with advanced properties for use in austere environments. Bioindustrial manufacturing addresses defense priorities and offers commercial potential for innovations in fuels, industrial chemicals, fibers, and other chemical components of commercial and defense supply chains that will create new opportunities for U.S. manufacturers and reshore domestic production of critical materials. FY 2026 Plans:		23.816	18.432	8.252

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2027 Office of the Secretary Of Defense		Date: April 2026		
Appropriation/Budget Activity 0400 / 3	R-1 Program Element (Number/Name) PE 0603680D8Z / Defense Wide Manufacturing Science and Technology Program	Project (Number/Name) 350 / Manufacturing Innovation Institutes		
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026	FY 2027
Continue progress on infrastructure investments to support the domestic bioindustrial manufacturing base, conduct project calls to address bioindustrial technical challenges, workforce development, biosafety and biosecurity, and innovations in manufacturing. Prioritize projects that align with defense priorities, securing supply chains, providing new capabilities to the DoW, and support the domestic bioindustrial base. Execute Distributed Bioindustrial Manufacturing Program (DBIMP, formerly referred to as MEMBR) - Piloting, Analysis and Challenge projects				
FY 2027 Plans: Continue progress on infrastructure investments to support the domestic bioindustrial manufacturing base, conduct project calls to address bioindustrial technical challenges, workforce development, biosafety and biosecurity, and innovations in manufacturing. Prioritize projects that align with defense priorities, securing supply chains, providing new capabilities to the DoW, and support the domestic bioindustrial base.				
FY 2026 to FY 2027 Increase/Decrease Statement: A decrease of \$10.180 million from FY 2026 to FY 2027 reflects the realignment of movement of DoW armed services requirements to Manufacturing Modernization Sprints.				
Title: Adoption of Defense Advanced Manufacturing (ADAM)		0.000	-	130.329
Description: ADAM invests directly in overcoming the remaining barriers required for widespread adoption of advanced manufacturing. Investments under this project address technical, operational and economic barriers, such as qualifications for additive manufacturing processes and certification of material and parts, within the DIB. Primary drivers are defined by joint defense working groups (JDMC, JAMWG, JDMTP) and emerge from roadmap-driven Manufacturing Innovation Institutes' efforts. DMAG and Reconciliation funding direct priority allocation towards high payoff transitions.				
FY 2027 Plans: Execute DoW armed service directed R&D projects to support overcoming the remaining barriers required for widespread adoption of advanced manufacturing. The projects are directed toward additive, digital, material, soft good, photonic, bio-industrial, robotic automation, bio-medical and hybrid electronic manufacturing. Requirements will be informed from the armed service labs and forward-deployed Advanced Manufacturing Capabilities to support area Combatant Command priorities. Project reviews will be held in conjunction with the vendors and the defense working groups JDMC, JAMWG and JDMTP) subject matter experts.				
FY 2026 to FY 2027 Increase/Decrease Statement: An increase of \$130.329 million between FY 2026 and FY 2027 reflects \$93.560 million for INDOPACOM critical priorities and the realignment of \$36.769 million for ongoing DoW armed service led advanced manufacturing projects already being conducted from Joint Additive Manufacturing Working Group, BiofabUSA, and ARM.				
Title: Manufacturing Modernization Sprints		0.000	-	28.040

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2027 Office of the Secretary Of Defense			Date: April 2026		
Appropriation/Budget Activity 0400 / 3		R-1 Program Element (Number/Name) PE 0603680D8Z / Defense Wide Manufacturing Science and Technology Program	Project (Number/Name) 350 / Manufacturing Innovation Institutes		
B. Accomplishments/Planned Programs (\$ in Millions)			FY 2025	FY 2026	FY 2027
Description: Investments under this project have limited scope and a clear deadline to mature and demonstrate advanced manufacturing solutions for defense acquisition or sustainment programs. Each sprint is intended to deliver the required manufacturing demonstration to enable 1) point of need manufacturing, 2) prototype production for a middle tier of acquisition (MTA) system, or 3) modernization of OIB processes or facilities. FY 2027 Plans: Projects focus on integrating advanced pilot manufacturing equipment over an accelerated schedule. The projects are directed toward additive, digital, material, soft good, photonic, bio-industrial, robotic automation, bio-medical and hybrid electronic manufacturing. The work being conducted will conclude with showcasing new integrated pilot manufacturing capability to the DoW, highlighting point of need manufacturing, prototype production for middle tier acquisition or modernization of a OIB or DIB process. FY 2026 to FY 2027 Increase/Decrease Statement: An increase of \$28.040 million between FY 2026 and FY 2027 reflects the re-alignment from digital, materials, photonics textiles and BioIndustrial innovation sub-projects in Manufacturing Innovation Institutes to align with the department's priorities.					
Accomplishments/Planned Programs Subtotals			142.455	130.694	229.040
			FY 2025	FY 2026	
Congressional Add: Operational Technology (OT) & Internet of Things (IoT) Asset Identification & Management FY 2025 Accomplishments: Funding will be provided to the University of Tulsa to complete a prototype fingerprint and identification tool (FITT) that works with a smart environment monitored by an autonomous system. The tool will inventory assets connected to the system; classify assets based on their observed signatures; and incorporate attack graph construction and risk-based decision making into the identification and critical/not-critical estimates of security vulnerabilities.			3.500	-	
Congressional Add: Advanced Ceramic Materials Design FY 2026 Plans: Reduce dependency on single-source suppliers Address potential energy crises with innovative solutions Provide strategic, asymmetric, battlefield advantages to protect the Warfighter			-	5.000	
Congressional Add: Bioindustrial Manufacturing Education and Workforce Training FY 2026 Plans: The goal of this effort is to scale bioindustrial education and workforce training across the country to fill the 38% of biomanufacturing jobs that remain unfilled. This will bring high-tech manufacturing jobs to rural and urban areas, and to new and incumbent workers.			-	10.000	

UNCLASSIFIED

Appropriation/Budget Activity 0400 / 3	R-1 Program Element (Number/Name) PE 0603680D8Z / <i>Defense Wide Manufacturing Science and Technology Program</i>	Project (Number/Name) 350 / <i>Manufacturing Innovation Institutes</i>	
		FY 2025	FY 2026
Transfer curriculum to members in different regions for tailored development and implementation Identify innovative new projects that effectively scale trainings to large numbers of dispersed learners.			
Congressional Add: BioMADE and Biotechnology Facilities FY 2026 Plans: Funding will be utilized to complete the BioMADE pilot plant network 3 facilities has been started, it was anticipated that previous funding would not be sufficient. Equipment purchases for BioMADE Iowa facility is anticipated Operating and commissioning costs may also be necessary for any of the three BioMADE PPN locations.		-	10.000
Congressional Add: Fiber to Textile Industrial Base Modernization FY 2026 Plans: The goal is to create a digital framework and build the necessary manufacturing modeling/ design tools to help modernize and accelerate manufacturing within the defense and commercial clothing and textile (C&T) industrial bases (IBs). Improving IB manufacturing capability/capacity will be accomplished through 4 initiatives: Advanced R&D – demonstration of tools through translation of digital models into a physical prototype: textile- based Soft Exoskin Digital infrastructure development for a scalable material supply, including creation of digital thread/twin – CAD/ CAM tools, textile-based Capacitive Touch Sensor (CTS), and Soft Systems Design Kit (SSDK) C&T ecosystem sustainment – advanced manufacturing and automation lower barriers to entry for new IB performers C&T workforce development – student training programs, advanced footwear workforce training program		-	4.000
Congressional Add: High Accuracy Robotics for Manufacturing and Depot Sustainment FY 2026 Plans: The goal of this effort is to invest in adoption of high accuracy robotic manipulators at the Organic Industria Base sustainment sites. Demonstrate improved accuracy, in-situ digital feedback and productivity of manufacturing lines. This investment will scope work within the boundaries of congressional intent.		-	10.000
Congressional Add: Hybrid Electronics FY 2026 Plans: Development of shared consortium IP to close critical gaps in Hybrid Electronics manufacturing. Develop databases to support dissemination of developed technical data to the OIB, DiB and U.S. industrial base. Pilot programs for training of future technicians to support the domestic electronics industry as a whole and the Hybrid Electronics industry in particular.		-	17.000

		FY 2025	FY 2026
Transition consortium developed IP through the NextFlex fab into partners with the OIB, DiB and U.S. Industrial base with a focus on tier 2 and 3 suppliers.			
Congressional Add: Robotic Enhancements for Armaments Manufacturing (ReARm) FY 2026 Plans: Establish the initial concept for an Advanced Manufacturing Prototype Pilot Line to integrate robotics, digital manufacturing, and emerging technologies, directly addressing munitions stockpile depletion by enhancing the responsiveness, scalability, and flexibility of the munitions industrial base. Identify and plan for the development and validation of advanced, flexible production methods for critical munitions – including artillery, warheads, mortars, demolitions, grenades, and missile components – to bridge the gap between innovative prototypes and full-scale industrial implementation while minimizing disruption to current operations. Directly support DoW and Army Transformation priorities by leveraging automation and digital twin technology to reduce costs, increase reliability and lethality, and create a decentralized, resilient production capability for both conventional and precision-guided munitions. Accelerate the production of key components for missile defense, counter-drone systems, and hypersonic interceptors, aligning with directives from OSW and PAE AS&A to maintain U.S. defense readiness and technology superiority.		-	2.000
Congressional Adds Subtotals		3.500	58.000

Remarks			
D. Acquisition Strategy Each Manufacturing USA institute is established through a competitive selection process. The executing military department or agency, in close and continuous coordination with Office of the Under Secretary of War for Research and Engineering Manufacturing Technology Office (ManTech), publishes a formal solicitation (funding opportunity announcement) for proposals describing the scope of required activities and extensive proposal evaluation criteria. Non-Profit Organizations (including universities) are eligible to bid, and each bidder forms a broad consortium of industry and academic partners. The executing military department or agency, in close coordination with the Office of the Secretary of War (OSW), uses a team of government experts to evaluate each proposal against the evaluation criteria and selects a winning consortium. The final terms of the cooperative agreement/technology investment agreement between the selectee and the federal government are then negotiated and the Cooperative Agreement (CA) or Technology Investment Agreement (TIA) is signed. Throughout and after completion of this process, the federal government makes clear that members of non-selected teams are encouraged to join the selected consortium as conditions permit.

A. Mission Description and Budget Item Justification

The M-EWD Strategy is designed to achieve mission objectives and generate engagement by promoting awareness of its program activities and capabilities. This strategy is executed through three primary lines of effort: (1) building regional ecosystems by creating and growing successful, skills-based pilot programs with an applied regional approach; (2) upscaling solutions by assisting stakeholders with funding options, establishing pathways to expand programs across geographies, technologies, and age groups, and disseminating best practices; and (3) leveraging interagency efforts by convening with key stakeholders, experts, and practitioners.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Manufacturing Education and Workforce Development	4.264	4.911	5.444
Description: The Manufacturing Education and Workforce Development (M-EWD) project provides a strategic framework for DoW leadership of advanced manufacturing talent development and includes MII-led regional initiatives informed by labor market data profiles of regional economies, a pilot effort to develop an automated real-time labor market data portal, and launch of ManufacturingWorkforce.org, a dual-use digital learning platform with advanced manufacturing course offerings.			
FY 2026 Plans: Design and implement structured workflow processes to build regional ecosystems and upscale solutions, streamlining the identification, integration, and replication of successful pilot programs. Continue to strengthen and grow M-EWD ecosystem structures by assisting stakeholders with funding and scaling pathways. Incorporate advanced data and knowledge management tools to enable the program to operate as a knowledge and propagation hub that systematically captures and shares best practices across the M-EWD ecosystem. Implement strategic communications to strengthen existing and establish new partnerships by convening with stakeholders, experts, and practitioners to capitalize on interagency synergies and resources. A key FY 2026 focus area will be on expanding these programs across new geographies, technologies, and age groups.			
FY 2027 Plans: Design and implement structured workflow processes to streamline identification, integration, replication, and scaling of M-EWD solutions originating from MIIs, internal M-EWD projects, and/or novel external opportunities. Continue to strengthen and grow M-EWD ecosystem structures. Incorporate advanced data and knowledge management tools to enable the program to operate as a knowledge and propagation hub and systematically capture, catalyze, and communicate project impacts across the M-

A. Mission Description and Budget Item Justification

The Office of the Secretary War (OSW) Manufacturing Science and Technology Program (MSTP) concentrates on cross-cutting defense manufacturing needs that are beyond the ability of a single service to address. MSTP projects focus on cross-cutting defense manufacturing advancements and stimulate early development of manufacturing processes and enterprise business practices. The MSTP invests in broad technology initiatives within Advanced Electronics and Optics, Advanced Materials and Composites, Advanced and Emerging Manufacturing Processes, and Advanced Energetics Manufacturing.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Advanced Electronics and Optics	16.809	14.774	35.146
Description: Advanced Electronics and Optics is a series of efforts addressing advanced manufacturing technologies for a wide range of applications such as sensors, radars, power generation, switches, and optics for defense applications. Focal points are productivity and efficiency gains in the defense manufacturing base to accelerate delivery of technical capabilities to impact current warfighting operations, and manufacturing technologies to reduce the cost, acquisition time and risk to our major defense acquisition programs. Future efforts will focus on advances in fuel cells, lasers, enhanced acuity micro-displays, and transparent ceramics for opto-mechanical and armor applications. Funding for Batteries for key systems.			
FY 2026 Plans: Fund year 5 of 5 for Transmit/Receive Integrated System on a Chip (TRISoC) and Direct-write Manufacturing for Conformal Antennas, Year 3 of 3 for Advanced Pulse Power Solutions, Year 2 of 3 for Optically Based Enhancements for Accurate Mechanical Sensors (O-Beams) and Automated Manufacturing of Small Format Liquid Reserve Batteries.			
FY 2027 Plans: Fund year 3 of 4 of Manufacturing Advances in the Scaling of Thin Electro-optic Resources for Making Integrated Niobate Devices (MASTERMIND), Year 2 of 3 for Fiber Laser-Attach for Manufacturability and Environmental Stability (FLAMES), Year 3 of 5 for Advanced Manufacturing of Thin Film Batteries, Year 3 of 3 for Automated Manufacturing of Small Format Liquid Reserve Batteries, Year 1 of 3 for Advanced Energy Storage System for Contested Logistics, Year 1 of 3 for High Energy Raman Lasers for Missile Defense, Year 1 of 3 for Manufacturing Infrared Arrays with Direct Bonding, Year 1 of 3 for Navigation Grade IMU for Precision Guided Munitions, and Year 1 of 4 for Superconducting MAGNAV with A-Axis Squid Arrays in HTS (SMASH).

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026	FY 2027
Additional funding being applied to beam steering optic components for high energy laser technologies to support directed energy applications.				
<i>FY 2026 to FY 2027 Increase/Decrease Statement:</i> The increase of \$20.372 million between FY 2026 and FY 2027 reflects a net increase of \$15.000 million for Batteries for Key Systems for Thermal Batteries and an additional \$5.372 million for a high energy laser technology initiative supporting beam steering and optical components in support of directed energy technologies is reflected as part of the year-to-year funding increase.				
<i>Title:</i> Advanced Materials and Composites <i>Description:</i> Advanced Materials and Composites is a series of efforts addressing advanced manufacturing technologies for a wide range of materials such as composites, metals, ceramics, nanomaterials, and metamaterials. Through productivity and efficiency gains, these manufacturing technologies will accelerate delivery of technical capabilities to impact current warfighting operations, while reducing the cost, acquisition time and risk of our major defense acquisition programs. Advanced materials manufacturing technologies undergoing development include materials for ballistic survivability and ballistic protection, survivability and rapid fabrication of structural components. Initiating projects for Additional Carbon-Carbon Suppliers for Hypersonics, Hypersonic Aperture Manufacturing Development, Manufacturing and Production Assessment and Improvements for Hypersonics. <i>FY 2026 Plans:</i> Fund Year 4 of 4 for Mobile Fabrication and Repair, Year 2 of 2 for Carbon Nanotube Fiber Cathodes for High Power Microwave Weapons. <i>FY 2027 Plans:</i> Fund Year 3 of 3 for Carbon Nanotube Fiber Cathodes for High Power Microwave Weapons, Year 3 of 5 for Harnessing Microbe-Sourced Cellulose for Advanced Fiber Manufacturing, Year 2 of 4 for Affordable Hydrogen On-Demand, Year 2 of 4 for Additive Manufacturing for Hypersonic Radomes, and Year 2 of 3 for Powder Granulation for Expanded Production Capacity of Thermal Batteries. Additional funding being applied to advanced manufacturing of hypersonic radome materials for the defense industrial base. <i>FY 2026 to FY 2027 Increase/Decrease Statement:</i>		5.548	8.189	36.189

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026	FY 2027
The increase of \$28.000 million between FY 2026 and FY 2027 reflects \$15.000 million for Additional Carbon-Carbon Suppliers, \$7.000 million for Hypersonic Aperture Manufacturing Development and \$6.000 million for Manufacturing and Production Assessments and Improvements for Hypersonics.				
Title: Advanced and Emerging Manufacturing Processes Description: Advanced and Emerging Manufacturing addresses advanced manufacturing technologies and business practices for defense applications. Key focus areas include direct digital (or additive) manufacturing, advanced manufacturing enterprise, machining, robotics, assembly, and joining. Projects selected will accelerate delivery of technical capabilities to impact current warfighting operations while reducing cost, acquisition time, and risk of major defense acquisition programs. FY 2026 Plans: Fund Year 3 of 3 for Nutritionally Tailored Food at the Point of Need, Precision Optical Wind Sensor, Year 2 of 5 for Harnessing Microbe-Sourced Cellulose for Advanced Fiber Manufacturing and continued development of Beacon CONNEX software for DoW ManTech. FY 2027 Plans: Fund Year 2 of 4 for Adaptive Incremental Forming through Optimized Robotic Manufacturing (AI-FORM), Year 1 of 3 for Manufacturing Automation with Turnkey Robotic Inspection & Flexible Finishing Tools (MATRIX) and Year 1 of 3 for Beyond the Black Box: Building Trust in AI for Defect Detection in Additive Manufacturing. Additional funding being applied to the development of advanced manufacturing processes supporting the munitions industrial base. FY 2026 to FY 2027 Increase/Decrease Statement: No change.		4.725	8.871	8.871
Title: Advanced Energetics Manufacturing Description: Advanced Energetics Manufacturing develops improved manufacturing capabilities for safer, low-cost, high-quality production of existing and newly developed ingredients and composites used in energetic materials production. Develops techniques such as additive manufacturing, microfluidics, continuous processing, resonant acoustic mixing, robotics, etc. for production of critical energetics and supporting ingredients to ensure Department access to these materials and enable development of new, highly advanced energetic systems for improved range and performance. FY 2026 Plans:		1.345	1.365	1.365

0400 / 3	PE 0603680D8Z / Defense Wide Manufacturing Science and Technology Program	680 / Manufacturing Science and Technology Program
	FY 2025	FY 2026
FY 2025 Accomplishments: Finalizing execution plans for CII through US Army DEVCOM Armaments Center. Efforts will be to increase production capacity of pilot nanopowder production and refining the consolidation techniques necessary to maximize attributes critical to lethality (i.e. density and hardness). These efforts will also increase the number of penetrators available for continued ballistics testing. FY 2026 Plans: Intended to improve the development of nanoscale particle materials used in powder-based materials. Manufacturing of end item products to include munition components (e.g. boron carbide, tungsten carbide, tungsten heavy alloy, etc.).		
Congressional Add: Advanced Aerospace Composites Tech Hub FY 2026 Plans: American Aerospace Materials Manufacturing Center (AAMMC), 501c3 consortium of industry leaders and higher education institutions in the Inland Northwest partnering to take large-sized aerospace composites from TRL 5 to TRL 6-9, by providing a prototype testbed with the largest equipment of its kind in the world and building out the workforce. The expensive and unique equipment necessary to prove these large composite aero parts has deterred any single entity from pursuing this alone. Bring to market multiple large-sized materials in 2 years for defense and within 10 years for commercial.	-	55.000
Congressional Add: Critical Materials for Energy Storage Solutions FY 2026 Plans: To ensure domestic access to the best performing materials, the Critical Materials for Energy Storage Solutions effort will: • Conduct testing to build specific data sets of current advanced polymer materials grades used in these applications, comparing attributes such as physical properties, electrical properties, durability and compatibility. • Compare broad performance criteria to non-fluorinated alternatives, elucidating potential failure mechanisms to better articulate specific risk factors associated with insufficient material selection. • Research and develop potential polymer design improvements to further advance the materials available for use in next generation designs for durable and versatile power and energy storage needs.	-	3.000
Congressional Add: Manufacturing Technology Readiness Center [MTRC] Initiative FY 2026 Plans: This initiative proposes to create an additional (new) public-private partnership with the DoW ManTech program that focuses on three key pillars: • Coordination amongst the existing DoW MIIIs to identify and target successful technologies and the associated training curriculum developed through their years-long federally funded efforts, to be adopted by small and medium-sized suppliers;	-	7.000

A. Mission Description and Budget Item Justification												
Technology Industrial Base (TIB) provides support to technology leaders in identifying industrial innovation base needs; characterizing and assessing priority technology investments, identifying and mitigating issues and risks impacting the industrial innovation base, and exploiting opportunities to advance technology development, testing, and manufacturing. TIB efforts develop near- and long-term strategies and employ mechanisms to retain the U.S. advantage in current and emerging modernization technology priorities by addressing the capabilities of the industrial innovation base to develop, test, manufacture, and sustain them.												
B. Accomplishments/Planned Programs (\$ in Millions)									FY 2025	FY 2026	FY 2027	
Title: Technology Industrial Innovation Base (TIB)									5.199	6.095	6.725	
Description: This project uses a three-step approach: (1) Assess, (2) Protect/Promote; and (3) Monitor. In the first step, TIB uses emerging technology assessments to translate technology needs to manufacturing and industrial innovation base requirements to identify industrial innovation base issues, risks, and opportunities. TIB created an assessment methodology that incorporates four types of studies to provide a full overview of the technology from a manufacturing and industrial innovation base point of view. The results of the assessments are used to generate industrial-innovation-base inputs to technology roadmaps, develop an investment plan addressing the needs of the industrial innovation base, and create technology and industrial innovation base protection and promotion strategies (second step of the approach). TIB leverages DoW and Federal Government tools and initiatives to implement the strategies. In the third step, TIB uses data analytics to measure the success of mitigation and exploitation strategies, establish trends in the markets, and identify the need for additional assessments or changes in investments and strategies.												
FY 2026 Plans:												
Continue to identify and address new, emerging manufacturing capabilities and technology base gaps that are vital to fielding critical technology areas and other key stakeholder priorities; manage ongoing technology innovation base assessments; and conduct deep dive assessments to identify and address national security innovation base risks, issues, and opportunities related to the DoW.												
FY 2027 Plans:												
Continue to identify and address new, emerging manufacturing capabilities and technology base gaps that are critical to fielding modernization priorities and other U.S. technological advantage areas; manage ongoing technical innovation base assessments

A. Mission Description and Budget Item Justification												
Advanced manufacturing demonstrations of biomanufactured products for critical defense applications. This project addresses the necessary activities to rapidly mature biomanufactured products and establish the necessary production capacity.												
B. Accomplishments/Planned Programs (\$ in Millions)									FY 2025	FY 2026	FY 2027	
Title: Rapid Maturation of Biomanufactured Defense Products									-	123.085	136.229	
Description: Biomanufactured products will be rapidly matured with coordinated DoW activities to validate if the product is capable of meeting DoW requirements. Activities include: formulation studies, early prototyping efforts, qualification testing, and initial relevant environment testing.												
FY 2026 Plans:												
Bioindustrial manufacturing products will be assessed for suitability to DoW requirements. Promising candidates for rapid maturation will be chosen in coordination with the relevant program office for the end application. Design product maturation plans, coordinated with all relevant stakeholders, to inform product scale-up and infrastructure investments necessary to meet DoW requirements.												
FY 2027 Plans:												
Continue to assess and award promising candidates in Bioindustrial manufacturing products. Criteria for selection will include exhibited capacity for rapid maturation and will be chosen in coordination with the relevant program offices for the end applications. Project chosen for maturation will have demonstrated alignment with defense stakeholders. Maturation of products for low resource environments will be prioritized. Program will implement product maturation plans, coordinated with all relevant stakeholders, to inform product scale-up and infrastructure investments necessary to meet DoW requirements.												
FY 2026 to FY 2027 Increase/Decrease Statement:												
The increase of \$13.144 million between FY 2026 and FY 2027 reflects the net increase of \$14.070 million for INDOPACOM Critical Priorities and a net decrease of \$0.926 million to reduce the exploration of new biomanufactured products for defense use.												
Title: Establish Critical Bioindustrial Manufacturing Capacity									-	102.356	118.286	
Description: Activities to establish capacity for critical bioindustrial products include initial production runs at a significantly higher scale (example: production batch size increasing from 1,000L to 10,000L), purchase of necessary equipment to increase

A. Mission Description and Budget Item Justification												
Technology Transfer and Commercial Partnership's (T2CP) mission is to provide policy, guidance and coordination of the DoW T2 Components' programs which encompass more than 9,000 active public private partnerships with DoW laboratories. The T2 budget is used to implement the 15 USC 3702 and 3710, multiple 10 USC partnership authorities, and DoD Instructions 5535.08 and .11.												
B. Accomplishments/Planned Programs (\$ in Millions)									FY 2025	FY 2026	FY 2027	
Title: Technology Transfer (T2), Transition, and Commercial Partnerships (T3CP)									-	1.768	4.552	
Description: Provides the resources for the management and policy of OSW and DoW-Wide T2 and transition activities. Provides contractual and subject matter expert support for the Undersecretary of War (Research and Engineering)'s DoW Domestic T2 responsibilities per DoDD 5137.02.												
FY 2026 Plans: Complete the Economic Impact Study (EIS) for Cooperative Research and Development Agreements (CRADAS) for the fourteen DoW T2 Components and update DoDI policy and regulations. Conduct an EIS for license agreements of the fourteen DoW T2 Components and provide continuing Technology Transfer University (T2U) training to DoW T2 legal professionals, scientists, and engineers.												
FY 2027 Plans: Complete DoW-wide adoption of iEdison Subject Invention Reporting for Extramural Research to comply with 37 CFR § 401.16 (federal agency reporting requirements for Bayh-Doyle); Unify intellectual property data systems from services to create a DoW “digital data estate” that facilitates strategic analysis of commercial licensing, accelerating technologies from lab to market; execute “challenge programs” in advanced materials and quantum sectors to increase transition opportunities for lab-developed technology in critical materials and quantum computing.												
FY 2026 to FY 2027 Increase/Decrease Statement: The increase of \$2.784 million between FY 2026 and FY 2027 reflects the realignment from Defense Technology Analysis (PE 0605798D8Z) to DMS&T (PE0603680D8Z). Funding increase supports new mission scope for the Defense-wide implementation of extramural subject invention (iEdison) as directed by the Undersecretary of War (R&E).

Note

New Start (Y/N): No

A. Mission Description and Budget Item Justification

The Strategic Environmental Research and Development Program (SERDP) invests in applied research to secure Department of War (DoW) installations, while its companion program, the Environmental Security Technology Certification Program (ESTCP), demonstrates and validates these technologies in operational settings.

SERDP tackles key challenges facing military installations, creating innovative approaches that strengthen mission capabilities where they're needed most across more than 800 DoW locations worldwide. The program focuses on cross-Service requirements and pursues solutions to the Department's most pressing installation challenges. To meet these challenges, SERDP develops innovative, scalable technologies that enhance military readiness, improve warfighter capabilities, and strengthen defense infrastructure, prioritizing common-sense, cost-effective solutions that support operational effectiveness at military installations.

SERDP issues solicitations for proposals from government, academia, and industry and employs a competitive selection process to ensure the highest quality research. Through these partnerships, SERDP identifies promising technologies that transition to ESTCP for operational demonstration. This coordination helps reduce duplicative efforts and maximizes research impact.

Established by Congress in 1990, SERDP serves as a catalyst for cooperation and collaboration across the Armed Services. The development and application of innovative technologies reduces the costs, risks, and time required to resolve installation challenges while advancing military readiness. These investments ensure military installations can withstand operational threats and environmental hazards both inside and outside the fence line, providing a distinct advantage to our warfighters while ensuring military forces remain combat-ready to deter adversaries and defend the nation.

A. Mission Description and Budget Item Justification

The Strategic Environmental Research and Development Program (SERDP) invests in applied research to secure Department of War (DoW) installations, while its companion program, the Environmental Security Technology Certification Program (ESTCP), demonstrates and validates these technologies in operational settings.

SERDP tackles key challenges facing military installations, creating innovative approaches that strengthen mission capabilities where they're needed most across more than 800 DoW locations worldwide. The program focuses on cross-Service requirements and pursues solutions to the Department's most pressing installation challenges. To meet these challenges, SERDP develops innovative, scalable technologies that enhance military readiness, improve warfighter capabilities, and strengthen defense infrastructure, prioritizing common sense, cost effective solutions that support operational effectiveness at military installations.

SERDP issues solicitations for proposals from government, academia, and industry and employs a competitive selection process to ensure the highest quality research. Through these partnerships, SERDP identifies promising technologies that transition to ESTCP for operational demonstration. This coordination helps reduce duplicative efforts and maximizes research impact.

Established by Congress in 1990, SERDP serves as a catalyst for cooperation and collaboration across the Armed Services. The development and application of innovative technologies reduces the costs, risks, and time required to resolve installation challenges while advancing military readiness. Our installations are not simply support structures; they are weapon systems that enable DoW to deliver lethality across the force. These investments ensure military installations can withstand operational threats and environmental hazards both inside and outside the fence line, providing a distinct advantage to our warfighters while ensuring military forces remain combat-ready to deter adversaries and defend the nation.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Environmental Restoration (ER)	17.312	15.867	17.822
Description: Investments in ER strengthen military readiness by efficiently addressing the DoW's environmental challenges through practical technologies. By developing better methods to detect, assess, and clean up harmful chemicals in training and operational areas, these investments keep military installations ready for use.			

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2027 Office of the Secretary Of Defense		Date: April 2026		
Appropriation/Budget Activity 0400 / 3	R-1 Program Element (Number/Name) PE 0603716D8Z / Strategic Environmental / Research and Development Program (SE RDP)	Project (Number/Name) 470 / Strategic Environmental Research and Development Program (SERDP)		
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026	FY 2027
SERDP has made addressing per- and polyfluoroalkyl substances (PFAS) at DoW installations a priority to support military operations. The program's research ensures installations can maintain full operational capacity while effectively managing these substances. Through hundreds of targeted projects, SERDP has quickly improved DoW's ability to evaluate and address PFAS with minimal impact on military activities. These efforts protect the warfighter, training grounds, ranges, and critical facilities, ensuring forces can prepare effectively and deploy when needed to defend the nation. FY 2025 Accomplishments: Development of PFAS destruction technologies, both thermal and non-thermal continued with an increased emphasis on technologies for in situ destruction of PFAS and aqueous film-forming foam (AFFF) residue that avoid the expense of traditional, more expensive methods. Studies continued on the underlying science of PFAS fate and transport, treatment of PFAS-impacted concrete and asphalt, and detection and treatment of PFAS-impacted microplastics in stormwater and groundwater. FY 2026 Plans: New projects will develop rapid, on-site sensors for detecting PFAS in soils and water. Additional projects will address ecological toxicity data gaps for PFAS identified during the SERDP & ESTCP 2024 Ecotoxicity Workshop. Development continues for PFAS destruction technologies that avoid the costs of pump-and-treat methods or off-site disposal. Ongoing studies improve the understanding of PFAS transport and treatment in concrete and asphalt, advance the science of PFAS fate and transport, and develop methods for treating PFAS-impacted microplastics in stormwater and groundwater. FY 2027 Plans: New projects will examine characterization and treatment of biosolids impacted with PFAS. Ongoing projects will continue to develop rapid, on-site sensors for detecting PFAS in soils and water, and further improve our understanding of the ecological toxicity of PFAS in the environment. Development will continue on advancing our ability to treat PFAS in concrete and asphalt, and further understanding PFAS-impacted microplastics in stormwater and groundwater. FY 2026 to FY 2027 Increase/Decrease Statement: The FY 2026 to FY 2027 increase of \$1.955 million reflects a programmed increase for improved sensors for analysis of PFAS in the field and for improved PFAS treatment and destruction technologies.				
Title: Munitions Response (MR) Description: Investments in MR ensure safe access to training grounds and operational areas by improving detection and removal of unexploded ordnance (UXO) at underwater sites across military installations and Formerly Used Defense Sites (FUDS). These efforts maintain readiness by clearing hazards that restrict training and deployment activities.		4.310	1.580	1.541

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2027 Office of the Secretary Of Defense		Date: April 2026		
Appropriation/Budget Activity 0400 / 3	R-1 Program Element (Number/Name) PE 0603716D8Z / Strategic Environmental Research and Development Program (SERDP)	Project (Number/Name) 470 / Strategic Environmental Research and Development Program (SERDP)		
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026	FY 2027
SERDP has developed advanced technologies to address UXO in marine environments including ponds, lakes, rivers, estuaries, and coastal areas where traditional detection methods face significant challenges. Following years of targeted research, the program has created effective solutions for detecting, classifying, and removing underwater munitions ranging from small projectiles to large bombs that show no visible evidence of their presence. These innovations dramatically reduce the personnel hours required for remediation while improving safety for military personnel and surrounding communities. By efficiently clearing UXO from underwater environments, SERDP ensures these areas remain available for training and operations, directly supporting the warfighter's ability to prepare for deployment. The program's technologies are now being transitioned from test sites to actual locations where UXO are present, delivering practical solutions that enhance military readiness and protect defense assets. FY 2025 Accomplishments: The program facilitated transition to live site environments under ESTCP, further developing acoustic, electromagnetic, and optical sensor systems for UXO detection and classification. Research improved discrimination between UXO and inert debris and validating established munitions burial and mobility models through ESTCP-funded test sites. A comprehensive summary report of prior research was developed for distribution to relevant stakeholders. FY 2026 Plans: Research funding needs are decreasing as investigations in munitions burial and mobility conclude, which have significantly advanced site characterization knowledge in dynamic underwater environments. Detection, classification, and localization technologies that achieved success have been transitioned to ESTCP for demonstration and validation. FY 2027 Plans: Research funding will continue to decrease as continuing projects conclude and mature technologies are transitioned to ESTCP. FY 2026 to FY 2027 Increase/Decrease Statement: The FY 2026 to FY 2027 decrease of \$.39 thousand reflects adjustments to promote Government efficiencies from efficiency in alignment with Executive Order 14222, "Implementing the President's Department of Government Efficiency Cost Efficiency Initiative" and a downscaling of efforts in this area as the munitions burial and mobility research concludes and mature technologies are transitioned to ESTCP.				
Title: Natural Hazards and Installation Resilience (NHIR) Description: Investments in NH/IR protect the 28 million acres of land essential for military training and testing operations across more than 800 global DoW locations. The program area was renamed to better reflect its strategic realignment that integrates		21.853	19.468	18.833

B. Accomplishments/Planned Programs (\$ in Millions)	FY 2025	FY 2026	FY 2027
management of DoW's natural and built infrastructure with hazard resilience efforts, creating a more comprehensive approach to installation readiness. By developing technologies to mitigate wildfires, contain invasive species, and manage natural resources, SERDP ensures training grounds remain available for realistic combat preparation directly supporting mission readiness. The program now addresses both environmental management challenges affecting training lands and the technologies needed to mitigate natweather-related risks that have caused billions in infrastructure damage. SERDP's research provides DoW with practical tools to maintain the contiguous, unencumbered spaces needed to replicate operational environments. These lands must support numerous units training over time, requiring effective management of environmental challenges that could otherwise restrict access or limit training days. This responsible management of natural resources is a critical readiness imperative. The program develops science-based solutions that enhance military readiness by addressing threats to training environments including wildfires, flooding, invasive species, and dust emissions. By providing installation managers with effective hazard mitigation and resource management technologies, SERDP maximizes available training days and ensures forces can prepare for deployment in realistic conditions. These efforts maintain the operational utility of DoW lands, providing an advantage to warfighters while ensuring military forces remain combat-ready. FY 2025 Accomplishments: New projects were initiated to develop models supporting installation planning staff in managing the interaction of natural hazards, fire management, and ecosystem transformations that impact DoW mission activities. Research continued on the effects of multiple stressors on threatened and endangered species that affect the DoW mission and to prevent future listings. Projects developed models, tools, and data to evaluate installation systems resilience to compounded threats and natural hazards, specifically hurricanes and wildfire. New projects advanced measurements and modeling of micrometeorology key to installation resilience in the arid West. Additional projects improved understanding and modeling of wildland fire smoke emissions and developed tools for smoke management from prescribed fires. FY 2026 Plans: The program will initiate new projects to advance technology and modeling of natural hazards and risks from weather issues occurring at DoW installations, focusing on tornado prediction, hailstorms, and dual-purpose wildland fire response technologies. Projects will continue advancing technology for detection and treatment of mission relevant invasive species with a focus on Indo-Pacific Command (INDOPACOM), specifically Hawaii and Guam. Ongoing projects will continue to assess DoW-relevant threatened, endangered, and at-risk species responses to multiple stressors and other key DoW geographies, including Hawaii,

southeastern United States, and California. Scenario modeling tools capable of integrating installations and ecosystem responses will continue to assess threats from weather issues and rapid transformations that impact mission activities and installation resilience, focused in Alaska and the coastal regions. New projects are testing efficient conservation strategies to prevent future listing of threatened and endangered species and guide changes to management strategies to save costs. FY 2027 Plans: New projects will be initiated to advance modeling of compounded hazards and their impacts on interdependent systems, including transportation and power systems, that support installations. Additional projects will continue to support understanding of rapid ecosystem transformations (fire, permafrost thaw, invasive species) on installations that disrupt military operations and evaluate management options for recovery. Projects continue to evaluate technologies to eliminate invasive species, with focus on INDOPACOM mission threats in Hawaii, Guam, and CNMI. Projects will continue to model DoW-relevant threatened, endangered, and at-risk species responses to multiple stressors, other key DoW geographies, including the southeastern United States and California. New projects will test and evaluate dual purpose technologies for firefighter safety and wildland fire response to include autonomous terrestrial fire equipment, real time monitoring of smoke exposure, and incident overwatch through data fusion products. FY 2026 to FY 2027 Increase/Decrease Statement: The FY 2026 to FY 2027 decrease of \$.635 thousand reflects adjustments to promote Government efficiencies from efficiency in alignment with Executive Order 14222, “Implementing the President’s Department of Government Efficiency Cost Efficiency Initiative” and other inflation adjustments to the program. Additionally, the program requirements reflect scaling back invasive species research initiatives in FY 2027. The program is strategically realigning resources to prioritize installation resilience against natural hazards, threatened and endangered species management, and wildfire risk mitigation that more directly support critical mission readiness objectives. This focused approach will target the most immediate threats to installation resilience while maintaining essential conservation efforts that prevent training restrictions.				
Title: Weapons Systems and Platforms (WP) Description: Investments in WP are focused on development of technologies and materials that ensure secure access to critical military assets across installations, depots, and maintenance facilities. By creating solutions that reduce dependence on restricted chemicals and vulnerable supply chains, SERDP strengthens the military’s ability to maintain essential defense platforms, from aircraft and vehicles to energy systems. SERDP’s research addresses supply chain instability and material restrictions that threaten readiness at maintenance depots and operational bases. The program develops next-generation materials that extend the service life of mission-critical systems from production through decommissioning, while enhancing American mineral production and material resilience throughout		14.003	20.660	22.578

the defense industrial base. These technologies support installation operations by ensuring access to vital systems, reducing maintenance costs, and improving energy resilience through advanced materials for power systems. By developing alternatives to hazardous chemicals in paints, coatings, munitions, and equipment, SERDP protects personnel and facilities. These efforts ensure installation infrastructure from maintenance depots to energy systems can effectively sustain the reliable weapons systems and platforms needed to defend the nation. FY 2025 Accomplishments: Projects were initiated to develop improved PFAS-free firefighting formulations addressing the intent of Section 323 of the FY2020 National Defense Authorization Act (NDAA). Efforts developed augmented reality for firefighter training with haptic feedback. Projects evaluated PFAS-free textile coatings and identified alternatives for fluorinated polymers in energetics. Research advanced field effects processing of energetic molecules, developed rocket propellants without isocyanate-based binders, and created corrosion-mitigating coating systems with reduced environmental impact. Efforts identified processes for refractory alloy recycling and developed elastocaloric materials for refrigeration methods to potentially eliminate the use of flammable refrigerants. FY 2026 Plans: New projects will develop improved emulsification agents for commercial fluorine-free foams (F3) to address the intent of Section 323 of the FY 2020 NDAA. The program will develop prototype elastocaloric refrigeration systems for potential vehicle retrofitting to eliminate refrigerant flammability risk. Efforts will continue to develop PFAS-free textiles and scalable fabric treatment manufacturing technologies. Projects will develop alternatives for fluorinated polymers in energetics processing and closed destruction technologies for energetics demilitarization. FY 2027 Plans: First generation saltwater compatible F3s will be developed and transitioned for demonstration/validation. Projects will identify whether ionic liquids can be used to increase the rate of demilitarization of nitrocellulose-based propellants. Alternative synthesis methods for TNT will be developed to prevent red water formation. PFAS-free binders for explosives and explosives manufactured using PFAS-free processing fluids will be transitioned to pilot production and/or range tests in demonstration/validation efforts. First generation omniphobic fabrics will be scaled to processing of garments to create transition to demonstration/validation. Improved efficiency critical mineral extraction, separation, and purification technologies will begin. FY 2026 to FY 2027 Increase/Decrease Statement: The FY 2026 to FY 2027 net increase of \$1.918 million reflects a programmed increase for PFAS chemical resiliency in weapons systems and platforms and development of alternative technology for demilitarization of energetics.

A. Mission Description and Budget Item Justification

The Joint Warfighting Program (JWP) supports the Assistant Secretary of War for Acquisition (ASW(A))'s responsibilities for acquisition and portfolio management. The JWP underwrites analyses, studies, performs limited scope experiments, wargaming, and partnerships that define joint capability gaps and develops credible requirements for follow-on acquisition efforts. These analyses and assessments deliver independent perspectives on potential remedies to align acquisition investments and solutions for joint capability gaps created by future warfighting environments and emerging threats. The JWP supports mission engineering integration management, as well as other high priority emerging issues requiring independent analysis to inform acquisition decisions that impact National Security.

Note

New Start (Y/N): No

This Software Engineering Institute (SEI) Advanced Technology Development program applies the software and computer science concepts developed under the Software Engineering Institute (SEI) Applied Research (0602751D8Z) PE to research, develop, and rapidly transition state-of-the-art software technology, tools, development environments, and best practices to improve the engineering, management, fielding, evolution, acquisition, and sustainment of software-intensive Department of War (DoW) systems.

A. Mission Description and Budget Item Justification

This program supports the Departments initiatives to Build a Sustainable and Long-Term Advantage, and Build a Resilient Joint Force and Defense Ecosystem.

Software is more pervasive than ever, and computer programs are growing in size and complexity. Designing, managing, and securing integrated, complex, and large-scale mission-critical systems are abilities that the Department of War (DoW) and the Defense Industrial Base (DIB) have not yet mastered. Reliance on software-intensive mobile and net-based products and systems has increased (e.g., Joint Tactical Radio System, USS ZUMWALT (DDG-1000), Joint Strike Fighter, F-22, and Army Modernization). As stated in the February 2018 Defense Science Board Report, "Design and Acquisition of Software for Defense Systems," software is a crucial and growing part of weapons systems and the national security mission, and the DoW must address its ability to build and sustain software continuously and indefinitely. With growing global parity in software engineering, the DoW must maintain leadership to ensure a competitive advantage.

The Carnegie-Mellon University Software Engineering Institute (SEI) Federally Funded Research and Development Center (FFRDC) was established in 1984 as an integral part of the DoW's initiative to identify, evaluate, and transition software engineering technologies and practices. The mission of the SEI is to provide the DoW with technical leadership and innovation through research and development to advance the practice of software engineering and technology. The SEI works across government, industry, and academia to improve the state of software engineering from the technical, acquisition, and management perspectives. The SEI engages in research and development of critical software technologies and tools and collaborates with the larger software engineering research community. It facilitates rapid transition of software engineering technologies into practice and evaluates emerging software engineering technologies to determine their potential for improving software-intensive DoW systems. Since its inception, the SEI has helped to transform the fields of software engineering and acquisition, network security, real-time systems, software architectures, and software-engineering process management.

The SEI program addresses the critical need to research, develop, and rapidly transition state-of-the-art software technology, tools, development environments, and best practices to improve the engineering, management, fielding, evolution, acquisition, and sustainment of software-intensive DoW systems. The research conducted by this

A. Mission Description and Budget Item Justification

This project focuses on two main research thrusts with known military applications: (1) Software Engineering, Systems Verification and Validation, and Mission Assurance (formerly Mission Assurance); and (2) Information Assurance.

SEI research focuses on the most significant and pervasive software challenges within the DoW, such as the scalability and reliability of software assurance, supply chain risk management, validation of and trust in autonomous systems, human-computer and human-technology teaming and interaction, computing and communication at the tactical edge, and efficiency and performance of acquisition strategies and software development appropriate for a contested cyber environment.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: SEI Advanced Technology Development in the Area of Software Engineering, Systems Verification and Validation, and Mission Assurance	14.496	10.921	8.357
Description: This research seeks to mature and rapidly prototype techniques to verify methods for identifying requirements, systems of systems architectures, and virtual integration of components. Furthermore, research in this area will pursue rapid prototyping and transitioning of capabilities that verify requirements for software assurance, analysis/control of unverified code and automated repair of damaged code. Software production and code analysis methods developed through this program will also improve the ability to predict how complex software systems, including artificial intelligence (AI) enabled systems, will behave in untested environments. Increasingly, large numbers of lines of code and the addition of machine-learning techniques will require a commensurate increase in sophisticated verification and validation mechanisms.			
FY 2026 Plans: Leverage AI generated software methods to automate software systems composition. Validate the results of the systems composition using statistical and graph theoretic methods including model-based systems engineering.			
FY 2027 Plans: Use hybridized AI methods to generate prototype system architectures and use automated graph matching verification and validation methods to check correctness of system design.			
FY 2026 to FY 2027 Increase/Decrease Statement:

Note

New Start (Y/N): No.

Program is a transfer from the Defense Health Agency (DHA).

A. Mission Description and Budget Item Justification

This program exploits advances in technology to develop, improve and implement detection, information processing and decision support for biosurveillance. The mission of this program is to create a fit-for-purpose biosurveillance capability with federated collection, processing, analysis, production, and dissemination capabilities to enable strategic, anticipatory, and operational decision-making for deterrence and risk mitigation. To accomplish this mission, the Biosurveillance Program will: 1) Implement agile planning and response processes through a cross-functional biosurveillance organizational architecture—with the structure, function, and authorities—to support time-sensitive needs of DoW leaders; 2) Expand physical and digital detection capabilities and capacity—infused with intelligence collection—to enable early warning, sustained awareness, and agile response focusing on advanced technological capabilities; 3) Enhance biosurveillance insights by increasing data value, knowledge generation and accelerating processing of existing health and biodefense repositories into a fit-for purpose analytic capability; 4) Communicate the full range of analytic products necessary for leadership decision-making across the continuum of conflict. This budget is justified by the critical gap, identified in the 2023 Biodefense Posture Review, in the Department's ability to gather and analyze timely biothreat information to protect the Joint Force and enhance national security. The funding will establish this necessary capability by operationalizing a Biosurveillance Information Platform (BIP), expanding next-generation sequencing, and improving data sharing. These investments are essential for enhancing readiness and resilience against a dynamic landscape of natural, accidental, and deliberate biological threats.

A. Mission Description and Budget Item Justification

This program exploits advances in technology to develop, improve and implement detection, information processing and decision support for biosurveillance. The mission of this program is to create a fit-for-purpose biosurveillance capability with federated collection, processing, analysis, production, and dissemination capabilities to enable strategic, anticipatory, and operational decision-making for deterrence and risk mitigation. To accomplish this mission, the Biosurveillance Program will: 1) Implement agile planning and response processes through a cross-functional biosurveillance organizational architecture—with the structure, function, and authorities—to support time-sensitive needs of DoW leaders; 2) Expand physical and digital detection capabilities and capacity—infused with intelligence collection—to enable early warning, sustained awareness, and agile response focusing on advanced technological capabilities; 3) Enhance biosurveillance insights by increasing data value, knowledge generation and accelerating processing of existing health and biodefense repositories into a fit-for purpose analytic capability; 4) Communicate the full range of analytic products necessary for leadership decision-making across the continuum of conflict. This budget is justified by the critical gap, identified in the 2023 Biodefense Posture Review, in the Department's ability to gather and analyze timely biothreat information to protect the Joint Force and enhance national security. The funding will establish this necessary capability by operationalizing a Biosurveillance Information Platform (BIP), expanding next-generation sequencing, and improving data sharing. These investments are essential for enhancing readiness and resilience against a dynamic landscape of natural, accidental, and deliberate biological threats.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Biosurveillance Information Platform (BIP)	-	-	9.800
Description: The BIP is a platform-agnostic software system designed to ingest, analyze, and communicate curated Biosurveillance data and information from multiple disparate sources across the Department of War, Interagency, Allies, and partners, making it accessible through a unified platform for query, analysis, and decision support. Leveraging advanced analytics, artificial intelligence (AI), machine learning (ML), modeling, and simulations, the BIP provides near real-time detection and alerting of biological events, identifies trends and anomalies, and delivers predictive insights to create decision advantage and directly supports Biodeterrence. The BIP communicates essential strategic and operational information via a Common Operating Picture (COP), generating alerts and analytical products to support timely decision-making across the Joint Force, mission partners, and the Federal Government. As a Combined Joint All-Domain Command and Control (CJADC2) enabling capability, the BIP ensures a secure and interoperable data exchange across multiple networks and domains, adhering to Zero Trust principles while supporting operations in both connected and disconnected environments.

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
<i>FY 2027 Plans:</i> • Identify novel Science and Technology (S&T) opportunities for conducting real time surveillance to enhance the network of DoW laboratory partners conducting pathogen detection and characterization through Next-Generation Sequencing (NGS) technologies. • Initiate (Research and Development) (R&D) efforts to develop and validate novel computational tools and algorithms for analyzing genomic data, improving the speed and accuracy of threat identification from environmental and clinical samples. • Invest in advanced technologies for wastewater sampling and surveillance to establish a persistent, passive monitoring capability at key strategic locations, providing baseline data on population-level trends and early warning of emerging biological threats. • Invest in advanced technologies and methodologies for far-forward wastewater-based surveillance. The goal is to establish a persistent, passive monitoring capability at key strategic locations, providing a pathogen agnostic early warning system for emerging biological threats before they manifest in the population. • Establish a Biosurveillance Consortium to support efforts in defining the technical requirements for next-generation BSV tools and portable diagnostic/sequencing platforms suitable for use in austere, forward-deployed environments. <i>FY 2026 to FY 2027 Increase/Decrease Statement:</i> The increase in FY 2027 request is due to funding transferred from Defense Health Program (DHP) in FY 2027.

Remarks			
D. Acquisition Strategy			
In FY 2027, the BIP is planned to enter into the Planning Phase of the Software Acquisition Pathway. During this acquisition phase, the BIP will transition from advanced technology development to advanced development to further the current prototype in collaboration with multiple Combatant Commands Decision Support Teams (DST) and the Biosurveillance Fusion Center (BSV FC). Additional activities planned for the Planning Phase include increasing knowledge of the end users' needs documented in the approved Capability Needs Statement as well as plan the approach to deliver the BIP capabilities to meet those needs. The BIP program office will engage with the DSTs and BSV FC to understand the capability gaps, refine the Concept of Operations and Concept of Employment, develop epics, user stories, and work packages in accordance with the agile software development methodology, and prioritize them over time. The BIP program office will also exercise its Development, Security, and Operations procedures including establishing and measuring the associated key performance indicators.

A. Mission Description and Budget Item Justification

This program supports the Department of War's (DoW) initiatives to "Build a Sustainable and Long-Term Advantage" and "Build a Resilient Joint Force and Defense Ecosystem."

DIA projects are organized by focus areas aligned to specific, persistent capability gaps. Aligning investments by focus areas allows ODASW Prototyping and Experimentation (P&E) to rapidly respond to urgent and emergent requirements at the speed of relevance. Focus areas include:

Kill Web Interoperability: The processes by which Joint Force Commanders plan, direct, coordinate, and control forces to accomplish assigned missions and enable Joint kill webs.

Resilient Communications: The ability to maintain hardened mission-capable systems that allow for secure freedom of communications in contested electromagnetic spectrum environments. This includes alternate position, navigation, and timing.

Sensors and Data Analytics: Networks of sensors and data collection assets, data analysis, and dissemination resources used to provide information to the Joint force about strategic and tactical threats.

Collaborative Multi-Domain Autonomy: The use of multi-domain uncrewed systems and autonomy to increase warfighting capabilities and to mitigate/negate risk to warfighters.

Contested Logistics / Sustainment: The coordinated use, synchronization, and often sharing of logistics resources to deploy, support, and sustain highly dispersed Joint forces in highly contested environments. This also includes other sustainment areas such as supply chain reduction efforts; additive manufacturing; operational/tactical water purification; and sustainment and transportation innovations.

Weapons Kinetic/Non-Kinetic Effects: Explores the delivery of weapon systems and long-range kinetic and non-kinetic effects in support of joint offensive and defensive tasks to create specific lethal effects on a target; includes techniques designed to deceive enemy observers and/or mitigate, disrupt, or negate adversary capabilities. These subprojects are matured through assessment and experimentation to show their readiness and utility to the warfighter.

Appropriation/Budget Activity 0400: <i>Research, Development, Test & Evaluation, Defense-Wide / BA 3: Advanced Technology Development (ATD)</i>	R-1 Program Element (Number/Name) PE 0603838D8Z / <i>Defense Innovation Acceleration (DIA)</i>
---	--

Experimentation, Prototypes and Enablers: Supports the acceleration of Department of War, Combatant Command (CCMD), and Service priority efforts which provide unique capability and/or address critical gaps. This focus area incorporates Combat Support/Combat Enablers; Special Forces Capabilities; Medical Technologies/ Devices; Special Access Program assimilation and operational management; prototyping through small business and non-traditional pathways; and the rapid development of technologies for inclusion in experimentation venues. The DIA Program Element resources (1) prototype integration by leveraging existing prototypes and integrating them into broader joint mission threads to increase/drive better joint interoperability and (2) the joint experimentation and assessment (E&A) activities that provides the body of evidence for senior-level decision making on what promising capabilities are transitioned and scaled. DIA addresses department-level joint E&A activities broken down in the following tiers:

1. Tier-1 E&A Activities: Single system/prototype qualification at T-REX sponsored events ISO industry partners, academia, service labs, and OGAs.
2. Tier-2 E&A Activities: Joint Rapid Experimentation (JRE) in support of tactical and/or operational mission threads (e.g., kill-chain closure) usually, but not limited to, sponsored service and Combatant Command (CCMD) exercises.

The FY 2026 spend plan amount for Research, Development, Test & Evaluation, Defense-Wide for OUSW(R&E) includes \$211,541 thousand of discretionary and \$348,860 thousand of mandatory for a total of \$560,401 thousand.

B. Program Change Summary (\$ in Millions)	FY 2025	FY 2026	FY 2027 Base	FY 2027 OOC	FY 2027 Total

Note New Start (Y/N): N												
A. Mission Description and Budget Item Justification Concepts and Capabilities (C&C) focuses on executing prototype integration, joint experimentation and assessments on a 12-to-24 month timeline. C&C investments address the joint warfighter’s most pressing operational capability gaps and accelerate new capability development in conjunction with the Services and CCMDs. Based on established needs, C&C capability directors execute experimentation, assessment, and prototype integration with the operational leads from the Services and CCMDs. They pool technical resources from the Services’ research and engineering laboratories, and program acquisition offices, and they leverage academia and industry expertise as needed. They require Service cost-sharing partnerships and execute the necessary planning steps for future transition early within the developmental life cycle. This execution strategy represents a time-proven catalyst for collaborative development and accelerates delivery of operational prototypes to the joint warfighter.												
B. Accomplishments/Planned Programs (\$ in Millions)									FY 2025	FY 2026	FY 2027	
Title: Joint Undersea Surveillance and Targeting (JUST) (Sensors and Data Analytics)									0.630	-	-	
Description: JUST provided a new capability to monitor changes to the undersea battlespace and seabed infrastructure by demonstrating intelligent autonomous unmanned underwater vehicle (UUV)-enabled target recognition and change detection capabilities. In FY 2025, JUST conducted an operational demonstration and completed a Military Utility Assessment (MUA). JUST software and payloads transitioned to Naval Sea Systems Command (NAVSEA), Sea-Systems (PMS 394) and NAVSEA Unmanned Maritime Systems (PMS 406).												
Title: Autonomous Multi-Domain Launcher (AML) (Weapons Kinetic / Non-Kinetic Effects)									1.700	-	-	
Description: AML developed and demonstrated an unmanned, cab-less, highly mobile, C-130 transportable, Long Range Precision Fires (LRPF) launcher. The prototype launcher is capable of leader-follower autonomy, drive-by-wire, and remote launcher, turret, and fire control operation. The prototype launcher is also capable of handling/launching longer munitions (up to 20 feet in length). In FY 2025, AML successfully demonstrated remote-control and leader-follower control modes, as well as the ability to autonomously receive and execute fire missions. The project transitioned to the Long-Range Precision Fires Cross Functional Team to inform requirements for the Common Autonomous Multi-domain Launcher capability development document (CDD), and to the Army Rapid Capabilities and Critical Technologies Office (RCCTO) for fielding.

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2025	FY 2026	FY 2027
Title: Birdseye Yonder (BEYOND) (Sensors and Data Analytics) Description: BEYOND matured and integrated an advanced, photonic-based, radio frequency (RF) signal processor for detection, identification, and tracking of airborne threats. The sensor technology is an ultra-wideband, 360-degree, passive design using a novel, physically assisted wideband correlator. The system will integrate into existing U.S. European Command (USEUCOM) air defense sensor networks. In FY 2025, BEYOND performed a technical demonstration at Technology Readiness Experiment 25-2. BEYOND development continues as an Office of Naval Research (ONR) funded Innovative Naval Prototype to deliver a leave-behind capability at Ramstein Air Defense System Integration Lab for USEUCOM / U.S. Air Forces in Europe (USAFE) air defense experimentation.			3.000	-	-
Title: Collaborative Artificial Intelligence (AI) for Predicting Enemy Course of Action (ECOA) (CAPE) (Kill Web Interoperability) Description: CAPE developed and demonstrated an AI-enabled decision support software for predicting enemy courses of action (ECOAs). CAPE introduced a unique decision-centric architecture not currently found in fielded systems and advanced symbolic plan recognition, semantic networks, and mixed initiative reasoning to facilitate human-machine teaming while automating ignorance identification and requests for information generation. In FY 2025, CAPE conducted beta testing and fielding of a software prototype and transitioned to the United States Space Force (USSF). CAPE completed a MUA and transitioned to Space Systems Command (SSC) for sustainment.			1.667	-	-
Title: HAYFINS (Sensors and Data Analytics) Description: HAYFINS fused protection technologies, artificial intelligence/machine learning (AI/ML), and legacy systems, enabling freedom of maneuver in support of multidomain operations. Additional details are available at a higher classification. In FY 2025, HAYFINS completed an operational demonstration in a real-world environment. HAYFINS hardware and software transitioned to the U.S. Army's Program Executive Office for Intelligence, Electronic Warfare, and Sensors (PEO IEW&S), Counter Surveillance & Reconnaissance (CSR) program.			5.419	-	-
Title: Joint Radiant Touchstone (J-RTS) (Sensors and Data Analytics) Description: J-RTS delivered a tactical software vulnerability tool that enables warfighters with freedom of maneuver, functions as a key offensive warfare enabler, and provides awareness for disaggregated/disadvantaged users. Additional details are available at a higher classification. In FY 2025, J-RTS conducted operational demonstrations and completed a MUA. J-RTS software transitioned to PMW-120's Battlespace Awareness and Information Operations Program of Record (PoR) as well as the SSC Warp Core PoR.			0.781	-	-
Title: Low-Altitude Future Vertical Take-off and Landing (VTOL) Long-Range Attack Missile (LRAM) (Weapons Kinetic / Non-Kinetic Effects)			3.924	-	-

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2027 Office of the Secretary Of Defense		Date: April 2026		
Appropriation/Budget Activity 0400 / 3	R-1 Program Element (Number/Name) PE 0603838D8Z / Defense Innovation Acceleration (DIA)	Project (Number/Name) 730 / Concepts and Capabilities		
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026	FY 2027
Description: LRAM built upon the Red Wolf air-launched unmanned air vehicle (UAV). The project developed a launcher and control interface for vertical takeoff and landing (VTOL) aircraft, kinetic payload, command and control architecture, and a seeker for autonomous over-the-horizon engagements. This weapon system concept significantly extends the lethal range of VTOL-launched weapons. Moreover, outfitting the VTOL fleet of tactical aircraft (H-1, H-60 series, AH-64, and Joint Future Vertical Lift) with this weaponized UAV dramatically increased the number of aircraft available for over-the-horizon strike. In FY 2025, LRAM refined the digital architecture (seeker and data link), developed a kinetic warhead, and conducted a successful live-fire operational demonstration. LRAM transitioned to the Precision Attack Strike Munition (PASM) Program of Record (PoR) managed by the PMA-242.				
Title: Rapid Large Area Clearance (RLAC) (Contested Logistics / Sustainment) Description: RLAC developed and integrated autonomous small unmanned aircraft and ground vehicles equipped with automatic target recognition to rapidly survey, detect, identify, and map both surface and buried unexploded explosive ordnance (UXO). A compact laser or kinetic system neutralizes the UXO at stand-off distances. The ability to rapidly conduct large area clearance of UXO is critical for logistics operations at air and seaports, and ground lines of communication. In FY 2025, RLAC developed survey, detection, geolocation/mapping, and identification capabilities for all surface targets and further integrated autonomy and communication capabilities onto the RLAC platforms. RLAC transitioned to PMS-408 and the Joint Service Explosive Ordnance Disposal (EOD) Program Board.		4.800	-	-
Title: ShadowCat (Resilient Communications) Description: ShadowCat is part of the Fully Networked Command, Control, and Communications (FNC3) problem set. Additional details are available at a higher classification. In FY 2025, ShadowCat conducted operational demonstrations and completed a Military Utility Assessment. ShadowCat technologies transitioned to a classified program of record.		1.160	-	-
Title: Prototyping Development Efforts to Fill Identified Gaps (Emerging Prototypes and Enablers) Description: In FY 2025, the Services, Joint Staff, and Combatant Commands identified several technology projects for accelerated development to fill identified gaps. The following efforts were completed under this subproject: • Rapid Employment Explosive Formations (REEF) delivered technical data and prototypes for exportable sea-mine components. REEF transitioned a Technical Data Package to U.S. Special Operations Command (USSOCOM). • Carbon Mine (CM) delivered software for fingerprinting electronic signals at the tactical edge. CM transitioned to the Office of Naval Research Rough Casper project. • Familiar Relative delivered novel small unmanned aerial system (SUAS) prototypes to USSOCOM. • Lithium-ion Reliable in the Arctic (LiRA) developed heating technologies for state-of-the-art lithium-ion cell batteries to enable soldier-borne batteries to power below -22 °F and charge below -4 °F. LiRA transitioned the tech data package and demonstration		50.651	-	-

results to U.S. Marine Corps Expeditionary Energy Office, Army Development Command (DEVCOM), and MITRE Inc. to commercialize LiRA BB-2590 batteries integrated with the heating technology. • Pacific Ecosystem for Cyber (PeCoC) Acceleration delivered a leave behind prototype for U.S. Indo-Pacific Command (USINDOPACOM). • Sandals delivered resilient SATCOM and deep space communication system to create a highly resilient and flexible ground network to serve multiple simultaneous DoW space missions. In FY 2025, Sandals demonstrated the concept leveraging the ViaSat-3 ground segment and transitioned to United States Space Force. • Joint Explosives and Propellant Prototyping Project (JEP3L) will continue development in FY 2026 and is described as a separate sub-project below.				
Title: Kinetic Calypso (Collaborative Multi-Domain Autonomy) Description: Kinetic Calypso upgrades and extends the operational life of U.S. undersea weapons stockpiles through novel low-cost employment methods of sea mines and torpedoes capable of delivering deterrent and mission relevant effects in future conflicts. The project's results will support integration of foreign modular minelaying systems into U.S. or partner-nation capabilities, and the defense industrial base, to complement U.S. Pacific Fleet's (USPACFLT) Hellscape concept. In FY 2025, Kinetic Calypso subprojects were tested and performed at sea demonstrations to further establish key performance parameters, demonstrable kinetic effects, and to select upgraded weapons. FY 2026 Plans: Kinetic Calypso will continue prototyping autonomous payloads. Data collected on payloads during technical and operational demonstrations will inform transition at the end of FY 2026. Kinetic Calypso prototypes will validate concepts to reduce acquisition risk for established Service PORs. The U.S. Navy (USN) will determine the appropriate acquisition strategy. FY 2026 to FY 2027 Increase/Decrease Statement: Funding decreases due to project completion in FY 2026.		8.184	4.922	-
Title: Maritime Platform ORCAstrate (Collaborative Multi-Domain Autonomy) Description: Maritime Platform ORCAstrate demonstrates and experiments with five unmanned surface vessels (USVs) designed to provide flexible payload delivery. These vessels support future experimentation and complement U.S. Pacific Fleet's (USPACFLT) employment of lethal effects in high-end conflicts at scale, while also complicating and degrading the adversary's ability to prioritize and process maritime targets. Platforms will be equipped with modular common architectures for navigation controls, sensors, and resilient communications at range or in contested environments. In FY 2025, Maritime Platform ORCAstrate continued experimenting with unmanned surface vessels while refining the command-and-control systems. Technical and		6.573	4.952	-

operational demonstrations were conducted as risk-reduction efforts for integration of autonomy, sensors, and communications hardware in a modular common architecture.			
FY 2026 Plans: Maritime Platform ORCAstrate will continue to conduct operational demonstrations to assess the effectiveness of platforms designed with a modular common architecture. A technical data package will accompany test results before transitioning to either Naval Sea Systems Command (NAVSEA) PEO Unmanned and Small Combatants and PMS 420 or other offices designated by the USN at the end of FY 2026.			
FY 2026 to FY 2027 Increase/Decrease Statement: Funding decreases due to project completion in FY 2026.			
Title: Cross-Service Sensor Netting for Integrated Air and Missile Defense (CSSN) (Sensors and Data Analytics) Description: CSSN enables the distribution of air defense radar measurements between U.S. Army, U.S. Navy, and U.S. Marine Corps (USMC) air defense networks to realize a broader and deeper field of engagement for air and space threats. CSSN links the Navy's Cooperative Engagement Capability, and, by extension the USMC's Cooperative Tracking Network, to the Army's Integrated Battle Command System (IBCS). In FY 2025, CSSN performed software development, Beyond-Line-of Sight testing, modeling, simulation, and development of the Concept of Operations.		4.000	6.455
FY 2026 Plans: CSSN will complete multiple simulation and lab-based software integration events, a beyond-line-of-site demonstration, and tracking exercises. Additionally, the CONOPs and the tactics, techniques, and procedures (TTPs) documents will be matured. Finally, CSSN will conduct two live fire engagements as an operational demonstration of the capability which will be accompanied by a military utility assessment. The project will transition to PEO Integrated Warfare Systems and PEO Missiles and Space; and their Navy Cooperative Engagement Capability (CEC), Army Integrated Battle Command System (IBCS), and U.S. Marine Corps (USMC) Composite Tracking Network (CTN) programs of record.			
FY 2026 to FY 2027 Increase/Decrease Statement: Funding decreases due to project completion in FY 2026			
Title: Red-Black Integrated Networking for Space Data Transport (RiBN-SDT) (Resilient Communications) Description: Red-Black Integrated Networking for Space Data Transport (RiBN-SDT) dynamic routing is a software-centric solution for resilient information sharing across crypto-partitioned networks. This solution provides dynamic control of encrypted network clouds and individual data links and flows, enabling dynamic re-routing of information across the "black" network core,		3.520	2.500

agnostic to the original configuration and pathway. In FY 2025, RiBN-SDT designed and built the space, airborne, and ground prototypes, and performed assessments to understand deployment at scale.				
FY 2026 Plans: RiBN-SDT will deliver mission ready prototypes for demonstration at the Rim of the Pacific exercise 2026. RiBN-SDT will transition to the Joint Warfighter Network Tactical Common Data Link (NTCDL) System Program Office.				
FY 2026 to FY 2027 Increase/Decrease Statement: Funding decreases due to project completion.				
Title: Scabbard Dome (Sensors and Data Analytics)		4.750	4.500	-
Description: Scabbard Dome develops and demonstrates solutions for protecting standoff munition seekers against directed energy (DE) countermeasures and weapons by delivering DE-resilient materials, that are low-size, weight, power, and cost (SWaP-C), for subsonic standoff weapon electro-optical/infrared/radio frequency (EO/IR/RF) seekers and apertures. This capability will enable employment of standoff munitions against DE weapons and DE-protected targets. Scabbard Dome will also apply hardening or DE-resistance to the munitions themselves to increase weapon system effectiveness. In FY 2025, Scabbard Dome completed threat characterization, a seeker data collection, and identified test articles.				
FY 2026 Plans: Scabbard Dome will perform radio frequency testing at White Sands Missile Range, followed by an operational demonstration and military utility assessment, and transition to the Air Force Life Cycle Management Center and PMA-201, and then to industry.				
FY 2026 to FY 2027 Increase/Decrease Statement: Funding decreases due to project completion.				
Title: Spatiotemporal Hybrid Open Optical Terminal for Enhanced Relay (SHOOTER) (Resilient Communications)		3.780	3.000	-
Description: SHOOTER develops and demonstrates a free space optics (FSO) network with multi-user terminals to rapidly connect distributed forces in an operational environment. SHOOTER addresses gaps in multi-user, secure, low-signature data transport between airborne platforms and “at the halt” ground and expeditionary users. In FY 2025, SHOOTER continued developing and testing advanced software.				
FY 2026 Plans: SHOOTER will continue development of fast acquisition algorithms, establish multi-node, seamless optical switching, and conduct an operational demonstration. SHOOTER has multiple transition paths that include: the Air Force's Advanced Battle Management

System (ABMS), the Army's Project Convergence, the Navy's Project Overmatch, and the USMC Digital Interoperability (DI) Program and Expeditionary Advanced Ground Link (EAGL) PoR.				
FY 2026 to FY 2027 Increase/Decrease Statement: Funding decreases due to project completion.				
Title: Unmanned Logistics Systems for Semi-Submersibles (ULS/SS) (Contested Logistics / Sustainment) Description: ULS-SS delivers cargo handling capability for a companion prototype of a low-cost, covert, autonomous, low-profile vessel (ALPV) for logistics transport. This vehicle provides tactical mobility and critical resupply from ship-to-shore and inter-island distribution networks. ULS-SS builds upon previous ALPV efforts to develop, integrate, and test the material handling equipment (MHE) required for transloading (loading/offloading) efficiently and effectively in austere locations. ULS-SS also develops ancillary equipment to transport large, heavy payloads from an afloat craft to the shore. In FY 2025, seaworthiness/counter detection/autonomous operation/MHE experimentation will culminate in resupply demonstrations in the USINDOPACOM area of responsibility. FY 2026 Plans: ULS-SS will conduct an operation demonstration and military utility assessment. ULS-SS will continue to mature expeditionary loading and unloading capabilities, demonstrate seaworthiness and maneuver capability, and transition to PEO Unmanned and Small Combatants and PMS 420. FY 2026 to FY 2027 Increase/Decrease Statement: Funding decreases due to project completion.		5.580	2.100	-
Title: Special Access Program (SAP) Assimilation and Integrated Operational Management (Emerging Prototypes and Enablers) Description: Continuously funded project. This project is comprised of two execution essentials that support the ODASW (P&E) enterprise: (1) Special Access Program (SAP) Assimilation, and (2) Warfighter Integrated Operational Management. This project executes a select number of highly classified projects in areas such as hypersonics and counter-hypersonics, time-sensitive targeting, electronic miniaturization, electronic countermeasures, advanced mobile / ad hoc network communications, space situational awareness, cyber, counter-ISR, decoys and deception, and persistent surveillance. This element funds SAP assimilation and synchronization across the joint prototyping activities to ensure DIA efforts and investments remain fully SAP informed while maintaining requisite security compliance. Liaising directly with the joint warfighter (e.g., CCMDs and Services) on prototype development is paramount to avoid unwanted duplication, propagate collaboration, and achieve joint interoperability. FY 2026 Plans:		-	1.000	1.000

UNCLASSIFIED

SAP will provide integrated operational management with joint Service and CCMD direct participation in shaping and executing operational prototypes. Sponsor and execute projects selected by OUSW(R&E) leadership that are fully SAP informed and synchronized. FY 2027 Plans: SAP will continue providing integrated operational management with joint Service and CCMD direct participation in shaping and executing operational prototypes. Sponsor and execute projects selected by OUSW(R&E) leadership that are fully SAP informed and synchronized. FY 2026 to FY 2027 Increase/Decrease Statement: No significant changes between FY 2026 and FY 2027.				
Title: Combining Information Content with Embedding Relationship Optimization (CICERO) (Collaborative Multi-Domain Autonomy) Description: CICERO automates foundational all-source intelligence analysis of units, equipment, and infrastructure, using software, artificial intelligence/machine learning (AI/ML), and statistical/qualitative analytic methods/techniques. After extracting relevant data concerning location, quantity, function, operational readiness, and disposition/relationships to other objects, CICERO updates intelligence data repositories. This allows the intelligence community to better understand enemy order of battle over long periods of time by linking new intelligence with existing reporting. In FY 2025, CICERO was tested during several risk reduction events in close partnership with the Joint Force, culminating in a successful independent assessment, which measured the utility and efficiencies of the CICERO system in support of CCMD objectives. Additionally, CICERO expanded its range of input datasets and object types to support the broader Service Components, and began deploying in cloud and edge environments. CICERO has transitioned to the Defense Intelligence Agency Analysis and Integration Office for deployment within the Defense Intelligence All-Source Analysis Enterprise (DIAAE) production workflows.		2.250	-	-
Title: Joint Ubiquitous Interoperable Communication Element (JUICE BOX) (Kill Web Interoperability) Description: Joint Ubiquitous Interoperable Communication Element (JUICE BOX) developed and demonstrated a communication method design and trade-off summary. Additional project details are available at a higher classification. In FY 2025, JUICE BOX delivered prototypes to United States Special Operations Command (USSOCOM).		1.500	-	-
Title: Low-cost Uncrewed Combat Attack System (LUCAS) L700 (Medium Configuration - 700 nautical miles range) (Weapons Kinetic / Non-Kinetic Effects) Description: LUCAS L700 is a cost-effective unmanned prototype in development for deployment at scale. Additional details are available at a higher classification. In FY 2025, LUCAS L700 conducted multiple experimentation events.		4.000	-	-

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026	FY 2027
Title: Passive Multi-Spectral Air Surveillance Kill Chains (PMASKC) Acceleration (Sensors and Data Analytics) Description: PMASKC Acceleration accelerated hardware development with government vendors for multiple, passive-multispectral, air surveillance track correlator prototypes. PMASKC uses passive sensors to locate and track airborne targets in a full-hemispherical volume to generate a comprehensive common operating air picture. In FY 2025, PMASKC iterated in four separate technical demonstrations, which involved an initial integration of a central fusion engine and interoperability with other PMASKC systems within relevant operational environments. These events also demonstrated capacity and capability to ensure scalability, flexibility, and rapid integration of emerging technologies and integrate seamlessly into tailored configurations. All these accomplishments established the conditions for more complex experimentation.		3.000	-	-
Title: Broad EA Technology for Launched Effects (BEATLE) (Weapons Kinetic / Non-Kinetic Effects) Description: BEATLE integrates radio frequency (RF) jamming apertures, techniques, and control software onto the L3 Harris Inc. Red Wolf unmanned aircraft to demonstrate electronic attack for training and testing. The project leverages low size, weight, and power (SWaP) technologies. In FY 2025, BEATLE conducted software development and integration and completed one technical demonstration. FY 2026 Plans: BEATLE will conduct initial flight tests and complete technical and operational demonstrations. BEATLE will transition to the U.S. Army PEO Aviation Uncrewed Aircraft Systems (UAS) PoR. FY 2026 to FY 2027 Increase/Decrease Statement: Funding decreases due to project completion in FY 2026.		3.625	3.500	-
Title: Containerized Agile Expeditionary and Rapid Beach Preparation (CONAER) (Contested Logistics / Sustainment) Description: CONAER further develops submersible matting system (SUBMAT) to allow customized installations tailored to actual beach conditions. SUBMAT is a new lightweight matting system, developed by the Army Engineering Research and Development Center (ERDC), that, when filled with sand at a deployed location, creates a stable roadway capable of supporting the movement of heavy vehicles through the surf and on the beach. CONAER also provides planners with site selection and analysis tools to choose landing locations based on beach data, vessel type, vehicle type, and available materials such as SUBMAT or Lightweight Quay Wall Fiber-Reinforced Polymer. In FY 2025, the CONAER team conducted detailed planning and development of performance metrics as captured in the project Implementation Directive. FY 2026 Plans:		2.250	1.050	1.700

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026	FY 2027
CONAER will conduct SUBMAT-light design with stability (to Sea State 5) and durability (wheel and track vehicle) testing and in stacked configuration for 3.5 to 6 ft water depths. CONAER will also conduct a land/sea packaging exercise and design a delivery method for the operational demonstration and military utility assessment. FY 2027 Plans: CONAER will conduct a land/sea packaging exercise and design a delivery method for the operational demonstration (Op Demo) and military utility assessment (MUA). FY 2026 to FY 2027 Increase/Decrease Statement: Funding increase to conduct the operational demonstration (Op Demo) and military utility assessment (MUA).				
Title: Contested Logistics Ops by Robots for Expeditionary Recon via SHARC Swarms (CLOBBER S2) (Contested Logistics / Sustainment) Description: CLOBBER S2 develops and demonstrates a 45-foot version of the Navy's Small High-Speed Amphibious Role-Variant Craft (SHARC) 38-foot prototype landing craft developed under a Navy Small Business Research Grant (SBIR). CLOBBER S2 also integrates autonomy and develops the CONOPs and Tactics, Techniques, and Procedures (TTPs) for multiple missions such as logistics and force projection. In FY 2025, CLOBBER formed and organized the project team and developed a project plan. FY 2026 Plans: CLOBBER will manufacture the 45ft variant prototype landing craft, integrate autonomy framework, and conduct final OD and transition the craft to a Navy Program of Record. FY 2026 to FY 2027 Increase/Decrease Statement: Funding decreases due to project completion in FY 2026.		1.945	2.435	-
Title: Sea-based Interrogation and Remote Emulation Node (SIREN) (Sensors and Data Analytics) Description: SIREN obstructs adversarial perception of the battlespace and electronic surveillance systems through electronic intelligence (ELINT), signals intelligence (SIGINT), and communications intelligence (COMINT) manipulation and synthesis creating electronic decoys. These decoys allow Commanders to shape the battle space through maneuvering, precision, and the ability to occupy adversarial resources. Additional details are available at a higher classification. The SIREN prototype was developed as a modular payload, making it employable across a broad spectrum of vessels. In FY 2025, SIREN was integrated onto unmanned surface vessels (USVs) and was tested against various radar systems. Through this evaluation process, desired SIREN emissions were defined and further refined. FY 2026 Plans:		4.000	4.000	-

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
SIREN will complete technical development and user testing and is expected to transition to the General Services Administration (GSA) schedule for future use by U.S. government (USG) customers.			
FY 2026 to FY 2027 Increase/Decrease Statement: Funding decreases due to project completion during FY 2026.			
Title: Talon SPEAR (Collaborative Multi-Domain Autonomy)		1.300	1.700
Description: Talon SPEAR provides a globally networked point defense system to counter unmanned aircraft systems (cUAS) and UAS swarms. The project will deliver upgrades to fielded cUAS systems to reduce acquisition costs related to the recurring disposal of legacy systems and the development, procurement, and fielding of new systems.			-
FY 2026 Plans: In FY 2026, Talon SPEAR will focus on domestic protection, and verify that all effects can run concurrently, without conflicts, and within processing limits.			
FY 2026 to FY 2027 Increase/Decrease Statement: Funding decreases due to project completion.			
Title: GEO Satellite Ranging (GSR) (Sensors and Data Analytics)		1.000	5.000
Description: GSR aims to deliver expeditionary space domain awareness (SDA) capabilities to U.S. Space Command (USSPACECOM) in support of theater operations. The proposed system will allow operators to track and rapidly generate trajectory data for previously uncorrelated or actively maneuvering spacecraft and detect faint objects orbiting near high value assets. In FY 2025, GSR completed algorithm refinement and integration, hardware upgrades, and on-sky experimentation and demonstration.			2.000
FY 2026 Plans: GSR will award two contracts for the deployable laser ranging system preliminary design reviews (PDR) and will conduct on-sky observations to inform hardware upgrades on the prototype system.			
FY 2027 Plans: In FY 2027, project GSR will conduct initial testing followed by a technical demonstration and an operational demonstration with a military utility assessment			
FY 2026 to FY 2027 Increase/Decrease Statement:

Funding decreases due to reduced requirements for technical prototype development. In its final year, the project will move to an operational demonstration and close-out.				
Title: Mine Counter Measure System of Systems (MCM SoS) (Collaborative Multi-Domain Autonomy) Description: MCM SoS accelerates the development of advanced, small, unmanned underwater vehicles (UUVs) with advanced sensors and technologies to identify safe routes to ports by providing a clear understanding of underwater threats, including explosive threats and other hazards to navigation. In FY 2025, the MCM SoS team developed the project plan. FY 2026 Plans: MCM SoS will draft preliminary CONOPs, conduct procurements, and perform an operational demonstration with a military utility assessment. FY 2027 Plans: In FY 2027, project MCM SoS will conduct initial testing followed by a technical demonstration and an operational demonstration with a military utility assessment. FY 2026 to FY 2027 Increase/Decrease Statement: Funding decreases due to reduced prototyping development requirements as the project shifts to its final year and an operational demonstration..		1.000	4.800	4.750
Title: Technology Readiness Experimentation (T-REX) and Indiana National Guard (INNG) Description: T-REX provides the resources for Technical Readiness Experimentation designed to demonstrate the system level performance for prototypes within technology readiness level 4-6 projects in the most operationally relevant environment. The experimentation, which also includes allies and partners, facilitates more informed Senior Leader technology maturity and decisions to accelerate the transition of warfighting capabilities. In FY 2025, T-REX executed four system level experiments evaluating integrated prototype performance in contested environments. T-REX conducted one coalition Australia experiment evaluating cross service data exchange, mission thread execution, and command & control integration. T-REX also updated the Assessment Body of Evidence (BoE) informing senior leader transition decisions. Finally, T-REX coordinated with Combatant Commands, Services, and department stakeholders to align Tier 1 experimentation objectives with priority Joint Operational Problems. FY 2026 Plans: In FY 2026, T-REX will support two T-REX events in Indiana to assess ~120 projects from Industry, the Services, the CCMDs, and Coalition Partners focusing on multi-domain uncrewed experimentation, low-cost short range air defense, Integrated Base		24.939	24.720	25.462

Defense, and CCMD Priorities. Additionally, support is provided to various OCONUS joint experimentation venues based on operational need and utility. FY 2027 Plans: T-REX will expand cross domain integration, incorporate additional technologies and refine techniques, data collection, data and knowledge management. FY 2026 to FY 2027 Increase/Decrease Statement: The increase from FY 2026 to FY 2027 provides more continuous experimentation opportunities and industry engagement while bolstering Body of Evidence collection for advancing prototypes.				
Title: Kill Web Interoperability Focus Area Description: Kill Web Interoperability explores the process by which Joint Force Commanders plan, direct, coordinate, and control forces to accomplish assigned missions and enable Joint kill webs. DIA identifies and refines individual efforts throughout the year of execution through interactions with industry, academia, Service representatives, and CCMDs. The CCMDs and Services closely coordinate on prospective efforts to deconflict, improve jointness, and increase transition to Service acquisition programs. Candidate prototype projects undergo a selection process that assesses joint warfighter impact, transition potential, and technical merit/feasibility. Selected sub-projects target key capabilities that enable leap-ahead improvements in kill web interoperability. FY 2026 Plans: Initiate Kill Web Interoperability efforts in support of emergent operational gaps in collaboration with the joint Services and CCMDs. FY 2027 Plans: DIA intends to initiate Kill Web Interoperability efforts in support of emergent operational gaps in collaboration with the joint Services and CCMDs. FY 2026 to FY 2027 Increase/Decrease Statement: The increase from FY 2026 to FY 2027 is to provide funding for additional Kill Web Interoperability efforts.		-	11.059	17.505
Title: Resilient Communications Focus Area Description: Resilient Communications explores the ability to maintain hardened mission-capable systems that allow for secure freedom of communications in contested electromagnetic spectrum environments. This includes alternate positioning, navigation, and timing. DIA identifies and refines individual efforts throughout the year of execution through interactions with industry, academia, Service representatives, and CCMDs. The CCMDs and Services closely coordinate on prospective efforts to deconflict, improve jointness, and increase transition to Service acquisition programs. process that assesses joint warfighter impact, transition potential, and technical merit/feasibility. Selected sub-projects target key capabilities that enable leap-ahead improvements in resilient communications.				
FY 2026 Plans: Initiate Resilient Communications efforts in support of emergent operational gaps in collaboration with the Joint Services and CCMDs.				
FY 2027 Plans: DIA intends to initiate Resilient Communications efforts in support of emergent operational gaps in collaboration with the Joint Services and CCMDs.				
FY 2026 to FY 2027 Increase/Decrease Statement: The increase from FY 2026 to FY 2027 is to provide additional funding for Resilient Communications efforts.				
Title: Sensors and Data Analytics Focus Area		-	21.612	36.126
Description: Sensors and Data Analytics explores networks of sensors and data collection assets, data analysis, and dissemination resources used to provide information to the Joint force about strategic and tactical threats. DIA identifies and refines individual efforts throughout the year of execution through interactions with industry, academia, Service representatives, and CCMDs. The CCMDs and Services closely coordinate on prospective efforts to deconflict, improve jointness, and increase transition to Service acquisition programs. Candidate prototype projects undergo a selection process that assesses joint warfighter impact, transition potential, and technical merit/feasibility. Selected sub-projects target key capabilities that enable leap-ahead improvements in sensors and data analytics.				
FY 2026 Plans: Initiate Sensors and Data Analytics efforts in support of emergent operational gaps in collaboration with the Joint Services and CCMDs.				
FY 2027 Plans: In FY 2027, DIA intends to initiate Sensors and Data Analytics efforts in support of emergent operational gaps in collaboration with the joint Services and CCMDs.				
FY 2026 to FY 2027 Increase/Decrease Statement: The increase from FY 2026 to FY 2027 is to provide funding for additional Sensors and Data Analytics efforts.				
Title: Collaborative Multi-Domain Autonomy Focus Area		-	10.864	22.255
Description: Collaborative Multi-domain Autonomy explores the use of multi-domain uncrewed systems and autonomy to increase warfighting capabilities and to mitigate/negate risk to warfighters. DIA identifies and refines individual efforts throughout

The increase from FY 2026 to FY 2027 is to provide funding for additional Contested Logistics/Sustainment efforts.				
Title: Weapons Kinetic / Non-Kinetic Effects Focus Area Description: Weapons Kinetic / Non-Kinetic Effects explores the delivery of weapon systems and long-range kinetic and non-kinetic effects in support of joint offensive and defensive tasks to create specific lethal effects on a target. This area includes counter positioning, navigation, and timing, and techniques designed to deceive enemy observers and/or mitigate, disrupt, or negate adversary capabilities. DIA identifies and refines individual efforts throughout the year of execution through interactions with industry, academia, Service representatives, and Combatant Commands (CCMDs). The CCMDs and Services closely coordinate on prospective efforts to deconflict, improve jointness, and increase transition to Service acquisition programs. Candidate prototype projects undergo a selection process that assesses joint warfighter impact, transition potential, and technical merit/feasibility. Selected subprojects target key capabilities that enable leap-ahead improvements in weapons effects. These subprojects are matured through assessment and experimentation to show their readiness and utility to the warfighter. FY 2026 Plans: Initiate Weapons Kinetic / Non-Kinetic Effects efforts in support of emergent operational gaps in collaboration with the Joint Services and CCMDs. FY 2027 Plans: In FY 2027, DIA intends to initiate Weapons Kinetic / Non-Kinetic Effects efforts in support of emergent operational gaps in collaboration with the joint Services and CCMDs. FY 2026 to FY 2027 Increase/Decrease Statement: The increase from FY 2026 to FY 2027 is to provide funding for additional Weapons Kinetic / Non-Kinetic Effects efforts.		-	10.659	18.042
Title: Experimentation, Prototypes, and Enablers Focus Area Description: The Experimentation, Prototypes, and Enablers focus area is funding Joint Rapid Experimentation (JRE) and Assessments to execute a continuous, multi-year campaign of tiered experimentation and independent assessments to validate and integrate prototype technologies to address critical operational gaps. Experimentation and Assessments integrates Mission Engineering Integration Activity (MEIA) Joint and Key Operational Problems & Prototyping efforts by developing rigorous joint assessment products for emerging prototypes evaluations during Tier 1, Tier 2, and Combatant Command experimentation events. It focuses on bridging cross-domain capabilities against Department-level joint operational problems (JOPs), providing the evidence necessary for senior leaders to rapidly transition and scale promising capabilities to the Joint Warfighter on accelerated timelines. JRE and Assessment Focus Areas		-	43.904	28.789

A. Mission Description and Budget Item Justification
 (U) The primary objective of this effort is to prove technological feasibility and assess the operability of key technologies to meet the most pressing operational needs identified in the 2026 National Defense Strategy and to provide response options to unique deterrence challenges. The near-term focus will be on the identification, maturation, and demonstration of subsystems and components. This effort prioritizes the rapid integration of these components into system demonstrators for field experiments and tests within simulated operational environments. This approach is designed to quickly prove the military utility of the technology and provide actionable data for future acquisition decisions.
 (U) In parallel, this program will develop a strategic roadmap to guide long-term technology maturation, consistent with the Department of War's vision. This ensures a comprehensive strategy that balances immediate technology demonstrations with the development of enduring capabilities. The goal for these projects is to achieve a Technology Readiness Level (TRL) of 6, making the technology available for transition out of the Science & Technology (S&T) phase and into a formal acquisition program within the Future Years Defense Program (FYDP). Upon successful completion, the technology will be transitioned to a service partner to address validated requirements.
 (U) Further details are available at higher classification levels.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: (U) Nuclear Prototyping	-	-	90.000
Description: (U) This effort executes concept and technology demonstrations of components and subsystems to meet 2026 National Defense Strategy objectives and provide response options to unique deterrence challenges. The results will provide proof of technological feasibility and assess subsystem producibility rather than developing hardware for immediate service use.			
FY 2027 Plans: (U) The program will conduct engineering feasibility studies and analysis to inform the development of system prototypes. The effort will prioritize technology solutions that demonstrate general military utility and can be rapidly integrated into form, fit, and function prototypes. Concurrently, this program will establish a strategic roadmap for maturing technologies to a TRL of 6, ensuring they are postured for successful transition into the acquisition process.

A. Mission Description and Budget Item Justification

This program is executed via Scaled Directed Energy (SCADE) Science and Technology and in alignment with the Department of War Directed Energy Roadmap, as well as other strategic guidance. The goal of this program is to support the Department's initiatives in directed energy to build a sustainable and long-term advantage.

This program funds advanced technology development in directed energy aimed at transitioning technology solutions for broadly defined military missions. These efforts include demonstrated performance pay-offs, increased capabilities, increased supportability, and increased affordability. In practice, directed energy weapon systems have many potential advantages, including speed-of-light time-to-target, high precision, low incremental cost per kill, and a rechargeable magazine through on-board power and thermal management systems improving logistics requirements over stocks of munitions or warheads. As a result, directed energy weapon systems have the potential to perform a wide variety of military missions. Activities conducted under this program will ultimately enable the employment of directed energy weapon systems.

A. Mission Description and Budget Item Justification

This program is part of an overall Department of War strategy in Joint directed energy advanced technology development. Efforts within this program will focus on scaling the capability of directed energy weapon systems to reach operationally effective levels applicable to broad mission areas across the Department of War. Additionally, efforts will pursue improvements in common directed energy system components to enable scalable architectures and increased lethality. These efforts complement, and will be closely coordinated with, other Department efforts directed at specific Service and Agency missions. This program builds upon other investments in directed energy advanced technology development by the Services and Agencies to eliminate duplication. In support, efforts in this project have been coordinated with the Department of War Directed Energy and Non-Lethal Weapons Science and Technology Community of Interest.

This effort is executed via the Directed Energy Technology Maturation program within the Joint Directed Energy Transition Office (JDETO). The Directed Energy Technology Maturation program enables High Energy Laser and High Power Microwave Technology maturation thru (1) Directed Energy system prototype and scaling initiatives (2) advanced technology development in high energy lasers and high power microwaves that support prototype-level integration, (3) proof of concept tech demonstrations in a laboratory or field environment with Joint-international participation, (4) advanced prototypes in support of demonstrating mission-driven lethality and survivability and (5) test and evaluation in a relevant field environment with Joint-international participation.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Directed Energy Advanced Technology Development	109.517	-	-
Description: Develop, mature, and demonstrate technologies that improve beam control and beam propagation for directed energy weapon systems. Conduct directed energy lethality and vulnerability experiments on materials, components, and targets. Develop a lethality database for use in system-level models.			
Title: Directed Energy Technology Maturation	-	120.763	201.125
Description: The Directed Energy Applied Tech Program enables (1) advanced technology development in high energy laser and high power microwave systems that support eventual prototype-level integration and (2) proof of concept tech demonstrations in a laboratory or field environment with Joint-international participation. Note that (1) and (2) are in alignment with the near-, mid-, and long-term goals of Department of War Directed Energy Roadmap.			
FY 2026 Plans:			

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2027 Office of the Secretary Of Defense			Date: April 2026		
Appropriation/Budget Activity 0400 / 3		R-1 Program Element (Number/Name) PE 0603924D8Z / <i>High Energy Laser Advanced Development</i>		Project (Number/Name) 924 / <i>High Energy Laser Advanced Development</i>	
B. Accomplishments/Planned Programs (\$ in Millions)			FY 2025	FY 2026	FY 2027
High Energy Laser Scaling Initiative: Conclude the development of electronically driven continuous wave laser sources with industry partners. Utilize government and industry diagnostics to demonstrate 500-kilowatt-class and one-megawatt-class power levels. Also demonstrate performance with a technical readiness level suitable for integration into advanced prototypes. Transition these laser sources to the Directed Energy Tech Maturation Program within the JDETO in support of mission-driven lethality and survivability demonstrations, or to Service programs for proof-of-concept demonstrations or fieldable weapon system prototypes.					
High Energy Laser Technology Maturation: Continue beam control maturation to include assessment efforts of counter missile, airborne for mid-term tactical missions, and meter-class beam directors for long-term strategic missions. Continue the development of higher order adaptive optics, advanced beam director common interfaces, and HEL source components to mature technologies and help accelerate acquisition by the Military Services. Investigate the feasibility of integration of a one-megawatt-class laser source from the High Energy Laser Scaling Initiative with a meter-class beam director					
High Power Microwave Technology Maturation: Leverage applied research investments in agile-frequency sources, novel antenna designs, pulsed power, and effects testing made by the Services and Agencies and make additional investments in the components and sub-systems needed for the development of system-level prototypes. Prototypes should enable near-term demonstration in a relevant field environment and leverage investments previously made by the JDETO in high power microwave technology.					
Test and Evaluation: Conduct test and evaluation in support of mission-driven lethality and survivability. Assess vulnerability for specific threats and develop surrogate threats that meet the overall mission requirements. Perform static field tests to demonstrate the lethality of advanced prototypes and the survivability of surrogate threats. Repeat the tests for both point-defense and area-defense engagements. Transition the data from these tests to the Service and Agency partners and stakeholders. Validate the engagement-level model predictions and refine aimpoint selection methodologies.					
FY 2027 Plans:					
High Energy Laser Technology Maturation: Continue beam control maturation to include assessment efforts of counter missile, airborne for mid-term tactical missions, and meter-class beam directors for long-term strategic missions. A. Mission Description and Budget Item Justification

The Test Resource Management Center (TRMC) Test and Evaluation / Science and Technology (T&E/S&T) Program supports the Department's initiatives to rebuild our military and re-establish deterrence. The T&E/S&T Program seeks out and develops test technologies to keep pace with emerging and evolving weapons technologies. Aligned with the National Defense Strategy, this program is critical to ensure that the Department has the ability to adequately test the advanced systems that will be fielded in the future.

To meet this objective, the T&E/S&T Program performs the following activities:

- Exploits new technologies and processes to meet important T&E requirements.
- Expedites the transition of new technologies from the laboratory environment to the T&E community.
- Leverages industry advances in equipment, modeling and simulation, and networking to support T&E.

UNCLASSIFIED

Exhibit R-2, RDT&E Budget Item Justification: PB 2027 Office of the Secretary Of Defense	Date: April 2026
---	-------------------------

Appropriation/Budget Activity 0400: <i>Research, Development, Test & Evaluation, Defense-Wide I BA 3: Advanced Technology Development (ATD)</i>	R-1 Program Element (Number/Name) PE 0603941D8Z <i>I Test and Evaluation Science and Technology</i>
---	---

- Uses non-traditional acquisition processes and contract vehicles for rapid development and fielding of test technologies.

Additionally, the T&E/S&T Program examines emerging T&E requirements resulting from Joint Service initiatives to identify T&E technology needs and develop a long-range roadmap for technology insertion. The program leverages and employs applicable applied research efforts from the highly developed technology base in the Department's laboratories and test centers, other Government agencies, and industry to accelerate development of new test capabilities. The program outreaches and engages academia to address test technology challenges. The T&E/S&T Program aligns with the science and technology (S&T) Communities of Interest (COI) to prepare the T&E community to test warfighting capabilities that emerge from priority S&T investments. The T&E/S&T Program utilizes Advanced Technology Development funding, which supports the development and demonstration of high payoff technologies for current and future test capabilities.

The FY 2026 spend plan amount for Research, Development, Test, & Evaluation, Defense-Wide for Test and Evaluation Science and Technology includes \$961,052 thousand of discretionary and \$713,000 thousand of mandatory (reconciliation) funding for a total of \$1,674,052 thousand.

A. Mission Description and Budget Item Justification

The Nuclear Test (NT) project mission addresses national test capability gaps by providing accurate, robust, and efficient T&E solutions to successfully develop, validate, and inform the employment of a modernized nuclear enterprise. The Department is prioritizing investments to modernize the nuclear enterprise while sustaining and increasing the resiliency of legacy systems. Current developments focus on deploying capabilities and systems to validate new designs and new materials in a complex threat-representative environment. Current testing infrastructure and methodologies to assess nuclear enterprise systems and microelectronics resilience against emerging threats is limited. Many test capabilities used in the past for acquisition are no longer available, either stopped by policy decisions or dismantled for cost savings. The NT project addresses test technology needs for adequate assessment of nuclear enterprise resiliency and aligns with the Department's S&T priority investments. The NT project is supporting the development of a strategic roadmap and investment strategy to establish nuclear test environments for microelectronics, ground test environments for system level testing, and flight test range enhancements for end-to-end testing needs. The NT project develops technologies to enable robust, accurate, and timely T&E of a modernized nuclear enterprise, and to ensure system suitability and survivability.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Nuclear Test (NT)	4.515	11.079	11.069
Description: In FY 2025, NT will continue to mature test technologies related to nuclear effects testing. Highlights include: - Continued Nuclear Test infrastructure gap analysis - Delivered High Altitude EMP (HEMP) test capability providing HEMP induced current measurements enabling efficient and effective surface ship HEMP survivability testing - Continued efforts related to neutron testing - Initiated efforts in Single Event Effects - Initiated efforts related to combined nuclear effects to include groundbreaking on a new combined environments test capability			
FY 2026 Plans: In FY 2026, NT will continue to mature test technologies supporting the Department's strategic goals of enabling radiation hardening and nuclear-survivable warfighting capabilities and accelerating strategic systems modernization. Highlights include: - Continue efforts related to Single Event Effects (SEE) to include system test and commissioning for a heavy ion test facility - Continue efforts related to combined nuclear effects to include completion of Critical Design Review and initial acquisition of long lead components for neutron and gamma components

A. Mission Description and Budget Item Justification

High-speed/hypersonic weapons are being developed to ensure the continued military superiority and strike capability of the United States including freedom of movement and freedom of action in areas protected by anti-access/area denial defenses. Current weapon system demonstrations and technology development programs include high-speed and hypersonic air-breathing missiles, maneuvering reentry and boost-glide weapons, hypersonic gun-launched projectiles, and air-breathing space access vehicles. These systems require development of conventional and high-speed turbine, ramjet, scramjet, and combined cycle engines; high temperature materials; thermal protection systems (TPS); and thermal management systems. The High Speed Systems Test (HSST) project addresses test technology needs including propulsion, aerodynamic and aerothermal testing, so the test community has the technology to support the required test scenarios for concepts under development in the S&T community. The technology developments within the HSST project align with the Department's S&T priority investments. As such, the HSST project is developing, validating and transitioning advanced T&E technologies for ground test, open-air range flight test, and advanced computational tools, along with instrumentation and diagnostics systems for use in both ground tests and flight tests of high speed systems.

The HSST project develops technologies to enable robust, accurate, and timely T&E of these future weapon systems. Department acquisition regulations require weapon systems to undergo a thorough T&E process to detect deficiencies early and to ensure system suitability and survivability. However, the extreme environments in which these weapons operate preclude accurate determination of their performance and operability with today's T&E assets. Current national test capabilities have deficiencies in data accuracy, flight condition replication and simulation, test methods, productivity, modeling and simulation (M&S) fidelity, and range safety.

The HSST mission is to address these national test capability gaps by providing test technology solutions that will enable high-speed and hypersonic weapon systems to be successfully developed through accurate, robust, and efficient T&E.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: High Speed Systems Test (HSST)	154.909	77.864	1,473.479
Description: In FY 2025, HSST continued to support the Department's strategic goals of modernizing ground test facilities to "fly" hypersonic missions on the ground and accelerating the ability to conduct flight testing anywhere in the world. Highlights include: - Further mature SkyRange capabilities while simultaneously supporting Department flight tests - Completed development of a fourth generation of SkyRange telemetry antennas, providing additional capability and versatility for hypersonic telemetry collection - Continued development of SkyRange RangeReaper flight termination capability and terminal scoring system

A. Mission Description and Budget Item Justification

Weapon systems have become increasingly complex in recent years, resulting in the need for significantly more data to be passed among these systems as well as between the systems and our test infrastructure. A vast amount of data must be collected, transmitted, and analyzed, which requires a large amount of radio frequency (RF) spectrum resources. However, the amount of RF spectrum designated to support test and evaluation (T&E) is decreasing, most notably due to reallocation of spectrum for commercial use. The combination of decreasing RF spectrum and increasing data requirements results in an urgent need to develop test technologies that maximize the use of spectrum resources for the Department's T&E operations.

The L- and S- Band frequencies are the traditional spectrum allotted for military T&E use. The explosive need for spectrum in the commercial sector has resulted in reallocation of portions of these bands to industry. To compensate, the Department is now authorized to use the C-Band spectrum which offers numerous benefits, including the potential for a large increase in available bandwidth, but the C-Band spectrum comes with technical challenges and regulatory constraints. Most notably, our current test infrastructure for telemetry is not designed to accommodate C-Band and the band is heavily shared for alternate uses. Technologies are required to implement innovative techniques that efficiently facilitate our use of C-Band without a major overhaul to our national test infrastructure. For instance, commercial telemetry transmitters operate in C-Band but do not have the form factor (size, weight and power) nor ruggedized packaging to survive airborne test applications.

Traditional telemetry applications employ streaming telemetry where data is moved one-way from the instrumented system under test to our test range infrastructure. Modern network based telemetry and cellular based telemetry capabilities enable more robust, efficient bidirectional transfer of data. The Department's strategy is to create technologies for implementing a telemetry capability in C-Band, using the legacy L- and S-Bands for both streaming and networked telemetry, and researching the feasibility of using higher frequency bands to augment telemetry operations.

The Spectrum Efficient Technology (SET) project is developing test technologies that enable more efficient use of legacy telemetry bands and expansion into non-traditional areas of the RF and optical spectra at test ranges. The technology development efforts within the SET project have been prioritized to align with Department guidance on science and technology priority investments. As such, the SET project is focusing on growing data requirements of warfighting systems and the limited availability of spectrum for testing. The SET project is structured to develop test technologies to advance range communications, networked and cellular based telemetry capabilities, and enhanced management of spectrum at test ranges.

A. Mission Description and Budget Item Justification

In order to establish dominance in the modern battlespace, our offensive and defensive electronic warfare systems must be capable against advanced radio frequency (RF) directed threats and electro-optic (EO) guided threats, which include infrared (IR) guidance. Ensured dominance in these areas requires more robust test and evaluation (T&E) with technologies that are rapidly adaptable to changing threats.

Readily available, IR seeking, man-portable air defense systems (MANPADS) are difficult to detect and pose an imminent and lethal threat to military aircraft of all types. Our ability to counter such threats is essential to owning the battlespace in theater. Therefore, the ability to test missile warning systems (MWS), hostile fire indicator (HFI) systems, IR countermeasures (IRCM), and advanced threat sensors is critical to our national defense. Additionally, a new generation of enemy RF missile seekers is both currently fielded and in further development, requiring a correspondingly new generation of test technologies to test the latest countermeasures. The T&E community is required to test IRCM and RF countermeasure systems in a repeatable manner with ground-truth data before and after integration into warfighting systems. Without new test technologies, the Department will be unable to perform adequate T&E of advanced warning and countermeasure systems.

The Electronic Warfare Electronic attack and Electronic protect (EP) community is developing jammers and EP measures that are more sophisticated and take advantage of newer technology that allows adaptive waveforms and artificial intelligence and autonomy to respond to threats more rapidly and robustly. In addition, the testing of these systems in realistic many on many environments that are more threat representative requires new technology investment.

The technology development efforts within the Electronic Warfare Test (EWT) project have been prioritized to align with the Department's guidance on science and technology priority investments. As such, the EWT project is focusing on the test needs in both the EO, including IR, and the RF threat domains. Additionally, development of core test technologies in this area can be leveraged to meet other EO and RF test requirements, such as in fire control systems; intelligence, surveillance and reconnaissance (ISR) sensors, and weapon seekers.

The EWT project develops test technologies to stimulate IRCM and RF system sensors through the high-fidelity simulation of scenes viewed by the sensors. Stimulation can be as simple as testing to see if a system under test responds to an image or as complex as simulating complex battle space phenomena to measure the response of a system under test in a more relevant, cluttered scenario. Simulations and stimulations are used at open-air ranges and in installed system test facilities (ISTF), and in hardware-in-the-loop (HWIL) test beds.

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2025	FY 2026	FY 2027
Description: In FY 2025, EWT continued to develop test technologies to improve simulated EW environments and secure test facilities, and enhance the scale and efficiency of EW testing in large-scale, open-air exercises and events. Highlights include: - Investments in technologies related to Cognitive EW, Cognitive Radar, and EW sensors that feed Artificial Intelligence uses of EW data - Improve Ground EW systems and cUAS EW testing - Efforts in infrared scene projection for sensor and seeker testing - Addressed scene generation for both EO and RF sensors and seeker testing to include transition of real-time, synchronized, and reactive simulation of complex targets and backgrounds to support T&E of next-gen 1 kHz sensors - Improve motors for flight motion simulator performance - Improve airborne jammer simulation - Address simulation of many-on-many EA environment FY 2026 Plans: In FY 2026, EWT will continues to develop test technologies to improve simulated EW environments and secure test facilities, and enhance the scale and efficiency of EW testing in large-scale, open-air exercises and events. Highlights include: - Investments in technologies related to Cognitive EW, Cognitive Radar, and EW sensors that feed Artificial Intelligence uses of EW data - Improve Ground EW systems and cUAS EW testing - Efforts in infrared scene projection for sensor and seeker testing - Address scene generation for both EO and RF sensors and seeker testing FY 2027 Plans: In FY 2027, EWT will continue to develop and transition test technologies to improve simulated EW environments and secure test facilities, and enhance the scale and efficiency of EW testing in large-scale, open-air exercises and events. Highlights include: - Increase realistic target availability for missile testing to include replacement of aging high speed targets and acquisition of airborne targets capable of presenting realistic collaborative and electromagnetic threat environments - Evolve class-representative, multi-threat, software-defined, domestic emitter technology - Introduce cognitive EW leveraging artificial intelligence - Progress on foundation upgrades of test facilities and laboratories - Integrate and upgrade new aircraft instrumentation systems FY 2026 to FY 2027 Increase/Decrease Statement: The majority of the \$305.490 million increase from FY 2026 to FY 2027 will support additional realistic target availability for missile testing. The increase will also support the continuation on previously delayed class representative, multi-threat, software-defined

A. Mission Description and Budget Item Justification

The Advanced Instrumentation Systems Technology (AIST) project addresses the test technology gaps resulting from emerging weapon systems that need to be assessed at the Department's installed systems test facility and hardware-in-the-loop testing (ISTF/HITL) and open-air range test facilities (including tropospheric, land-based, open-ocean, and undersea ranges). Instrumentation requirements for systems under test are increasing exponentially for new weapons systems. System-borne, warfighter-wearable, and remote sensing instrumentation packages are required. This instrumentation is for sensing and collecting critical performance data; determining accurate time, space, position information (TSPI) and attitude information; interfacing with command and control data links; monitoring and reporting system-wide communications; recording human operator physical and cognitive performance; and storing and transmitting data.

The technology development efforts within the AIST project have been prioritized to align with the Department's guidance on science and technology (S&T) communities of interest (COIs). The AIST project is focused on developing technologies for advanced TSPI instrumentation (especially with limited or no availability of Global Positioning System (GPS)), advanced sensors, advanced energy and power systems for instrumentation, micro-electronics, mitigating range encroachment issues, and measuring warfighter physical and cognitive performance. The AIST project addresses requirements for miniaturized, non-intrusive instrumentation suites with increased survivability in harsh environments. Such instrumentation is an urgent need because minimal space is available to add instrumentation to new or existing weapon systems subsequent to their development; furthermore, additional weight and power needs for instrumentation can adversely affect weapon system signature and performance. Instrumentation for humans-in-the-loop, especially dismounted warfighters, must not adversely affect performance, induce artificiality in the test environment, or create any operational burdens. New technologies can be exploited to integrate small, non-intrusive instrumentation (micro-technology) into emerging platforms during design and development, and, in some cases, into existing platforms. This class of instrumentation will provide critical system performance data during operational test (OT) and continuous assessment throughout a system's lifecycle. Technology developed under AIST can also benefit training and combat missions by enabling a continual feedback loop between the developer, training staff, operators, and commanders.

Quantity of RDT&E Articles	-	-	-	-	-	-	-	-	-	-		

A. Mission Description and Budget Item Justification

The Department is exploring the military utility, safety, and suitability of directed energy weapons. A robust test capability to assess directed energy weapons is essential to understanding their effectiveness and limitations, including determining their effectiveness in performing counter improvised explosive device (C-IED) operations and counter UAS operations. Such assessments will depend upon knowledge acquired through the test and evaluation (T&E) of directed energy technologies and testing of operational concepts. Directed energy weapon technologies, primarily consisting of high energy lasers (HEL) and high powered microwaves (HPM), are outpacing available test capabilities. Traditional test techniques for evaluating conventional munitions (with flight times ranging from seconds to minutes) are not sufficient for the T&E of directed energy weapons that place energy on target instantaneously. Consequently, new test technology solutions are needed to ensure that adequate developmental, live-fire, and operational test capabilities are available when directed energy programs are ready to test.

Directed energy system and component testing requires three principal assessments: (1) energy or power on target; (2) the effects on the target; and (3) the propagation of the directed energy to the target through the atmosphere. In addition, the vulnerabilities of Blue systems to directed energy threats are required to be characterized, such as those requirements captured in Military Standard (MIL-STD)-464C. Equally as important, current test capabilities do not provide the detailed data required to understand U.S. directed energy system performance and effects. The technology development efforts within the Directed Energy Test (DET) project have been prioritized to align with Department guidance on science and technology priority investments. As such, the DET project is developing the technologies necessary for quantitative assessment of United States (U.S.) HEL and HPM performance, as well as the vulnerability of Blue weapon systems to enemy directed energy threats.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Directed Energy Test	2.450	10.133	10.375
Description: In FY 2025, DET continued to mature technologies to accelerate delivery of Directed Energy Weapon capabilities to the warfighter. Highlights include: - Upgrade HPM sensor field measurement instrumentation - Measure HPM fields for airborne HPM weapon characterization - Develop HPM sources for survivability and vulnerability testing as well as to support HPM lethality assessments - Develop mobile reusable HPM test assets DET will also initiate efforts to: - Improve assessment of HPM survivability and vulnerability of space systems to include acceptance and adoption by the FAA and the Joint Technical Coordinating Group for Munition Effectiveness (JTTCG/ME) - Develop cUAS testing instrumentation - Improve HPM Modelling and Simulation in support of lethality assessments and test safety

Quantity of RDT&E Articles	-	-	-	-	-	-	-	-	-	-		

A. Mission Description and Budget Item Justification

The Command, Control, Communications, Computers, Intelligence (C4I) and Software Intensive Systems (SIS) Test (C4T) project addresses test technology for next generation resilient, survivable, federated networks and information systems (information superiority) from the tactical level up to strategic planning. The technology development efforts within the C4T project have been prioritized to align with the Department's guidance of S&T Communities of Interest (Cols) and the National Defense Strategy. Gaps are driven by more complex warfare environments and distributed systems; large quantities of data and intelligence (e.g., Big Data, Artificial General Intelligence (AGI) and Machine Learning Algorithms (MLA)); and more software intensive systems (e.g. F-35, CVN, IBCS)).

C4T addresses gaps in Big Data Analytics technologies to gain knowledge from massive amounts of structured and unstructured data collected over a single test, but also expanded to look at the systems' performance over the acquisition lifecycle. The technologies are required when testing sensor platforms, command and control systems and weapon platforms that support the kill chain in a Joint multi-domain operation. These systems must be evaluated for their ability to provide the accurate, timely transfer of data (e.g., target tracks, weapons allocation, mission tasking, and situational awareness) as the data passes among the Services, Warfighting Domains, and Coalition Partners.

C4T also addresses gaps in Live and Simulated Environments, these technologies are required to increase the use of a distributed test environment for new warfare concepts leveraging simulated entities (e.g. modeling and simulation) for more thorough joint mission context platform T&E (e.g., Anti-Access Arial Denial (A2AD) and Manned and Unmanned Systems (MUM-T)). The technologies within C4T will remove undesired distributed testing biases while improving test agility and the tester's ability to effectively support knowledge management, rapid analysis of "Big Data," and automated test reporting. The C4T project advances these test technologies as well as Big Data collection, analysis, and visualization that enable the virtual integration of Department weapon laboratories and open-air ranges. Using Modeling and Simulation (M&S) along with hardware-in-the-loop (HWIL) laboratories, the effectiveness of Joint missions can be assessed in terms of system-of-systems interoperability and effectiveness in executing Joint mission operations, including testing of weapons and C4I and SIS systems accessing and providing information.

Lastly, C4T addresses technologies to support C2 Analysis in Multi-Domain Operations (MDO), specifically at scale and density to fully assessed the mission kill web with new test design, planning and assessment technologies utilizing artificial intelligence and machine learning to not only plan assessments within a domain, but also to enable assessments of "what-if" testing cascading across the other domains of warfare. This will enable full assessment of multi-domain operations to ensure information superiority to accomplish mission objectives. New intelligent testing technologies are required for assessment of MDO missions for our future warfighter AI/ML-enabled C2 Warfighter Systems to ensure the battlefield will not be the testing field. These new MDO focused technologies are vital to creation of a robust operationally relevant Joint Service All Domain Test Range.

A. Mission Description and Budget Item Justification

The emergence of Artificial Intelligence (AI) brings a host of revolutionary capabilities that will profoundly influence warfare, and bring special challenges for testers of Artificial Intelligence systems. The Autonomy and Artificial Intelligence Test (AAIT) project addresses current and emerging challenges associated with the test and evaluation (T&E) of unmanned systems, particularly in testing autonomy, artificial intelligence, and machine learning. As such, AAIT is developing test technologies to simulate, stimulate, instrument, measure, and assess an autonomous system's ability to perceive its environment, process information, adapt to dynamic conditions, make decisions, and effectively act on those decisions in the context of mission execution.

AAIT will provide the test technologies to effectively measure performance and characterize risk, thereby increasing warfighter trust in autonomous systems and artificial intelligence tools. This program will improve the Department's test capabilities and methodologies to address the testing of increasingly autonomous units operating in unstructured, dynamic, battlespace environments. Furthermore, advancements are being made in developing collaborating, system-of-autonomous-systems that will work in concert as a swarm or pack, and in close proximity with humans. New test technologies are needed to stress the collective set of autonomous systems under realistic conditions, predict emergent behavior of autonomous systems, emulate the complex environment, and assess mission performance of these highly coupled and artificially intelligent systems.

A. Mission Description and Budget Item Justification

The Department's ability to use cyberspace for rapid communication and information sharing in support of operations is a critical enabler of military missions. Advancements in utilizing cyberspace are outpacing the technologies needed for test and evaluation (T&E). The Cyberspace Test Technology (CTT) project develops advanced technologies and methodologies to test and evaluate the Department's capabilities and information networks to defend and conduct full-spectrum military operations across cyberspace. This program will improve cyberspace T&E capabilities to support the continual experimental, contractor, developmental, operational, and live-fire testing requirements of warfighter systems operating in cyberspace. Many of the test tools and infrastructure items required for systems in cyberspace will require advancement and maturation of nascent test technologies. The CTT project will address test technology shortfalls in cyberspace testing, including planning cyberspace tests, creating representative cyberspace threats and test environments, executing cyberspace tests, and performing cyberspace test analysis and evaluation.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Cyberspace Test Description: In FY 2025, CTT continued to develop and demonstrate test technologies that enable delivery of cyber-resilient systems to the warfighter and enhance the scale and efficiency of cyber testing. Highlights include: - Address test needs in cyber-physical systems, tactical edge components, and enterprise information systems domains FY 2026 Plans: In FY 2026, CTT continues to develop and demonstrate test technologies that enable delivery of cyber-resilient systems to the warfighter and enhance the scale and efficiency of cyber testing. Highlights include: - Address test needs in cyber-physical systems, tactical edge components, and enterprise information systems domains FY 2027 Plans: In FY 2027, CTT will continue to develop and demonstrate test technologies that enable delivery of cyber-resilient systems to the warfighter and enhance the scale and efficiency of cyber testing. Highlights include: - Develop and implement tools and processes to improve capability to safeguard test data from exfiltration and corruption - Continue to develop Big Data tools and techniques to accelerate cyberspace test environment design FY 2026 to FY 2027 Increase/Decrease Statement:	1.000	155.762	15.070

A. Mission Description and Budget Item Justification

The space domain has become a competitive, congested, and contested environment dominated by global economics and key to national security. With the creation of the United States Space Force, the Department is prioritizing investments to maintain space superiority and increase resiliency of space systems. Current testing infrastructure and methodologies to assess space system resilience against emerging threats is limited. The Space Test (ST) project mission is to address national test capability gaps by providing accurate, robust, and efficient T&E solutions to successfully develop, validate, and inform the employment of new space control systems. The ST project addresses test technology needs for adequate realism for space systems and aligns with the Department's S&T priority investments and is developing a strategic roadmap and investment strategy to establish live and virtual range environments, develop space and ground-based threat emulation capabilities. The ST project seeks to develop technologies that will enable robust, accurate, and timely T&E of future space weapon systems.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Space Test	1.000	0.836	0.873
Description: In FY 2025, ST continued to develop test technologies to validate the functionality and resiliency of space systems. Highlights include: - Continue development of a mobile space threat testbed in a chamber environment - Continue combined NASA/DoW study to identify upgrades to facilitate classified system testing at existing NASA facilities FY 2026 Plans: In FY 2026, ST continues to develop test technologies to validate the functionality and resiliency of space systems. Highlights include: - Demonstrate mobile space threat testbed - Continue development of flight unit electro-optical space based sensor for real-time space domain awareness FY 2027 Plans: In FY 2027, ST will continue to develop test technologies to validate the functionality and resiliency of space systems. Highlights include: - Create multi-site interoperability - Develop digital threat models for modeling and simulation - Develop calibration capability for space domain awareness FY 2026 to FY 2027 Increase/Decrease Statement:

A. Mission Description and Budget Item Justification												
Hypersonic development remains a top priority for the Department. The Multi-Service Advanced Capability for Hypersonics Test Bed (MACH-TB) accelerates delivery of advanced hypersonic and strategic capabilities to the warfighter by leveraging commercial space launch and non-traditional test beds to provide the Department, other Federal agencies, industry, and academia the capability to affordably and rapidly conduct hypersonic experiments and test hypersonic system components.												
B. Accomplishments/Planned Programs (\$ in Millions)									FY 2025	FY 2026	FY 2027	
Title: MACH-TB									0.000	334.000	1,124.241	
Description: MACH-TB is a new project in FY 2026 (112). Previous MACH-TB activities were conducted under the High Speed System Test project (091) of this program element. In FY 2025, MACH-TB demonstrated the use of commercial space launch services, precision sounding rockets, and reusable/recoverable hypersonic test vehicles to conduct hypersonic experimentation and hypersonic system component flight testing. Highlights include: - Demonstrated the reusability of a fully recoverable autonomous hypersonic test vehicle, marking the Nation's first return to reusable hypersonic flight testing since the manned X-15 program ended in 1968												
FY 2026 Plans: In FY 2026, MACH-TB continues to accelerate the cadence of flight tests supporting hypersonic experimentation and hypersonic system component testing. Highlights include: - Leverage commercial space launch and non-traditional test beds to support stakeholders across the Department, other Federal agencies, industry, and academia - Acquire long-lead hardware and block buy of launch service agreements with commercial launch providers for MACH-TB tests over the next three years; this will accelerate the timeline to achieve the Department’s goal of 50 flight tests per year												
FY 2027 Plans: In FY 2027, MACH-TB will continue to accelerate the cadence of flight tests supporting hypersonic experimentation and hypersonic system component testing. Highlights include: - Continue challenge-based acquisition, Multi-Service Advanced Capability Hypersonic Accelerator (MACH-XL), to test and demonstrate affordable hypersonic systems from nontraditional DoW performers - Use recoverable/reuseable test bed to stress test hypersonic system and kill chains - Leverage MACH-TB to demonstrate lower cost producibility of Boost Glide Vehicles and lower cost for Thermal Protection System (TPS) aeroshell

A. Mission Description and Budget Item Justification

This program supports the Department's initiatives to (1) deter strategic attacks against the United States, and its Allies and partners; (2) deter aggression while being prepared to prevail in conflict when necessary; and (3) building enduring advantages for the future Joint Force.

This program supports the Enhanced Trilateral Security Partnership among Australia, the United Kingdom, and the United States (AUKUS), the North Atlantic Treaty Organization (NATO) Defense Innovation Accelerator for the North Atlantic (DIANA), and Science and Technology (S&T) International Engagement Initiatives.

AUKUS contributes to the Pacific Deterrence Initiative (PDI) by providing funding to pursue operationally relevant advanced capability co-development, support integration of multi-national capabilities to act as a force multiplier, and test and evaluate promising solutions for deployment in the Indo-Pacific theater.

It will deepen defense capability and technological cooperation by developing and providing joint advanced military capabilities to promote security and stability in the Indo-Pacific region. The AUKUS program will accelerate the delivery of advanced military capabilities, increased interoperability, and improved information sharing. The delivery of these capabilities will enhance AUKUS partners' military edge and strengthen integrated deterrence. In support of these objectives, the marquee AUKUS Pillar II project centers around increasingly complex collaborative demonstrations and evaluations that will lead to the validation of trilaterally-connected platforms from the sea floor to the stratosphere, and ultimately enable trilateral production, acquisition, fielding, and sustainment of these systems.

The NATO DIANA program will pursue operationally relevant advanced capability co-development, support integration of multi-national capabilities to act as a force multiplier, and test and evaluate promising solutions found across the innovation ecosystem. This complementary program to DIANA will allow the United States to pull successful security solutions from the DIANA effort across the Alliance into availability in the U.S. industrial base and for operational use and aligns with the critical technology areas and operational requirements.

The S&T International Engagement Initiatives program will incentivize the Department of War (DoW) Components, including the Military Services, to engage and/or expand their S&T cooperation with existing partners (e.g., Israel, India, Japan, South Korea) and with those new partners with whom they may be engaged in policy or

Note New Start (Y/N): No												
A. Mission Description and Budget Item Justification This program is creating a more lethal force that further integrates the trilateral forces, as well as strengthens the domestic defense industrial base under the regulatory framework authorized under the National Defense Authorization Act for Fiscal Year 2024 (Public Law 118-31). It supports the Department's initiatives to: (1) deter strategic attacks against the United States, and its Allies and partners; (2) deter aggression while being prepared to prevail in conflict when necessary; and (3) build enduring advantages for the future Joint Force. Specifically, the Enhanced Trilateral Security Partnership among Australia, the United Kingdom, and the United States (AUKUS) will deepen defense capability and technological cooperation by developing and providing joint advanced military capabilities to promote security and stability in the Indo-Pacific region. This program provides funding to pursue operationally relevant advanced capability co-development, co-production, and/or co-sustainment; support integration of multi-national capabilities to act as a force multiplier; and test and evaluate promising solutions found across the AUKUS innovation ecosystem. The program portfolio aligns with the critical technology areas and operational requirements. As new AUKUS projects are considered in FY 2026, the intent is to consider proposals submitted from the DoW Components and industry and academia partners. The appropriate leadership will select proposals using a merit-based process that identifies the most promising solutions to operational challenges with an emphasis on transitioning technologies to current or future programs of record.												
B. Accomplishments/Planned Programs (\$ in Millions)									FY 2025	FY 2026	FY 2027	
Title: AUKUS Multi-Classification Level Collaborative Computing Environment.									5.000	-	-	
Description: This project provides a multi-classification level collaborative computing environment to support efforts under the AUKUS Advanced Capabilities Pillar.

Description: This project pursues military-operations focused advanced capability co-development, co-production and/or co-sustainment; supports integration of multi-national capabilities to act as a force multiplier; and tests and evaluates promising solutions found across all three countries. Funding provides for the solicitation, evaluation, merit-based selection, and execution of new projects to get cutting-edge technological capabilities into the hands of the warfighters. Projects are selected based upon												

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2027 Office of the Secretary Of Defense		Date: April 2026	
Appropriation/Budget Activity 0400 / 3	R-1 Program Element (Number/Name) PE 0603945D8Z / <i>International Innovation I initiatives</i>	Project (Number/Name) 079 / AUKUS	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
a tri-laterally agreed-upon governance framework, derived in part from proven DARPA processes. The senior tri-lateral leadership will continuously evaluate and re-prioritize sub-projects based on the evolving threat landscape in the Indo-Pacific region, with the Department ensuring early and complete Congressional notification as the program matures. An important element of the AUKUS Advanced Capabilities Projects is the AUKUS Maritime Big Play. MBP provides an annual series of exercises designed to drive technical integration of emerging trilateral capabilities culminating in a marquee event within the USINDOPACOM Area of Responsibility (AOR) to emphasize strategic deterrence. As the Series progresses year to year in scale and complexity, it provides a mechanism and forum to engage industry partners from across the partner nations to seek partnering and technology insertion opportunities, enables opportunities for foreign comparative testing, demonstrates the utility of emerging trilateral information sharing agreements, and provides an opportunity to showcase the security partnership with other nations seeking AUKUS involvement in project specific instances. FY 2026 Plans: AUKUS sub-projects in FY 2026 will build on successes in FY 2025. In FY 2026, OUSW(R&E) and international partners will increase the scale and complexity of the Maritime Big Play to enable AUKUS coalition-massed robotic autonomous systems to achieve greater reach, scale, and lethality. As the AUKUS Trilateral Advanced Capability Executive Group (ACEG) drives execution toward Trilaterally ACEG Approved Projects, there is a trilateral acknowledgment that an AUKUS project may take one of three forms, "Co-Development/co-production/co-sustainment" across AUKUS partners; "Experimentation" of emerging trilateral capabilities to demonstrate and validate solutions to emerging I-JROC requirements and Key Operational Problems (KOP); and "procure, deploy, and maintain" interoperable solutions to warfighters across the trilateral partner formations. OUSW(R&E) has a significant role in the shaping of AUKUS projects for ACEG consideration, and for driving the execution of projects to maximize the opportunity to transfer operational capability to the AUKUS warfighter. Current plans include: (1) conducting technical evaluations to inform selection and shape the most promising AUKUS Pillar II projects ; (2) increasing the scale and complexity of the AUKUS Maritime Autonomy Experimentation and Exercise Series ("Maritime Big Play") to enhance interoperability and combined capability of un-crewed maritime systems among AUKUS partners; (3) developing common architectures and standards to enhance our ability to perform coalition operations with mature Resilient Autonomous and Artificial Intelligence Technologies; and (5) evaluating hypersonic strike missile mission performance using air, land and sea-based platforms, developing conceptual missile design, conducting platform compatibility assessment, conducting

Appropriation/Budget Activity 0400 / 3	R-1 Program Element (Number/Name) PE 0603945D8Z / <i>International Innovation I initiatives</i>	Project (Number/Name) 079 / AUKUS	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
operational and survivability analysis, and initiating planning for component ground test and experimentation; and (5) supporting Select Trilateral Approved Projects by helping to address technical challenges.			
FY 2027 Plans: Current plans include: (1) increasing the scale and complexity of the AUKUS Maritime Big Play to enhance interoperability and combined capability of un-crewed maritime systems among AUKUS partners;(2) expanding and refining common architectures and standards to enhance our ability to perform coalition operations with mature Resilient Autonomous and Artificial Intelligence Technologies; and (3) expanding and extending preparations for hypersonic strike weapons demonstrations using our AUKUS partners' systems and across multi-domain platforms; continue to develop and test in both HWIL and via live demonstrations the joint integrated fires capability for AUKUS nations using MDA's Joint Track Management Capability (JTMC) Bridge; and (4) supporting Select Trilateral Approved Projects by helping to address technical challenges; and (5) conducting technical evaluations to inform selection and shape the most promising AUKUS Pillar II projects. FY 2026 to FY 2027 Increase/Decrease Statement: The increase of \$16.094 million between FY 2026 and FY 2027 is due to work to weaponize U.S., Australian and UK systems to ensure readiness for AUKUS hypersonic capability demonstrations. Enabling hypersonic strike weapons capabilities across all AUKUS partners and across multi-domain platforms enhances operational impact and strengthens integrated deterrence. Also, the increase will cover implementation of the JTMC Bridge on allied hardware and enable Australia and United Kingdom sensor interfaces and tracking to integrate with US composite tracking networks. Developing a joint integrated fires capability with our AUKUS partners by leveraging trilateral sensors and platforms strengthens survivability and integrated deterrence.			
Title: Maritime Digital Experimentation Federation Description: The Maritime Digital Experimentation Federation (MDEF) is a trilateral experimentation network designed to support virtual and live interoperability testing and integration of uncrewed autonomous systems into trilateral operations. This sub-project seeks to design and achieve integrated multi-national capabilities for unmanned operations, with the necessary Approvals to Operate (ATOs), and to demonstrate its operational capacity. The anticipated outcomes will provide a secure (SECRET accredited), cloud-enabled system that is integrated with warships of all three nations to enable dynamic tactical control of drones and other platforms and execution of mission sets. FY 2026 Plans: Establish the MDEF network, hardware integration, and test environment to support connectivity with AUKUS partners. Secure Authority To Operator for US portion of Network and connect to SECREL network to support exchange with partners. Develop and demonstrate tri-lateral interoperable uncrewed systems to further STANAG 4817 readiness. FY 2027 Plans:		5.000	5.000

Note

New Start (Y/N): No

A. Mission Description and Budget Item Justification

To combat the evolving threat and development of critical technologies, the North Atlantic Treaty Organization (NATO) established the Defence Innovation Accelerator for the North Atlantic (DIANA) to leverage dual-use technological advances in Allied centers of innovation to achieve the Alliance's operational requirements, including accelerating the development, testing, and fielding of security technology solutions to achieve an advantage over the evolving threat. The NATO DIANA program only provides non-traditional business partners from Alliance nations with funding to accelerate new technical solutions and commercialization specifically where the technology holds a dual use (commercial and defense in nature) potential. Advanced development and testing to facilitate adoption into U.S. defense programs requires supporting funding for our own labs and test centers to pull that technology into our Defense acquisition ecosystem.

This project enables the Office of the Under Secretary of War for Research and Engineering (OUSW(R&E)) to assist in accelerating military capability development for U.S. forces as well as our NATO Allies and will expose new U.S. industries to the European markets. Fielding of critical technologies in the proposed areas will have significant positive impact on detecting the enemy first, ensuing effective communications and data exchange between coalition partners, as well as systems developed by different original equipment manufacturers (OEMs), and enabling robotic and autonomous systems to remain on station longer periods of time for greater operation impact. NATO DIANA advances access to technology across larger security challenges. These enhancements will contribute to increasing lethality across the U.S. and NATO military capabilities.

The NATO DIANA initiative will fund dual-use technologies identified through the NATO DIANA challenges found sufficiently mature with the potential for meaningful impact for U.S. forces on the battlefield for continued development, testing, integration, and experimentation and proposes to fund each technology for capability maturation.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Defence Innovation Accelerator for the North Atlantic (DIANA)	0.000	37.507	-
Description: Funds efforts that are complementary to the DIANA program to allow the United States to pull successful security solutions from across the Alliance into availability in the U.S. industrial base and for operational use and aligns with the critical technology areas and operational requirements.			
FY 2026 Plans:

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
Fund evaluation of dual-use technologies identified through the NATO DIANA 2024-2025 challenge problems found sufficiently mature with the potential for meaningful impact for U.S. forces on the battlefield for continued development, testing, integration, and experimentation and proposes to fund each technology for capability maturation. Each identified technology investments will be supported by mission and operational analysis, due diligence assessment, testing, and productization to assess the viability of the proposed technical approach and the mission impact of the technology in relevant operational scenarios; to assess the risks associated with the selected technology companies prior to investment, from both an adversarial risk perspective and from a financial risk perspective, as well as continue to monitor adversarial interest and engagement in selected technology companies post-award; to establish and quantify measures of performance and measures of effectiveness for the capability prototypes as they mature, to include through participation in operationally relevant demonstration environments; and to further mature qualified prototype capabilities for commercialization and operational use. <i>FY 2026 to FY 2027 Increase/Decrease Statement:</i> The decrease of \$37.507 million from FY 2026 to FY 2027 is due to an internal funding realignment within the Critical Technologies portfolio. This funding increase supports high-priority DoW research for AHI (PE 0603375D8Z Technology Innovation - Anomalous Incidents Research).

D. Acquisition Strategy			
Successful projects support capability acquisition in several ways: technology upgrade insertion in a current platform or program providing greater capability or prolonging life of the system, inform or refine requirements for planned systems, or direct procurement. NATO DIANA will leverage the Department's most efficient and effective cooperation or acquisition approaches to support the appropriate transition pathway.

A. Mission Description and Budget Item Justification

To keep pace with the rapidly evolving technological landscape, advancing science and technology (S&T) cooperation with our Allies and partners remains important. This project will incentivize the DoW Components, include the Military Services, to engage and/or expand their S&T cooperation with existing partners and with those partners with who they may be engaged in policy or operational activities but not in the S&T realm. In addition, this project will allow the Department to meet new and expanded requirements for substantive, administrative, and operational activities in support on international defense S&T cooperation.

The intent is to consider proposals submitted from the DoW Components. The appropriate leadership will select proposals using a merit-based process that identifies the most promising solutions to operational challenges with an emphasis on transitioning technologies current or future programs of record.

B. Accomplishments/Planned Programs (\$ in Millions)

A. Mission Description and Budget Item Justification

This program supports the Department's initiatives to Build a Sustainable and Long-Term Advantage and Build a Resilient Joint Force and Defense Ecosystem. The National Security Innovation Network (NSIN) activities build networks of innovators that generate new solutions to national security problems.

The FY 2026 spend plan amount for 0603950D8Z includes \$0 of discretionary and \$21,202 thousand of mandatory (reconciliation) for a total of \$21,202 thousand.

PE 0604055D8Z will undergo a PE change to PE 0603055D8Z beginning in FY 2026. This change better aligns the PE with the BA-3 budget activity and improves differentiation from the Operational Energy Prototyping program, PE 0604555D8Z, which advances BA-4 workload. Moving forward, updates for the OECI program are documented in the budget exhibit for PE 0603055D8Z.

A. Mission Description and Budget Item Justification

OE innovation is the cornerstone of the future Joint Force and ensuring:

- Increased lethality
- Agile, integrated, shaping, and pulsed operations
- Survivable and sustainable capabilities across domains and in any environment including contested and extreme ones (i.e., Arctic and Space)
- Decisive information and decision advantage

OE Innovation projects ensure all emerging technology is prepared to share power and energy information into the broader Combined Joint All-Domain Command & Control (CJADC2) system - providing decision-quality information and is of high-value to the warfighter. OECI powers this future by investing in early-stage energy innovation for military capabilities, incentivizing the Components to achieve energy superiority for U.S. Joint Forces and missions. The OECI program accelerates the transition of pre-commercial, military-unique technologies, promoting rapid fielding to warfighters. OECI is innovating today for energy superiority tomorrow, delivering unmatched value to the DoW warfighter by:

- Boosting lethality and supportability
- Enhancing operational readiness and responsiveness
- Extending operational capabilities and endurance for advanced platforms and weapons

UNCLASSIFIED

Exhibit R-2, RDT&E Budget Item Justification: PB 2027 Office of the Secretary Of Defense		Date: April 2026
Appropriation/Budget Activity 0400: <i>Research, Development, Test & Evaluation, Defense-Wide / BA 3: Advanced Technology Development (ATD)</i>		R-1 Program Element (Number/Name) PE 0604055D8Z / <i>Operational Energy Capability Improvement (OECI)</i>
OECI prioritizes technology development for multiple-Service use-cases, deconflicts across Service investments reducing duplication, and increases auditability of funding both within the program and community-wide from 6.2 through warfighter transition. OECI maintains and advances use of accountability tools and process development. OECI's technical thrust areas are: • Operational Energy Dominance: Providing energy capability and battlespace awareness technologies for collecting, camouflaging, and controlling power and energy data. These investments leverage Artificial Intelligence and machine learning (AI/ML) for integrating U.S., allied, and adversary energy information into the combined joint all-domain command and control (CJADC2) architecture. Additional information is available in a classified addendum for this budget exhibit. Dominance supports solutions to power and energy vulnerabilities and threat reduction at home and abroad. • Operational Energy Surety: Ensuring U.S. forces, capabilities, and missions assured, robust, and resilient access to energy, including powering energy magazines (missile defense, Golden Dome, and counter-UAS) and data centers in the homeland and abroad. Operational Energy Surety recognizes bases as warfighting capabilities and is protecting and exploiting homeland operations. Technical areas include fuel fabrication processes, energy conversion, novel power generation, and energy storage and distribution technologies. • Operational Energy and Power Projection: Giving U.S. forces operational flexibility, freedom to operate at will, and a qualitative edge in all domains (including air, space, and cyber), through implementation of advanced energy technologies. Investments include novel platform structures and power plant solutions for extended duration and enabling and enhancing maneuver without regret (including next-generation power and energy delivery (power beaming)). • Nuclear Innovation: Developing power and energy solutions for the battlespace including assured power for critical missions at home, underway, and abroad. Nuclear innovations do not overlap efforts covered by the Chief of Naval Reactors (CNR) but are broadly applicable in all domains from sub-sea to space. OECI is laser-focused on accelerating solutions to critical OE capability gaps, delivering game-changing technologies that advance contested and strategic logistics, command of energy resources, and electrify the battlespace. Select successes include: • TRISO Fuel Production: Reclaiming America's Nuclear Leadership: Established the only domestic, commercial TRISO nuclear fuel production capability for DoW in the US, eliminating a critical vulnerability in our nuclear infrastructure. This strategic capability is now enabling terrestrial and space RDT&E demonstrations, Service small modular reactor (SMR) initiatives at installations, and the national civilian advancement of advanced nuclear power, benefiting both DoW and utility applications and solidifying America's leadership in nuclear energy. This effort successfully provided all nuclear fuel for Project Pele and Project VALKRE and lays the commercial infrastructure for supporting near-term nuclear reactor interests for all Services. • Revolutionary Airframe Prototyping: Redefining Airpower: Advanced oblique-angle flying wing (OAFW) technology, delivering unprecedented endurance, range, and altitude performance (greater than 40% increase) in under 12 months. These airframe advancements are applicable and scalable across multiple joint communities, advancing lift, refueling, and signature management and promising to redefine the future of airpower. • Dynamic Hydride Vapor Phased Epitaxy (DHVPE): Securing Dominance in Space: Innovations are driving down the cost of space-qualified PV, reducing launch weight, and maturing power beaming components, enabling increased maneuverability and survivability in space and ensuring U.S. dominance in this critical domain. • Power Beaming: Projecting Power Across the Battlespace: Power beaming advancements in multiple modalities (RF, Optical/Laser, mm Wave) are accelerating the maturation of transmit, receive, beam forming/steering/safety capabilities and demonstrating concepts across modalities. This positions the U.S. as the undisputed leader in wireless power technology, enabling a new era of energy delivery.		

UNCLASSIFIED

Exhibit R-2, RDT&E Budget Item Justification: PB 2027 Office of the Secretary Of Defense		Date: April 2026
Appropriation/Budget Activity 0400: <i>Research, Development, Test & Evaluation, Defense-Wide I BA 3: Advanced Technology Development (ATD)</i>		R-1 Program Element (Number/Name) PE 0604055D8Z I <i>Operational Energy Capability Improvement (OECI)</i>
• Airborne Energy Delivery: Guaranteeing Resupply in Contested Environments: Innovations are increasing the standoff distance and accuracy for airborne energy delivery in contested environments, including GPS-denied environments, guaranteeing ground forces receive the energy resupply they need to fight and win, regardless of the threat environment. • Power and Thermal management for energy magazine: Underpinning advancements for current laser technology use and scaling to support increasing future demands. Current/ongoing OECI investments focus on providing agile OE solutions that address insights from current operations. Technical advancements include: Advanced Algorithms & Analytics: Developing AI/ML algorithms for anomaly detection, predictive power analysis, energy optimization, and pattern-of-life analysis • Joint All-Domain Command and Control (JADC2) Integration: Developing data models, user interfaces, and communication protocols to integrate and visualize OE assets and data into the JADC2 architecture • Power Electronics & Microgrids: Designing high-efficiency power converters, inverters, and microgrid controllers for tactical applications, with a focus on vehicle-centric microgrids and integration with Joint and Coalition energy sources • Energy Storage & Generation: Developing advanced battery chemistries (Li-ion, Lithium Sulfur), fuel cells (hydrogen), and waste-to-energy systems for mobile and expeditionary power • Wireless Power Transfer Technologies: Advancing RF, mm-Wave and laser power beaming systems, including rectenna design, beam steering, and integration with UAVs and other platforms • Space-Based Solar Power: Developing low-cost, high-efficiency solar cells and arrays for space applications, including perovskite and III-V materials • Nuclear Reactor Technology: Developing small modular reactors (SMRs), TRISO fuel, and advanced nuclear reactor materials for both space and terrestrial applications • Fuel Efficiency & Hybridization: Developing hybrid-electric architectures for tactical vehicles, aircraft, and naval vessels to improve fuel efficiency and enable new capabilities The OECI program has a proven track record of successfully transitioning emerging OE capabilities, with over 80% of completed projects moving into practical application. Specifically, 117 of 132 completed projects have transitioned to: follow-on funding; equipment for Combatant Command (CCMD) exercises and demonstrations; knowledge or analytic tools supporting the Joint OE community; or commercial markets. OECI has been instrumental in advancing critical capabilities for energy-efficient shelters, ground vehicle efficiency, high-power weapons and power beaming, energy storage for uncrewed systems, nuclear power, and technologies addressing key capability gaps, enabling the ability to command energy, power the force, and electrify the battlespace.

Note This program was realigned in FY 2025.												
A. Mission Description and Budget Item Justification The OECIF project is the pre-commercial engine driving enhanced DoW operational effectiveness through targeted Science & Technology (S&T) investments. This project strategically prioritizes technologies enabling OE integration, supporting operations in contested / strategic environments and seamlessly embedding energy awareness into DoW command and control architectures. By harnessing energy data and information for improving decision-making, the OECI project is developing a critical OE data layer within all CJADC2 data platforms as an integral part of JADC2 and, in-turn, transforming the battlespace. Specifically, S&T investments in this project are focused on: • Real-Time Power and Energy Performance Assessment: Providing state-of-the-art metering and monitoring of platform/system capabilities, delivering real-time performance assessment for optimized resource allocation. • Revolutionizing Mission Planning: Improving mission-planning tools and analytics while providing warfighters with unparalleled situational awareness and decision-making capabilities. • Empowering Operational Control: Increasing operational control and decision-making for power and energy at and between all warfighting echelons, enabling more agile and responsive operations with an emphasis on classification consideration. • Data-Driven Decision-Making: Developing next-generation OE modeling and simulation tools that quantify operational and business case impacts, empowering senior leaders to make informed decisions based on data-driven insights. • Informing Strategic Investments: Bringing power and energy innovation knowledge and analytics to warfighters and senior leaders, informing future acquisition, sustainment, and budget decisions and ensuring that investments are aligned with critical operational needs. • Cultivating Expertise: Delivering foundational training and education on power and energy innovation across the military and S&T communities, building a cadre of experts who can drive and exploit future innovation. All six technology areas within this project directly support the DoW's OE Strategy Enterprise-wide Energy Visibility (EWEV) line of effort, contributing to a more resilient and effective force. Program-wide administrative costs are also part of this project code and include transparency and accountability tools for the program and the OE-Innovation community, inclusion of warfighters into the projects enhancing technology awareness and adoption, and power and energy subject matter expertise.												
B. Accomplishments/Planned Programs (\$ in Millions)									FY 2025	FY 2026	FY 2027	
Title: Operational Energy Capability Improvement Fund (OECIF)									40.183	-	-	

UNCLASSIFIED

Appropriation/Budget Activity 0400 / 3	R-1 Program Element (Number/Name) PE 0604055D8Z / <i>Operational Energy Capability Improvement (OECI)</i>	Project (Number/Name) 455 / <i>OECIF</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
Description: In FY 2025, OECIF successfully closed out five projects, transitioning operational energy capabilities from pilot demonstrations into operational use and enhancing Joint Force effectiveness and battlespace awareness across strategic environments. Key technology advancements focused on: • Scaled Precision Energy Management: Expanded deployment of OE metering and monitoring systems, providing unit-level commanders with real-time visibility of energy consumption to optimize allocation, reduce waste, and improve resupply planning • Enhanced Operational Energy Awareness: Extended power and energy sensing across additional platforms and nodes, giving a more comprehensive picture of availability and usage across the battlespace • Integrated Energy Data: Connected Class IIIB (fuel, batteries, generators) data streams into enterprise-level tools, enabling data-driven forecasting, sustainment planning, and improved decision-making • Energy-Enabled Mission Planning: Integrated energy and environmental data into ISR workflows, improving UAV route optimization, mission endurance, and maneuver planning in dynamic operating conditions • Data Transfer and Networking: Established initial data transfer layers to support subsea energy and networking experiments, while conducting tactical mesh networking demonstrations that validated resilient energy-aware communications at the edge These advancements empowered warfighters with timely, accurate energy intelligence, improving mission planning, acquisition and sustainment decisions, and survivability across strategic logistics environments. Furthermore, in FY 2025 OECI launched new initiatives that expand future capabilities, including enterprise-wide energy visibility, predictive modeling and simulation for campaign-level planning, energy-informed wargaming tools, and efforts to harden digitized power systems against cyber and physical threats. These efforts ensure warfighters are supported with resilient, secure, and energy-efficient tools while shaping the next generation of innovation through competitive calls and transition pathways.

A. Mission Description and Budget Item Justification

This project is revolutionizing operational energy resilience, a critical force multiplier enabling operational flexibility, freedom of maneuver, and guaranteeing mission success in any environment. By driving innovations across key technical areas, this project is ensuring that U.S. Joint Forces have the energy they need, when and where they need it.

The project's strategic focus areas include:

- **Next-Generation Capabilities: Powering the Future Battlespace:** Investing in high-power weapons enablers, advanced energy storage devices, power and thermal management technologies, energy magazines, and energy innovations optimized for arctic operations, ensuring that U.S. forces maintain a decisive advantage in any environment, including the most challenging and contested
- **Energy Diversification: Expanding the Energy Arsenal:** Focusing on Space and Arctic storage and use technologies including hydrogen, and Proton Exchange Membrane (PEM) fuel cell technologies; expanding the range of available energy sources through innovative production and distribution methods, and providing power, fuel, and heat from waste resources thereby reducing reliance on vulnerable supply chains
- **Interoperability and Standardization: Creating a Seamless and Assured Energy Use:** Investing in tactical micro-gridding, electrical and communication standards, and energy component commonality for multiplatform applications, ensuring seamless integration across the force and enabling more agile and responsive operations

By pursuing these strategic objectives, this project is transforming operational energy resilience, expanding warfighter capability and safety, and ensuring that U.S. forces are prepared to meet the challenges of the future.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Operational Energy Resilience	35.671	-	-
Description: In FY 2025, Operational Energy Resilience (OER) transformed the battlespace by delivering groundbreaking advancements that enhance warfighter capabilities and guarantee mission success in any environment. In FY 2025, the OER portfolio successfully closed out 4 projects that provided and developed the following capabilities. • Analysis of Charging and Energy Storage (ACES) initiative evaluated methods for generating, storing, and delivering power for combat and tactical vehicles. This analysis establishes a data-driven foundation for adopting hybrid technology, enabling key capabilities like extended range, silent watch, and improved thermal signature management.

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
• Evaluation of Electric Vehicle Batteries to Enable Directed Energy (EVEBEDE) delivered a complete analysis and profile of commercial off-the-shelf electric vehicle batteries with advanced scaling software, and tailoring form factors to Directed Energy platform needs. • Synthetic Fuels for Contested Environments (SynCE) Nuclear provided results of a feasibility study for using small modular reactors in assessing the energy required for synthetic diesel production and matching nuclear supply for demand and storage. • Graphene Manufacturing Advancements for Energy Storage Applications (GMA-ESA) analyzed the current state of technology, manufacturing capacity, risks, opportunities and recommendations informing industrial supply base planning for rapid development, demonstrations, and transitions of U.S. and Allied graphene manufacturing for energy storage. Other key achievements from FY 2025 are described below: • Unmatched Tactical Edge Resilience: Pioneered resilient production, storage, delivery, and use of fuels and energy storage technologies at/near the tactical edge, including cold-weather solutions for the Arctic and reduced-cost logistical transportation solutions, ensuring operational effectiveness even in the most challenging and contested environments • Enhanced Lethality for Directed Energy Weapons: Revolutionized Directed Energy (DE) weapon capabilities via advanced thermal management systems enabling greater lethality, extended engagement times, and enabling decisive advantage against emerging threats • Hybridization for Tactical and combat platforms: Extend tactical silent watch/silent mobility, improved tactical sprint, and reduced signature management (thermal and acoustic). Efforts reduced reliance on costly and dangerous fuel supply convoys, boosting resilience through exportable power from crewed-uncrewed teaming, and optimized energy use through vehicle-to-grid and vehicle-to-vehicle technologies providing both equipment power and payload (DE weapons) power • Game-Changing Innovation: The Refueling & Support Package enabling Communications & Situational Awareness (RASP-CASA) project successfully tested the remote set-up, service & launch of the High-Altitude Ballon (HAB) using Hydrogen (H2) lifting gas with USMC and NATO exchange officer participation at 29 Palms. The team successfully tested/demonstrated over-the-horizon secure communications by connecting with a battery and H2 fuel cell powered Stalker Unmanned Aerial Systems (UASs) - demonstrating the ability to stage and deploy reliable communications from remote locations and in a liquid petroleum deprived environments. The success of this project led to their invitation/participation in Arctic Edge 2025 in Alaska. • Game Changing Innovation: The Long-Range Precision Air Drop System 2,000lbs (LRPADS2K) project completed successful testing and flight of a 300 hp engine and upgraded propeller at Coolidge Airfield with U.S. Army warfighter participation. The project successfully transitioned back and forth from autonomous and manual flight modes multiple times while simultaneously setting records in altitude gained, time to climb, speed, distance and endurance. The project is rapidly advancing to meet the critical need to quickly/accurately provide resupply assets to warfighters in remote or contested environments while keeping low-density, high-demand airlift assets/crews out of anti-aircraft threat envelopes. The successful testing of this project also led to their invitation/participation in Arctic Edge 2025 in Alaska. • Game Changing Innovation: The Reliable Rapid Arctic Lithium-Ion Energy (RRALIE) project successfully developed and delivered an innovative heating technology for lithium-ion batteries. This system enables ground vehicles to operate effectively in

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2025	FY 2026	FY 2027
extreme arctic conditions, providing full power and rapid charging capabilities at temperatures as low as -60°F. For the DoW, this breakthrough enhances arctic mission readiness by reducing diesel consumption, eliminating engine idling, and enabling critical silent watch operations. • The Arctic Technology Landscape Study (ATLAS) delivered a new capability through its modeling and simulation, and analysis. It identifies platforms and missions where enhanced Arctic energy and power systems provide the greatest mission benefit. This insight improves both warfighter survivability and mission-planner success. • Multi-Mission Support via Hybrid Airships (Hybrid Airship): The Hybrid Airship initiative developed and validated multi-mission concepts of operation (CONOPS), demonstrating the airship's superiority for missions like logistical resupply and anti-submarine warfare, particularly in austere conditions. This approach frees tactical assets for their primary roles, extending warfighter lethality and range. The airship's effectiveness is driven by its 10-50 ton payload, 2,400 nautical mile range, and multi-surface landing capability, all while reducing operational costs. • Base Integration of High-Power Vehicles (BIHV): BIHV is integrating high-power vehicles with base electrical power grids for reducing DoW electrical grid costs, securing the base grid, and supporting vehicle maintenance. Emerging opportunities include significantly reducing operational costs through peak shaving, using existing maintenance practices to improve grid resiliency, and improving energy / power information visibility for remote/touchless vehicle maintenance actions and other applications. • The Tactical Hub Drive (THD) initiative completed its feasibility analysis and is now exploiting these findings, driving the development of advanced wheel-hub systems for combat platforms. Expected benefits include superior fuel efficiency, extended operational reach, and enhanced vehicle maneuverability. For the DoW, this technology maturation creates a decisive advantage by increasing warfighter survivability and granting greater strategic agility on the battlefield. Building on these successes, OER is continuing development of projects from FY 2025 while initiating two new-start projects in FY 2026. The OER 456 p-code is driving state-of-the-art near-term innovations in operational effectiveness under austere conditions, including the Arctic, and advancing alternatives to fossil fuel requirements. OER is enabling increased DE weapons operability (use time, thermal loads, and power magazine), ensuring resilient and innovative delivery/re-supply options of power and fuel solutions in contested environments, guaranteeing mission success in any environment and transforming the future of warfare.

A. Mission Description and Budget Item Justification

The OE Demand Reduction project is revolutionizing operational energy management by driving innovations that:

- Shrink the Logistical Footprint: Reducing operational energy demand, minimizing reliance on vulnerable supply lines, and freeing up resources for other critical missions.
- Maximize Performance in the Air and Space Domains: Increasing efficiencies for aviation and space domains, enabling longer mission durations, greater payload capacity, and enhancing operational effectiveness.
- Mitigate Critical Vulnerabilities: Reducing risks by providing next-generation power and energy delivery options, such as power beaming, creating a less vulnerable, more resilient, and adaptable force.
- Dominate the Information Domain: Enabling exploitation of critical power system signatures through Cyber-physical Power ISR Protection (C PIP), providing a decisive intelligence advantage by determining force capabilities and informing sustainment actions in both domestic and austere environments.

To achieve these ambitious goals, the project focuses on:

- Aviation Efficiency- Transforming Air Operations: Investing in innovations to gain efficiency and lower energy consumption through advances in aviation powerplants (e.g., uncrewed electrification, hybridization, etc.), flight software planning tools, inflight algorithms, composite airframe structures, and propulsion power options, enabling longer-range, more efficient, and more stealthy air operations.
- Space Efficiency- Powering Dominance in Space: Investing in power and energy (generation, transmission, storage, and resupply) for space access (platform launch and orbital transfer), platform maneuver and station keeping/resupply, and platform operation capabilities that improve energy efficiency, reducing energy consumption, and/or increasing range/endurance. These projects also focus on innovations that dramatically reduce the cost of production and/or launch weight of critical space components, ensuring U.S. dominance in this critical domain and supporting U.S. manufacturing and supply chains.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Operational Energy Demand Reduction	57.775	-	-
Description: In FY 2025, Operational Energy Demand Reduction (OEDR) delivered transformative advancements successfully closing out 12 projects reshaping the future of military operations and enhancing national security. Key achievements including: • Dual Purposing Directed Energy Systems: A laser weapon system fielded by the Marines for Counter Uncrewed Aerial Systems (cUAS) and Intelligence, Surveillance, and Reconnaissance (ISR) was dual purposed to include power beaming capabilities.

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
This enables UAS persistence and remote recharging options, benefiting operational environments where mobility or weight is a concern. • Revolutionizing Power Delivery: Achieved significant breakthroughs in Radio Frequency (RF) power beaming through the technology maturation of high-power, low-loss meta surface relays and a novel oscillator increasing the efficiency of solid-state transmitters. • Pioneering next generation lithium-sulfur (Li-S) battery technology: Strengthened domestic and allied energy storage capabilities through the development of Li-S batteries for space. Li-S batteries provide a pathway to higher specific power and alleviate Chinese based supply chain issues. • Onshoring the production process of Gallium Arsenide (GaAs) substrates: Rapidly established a domestic capability for growing single-crystal GaAs and fabricating qualified GaAs substrates used to develop national security satellite solar panels. This development reduces dependence on foreign suppliers and strengthens the U.S. position in advanced space power technology. • Oblique Angle Flying Wing (OAFW): A FY 2024 surge, the OAFW rapidly transitioned from concept to flight demonstration in December 2025. This test flight advanced the platform's potential as a low-signature and long-endurance system including the potential for autonomous aerial refueling. Building on this effort, future investments in OAFW technologies present opportunities for resilient power projection. • Please see higher classification for additional information.

Note This program was realigned in FY 2025.												
A. Mission Description and Budget Item Justification This project is at the forefront of a revolution in military power, spearheading DoW innovations in nuclear power (fission reactors and radioisotope power systems) and enabling joint operations across all domains. Recognized as a strategic priority, nuclear power is poised to redefine energy surety by: • Unleashing Unprecedented Power Density: Maximizing the energy density of existing power systems by approximately 1,000,000x, enabling prolonged operations, reducing logistical dependencies, and providing a decisive advantage in strategic and contested environments. • Extending Reach to the Most Remote Locations: Enhancing power system lifetime in remote and austere locations, guaranteeing reliable power for critical missions, regardless of the environment. • Liberating Personnel for Mission-Critical Tasks: Minimizing the operational burden on personnel compared to traditional power systems (e.g., chemical batteries and fossil fuels), freeing up valuable resources for other vital military tasks and increasing overall operational effectiveness. The nuclear power portfolio's investments are focused on making nuclear technologies safer, lighter, more secure, more efficient, more economical, and more operational for the DoW, transforming the future of military power and ensuring U.S. dominance in the 21st century. To realize this vision, this project is driving critical technology improvements in the supply chain and power conversion efficiency of both small and large RPS and fission subsystems and components, as well as de-risking complete fission mobile nuclear reactor systems. These transformative technology development efforts include investments in cutting-edge materials like smart carbon/carbon, shielding optimizations, betavoltaics, alphavoltaics, alpha photovoltaics, Stirling energy conversion technology, and supercritical CO2 energy conversion loops (sCO2). The nuclear power portfolio also funds rigorous studies to ensure the safety and security of these revolutionary technology investments, prioritizing responsible and U.S. sustainable development.												
B. Accomplishments/Planned Programs (\$ in Millions)									FY 2025	FY 2026	FY 2027	
Title: Nuclear Power									19.027	-	-	
Description: FY2025 marked a year of significant progress, driven by strategic investments and a commitment to innovation: • The program successfully established the nation's only commercial-scale TRISO fuel fabrication line, now supplying the required advanced nuclear fuel for Project Pele and Project VALKRE. This action de-risks the fuel supply chain, spurring commercial investment and creating new opportunities for TRISO-fueled designed reactors within and outside the Department of War. This success created a proven pathway for advanced reactors, prompting the Department of Energy (DOE) to allocate the first allotments of domestic High Assay Low Enriched Uranium (HALEU) to a select group of advanced reactor suppliers.

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
• Prioritizing Nuclear Investments for DoW: The nuclear power portfolio completed the first dedicated nuclear-focused call for proposals yielding key projects, including the development of optimized supply chain and power conversion efficiency of small radioisotope power systems for space and terrestrial environments, a maritime reactor transport study, and nuclear battlefield curriculum development that addresses lessons learned from current conflicts. • Addressing Key Knowledge Gaps: The portfolio oversaw the completion of four studies addressing crucial knowledge gaps, including clarifying policy frameworks for nuclear power systems in very low Earth orbit (vLEO), identifying high-impact spaceflight applications for nuclear technologies, providing transportation and logistics guidance for deploying nuclear power systems for the DoW, and exploring feasible designs for nuclear systems in contested environments, ensuring a well-informed and strategic path forward. These accomplishments demonstrate a relentless commitment to advancing nuclear technology for defense purposes while ensuring safe and secure operations, solidifying America's leadership in this critical domain.

Note

New Start (Y/N): N

A. Mission Description and Budget Item Justification

Nuclear Matters, Advanced Component Development & Prototypes addresses the need to defend and deter against weapons of mass destruction threats and to safeguard personnel, prevent unauthorized access to equipment, installations, material, and documents, and to safeguard the foregoing against espionage, sabotage, damage, and theft. This program oversees advanced engineering development and rapid fielding throughout the Department of War (DoW) for an integrated and systemic approach to develop material solutions.

The Physical Security Enterprise and Analysis Program (PSEAP) avoids duplication of effort, ensures systems integration, and promotes interoperability and sustainability. The material solutions either (a) lead to a Program of Record, (b) become technology insertions into existing programs; or (c) advance to being a certified Commercial/Government off-the-shelf product. The PSEAP advances enterprise-level physical security RDT&E solutions to reduce risk created by current and emerging threat by analyzing, researching, developing, demonstrating, and evaluating interoperable solutions to transition capability to warfighters. Collaboration with DoW Components, other government agencies, and the international community to prioritize and close capability gaps is a top priority of the PSEAP and the physical security community.

National Technical Nuclear Forensics (NTNF) mission requirements and responsibilities derive from multiple source documents. Per National Security Presidential Memorandum 35 (NSPM 35), the DoW leads the United States (U.S.) Government (USG) post-detonation NTNF capability. NSPM 35 also directs that the US will maintain and advance a robust NTNF capability to detect, identify, locate, and characterize the attribution of the source of an actual or attempted nuclear or radiological attack in all environments, to include underground, underwater, in the atmosphere, and space. Per DoW Directive S-2060.04, the Office of the Undersecretary of War for Acquisition & Sustainment (OUSW(A&S)) is the office responsible for developing and leading the DoW's NTNF capabilities. Per the 2022 Nuclear Posture Review (NPR) Direction, greater investment in NTNF tools is required to ensure they remain responsive to the threat, and thus scientifically credible and internationally accepted to hold states facilitating acts of nuclear terrorism accountable. The FY 2022 – FY2026 Nuclear Forensics and Attribution Strategic (NFAS) Plan requires an NTNF capability to collect, analyze, and evaluate both air and ground post-nuclear detonation samples at accelerated directed timelines. The DoW mission to collect, analyze,

Appropriation/Budget Activity 0400: <i>Research, Development, Test & Evaluation, Defense-Wide I BA 4: Advanced Component Development & Prototypes (ACD&P)</i>	R-1 Program Element (Number/Name) PE 0603161D8Z / <i>Nuclear Matters, Advanced Component Development & Prototypes</i>
---	---

and evaluate post-detonation prompt signals and nuclear debris is critical to our national defense and security to ensuring the USG can identify the source of nuclear material and hold those involved or supporting an attack accountable. Internal and independent assessments indicate that new capabilities are needed to sustain an effective deterrent against an unattributed nuclear attack and meet the challenges of future threats. This PE is the only DoW research, development, and test and evaluation (RDT&E) program focused on Advanced Component Development and Prototypes for post-detonation NTNF capabilities. Without fully supporting these requirements, the DoW's ability to meet this critical deterrence need will be significantly degraded.

The DoW, through the Innovative Technologies program, will partner with the National Nuclear Security Administration (NNSA) to develop technology aimed at preventing would-be proliferants from advancing nuclear weapons related efforts. Additionally, the DoW seeks to support current and future counterproliferation missions by leveraging the expertise within the national laboratories. The program goal is to ensure DoW's operational units are paired with the NNSA technology experts to develop requirements early in the process to reduce the time of fielding a technology.

Nuclear Survivability will invest in innovative radiation hardening techniques to modernize microelectronics for strategic and space systems and increase the reliability of mission critical systems. This program will result in achieving key metrics, including improved understanding of radiation effects on advanced Complementary Metal Oxide Semiconductor (CMOS) technologies; Radiation Hardened/Strategic Radiation Hardened parts qualified and available for space and strategic modernization; Improved mission critical systems reporting; and improved testing procedure guidance for extreme radiation environments.

A. Mission Description and Budget Item Justification

The Physical Security Enterprise and Analysis Program (PSEAP) pursues the development of nuclear and conventional physical security materiel solutions in response to the stated needs and requirements of the Combatant Commands and Military Services. This program leverages commonalities in physical security requirements in order to closely balance and integrate the needs of users. The PSEAP is responsible for avoiding duplication of effort, ensuring systems integration, and promoting interoperability and sustainability. The materiel solutions either (a) lead to a Program of Record, (b) become technology insertions into existing programs; or (c) advance to being a certified Commercial/Government off-the-shelf product.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Physical Security System Capability Development	25.665	25.661	22.850
Description: This program's focus is on advanced component development and prototypes for physical security components and systems to support valid requirements while eliminating duplication of effort, pursuing the use of government and commercial off-the-shelf products, ensuring systems integration, and promoting interoperability and sustainability. Leverages RDT&E investments to achieve physical security enterprise-level solutions to deter, detect, delay, deny and defeat adversaries threatening nuclear and non-nuclear environments. Promotes government and appropriate industry standards for interoperability with existing programs of record to achieve cohesive system architectures. Improves transition of successful RDT&E innovations to DoW Acquisition agencies by using technology transition agreements and other tools to provide improved warfighter capabilities against asymmetrical, conventional and Weapons of Mass Destruction threats. FY 2026 Plans: - Improve supply chain security by mitigating vulnerabilities using physical security equipment/technology to counter potential threats to organic industrial base facilities and ports receiving materials from suppliers and shipping assets the supply DoW Services and foreign partners around the globe - Mature All Domain Counter-Uncrewed Systems (C-UXS) by addressing the proliferation of uncrewed systems used by our adversaries by advancing C-UXS capabilities that change the risk calculus for the adversary (i.e., deterrence) and increase Joint Force survivability and resiliency against UXS

A. Mission Description and Budget Item Justification

Per National Security Presidential Memorandum 35, the Department of War (DoW) leads the United States Government (USG) post-detonation National Technical Nuclear Forensics (NTNF) capability and directs the U.S. to maintain and advance NTNF capabilities leading to the attribution of the source of an actual or attempted nuclear attack in all environments. Per the 2022 Nuclear Posture Review, greater investment in NTNF tools is required to ensure they remain responsive to the threat. Per DoDD S-2060.04, OUSW(A&S) is the DoW office responsible for DoW's NTNF capabilities. Per the FY 2022 – FY 2026 Nuclear Forensics Analysis System Plan, accelerated timelines are required for the NTNF capability to collect, analyze, and evaluate both air and ground post-nuclear detonation samples. This program is the only DoW RDT&E program focused on Advanced Component Development & Prototypes for NTNF capabilities.

Collecting analyzing and evaluating post-detonation prompt signals and nuclear debris is critical to ensure the USG can identify the source of nuclear material and holding those involved or supporting an attack accountable is critical to our national defense and security. Swift and accurate forensic and attribution capabilities are vital to supporting the President and Secretary of War in developing an appropriate, and timely, national response to a nuclear event and to prevent future attacks. An effective NTNF capability ensures potential adversaries, or those who support them, know that they will be held accountable if they use proxies or other non-traditional delivery (e.g., false-flag operations) of nuclear weapons against the U.S., U.S. interests, or allies. Both internal and independent studies indicate that continued improvement to the USG's NTNF capabilities is needed to sustain a credible deterrent against an attempted or actual nuclear attack.

Additionally, this program sustains perishable U.S. technical expertise at the operational DoW laboratories required to respond to a post-detonation NTNF event. The DoW's laboratory capability in this area is limited by capacity and technical expertise. Increased support of the DoW's NTNF mission is crucial to prevent attrition of current capabilities and knowledge base, ensure that this critical and unique deterrence capability is not lost, putting the security of the nation and the ability to deter specific kinds of nuclear attack at risk, and meeting a higher standard of timeliness and confidence as directed.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: NTNF Capability Development	29.055	23.824	17.917
Description: The development of capability to collect, analyze, and evaluate prompt signals and nuclear debris is critical to our national defense and security. Swift and accurate forensic analysis and contribution to USG attribution (identification) processes are vital to supporting the President and Secretary of War in developing an appropriate national response to a nuclear event and to prevent future attacks in a timely manner. Recent Russian nuclear threats related to Ukraine have sharpened the understanding of, and need for, robust nuclear forensics capabilities.

Exhibit R-2A, RDT&E Project Justification: PB 2027 Office of the Secretary Of Defense		Date: April 2026	
Appropriation/Budget Activity 0400 / 4	R-1 Program Element (Number/Name) PE 0603161D8Z / <i>Nuclear Matters, Advanced Component Development & Prototypes</i>	Project (Number/Name) 040 / <i>National Technical Nuclear Forensics</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
NTNF investments support development and retention of technical nuclear forensics expertise and improvements in CONUS and OCONUS collection and fixed laboratory processes. Investments will also support legacy NTNF capabilities and the operationalization of new capabilities. FY 2026 Plans: - RDT&E investments in the collection, analysis, and evaluation of ground and airborne post-detonation debris samples. -- Collection Support: Improve ground collection capabilities and tools to accelerate mission timelines. Develop requirements documents and begin conceptual design prototypes for next generation unmanned airborne and autonomous ground collection systems. -- Analysis Support: Improve debris and prompt signals analysis capabilities and expertise development to accelerate analysis and attribution timelines. -- Evaluation support: Expand the debris diagnostic and prompt evaluation capability to expedite the attribution process. Develop and design IT infrastructure system of tools to rapidly generate and disseminate nuclear forensic results across the Department and interagency leadership. - Improve the Quality Assurance process ensuring that the surrogate samples used in NTNF exercises best match anticipated real-world NTNF ground and airborne samples. - Develop, design, and validate new speed of light sensor systems to increase the portability and scalability of prompt signals coverage. - Develop airworthiness package and conduct successful demonstration of Harvester particulate collection pods on an MQ-9A using Geo-synchronous Earth Orbit satellite connectivity. FY 2027 Plans: - Continue RDT&E investments in the collection, analysis, and evaluation of ground and airborne post-detonation debris samples. -- Continue to support collection: Improve ground collection capabilities and tools to accelerate mission timelines. -- Continue to support analysis: Improve debris and prompt signals analysis capabilities and expertise development to accelerate analysis and attribution timelines. -- Continue to support evaluation: Expand the debris diagnostic and prompt evaluation capability to expedite the attribution process. Develop and design IT infrastructure system of tools to rapidly generate and disseminate nuclear forensic results across the Department and interagency leadership. - Continue to improve the Quality Assurance process for ensuring that the surrogate samples used in NTNF exercises best match anticipated real-world NTNF ground and airborne samples. - Continue to develop, design, and validate new speed of light sensor systems to increase the portability and scalability of prompt signals coverage.

Note The Innovative Technologies program is reported in accordance with Title 10, United States Code, Section 119(a)(1) in the Special Access Program Annual Report to Congress.												
A. Mission Description and Budget Item Justification The DoW, in partnership with the National Nuclear Security Administration (NNSA), provides technical capability to understand and defeat nuclear threat devices, including improvised nuclear devices, radiological dispersal devices, and lost or stolen foreign nuclear weapons, as well as to develop foundational technologies supporting nuclear counterproliferation efforts.												
B. Accomplishments/Planned Programs (\$ in Millions)									FY 2025	FY 2026	FY 2027	
Title: Innovative Technologies									4.609	2.833	0.879	
Description: The DoW, through the Innovative Technologies program, will partner with the NNSA to develop technology aimed at preventing would-be proliferants from advancing nuclear weapons related efforts. Additionally, the DoW seeks to support current and future counterproliferation missions by leveraging the expertise within the national laboratories. The program goal is to ensure DoW's operational units are paired with the NNSA technology experts to develop requirements early in the process to reduce the time of fielding a technology.												
FY 2026 Plans: The Innovative Technologies program is reported in accordance with Title 10, United States Code, Section 119(a)(1) in the Special Access Program Annual Report to Congress.												
FY 2027 Plans: The Innovative Technologies program is reported in accordance with Title 10, United States Code, Section 119(a)(1) in the Special Access Program Annual Report to Congress.												
FY 2026 to FY 2027 Increase/Decrease Statement: FY 2026 to FY 2027 decrease reflects transition of DoW developmental acquisition efforts to some funded by end-use customers.

A. Mission Description and Budget Item Justification												
Nuclear Survivability will invest in innovative radiation hardening techniques to modernize microelectronics for strategic and space systems and increase the reliability of mission critical systems. This program will result in achieving key metrics, including improved understanding of radiation effects on advanced Complementary Metal-Oxide-Semiconductor (CMOS) technologies; Radiation Hardened/Strategic radiation hardened parts qualified and available for space and strategic modernization; Improved mission critical systems reporting; and improved testing procedure guidance for extreme radiation environments.												
B. Accomplishments/Planned Programs (\$ in Millions)									FY 2025	FY 2026	FY 2027	
Title: Nuclear Survivability Research & Development									2.762	2.990	3.039	
Description: Many DoW mission-critical systems must survive and operate through one or more nuclear weapons effects (NWE) environments. This requires assured DoW access to NWE-survivable components, materials, and the test and evaluation infrastructure to validate system performance.												
This program will result in achieving key metrics, including improved understanding of radiation effects on advanced CMOS technologies; Radiation Hardened/Strategic radiation hardened parts qualified and available for space and strategic modernization; Improved mission critical systems reporting; and improved testing procedure guidance for extreme radiation environments.												
FY 2026 Plans:												
- Increase access and reduce cost for technologies and materials that provide increased levels of survivability to the effects of nuclear weapons.												
- Sponsor RDT&E to better understand the effects of extreme radiation environments on state-of-the-art microelectronics to support nuclear modernization and improve radiation hardening by design.												
- Sponsor RDT&E to improve radiation hardening techniques leveraging novel additive manufacturing technology.												
- Complete comparative study on electromagnetic pulse hardening techniques for critical infrastructure in support of Executive Order 13865 requirements and issue report to Congress.												
- Fund additional data entry, periodic security updates, and data consolidation of the Strategic Radiation Hardened Electronics Council (SRHEC) Parts Library.												
FY 2027 Plans:

Note

New Start (Y/N): No

A. Mission Description and Budget Item Justification

The Environmental Security Technology Certification Program (ESTCP) demonstrates and validates innovative technologies for military installations, while its companion program, the Strategic Environmental Research and Development Program (SERDP), invests in applied research to develop these solutions.

ESTCP tests promising technologies in relevant operational environments across Department of War (DoW) installations, providing decision-makers with reliable performance and cost data before widespread implementation. By validating solutions under real-world conditions, ESTCP reduces adoption risks and accelerates technology transfer to end users. The program has an excellent track record of return on investment, with many solutions deployed directly to installations without further development. ESTCP demonstrations provide innovative, scalable technologies that enhance military readiness, improve warfighter capabilities, and strengthen defense infrastructure, prioritizing common sense, cost effective solutions that support operational effectiveness at military installations.

ESTCP conducts formal demonstrations at DoW facilities in operational settings to document and validate improved performance and cost savings. To ensure real impact, ESTCP collaborates with end users and regulators throughout the development and execution of each demonstration. Transition challenges are overcome with rigorous and well-documented demonstrations that provide the information needed by all DoW partners to confidently invest in these innovative, transformative technologies.

The program employs a competitive selection process to ensure high-quality demonstrations, issuing solicitations for proposals from government, academia, and industry. Each project develops a formal test and evaluation plan, and demonstration results undergo rigorous technical reviews to ensure conclusions are accurate and supported by data. This process ensures installations receive solutions that address current operational needs and deliver measurable benefits to DoW.

A. Mission Description and Budget Item Justification

The Environmental Security Technology Certification Program (ESTCP) demonstrates and validates innovative technologies for military installations, while its companion program, the Strategic Environmental Research and Development Program (SERDP), invests in applied research to develop these solutions.

ESTCP tests promising technologies in relevant operational environments across Department of War (DoW) installations, providing decision-makers with reliable performance and cost data before widespread implementation. By validating solutions under real-world conditions, ESTCP reduces adoption risks and accelerates technology transfer to end users. The program has an excellent track record of return on investment, with many solutions deployed directly to installations without further development. ESTCP demonstrations provide innovative, scalable technologies that enhance military readiness, improve warfighter capabilities, and strengthen defense infrastructure, prioritizing common sense, cost effective solutions that support operational effectiveness at military installations.

ESTCP conducts formal demonstrations at DoW facilities in operational settings to document and validate improved performance and cost savings. To ensure real impact, ESTCP collaborates with end users and regulators throughout the development and execution of each demonstration. Transition challenges are overcome with rigorous and well-documented demonstrations that provide the information needed by all DoW partners to confidently invest in these innovative, transformative technologies.

The program employs a competitive selection process to ensure high-quality demonstrations, issuing solicitations for proposals from government, academia, and industry. Each project develops a formal test and evaluation plan, and demonstration results undergo rigorous technical reviews to ensure conclusions are accurate and supported by data. This process ensures installations receive solutions that address current operational needs and deliver measurable benefits to DoW.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Environmental Technology Demonstration/Validation	26.266	26.529	33.312
Description: Funds are programmed to develop cutting-edge technologies that enable the DoW to deploy its most critical modernization initiatives on DoW -controlled installations. These innovations create the foundation for nuclear deterrence, missile defense, Indo-Pacific posture, and industrial base readiness across DoW 's 28 million acres.			

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2027 Office of the Secretary Of Defense			Date: April 2026

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2025	FY 2026	FY 2027
Funding drives the most innovative solutions from industry, academia, and federal government partners addressing key priorities: Tackling emerging and persistent land impact challenges, particularly from per- and polyfluoroalkyl substances (PFAS); addressing live-site unexploded ordnance (UXO) in underwater environments; advancing conservation and range sustainment technologies; and minimizing DoW weapons systems' lifecycle costs through hazardous materials elimination. These solutions ensure DoW maintains the contiguous, unencumbered spaces needed to effectively deploy, test, and operate new capabilities. By maximizing available training days, reducing regulatory burden, and enhancing land management, these technologies create the conditions necessary for DoW to install and operate next-generation systems on its installations while ensuring military readiness for multiple training units over time. FY 2025 Accomplishments: Demonstrated PFAS destruction technologies for various media. Initiated engineering tests and live site demonstrations of munitions detection technologies. Demonstrated environmental DNA (eDNA) for rapid species surveys. Validated chemical resilience technologies including PFAS-free corrosion control methods, depainting alternatives, sustainable energetics processing, and PFAS-free firefighting formulations per 2020 National Defense Authorization Act (NDAA) requirements. Live site demonstrations in support of underwater UXO remediation were initiated with solicitations released to support the remaining live site demonstrations. FY 2026 Plans: Continue PFAS treatment technology validation and assess technology combinations. Support live-site demonstrations of munitions response technologies. Advance environmental security technologies to improve compliance and reduce regulatory burdens. Demonstrate chemical resilience technologies including antimicrobial and anti-biofouling coatings, isocyanate-free fighter jet coatings, chromium-free thermal spray for F-35 landing pads, ship water disinfection alternatives, non-PFAS explosive binders, and energetic destruction technologies. Live site and test bed demonstrations will continue in support of underwater UXO remediation. FY 2027 Plans: Continue PFAS treatment technology validation and assess technology combinations, particularly in support of stormwater treatment. Advance environmental security technologies to improve compliance and reduce regulatory burdens. Demonstrate and/or validate chemical resilience technologies including saltwater compatible film forming foams (F3) for shipboard firefighting of fuel fires, alternative technology prototypes for demilitarization of energetics, PFAS-free processing of explosives to produce similar energetic particles in pilot scale production, and corrosion mitigation protocols for additively manufactured steels. Live site and test bed demonstrations will continue in support of underwater UXO remediation. FY 2026 to FY 2027 Increase/Decrease Statement:

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2025	FY 2026	FY 2027
The FY 2026 to FY 2027 increase of \$6.783 million a programmed increase for PFAS chemical resiliency in weapons systems and platforms and development of alternative technology for demilitarization of energetics.					
Title: Energy Technology Demonstration/Validation			39.770	48.979	46.911
Description: Funds are programmed to evaluate and deploy advanced energy and water technologies across DoW installations. This program directly supports Executive Order (EO) 14154, “Unleashing American Energy” and EO, 14156 “Declaring a National Energy Emergency” by enhancing the security and resilience of military installation infrastructure while improving operational efficiency and reducing costs. Military installations remain largely dependent on commercial power grids vulnerable to disruption from cyber-attacks, aging infrastructure, weather issues, and potential direct attacks. As electricity outage frequency and duration increase, these investments enable DoW to withstand and rapidly recover from energy disruptions while ensuring mission continuity, addressing key vulnerabilities identified in EO 14262, “Strengthening the Reliability and Security of the United States Electric Grid.” The program leverages DoW 's diverse built infrastructure to evaluate promising commercial technologies under varied environmental conditions and building types. By conducting demonstrations at actual installations, the program provides technology developers low-risk opportunities to validate performance when integrated with legacy systems under real-world conditions. This approach accelerates technology adoption by generating critical cost and performance data while giving installation managers hands-on experience with innovative solutions without the financial risk of full procurement. FY 2025 Accomplishments: Continued planning multi-year demonstrations for microgrid and energy storage technologies that improved installation energy system reliability and resilience, while reducing the time and cost of microgrid design, development, and operation. Completed feasibility studies on the implementation of ambient temperature thermal microgrids on DoW installations to improve resilience by reducing dependence on imported energy. High efficiency building heating, ventilation, and air conditioning (HVAC) technologies demonstrations continued to establish life-cycle cost and indoor air quality improvement performance data. Successful demonstrations of several novel dehumidification technologies give DoW installation new tools to cost-effectively mitigate mold growth in buildings, especially unaccompanied housing, while simultaneously improving occupant comfort. Planned multi-year demonstrations for water efficiency and resilience technologies and analysis. Technology transition efforts through targeted partnerships with energy services companies (ESCOs) and utilities continued. These demonstrations addressed requirements for installation energy resilience stated in DoW Instruction 4170.11, and energy and water efficiency objectives outlined in the DoW Installation Energy Strategy. Energy resilience solutions were sought that integrated installation and operational energy assets to provide dual-use benefits. FY 2026 Plans:					

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2027 Office of the Secretary Of Defense		Date: April 2026		
Appropriation/Budget Activity 0400 / 4	R-1 Program Element (Number/Name) PE 0603851D8Z I Environmental Security Technology Certification Program (ESTCP)	Project (Number/Name) 514 I Environmental Security Technology Certification Program		
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026	FY 2027
Demonstrations of innovative technologies and technology transition approaches are continuing to improve installation energy and water resilience in accordance with DoW Instruction 4170.11, improve building performance, indoor air quality, energy and water efficiency and reduce facilities’ utility and operational costs. Demonstrations are being initiated for integrated solutions that combine facility energy demand reduction, advanced district energy systems, energy storage and load flexibility to improve building-level and system-wide efficiency and reliability. Integrated solutions provide benefit through cumulative improvements in facility and equipment efficiency that reduce whole-system life cycle costs. Solutions vary by regional factors and projects will be selected to validate system design approaches that are tailorable to the Department’s installation portfolio. The program will seek to facilitate teaming with key stakeholders to leverage expertise in system design and analysis, cybersecurity of control system, systems integration, project development and utility services.				
FY 2027 Plans: Demonstrate and validate technologies that improve the performance, cybersecurity, and robustness of installation buildings as well as water and energy infrastructure. Technologies include zero-trust principles applied to facility related control systems, long-duration energy storage added to electric microgrids, and building thermal energy networks that link buildings via an ultra-efficient ambient temperature loop, facilitating shared heating and cooling resources. Additionally, investments will focus on assessment of regional transmission grid resilience, guiding investment and engagement strategies to ensure reliable supplies of energy needed for critical missions.				
FY 2026 to FY 2027 Increase/Decrease Statement: The FY 2026 to FY 2027 decrease of \$2.068 million reflects a contraction on the focus of demonstrations that involve energy and water resilience technologies, reflecting adjustments to promote Government efficiencies from efficiency in alignment with Executive Order 14222.				
Title: Sustainable Technologies Evaluation and Demonstration Program		3.000	3.000	3.000
Description: The DoW Sustainable Technology Evaluation and Demonstration (STED) Program under the Office of the Assistant Secretary of War for Energy, Installations and Environment (OASW EI&E), mandated by Congress, works directly with the warfighters, military departments, DoW Components, government agencies, and industry partners. The STED Program tests and evaluates (T&E) emerging, resilient, and sustainable technologies to rapidly field viable technologies across the Department of War (DoW), increasing mission capabilities, operational readiness and supply chain implementation.				
With an agile structure capable of addressing exigent demands, the Program collaborates directly with the warfighter and other government partners to validate the performance of technologies against current mission priority needs while creating awareness of their cost effectiveness in supporting operational readiness, resilience, and security. The Program identifies commercially available technologies to address government requirements and Secretary of War priorities in increasing deterrence, lethality, and readiness, matching threats to capabilities and rapidly fielding emerging technologies to meet mission needs. Testing and

Exhibit R-2A, RDT&E Project Justification: PB 2027 Office of the Secretary Of Defense			Date: April 2026		
Appropriation/Budget Activity 0400 / 4		R-1 Program Element (Number/Name) PE 0603851D8Z / <i>Environmental Security Technology Certification Program (ESTCP)</i>		Project (Number/Name) 514 / <i>Environmental Security Technology Certification Program</i>	
B. Accomplishments/Planned Programs (\$ in Millions)			FY 2025	FY 2026	FY 2027
evaluation activities are carried out within operational and training environments and focus on meeting or exceeding end-user performance requirements. The Program works with federal supply organizations and specification owners to accelerate transition of validated technologies. The DoW STED Program reduces the burden on installation personnel and major commands by identifying technologies, validating technical data, and executing planned coordination with end-users. These technologies enhance and sustain mission readiness, reduce health and safety impacts to the warfighter, improve operational performance, reduce life cycle costs, and lessen waste and environmental impacts with improved availability of viable technologies required for DoW operations, training, and maintenance activities. The STED Program has established working relationships with all military departments, multiple commands, including US Special Operations Command (USSOCOM), introducing blast over pressure (BOP) reduction technologies and wearable biometric sensors for warfighters. The Program is working with numerous federal partners including the Department of Homeland Security (DHS), the National Aeronautics and Space Administration (NASA) and the Federal Bureau of Investigation (FBI). The Program has worked with these stakeholders to successfully T&E and implement cost effective emerging technologies, such as military specification (milspec) qualified biobased cleaner, lubricant, and preservatives (CLPs) for weapons and weapon systems and other biobased technologies/products that reduce health impacts and increase safety while increasing mission performance, lethality, and readiness. FY 2026 Plans: The program will continue ongoing demonstrations and initiate new test and evaluations (demonstrations) of technologies and products that increase lethality, improve cost-effectiveness and enhance readiness. STED will increase participation in test and evaluation of emerging technologies at DoW installations and federal agency facilities with military departments, DoW components, including special operation forces (SOF) and federal agency command-levels. These efforts will accelerate technology transition across the federal government, expand the Program's scope while supporting domestic manufacturing capabilities and meeting Program Congressional mandates of FY24 NDAA. FY 2027 Plans: The program will focus on growth through ongoing and new test and evaluations (demonstrations) of technologies and domestically sourced products that improve cost-effectiveness and enhance Warfighter readiness. STED will increase command-level participation in test and evaluation for solutions at DoW installations and federal agency facilities. These efforts will accelerate technology transition across the federal government while supporting domestic manufacturing capabilities and meeting Program Congressional mandates of FY24 NDAA. FY 2026 to FY 2027 Increase/Decrease Statement:

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2025	FY 2026	FY 2027
N/A					
Title: Natural Hazards and Installation Resilience Technology Demonstration/Validation			51.012	44.790	41.843
Description: Funds are programmed to develop and demonstrate hardened infrastructure, physical systems, and decision support tools that protect DoW installations from natural hazards and enhance mission resilience. The program delivers technologies that strengthen critical infrastructure, harden facilities, and improve operational capabilities during weather issues. These investments directly address EO 14153, "Unleashing Alaska's Extraordinary Resource Potential" as it relates to infrastructure, permafrost, critical minerals, and potential subsidence. Natural disasters hinder DoW mission readiness and have proven costly to installation infrastructure with billions in damage repair in recent years. As natural hazards increase in frequency and severity, SERDP and ESTCP investments provide tangible solutions to enhance installation resilience and protect mission-critical operations. FY 2025 Accomplishments: The program conducted rapid testing of autonomous ground-based vehicles for firefighting applications through partnership with the Navy's Tech Grove. It advanced virtual reality for wildland fire training environments using next-generation fire and smoke modeling tools. The program continued planning multi-year demonstrations focused on hardening infrastructure against natural hazards across key DoW geographies, implementing physical systems to protect DoW water supply, and improving the resilience of systems linking DoW installations and surrounding community infrastructure. The program continued projects that evaluated heat stress forecasting and mitigation technologies that are intended to enhance mission flexibility and minimize downtime for military personnel during black flag conditions. Through the Innovation Landscape Network, end-users rapidly refined technology investments for installations and mission applications, including permafrost-resistant construction demonstrations with United States Northern Command, coastal erosion protection systems for the mid-Atlantic and Alaska, permafrost stabilization hardware, and saltwater intrusion barriers. The program provided rapid science support to Army Garrison at Roi Namur (Kwajalein) for development of early warning system and overtopping wave modeling following the inundation event in 2024. FY 2026 Plans: The program is initiating additional rapid demonstrations for hardened infrastructure and physical systems to address natural hazards facing installations in key DoW geographies, focused on coastal installations, wildfire, Pacific Island resilience, and the Arctic. Projects will implement permafrost stabilization technologies, wildfire planning and response technologies, and coastal resilience hybrid design and 3-dimensional printing evaluations. The formal network of technology testbeds called "Innovation Landscapes" will continue in areas with high concentrations of DoW installations including Alaska, Southern California, Sonoran Desert (Arizona), Coastal California, mid-Atlantic, Gulf Coast of Florida, Hawaii, and the Southeast US. Projects continue to build robust, accelerated technology transfer on installations and with partner agencies in coordination with DoW Sentinel Landscapes partnerships. Within this integrated Innovation Landscape Network, DoW end-users helps direct technology priorities to sustain

mission activities and meet environmental compliance in the face of compounded threats. These testbeds develop resilience metrics to improve natural hazard readiness and will leverage other agency funding and expertise to address complex resilience problems.					
FY 2027 Plans: The program will expand and mature rapid demonstrations within the Innovation Landscape Network through research agencies and universities for hardened infrastructure, physical systems, and rapid responses to address natural hazards facing installations in key DoW geographies. ESTCP will expand capacity for rapid research or technology support for installations experiencing natural hazard mission impacts. The program will also add prize challenges and other transactional authority (OTA) through partnership with the Navy’s Tech Bridge Orlando to engage dual purpose technologies, industry partners, and end users to accelerate demonstration and adoption of natural hazards tools and technology. The program will continue projects to implement permafrost travelability and construction stabilization technologies on installations in the Arctic, coastal hazard mapping tools in Alaska and Pacific Islands, wildfire planning and response technologies, and industry engagement for applications of artificial intelligence to resilience applications. Prescribed fire tools, advanced training technologies, and dual-purpose ground based autonomous firefighting vehicles will be piloted. eDNA sampling tools and genetic treatments of invasive species will be operationally demonstrated.					
FY 2026 to FY 2027 Increase/Decrease Statement: The FY 2026 to FY 2027 decrease of \$2.947 million reflects a reduction associated with a realignment for regenerative grazing.					
Accomplishments/Planned Programs Subtotals		120.048	123.298	125.066	
		FY 2025	FY 2026		
Congressional Add: Environmental research-to-demonstration partnership centers		25.000	-		
FY 2025 Accomplishments: n FY 2025, the program established 4 university-based Environmental Research-to-Demonstration Partnership Centers with academic institutions, and a fifth is under consideration. These centers will create a structured pipeline to accelerate the transition of promising technologies from research to demonstration across several ESTCP program areas. The centers are leveraging university expertise and facilities to complement ESTCP's capabilities in PFAS treatment technologies, weather issues, coastal installation resilience, wildland fire, and critical minerals. This network will implement a coordinated approach including technical working groups, streamlined validation processes, and collaborative teams of researchers, industry partners, and DoW end-users. The centers will serve as regional hubs for technology demonstration, providing DoW with expanded capacity to address installation challenges while delivering validated, cost-effective solutions that improve military readiness and environmental performance.					
Congressional Add: Immersion cooling		2.500	-

A. Mission Description and Budget Item Justification

The Coalition Warfare Program (CWP) supports the Department's initiatives to increase burden sharing, strengthen alliances and enhance interoperability, support the defense industrial base and technological advantage, and maintain focus on warfighter needs.

This program supports Department of War (DoW) organizations that work with foreign partners to collaboratively address strategic technology gaps for current and future missions, develop interoperability solutions for coalition operations, and develop and strengthen defense relationships.

The CWP provides a broad base of technological, operational, and logistical support for military operations and eases the United States (U.S.) financial and manpower burdens associated with meeting military goals and objectives. Coalitions and relationships with international partners that benefit the U.S. warfighter are high priorities for the nation and the DoW.

The CWP supplements U.S. Government proponents' funding for cooperative efforts, unlocking external capital to complete research and development activities with foreign partners. When CWP funds are used to help fund a cooperative project, that project leverages technical and financial contributions of the foreign partners and accelerates the development and delivery of technical solutions to the warfighter. For every \$1 the CWP has invested in cooperative projects with 86 partners since 2001, the program has leveraged \$3 in foreign partner resources and \$2 in other U.S. Government resources. The CWP funding enables the DoW project teams to transition technology to operational use, further development, or integration into other systems. These projects may also form the basis for future cooperation with international partners.

A. Mission Description and Budget Item Justification

The Coalition Warfare Program (CWP) supports the Department's initiatives to increase burden sharing, strengthen alliances and enhance interoperability, support the defense industrial base and technological advantage, and maintain focus on warfighter needs.

This program supports Department of War (DoW) organizations that work with foreign partners to collaboratively address strategic technology gaps for current and future missions, develop interoperability solutions for coalition operations, and develop and strengthen defense relationships. The CWP provides a broad base of technological, operational, and logistical support for military operations and eases the United States (U.S.) financial and manpower burdens associated with meeting military goals and objectives. Coalitions and relationships with international partners are high priorities for the nation and the DoW.

The CWP supplements U.S. Government proponents' funding for cooperative efforts, ensuring U.S. funds are sufficient to complete research and development activities with foreign partners. When CWP funds are used to help fund a cooperative project, that project leverages technical and financial contributions of the foreign partners and accelerates the development and delivery of technical solutions to the warfighter. For every \$1 the CWP has invested in cooperative projects with 86 partners since 2001, the program has leveraged \$3 in foreign partner resources and \$2 in other U.S. Government resources. The CWP funding enables the DoW project teams to transition technology to operational use, further development, or integration into other systems. These projects may also form the basis for future cooperation with international partners.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Coalition Warfare Program	9.828	10.062	10.082
Description: The CWP provides funding on a competitive basis to DoW organizations to conduct cooperative research, development, test, and evaluation projects with foreign partners. The goals of the CWP program are to: collaboratively address strategic technology gaps for current and future missions, develop interoperability solutions for coalition operations, and strengthen current and future defense partnerships. The CWP selects projects for funding through an annual competitive selection process in accordance with DoW and Combatant Command needs. In addition to funding newly selected projects, the program also provides funding to projects that began in earlier selection cycles (for a total of up to three years of funding for each project). Currently, the funded portfolio includes 67 active projects governed by negotiated/signed international agreements with 20 foreign partners.

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
FY 2025 funding was used to incrementally fund executing projects selected in previous nomination cycles that are bound by government-to-government international agreements. CWP projects that were executed and received incremental funding in FY 2025 are: • Confirm the transition performance (boost to ramjet operation burn, “B2B”) of a liquid-fueled integral rocket ramjet in full-scale ground experimentation - THRESHER Propulsion Boost through Burn (THRESHER B2B) (US Air Force) • Advance multiple armament system technologies and integrate them to create a distributed, contextually aware, heterogeneous collaborative counter unmanned aerial system capability against multi-agent UAS threats. (CHCUAS) (US Navy) • Develop a capability to provide beyond line-of-sight wide area volume surveillance, target track and cueing over large forward areas from a sanctuary-based High Frequency Over the Horizon (OTH) radar to support microwave fire-control radars on forward stationed blue platforms hiding in contested environments, enhancing platform survivability (BIFOCAL) (US Navy) • Develop multi-modal autonomous navigation solutions for unmanned surface vessels operating in Global Navigation Satellite System (GNSS)-denied environments - Next Generation Unmanned Surface Vessel (NEXUS) (US Navy) • Develop and mature expendable Countermeasure (CM) concepts to defend against surrogate imaging seeker threats and laser protected devices during contested Air Operations - Electro-Optic Countermeasures and Protection Measures (EOCM/EOPM) Trials (THOR’S HAMMER) (US Air Force) • Research, develop, prototype, and test wide area decontamination solutions on various terrain (ports of debarkation and embarkation, main supply routes, and forward staging areas) - Chemical Biological Wide Area Decontamination (CBWAD) (US Army) • Characterize the region-specific threat of Severe Acute Respiratory Infections (SARI) and initiate clinical testing of a Middle East Respiratory Syndrome (MERS) Coronavirus (CoV) vaccine candidate (SARI) (US Army) • Develop an open standards architecture to enable “plug-n-play” insertion of assistive (AI) agents into coalition Intelligence, Surveillance, Reconnaissance (ISR) Processing, Exploitation and Dissemination (PED) systems and build a new generation of AI enabled smart sensors - Collaborative AI at the Tactical Edge (CATE) (US Army) • Mature interoperable information and command and control decision support systems for threat awareness, understanding, and response in a multinational coalition computational environment - Integrated Threat Awareness – Coalition (ITAC) (US Army) • Integrate low power sensors into stealth underwater power sources - Stealth Powered Underwater Sensors (BEACONS LPS) (US Navy) • Deliver a COMPACT solid-state scalable Gigawatt High Power Microwave (HPM) “Cannon”, exploiting state-of-the art US Blumlein technology, Sandia Lab’s Vertical Cavity Surface Emitting Laser (VCSEL) lasers, and Singapore high-power miniature switches, capable of neutralizing electronic devices with broad threat capabilities (COMPACT HPM) (US Air Force) • Develop and refine neurocognitive optimization training tools for improving Soldiers’ physical and psychological resiliency to combat operational stress - Brain-Physical Optimization Conditioning (B-POC) as a Training Tool for Improving Soldiers’ Resiliency to Combat Stress (BPOC IPCFEX) (US Army)			
			FY 2027

Remarks			
D. Acquisition Strategy The Combatant Commands, Services, Defense Agencies, and the Office of the Secretary of War nominate candidate projects on an annual basis. CWP provides selected projects up to three years of incremental funding. The Program selects projects that address DoW priorities and meet the needs and requirements specified by the Joint Staff and the Combatant Commanders. Projects have equitable contributions from international partners, strong potential for transition, Combatant Command endorsement, and contribute to allied interoperability and/or meet a warfighter need.

Note

New Start (Y/N): No

Relevant previously slated funding for PE 0604011D8Z / Next Generation Information Communications Technology (5G) from FY 2028 to FY 2030 has been transferred to the new PE 0603331D8Z / Future Generation Wireless Technologies. The new 060331D8Z dedicated program element is needed to advance the development of future generation wireless (currently 6G) systems and technology beyond the basic research stage and effectively leverage commercial advancements for national priorities and into defense utility as they occur over the next several years

A. Mission Description and Budget Item Justification

Purpose: This program supports the Department's mission to achieve peace through strength by restoring the warrior ethos and trust in our military, rebuilding our military by matching threats to capabilities, and reestablishing deterrence by defending our homeland.

The Department of War (DoW) Next Generation (FutureG) Information Communications Technologies (ICT) program will conduct large-scale experimentation and prototyping of fifth-generation (5G) and future-generation wireless technology (FutureG) cellular network technology for military uses. The program will adopt, adapt, and advance on commercial technologies for asymmetric warfighter advantage and research and develop wireless innovations to meet DoW technical and capability requirements.

Approach:

- Leverage and advance 5G/FutureG capability to deliver asymmetric operational warfighting advantage over China.
- Rebuild US leadership in 5G/FutureG for strategic advantage in economic/information competition.
- Leverage and drive increasing overlap between commercial mobile network capabilities and warfighting needs.

Exhibit R-2, RDT&E Budget Item Justification: PB 2027 Office of the Secretary Of Defense	Date: April 2026
---	-------------------------

Appropriation/Budget Activity 0400: <i>Research, Development, Test & Evaluation, Defense-Wide I</i> BA 4: <i>Advanced Component Development & Prototypes (ACD&P)</i>	R-1 Program Element (Number/Name) PE 0604011D8Z <i>I Next Generation Information Communications Technology (5G)</i>
---	---

- Deliver high availability systems with security assurance in all DoW operational settings.
- Provide the communications fabric required to achieve Combined Joint All Domain Command and Control w/ Allies & Partners and ensure that both near-term and future generations of information and communications technologies will be capable of supporting US military and national security objectives.
- Enable high-capacity, dense communications at the edge of for the Indo-Pacific AOR that will drive improved, robust, available communications and edge AI for low-latency, high-availability AI workloads driven by Warfighter requirements

Program Partners:

DoW Chief Information Officer (CIO)

Joint Staff, Combatant Commands, North Atlantic Treaty Organization (NATO) Allied Command Transformation, Military Services and DoW Agencies
Interagency – Department of Energy (DOE), Intelligence Community (IC), National Telecommunications and Information Administration (NTIA), Federal Communications Commission (FCC), Department of Homeland Security (DHS), National Security Administration (NSA), Department of Justice (DOJ), National Science Foundation (NSF), National Institute of Standards (NIST), National Safety Security Council (NSSC), Department of State (DOS), Department of Commerce (DOC), and 5G Interagency Policy Committee (IPC)

Industry – Over 300 U.S. companies and academic institutions including national/global communications providers, communication equipment manufacturers, elements of the defense industrial base, innovative small businesses and members of the National Spectrum Consortium (NSC) and Information Warfare Rapid Prototyping (IWRP)consortium and the Open RAN Policy Coalition (ORPC).

A. Mission Description and Budget Item Justification

Focus investment on 1) waveform resilience for tactical and expeditionary environments, 2) simplified network deployment (logical and physical), management, and orchestration, and 3) heterogenous network integration for Partner Force interoperability and interchangeability. At end-state, provide innovation that enables commercial network technologies in tactical operations and advance 5G/6G technology for scalable, interoperable, and resilient warfighting networks to execute effective communications for coalition coordination with Allies and Partners. When able, expeditionary and tactical projects will be evaluated in a deployed expeditionary environment over tactical and applicable commercial 5G/6G infrastructure with operationally relevant numbers of users and geographic scale.

Current efforts will continue to leverage scalable, interoperable, and resilient warfighting networks that support Combined Joint All-Domain Command and Control. Future efforts will optimize within the constraints of commercial 5G/6G standards by investigating application of relevant areas ahead of commercial markets and advocating for tactically relevant, high payoff seedling research in artificial intelligence, quantum technologies, operational security, and future standards development.

The Army Tactical Mobility project is a cost effective, combat-ready 5G On-The-Move (OTM) Command and Control (C2) capability that meets latency, throughput, range, and resiliency objectives. This program will address operational needs and future Secure Cellular Program requirements for survivability of Army networks to include the distributed Command Post (i.e., mobility, dispersion, concealment). Additionally, in partnership with the NATO Cooperative Cyber Defense Center of Excellence, the Scalable Interoperable Resilient-5G (SIR-5G) initiative employs 5G secure roaming, Radio Access Network (RAN) Sharing, and internetworking to provide a 5G warfighting network that NATO allies can directly procure as they increase their defense spending.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Expeditionary and Tactical Use	36.455	12.281	-
Description: Demonstrate use cases that enable commercial network technologies in tactical operations, while also assessing and developing mitigations to their security vulnerabilities.			
FY 2026 Plans: In FY 2026, the program will continue to improve interoperability for forces from different NATO Allies to share data and coordinate actions in near real-time, under stress and in contested conditions; develop advanced expeditionary 5G tactical network communication capabilities that provide high bandwidth, high data speeds on a resilient, secure architecture and cross-platform compatibility for both commercial and specialized devices; develop a unified, software-defined radio platform integrating 5G

A. Mission Description and Budget Item Justification

Focus investment on 1) 5G/6G Commercial Technology application and Commercial/Military shared resources that leverage both commercial and coalition networks without requiring new spectrum access and 2) expanding military communications coverage and increasing resiliency by integrating non-terrestrial networks (NTN) and high-altitude platforms to extend 5G/6G coverage to challenging areas and provide backup for existing areas. At end-state, deliver high availability wireless communication systems with security assurance across all DoW operational settings by exploiting the growing DoW diversity, coalition, and commercial communication option to provide high-availability secure communication and providing wireless network risk assessment tools and mitigations that inform operational decision-making.

Current efforts will leverage world-wide high availability commercial networks for assured and resilient DoW communications. Future efforts will build on today's developments in non-terrestrial networks toward multi-layer non-terrestrial networks that will provide ubiquitous access to communication and compute.

Prototyped and/or enhanced capabilities will be based on technologies such as anomaly detection and zero-trust policy enforcement to maximize availability and resilience for wireless connectivity; multi-networking across wired and wireless systems for finding and exploiting alternate paths and redundant paths to ensure secure and reliable communication; Radio Access Network (RAN) Sharing that leverage commercial and private mobile network operators; and 5G non-terrestrial networks that use satellite, drones, and other low-altitude airborne vehicles to provide connectivity. These technologies will enable warfighters to access mobile communications anywhere they operate leveraging existing commercial 5G infrastructure and enhanced 5G network security architectures.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Ubiquitous, Secure, and Instant Access	36.170	21.865	-
Description: Demonstrate the capacity to deliver high availability wireless communication systems with security assurance by prototyping and/or enhancing technologies to both defend and exploit leverage 5G networks.			
FY 2026 Plans: In FY 2026, the program will continue to identify, develop, and demonstrate agile and operationally relevant RAN Sharing solutions to leverage commercial and private mobile network operators; develop and demonstrate single-layer 5G NTN composed of air or space platforms; continue to conduct 5G security assessments at the classified level at INL; and culminate and transition remaining tasks relative to ongoing project closeouts.

A. Mission Description and Budget Item Justification

Continue to research and leverage Open Radio Access Network (Open RAN) commercial technologies to accelerate critical DoW enterprise and mission capabilities and support the ability to fully leverage secure and resilient next generation networks.

Support commercially sustainable advancements that deliver military and industry impact using open systems.

DoW will conduct active and passive security vulnerability assessments of 5G prototypes in order to support zero-trust security designs for military 5G applications.

Funding will be used to develop policies, regulations, and standards for streamlined deployment of protected, resilient Government and commercial networks and continue development of Open Radio Access Network (ORAN) standards and technologies that accelerate the adoption of open interfaces, interoperable subsystems, and modular, multi-vendor solutions, as well as leverage new technology components to create new ICT systems.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Resilient and Open Commercial Solutions	1.140	5.132	-
Description: Develop open-source implementations of open RAN, policies, regulations, and standards for streamlined deployment of protected, resilient Government and commercial networks. Conduct active and passive security vulnerability assessments to support 5G security capabilities.			
FY 2026 Plans: Continue efforts to inform and influence policies, regulations, and standards within DoW, the U.S. Government, and international bodies supporting a forward-thinking NextG position. Strengthen existing and develop new technology relationships with allies and partners that lead to common standards, open, secure and interoperable technologies and FutureG innovation and development in support to the joint warfighter. Continue to support DoW CIO recommendations on standards and spectrum policy into relevant FutureG research efforts.			
FY 2026 to FY 2027 Increase/Decrease Statement: The decrease of \$5.132 million between FY 2026 and FY 2027 reflects a realignment of DoW funding.

A. Mission Description and Budget Item Justification

The ISAC Line of Effort and projects focus research around both data and physics topics critical to realizing object and environmental detection using 5G/6G. These research topics include but are not limited to leveraging wireless info for detections, standards, Open RAN, program interfaces, AI/ML training, channel modeling, beam steering, reflective surfaces, optimization, spectrum sensing, and waveforms. Research has a defined migration path for integration into existing fusion and C2 systems. Transitions of ISAC technology will occur through additional features in existing C2 and intelligence systems, open-source software, candidate features for standards, hardware, and workforce development.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Integrated Sensing and Communications	5.505	2.000	-
Description: Establish long-term research and application paths to give the U.S. a leap-ahead, stay-ahead position in ISAC for both capabilities and countermeasures.			
FY 2026 Plans: FY 2026 serves as the initial kickoff of development programs identified in the ISAC technology roadmap developed in FY 2025. These projects focus around the “radar-like” identification of objects and environments utilizing communications systems. These system collaboration aspects will allow the systems to perform at scale and ascertain context of the objects in their environment. This is an enabling technology, likely to be prominent in Golden Dome for America.			
FY 2026 to FY 2027 Increase/Decrease Statement: The increase of \$2.000 million between FY 2026 and FY 2027 is due to a realignment of DoW funding.

Note

New Start (Y/N): No

A. Mission Description and Budget Item Justification

The Department of War (DoW) RDT&E corrosion prevention program, as defined in Public Law 107-314 in section 2228 of title 10 United States Code (section 2228(d) (2)), is a key mechanism to directly address the National Defense Strategy to sustain our lethal force and modernize capabilities within the organic industrial base. Additionally, the corrosion program addresses DoW's annual cost in corrosion that exceeds \$20 billion across the enterprise. The strategic goal of the DoW Corrosion Prevention Program is to improve weapon system readiness through the implementation of targeted and effective material and process solutions that reduce corrosion's impacts on reliability, maintainability, and cost of maintaining DoW weapon systems and infrastructure. Historically, the program's high TRL tech insertion projects have yielded an average a 17:1 return-on-investment. The focus on modern technology solutions for sustainment in weapon systems, equipment, and facilities corrosion challenges requires meaningful efforts to align policies and workforce development of field and depot level maintenance to truly effect change in reducing short- and long-term costs and increasing readiness and availability in direct support of the national defense strategy. Specifically, the DoW corrosion program looks at joint applications of DoW assets, as well as those with identified high costs/low availability to make impacts across the enterprise in partnership with the public and private sectors. It also addresses the challenges of a contested logistics environment. This overarching effort breaks down organizational barriers and applies meaningful and direct support to the warfighter across the enterprise.

This program fully aligns with the ODASW (MR) Corrosion Policy and Oversight program strategy. The primary areas of focus in the execution of the strategy include: testing and transitioning corrosion technologies in conjunction with the military departments; funding for education and training of the organic workforce in corrosion-related certifications; development and coordination of department corrosion policies; development and adoption of industry standards; research of quantifiable data towards identification of corrosion costs; partnerships with trades, associations, and allied partner nations; coordination of enterprise level corrosion community; and a focus on long-term solvency of systems.

Corrosion accounts for a 33% reduction of operational availability in aviation consistently in Government Accountability Office, Congressional Budget Office and DoW Inspector General audits. Several aviation programs (F35/F22) without primary consideration of corrosion impacts have shown to increase program cost requirements over 100% of the initial sustainment plan to rectify unplanned corrosion challenges (\$664 million to \$1.3 billion, GAO-12-447, GAO-14-425).

Corrosion imposes more than \$20 billion in annual maintenance costs on the Department of War, according to quantitative analyses from Congress, the GAO, and the Defense enterprise across weapon systems, equipment, and facilities. Despite this massive, well documented burden, the FY 2025-FY 2026 DoW Corrosion Program budget represents only 0.013% of that yearly cost, an investment level dramatically out of proportion to the scale of the problem. This underfunding persists even though

Title: Corrosion Prevention and Control Projects and Activities		2.600	2.545
Description: Corrosion prevention and control projects and activities are conducted in support of the strategic plan to reduce the impact of corrosion on the cost and availability of DoW equipment and facilities. Projects include: • Completed the Improved Landing Gear Durability for F/A-18E/F Super Hornet evaluating the application of multiple corrosion prevention technologies to the landing gear system to improve readiness and reduce cost; the successful project resulted in engineering approvals to initiate the specific technology transitions into components on 3 additional platforms: F-35 Navy/USMC variants, CH-53 platform, and V-22 platform. • Implemented CPC technologies on LPD-24 (USS Arlington) during its April 2023-July 2024 maintenance period to start its service environment demonstration and validation. • Collaborated with the Association of Materials Protection and Performance (AMPP) to deliver six industry developed corrosion control and coatings inspection training course to over 230+ DoW acquisition and depot-level workforce personnel. The DoW workforce demand for CPC training is illustrated in a FY 2024 waitlist increase over 200 persons from the previous year. This does not include the inquiry of other necessary certifications that are currently not offered due to lack of sustained funding. • The CPO supported technical revision of Mil-Std-1568, Materials and Processes for Corrosion Prevention and Control in Aerospace Weapon Systems, was selected as a winner of the Defense Standardization Program Achievement Award. FY 2026 Plans: Continued execution of: • Expansion of thermal spray non skid for ships extending the lifecycle of flight deck coatings from 1-3 yrs to 10-12 yrs. • Ultra-Short Pulse Laser Surface Prep for Optimizing Adhesion and Mitigating Corrosion of Marine Connectors (Industry Partner Collaborator: PulseTex) • Demonstrate technologies for mitigating electronics corrosion on autonomous assets. • Advanced Development of a digital engineering corrosion design tool to assess galvanic corrosion impacts and predict the corrosion lifecycle risks (Industry Partner Collaborators: Siemens Govt Tech , Corrdesa) FY 2027 Plans: Continued execution of approved demonstration projects and workforce education and training: • Corrosion Prevention and Control Demonstration & Implementation Project Process – 155mm Cannon Tube Bore Laser Ablation • Advanced Metal Pretreatment Option to Provide Extended		2.675

Note

New Start (Y/N): Yes

This is a new start in FY 2027.

A. Mission Description and Budget Item Justification

This program supports the Department's initiatives to Reestablish Deterrence, Prevail in Conflict, Defend the Homeland, and Build Sustainable and Long-Term Advantages.

Joint Munitions Component Prototyping will enable advanced component technology demonstrations and munitions prototypes for promising, impactful, and disruptive technologies developed by the Department's science and technology investments. Efforts will reduce technical, financial, integration, and schedule risk for Services and Program Offices through meaningful testing, initial qualification evaluations, and graduation of technologies from technology readiness levels 5-6 to 6-7. Warheads employing new energetics and lethality mechanisms, propulsion components providing increased range/speed, fuzing and safe/arm devices for UAVs, GPS-independent guidance, novel materials for flight bodies and control surfaces, batteries and power sources, collaborative behaviors, seekers and target identification, and other technologies will be evaluated. Successful demonstrations and prototypes will support advanced technology transition to Services and Programs and provide valuable insight into next-generation munitions technologies to inform requirements and concept writers across the Joint Force and Combatant Commands.

This program is a new start in FY 2027 and will draw from munitions technology investments by the Joint Munitions Advanced Technology program, the Joint Munitions Technology program, the Joint DoW/DOE Munitions Technology Development program, and Service S&T programs.

A. Mission Description and Budget Item Justification

The Joint Munitions Component Prototyping project will demonstrate and prototype advanced munitions component technologies related to lethality, range, speed, survivability, application of artificial intelligence and machine learning in munitions, advanced communication and collective behaviors, and other next-generation munition attributes. Advancing game-changing technologies from Technology Readiness Level (TRL) 5-6 to TRL 6-7 reduces technology integration/transition risk to the Services and Program Offices by validating the tactical and operational applications and benefits of new component technology. As a new start in FY 2027, the project will focus on warhead and fusing technologies, including those employing advanced energetics, before expanding into other areas in later years.

This project will continue technology developments funded under OSW and Service science and technology lines to facilitate more efficient and effective technology transition while delivering technology overmatch to the Joint Force in accordance with Department strategic guidance.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Joint Munitions Component Prototyping Description: Prototyping of munitions component technologies, including lethality, range, speed, survivability, control, communications, and other systems. FY 2027 Plans: • Development and fabrication of munition lethality components and sub-components. • Integration and demonstration of component prototypes for munitions. FY 2026 to FY 2027 Increase/Decrease Statement: Addition of \$1.383 million to develop component prototyping plans and test articles.	-	-	1.383
Title: Joint Live Fire Description: Joint Live Fire Program (JLF) performs a critical role within the Survivability/Lethality Analytic Community by delivering infrastructure, models, simulations, and data to support testing and experimentation of kinetic/non-kinetic systems in operationally relevant contexts to inform, improve and act as a consistent foundation for LFT&E and Warfighter tools and techniques. JLF efforts focus technically diverse expertise onto leading-edge and unique systems development challenges while ensuring data and characteristics can be analyzed for lethality and effectiveness. JLF is the bridge between research & development, testing, acquisition, and operational communities. The program focuses on:	-	-	6.510

Note

New Start (Y/N): No

Beginning in FY 2025 Program Element funding was realigned under a new project code to correctly align funding in support of Chief Digital and Artificial Intelligence Officer (CDAO) priorities. The new project code is: (1) P074 AI/ML Scaffolding. The prior year funding project code did not continue after FY 2023 though the overarching goals of the program element are the same. The new project code refocuses the PE and provides traceability to the current priorities of the CDAO.

A. Mission Description and Budget Item Justification

The Chief Digital and Artificial Intelligence Officer (CDAO) supports the Department's initiatives to build enduring advantage and build a resilient Joint Force and defense ecosystem. The CDAO is responsible for strengthening and integrating data, artificial intelligence, and digital solutions in the Department in support of the interim National Defense Strategy and Section 1513 of the National Defense Authorization Act (NDAA) for FY 2023.

The functions of the CDAO are as follows: lead and oversee the DoW's strategy development and policy formulation for data, analytics, and AI; break down barriers to data and AI adoption within DoW institutional processes; create enabling digital infrastructure and services that support Components' development and deployment of data, analytics, AI, and digital-enabled solutions; selectively scale proven digital and AI-enabled solutions focused on enterprise and joint use cases; and surge digital services for rapid response to crises and emergent challenges. The CDAO will continue priority projects that align to the mission. This includes expanding the AI integration between the DoW and Intelligence Community (IC); enterprise data repository; establishing a responsible AI ecosystem; executing the AI and Data Accelerator (ADA) initiative; and developing a Data, Analytics, and AI Adoption Strategy. These various lines of effort will support the overarching mission of accelerating the Department's adoption of data, analytics, and AI to preserve decision advantage across the Joint Force.

The CDAO's DoW and IC Integration Division was chartered to create joint interoperability and to harness and scale AI across the DoW and IC jointly, especially within the Defense Intelligence Enterprise. The organizational purpose is to improve coordination and interoperability between DoW and the IC, minimize duplication while maximizing a common approach, and develop an innovated joint AI operational concept and capability, where appropriate. This funding is assigned to support algorithm development, data preparation, and integration experimentation to create joint DoW and IC capabilities. Further details are classified and available upon request.

Note

New Start (Y/N): No

The National Defense Strategy (NDS) directs the Department of War (DoW) to seed opportunities in critical technology areas, including biotechnology, as part of our broader responsibility to ensure enduring U.S. technological advantage, and the Department will use this program element to execute the Administration's vision for advanced manufacturing of critical technologies.

A. Mission Description and Budget Item Justification

The Advanced Manufacturing Components and Prototypes (AMCAP) program is established to validate the build and/or expansion of advanced manufacturing infrastructure and conduct research, develop, test, and evaluation (RDT&E) to facilitate development and transition of promising advanced manufacturing technologies to higher manufacturing readiness levels (MRL) via component and prototype development. Funding for this program is focused on requirements emerging from the Defense Biomanufacturing Strategy, which is guiding the execution of the Distributed Bioindustrial Manufacturing Program (DBIMP) – formerly known as the Manufacturing Enabled by Modular and Reusable (MEMBR) assets initiative investments to scale up domestic manufacturing of bioindustrial products. The project under this program will cover the full range of technologies critical to the Department of War (DoW) and manufacturing technologies with dual-use commercial applications to support the industrial base that will supply the DoW.

A. Mission Description and Budget Item Justification

This project will mature manufacturing processes to support the transition of advanced manufacturing components and prototypes to address warfighter needs.

With initial emphasis in the bioindustrial manufacturing area, the project will advance the scale up production of molecules of interest. Through the biotechnology Distributed Bioindustrial Manufacturing Program (DBIMP) – formerly known as the Manufacturing Enabled by Modular Bioindustrial & Reusable (MEMBR) assets initiative - the project will establish a network of flexible manufacturing facilities to scale-up promising biotechnology capabilities for integration into DoW missions.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Pilot-Scale Production of Bioindustrial Products	16.193	44.801	52.122
Description: Bioindustrial projects to scale up promising molecules utilizing flexible bioindustrial manufacturing facilities. Biotechnology activities could include, but are not limited to, initial pilot or production scale batches, producing material needed for qualification to a military or commercial specification, test batches to facilitate the technology transfer from a pilot facility to an industrial scale facility, development of downstream processing techniques at scale, standard operating procedure (SOP) development, and test and evaluation. The biotechnology projects are to be performed in bioindustrial infrastructure funded by DoW. FY 2026 Plans: In support of the Distributed Bioindustrial Manufacturing Program (DBIMP), continue maturation of biomanufactured fibers for DoW specific applications using qualification testing and prototyping for relevant environments. Complete first tier of qualification testing for the biomanufactured fiber. Initiate prototyping efforts for biomanufactured elastomers. Formulate biomanufactured energetic precursors and produce material necessary for qualification. Perform pilot process optimization and produce biomaterials using mature precursor chemicals or materials and formulate final materials for biomanufactured products critical to DoW and the United States. This effort includes military specification and conformance testing. Promising candidate molecules and materials selected in FY 2025 will become qualification projects in FY 2026. Initiate additive manufacturing efforts with biomanufactured filament. The program will conduct feasibility assessments for bioindustrial manufacturing prototypes for low resource environments important to the DoW mission. FY 2027 Plans:

Continue maturation of biomanufactured fibers for DoW specific applications.. Prototyping filter applications with successful candidate fibers.. Conduct technology/economic analyses of biomanufactured fibers and biomanufactured energetic precursor materials. Evaluation of biomanufactured fuel in new applications Perform pilot process optimization and produce biomaterials using mature precursor chemicals or materials and formulate final materials for biomanufactured products critical to DoW and the United States. Continue prototyping and early test and evaluation efforts for forward deployed biomanufacturing.			
FY 2026 to FY 2027 Increase/Decrease Statement: The increase of \$7.321 million between FY 2026 and FY 2027 is the net result of an increase of \$12.550 million and a decrease of \$5.229 million. The increase funds continued projects from FY 2026 and pilot process optimization projects for new bioindustrial manufacturing production lines and/or qualification of high technology readiness level products and the decrease in contract services is in direct support of Executive Order 14222 "Implementing the President's 'Department of Government Efficiency' Cost Efficiency Initiative," which prioritizes cost efficiency, transparency, and the consolidation of services. This measure represents a deliberate workforce optimization strategy designed to streamline resources while safeguarding against adverse impacts to modernization initiatives and overall mission effectiveness.			
Accomplishments/Planned Programs Subtotals		16.193	44.801
		FY 2025	FY 2026
Congressional Add: Large Scale, Agile, Additive and Hybrid Manufacturing Pilot Program		5.000	-
FY 2025 Accomplishments: Establish research with University of Maine Advanced Manufacturing Pilot Research Facility for Large Scale, Agile, Additive and Hybrid Manufacturing to act as a national and regional node, capable of rapidly prototyping large integrated systems in a production-representative environment.

A. Mission Description and Budget Item Justification

Chemical and biological weapons (CBW)-based threats continue to evolve in response to changing geopolitics and emerging technologies. Each of the nations that are deemed as threats to United States (U.S.) national security are believed to have and/or be developing chemical and/or biological weapons. The Department of War (DoW) must be prepared to eliminate these threats during and/or after the execution of a contingency operation or in support of a diplomatic breakthrough, enabling the U.S. to achieve peace through strength and strengthen deterrence.

Chemical Weapons Convention (CWC) and Biological Weapons Convention (BWC) obligations and DoW strategic guidance demand the Department maintain a complete and enduring capability to assess and destroy CBW, regardless of location or environment. In accordance with the CWC and BWC, the U.S. must be prepared to “destroy [chemical/biological] weapons...in its possession or...under its jurisdiction or control.” It is critical for the DoW to match CBW-based threats by possessing the capabilities to directly disable or defeat WMD threats prior to use. This capability must provide operational flexibility that enables early action and expedient destruction, from small-scale disablement and defeat in a non-permissive or austere environment to large-scale destruction of a foreign CBW stockpile in a post-contingency or permissive environment. These capabilities will positively influence deterrence and project Peace Through Strength.

Our current capabilities are inadequate to support these requirements, and we are currently unable to invest in the development and/or improvement of capabilities to eliminate CBW on the scale required. The Department must be proactive in ensuring we are prepared to eliminate known and expected CBW threats before adversary use against U.S. military or civilian personnel at home or abroad or our allies.

The Chemical and Biological Weapons Elimination (CBWE) Research and Development Activities (RDAs) support the Department’s initiatives to rebuild our military and reestablish deterrence by ensuring a complete and enduring capability to assess and destroy chemical and biological weapons (CBW), regardless of location or operational environment. This program addresses Joint Force priorities, tasks, and requirements. Fiscal Year (FY) 2027 funding is for the advanced development of chemical weapons destruction technologies in support of joint warfighter requirements.

The CBWE portfolio provides material solutions that enable DoW to prevent adversary acquisition, transfer, deployment, and use of CBW as well as meet U.S. Chemical Warfare Convention (CWC) treaty obligations.

UNCLASSIFIED

Exhibit R-2, RDT&E Budget Item Justification: PB 2027 Office of the Secretary Of Defense	Date: April 2026
---	-------------------------

Appropriation/Budget Activity 0400: <i>Research, Development, Test & Evaluation, Defense-Wide I BA 4: Advanced Component Development & Prototypes (ACD&P)</i>	R-1 Program Element (Number/Name) PE 0604162D8Z I <i>CHEMBIO WEAPONS ELIM TECH DEV</i>
---	--

The CBWE portfolio will execute along several Lines of Effort (LOEs) to help prepare the Joint Force for a future operating environment in which adversary possession of Weapons of Mass Destruction (WMDs) pose threats ranging from tactical to existential, and limit U.S. strategic choices. These LOEs will create options for assessment and destruction of recovered chemical warfare material within the U.S., as well as chemical and biological warfare material across the continuum of conflict, including materiel solutions for the destruction of small-scale weaponized and bulk CBW agents, and solutions for the elimination of nation state CBW programs and stockpiles.

The Office of the Secretary of War uses the CBWE Portfolio to invest strategically in projects to fill validated requirements from the Services, Combatant Commands, combat support agencies, and defense agencies. Funding is prioritized for projects that close Joint Force and domestic assess, disable and/or destroy capability gaps. An annual investment strategy is used to prioritize and meet capability needs.

The CBWE Technology Development program invests in advanced development of systems used to assess, disable, and/or destroy chemical and biological weapons and material – foreign and domestic. Funds are used for the development and integration of operational prototypes into fielded systems, or other upgrades and enhancements, including any necessary test and evaluation.

This program funds labor, materials, and travel requirements, performed by a government agency or by private individuals or organizations under a contract with the government, for activities and acquisitions including Research, Development, Test & Evaluation (RDT&E), assessments and analyses, and other activities related to capability development and fielding.

A. Mission Description and Budget Item Justification

Chemical and biological weapons (CBW)-based threats continue to evolve in response to changing geopolitics and emerging technologies. Each of the nations that are deemed as threats to United States (U.S.) national security are believed to have and/or be developing chemical and/or biological weapons. The Department of War (DoW) must be prepared to eliminate these threats during and/or after the execution of a contingency operation or in support of a diplomatic breakthrough, enabling the U.S. to achieve peace through strength and strengthen deterrence.

Chemical Weapons Convention (CWC) and Biological Weapons Convention (BWC) obligations and DoW strategic guidance demand the Department maintain a complete and enduring capability to assess and destroy CBW, regardless of location or environment. In accordance with the CWC and BWC, the U.S. must be prepared to “destroy [chemical/biological] weapons...in its possession or...under its jurisdiction or control.” It is critical for the DoW to match CBW-based threats by possessing the capabilities to directly disable or defeat WMD threats prior to use. This capability must provide operational flexibility that enables early action and expedient destruction, from small-scale disablement and defeat in a non-permissive or austere environment to large-scale destruction of a foreign CBW stockpile in a post-contingency or permissive environment. These capabilities will positively influence deterrence and project Peace Through Strength.

Our current capabilities are inadequate to support these requirements, and we are currently unable to invest in the development and/or improvement of capabilities to eliminate CBW on the scale required. The Department must be proactive in ensuring we are prepared to eliminate known and expected CBW threats before adversary use against U.S. military or civilian personnel at home or abroad or our allies.

The Chemical and Biological Weapons Elimination (CBWE) Research and Development Activities (RDAs) support the Department’s initiatives to rebuild our military and reestablish deterrence by ensuring a complete and enduring capability to assess and destroy chemical and biological weapons (CBW), regardless of location or operational environment. This program addresses Joint Force priorities, tasks, and requirements. Fiscal Year (FY) 2027 funding is for the advanced development of chemical weapons destruction technologies in support of service and joint warfighter requirements.

The CBWE portfolio provides material solutions that enable DoW to prevent adversary acquisition, transfer, deployment, and use of CBW as well as meet U.S. Chemical Warfare Convention (CWC) treaty obligations.

Exhibit R-2A, RDT&E Project Justification: PB 2027 Office of the Secretary Of Defense		Date: April 2026		
Appropriation/Budget Activity 0400 / 4	R-1 Program Element (Number/Name) PE 0604162D8Z / CHEMBIO WEAPONS ELIM TECH DEV	Project (Number/Name) 528 / ChemBio Weapons Elim Tech Impr		
The CBWE portfolio will execute along several Lines of Effort (LOEs) to help prepare the Joint Force for a future operating environment in which adversary possession of Weapons of Mass Destruction (WMDs) pose threats ranging from tactical to existential, and limit U.S. strategic choices. These LOEs will create options for assessment and destruction of recovered chemical warfare material within the U.S., as well as chemical and biological warfare material across the continuum of conflict, including materiel solutions for the destruction of small-scale weaponized and bulk CBW agents, and solutions for the elimination of nation state CBW programs and stockpiles. The Office of the Secretary of War uses the CBWE Portfolio to invest strategically in projects to fill validated requirements from the Services, Combatant Commands, combat support agencies, and defense agencies. Funding is prioritized for projects that close Joint Force and domestic assess, disable and/or destroy capability gaps. An annual investment strategy is used to prioritize and meet capability needs. The CBWE Technology Development program invests in advanced development of systems used to assess, disable, and/or destroy chemical and biological weapons and material – foreign and domestic. Funds are used for the development and integration of operational prototypes into fielded systems, or other upgrades and enhancements, including any necessary test and evaluation. This program funds labor, materials, and travel requirements, performed by a government agency or by private individuals or organizations under a contract with the government, for activities and acquisitions including Research, Development, Test & Evaluation (RDT&E), assessments and analyses, and other activities related to capability development and fielding.				
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026	FY 2027
Title: ChemBio Weapons Elimination Technology Development Description: The CBWE program invests in materiel solutions through the development of technologies; operational test and evaluation; and transition to fielded capabilities that counter WMD proliferation. This program enables advanced development and transition of technologies to fielded capabilities by leveraging significant Science and Technology (S&T) investments made by the DoW, other Federal agencies, and industry. FY 2026 Plans: N/A FY 2027 Plans: Advanced development and testing in support of joint warfighter requirements - small-scale chemical weapons access and destruction technologies. FY 2026 to FY 2027 Increase/Decrease Statement: The \$945 thousand increase from FY 2026 to FY 2027 reflects the need for the Department of War to invest in the development of capabilities to match CBW threats and eliminate chemical and biological weapons, at home and abroad.		0.000	0.000	0.945

Remarks 		
D. Acquisition Strategy The Office of the Assistant Secretary of War for Nuclear Deterrence and Chemical and Biological Defense Policy and Programs (OASW(ND-CBD)) establishes annual priorities based on National strategies and senior leader guidance. Based on those priorities, OASW(ND-CBD) solicits project proposals from Combatant Commands, Military Services, Defense Agencies, and interagency partners. To be selected, a proposed project must have a validated requirement, an engaged requirement champion, a viable acquisition strategy, and a qualified program management office. A technology project must identify its starting and desired end-state Technology Readiness Level. Likewise, the end-user for any proposed project must demonstrate a long-term plan for acceptance and sustainment of a fieldable capability.

A. Mission Description and Budget Item Justification

In support of the Interim National Defense Strategy, the Strategic Capabilities Office (SCO) develops, demonstrates, and transitions operationally impactful capabilities and effects to shape and counter emerging threats and increase the lethality of the Joint Force in contested environments. The SCO combines innovation with concepts of operation to develop novel capabilities solving critical national security challenges in partnership with the Services, Defense Agencies, Combatant Commands (CCMDS), Joint Chiefs of Staff, Intelligence Community, and the Office of the Secretary of War (OSW).

The FY 2026 spend plan amount for Advanced Innovative Technologies 0604250D8Z includes \$770,844 thousand of discretionary, and \$1,002,000 thousand of mandatory (reconciliation) for a total of \$1,772,844 thousand.

A. Mission Description and Budget Item Justification

The Strategic Capabilities Office (SCO) develops, demonstrates, and transitions operationally impactful capabilities and effects to shape and counter emerging threats and increase the lethality of the Joint Force in contested environments. The SCO combines innovation with concepts of operation and information management to develop novel capabilities solving critical national security challenges in partnership with the Services, Defense Agencies, Combatant Commands (CCMDS), Joint Chiefs of Staff, Intelligence Community, and the Office of the Secretary of War (OSW).

SCO's FY 2026 Pacific Deterrence Initiative (PDI) spending under Exercises, Training, Experimentation, and Innovation includes \$639.296 million discretionary and \$167.000 million mandatory for a total of \$806.296, an increase of \$150.786 million from FY 2025, with five new capability projects transitioning into Execution in FY 2026.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Advanced Innovative Technologies Project Management	47.600	70.972	146.600
Description: SCO has a small government workforce, and relies on this project to fund the required additional labor for subject matter experts and programmatic support teams to help centrally manage the execution of the SCO prototype development portfolio. This project funds the travel for government employees and salaries for detailed staff, Inter-governmental Personnel Act participants, and Systems Engineering and Technical Assistance (SETA) contract staff that manage SCO's projects, studies, and test support. This staff annually supports ~25 prototype project teams, the on-going study and development of additional concepts, and the office support functions like: program security representatives, intelligence, Information Technology, and finance and accounting support staff required to enable the project teams.			
FY 2026 Plans: These funds provide for SCO labor and travel to support the ~25 project teams that are active each fiscal year, and includes \$15.272M for SBIR/STTR funding.			
FY 2027 Plans:

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026	FY 2027
Description: Due to the classified nature of this project, specific applications and details are available at a higher classification level. FY 2026 Plans: Due to the classified nature of this project, specific applications and details are available at a higher classification level. FY 2027 Plans: Due to the classified nature of this project, specific applications and details are available at a higher classification level. FY 2026 to FY 2027 Increase/Decrease Statement: The increase is due to planned project phasing which is available at higher classification levels.				
Title: Mission Support Infrastructure Description: These funds provide facility and information technology support costs for the Strategic Capabilities Office. Costs include: building lease payments, utilities, upkeep and refurbishment; physical security; supplies, office furnishings and communications equipment; video teleconferencing suites across multiple security levels; and information technology hardware systems and software licenses across multiple levels of security for the entire SCO staff. FY 2026 Plans: SCO is planning minor renovation to its Chantilly, VA office requiring \$7.6M for its portion of the facility. SCO completed the transition to DISA DODNET in FY 2025, and the migration of its SAP system from SAV to a cloud-based service is planned in FY 2026. Once the migration away from DMSS, DSN, and SAV is complete, continued payment to DARPA will only be for the DSWAN system. FY 2027 Plans: SCO will continue to fund facility and information technology support costs to include building lease payments, utilities, physical security, communications equipment, video teleconferencing suites, IT hardware systems and software licenses for all classification levels across the organization. FY 2026 to FY 2027 Increase/Decrease Statement: The increase from FY 2026 to FY 2027 is due to facilities and IT support required to support 15 additional project teams.		27.718	24.466	27.051
Title: Oculus Prime Description: Due to the classified nature of this project, specific applications and details are available at a higher classification level. FY 2026 Plans:		14.900	27.200	41.200

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
Due to the classified nature of this project, specific applications and details are available at a higher classification level.			
FY 2027 Plans: Due to the classified nature of this project, specific applications and details are available at a higher classification level.			
FY 2026 to FY 2027 Increase/Decrease Statement: The increase is due to planned project phasing which is available at higher classification levels.			
Title: Pele Description: Pele will develop and demonstrate the first Generation IV small modular reactor (SMR) power plant in the U.S. All elements will be factory-built and tested before shipping to the operational site for fueling, plant assembly, and start-up. The reactor module will be transported by airlift, and all other elements will be transported by road, demonstrating transportability of SMR technology. Pele's objective is to be fully operational in FY 2028, and generate approximately 1 MW of electric power, meeting safety, legal, and regulatory requirements to minimize risk of radiation exposure, nuclear proliferation, and environmental impact. Pele's safe by design approach exploits the extreme resilience and safety features of a new qualified fuel form, Tristructural Isotropic (TRISO) that confines fission products within 0.85mm diameter particles of uranium coated in silicon carbide. Pele has decontrolled its project information to enable sharing design, development, and regulatory lessons learned on the first Generation IV plant in the U.S. across the U.S. Government and industry, informing follow-on advanced nuclear reactor programs for the Department of War. After start-up, testing, and verification of full operational capability, Pele will transition to the US Army in the last quarter of FY 2028 for operations under Army authority to demonstrate use of a nuclear reactor in support of the May 2025 Executive Order 14299 "Deploying Advanced Nuclear Reactor Technologies for National Security." FY 2026 Plans: Pele will complete detailed designs and drawings of all reactor and plant systems as well as the site at Idaho National Laboratory, and initiate procurements for all materials and components required to assemble the plant. Pele will complete the Preliminary Safety Analysis Report (PSAR) and submit to the safety authority, Department of Energy, for approval. The Pele core cartridge assembly will be completed and the reactor assembly will begin. Pele will complete development of the Control Module, and continue development of the Power Conversion and Intermediate Heat Exchanger Modules. Pele will complete production of the TRISO fuel compacts and transport the fuel to INL in preparation for reactor fueling in FY 2028. Pele will initiate production of the concrete pad and shield walls for the operational site at INL.		83.800	0.000

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026	FY 2027
The FY 2026 plan includes \$41 million of discretionary (Congressional Add) and \$209.1 million of mandatory (reconciliation) for a total of \$250.100 million. FY 2027 Plans: Pele will complete assembly and testing of the individual Reactor, Power Conversion, and Intermediate Heat Exchanger Modules, and deliver all to the Prime contractor facility for integrated Factory Acceptance Testing. At the completion of Factor Acceptance Testing, all elements will be prepared for shipment to INL. Pele will complete all site preparation at INL, to be ready to install modules and hardware upon arrival in early FY 2028 FY 2026 to FY 2027 Increase/Decrease Statement: The decrease supports phasing required for the Pele development cycle with remaining materials and components placed on contract in FY 2026, and final assembly planned for FY 2027.				
Title: Pernicious Description: Due to the classified nature of this project, specific applications and details are available at a higher classification level. FY 2027 Plans: Due to the classified nature of this project, specific applications and details are available at a higher classification level. A. Mission Description and Budget Item Justification

This program provides microelectronics development and prototyping activities that support the 2026 National Defense Strategy Line of Effort to supercharge the United States Defense Industrial Base through building out capacity, empowering innovators and adopting new advancements in technology, guided by the Department's policy on Assured Access to Trusted Microelectronics, and 10 USC 4128, Joint Federated Assurance Center. Microelectronics and their supporting supply chains face unprecedented and constantly changing and evolving security risks that threaten national security and the performance of Department of War (DoW) systems and technologies. Microelectronics products and services for DoW systems are most often obtained from a global supply chain. This requires the Department to have multiple options to maintain assured access to trusted microelectronics by managing risks from supply chain disruptions and malicious activity during all phases of design, manufacturing, packaging, test, and distribution.

Microelectronics are a critical enabler of military systems to ensure the Joint Force is second to none. This program delivers trusted and assured microelectronics to support the lethal force through:
 Providing access to state-of-the-art (SOTA) microelectronics design, emulation tools, and intellectual property (IP) libraries; advanced fabrication nodes, and advanced packaging and test capabilities; and commercial device implementation and development of devices to strengthen the lethal force of the Department.

Exhibit R-2, RDT&E Budget Item Justification: PB 2027 Office of the Secretary Of Defense				Date: April 2026		
Appropriation/Budget Activity		R-1 Program Element (Number/Name)				
0400: Research, Development, Test & Evaluation, Defense-Wide I BA 4: Advanced Component Development & Prototypes (ACD&P)		PE 0604294D8Z I Trusted and Assured Microelectronics				
Development of evidence-based assurance methodologies to inform decisions on microelectronics systems, technologies, services and supply chains.						
Development and application of analytic techniques and methods for verification and validation of microelectronics designs, 3rd party IP, physical implementations and functionality, and counterintelligence awareness of threats to DoW microelectronics supply chain.						
Technology transition into systems and platforms providing improvements in size, weight, power, latency, bandwidth and resilience enabled by advanced chip manufacturing, multi-chip packages, radiation hardened microelectronics, and the maturation of microelectronics for communications, radar, missiles, electronic warfare, sensors and imaging.						
This program’s technology investments and innovations support the U.S. domestic microelectronics ecosystem. The program fosters and leverages partnerships with industry to rapidly incorporate market-driven commercial advances within military systems. This program interfaces with interagency partners and stakeholders to collaborate on joint requirements, reduce cost of microelectronics, reduce duplication, and enable technology transition and adoption.						
Projects within the PE provide: access to SOTA microelectronics technology; advanced packaging and test capabilities; on shore foundries, commercial design technology; radiation hardened microelectronics; and microelectronics for radio frequency and optoelectronic applications. This PE also promotes capabilities for hardware and software assurance, trusted and assured microelectronics education and workforce development, supply chain awareness and security, and maturation of evidence-based assurance methods, guidance, standards, and the Joint Federated Assurance Center (JFAC) governing body.						
This activity is led by the Under Secretary of War for Research and Engineering.						
The FY 2025 spend plan amount for Trusted and Assured Microelectronic includes \$638,321 thousand of discretionary and \$150,000 thousand of mandatory for a total of \$788,321 thousand.

A. Mission Description and Budget Item Justification

This project establishes strategic partnerships with commercial SOTA domestic foundries to develop a data-driven, risk- based approaches to supply chain protection and develops the assured access, secure design, and manufacturing capability of advanced microelectronics technology and electronic components.

This project funds microelectronics software assurance (SwA) support to DoW programs and supports the activities of the Joint Federated Assurance Center (JFAC), codified in the National Defense Authorization Act (NDAA) for Fiscal Year 2025, Sec 922, to support the assurance needs of the DoW by ensuring, pursuant to policies related to hardware and software assurance and supply chain risk management, that the software and hardware developed, acquired, maintained, and used by the Department are free from intentional and unintentional vulnerability during the life-cycle of development and deployment of assured, trustworthy defense systems.

Projects are transitioning technologies into DoW systems and platforms, ensuring access to multiple onshore commercial microelectronics facilities, establishing secure design capabilities, implementing an evidence-based approach to supply chain protection, and developing technologies for situational awareness of the global microelectronics supply chain. This project builds the foundation for updating and strengthening DoW assurance methods and standards with industry to develop data driven evidence-based practices.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Joint Federated Assurance Center (JFAC)	-	9.090	9.531
Description: This project's activities will advance the state of the art for evidence-based software assurance tools and methods practiced by the JFAC member organizations to enhance both microelectronics hardware and software assurance for the DoW enterprise. The project accelerates the development of assurance technologies to ensure the integrity of DoW weapon systems, information systems, and national security systems in direct support of program offices across the microelectronics life cycle.			
FY 2026 Plans: Select, procure, and adapt quantities of state-of-the-art software assurance (SwA) tools; innovate and advance technology for detection of malicious and subverted code in DoW embedded systems; determine and mitigate exploitable vulnerabilities; map vulnerabilities and threats to SwA tool capabilities and provide assessments of SwA tool effectiveness; develop both embedded

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026	FY 2027
software and software tools to address supply chain vulnerabilities, bill of materials (BoM) validation, and integrity of intellectual property (IP) blocks. FY 2027 Plans: Evaluate state-of-the-art software assurance (SwA) tools applicable to DoW needs for enhanced microelectronics software assurance; conduct an assessment of formal methods as applied to specific DoW SwA needs; advance technology for detection of malicious and subverted code in DoW embedded systems and evaluate against ground truth; map vulnerabilities and threats to SwA tool capabilities and provide assessments of SwA tool effectiveness; develop both embedded software and software tools to address supply chain vulnerabilities, bill of materials (BoM) validation, and integrity of intellectual property (IP) blocks. FY 2026 to FY 2027 Increase/Decrease Statement: The increase of \$0.441 million from FY 2026 to FY 2027 is due to priority realignment for DoW critical technologies				
Title: Access to State-of-the-Art (SOTA) Microelectronics - Development Description: This activity supports resilience in Department microelectronics manufacturing by initiating fabrication at multiple onshore foundries ensuring the USG is not dependent on a single source for critical components. The project includes design and fabrication of advanced microelectronics utilizing SOTA electronic design automation (EDA) tools and process development kits (PDKs); and prototyping hardware through dedicated and multi-project wafer runs at multiple foundries. The Rapid Assured Microelectronic Prototypes –Commercial (RAMP-C) project enables the DoW and the defense industrial base to collaborate with the commercial microelectronics industry to develop advanced prototypes and address the warfighter’s need to maintain and modernize weapon systems as the threat landscape evolves. This project enables full access to U.S. commercial SOTA design, foundry, and advanced packaging capability and the ability and infrastructure for the DIB and commercial companies to meet DoW’s unique needs. Secure manufacturing capabilities enables the USG and the defense industrial base (DIB) to design and manufacture in the most advanced onshore microelectronics fabrication technologies. This project: • Enables DoW access to the SOTA on shore fabrication ecosystem. • Conducts multi-project wafer production runs at multiple SOTA domestic sources. • Leverages advanced domestic foundries by key U.S. fabless companies and a digital engineering/design ecosystem including access to 3rd party design modules • Uses modeling and simulation to anticipate performance benefits to be derived from design and fabrication of DoW microelectronics in advanced fabrication technologies. • Leverages the expertise of commercial industry to develop and demonstrate novel capabilities for design of State-of-the Art (SOTA) microelectronics with assurance.		311.821	115.876	5.354

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2025	FY 2026	FY 2027
• Expands and accelerates development, evaluation, and insertion of IP, for application-specific integrated circuit (ASIC) and chiplet security including authentication, firmware attestation and decryption and system-on-chip (SOC) interface encryption. • Develops tools and techniques to protect silicon IP during packaging and test phase, including multi-chip packages (MCP). • Conducts test and evaluation of domain-specific inference processors against emerging commercial technologies for DoW applications. FY 2026 Plans: Foundry Access and RAMP-C: Completion of the dedicated RAMP-C project to leverage the leading edge (<7 nanometer), commercially-viable, U.S.-located domestic wafer foundry ecosystem for design and manufacturing of evidence-based assured, dual-use commercial and DoW custom integrated circuits. Evolution of RAMP-C to transition-focused development of microelectronics devices with enhanced mission capability by leveraging <7 nanometer microelectronics manufacturing. This project will: • Continue to enhance access to state-of-the-art (SOTA) fabrication ecosystem. • Maintain program of record access to assured fabrication flow and fund multi-project wafer production runs at multiple SOTA domestic sources. • Continue growth in commercial and government use of the most advanced domestic foundries by key U.S. fabless companies. • Leverage a digital engineering/design ecosystem including access to 3rd party design modules. • Promote modeling and simulation to anticipate performance benefits to be derived from design and fabrication of DoW microelectronics in advanced (<7 nm) technologies. • Utilize commercially-supported and enduring U.S. logic foundry capability. • Leverage the expertise of commercial industry to develop and demonstrate novel capabilities for design of State-of-the Art (SOTA) microelectronics with assurance. Domain Specific Design and Transition: • Leverage EDA tools for emulation based evidence-based assurance design flows. • Construct domain-specific architectures that leverage commercial intellectual property (IP), EDA, and processes enabling accelerated prototype demonstration and transition. • Continue to expand and accelerate development and evaluation, and initiate insertion of IP, for application-specific integrated circuit (ASIC) and Chiplet security including authentication, Firmware Attestation and Decryption and system-on-chip (SOC) Interface encryption.

B. Accomplishments/Planned Programs (\$ in Millions)	FY 2025	FY 2026	FY 2027
- Continue to develop and evaluate, and initiate insertion of, tools and techniques to protect silicon IP during packaging and test phase, including multi-chip package (MCP). - Continue leverage of trusted commercial off-the-shelf (COTS) parts in for DoW applications. Artificial Intelligence Hardware at the Edge: - Conduct ongoing evaluation of the NorthPole AI inference processor against emerging commercial technologies for DoW applications. - Identify demonstration opportunities to support transition of Northpole technology for operational use. - Investigate the potential of Neuromorphic AI processors that are robust radiation tolerant, low power and low latency for real-time onboard AI and autonomy capabilities for future DoW and intelligence community systems across all operational domains (space, land, air, sea). <i>FY 2027 Plans:</i> Focus the scope of SOTA Access efforts to deliver end-to-end design, tape out, test and evaluation for specific chips in concert with transition partners. These efforts include application specific integrated circuits (ASICs) for communications and imaging applications. <i>FY 2026 to FY 2027 Increase/Decrease Statement:</i> The decrease of \$110.522 million between FY 2026 and FY 2027 is due to priority realignment for DoW critical technologies.

A. Mission Description and Budget Item Justification

Advanced packaging provides necessary performance improvements, size, weight, power, and cost (SWAP-C) benefits, and unique opportunities to disaggregate DoW requirements into smaller and lower cost chiplets while maximally leveraging SOTA commercial technologies. However, domestic advanced packaging capabilities are limited and the heterogeneous integrated (HI) chiplet ecosystem is nascent. This project is a collaborative effort among the DoW, the Defense Industrial Base (DIB), and domestic commercial industry to leverage and enhance existing capabilities to develop self-sustaining advanced packaging and test solutions that meet DoW needs.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Access to Advanced Packaging and Testing - Development	53.000	97.348	7.723
Description: This project is developing chiplets and advanced packaged microelectronics informed by DoW requirements. The project leverages domestic heterogeneous integration (HI) packaging technologies to accelerate transition of the most advanced microelectronics available. Key technologies, processes and tools will be developed and improved upon, allowing DoW to utilize HI technologies to package chips and chiplets to realize performance and SWAP-C benefits. The SOTA Heterogeneous Integrated Packaging (SHIP) effort provides access to dual-use heterogeneous packaged digital and RF microelectronics and manufacturing processes. This effort enables early access to proprietary information related to these technologies, enabling customization to support DoW programs. SHIP-Radio Frequency (RF) enables a leap in system performance and reduced SWaP by incorporating SOTA commercial off the shelf (COTS) devices, such as field programmable gate arrays (FPGAs), microprocessors, and graphics processing units (GPUs) into multichip packages (MCPs). FY 2026 Plans: Establish and accelerate access to SOTA facilities capable of packaging, testing and delivering integrated circuits in which the fully assembled and operationally functional Multi-Chip Package (MCP) can meet DoW information handling and performance requirements. Promote reuse and standardization for sustainability and cost reduction to drive transition. Ongoing planned activities are as follows:

B. Accomplishments/Planned Programs (\$ in Millions)							FY 2025	FY 2026	FY 2027		
• Development of advanced dual-use multi-chip packages (MCPs) and DoW requirement-driven chiplets • Lower barriers between DIB and high-volume commercial technologies to enable faster and lower cost prototyping of custom chiplets and MCPs • Develop prototypes using ITAR compliant production-ready advanced packaging • Development 2.5D RF packaging design and assembly technologies • Enhance secure design and packaging capability with new tools/techniques • Utilize advanced radio frequency (RF) packaging design tools, process design kits (PDKs), assembly design kits (ADKs), and platforms using a wide selection of material choices. FY 2027 Plans: • Focus on advanced packaging technology for digital, analog, and mixed-signal applications for DoW transition partners. • Test, evaluate, and analyze MCP solutions for transition to DoW systems. FY 2026 to FY 2027 Increase/Decrease Statement: The decrease of \$89.625 million between FY 2026 and FY 2027 is due to priority realignment for DoW critical technologies.

A. Mission Description and Budget Item Justification

The DoW relies on a small number of specialty suppliers to develop and acquire the application specific integrated circuits (ASICs) and specialized or modified commercial components required to satisfy military needs for radiation hardened digital and analog microelectronics.

By partnering in the maturation of SOTA material sources, foundries, and packaging facilities, the DoW is aligning commercial practices with unique needs for performance and functionality and encouraging open access design to stimulate innovation and drive affordability. Expanding the manufacturing capability and capacity of facilities for fabrication, packaging, and testing are all enablers to ensuring availability of radiation hardened microelectronics.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Access to Radiation Hardened-, RF-, and Opto-Electronic Development	125.000	187.336	108.496
Description: Government-unique trusted design and manufacturing flows have been developed to enable a tier of trust for select ASIC parts including processors, memory, microcontrollers, field programmable gate arrays (FPGAs), and radiation-tolerant processors. The DoW is partnered with the interagency to develop radiation hardened components that permit systems to operate in space and other harsh environments. State-of-the-practice (SOTP) and state-of-the-art (SOTA) technologies are being characterized and developed in support of Radiation Hardened by Process (RHBP) and Radiation Hardened by Design (RHBD) activities to satisfy radiation hardened requirements of DoW programs. Radio frequency (RF)- and opto-electronic (RF/OE) technologies are critical enablers of asymmetric DoW capabilities for communications in congested regions of the spectrum and efficient data transfer as well as domestic dual-use industrial base capabilities. RF/OE efforts are developing and demonstrating RF Gallium Nitride (GaN) and integrated photonic material sources, foundries, and packaging resources and facilities. FY 2026 Plans: • Development of radiation hardened by design (RHBD) techniques in state-of-the-art (SOTA) technologies with validated radiation aware process design kits (PDKs) and radiation hardened cell libraries. • Transition developed radiation hardened technologies into space and strategic programs. • Characterize, develop, and demonstrate space and strategic radiation hard microelectronics technology in support of DoW programs.

A. Mission Description and Budget Item Justification

This project promotes microelectronics innovation and creates an evidence-based assured microelectronics pipeline and strategic partnerships for assuring field programmable gate array (FPGA) devices, supply chain awareness and security, and workforce development. It will strengthen workforce expertise and ensure DoW has access to the next generation of advanced technology by utilizing an evidence-based assurance approach. This approach enables management of microelectronics security that is commensurate with program risk throughout the product pipeline and maintain the United States as the global source for high-end, secure, and reliable microelectronics components.

In addition, this project will develop new data driven risk-based assurance methodologies for supply chain protection to strengthen security while improving access, without exposing sensitive intellectual property (IP) to the foundry and requiring post-manufacture validation of foundry products. The project will develop evidence-based assured design concepts in manufactured systems, enabling a formal risk-based approach to protection techniques.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Create an Evidence-Based Assured Microelectronics Pipeline – Development	140.000	139.536	25.639
Description: Significant increases in assurance and protection of DoW technical data and components will be achieved through improvements in design practices, modern commercial security practices, and advanced packaging and chain of custody technologies. This activity, along with continued engagements and partnerships with industry will foster necessary security features in commercial products and infrastructure that will facilitate long-term assured access for the U.S. Government to commercial advanced state-of-the-art (SOTA) technology providers. This project funds hardware assurance (HwA) by providing engineering tools, technologies, and support to DoW and USG programs to detect, assess, prioritize, and mitigate vulnerabilities from hardware attacks and assurance against supply chain exploitation vulnerabilities. This project provides capabilities for programs to keep assessment findings throughout the life cycle of their systems. An evidence-based assurance approach addresses FY 2020 NDAA Sec 224 requirement for trusted supply chain and operational security standards. FY 2026 Plans:

Appropriation/Budget Activity 0400 / 4	R-1 Program Element (Number/Name) PE 0604294D8Z / <i>Trusted and Assured Microelectronics</i>	Project (Number/Name) 912 / <i>ME U.S. ME Dominance-Dev</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
• Develop FPGA- hardware assurance guidance and best practices to inform risk decisions. • Develop tools, technologies, and techniques to mitigate vulnerabilities in. • Provide FPGA supply chain lifecycle assurance through the development of best practices. • Provide direct technical and analytical support to DoW programs, including risk analysis, validation & verification analysis, and guidance on possible mitigations. • Develop assurance tools, techniques, technology and mitigations to fill assurance gaps within design, physical verification and validation (V&V) and functional testing stages of microelectronic components. • Conduct V&V on FPGA families inform vulnerability mitigations. • Provide technical and analytical support to Military Global Positioning System (GPS) User Equipment (MGUE) program • Provide engineering, technology analysis, and foreign language expertise to the counterintelligence community to support collection, analysis, investigations, and operations related to the DoW and US Government supply chains and foreign intelligence entity (FIE) threats to semiconductor-related equities. • Develop the counterintelligence portal for semiconductor analysis and mitigations to share raw and finished intelligence analysis, intelligence collection, and threat data relating to the semiconductor industry within the law enforcement, counterintelligence, and intelligence communities, as well as key government stakeholders. • Conduct semiconductor familiarization training program for intelligence and counterintelligence personnel. • Conduct supply chain risk-analysis and engagements with the U.S. Semiconductor industry to mitigate supply chain threats • Mature and adopt an evidence-based assurance approach • Support workforce development efforts to build a clearable, knowledgeable workforce to support and execute DoW program workforce modernization needs in microelectronics. FY 2027 Plans: Conduct vulnerability analyses of intellectual property, conduct hardware assessments, integrated circuit verification and validation analyses. Conduct microelectronics situational awareness activities. Develop toolkits and establish transitions for developed toolkits for supply chain vulnerability awareness and bitstream analysis. FY 2026 to FY 2027 Increase/Decrease Statement: The decrease of \$113.897 million between FY 2026 and FY 2027 is due to priority realignment for DoW critical technologies.

A. Mission Description and Budget Item Justification

This project funds microelectronics software assurance (SwA) support to DoW programs and supports the activities of the Joint Federated Assurance Center (JFAC), codified in the National Defense Authorization Act (NDAA) for Fiscal Year 2025, Sec 922, to support the assurance needs of the DoW by ensuring, pursuant to policies related to hardware and software assurance and supply chain risk management, that the software and hardware developed, acquired, maintained, and used by the Department are free from intentional and unintentional vulnerability during the life-cycle of development and deployment of assured, trustworthy defense systems.

B. Accomplishments/Planned Programs (\$ in Millions)	FY 2025	FY 2026	FY 2027
Title: Joint Federated Assurance Center (JFAC)	8.500	-	-
Description: This project's activities will advance the state of the art for evidence-based software assurance tools and methods practiced by the JFAC members to enhance both microelectronics hardware and software assurance for the DoW enterprise. The project accelerates the development of assurance technologies to ensure the integrity of DoW weapon systems, information systems, and national security systems in direct support of program offices across the microelectronics life cycle.

New Start (Y/N): No

A. Mission Description and Budget Item Justification

The Rapid Prototyping Program (RPP) supports the Department's initiatives to Defend the Homeland, Build Sustainable and Long-Term Advantage, and Build a Resilient Joint Force and Defense Ecosystem.

RPP supports the rapid development of prototypes within 12-to-24 months to address joint urgent and emergent needs identified through ideation with the Joint Staff, Combatant Commands, or Secretary of War guidance. Prototype requirements are developed using threat-informed physics-based mission analyses and are evaluated under the Office of the Assistant Secretary of War for Mission Capabilities' (OASW(MC)) campaign of experimentation, resulting in military utility assessments. RPP supports the maturation of joint prototypes across the Department (including those developed by the Strategic Capabilities Office (SCO), Defense Innovation Unit (DIU), Defense Advanced Research Projects Agency (DARPA), and the Services (TRL 5-6)) that have successfully demonstrated a required capability but have not been independently assessed in an interoperable, system of systems architecture.

Overarching program goals include modernization of cross-cutting joint technology areas, providing fieldable end-to-end mission capabilities for joint application, informing disparate programs of record, and delivering capabilities more quickly than traditional acquisition. RPP develops prototypes that reduce technical and integration risk across the Services and accelerate capabilities to programs of record and joint, rapid experimentation. RPP project selection aligns to strategic guidance including priority joint mission threads and the Under Secretary of War for Research and Engineering's (USW(R&E)) critical technology areas. RPP rapidly develops and fields cross-cutting, joint prototype capabilities demonstrated in an operational environment to inform DoW and Service leadership.

In FY 2026, RPP organized projects by focus areas aligned to specific, persistent capability gaps. Aligning the program to Secretary of War priorities, the following focus areas will allow Prototyping and Experimentation to rapidly respond to urgent and emergent requirements at the speed of relevance. Focus areas include:

Kill Web Interoperability: The processes by which Joint Force Commanders plan, direct, coordinate, and control forces to accomplish assigned missions and enable joint kill webs.

Resilient Communications: The ability to maintain hardened mission-capable systems that allow for secure freedom of communications in contested electromagnetic spectrum environments. This includes alternate position, navigation, and timing.

UNCLASSIFIED

Exhibit R-2, RDT&E Budget Item Justification: PB 2027 Office of the Secretary Of Defense		Date: April 2026
Appropriation/Budget Activity 0400: Research, Development, Test & Evaluation, Defense-Wide / BA 4: Advanced Component Development & Prototypes (ACD&P)	R-1 Program Element (Number/Name) PE 0604331D8Z / Rapid Prototyping Program	
Sensors and Data Analytics: Networks of sensors and data collection assets, data analysis, and dissemination resources used to provide information to the joint force about strategic and tactical threats. Collaborative Multi-Domain Autonomy: The use of multi-domain uncrewed systems and autonomy to increase warfighting capabilities and to mitigate/negate risk to warfighters. Contested Logistics / Sustainment: The coordinated use, synchronization, and often sharing of logistics resources to deploy, support, and sustain highly dispersed joint forces in highly contested environments. This also includes other sustainment areas such as supply chain reduction efforts; additive manufacturing; operational/tactical water purification; and sustainment and transportation innovations. Weapons Kinetic/Non-Kinetic Effects: The delivery of weapon systems and long-range kinetic and non-kinetic effects in support of joint offensive and defensive tasks to create specific lethal effects on a target. This area includes counter position, navigation, and timing; and techniques designed to deceive enemy observers and/or mitigate, disrupt, or negate adversary capabilities. Emerging Prototypes and Enablers: Supports the acceleration of DoW, Combatant Command, and Service priority efforts which provide unique capability and/or address critical gaps. This focus area incorporates Combat Support/Combat Enablers; Special Forces Capabilities; Medical Technologies/Devices; Special Access Program assimilation and operational management; prototyping through small business and non-traditional pathways; and the rapid development of technologies for inclusion in experimentation venues. The FY 2027 request for the Rapid Prototyping Program includes \$238,800 thousands of discretionary and \$1,394,000 thousands of mandatory for a total of \$1,632,800 thousands. The mandatory funds the Low-Cost Containerized Munition - Ground Launch (LCCM-GL) effort, which is a rapid, competitive prototyping effort to support critical munitions acceleration. The FY 2027 mandatory funds continue efforts from FY 2026 to deliver integrated and resilient munitions for ground launch applications. The FY 2026 spend plan amount includes \$232,635 thousand of discretionary and \$706,200 thousand of mandatory (reconciliation) for a total of \$938,835 thousand.

Note New Start (Y/N): N												
A. Mission Description and Budget Item Justification The Rapid Prototyping Program (RPP) develops prototypes to deliver capabilities, inform requirements, and bridge the gap between RDT&E activities and fieldable solutions. RPP facilitates and accelerates joint, cross-cutting prototyping efforts within the Services and Defense Agencies. This program has the agility to select, fund, and implement projects in the year of execution as new opportunities or threats emerge. In consultation with the Service Science and Technology (S&T) executives, selected projects generally receive a single year of funding to accelerate capability transition to Services' and Agencies' programs of record. Projects deemed critical by the Under Secretary of War for Research and Engineering (USW(R&E)), the Joint Staff, and the Combatant Commands receive higher amounts of funding across multiple years. Planned funding supports the Joint Warfighting Concept (JWC), the Office of the Under Secretary of War for Research and Engineering's (OUSW(R&E)) critical technology areas, and Service and Agency needs to enable rapid response to emergent and time-sensitive threats.												
B. Accomplishments/Planned Programs (\$ in Millions)									FY 2025	FY 2026	FY 2027	
Title: Terrestrial Electronic Surveillance (Sensors and Data Analytics) Description: This effort developed and integrated a sensing technology in support of weapons systems. Additional details are classified. In FY 2025, this capability transitioned to the U.S. Army.									3.100	-	-	
Title: Multi-domain Unmanned Secure Integrated Communications (MUSIC) (Resilient Communications) Description: Multi-domain Unmanned Secure Integrated Communications (MUSIC) developed and integrated an advanced networked capability to ensure tactical communications in denied and degraded environments. The capability leverages multiple available communication networks to create resilient and dynamic communication pathways that seamlessly adapt to changing conditions. The highly dynamic and distributed communications network is designed to scale across thousands of nodes and automatically prioritize traffic flows across the mission network in real-time. In FY 2025, the effort expanded the software-defined networking (SDN) mesh across multi-domain unmanned systems in field experiments and transitioned to a U.S. Navy program of record.									5.500	10.000	-	

UNCLASSIFIED

Appropriation/Budget Activity 0400 / 4	R-1 Program Element (Number/Name) PE 0604331D8Z / <i>Rapid Prototyping Program</i>	Project (Number/Name) 638 / <i>Rapid Prototyping Program</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
<i>FY 2026 Plans:</i> In FY 2026, this effort will develop Tactical-zero trust united network evaluator, a purpose-built, standards-based zero trust architecture that meets the unique needs of unmanned platforms and networks, ensuring sovereign data and network access.			
<i>FY 2026 to FY 2027 Increase/Decrease Statement:</i> Funding decrease in FY 2027 due to the end of the project and transition to Service programs of record.			
<i>Title:</i> Multi-domain Autonomous Tactical Expendable Radio (MATER) (Resilient Communications) <i>Description:</i> MATER addresses the current challenge of low cost, attritable, frequency agile radios enabling joint force interoperability, especially on size, weight, and power (SWaP) constrained uncrewed platforms. The project leveraged multi-billion-dollar commercial investments in the development of low-cost software-defined transceivers for the cellular industry and adapts these to military-relevant waveforms and applications for platforms. This project built upon the latest microelectronic processors operating in 5G cellphones, mobile broadband, and internet of things (IoT) devices. Using these industry standard chipsets as the basis for a family of military communication devices allows the DoW to reap the benefits of their built-in advanced signal processing, encryption, and acceleration capabilities, and also to gain the size and power benefits of microelectronics manufactured at commodity scale on advanced micro-electronics manufacturing nodes for low SWaP applications. In FY 2025, the effort expanded integration into swarming unmanned platforms with size, weight, and power (SWaP) constrained uncrewed platforms. MATER transitioned to the U.S. Army as a fieldable system providing low-cost interoperable communication at the tactical edge.		4.749	-
<i>Title:</i> Wolfpack (Weapons Kinetic/Non-Kinetic Effects) <i>Description:</i> Wolfpack develops multi-domain prototypes that can deliver payloads, both kinetic and non-kinetic, to a target from small, containerized launchers. Wolfpack leverages proven delivery platforms and integrates payloads to support intelligence, surveillance, and reconnaissance (ISR), kinetic, and decoy missions using attritable and swarming uncrewed systems. Wolfpack enables joint mission engagement using integrated command and control (C2) of the Wolfpack uncrewed platform and payload of swarming uncrewed aerial systems (UAS) that interface with multi-Service control systems. In FY 2025, Wolfpack integrated and tested kinetic payloads and sensor package for group 3 UAS. This effort transitioned to a U.S. Marine Corps PoR.		5.124	-
<i>Title:</i> Swarming Prototype Attack Unmanned Aerial Systems (Collaborative Multi-Domain Autonomy) <i>Description:</i> This project developed and integrated novel payloads and capabilities into existing unmanned aerial systems (UAS) to aid in kill-chain closure at the tactical edge. Prototypes sought to provide identification, targeting, and battle damage		13.950	-

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026	FY 2027
assessment with kinetic and non-kinetic effects focused on autonomous target recognition, identification, and terminal engagement. UAS will integrate swarm coordination and collaboration in multi-agent mission roles.				
In FY 2025, the Swarming Prototype Attack UAS integrated and tested small UAS with intelligence, surveillance, and reconnaissance (ISR) and kinetic payloads for multi-mission functionality.				
Title: Stratospheric Payload Development and Maturation (Collaborative Multi-Domain Autonomy) Description: This effort matures platforms, and develops and integrates payloads, in support of stratospheric domain operations. High altitude payloads enable and improve multi-domain communication and collaboration and provide additional ISR capabilities. In FY 2025, the effort successfully performed platform air worthiness evaluations for integrated mission payloads. This included integration and flight evaluations for a long endurance UAS. FY 2026 Plans: In FY 2026, the effort will expand development and testing of new communications and ISR prototype payloads with the surrogate long endurance UAS and high-altitude test platforms, and will perform military assessment exercises and demonstrations to validate long endurance mission capabilities. These platforms are transitioning to the U.S. Army and U.S. Marine Corps. FY 2026 to FY 2027 Increase/Decrease Statement: Funding decrease in FY 2027 due to the end of the project and transition to Service programs of record.		7.560	20.000	-
Title: Low Cost Short Range Air Defense (LSHORAD) Experimentation (Weapons Kinetic/Non-Kinetic Effects) Description: LSHORAD experimentation tested and validated the effectiveness of innovative defensive capabilities in real-world scenarios. The tested capabilities will provide a critical layer of protection against low-altitude threats. The experimentation will focus on detection and tracking, interception and neutralization, and the operational integration into seamless air defense infrastructures and command and control (C2) networks. In FY 2025, this effort successfully experimented with LSHORAD technologies integrated into a single command and control (C2) kill web against real threats in a realistic exercise environment. The data and system validation from this experimentation will inform DoW leadership on the readiness of various technologies for fielding and scaling.		2.800	-	-
Title: Project Ariel (Weapons Kinetic/Non-Kinetic Effects) Description: Project Ariel is integrating and demonstrating a maritime capability. Additional details are classified.		2.000	-	-
Title: Resilient Affordable Satellite communications Terminal (RAST) (Resilient Communications)		2.140	-	-

UNCLASSIFIED

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2025	FY 2026	FY 2027
Description: RAST integrated and tested satellite communications for use in unmanned aircraft systems (UAS). Satellite communications provide UAS with a redundant, high bandwidth pathway for communication links and for beyond line-of-sight (BLOS) operation. Integration with group 3 UAS is a critical next step to enable longer endurance platforms to operate at their full potential range and loiter times. In FY 2025, this effort successfully integrated and tested BLOS satellite communications in a group 3 UAS. This capability will enable operation of the long endurance platforms over their full mission range. This capability transitioned to the U.S. Army.					
Title: Tallneck (Weapons Kinetic/Non-Kinetic Effects) Description: Tallneck is developing and demonstrating a Counter- Command, Control, Computing, Communications, Cyber, Intelligence, Surveillance, Reconnaissance, and Tracking (Counter-C5ISR) capability. Additional details are classified. In FY 2025 this effort developed and tested a C-C5ISR capability and prepared Tallneck for FY 2026 integration efforts. FY 2026 Plans: Integrate and demonstrate a classified Counter-C5ISR capability. FY 2026 to FY 2027 Increase/Decrease Statement: Decrease in funding from FY 2026 to FY 2027 is due to the project ending.			1.250	2.500	-
Title: Cryptid Stare (Weapons Kinetic/Non-Kinetic Effects) Description: Cryptid Stare is developing and demonstrating an indications and warnings (I&W) array capability. Additional details are classified. In FY 2025, this effort successfully developed and demonstrated additional I&W capabilities with transition to U.S. Space Force.			2.330	-	-
Title: Bamboozled (Weapons Kinetic/Non-Kinetic Effects) Description: Bamboozled developed, tested, and deployed a prototype C-C5ISR-T capability. Additional details are classified. In FY 2025 this effort developed effective C-C5ISR-T prototype capabilities and transitioned to the U.S. Space Force.			1.350	-	-
Title: Small Platform Aerial Strike Munition (SPASM) (Collaborative Multi-Domain Autonomy) Description: The SPASM effort is integrating and testing subsystems for launch, autonomous mission control, target detection, and terminal effects low-cost Group 3 UAS operation.			2.650	-	-

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026	FY 2027
In FY 2025, this effort developed, integrated, and demonstrated subsystem components for improved target identification and strike capabilities onboard Group 3 UAS platforms.				
Title: Tibanna CUAS Assessment (Sensors & Data Analytics) Description: Tibanna provides low-cost sensors and sensor networks for the identification and tracking of UAS in support of force protection. This effort supports rapid assessment and validation of low-cost prototype system configuration(s) for application. This effort includes assessing system cybersecurity to enable use by U.S. forces and potentially with allies. In FY 2025 this effort tested and assessed functional value of various C-UAS systems for force protection.		7.931	-	-
Title: Small Lightweight Interceptor with Cost Efficiency (SLICE) (Weapons Kinetic/Non-Kinetic Effects) Description: This effort accelerated development of prototype small, lightweight short-range C-UAS interceptor. This development effort includes hardware and software integration, performance evaluation through flight testing, and demonstration of defensive effectiveness against Group 3 UAS threats. In FY 2025 this effort developed and demonstrated an effective prototype interceptor for transition capability to U.S. Air Force and joint Service application. FY 2026 Plans: In FY 2026, this project will complete sensor development, warhead qualification, and rocket assisted takeoff improvements, leading to fully integrated demonstrations and experimentation in realistic environments. FY 2026 to FY 2027 Increase/Decrease Statement: Decrease in funding from FY 2026 to FY 2027 is due to the project ending.		1.000	15.000	-
Title: LSHORAD Prototyping (Weapons Kinetic/Non-Kinetic Effects) Description: This effort is developing and integrating detection, tracking, and neutralization capabilities to provide a layered defense against low-altitude threats. The integrated solution will enable a centralized kill web fusing active and passive sensors to detect and identify multiple simultaneous target tracks and pass tracks to kinetic and non-kinetic effectors. In FY 2025, this effort integrated passive sensors into a kill-chain for follow-on assessment. Successful technologies will be down-selected for follow-on refinement and expansion of capabilities.		4.000	-	-

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026	FY 2027
Description: This effort integrates, demonstrates and assesses multiple mine and fast attack craft prototypes in support of Combatant Command (CCMD) mission threads. Prototypes seek to provide autonomy for identification, targeting, and battle damage assessment with kinetic effects. FY 2026 Plans: In FY 2026, the project will demonstrate and assess an increased number of fast attack craft platforms and payloads for priority CCMD missions. FY 2026 to FY 2027 Increase/Decrease Statement: Funding decrease in FY 2027 due to the project ending.				
Title: Kill Web Interoperability Description: Kill Web Interoperability explores the process by which Joint Force Commanders plan, direct, coordinate, and control forces to accomplish assigned missions and enable Joint kill webs. Individual efforts are identified and refined throughout the year of execution through interactions with industry, academia, Service representatives, and CCMDs. Prospective efforts are closely coordinated with the CCMDs and Services to deconflict, improve jointness, and increase transition to Service acquisition programs. Candidate prototype projects undergo a selection process that assesses joint warfighter impact, transition potential, and technical merit/feasibility. Selected sub-projects target key capabilities that enable leap-ahead improvements in Kill Web Interoperability. FY 2026 Plans: Initiate Kill Web Interoperability efforts in support of emergent operational gaps in collaboration with the joint Services and CCMDs. FY 2027 Plans: Continue Kill Web Interoperability efforts in support of emergent operational gaps in collaboration with the joint Services and CCMDs. FY 2026 to FY 2027 Increase/Decrease Statement: The continuation of funding into FY 2027 supports the program's planned evolution from initial development to prototype field demonstrations, which will begin in Q2 FY27 in collaboration with the joint Services and CCMDs.		-	9.750	9.780
Title: Resilient Communications Description: Resilient Communications explores the ability to maintain hardened mission-capable systems that allow for secure freedom of communications in contested electromagnetic spectrum environments. This includes alternate positioning, navigation, and timing. Individual efforts are identified and refined throughout the year of execution through interactions with industry,		-	8.593	14.327

academia, Service representatives, and CCMDs. Prospective efforts are closely coordinated with the CCMDs and Services to deconflict, improve jointness, and increase transition to Service acquisition programs. Candidate prototype projects undergo a selection process that assesses joint warfighter impact, transition potential, and technical merit/feasibility. Selected sub-projects target key capabilities that enable leap-ahead improvements in Resilient Communications. FY 2026 Plans: Initiate Resilient Communications development and integration efforts in support of emergent operational gaps in collaboration with the joint Services and CCMDs. FY 2027 Plans: Continue Resilient Communications development and integration efforts in support of emergent operational gaps in collaboration with the joint Services and CCMDs. FY 2026 to FY 2027 Increase/Decrease Statement: The funding increase from FY 2026 to FY 2027 supports the planned transition from initial development to prototype field demonstrations, which will begin in Q2 FY27. This will enable operational assessment of hardened mission-capable communication systems in contested electromagnetic spectrum environments.				
Title: Sensors and Data Analytics Description: Sensors and Data Analytics explores networks of sensors and data collection assets, data analysis, and dissemination resources used to provide information to the Joint force about strategic and tactical threats. Individual efforts are identified and refined throughout the year of execution through interactions with industry, academia, Service representatives, and CCMDs. Prospective efforts are closely coordinated with the CCMDs and Services to deconflict, improve jointness, and increase transition to Service acquisition programs. Candidate prototype projects undergo a selection process that assesses joint warfighter impact, transition potential, and technical merit/feasibility. Selected sub-projects target key capabilities that enable leap-ahead improvements in sensors and data analytics. FY 2026 Plans: Initiate Sensors and Data Analytics development and integration efforts in support of emergent operational gaps in collaboration with the joint Services and CCMDs. FY 2027 Plans:		-	11.500	34.185

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026	FY 2027
Continue Sensors and Data Analytics development and integration efforts in support of emergent operational gaps in collaboration with the joint Services and CCMDs. FY 2026 to FY 2027 Increase/Decrease Statement: The funding increase from FY 2026 to FY 2027 supports the expansion of the program from development into large-scale prototype field demonstrations beginning in Q2 FY27. The additional resources will be used to operationally test and validate networks of sensors and data analytics capabilities in collaboration with the joint Services and CCMDs.				
Title: Collaborative Multi-Domain Autonomy Description: Collaborative Multi-Domain Autonomy explores the use of multi-domain uncrewed systems and autonomy to increase warfighting capabilities and to mitigate/negate risk to warfighters. Individual efforts are identified and refined throughout the year of execution through interactions with industry, academia, Service representatives, and CCMDs. Prospective efforts are closely coordinated with the CCMDs and Services to deconflict, improve jointness, and increase transition to Service acquisition programs. Candidate prototype projects undergo a selection process that assesses joint warfighter impact, transition potential, and technical merit/feasibility. Selected sub-projects target key capabilities that enable leap-ahead improvements in uncrewed/ multi-domain autonomy. FY 2026 Plans: Initiate Collaborative Multi-Domain Autonomy development efforts in support of emergent operational gaps in collaboration with the joint Services and CCMDs. FY 2027 Plans: Continue Collaborative Multi-Domain Autonomy development efforts in support of emergent operational gaps in collaboration with the joint Services and CCMDs. FY 2026 to FY 2027 Increase/Decrease Statement: The funding increase from FY 2026 to FY 2027 supports the program's planned transition from initial prototype development to resource-intensive prototype field demonstrations in Q2 FY27. This will enable operational assessment of multi-domain uncrewed systems and autonomy capabilities in realistic environments.		-	7.000	13.129
Title: Contested Logistics / Sustainment Description: Contested Logistics/Sustainment explores the coordinated use, synchronization, and often sharing of logistics resources to deploy, support, and sustain highly dispersed joint forces in highly contested environments. Individual efforts are identified and refined throughout the year of execution through interactions with industry, academia, Service representatives, and CCMDs. Prospective efforts are closely coordinated with the CCMDs and Services to deconflict, improve jointness, and increase transition to Service acquisition programs. Candidate prototype projects undergo a selection process that assesses joint		-	12.000	4.523

warfighter impact, transition potential, and technical merit/feasibility. Selected sub-projects target key capabilities that enable leap-ahead improvements in contested logistics/sustainment.				
FY 2026 Plans: Initiate Contested Logistics / Sustainment development efforts in support of emergent operational gaps in collaboration with the joint Services and CCMDs.				
FY 2027 Plans: Continue Contested Logistics / Sustainment development efforts in support of emergent operational gaps in collaboration with the joint Services and CCMDs.				
FY 2026 to FY 2027 Increase/Decrease Statement: The funding decrease from FY 2026 to FY 2027 reflects the successful completion and ramp-down of major prototype field demonstrations in FY 2027. The remaining funds will support the final phase of field testing and analysis for ongoing efforts, which conclude in Q3 FY27.				
Title: Weapons Kinetic / Non-Kinetic Effects Description: Weapons Kinetic / Non-Kinetic Effects explores the delivery of weapon systems and long-range kinetic and non-kinetic effects in support of joint offensive and defensive tasks to create specific lethal effects on a target. This area includes counter positioning, navigation, and timing, and techniques designed to deceive enemy observers and/or mitigate, disrupt, or negate adversary capabilities. Individual efforts are identified and refined throughout the year of execution through interactions with industry, academia, Service representatives, and CCMDs. Prospective efforts are closely coordinated with the CCMDs and Services to deconflict, improve jointness, and increase transition to Service acquisition programs. Candidate prototype projects undergo a selection process that assesses joint warfighter impact, transition potential, and technical merit/feasibility. Selected sub-projects target key capabilities that enable leap-ahead improvements in weapons effects.		-	16.542	16.270
FY 2026 Plans: Initiate Weapons Kinetic / Non-Kinetic effects development efforts in support of emergent operational gaps in collaboration with the joint Services and CCMDs.				
FY 2027 Plans: Continue Weapons Kinetic / Non-Kinetic effects development efforts in support of emergent operational gaps in collaboration with the joint Services and CCMDs.

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026	FY 2027
The decrease from FY 2026 to FY 2027 is due to the closeout of successful FY 2026 Weapons Kinetic / Non-Kinetic efforts and for continued funding of FY 2027 new start efforts.				
Title: Emerging Prototypes and Enablers Description: Emerging Prototypes and Enablers supports the acceleration of DoW, CCMD and Service priority efforts, to include urgent and emergent requirements, which provide unique capability and/or address critical gaps; Special Access Program assimilation and operational management; prototyping through small business and non-traditional pathways; and the rapid development of technologies for inclusion in experimentation venues. Individual efforts are identified and refined throughout the year of execution through interactions with industry, academia, Service representatives, and CCMDs. Prospective efforts are closely coordinated with the CCMDs and Services to deconflict, improve jointness, and increase transition to Service acquisition programs. Candidate prototype projects undergo a selection process that assesses joint warfighter impact, transition potential, and technical merit/feasibility. Selected sub-projects target key capabilities that enable leap-ahead improvements in joint warfighter capability. FY 2026 Plans: Initiate Emerging Prototypes and Enablers development efforts in support of emergent operational gaps in collaboration with the joint Services and CCMDs. FY 2027 Plans: Continue Emerging Prototypes and Enablers development efforts in support of emergent operational gaps in collaboration with the joint Services and CCMDs. FY 2026 to FY 2027 Increase/Decrease Statement: The funding decrease from FY 2026 to FY 2027 reflects the conclusion of several major prototype development and demonstration efforts in FY 2026. The remaining funds will support the completion of final prototype field demonstrations, which will end in Q4 FY27, and facilitate the transition of successful technologies to Service partners.		-	10.000	4.346
Title: Advanced Energetics Prototyping and Demonstration Description: This effort will demonstrate advanced energetics applications in multiple system prototypes to show improved warhead effectiveness and lethality, improved propulsion performance, and operational gains from novel materials. Aligns to FY 2024 NDAA Section 243 requirement to incorporate CL-20 into 3 weapon systems. Selected systems for incorporation and intended performance improvements are classified. FY 2026 Plans:		-	25.000	30.000

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
Mature and procure test articles and energetic materials, and execute a limited test series for 3 selected munitions to show improvements in lethality and/or range. FY 2027 Plans: Continue maturation of test articles and energetic materials, and execute a test series for 3 selected munitions to show improvements in lethality and/or range. FY 2026 to FY 2027 Increase/Decrease Statement: The increase from FY 2026 to FY 2027 is to continue maturation and testing for Advanced Energetics Prototyping and Demonstration.			
Title: High Reliability Cluster Munitions (HRCM) Development and Demonstration Description: The HRCM effort will advance the state of the art for area effects munitions through the maturation of the Distributed Fuzing Architecture (DFA) and Long Range Dispense Submunition (LRDS) technologies. The DFA is a modular, internal power and data transmission architecture that enables a variety of area effects payloads to be integrated into an assortment of delivery platforms. Its design supports the intermingling of different submunition effectors into a single carrier platform, adding significant tactical flexibility and capability. LRDS is a state-of-the-art submunition effector being developed to incorporate advances in machine learning, warhead technologies, and novel flight structures. The resulting submunition will provide the warfighter with a highly lethal, long range, low cost, precision attack capability. HRCM will be demonstrated in a live fire exercise in collaboration with Army Long Range Precision Fires. FY 2026 Plans: Initiate the HRCM effort development efforts in support of emergent operational needs in collaboration with Services and CCMDs. Progress on the DFA and LRDS will be transitioned from corresponding Joint Enhanced Munition Technology Program science and technology efforts. Coordination with U.S. Army Long Range Precision Fires will provide technical specifications and integration support. FY 2027 Plans: Continue the HRCM effort development efforts in support of emergent operational needs in collaboration with Services and CCMDs. FY 2026 to FY 2027 Increase/Decrease Statement:		-	80.800

A. Mission Description and Budget Item Justification

The Defense Innovation Unit (DIU) mission is to strengthen U.S. national security by accelerating the adoption of commercial technology and externally developed products--connecting American entrepreneurs and commercial technology companies to Department needs at speed. DIU serves as the Department's center of excellence for commercial technology adoption and product transition, available to Portfolio Acquisition Executives and program offices across the Department. DIU is the Department's primary interface with the nontraditional and commercial ecosystem for rapid product adoption and transition.

In support of the Secretary of War's directive to transform the Defense Innovation Ecosystem to Accelerate Warfighting Advantage, DIU will: 1) Focus on high technologies that produce overmatch domination; 2) Focus on technologies that reduce the number of Soldiers, Sailors, Airmen, Marines, and Guardians in harm's way; 3) Focus on capabilities that can scale quickly and dramatically reduce costs.

Through a competitive prototype process, DIU identifies and provides access to technology companies and products on behalf of DoW organizations. Additionally, DIU executes projects to leverage commercial sector technology analogous to military applications thereby increasing dual-use technology agility for the DoW. DIU Prototyping funds facilitate the award of projects that can augment commercial technologies, existing government-owned capabilities, or concepts for defense application.

A. Mission Description and Budget Item Justification

FY 2027 request for Department of War (DoW) Unmanned Systems Common Development includes \$2,024 thousands of discretionary and \$34,627 thousands of mandatory for a total of \$36.651 thousand. The mandatory funds will provide additional support for Unmanned Systems Development, Integration, and Integration Support missions, allowing OUSW(A&S) to implement the Acquisition Transformation Strategy for unmanned systems across the department. Funds will also support the blue list marketplace that supports industries in development of UAS systems and warfighter procurement of secure systems. The FY 2027 funds are different from the FY 2026 mandatory funds that support continued development of multiple unmanned air systems, Task Force Baker operationalization activities, and test range and target costs. Results from these development efforts drive appropriate LRIP decisions as platform designs are iterated. These funds are executed in close coordination with service POR strategies and budgets.

The FY 2026 spend plan amount for Department of War (DoW) Unmanned Systems Common Development includes \$11,971 thousands of discretionary and \$1,000,000 thousands of mandatory (reconciliation) for a total of \$1,011,971 thousands.

This program supports the Department's initiatives to Restoring Warrior Ethos, Rebuilding Military Capabilities and Re-establishing Deterrence.

The Department of War (DoW) Unmanned System Common Development Program allows the Office of the Under Secretary of War for Acquisition and Sustainment (OUSW(A&S)) to support both the near-term and long-term advancement of DoW unmanned systems capabilities. These efforts are in direct support of both the letter and the intent of the following directives (1) Executive Order 14307 on Unleashing Drone Dominance signed on June 6, 2025 to enhance the capabilities of U.S. warfighters and support the American drone industry and (2) the Secretary of War memorandum on Unleashing Drone Dominance signed on July 10, 2025 to rebuild our military Unmanned Aerial Systems capabilities. This includes the development of common technologies, standards, concepts, and guidance that can be applied across all Military Services. This effort focuses on the development of technologies and concepts that support unmanned systems of all sizes and modalities to include the operation of DoW Small Unmanned Aerial Systems (UAS) both in the U.S. National Airspace and in an expeditionary environment. Key aspects of this effort includes (1)

A. Mission Description and Budget Item Justification

FY 2027 request for Unmanned Systems Development supports the Department's unmanned system development goals of making available commercial unmanned systems and components for DoW procurement and operations that are safe, secure, interoperable, and effective on the modern battlefield. This effort includes: (1) identifying and mitigating unmanned system related cyber and operations security threats, (2) developing standards, concepts, and guidance that support the Department's procurement and operation of unmanned systems, and (3) facilitating the acquisition of modern commercially developed unmanned systems for DoW use that are sourced from trusted supply chains and are cyber-secure.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Unmanned Systems Development	1.343	0.735	0.739
Description: FY 2025 Accomplishments: Under this program the DoW continued to support its goal of making available unmanned systems and components for DoW procurement and operations that are safe, secure, resilient, and interoperable. Specific accomplishments included overseeing UAS procurement to ensure the compliance with applicable policies and regulations and the mitigation of potential cyber and operations security vulnerabilities. Accomplishments also included supporting the effort to make safe, secure, resilient, and interoperable unmanned systems and components available for the Department's use by (1) adding several unique platforms to the Blue UAS Cleared List, (2) adding numerous vetted components to the Blue UAS Component List, (3) supporting the sustainment of existing and new Blue UAS systems to ensure the integrity of these platforms are maintained over time, and (4) updating the Department's policy to streamline the review and approval process for the use of commercially developed UAS.			
FY 2026 Plans: - Conduct penetration testing and cybersecurity assessments on unmanned systems in order to assess and validate system security and provide the government with an understanding of the level of security risk incurred by system operation. - Integrate Cyber Security Policies and standards into unmanned system Architectures. - Continue the development of unmanned systems cyber security concepts in order to limit and mitigate against cybersecurity risk. - Identify, test, and make available the latest commercial small UAS technology that is capable of meeting the operational demands of the DoW. This effort is intended to take lessons from recent combat operations and apply them to the development and employment of future DoW one-way-attack and autonomous unmanned systems.

B. Accomplishments/Planned Programs (\$ in Millions)	FY 2025	FY 2026	FY 2027
- Collaborate with Joint stakeholders to update the Department's unmanned systems related strategy documents. FY 2027 Plans: Under this program the DoW will continue to make available commercial unmanned systems and components for DoW procurement and operations that are safe, secure, interoperable, and effective on the modern battlefield. In FY 2027 this effort will focus on maintaining the ability to certify unmanned systems and components as cyber secure and not prohibited by law as directed by the Secretary of War's memorandum on Unleashing Drone Dominance dated July 10, 2025. This will include identifying, testing, and making available the latest commercial all domain unmanned systems (UXS) technology that will meet the operational demands of the DoW based on the lessons from recent combat operations. This effort will pursue the following overarching Department objectives: (1) protect the national security of the United States by managing risks to the DoW associated with obtaining and using commercially derived UXS, (2) promote a resilient DoW UXS supply chain and strengthen our domestic and partner industrial base by prohibiting the procurement and operation of uncrewed systems associated with companies connected to adversary governments, (3) accelerate the development and experimentation of commercial technology to provide the latest UXS capabilities to the Warfighter. FY 2026 to FY 2027 Increase/Decrease Statement: There is no significant change between FY 2026 and FY 2027.

A. Mission Description and Budget Item Justification

FY 2027 funding for Unmanned Systems Integration includes \$693 thousand of discretionary funds which supports the Department's unmanned system integration goals of facilitating access and integration of unmanned systems into military and civilian environments in a safe and effective manner. This effort includes: (1) the safe and effective integration of UXS within civil and military environments and (2) the development of standards, concepts, and guidance to support this integration. In the near-term, this project is focused on the development of concepts and prototype systems that support the DoW UXS integration mission and includes the execution of various evaluation events that integrate military UXS within air, ground, and maritime environments. This effort also includes the development and integration of current airspace access and integration system initiatives to include UAS Drone Zone and UAS Traffic Management (UTM). The long-term goal of this project is to establish the ability for DoW UAS and UGV systems to operate beyond visual line of sight (BVLOS) safely, effectively, and routinely within civil and military environments. The results from this effort will be shared with federal partners, to include the Federal Aviation Administration (FAA), in order to help shape the development of UAS airspace access and integration related concepts, technology, and rulemaking.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Unmanned Systems Integration	0.535	0.668	0.693
Description: FY 2025 Accomplishments: Under this program the DoW conducted various testing efforts that focused on the continued development and testing of technologies and concepts that will support the DoW's long-term goal of enabling routine, efficient, safe, and secure airspace access and integration for DoW UAS operations. Specific accomplishments included (1) the successful evaluation of the FAA Low Altitude Authorization and Notification Capability for DoW use, setting the stage for integrating systems at DoW Air Traffic Control facilities across the Department, (2) transitioning the Department's airspace access program from the Certificate of Authorization (COA) Approval Processing System (CAPS) to the Drone Zone system, (3) the development and evaluation of DoW UTM related prototype systems that will enable future UAS beyond visual line-of-sight operations for the Department within both civil and military airspace, and (4) demonstrating the ability to successfully pass telemetry data from multiple platforms on the Blue UAS Cleared list to the DoW prototype UTM system. FY 2026 Plans: - Continue to develop DoW prototype UAS related command and control systems and associated concepts that support DoW operations in both US national airspace and expeditionary airspace, with a specific focus on integrating counter UAS operations, UAS, and Air Traffic Control operations.

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
- Field the Department's UTM capabilities at one or more DoW sites for each Military Service and continue to collect data from these sites to refine UTM related technology and concepts. - Conduct joint UTM demonstration events in collaboration with the FAA to inform jointly developed system certification standards. - Develop Group 3-5 UAS airspace integration procedures and standards as well as conduct modeling, simulation, and operational analysis needed to validate those procedures and standards. - Establish routine BVLOS live flight cargo delivery operations using the Department owned airspace integration technology and concepts developed UAS integration and security systems and associated concepts in order to (1) demonstrate the latest capabilities, (2) assess system interoperability, (3) refine concepts and hardware/ software solutions, and (4) validate current standards. FY 2027 Plans: Under this program the DoW will continue to advance its access and integration of unmanned systems into military and civilian environments in a safe and effective manner. In FY 2027 this effort will pursue the following objectives: (1) expand short and mid-range live UXS cargo delivery operations to multiple locations across the U.S. to meet the intent of Executive Order 14307 of replacing manned programs with more effective unmanned capabilities, (2) update UXS access and integration technologies and concepts to ensure the DoW is employing the latest capabilities, (3) expand the Department's UAS traffic management system to multiple airfields within each Military Service in preparation for transitioning the capability to the Services, and (4) develop Department-wide guidance and standards for employing the Department's UAS traffic management system. Under this program, the Department will also support Executive Order 1437 by updating acquisition policy related to the rapid procurement of UXS and providing support to the Defense Autonomous Warfare Group. FY 2026 to FY 2027 Increase/Decrease Statement: There is no significant change between FY 2026 and FY 2027.			
Accomplishments/Planned Programs Subtotals		0.535	0.668
		FY 2025	FY 2026
Congressional Add: Unmanned Systems Integration		6.000	-
FY 2025 Accomplishments: FY 2025 Accomplishments: The additional funding allowed the Department to advance its long-term goal of enabling routine, efficient, safe, and secure airspace access and integration for DoW unmanned aerial systems (UAS) and counter UAS related operations conducted within both civilian and military airspace. Specifically the 'Unmanned Systems Integration' funding line in FY 2025 included: -Build on the technology, concepts, and procedures developed under previous Project ULTRA efforts to plan and execute numerous live flight cargo delivery events and other UAS capabilities.

A. Mission Description and Budget Item Justification

FY 2027 request for Unmanned Systems Integration Support supports the Department's unmanned system integration goals of establishing and overseeing coordination, agreements, guidance, and standards that enable the DoW's operation of unmanned systems in military and civilian environments. This effort includes leading multiple Joint and Interagency forums focused on identifying, prioritizing, and executing tasks aimed at overcoming challenges associated with the successful development, fielding, and operation of DoW unmanned systems.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Unmanned Systems Integration Support	0.800	0.568	0.592
Description: FY 2025 Accomplishments: Under this program the DoW continued to support the establishment and oversight of coordination, agreements, guidance, and standards that enable the operation of unmanned systems in military and civilian environments. Specific accomplishments included (1) continued support of the UAS EXCOM, the UAS Science and Research Panel (SARP), and other interagency organizations that are focused on synchronizing the federal government towards achieving the goal of enabling routine, efficient, safe, and secure airspace access and integration for member UAS operations within U.S. National Airspace and (2) the development of the Department's UAS airspace operations concept document which is necessary to align all DoW UAS airspace integration Research, Development, Test and Evaluation (RDT&E) efforts towards a single objective. FY 2026 Plans: Under this program the DoW will continue to support the establishment and oversight of coordination, agreements, guidance, and standards that enable the operation of unmanned systems in military and civilian environments by engaging in the following areas: - Support unmanned system objectives of the DASW (Platform and Weapons Portfolio Management), Assistant Secretary of War (Acquisition); and Under Secretary of War (Acquisition and Sustainment). - Serve as DoW Co-Chair of the UAS Executive Committee, to include the Integration and Security Senior Steering Groups and the UAS Science and Research Panel (SARP). - Serve as OUSW(A&S) Co-Chair of the OSW UAS cyber-security Exception and Waiver Board. - Serve as OUSW(A&S) Tri-Chair of the JRASE to prioritize and execute joint initiatives that support the development of unmanned system related strategies, concepts, standards, procedures, and policies. - Oversee the processing of UAS cyber-security procurement and operations requests.

		FY 2025	FY 2026	
Congressional Add: Unmanned Systems Integration Support		0.500	-	
FY 2025 Accomplishments: FY 2025 Accomplishments: The additional funding allowed the Department to advance its long-term goal of enabling routine, efficient, safe, and secure airspace access and integration for DoW unmanned aerial systems (UAS) and counter UAS related operations conducted within both civilian and military airspace. Specific plans for the 'Unmanned Systems Integration Support' funding line in FY 2025 included: -Developed and published the second version of the Department's UAS airspace concept of operations based on lessons learned from Project ULTRA and other similar DoW initiatives which aligns all DoW UAS airspace integration Research, Development, Test and Evaluation (RDT&E) efforts towards a single objective. -Conducted planning and interagency coordination necessary to establish a repeatable process to conduct the safe and efficient cargo delivery operations in both DoW and FAA controlled air traffic control airspace to support flights between Grand Forks Air Force Base and Cavalier Space Force Station.

Note

The Defense Autonomous Warfare Group (DAWG) was funded with mandatory funds only in FY 2026.

A. Mission Description and Budget Item Justification

The FY 2027 request for Drone Dominance includes \$1,000,000 thousand of discretionary and \$53,599,650 thousand of mandatory for a total of \$54,599,650 thousand. The mandatory funds Drone Dominance which is in support of the Secretary's Drone Dominance initiative for autonomous systems procurement, domestic production capacity, and advanced capabilities. The Drone Dominance initiative will provide investment for: 1) Contested Logistics initiatives – providing support to establish a commercially integrated logistics network capable of sustaining autonomous operations under contested conditions. 2) Collaborative Autonomy initiatives – providing support to the software, control layers, interfaces, and integration rigor required for autonomous systems to operate collaboratively at scale. 3) Force Generation initiatives – providing support for the institutions, personnel pipelines, and other resources required to operate autonomous systems at scale. 4) Counter-Unmanned Systems initiatives – providing support for defense against unmanned threats to the enterprise. 5) Asset Purchase and Industrial Demand Signal initiatives – to support the procurement of unmanned systems required to generate operational mass across air, surface, subsurface, and ground domains. The FY 2027 mandatory funds continue efforts from FY 2026 to accelerate the development and deployment of cost-effective, expendable autonomous systems for the United States Forces.

The FY 2026 spend plan amount for Research, Development, Test and Evaluation, DAWG includes \$0 thousand of discretionary and \$225,900 thousand of mandatory for a total of \$225,900 thousand.

Note

The Defense Autonomous Warfare Group (DAWG) was funded with mandatory funds only in FY 2026.

A. Mission Description and Budget Item Justification

The Defense Autonomous Warfare Group (DAWG) supports the Secretary of War's Drone Dominance initiative for autonomous systems procurement, domestic production capacity, and advanced capabilities. The Drone Dominance initiative will provide investment for: 1) Contested Logistics initiatives – providing support to establish a commercially integrated logistics network capable of sustaining autonomous operations under contested conditions. 2) Collaborative Autonomy initiatives – providing support to the software, control layers, interfaces, and integration rigor required for autonomous systems to operate collaboratively at scale. 3) Force Generation initiatives – providing support for the institutions, personnel pipelines, and other resources required to operate autonomous systems at scale. 4) Counter-Unmanned Systems initiatives – providing support for defense against unmanned threats to the enterprise. 5) Asset Purchase and Industrial Demand Signal initiatives – to support the procurement of unmanned systems required to generate operational mass across air, surface, subsurface, and ground domains.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Defense Autonomous Warfare Group	-	-	1,000.000
Description: Allocated funds will be used to advance targeted research, development, test, evaluation (RDT&E), and procurement of selected lethal unmanned systems (UxS), directly supporting validated Combatant Command needs. Ongoing RDT&E efforts will maintain innovation and refinement to ensure these capabilities and the production capacity is postured to remain responsive to evolving warfighter requirements.			
FY 2027 Plans: Spending will focus on prioritized operational needs—particularly through the development, modernization, and scaled production of enhanced, extended-range UxS capabilities. Investments will also expand the production of proven short- and medium- range UxS capabilities and strengthen the US drone industrial base by engaging capable vendors and driving deliberate growth for continual capability refinement. Spending will be leveraged to signal industry performance expectations and scalable production demands, facilitating large-scale acquisition of the most performant UxS platforms for INDOPACOM, stimulating industry participation, and posturing for continued scaled and accelerated execution and refinement in future fiscal years.

Note

In FY 2025, the program's name changed from the “Operational Energy Capability Improvement – Non S&T ”to “Operational Energy Prototyping” Fund (OEPF) to emphasize the program’s focus on rapid prototyping, demonstration, and validation of innovative operational energy capabilities.

A. Mission Description and Budget Item Justification

The Operational Energy Prototyping Fund (OEPF) addresses joint operational energy needs and requirements that enhance warfighter lethality and survivability. Modern battlefield capabilities require ever-increasing amounts of power and energy to maintain advantage, including new investment in directed energy, electronic warfare, proliferated drones, energy sensing, and artificial intelligence at the tactical edge along with traditional operational energy investment in maneuver forces’ platforms and individual warfighters.

The OEPF program provides a solutions pipeline for next-generation power and energy technologies, delivering them on warfighter-relevant timelines. These solutions support current and emerging weapon systems and transition to the Services, Combatant Commands, and DIU. OEPF supports the Department's priority of rebuilding the U.S. military by creating long-term lethality and survivability advantages through an interoperable, robustly powered, and energy resilient Joint Force.

OEPF investments accelerate transition of critical power and energy enablers across multiple services through an emphasis on purposeful demonstrations and validations of prototypes in operationally relevant environments. These events collect warfighter feedback, operational performance data, and focused analyses. These efforts ensure warfighters can command power across all domains. The data gathered also enables senior acquisition and programming leaders to make data-driven decisions and enact institutional change.

By including service acquisition decision makers, end-user warfighters, and industry partners even before project selection, the program delivers meaningful transitions. This clear-eyed understanding of service acquisition processes has resulted in more than 80% of projects to date transitioning to service acquisition programs, industry for government procurement, or directly to operational users at the Combatant Commands. In addition to creating more transitions that endure, OEPF also accelerates these transitions by more than two years.

Project selection is competitive. The program chooses projects after consultation with a wide range of stakeholders to solicit technical, programmatic, strategic, and warfighter transition inputs that maximize project impact and deconflict to avoid redundancy. OEPF prioritizes partner co-funding to increase transition results and improve affordability. Program outreach and industry partnership accelerate discovery and ensure incorporation of the latest commercial innovations and fosters and synchronizes domestic manufacturing and investments. The program regularly reviews ongoing projects for additional investment that accelerate or enhance capabilities, while evaluating any underperforming projects for early termination.

A. Mission Description and Budget Item Justification

The Operational Energy Prototyping Fund (OEPF) provides advanced energy solutions for decisive capabilities in the expeditionary environment, like proliferated drones and tactical AI, by accelerating power and energy technology transition to the warfighter. Through rapid, warfighter-centric prototyping, OEPF de-risks acquisition and enables data-driven investment. This proven model accelerates capability delivery by more than two years and has successfully transitioned over 80% of its projects to Service acquisition programs, Combatant Commands, industry, or other partners.

In addition to core program activities, OEPF also executes projects responding to specific congressional interest items (CIIs). OEPF manages these initiatives, including efforts in field-based airborne power generation, forward aerial refueling point upgrades, and laser wireless power beaming, in full alignment with its proven model. OEPF manages CIIs with the same rigor as its core projects, applying its proven principles of warfighter-centric prototyping and data-driven evaluation. This ensures these investments successfully transition meaningful capabilities to the Joint Force.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Operational Energy Prototyping	48.723	54.342	53.505
Description: FY 2025 Accomplishments include transitioning the following technologies:			
Small Tactical Universal Battery (STUB) is a standardized battery that reduces the number, types, and weight of batteries and chargers carried by dismounted warfighters. STUB transitioned to Small Unit Power POR within PEO Soldier (RDT&E PE 0604827A), Project Manager (PM) Soldier Warrior (SWAR) and Mobile Soldier Power for procurement (PE 8827R80800).			
Low-Cost Helicopter Sling (LC HSL) reduces mission fuel requirements, lessening the logistical burden on the force and reduces logistics cost. LC HSL transitioned to the US Army PM Force Sustainment Systems (FSS) and supports the Sustainment Aerial Delivery Equipment – Sling Load POR (PE 0604804A).			
Global Positioning System – Denied (GPS-denied) is an on-demand, platform-agnostic capability for delivering energy to the tactical edge in GPS-denied/contested environments. It powers small unit assets and supports crewed/uncrewed operations. GPS-denied transitioned to the Army PM FSS, United States Air Force (USAF) Special Forces Command and United States Marine Corps (USMC) Logistics Combat Element Integration Division (RDT&E PE 0654804L39 and PROC PE MA7806000).			

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2027 Office of the Secretary Of Defense		Date: April 2026	
Appropriation/Budget Activity 0400 / 4	R-1 Program Element (Number/Name) PE 0604555D8Z / <i>Operational Energy Proto</i> <i>typing</i>	Project (Number/Name) 035 / <i>Operational Energy Prototyping</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
Data Integration for Ground Systems (DIGS) captures engine runtime, fuel usage, maintenance requirements, and identifies vehicle energy optimizations. DIGS transitioned to Product Director Test, Measurement, Diagnostics Equipment (PD TMDE) (PE 0604622A) POM FY 2027, as a ground vehicle energy visibility and predictive logistics management tool. Very Small Waste to Energy (VSW2E) generates electrical power for forward-deployed warfighters in austere expeditionary environments using operationally-produced waste and leaving zero-footprint. VSW2E transitioned directly to operational warfighters in USAFRICOM for extended in-theater use and evaluation. 6T Alliance establishes an onramp for innovative commercial partners to introduce and productize their specialized component battery technologies into the 6T battery format. The 6T battery format is widely fielded in most military ground vehicles. 6T Alliance eliminates the need for companies to manufacture the entire battery, creating competition, and challenging vendor lock. The 6T Alliance project outcomes transition to industry through the Qualified Products List process. Additionally, the OEPF integrated operational energy technologies at one Continental United States (CONUS) and one arctic, Outside the Continental United States (OCONUS) exercise. The events captured warfighter feedback on emerging technologies and accelerated rapid fielding of each technology. FY 2026 Plans: In FY 2026, the program leverages a significant one-time funding increase to accelerate a larger, more ambitious portfolio of projects and conduct more frequent, higher-fidelity operational demonstrations. The focus is on rapidly transitioning operational energy capabilities that support the development, employment, and logistics of low-cost weapons. Key technology transitions include: - Long-duration persistent intelligence, surveillance, and reconnaissance power for low-cost uncrewed aviation platforms and their kill chains. - Matures a compact radioisotope power system prototype for long-lived, persistent, and autonomous power applications. This technology directly improves distributed ground sensors used by intelligence partners for low-cost targeting. In FY 2026, this project transitioned from PE 0604055D8Z. - Prototypes and demonstrates a low SWAP-c high power microwave power supply for low-cost offensive and defensive weapons. - Power beaming technologies capable of powering low-cost UAS platforms for persistent surveillance.

Appropriation/Budget Activity 0400 / 4		R-1 Program Element (Number/Name) PE 0604555D8Z / <i>Operational Energy Proto</i> <i>typing</i>		Project (Number/Name) 035 / <i>Operational Energy Prototyping</i>	
B. Accomplishments/Planned Programs (\$ in Millions)			FY 2025	FY 2026	FY 2027
- Increasing operational range of an uncrewed logistics delivery platform in a GPS-contested environment. - Powering long-range energy delivery capabilities that autonomously transit contested environments. - Prototyping and demonstrating a national mission capability solution with US Special Operations Command. - Powers a Space System using a novel low-cost manufacturing technology for high-efficiency solar cell production. Weight and cost are limiting factors in Space-based capability proliferation. - Vehicle batteries that can operate in extreme arctic environments. - Energy-sensor monitoring that enable diagnostic and preventive maintenance at key global locations. - High power density flight-rated aircraft batteries that enable expeditionary basing and extend flight time in emergency situations. - Demonstrating and validating a package of software innovations and in-flight mission planning capabilities that are integrated and validated across the fleets of KC-135 and KC-46 refueling aircraft that increase range, endurance, and operational impact. In FY 2026, OEPPF continues to validate these technologies in appropriate exercises, utilizing the Warfighter Touchpoint application and capturing operator input. This application, which directly addresses Government Accountability Office recommendations (GAO-23-105868) for improving transition planning, provides a scalable and repeatable workflow for any DoW agency to conduct meaningful warfighter engagements and accelerate the transition of advanced capabilities. FY 2027 Plans: FY 2027 projects focus on accelerating the acquisition of energy solutions needed to support modern capabilities in operational environments. Projected efforts include: - Prototyping and demonstrating low-cost aerodynamic modifications that increase the operational range and endurance of several military aircraft fleets. - Demonstrating and validating energy storage and distribution solutions in the USCENTCOM theater. - Demonstrating power and energy sensing for multiple operational applications.

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2025	FY 2026	FY 2027
- Prototyping and demonstrating a novel tactical vehicle drivetrain for use in a set of high priority and sensitive missions. - Continues to mature a compact radioisotope power system prototype, demonstrating it in operationally-relevant environments to validate performance and de-risk its use for distributed ground sensors. - Demonstrating military-specific battery formats in the arctic and other operationally relevant environments. - Demonstrating high-volume transmission over air via lasers for operational units in the USINDOPACOM theater. - Prototyping an extended range silent mobility vehicle supporting operational missions. - Validating a new mobile compact generator with greatly improved size, weight, and power performance. - Developing energy monitoring vehicle kits for tactical vehicles. - Modeling and simulation for applicable projects enabling data-driven acquisition and requirements decisions and accelerating capability deployment at scale. Emphasis is on energy-informed mission planning and providing power and energy input into combined joint all-domain command and control (CJADC2). In FY 2027, OEPP continues performing warfighter demonstrations at both CONUS and OCONUS locations and collecting warfighter input utilizing the OEPP developed Warfighter Touchpoint application. This data informs requirements, shapes acquisition strategies, and provides validation analytics, accelerating the transition of advanced Operational Energy capabilities across the Services and into programs of record. FY 2026 to FY 2027 Increase/Decrease Statement: The FY 2027 decrease reflects the completion of the accelerated prototyping and transition of innovative operational energy capabilities related to low-cost weapons and does not continue in FY 2027.

Note

New Start (Y/N): No

FY 2023 - 2025 program funding is transferred from the Creating Helpful Incentives to Produce Semiconductors (CHIPS) for America Defense Fund to the Research, Development, Test and Evaluation, Defense-Wide appropriation for proper execution. Funding from FY 2023 through 2027 were appropriated by, and are transferred using special transfer authority provided by, section 102(b) of the CHIPS Act of 2022, division A of Public Law 117–167.

A. Mission Description and Budget Item Justification

This Program Element supports the Department's initiatives to Build Sustainable and Long-Term Advantage, Defend the Homeland, and Deter Aggression.

The Office of the Under Secretary of War for Research and Engineering (OUSW(R&E)) is executing the Microelectronics Commons (the Commons) activity pursuant to the Fiscal Year (FY) 2021 National Defense Authorization Act (NDAA) (Pub. L. 116-283), including the CHIPS for America Act, and funded through the CHIPS for America Defense Fund established by the CHIPS Act of 2022. The FY 2021 NDAA legislation significantly emphasized solutions that promote the domestic on-shoring of capabilities to address economic and technology security concerns. Under FY 2021 NDAA Sec. 9903(b), the DoW was directed to establish a National Network for Microelectronics Research and Development (NNMRD) to enable the laboratory-to-fabrication transition of microelectronics innovations in the United States and to expand the global leadership in microelectronics of the United States. Specifically, the DoW is addressing a component of the NNMRD, the Commons, through a public-private partnership consisting of regional innovation hubs distributed across the U.S. to foster a pipeline of innovative ideas and talent residing in, for example, university labs and small business R&D teams.

Background

U.S. technological dominance in microelectronics materials, processes, devices, and architectural designs can only be sustained through the development of a robust domestic innovation ecosystem that fosters the rapid development and transition of novel concepts into commercially viable manufacturing processes. The U.S. innovation ecosystem has long been the driver of our nation's technology leadership throughout the world. U.S. R&D kick-started the enormous semiconductor industry and continues to lead the world in developing the next generation of disruptive technologies including new materials, devices, circuits, architectures, and design tools.

In recent years, the efficient domestic adoption of U.S. chip innovation has been threatened as emerging hardware technologies have become increasingly reliant on offshore sources for State of the Art (SOTA) manufacturing, prototyping, and investment. There are several significant hurdles that hardware startups face, including limited or expensive access to necessary facilities and design infrastructure, high costs of design intellectual property, limited expertise with hardware engineering, and

UNCLASSIFIED

Exhibit R-2, RDT&E Budget Item Justification: PB 2027 Office of the Secretary Of Defense				Date: April 2026		
Appropriation/Budget Activity		R-1 Program Element (Number/Name)				
0400: Research, Development, Test & Evaluation, Defense-Wide I BA 4: Advanced Component Development & Prototypes (ACD&P)		PE 0604669D8Z I Microelectronics Commons - 0400D				
high costs of prototyping. As a result, the number of U.S. hardware startups has dropped significantly and foreign investment in U.S.-based technology startups has enabled offshore fabrication and maturation of emerging technologies.						
To address these needs, OUSW(R&E) is standing up the Commons as a public private partnership, consisting of regional innovation hubs distributed across the U.S. to foster a pipeline of innovative ideas and talent residing in university labs and small business R&D teams. The partnership will provide resources for and access to specialized lab equipment, technical expertise, and connections to existing or upgraded prototyping facilities. Fabrication facilities (fabs) will help mature promising technologies and demonstrate the manufacturing and economic benefits of these innovations for dual-use application for defense and commercial sectors.						
The Commons focuses on critical, on-shore prototyping to transition innovation from universities, start-ups, and small companies to fabrication facilities (lab-to-fab transition). Key features include:						
• Creates and connects “Lab-to-Fab” testing/prototyping hubs to form a network focused on maturing emerging microelectronics technologies • Provides broad access to these prototyping hubs, potentially by augmenting facilities and enabling access to facilities within local semiconductor companies or FFRDCs. • Facilitates microelectronics education and training of students at local colleges and universities and grows a talent pipeline to bolster local semiconductor economies and contribute more broadly to the growth of a domestic semiconductor workforce.						
This program element focuses on the advanced component development and advanced prototyping activities of the Commons, including staffing at Commons Hub facilities, prototype development, and the establishment and development of a path for successful Lab-to-Fab technology transition. The Commons will establish early and sustained engagement with industry and academic stakeholders to build consensus on technology roadmaps to guide maturation and delivery of innovation into a given commercial fab’s pilot line and production plans.

New Start (Y/N): No

FY 2023 - 2025 program funding is transferred from the Creating Helpful Incentives to Produce Semiconductors (CHIPS) for America Defense Fund to the Research, Development, Test and Evaluation, Defense-Wide appropriation for proper execution. Funding from FY 2023 through 2027 were appropriated by, and are transferred using special transfer authority provided by, section 102(b) of the CHIPS Act of 2022, division A of Public Law 117–167.

A. Mission Description and Budget Item Justification

This project focuses on advanced prototyping activities of the Commons. Additionally, it focuses on providing cost-effective ways to capture and incentivize domestic R&D for various semiconductor technologies in a low-volume production environment and transition them for DoW and commercial market applications. Specifically, it works to transition developments from Commons Hubs resulting from technology identification and research funded by Commons PEs 0602669D8Z and matured by activities funded by Commons PE 0603669D8Z. The project also supports the establishment of the Commons Hubs, which will be networks of regional capabilities organized in collaboration with the CM to address DoW and commercial needs and requirements. The Hubs may include existing academic facilities augmented to enhance intrinsic specializations in emerging areas of microelectronics. Each Hub will concentrate on one of six technical areas including: Secure Edge Computing, 5G/6G Technology, Artificial Intelligence Hardware, Quantum Technology, Electromagnetic Warfare, and Commercial Leap Ahead Technologies. Core Facilities (i.e., fabs) are integral parts of the Hubs network that will provide key fabrication capabilities that are required to demonstrate prototypes with the volume and characteristics required to ensure reduced risk for full manufacturing production.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Microelectronics Research Maturation – Advanced Prototyping	62.704	-	-
Description: This effort focuses on the advanced prototyping of promising new microelectronics technologies and enabling the transition of these technologies into fabrication processes that ensure reduced risk for insertion into DoW Programs and commercial applications. It will also support operation of regional Commons Hubs and initial selection and execution of Commons Projects in conjunction with activities funded by PEs 0602669D8Z and 0603669D8Z.

A. Mission Description and Budget Item Justification

The Office of Strategic Capital's (OSC) mission is to attract and scale capital in technology and assets that support national security. Specifically, the OSC employs unique Title 10 federal credit authorities and appropriations to crowd investment through loans, loan guarantees, and technical assistance, efficiently using taxpayer dollars that support Department of War needs. Since its authorization, the OSC has begun developing and rapidly deploying new financial products to accelerate private investment in the industrial base across Covered Technology Categories prescribed by Congress. These tools will crowd capital to secure critical supply chains and rebuild the industrial base, enhancing the U.S. competitive advantage.

The FY 2027 President's Budget request supports the creation of new financial products to address a range of priorities, including greenfield projects, project finance, acquisition capital, investment fund subscription lines, and fund-level leverage to increase assets under management. These strategic capital solutions will enable the office to address key Presidential and Departmental priorities such as critical minerals, shipbuilding, infrastructure, and U.S. supply chain chokepoints.

These strategic capital solutions will enable the office to address key Presidential and Departmental priorities such as critical minerals, shipbuilding, infrastructure, and U.S. supply chain chokepoints.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Global Technology Scouting and Co-Investment Program (GTS)	0.000	0.000	16.955
Description: The Global Technology Scouting and Co-Investment (GTS) program informs and facilitates strategic allied and partner co-investment toward U.S. national security priorities. GTS: - Identifies and scales co-investment opportunities with allies and partners that yield asymmetric advantages for the Joint and allied force. - Guides OSC and partner investments through shared strategies and frameworks to address dependencies, vulnerabilities, and opportunities.			
FY 2026 Plans: OSC will continue to develop and formally implement its international engagement and origination strategy. Analyze economic chokepoints and efforts to prioritize transactable deals in terms of national security impact.			
FY 2027 Plans:			

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2027 Office of the Secretary Of Defense		Date: April 2026	
Appropriation/Budget Activity 0400 / 4	R-1 Program Element (Number/Name) PE 0604679D8Z / Office of Strategic Capital (OSC)	Project (Number/Name) 893 / Office of Strategic Capital (OSC)	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
Work with U.S. government partners to assess potential projects that are investable through commercial due diligence, market studies, and assessments of the economic climate. This would be complemented by continuing analysis of economic chokepoints and efforts to prioritize transactable deals in terms of national security impact.			
FY 2026 to FY 2027 Increase/Decrease Statement: The increase from FY 2026 to FY 2027 is for expanded deal origination and transaction evaluation capabilities to establish enhanced due diligence capacity for international co-investment transactions. Funding continues operational research and developmental groundwork for strategic co-investment structures to complement OSC's direct loan authority.			
Title: Investment Strategy		0.000	0.000
Description: The Investment Strategy program develops, drafts, and coordinates OSC's Investment Strategy to ensure the office's investments are aligned broadly with the Department's priorities articulated by the INDSG, NSS, NDS, DPG and other strategic documents. As a part of this analysis, Strategy conducts a combination of quantitative and qualitative research to map economic networks, assess key industries, and determine which critical technologies are essential to economic and national security. This work continuously informs where the office deploys its resources.			2.000
FY 2026 Plans: N/A			
FY 2027 Plans: – Continue development of an organic data analytics platform that will be used to source and provide information on potential transactions that can be pursued by OSC, participants in the National Security Capital Forum, or other partners in and out of government. – Mature existing analytic pathways developed in FY 2026 to inform OSC's Investment activities.			
FY 2026 to FY 2027 Increase/Decrease Statement: The increase from FY 2026 to FY 2027 supports the development of an organic data analytics platform.			
Accomplishments/Planned Programs Subtotals		0.000	0.000
			18.955
		FY 2025	FY 2026
Congressional Add: Financial Responsibility Technology		-	2.000
FY 2026 Plans: Enhance the OSC's analysis and processing of loans with tools to enhance the Office's efforts to efficiently and effectively provide capital assistance to eligible entities.

A. Mission Description and Budget Item Justification

This program supports the Office of the Director, Cost Assessment & Program Evaluation (CAPE). It funds activities that help CAPE to implement the vision of the Deputy Secretary of War to support new approaches to campaign analysis. CAPE will accomplish this by leading studies and developing analytic tools to think about future capabilities and posture.

This program provides for analytical research across a spectrum of issues and concerns. The research agenda is focused on near to long-term problems identified by the Deputy Secretary of War, and addresses difficult and complex questions linked to program alternatives for current and future capabilities and forces in order to enhance the senior leadership's deliberations and decision-making.

This program provides the scientific and technical engineering services needed for research studies in the development of models and simulations and the evaluation of current analytical tools and scientific methods used to evaluate and assess future scenarios and concepts of operations for a wide range of warfighting environments and scenarios. Deliverables from this program will include reports, briefings, and analyses designed to illuminate findings and assessments. Outcomes include the compilation and campaign analyses data to support the DoW capabilities to the challenges of a near-peer warfight and strategic and programmatic options for post Intermediate-Range Nuclear Forces (INF) Treaty weapons options.

A. Mission Description and Budget Item Justification

The Rapid Defense Experimentation Reserve (RDER) program supports core program management and integration activities necessary to plan and execute a multi-year campaign of experimentation. The RDER initiative is a whole of DoW effort focused on joint experimentation to provide rapid capabilities that address our most difficult military challenges. The Secretary of War established the RDER initiative in the Defense Planning Guidance for Fiscal Years 2024-2028, to enable multi-component experimentation through a campaign of learning that accelerates technology transition and scale-up with the Services through the Deputy's Management Action Group. This experimentation is executed using validated mission vignettes to assess Measures of Effectiveness and Measures of Performance identified in Modeling and Simulation. Integrated Assessment plans are developed for each prototype in the experiment and the data is collected through a campaign of experimentation utilizing Service demonstration venues or Combatant Command Training Exercises. The final prototype assessment will consist of a body of evidence that consists of Modeling and Simulation data, range or exercise performance, and doctrine, organization, training, materiel, leadership and education, personnel, and facilities (DOTMLPF) issues. The assessment will drive a Department decision point for transition or acceleration of RDER projects.

The Office of the Under Secretary of War for Research and Engineering OUSW(R&E) process for incubating promising prototypes starts with a novel experimental design based on a web of interconnected systems addressing specific Defense Planning Scenarios. This approach is unique from other experimentation that focuses on determining individual system efficacy. Additionally, the experimental design is unique in using the web of systems to explore new warfighting concepts that capitalize on contributions of multiple Services as a true joint force. The experimentation yields live data which is evaluated to depict system operational analysis against the predicted performance from modeling and simulation. The Operational Utility Assessment establishes the body of evidence for the "best of breed" and the rapid adaptation of the capability by the Services.

OUSW(R&E) manages the Department's multiple RDER experimentation events and conducts integration activities with the Joint Force. OUSW(R&E) oversees an integrated selection process with the Joint Staff, Services, and Combatant Commands that incorporates the most promising innovative prototypes into existing exercise venues such as: Balikatan and Grey Flag. RDER utilizes funding to plan, integrate, and oversee joint experiments; provide assessments on project viability; and, deliver results to facilitate decisions on transitioning promising capabilities with the Services.

New Start (Y/N): N

A. Mission Description and Budget Item Justification

The RDER program focuses on a campaign of joint experimentation on rapid capabilities that address our most complex military challenges. The Secretary of War established RDER in the Defense Planning Guidance to enable multi-component joint experimentation through a campaign of learning and to establish a body of evidence to support rapid adoption by the Services. RDER enables the Services, agencies, industry, and other organizations to identify “best of breed” capabilities to be prototyped in large-scale joint experiments and validate and/or refine the Joint Warfighting Concept (JWC).

OUSW(R&E)’s process for incubating promising prototypes starts with a novel experimental design based on a web of interconnected systems addressing specific Defense Planning Scenarios. This approach is unique from other experimentation that focuses on determining individual system efficacy. Additionally, the experimental design is unique in using the web of systems to explore new warfighting concepts that capitalize on contributions of multiple Services as a true joint force. The experimentation yields live data that the OUSW(R&E) analyzes against the performance predicted in modelling and simulation.

OUSW(R&E) manages the Department’s multiple RDER experimentation events and conducts integration activities with the Joint Force. OUSW(R&E) oversees an integrated selection process with the Joint Staff, Services, and Combatant Commands that incorporates the most promising innovative prototypes into existing exercise venues such as: Project Capstone, Northern Edge, Valiant Shield, Talisman Sabre, Grey Flag, Joint Battle Problem, and TREX. RDER utilizes funding to plan, integrate, and oversee joint experiments; provide assessments on project viability; and deliver the results to the Deputy Secretary of War management action group to facilitate decisions on transitioning promising capabilities with the Services.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Rapid Defense Experimentation Reserve (RDER) Program Management	2.535	0.000	-
Description: Program Management includes the oversight of the execution of prototypes resourced with the Services to address required capabilities. This effort includes the evaluation of service candidates through the technical maturation phase prior to executing an experiment. Activities include monitoring new technologies through the innovation stakeholder community, which includes the Service laboratories, industry, academia, and federally funded research and development centers and assess “best of breed” prototypes integrated in joint experimentation venues.			

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2027 Office of the Secretary Of Defense		Date: April 2026		
Appropriation/Budget Activity 0400 / 4	R-1 Program Element (Number/Name) PE 0604790D8Z / Rapid Defense Experimentation Reserve (RDER)	Project (Number/Name) 790 / Rapid Defense Experimentation Reserve (RDER)		
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026	FY 2027
FY 2026 Plans: In FY 2025, the Department of War (DoW) Service formally assumed responsibility for defense experimentation functions previously managed by the Rapid Defense Experimentation Reserve (RDER). This transition ensured sustained oversight of prototype development, cost, schedule, and performance within Joint Warfighting Concept (JWC) functional battles, strengthening interoperability and innovation in joint defense planning. Through this transition, the DoW Service sustained continuity, innovation, and readiness in defense experimentation efforts.				
FY 2026 to FY 2027 Increase/Decrease Statement: The Rapid Defense Experimentation Reserve (RDER) was eliminated to streamline defense innovation efforts, reduce redundancy, and optimize resource allocation toward more impactful modernization initiatives.				
Title: Experiments Integration Description: RDER coordinates with the exercise planning cells at the Combatant Commands (CCMD) to conduct experiments. Technical readiness reviews evaluate system design requirements in order to define requirements for participation into multiple experimentation venues. RDER reviews prototype system requirements and maps each within the network architectures for data dissemination and collection. RDER identifies risks that would impede interoperability at multi-component experiment venues. This effort integrates the fully functional capabilities of RDER prototypes into joint operational kill webs to enable joint experimentation.		2.381	0.000	-
FY 2026 Plans: In FY 2025, the Department of War (DoW) Service assumed full ownership of prototype integration across multiple experimentation events, including Balikatan and Grey Flag, ensuring their alignment with operational readiness objectives. This transition enabled the DoW Service to lead comprehensive reviews for each technology, including safety assessments, Authority to Operate (ATO) approvals, and compliance standards to support technical maturity. Executed systematically across the campaign series, this effort strengthened the DoW's commitment to innovation, interoperability, and the effective integration of emerging capabilities within joint operational frameworks.				
FY 2026 to FY 2027 Increase/Decrease Statement: The Rapid Defense Experimentation Reserve (RDER) was eliminated to streamline defense innovation efforts, reduce redundancy, and optimize resource allocation toward more impactful modernization initiatives.				
Title: Experiment Design Description: Resources provide the analysis to support the Combatant Commands establishing the system-of-system level architecture for integrating multiple prototypes into a single experimentation event. For each experimentation event, RDER evaluates each system level design to establish a government reference architecture that seamlessly employs prototype technologies at multiple experimentations geolocated across multiple states. Measures of Effectiveness (MOEs) and Measures of		3.148	0.000	-

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
Performance (MOPs) are established to be collected at each event. These Integrated assessment plans are developed for each individual technology.			
FY 2026 Plans: In FY 2025, the Department of War (DoW) Service assumed full ownership of experimentation efforts, utilizing government reference architecture across venues to assess prototype interoperability at Balikatan and Grey Flag. The DoW Service will evaluate and validate the technical maturity of each interface within the experimentation architectural design using advanced architectural analysis tools. Through this transition, the DoW Service maintained oversight, fostering innovation and interoperability within multi-component defense planning.			
FY 2026 to FY 2027 Increase/Decrease Statement: The Rapid Defense Experimentation Reserve (RDER) was eliminated to streamline defense innovation efforts, reduce redundancy, and optimize resource allocation toward more impactful modernization initiatives.			
Title: Experimentation Execution Description: The execution phase consists of the collection of experimental system performance that is evaluated against the Measures of Effectiveness (MOEs) and Measures of Performance (MOPs) that have been previously established. RDER establishes a data collection command and control network architecture to monitor the behavioral analysis of prototypes during an experimental event. Data is collected and stored for post event analysis. RDER deploys an experimentation unit to provide onsite observation, oversight, and governance during a prototype experiment event. These evaluation teams are required at each data collection node or technology location involved in the experiment.		4.138	0.000
FY 2026 Plans: In FY 2025, the Department of War (DoW) Service assumed full ownership of experimental prototype data collection, deploying the Deployable Experimentation White Cell (DEWC) during Balikatan and Grey Flag. To support geographically dispersed experimentation, the DoW Service will maintain command and control facility, ensuring operational oversight and readiness assessments. The functional cell will control operational accreditation and integrated automated tools for rapid analysis, with to senior leadership, reinforcing informed decision-making and strategic oversight.			
FY 2026 to FY 2027 Increase/Decrease Statement: The Rapid Defense Experimentation Reserve (RDER) was eliminated to streamline defense innovation efforts, reduce redundancy, and optimize resource allocation toward more impactful modernization initiatives.			
Title: Opposing Force (OPFOR) Threat Emulation Description: Opposing Force (OPFOR) threat emulation establishes a plausible, flexible military force representing a composite of varying capabilities of actual adversary forces within an experiment. Resources provide a threat informed and operationally		8.361	0.000

relevant environment to conduct experiments. RDER employs OPFOR across geographically dispersed experiments which requires the procurement of Manpower to operate OPFOR capabilities, a deployable experimentation white cell to maintain command and control of RDER proposal external from the exercise, maritime threats, UAVs/Drones, UUVs, Small boats, Electromagnetic Spectrum emitters, mobile and fixed medium range BMs, and Decoys to establish a relevant environment for RDER capabilities. FY 2026 Plans: In FY 2025, the Department of War (DoW) Service took ownership of OPFOR emulations, enhancing threat representation in Balikpapan and Grey Flag through emitters, targets, decoys, and communications nodes. This transition ensured a realistic, multi-domain environment, integrating threat analysis, tactical network infrastructure, and logistical coordination for deployed assets. FY 2026 to FY 2027 Increase/Decrease Statement: The Rapid Defense Experimentation Reserve (RDER) was eliminated to streamline defense innovation efforts, reduce redundancy, and optimize resource allocation toward more impactful modernization initiatives.					
Title: Data Collection and Assessment Description: This effort supports the manpower required for data collection teams. The collection teams record the joint operational data to assess the measurements of performance and measurements of effectiveness of a prototype in a multi-component experimentation venue. It resources personnel who are co-located at multiple experimentation locations to include experiment venues, UARC/FFRDC's in the Continental United States, as well as at the CCMD headquarters. Data collection teams are required for each individual technology being evaluated at each event. FY 2026 Plans: In FY 2025, the Department of War (DoW) Service assumed responsibility for coalition experimentation, maintaining data collection at Balikpapan and Grey Flag. The Services will submit daily assessments to support prototype evaluations at their leadership level FY 2026 to FY 2027 Increase/Decrease Statement: The Rapid Defense Experimentation Reserve (RDER) was eliminated to streamline defense innovation efforts, reduce redundancy, and optimize resource allocation toward more impactful modernization initiatives.			2.489	0.000	-

Note

New Start (Y/N): No

In FY 2027, \$15.627 million of funding is realigned from the Mission Engineering and Integration Program Element 0603142D8Z, Project Code 124, to conduct Joint Lethality Engineering (JLE) support to Capability Portfolio Management (CPM) in partnership with the Joint Staff and Office of the Under Secretary of War for Acquisition and Sustainment (OUSW(A&S)) as per Department Directive 7045.20.

Joint Lethality Engineering (JLE), formerly called Assault Breaker II, was previously executed under Program Element 0603142D8Z, Project Code 124, Advanced Analysis and Capability Development and continues work transitioned in FY 2025 from the Defense Advanced Research Project Agency's (DARPA) Assault Breaker II program to support efforts to integrate data, tools, and techniques accelerating delivery of capabilities to the warfighter, which addresses a key NDS goal – Building on our Enduring Advantages. Assault Breaker II (ABII) was renamed Joint Lethality Engineering (JLE) in FY 2025 to mark the transition from DARPA to OUSW(R&E).

A. Mission Description and Budget Item Justification

The Office of the Deputy Assistant Secretary of War (DASW) for Multi-Domain Joint Operations (MDJO) serves as the primary driver for identifying, developing, and transitioning high-priority joint capabilities to the warfighter. In accordance with Public Law 116-283 and DoD Directive 7045.20, MDJO collaborates across the Department of War to ensure the seamless integration of cutting-edge technologies into operational use. Key efforts executed include:

- Mission Engineering and Integration Activity (MEIA): Plans and supports the execution of mission engineering, industry engagement, experimentation, and capability assessments to address priority Joint Operational Problems (JOPs). Establishes Mission Capability and Analysis Teams (MCATs) and informs the Requirements and Resourcing Alignment Board (RRAB).
- JROC Representation: Serves as the official Research and Engineering (R&E) representative to the Joint Requirements Oversight Council (JROC), providing technical expertise to shape requirements, concepts of operation, and solutions for urgent operational needs.
- Senior Governance Engagement: Actively participates in senior governance forums, including Cost Assessment and Program Evaluation (CAPE) reviews and Warfighter Senior Integration Groups (W-SIGs), to ensure the integration of innovative technologies into decision-making processes.
- Technology Modernization Transition Reviews (TMTRs): Executes TMTRs in collaboration with the Joint Staff, Acquisition and Sustainment (A&S), and other stakeholders to accelerate technology options for JROC-designated high-priority operational problems.
- Joint Lethality Engineering (JLE): Conducts critical research and analysis to address the nation's most pressing military challenges. By enhancing the lethality and survivability of our systems against advanced adversarial threats, JLE directly contributes to the Department's investment decisions and the overall effectiveness of the joint force. This program element spans all security levels and warfighting domains, ensuring a comprehensive approach to bolstering our military capabilities.

---	---

The FY 2027 request for MDJO includes \$32,001 thousands of discretionary and \$2,400,000 thousands of mandatory for a total of \$2,432,001 thousand. The FY 2027 mandatory funds are for next generation technologies / autonomy, directed toward integrating mature technologies that are ready for fielding now (next 24 months). It accelerates delivery mission-ready capabilities to the warfighter aligned with the Department's six critical technology areas to deter adversaries and enhance Joint Force operational advantage.

The FY 2026 spend plan amount for Multi-Domain Joint Operations (MDJO) includes \$2,310 thousands of discretionary and \$1,000 thousands of mandatory (reconciliation) for a total of \$3,310 thousand.

Note

New Start (Y/N): N

A. Mission Description and Budget Item Justification

This project supports identification and transition of priority joint capabilities to the Military Services and Agencies, through persistent, proactive stakeholder engagement with continuous transition risk assessment, development of technology transition plans, and coordination across the Department of War. Project identification activities inform the specific focus areas for the Assistant of Secretary of War (ASW) Mission Capabilities for Mission Engineering and Prototyping & Experimentation activities. Concurrently, project transition activities accelerate the fielding of successfully demonstrated joint capabilities. MDJO's core mission is to align Joint Force efforts to the interim National Defense Strategy priorities. Additionally, this project funds TMTR which are executed to review the health of research and development portfolios to identify promising technologies to address warfighter gaps and support investment decisions. In FY 2026, this project also supports MEIA, the DoW's new enterprise framework and approach for delivering capability at speed to the Joint Force. MEIA integrates mission engineering, rapid experimentation, operational integration, and solution refinement with industry.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Project Identification Activities	-	0.000	0.000
Description: In accordance with DoW capability portfolio management, provides a whole of DoW integrated decision approach for the Department's RDT&E budget in critical technology and capability portfolios to address Key Operational Problems. This effort identifies technologies, systems, and system-of-systems that close time-critical joint gaps in high-priority, multi-domain missions. It leverages capability gap assessments, Science & Technology (S&T) innovation harvesting, the Defense Advanced Research Projects Agency (DARPA) Technology Development Working Group, modeling and simulation, and supports continuous engagements across the DoW to conduct project identification and continuous engagements across the DoW to identify, accelerate, and transition technologies and capabilities.			
FY 2026 Plans: Conduct identification of critical DoW missions requiring accelerated technical solutions to shape prototyping efforts across the ASW(MC) portfolio, Joint Service investments, industry proposals and other stakeholder interests. Participate in capability gap assessments and engage with the Joint Staff, CCMDs, and Services; harvest S&T through communities of interest, data

collections, and innovation workshops; support DARPA Technology Development Working Group workshops; and participate in the (Functional Capability Boards, FCBs) for the JROC.					
FY 2027 Plans: N/A					
FY 2026 to FY 2027 Increase/Decrease Statement: N/A					
Title: Project Transition Activities Description: This effort transitions technologies, systems, and system-of-systems that close time-critical joint gaps in high-priority, multi-domain missions, through stakeholder engagement, and execution of transition risk assessment for high priority prototyping efforts. Upon successful completion of development, the Office of the Under Secretary of Defense for Acquisition and Sustainment (OUSW(A&S)) Competitive Advantage Pathfinders (CAP) program is leveraged to ensure successful transition into a fielded capability. This effort also leverages the Agile Transition Procurement Pilot established in section 834 of the FY 2022 National Defense Authorization Act (NDAA) to facilitate transition where appropriate. FY 2026 Plans: Conduct transition activities in collaboration with the Services, CCMDs, OUSW(A&S) CAP program, and others as necessary. FY 2027 Plans: N/A FY 2026 to FY 2027 Increase/Decrease Statement: N/A			-	0.000	0.000
Title: Technology Modernization Transition Reviews (TMTRs) and Senior Governance Forum (SGF) support Description: This effort funds the execution of TMTRs to assess the research and development efforts within portfolios. TMTRs consider the warfighter impact, cost schedule, performance, technology readiness, manufacturing readiness and transition readiness of each project within a portfolio to make recommendations regarding additional investments or divestments of efforts. TMTRs are part of integrated CPM including Joint Staff Capability Portfolio Management Reviews (CPMRs) and OUSW(A&S) Integrated Acquisition Portfolio Reviews (IAPRs) that inform JROCs, acquisition decisions and Deputy's Management Action Group (DMAG). TMTRs are structured to: (1) synchronize technology development with transition planning to meet strategic objectives, (2) integrate with, and inform, acquisition portfolio reviews of the Joint Staff, OUSW(A&S), and Cost Assessment and Program Evaluation (CAPE), and (3) provide the OUSW(R&E)'s science and technology inputs to CAPE to support the annual President's Budget Request. TMTRs and associated SGF coordination facilitate project identification and transition activity. In FY			-	2.310	16.374

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2025	FY 2026	FY 2027
2026, effort includes Mission Engineering and Integration Activity (MEIA) support which consists of mission engineering, industry engagement, experimentation, and technical analysis to address the JROC's highest priority operational problems.					
FY 2026 Plans: Conducting approximately 5 TMTRs. Reviews are integrated across the Joint Staff, OUSW(R&E) and OUSW(A&S) to address strategic operational issues raised by the Joint Staff; providing technical analysis and advisory support to the Joint Staff; and implementing MEIA for two prioritized Joint Operational Problems.					
FY 2027 Plans: Will execute approximately 25 TMTRs of emerging technologies to inform future investment decisions and maintain alignment between RDT&E activities and the Joint Staff needs; conduct full MEIA mission cycles for prioritized Joint Operational Problems; and conduct technical assessments and analysis that inform requirements and concept development.					
FY 2026 to FY 2027 Increase/Decrease Statement: Increase from FY 2026 to FY 2027 restores efforts that were deferred and realigns funding with strategic imperatives.					
Title: Joint Lethality Engineering (JLE)			0.000	0.000	15.627
Description: JLE, conducts critical research and analysis to address the nation's most pressing military challenges. By enhancing the lethality and survivability of our systems against advanced adversarial threats, JLE directly contributes to the Department's investment decisions and the overall effectiveness of the joint force. This program element spans all security levels and warfighting domains, ensuring a comprehensive approach to bolstering our military capabilities.					
- Produces strategically informed technical analysis that supports the development of future warfighting concepts and identify opportunities for investment in key enabling technologies that enhance the lethality of systems against adversarial threats. - Produces investment recommendations in capabilities oriented toward increasing warfighter effectiveness.					
FY 2026 Plans: Continue JLE initiative focusing on distinct military challenges related to advanced warfighting architectures, operational concepts, and associated capability development. Additional classified information available upon request.					
Continue executing the Eloquent Omen (EO) analytic campaign to inform the development of non-kinetic capabilities in a strategically informed way, focused on de-escalation and preserving decision space. Additional classified information available upon request.

A. Mission Description and Budget Item Justification

The FY 2027 request for Joint Energetics Transition Office (JETO) includes \$6,278 thousand of discretionary and \$500,000 thousand of mandatory for a total of \$506,278 thousand. The FY 2027 \$500,000 thousand of mandatory funds continue efforts from FY 2026 to conduct systems engineering and rapid, full-scale prototyping of weapons systems and supporting components to demonstrate the technical maturity of new energetic materials technologies. It will sponsor the expedited maturation, validation, verification, and accreditation of Modeling and Simulation tools. It will conduct modernized Test and Evaluation activities to support the systems engineering and modeling and simulation missions, ultimately encouraging the development of increased fidelity and enhanced throughput for future qualification work.

The FY 2026 spend plan amount for Joint Energetics Transition Office (JETO) includes \$2,986 thousand of discretionary and \$1,000 thousand of mandatory (reconciliation) for a total of \$3,986 thousand.

The FY 2024 National Defense Authorizations Act (NDAA) directs The Under Secretary of War for Acquisition and Sustainment (USW(A&S)) and Under Secretary of War for Research and Engineering (USW(R&E)) to select the Head and Deputy Head of Joint Energetics Transition Office (JETO), respectively. JETO will establish and manage a DoW field activity dedicated to systems engineering associated with energetic materials. Additionally, JETO has been assigned strategic roles, tactical roles, coordination responsibilities, and directed studies.

This new joint office is intended to improve the transition of energetic materials and technologies to programs of record. It will also result in cost savings through economies of scale and lower barriers for additional suppliers entering the market. Roles and responsibilities of include:

DoW Field Office: The establishment and management of a Department of War field activity will be dedicated to systems engineering associated with energetic materials. The field activity mission will be to reduce technical risk; integrate research; develop, test, and evaluate energetic materials; and perform Department of War system demonstration programs on novel energetic materials for use in weapon systems. This field office will execute studies to inform the Energetic Materials Strategic Plan and Investment Strategy. Per NDAA language, these activities must be funded under budget activity 3 (advanced technology development) or budget activity 4 (advanced component development and prototypes).

Strategic Roles: JETO will create an Energetic Materials Strategic Plan and Investment Strategy and report on changes and progress annually.

UNCLASSIFIED

---	--

Tactical Roles: JETO will identify and develop plans to alleviate any shortfalls in the supply chain for energetic materials. It will determine targets which would be better addressed with advanced energetics materials.

Coordination: JETO will identify promising new energetic materials and technologies. It will mature, integrate, prototype, test, and demonstrate novel energetic materials and technologies. It will also expedite the transition of energetic materials and technologies from the research and development phase to production and operational use. Finally, it will identify or establish prototyping demonstration venues.

Directed Studies: JETO will oversee processes, including recommending changes to regulations to (1) expedite the validation, verification, and accreditation of modeling and simulation, and (2) expedite the qualification process for energetic materials, from discovery through integration.

Additionally, the NDAA generated a requirement for three standalone reports and one annual report to be fulfilled by JETO.

Note

New Start (Y/N): No

Program is a transfer from the Defense Health Agency (DHA).

A. Mission Description and Budget Item Justification

This program exploits advances in technology to develop, improve and implement detection, information processing and decision support for biosurveillance. The mission of this program is to create a fit-for-purpose biosurveillance capability with federated collection, processing, analysis, production, and dissemination capabilities to enable strategic, anticipatory, and operational decision-making for deterrence and risk mitigation. To accomplish this mission, the Biosurveillance Program will: 1) Implement agile planning and response processes through a cross-functional biosurveillance organizational architecture—with the structure, function, and authorities—to support time-sensitive needs of DoW leaders; 2) Expand physical and digital detection capabilities and capacity—infused with intelligence collection—to enable early warning, sustained awareness, and agile response focusing on advanced technological capabilities; 3) Enhance biosurveillance insights by increasing data value, knowledge generation and accelerating processing of existing health and biodefense repositories into a fit-for purpose analytic capability; 4) Communicate the full range of analytic products necessary for leadership decision-making across the continuum of conflict. This budget is justified by the critical gap, identified in the 2023 Biodefense Posture Review, in the Department's ability to gather and analyze timely biothreat information to protect the Joint Force and enhance national security. The funding will establish this necessary capability by operationalizing a Biosurveillance Information Platform (BIP), expanding next-generation sequencing, and improving data sharing. These investments are essential for enhancing readiness and resilience against a dynamic landscape of natural, accidental, and deliberate biological threats.

A. Mission Description and Budget Item Justification

The mission of this program is to create a fit-for-purpose biosurveillance capability with federated collection, processing, analysis, production, and dissemination capabilities to enable strategic, anticipatory, and operational decision-making for deterrence and risk mitigation. To accomplish this mission, the Biosurveillance Program will: 1) Implement agile planning and response processes through a cross-functional biosurveillance organizational architecture—with the structure, function, and authorities—to support time-sensitive needs of DoW leaders; 2) Expand physical and digital detection capabilities and capacity—infused with intelligence collection—to enable early warning, sustained awareness, and agile response focusing on advanced technological capabilities; 3) Enhance biosurveillance insights by increasing data value, knowledge generation and accelerating processing of existing health and biodefense repositories into a fit-for purpose analytic capability; 4) Communicate the full range of analytic products necessary for leadership decision-making across the continuum of conflict. This budget is justified by the critical gap, identified in the 2023 Biodefense Posture Review, in the Department's ability to gather and analyze timely biothreat information to protect the Joint Force and enhance national security. The funding will establish this necessary capability by operationalizing a Biosurveillance Information Platform (BIP), expanding next-generation sequencing, and improving data sharing. This also includes field exercises, demonstrations, and initial capability evaluations supporting development and production activities. These investments are essential for enhancing readiness and resilience against a dynamic landscape of natural, accidental, and deliberate biological threats.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Biosurveillance Information Platform (BIP)	0.000	0.000	7.000
Description: Continue the iterative development and maintenance of the BIP, focusing on enhancing its capacity to ingest, process, and securely analyze new and diverse data streams. This includes data from the expanded laboratory network, advanced sensors, and open-source intelligence feeds. Develop and prototype advanced analytic capabilities, including Artificial Intelligence (AI) and Machine Learning (ML) models, within, or as precursors to ingestion into the BIP. These models will automate the detection of anomalous biological events and predict potential disease spread, transforming raw data into actionable intelligence for decision-makers.			
FY 2026 Plans: N/A			
FY 2027 Plans: Biosurveillance Information Platform Advanced Analytic (BIP) Development:

Appropriation/Budget Activity 0400 / 4	R-1 Program Element (Number/Name) PE 0604834D8Z / <i>Biosurveillance Program Development & Prototyping</i>	Project (Number/Name) 957 / <i>Biosurveillance Program Development & Prototyping</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
- Continue the iterative development and maintenance of the BIP, focusing on enhancing its capacity to ingest, process, and securely analyze new and diverse data streams. This includes data from the expanded laboratory network, advanced sensors, and open-source intelligence feeds. - Develop and prototype advanced analytic capabilities, including Artificial Intelligence (AI) and Machine Learning (ML) models, within, or as precursors to ingestion into the BIP. These models will automate the detection of anomalous biological events and predict potential disease spread, transforming raw data into actionable intelligence for decision-makers. Integration, Exercises, and Demonstrations: - Conduct a series of field exercises and technology demonstrations to test, validate, and refine the functionality of advanced analytic tools to support the BIP. This will include assessing its integration with existing and emerging Command and Control (C2) systems within the Combined Joint All-Domain Command and Control (CJADC2) framework. Biosurveillance Consortium Supported Implementation and Testing: - Design and execution of field exercises and technology demonstrations, acting as the primary end-user and evaluator of analytic tools wrt BIP IOC and FOC capabilities and other BSV tools at forward locations. - Develop and refine the Concept of Operations (CONOPS) for the use of BSV technology in operational settings, ensuring that platform development is directly tied to warfighter needs and feedback. <i>FY 2026 to FY 2027 Increase/Decrease Statement:</i> N/A. Transfer of resources from Defense Health Program (DHP) to OSW, RDT&E, DW.

A. Mission Description and Budget Item Justification

This program is executed via Scaled Directed Energy (SCADE) Integration and Manufacturing and in alignment with the Department of War Directed Energy Roadmap, as well as other strategic guidance. The goal of this program is to support the Department's initiatives in directed energy to build a sustainable and long-term advantage.

This program funds advanced component and subsystem development, as well as the prototyping and assessment of new and transitioning technologies. The goal is to reduce technology and engineering integration risks, creating the conditions for scaled production and the enhanced, widespread acceptance of DE. These efforts inform the requirements needed to develop the functional and allocated baselines of the end-item system configurations. In practice, directed energy weapon systems have many potential advantages, including speed-of-light time-to-target, high precision, low incremental cost per kill, and a rechargeable magazine through on-board power and thermal management systems improving logistics requirements over stocks of munitions or warheads.

As a result, directed energy weapon systems have the potential to perform a wide variety of military missions. Activities conducted under this program will ultimately enable the demonstration of military utility for mission areas across the Department of War.

A. Mission Description and Budget Item Justification

This program is part of an overall Department of War strategy in SCADE Integration and Manufacturing. Efforts within will focus on enabling next-generation directed energy weapons that engage threats at longer ranges with shorter engagement timelines in adverse environments with improved size, weight, and power requirements. These efforts complement, and will be closely coordinated with, other Department efforts directed at specific Service and Agency missions. This program builds upon department investments by the Services and Agencies to eliminate duplication. As a result, efforts in this program will transition directed-energy technology to the Services and Agencies at a technical, integration, and manufacturing readiness level for insertion into directed energy weapon systems.

This project executes a technical program that enables (1) integration of advanced prototypes in support of demonstrating mission-driven lethality and survivability, (2) test and evaluation in a relevant field environment with Joint-international participation, (3) studies, analyses, and evaluations in mission-driven lethality and survivability that support directed energy military utility assessments and (4) identify gaps within the defense industrial base for manufacturability of directed energy weapon systems.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: SCADE Integration and Manufacturing	2.850	5.528	44.485
Description: The Directed Energy Tech Maturation Program enables advanced prototypes in support of demonstrating mission-driven lethality and survivability through modeling and simulation, test and evaluation in a relevant field environment with Joint-international participation and evaluate manufacturability of prototypes within the Defense Industrial Base.			
FY 2026 Plans: Advanced Prototypes: Using a modular open system approach, refine a previously developed reference architecture for advanced prototypes. Provide support to programs implementing the reference architecture.			
Test and Evaluation: Conduct operational analysis and mission studies. Leverage these studies to develop and refine common directed energy weapon system requirements and command and control timelines. Integrate lessons learned from these studies into test and evaluation efforts across the Department of War to support requirement development, reduce kill chain latencies, and enable more robust battle management.

Exhibit R-2A, RDT&E Project Justification: PB 2027 Office of the Secretary Of Defense			Date: April 2026		
Appropriation/Budget Activity 0400 / 4		R-1 Program Element (Number/Name) PE 0604924D8Z / <i>High Energy Laser Advanced Component Development & Prototype</i>		Project (Number/Name) 921 / <i>High Energy Tech Maturation</i>	
B. Accomplishments/Planned Programs (\$ in Millions)			FY 2025	FY 2026	FY 2027
Mission-driven lethality/survivability: Collect lethality/survivability data for a prioritized list of threats and a prioritized set of aimpoints on those threats. Develop vulnerability modules from this data based on a Joint process with approved standards for distribution to the Services and Agencies.					
Mission Engineering: Update engagement-level models with vulnerability modules uploaded to a Joint repository. Distribute the updated models to support directed energy weapon system integration into exiting force development and force design studies for future employment of directed energy weapon systems.					
Manufacturing: Evaluate capabilities of current manufacturers, identify technology gaps, and assess the defense industrial base and readiness to support advanced manufacturing techniques for directed energy weapon systems.					
FY 2027 Plans:					
Advanced Prototypes: Using a modular open system approach, refine a previously developed reference architecture for advanced prototypes. Provide support to programs implementing the reference architecture.					
Test and Evaluation: Continue to conduct operational analysis and mission studies. Leverage these studies to develop and refine common directed energy weapon system requirements and command and control timelines. Integrate lessons learned from these studies into test and evaluation efforts across the Department of War to support requirement development, reduce kill chain latencies, and enable more robust battle management.					
Mission-driven lethality/survivability: Continue to collect lethality/survivability data for a prioritized list of threats and a prioritized set of aimpoints on those threats. Develop vulnerability modules from this data based on a Joint process with approved standards for distribution to the Services and Agencies.					
Mission Engineering: Review models and update engagement-level models with vulnerability modules uploaded to a Joint repository. Distribute the updated models to support directed energy weapon system integration into exiting force development and force design studies for future employment of directed energy weapon systems.					
Manufacturing: Review/validate previous FY evaluation of capabilities of current manufacturers, identify technology gaps, and assess the defense industrial base and readiness to support advanced manufacturing techniques for directed energy weapon systems.					
FY 2026 to FY 2027 Increase/Decrease Statement:					
The increase of \$38.957 million between FY 2026 and FY 2027 is to invest in the rapid development of Advanced Prototypes and support the key requirements of Test and Evaluation, Mission-driven lethality/survivability, Mission Engineer, and Manufacturing.

Note

New Start (Y/N): No

- Starting in FY 2026, the 'Loan Program Office' will now be referred to as 'Credit Program' and 'Investment Prospectus Analysis' will now be referred to as 'Investment Strategy'
- Starting in FY 2026, funding for Transition Acceleration Program (TAP), Global Technology Scouting and Co-Investment Program (GTS), and Investment Strategy is budgeted in PE 0604679D8Z
- Starting in FY 2026, funding for the Credit Program and Critical Technologies Limited Partnership Program (CTLP Program) is budgeted in PE 0902199D8Z

The FY 2026 spend plan amount for RDT&E DW, Office of Strategic Capital (OSC), includes \$0 thousand of discretionary and \$20,000 thousand of mandatory for a total of \$20,000 thousand.

A. Mission Description and Budget Item Justification

In support of the Department of War, Office of Strategic Capital's (OSC) mission is to attract and scale private capital to technologies critical to the national and economic security of the United States. To accomplish its mission, OSC uses loans, loan guarantees, and technical assistance – an efficient use of taxpayer dollars – to crowd in investment by aligning government and private sector incentives. The office's tools take advantage of the power of markets and competition to support DoW needs. OSC's investments are guided by: (i) control of economic chokepoints; (ii) scaling of key industries, and (iii) commercialization of critical technologies. OSC investments will provide the Department of War advantages in all these competitive arenas, especially by securing critical supply chains and rebuilding the industrial base.

Specifically, OSC will:

- Develop new financial products, such as direct equipment finance loans for manufacturers, project finance loans to support capital intensive projects, working capital loans for businesses in need of short-term financing, and loan guarantees through private banks.
- Provide loans, loan guarantees and technical assistance to businesses, funds, and other entities within the 33 Covered Technology Categories prescribed by Congress.
- Identify and prioritize areas for investment through engagements with the Services, Combatant Commands, National Security Council, and other interagency partners.
- Create new data tools to map economic networks to determine chokepoints that impact U.S. national and economic security.
- Increase private capital investment to enhance the commercialization of DoW and United States Government (USG) science & technology investments.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Critical Technologies Limited Partnership Program (CTLP Program)	0.000	0.000	-
Description: This program provides loans, loan guarantees, and technical assistance to investment funds to increase their investable capital for investments in portfolio companies within the 33 Covered Technology Categories (as described in the FY 2024 and FY 2025 NDAA's) vital to national and economic security. The intent is to increase investment in unaddressed and underserved sectors critical to national security by attracting private capital and aligning incentives with the mission of the Office of Strategic Capital -- all at little or no cost to the taxpayer.			
• In FY 2025, \$20.0 million was transferred from PE 0901579D8Z to the Credit Program Account (PE 0902199D8Z) for CTLP Program. • Beginning in FY 2026, funds for CTLP Program are budgeted to the Credit Program Account (PE 0902199D8Z).			

UNCLASSIFIED

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
FY 2026 Plans: Funding for CTLP Program is budgeted in PE 0902199D8Z starting in FY 2026.			
FY 2026 to FY 2027 Increase/Decrease Statement: Funding for CTLP Program is budgeted in PE 0902199D8Z starting in FY 2026.			
Title: Credit Program Description: This program provides direct loans, loan guarantees, and technical assistance to businesses operating within the 33 Covered Technology Categories (CTCs) mandated by Congress in the FY 2024 and FY 2025 NDAA's. These companies require significant debt capital to expand manufacturing, secure critical supply chains, and produce components that are the foundation of key capabilities. Given the market risk of businesses within the 33 CTCs, private debt financing is often insufficient or otherwise inaccessible. As a result, private companies are unable to compete especially against businesses that receive direct support from adversary countries. OSC addresses this capital gap by providing attractively priced, long-term capital to these companies that support U.S. national and economic security. • In FY 2025, \$69.049 million was transferred from PE 0901579D8Z to DoW Credit Program Account (PE 0902199D8Z) for Credit Program. • Beginning in FY 2026, funds for Credit Program will be budgeted to DoW Credit Program Account (PE 0902199D8Z). FY 2026 Plans: Funding for Credit Program is budgeted in PE 0902199D8Z starting in FY 2026.		0.000	0.000
FY 2026 to FY 2027 Increase/Decrease Statement: Funding for Credit Program is budgeted in PE 0902199D8Z starting in FY 2026.			-
Title: Transition Acceleration Program (TAP) Description: Leveraging existing development programs, projects, and warfighter priorities, this program aligns private investment and RDT&E funding to co-invest in critical technology companies that are developing compelling military capabilities with clear pathways to transition to existing or future programs of record. RDT&E funding is used to fund a Pathfinder program to validate advanced manufacturing methods and approaches to meet critical demand for solid rocket motors. This effort coordinates Service and OSW funding with private sector investment across multiple contract efforts to maximize available capital, operational impact, and broader USW(R&E), ASA(ALT), and ASN(RDA) equities. FY 2026 Plans:		14.524	0.000
			-

FY 2026 to FY 2027 Increase/Decrease Statement: Funding for TAP is budgeted in PE 0604679D8Z starting in FY 2026.			
Title: Global Technology Scouting and Co-Investment Program (GTS) Description: The Global Technology Scouting and Co-Investment (GTS) program leads international activities to leverage OSC's financial tools and co-investment opportunities with allies, into critical technologies, which support interoperability, integrated deterrence, and prevent adversarial capital investment. FY 2026 Plans: Funding for GTS is budgeted in PE 0604679D8Z starting in FY 2026. FY 2026 to FY 2027 Increase/Decrease Statement: Funding for GTS is budgeted in PE 0604679D8Z starting in FY 2026.		14.550	0.000
Title: Investment Strategy Description: The Investment Strategy program develops, drafts, and coordinates OSC's Investment Strategy to ensure the office's investments are aligned broadly with the Department's priorities articulated by the INDSG, NSS, NDS, DPG and other strategic documents. As a part of this analysis, Strategy conducts a combination of quantitative and qualitative research to map economic networks, assess key industries, and determine which critical technologies are essential to economic and national security. This work continuously informs where the office deploys its resources. FY 2026 Plans: Funding for Investment Strategy is budgeted in PE 0604679D8Z starting in FY 2026. FY 2026 to FY 2027 Increase/Decrease Statement: Funding for Investment Strategy is budgeted in PE 0604679D8Z starting in FY 2026.		4.656	0.000
Title: Defense Ventures Fellowship Program Description: The Defense Ventures Fellowship Program places select DoW personnel in immersive fellowships within leading investment firms and defense technology companies. This initiative aims to enhance DoW expertise in cutting-edge technologies and innovative business practices, drive innovation within the DoW, strengthen public-private partnerships, and develop future leaders equipped to navigate the evolving defense landscape. By providing structured learning opportunities, mentorship, and real-world project experience, the program cultivates a more agile and innovative workforce, ultimately strengthening national security.		2.000	0.000

A. Mission Description and Budget Item Justification

The Chief Digital and Artificial Intelligence Officer (CDAO) mission is to accelerate DoW adoption of data, analytics, and artificial intelligence (AI) to enable decision advantage from the boardroom to the battlefield. This includes improving CJADC2 in support of the Joint Warfighting Concept through three lines of effort:

-Data Integration Layer: These efforts mature management of DoW operational data and deploy a tactical edge data mesh (EDM) to enable data integration among new and legacy systems. EDM is a resilient, interoperable data integration service connecting sensors, weapons, and other battlefield assets for enhanced situational awareness and coordination into a cloud environment. EDM leverages commercial software, a government-owned software development kit (SDK), and open application programming interfaces (APIs) to integrate government and vendor systems, facilitate tactical data sharing, and incorporate artificial intelligence/machine learning (AI/ML) capabilities at the edge. EDM supports multi-domain operations across echelons, including enhanced C2 and fires in contested environments by optimizing data exchange among Denied, Disrupted, Intermittent, and Limited (DDIL) communication paths.

-Mission Command Applications: This effort integrates data, analytics, and AI in support of the seven Joint warfighting functions leveraging a common government owned/contractor operated data stack that adheres to open architecture principles. Requested funding purchases licenses for access to Joint commercial software tools for Joint Force and Services on multiple networks, engineering support to integrate new data sources and digitize workflows, maintenance of a DevSecOps pipeline to allow third party vendors to develop and field applications on shared digital infrastructure, funding for those third party vendors to close CJADC2 gaps, and cloud compute costs needed to run applications and workflows.

-Global Experimentation: This effort supports experimentation efforts for Joint Command and Control (C2) capabilities leveraging CCMD and Service exercises. Experiments evaluate data integrations and digital workflows in the context of real mission use cases, on live networks, and with real data and users.

Note
Funding for DIL has moved from BA 5 to BA 6 starting in FY26. Remains under the same PE 0604122D8z

A. Mission Description and Budget Item Justification
The DIL funding line contains efforts to mature management of DoW operational data and deploy a tactical edge data mesh (EDM) to enable data integration among new and legacy systems. EDM is a resilient, interoperable data integration service connecting sensors, weapons, and other battlefield assets for enhanced situational awareness and coordination into a cloud environment. EDM leverages commercial software, a government-owned software development kit (SDK), and open application programming interfaces (APIs) to integrate government and vendor systems, facilitate tactical data sharing, and incorporate artificial intelligence/machine learning (AI/ML) capabilities at the edge. EDM supports multi-domain operations across echelons, including enhanced C2 and fires in contested environments by optimizing data exchange among Denied, Disrupted, Intermittent, and Limited (DDIL) communication paths. The tactical edge data mesh provides real time understanding at tactical level C2 into the data layer for the department in Joint C2 system.

B. Accomplishments/Planned Programs (\$ in Millions)	FY 2025	FY 2026	FY 2027

A. Mission Description and Budget Item Justification This effort integrates data, analytics, and AI in support of the seven Joint warfighting functions leveraging a common government owned/contractor operated data stack that adheres to open architecture principles. Requested funding purchases licenses for Joint access to Joint C2 capabilities on multiple networks, engineering support to integrate new data sources and digitize workflows, maintenance of a DevSecOps pipeline to allow third party vendors to develop and field applications on operational networks, funding for those third party vendors to close CJADC2 gaps, and cloud compute costs needed to run applications and workflows. This line also supports the efforts to mature management of DoW operational data and deploy a tactical edge data mesh to enable data integration among new and legacy systems' and Joint C2 experimentation.

Note

New Start (Y/N): No

The purpose of the Dem/Val Activities PE to prototype and mature new efforts is better represented under this new structure and provides better visibility to CDAO programs.

A. Mission Description and Budget Item Justification

The Chief Digital and Artificial Intelligence Officer (CDAO) Demonstration and Validation (Dem/Val) supports prototyping of new data, analytics, and AI capabilities and acquisition, process, and people approaches that are not yet mature enough to field at scale. This line enables CDAO to test and validate new approaches to digital technology capability development and delivery and inform future procurement activities, policy changes, and/or acquisition models to enable DoW adoption of data, analytics, and AI.

The FY 2026 spend plan amount for Research, Development, Test & Evaluation, CDAO, includes \$9,066 thousand of discretionary and \$5,000 thousand of mandatory (reconciliation) for a total of \$14,066 thousand.

Note

In FY 2026, efforts in Project Code 083 were realigned to other PEs or concluded. FY 2026 contains no funding in this line.

In FY 2025, Foundational Enablers funded a variety of CDAO projects and capabilities, which in FY 2026, moved to other project codes or PEs or concluded. The mapping follows:

- Acquisition Ecosystem (FY 2026: remains in this PE, moved to code 786)
- Advana Platform (FY 2026: moved to new BA08 Pilot PE0608140D8Z)
- SUNet (FY 2026: moved to new BA08 Pilot PE0608140D8Z)
- CDAO Centrally Managed Support (FY 2026: no funding, concluded activities)
- Defense Digital Services (FY 2026: no funding, concluded activities)
- Enterprise Platforms and Capabilities (EPC): Data Engineering, Data Operations, and Data Governance (FY 2026: moved to new BA08 Pilot PE0608140D8Z)

A. Mission Description and Budget Item Justification

CDAO's Foundational Enablers efforts in this PE include:

- Acquisition Ecosystem: provides rapid, effective, and efficient acquisition support to CDAO and DoW at large (through decentralized offerings) by providing contracting capabilities, guidance, and training for the acquisition workforce on AI. The CDAO Acquisition Ecosystem provides several types of contracting mechanisms / vehicles such as CSOs, OTAs, BOAs, and BPAs; expedited contracting processes; and AI-driven tools to streamline federal procurements. (Moves to project code 786 in FY 2026.)
- Advana Platform: Advana is DoW's enterprise data acquisition, data operations, and data analytics capabilities within a government and military-owned environment hosted in DoW and NGA clouds, as well as available at the edge. Advana delivers 24/7 continuous operations on NIPR, SIPR, JWICS, SUNet, and Edge environments and supports a rapidly growing user community that now exceeds 100,000+ users, 500+ data connections, hosts the DoW Federated Data Catalog, hosts the DSD Pulse applications, and provides a DevSecOps pipeline to field 3rd party applications on DoW data. The "Creating Data Advantage" Memo, signed by DSD on 5 May 2021, directs that "The Advancing Analytics (Advana) platform is the single enterprise authoritative data management and analytics platform for the Secretary of War, Deputy Secretary of War, and Principal Staff Assistants (PSAs), with inputs from all DoW Components". (Moves to new BA08 Pilot PE 0608140D8Z in FY 2026)
- Secure Unclassified Network (SUNet) Enterprise: SUNet is a National Security System used as an AI development environment and multi-national collaboration & data sharing environment for non-traditional partners (e.g., Sky Blue). Its unique capabilities include:
 - Unique and Extensible US Government Platform: Designed as an Open Architecture, Non-Proprietary USG capability
 - Internet accessible, GIG-Waiver precludes special hardware/software required to access, alternative MFA

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2027 Office of the Secretary Of Defense		Date: April 2026
Appropriation/Budget Activity 0400 / 5	R-1 Program Element (Number/Name) PE 0604123D8Z / <i>Chief Digital and Artificial Intelligence Officer (CDAO) - Dem/Val Activities</i>	Project (Number/Name) 067 / <i>AI/ML Demonstration & Validation</i>
- Supports commercial, non-traditional development, and non-CAC multi-national partners; government (IL-5) and Industry Data Protection; Hybrid, On-Prem, Multi-cloud Enterprise. - AI Development & Non-Traditional Partner Data Sharing used to deploy 250+ AI models, label 208+ million objects, and build over 1,000+ models from 30+ vendors - Partner collaboration platform for 25+ international partners, multiple mission profiles (SUNet moves to new BA08 Pilot PE 0608140D8Z in FY 2026) • CDAO Centrally Managed Support: Centrally managed support provides basic and advanced workforce enabling tools to empower the CDAO to advance mission for DoW. (These activities conclude by FY 2026.) • Defense Digital Services (DDS): The Defense Digital Services (DDS) effort provides DoW with highly-technical expertise to advise on and rapidly develop, prototype, and deploy digital solutions to meet the needs of the warfighter and the policymaker. Digital solutions provided by this effort include prototypes, technology assessments of government digital services, cybersecurity solutions via bug bounties, and surging digital services for crises response. (These activities conclude by FY 2026.) • Enterprise Platforms and Capabilities (EPC) Data Engineering, Data Operations, and Data Governance: Implements enterprise data acquisition, data engineering, data governance, data cataloging, and data integration capabilities available to 100,000+ Advana users and is required to support several top-priority CDAO use cases across the Department. These top-priority use cases include DSD Pulse metrics, the DoW Audit, the Federated Data Catalog, GIDE, J4 Operational Logistics, J35S Orion, J8 GFMDI, J7 JEXNET, all BASI products, and 300+ production applications hosted in the Advana platform. This effort also develops and sustains the expanding the number of enterprise data connections feeding data from Authoritative Data Sources (ADS) into the Federated Data Catalog hosted in Advana. This effort manages and currently sustains 500+ active data connections feeding data into the Federated Data Catalog. (EPC moves to new BA08 Pilot PE 0608140D8Z in FY 2026.)

New Start (Y/N): No

A. Mission Description and Budget Item Justification

This is a continuation of the initial FY 2024 Management Innovation Pilot (H.R. 118-121) and seeks to improve warfighter lethality and DoW efficiency by using data, analytics, and AI to modernize business practices across CDAO and DoW.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Management Innovation Pilots	0.000	2.149	2.604
Description: This is a continuation of the initial FY 2024 Management Innovation Pilot (H.R. 118-121) and seeks to improve warfighter lethality and DoW efficiency by using data, analytics, and AI to modernize business practices across CDAO and DoW.			
FY 2026 Plans: Funding will extend some management projects from FY 2025 FY 2026 into FY 2027 based on success criteria and impact.			
FY 2027 Plans: CDAO will continue efforts to maintain Management Innovation and meet/create goals of the project. The aim is to continue research and development of AI in a way that can help DoW management, acquisition, cyber security, and other areas be more efficient while also being a robust and reliable system for the department. These developments aim to streamline tasks, reduce overall department spending and mitigate risk in tasks that would previously be seen as a security risk to automate.			
FY 2026 to FY 2027 Increase/Decrease Statement: Increase represents projected management innovation efforts.			
Accomplishments/Planned Programs Subtotals	0.000	2.149	2.604

A. Mission Description and Budget Item Justification

Funding for Acquisition Ecosystem leverages digital and AI technologies to improve acquisition processes and provides training to the acquisition workforce on how to procure digital and AI technologies more effectively. Streamline commercial data and AI company access to DoW contracts via the Tradewinds Acquisition Ecosystem Solution Marketplace and Commercial Solutions Opportunity/Other Transaction Authority vehicles to rapidly field data and AI cutting-edge capabilities to warfighters. The goal is to develop, sustain, and share across the acquisition workforce acquisition approaches that enable greater agility, speed, and mission utility when procuring digital and software-based technologies.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Acquisition Ecosystem	-	6.917	8.593
Description: Funding supports two focus areas: Acquisition of AI: Sharing creative approaches across the acquisition workforce to improve agility, speed, and mission utility to improve acquiring AI and software-based commercial capabilities. AI For Acquisition: Development and sustainment of DoW acquisition and contracting processes that provide the agility and rapid procurement of AI-enabled commercial solutions needed to meet evolving mission needs.			
FY 2026 Plans: FY 2026 continues CDAO Acquisition Ecosystem activities, including: Acquisition of AI: CDAO practices and offers agile contracting pathways, like the Tradewinds Solution Marketplace (TSM), which leverages existing acquisition authorities by fully aligning with FAR, DFARS, CSO and OTA standards and decentralized ordering vehicles to create easier access to contracting vehicles for DoW AI For Acquisition: CDAO experiments with AI enabled acquisition tools, such as Innovet and Bidscale to create an AI-enabled end-to-end contracting process.			
FY 2027 Plans:

D. Acquisition Strategy The CDAO acquisition, management, and contracting strategy follows guidance outlined in the DoW 5000 series directives, Other Transaction Authorities (OTA), Federal Acquisition Regulation (FAR) and FAR supplement policies and procedures. Management uses project management tools and meetings to ensure delivery of stated capabilities and performance criteria.

A. Mission Description and Budget Item Justification

Chief Digital and Artificial Intelligence Officer (CDAO) are spearheading the Department of War's transformation into an AI-enabled enterprise by focusing on warfighting, intelligence, and enterprise-wide AI deployment. The core of this strategy revolves around a series of pioneering "Pace-Setting Projects" (PSPs). adoption, the Enterprise Agents PSP provides a playbook for deploying AI workflows. Underpinning all these efforts are two foundational enablers: the new War Data Platform (WDP) for standardized data access and the "GenAI.mil" initiative to scale AI tools across the force. In parallel, Autonomy.mil will provide similar standardization for autonomy platform development across the DoW. The CDAO will champion this transformation as a "Wartime CDAO," cutting through bureaucracy to rapidly deliver these capabilities. CDAO is also evolving its AI model assessment to evaluate future models on a wide variety of use cases including performance, testing, ethics, and security compliance.

The FY 2027 request for Alpha 1 includes \$969,825 thousand of discretionary and \$500,000 thousand of mandatory for a total of \$1,469,825. The mandatory funds Alpha 1 which is to support pace setting projects and generative AI for all government. The FY 2027 mandatory funds continue efforts from FY 2026 to support the Artificial Intelligence Strategy for the Department of War.

The FY 2026 spend plan amount for Alpha-1 includes \$395,882 thousand of discretionary and \$250,000 thousand of mandatory for a total of \$645,882 thousand.

FY 2026 Plans: Develop solutions in Warfighting, Intelligence and Enterprise through Pace Setting Projects Acquire, label, and deliver data to support priority autonomy requirements. Expand Mission and support and synthetic data generation capabilities and availability. Replicate data pipelines and labeling capabilities on classified networks.			

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2027 Office of the Secretary Of Defense		Date: April 2026	
Appropriation/Budget Activity 0400 / 5	R-1 Program Element (Number/Name) PE 0604133D8Z / <i>Alpha-1 Development Activities</i>	Project (Number/Name) 773 / <i>AI & Autonomy Enterprise Enablers</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
Pilot new data modalities and data fusion techniques to accelerate new model development. Grow use of enterprise data acquisition and labeling capabilities to service more DoW projects. Develop intake and assessment criteria for onboarding new pilots. Complete existing pilots and disseminate lessons learned or assist in transition planning in case of success. Enterprise purchasing of general use generative AI models for NIPR/SPIR /JWICS. Generative AI available cross multi cloud integration. Prototype generative AI solutions for warfighters, audit, and improving DoW efficiency. FY 2027 Plans: Deliver capabilities from Pace Setting Projects to end users for immediate impact and further iterate CDAO will partner with National Geospatial-Intelligence Agency and Defense Innovation Unit for the full AI/ML pipeline for Average True Range (ATR) model development. CDAO will focus on data ingest, labeling, and model and sim capabilities for enterprise use Align NIPR, SIPR, and JWICS compute capabilities with FY 2027 planned pilots Initial investment in classified commercial compute Prototype multi-cloud multi-model Frontier AI contract Prototype multi-cloud multi-model Frontier AI architecture FY 2026 to FY 2027 Increase/Decrease Statement: FY 2027 request reflects a significant increase from the FY 2026 levels due to funding of strategic priorities in support of Secretary of War strategic AI objectives as outlined in the AI Strategy. \$363.1 million for: Cloud Compute for GenAI Applications supporting "AI for Every Desktop". This investment is crucial for acquiring the high-performance computing infrastructure necessary to develop and operationalize frontier AI models across the Department of War. Securing this funding directly enables the execution of the strategic AI objectives outlined in the USW (R&E)'s AI Strategy, ensuring the Department can set a commanding pace in technological superiority. Without this foundational compute capability, key initiatives like Ender's Foundry and GenAI.mil will be unable to scale, critically delaying the delivery of advanced AI tools to our warfighters and strategic planners. Therefore, this investment is not merely for hardware but is a direct enabler for maintaining a decisive strategic advantage and accelerating the integration of transformative AI across the force. \$150 million for AI-Enabled Pilots to support Strategic Pace Setting Challenges. In response to Executive Order 14179 and the evolving character of AI-enabled warfare, the Department of War is launching an aggressive strategy to accelerate America's military AI dominance by becoming an "AI-first" fighting force. This initiative is spearheaded by seven initial Pace-Setting Projects (PSPs) for fiscal year 2026, which serve as high-speed exemplars for innovation across the department. In the Warfighting domain, these include (1. Swarm Forge) to competitively test new AI combat methods, (2. Agent Network) to unleash AI for battle

Appropriation/Budget Activity 0400 / 5	R-1 Program Element (Number/Name) PE 0604133D8Z / <i>Alpha-1 Development Activities</i>	Project (Number/Name) 773 / <i>AI & Autonomy Enterprise Enablers</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
management, and (3. Ender's Foundry) to advance AI-driven simulations. The Intelligence mission is advanced by (4. Open Arsenal), designed to turn intelligence into weapons in hours, and (5. Project Grant), which transforms deterrence into a dynamic, data-driven strategy. At the Enterprise level, (6. GenAI.mil) aims to democratize AI tools for all personnel, while (7. Enterprise Agents) will create a playbook for deploying AI to revolutionize workflows. The mission continues to evolve by emphasizing a "wartime footing" that prioritizes speed, competition, and the rapid removal of bureaucratic barriers. The strategy mandates that the department must maintain parity with the latest commercial AI models, enforce modular open architectures for easy upgrades, and adopt a "hard-nosed realism" approach to AI, ensuring models are objective and free from ideological constraints. This is a fundamental shift from merely integrating AI into old systems to completely re-imagining warfighting concepts, tactics, and processes as "AI-native," ensuring that the United States not only maintains but extends its lead in this critical technological race. \$500 million in the FY 2027 mandatory request supports the evolving PSP mission.

A. Mission Description and Budget Item Justification

Nuclear Matters, System Development & Demonstration addresses the need to defend and deter against weapons of mass destruction threats and to safeguard personnel, prevent unauthorized access to equipment, installations, material, and documents, and to safeguard the foregoing against espionage, sabotage, damage, and theft. This program oversees advanced engineering development and rapid fielding throughout the Department of War (DoW) for an integrated and systemic approach to develop material solutions.

The Physical Security Enterprise and Analysis Program (PSEAP) avoids duplication of effort, ensures systems integration, and promotes interoperability and sustainability. The material solutions either (a) lead to a Program of Record, (b) become technology insertions into existing programs; or (c) advance to being a certified Commercial/Government off-the-shelf product. The PSEAP advances enterprise-level physical security RDT&E solutions to reduce risk created by current and emerging threat by analyzing, researching, developing, demonstrating, and evaluating interoperable solutions to transition capability to warfighters. Collaboration with DoW Components, other government agencies, and the international community to prioritize and close capability gaps is a top priority of the PSEAP and the physical security community.

National Technical Nuclear Forensics (NTNF) mission requirements and responsibilities derive from multiple source documents. Per National Security Presidential Memorandum 35 (NSPM 35), the DoW leads the U.S. Government (USG) post-detonation NTNF capability. NSPM 35 also directs that the US will maintain and advance a robust NTNF capability to detect, identify, locate, and characterize the attribution of the source of an actual or attempted nuclear or radiological attack in all environments, to include underground, underwater, in the atmosphere, and space. Per DoW Directive S-2060.04, the Office of the Undersecretary of War for Acquisition & Sustainment (OUSW(A&S)) is the office responsible for developing and leading the DoW's NTNF capabilities. Per the 2022 Nuclear Posture Review (NPR) Direction, greater investment in NTNF tools is required to ensure they remain responsive to the threat, and thus scientifically credible and internationally accepted to hold states facilitating acts of nuclear terrorism accountable. The FY 2022 – FY 2026 Nuclear Forensics and Attribution Strategic (NFAS) Plan requires an NTNF capability to collect, analyze, and evaluate both air and ground post-nuclear detonation samples at accelerated directed timelines. The DoW mission to collect, analyze, and evaluate post-detonation prompt signals and nuclear debris is critical to our national defense and security to ensuring the USG can identify the source of nuclear material and hold those involved or supporting an attack accountable. Internal and independent assessments indicate that new capabilities are needed to sustain an effective deterrent against an unattributed nuclear attack and meet the challenges of future threats.

A. Mission Description and Budget Item Justification

The Physical Security Enterprise and Analysis Program (PSEAP) pursues the development of nuclear and conventional physical security materiel solutions in response to the stated needs and requirements of the Combatant Commands and Military Services. This program leverages commonalities in physical security requirements in order to closely balance and integrate the needs of users. The PSEAP is responsible for avoiding duplication of effort, ensuring systems integration, and promoting interoperability and sustainability. The materiel solutions either (a) lead to a Program of Record, (b) become technology insertions into existing programs; or (c) advance to being a certified Commercial/Government off-the-shelf product.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Physical Security System Capability Development	5.394	4.820	5.824
Description: This program matures capability before transitioning to warfighter user community by developing physical security components and systems to support valid requirements while eliminating duplication of effort, pursuing the use of government and commercial off-the-shelf products, ensuring systems integration, and promoting interoperability and sustainability. Leverages RDT&E investments to achieve physical security enterprise-level solutions to deter, detect, delay, deny and defeat adversaries threatening nuclear and non-nuclear environments. Promotes government and appropriate industry standards for interoperability with existing programs of record to achieve cohesive system architectures. Improves transition of successful RDT&E innovations to DoW Acquisition agencies by using technology transition agreements and other tools to provide improved warfighter capabilities against asymmetrical, conventional and Weapons of Mass Destruction threats. FY 2026 Plans: - Supply chain security: Mitigate vulnerabilities using physical security equipment/technology to counter potential threats to organic industrial base facilities and ports receiving materials from suppliers and shipping assets the supply DoW Services and foreign partners around the globe. - Mature All Domain Counter-Uncrewed Systems (C-UXS): Continue to address the proliferation of uncrewed systems used by our adversaries by advancing C-UXS capabilities that change the risk calculus for the adversary (i.e., deterrence) and increase Joint Force survivability and resiliency against UXS.

A. Mission Description and Budget Item Justification

Per National Security Presidential Memorandum 35, the Department of War (DoW) leads the United States Government (USG) post-detonation National Technical Nuclear Forensics (NTNF) capability and directs the U.S. to maintain and advance NTNF capabilities leading to the attribution of the source of an actual or attempted nuclear attack in all environments. Per the 2022 Nuclear Posture Review, greater investment in NTNF tools is required to ensure they remain responsive to the threat. Per DoDD S-2060.04, OUSW(A&S) is the DoW office responsible for DoW's NTNF capabilities. Per the FY 2022 – FY 2026 Nuclear Forensics Analysis System Plan, accelerated timelines are required for the NTNF capability to collect, analyze, and evaluate both air and ground post-nuclear detonation samples. This Program Element is the only DoW Research, Development, Test and Evaluation program focused on System Development & Demonstration for NTNF capabilities.

Collecting, analyzing, and evaluating post-detonation prompt signals and nuclear debris is critical to ensure the USG can identify the source of nuclear material and holding those involved or supporting an attack accountable is critical to our national defense and security. Swift and accurate forensic and attribution capabilities are vital to supporting the President and Secretary of Defense in developing an appropriate, and timely, national response to a nuclear event and to prevent future attacks. An effective NTNF capability ensures potential adversaries, or those who support them, know that they will be held accountable if they use proxies or other non-traditional delivery (e.g., false-flag operations) of nuclear weapons against the U.S., U.S. interests, or allies. Both internal and independent studies indicate that continued improvement to the USG's NTNF capabilities is needed to sustain a credible deterrent against an attempted or actual nuclear attack.

Additionally, this program sustains perishable U.S. technical expertise at the operational DoW laboratories required to respond to a post-detonation NTNF event. The DoW's laboratory capability in this area is limited by capacity and technical expertise. Increased support of the DoW's NTNF mission is crucial to prevent attrition of current capabilities and knowledge base, ensure that this critical and unique deterrence capability is not lost, putting the security of the nation and the ability to deter specific kinds of nuclear attack at risk, and meeting a higher standard of timeliness and confidence as directed.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: NTNF Capability Development	7.880	7.970	9.095
Description: The development of capability to collect, analyze, and evaluate prompt signals and nuclear debris is critical to our national defense and security. Swift and accurate forensic analysis and contribution to USG attribution (identification) processes are vital to supporting the President and Secretary of War in developing an appropriate national response to a nuclear event and

to prevent future attacks in a timely manner. Recent Russian nuclear threats related to Ukraine have sharpened the understanding of, and need for, robust nuclear forensics capabilities. NTNF investments support development and retention of technical nuclear forensics expertise and improvements in CONUS and OCONUS collection and fixed laboratory processes. Investments will also support legacy NTNF capabilities and the operationalization of new capabilities. <i>FY 2026 Plans:</i> - Prepare elements necessary to model, simulate, and develop data outputs for injects for prompt and material diagnostic requirements necessary to conduct an end-to-end exercise for the NTNF mission. - Execute a National-Level technical demonstration, or series of technical demonstrations, with Interagency Partners to test the full nuclear forensics process from sample collection to final technical assessment. - Operationalize deployed nuclear detection prompt signals sensors (the United States Prompt Detection System), connecting the in-field sensors to active operational centers so that their data feed can be continuously monitored. <i>FY 2027 Plans:</i> - Continue to prepare elements necessary to model, simulate, and develop data outputs for injects for prompt and material diagnostic requirements necessary to conduct an end-to-end exercise for the NTNF mission. - Continue to execute a National-Level technical demonstration, or series of technical demonstrations, with Interagency Partners to test the full nuclear forensics process from sample collection to final technical assessment. - Continue to operationalize deployed nuclear detection prompt signals sensors (the United States Prompt Detection System), connecting the in-field sensors to active operational centers so that their data feed can be continuously monitored. <i>FY 2026 to FY 2027 Increase/Decrease Statement:</i> FY 2026 to FY 2027 increase reflects maturation of technologies.

A. Mission Description and Budget Item Justification

The FY 2027 request for Joint Tactical Information Distribution System (JTIDS) includes \$10,200 thousand of discretionary and \$23,129 thousand of mandatory for a total of \$33,329. The mandatory funds acquisition support of Combined Joint All-Domain Command and Control (CJADC2) to establish the Joint Fires Network ACAT ID program; establish a Golden Dome program office and associated program plans to deliver a national Integrated Air and Missile Defense system and accelerate acquisition of Standard Missile 3. Funds support the increasing National Intelligence major system acquisition programs. Increase in funding allows the Deputy Assistant Secretary of War Strategic, Space, and Intelligence Portfolio Management (DASW SSIPM) to fully support Presidential, Deputy Secretary of War and USW(A&S) initiatives Executive Order (EO) 14186, "The Iron (Golden) Dome for America, EO 14625 ", Modernizing Defense Acquisitions and Spurring Innovation in the Defense Industrial Base," Secure Enclave, Key Management Infrastructure Capability Increment 3, and Congressional direction and achieve the desired outcomes, such as strengthening program execution.

This program supports the Department's initiatives to Restoring Warrior Ethos, Rebuilding Military Capabilities and Re-establishing Deterrence.

This program Manages, analyzes, and informs acquisition and resourcing decisions in the nuclear modernization/acquisition; nuclear command, control, and communications (NC3); space and national intelligence (SNI); and command, control, communications, computers, and missile defense (C4MD) portfolios

- C4MD: Inform synchronized modernization and delivery of new command, control, communications, and computer systems. Supports defending the homeland, paced to the growing multi-domain threat posed by China and deterring aggression while being prepared to prevail in conflict, when necessary; prioritizing the challenge posed by China in the Indo-Pacific region the Russia challenge in Europe.
- SNI: Inform synchronized modernization and fielding of space and national intelligence systems, including Space Control, Remote Sensing (e.g., Missile Warning), and National Security Space Launch. Supports defending the homeland, paced to the growing multi-domain threat posed by China and deterring aggression while being prepared to prevail in conflict, when necessary; prioritizing the challenge posed by China in the Indo-Pacific region the Russia challenge in Europe.
- NC3: Execute an NC3 Capability Portfolio Management per Title 10 U.S. Code §133b and Dow Directive 3730.02. Supports Deterring strategic attacks against the United States, allies, and partners per 2022 NDS, pg. 9, Section IV, Integrated Deterrence.

A. Mission Description and Budget Item Justification

This program supports the Department's initiatives to Restoring Warrior Ethos, Rebuilding Military Capabilities and Re-establishing Deterrence

This program Manages, analyzes, and informs acquisition and resourcing decisions in the nuclear modernization/acquisition; nuclear command, control, and communications (NC3); space and national intelligence (SNI); and command, control, communications, computers, and missile defense (C4MD) portfolios

- C4MD: Inform synchronized modernization and delivery of new command, control, communications, and computer systems. Supports defending the homeland, paced to the growing multi-domain threat posed by China and deterring aggression while being prepared to prevail in conflict, when necessary; prioritizing the challenge posed by China in the Indo-Pacific region the Russia challenge in Europe.
- SNI: Inform synchronized modernization and fielding of space and national intelligence systems, including Space Control, Remote Sensing (e.g., Missile Warning), and National Security Space Launch. Supports defending the homeland, paced to the growing multi-domain threat posed by China and deterring aggression while being prepared to prevail in conflict, when necessary; prioritizing the challenge posed by China in the Indo-Pacific region the Russia challenge in Europe.
- NC3: Execute an NC3 Capability Portfolio Management per Title 10 U.S. Code §133b and DoW Directive 3730.02. Supports resourcing and accelerate modernization of NC3 per 2026 NDS, pg. 29 (Strategic Deterrence Policy) and pg 98 (Additional Domain-Specific Guidance)

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Joint Information and Capability Modernization	12.426	10.380	10.200
Description: FY 2025 Accomplishments: C4MD: - Performed Bandwidth Efficient Common Data Link (CDL-BE) compliance analysis on over 120 platforms/users, evaluated new and evolving industry and government waveforms, and identified data transport plans for emerging capabilities. - Executed Combined Joint All-Domain Command and Control (CJADC2) Integrated Acquisition Portfolio Review (IAPR) focused on Common Operating Pictures / Common Intelligence Picture--evaluated current JADC2 acquisitions to identify acquisition challenges and proposed extensible reforms to the Defense Acquisition System, the Planning, Programming, Budgeting & Execution (PPBE) process, and the Joint Capabilities Integration & Development Systems. - Executed A&S co-chair function within the C3LB, conducted strategic planning, prioritization, policy execution, resource review, and oversight; addressed Link 16, Tactical Data Link Portfolio Management, High Frequency Governance, and SATCOM Force Design Assessment.

Exhibit R-2A, RDT&E Project Justification: PB 2027 Office of the Secretary Of Defense			Date: April 2026		
Appropriation/Budget Activity 0400 / 5		R-1 Program Element (Number/Name) PE 0604771D8Z / Joint Tactical Information Distribution System (JTIDS)		Project (Number/Name) 771 / Joint Information and Capability Modernization	
B. Accomplishments/Planned Programs (\$ in Millions)			FY 2025	FY 2026	FY 2027
- Executed A&S leadership role within the Congressionally directed 5G Cross Functional Team, focused upon accelerating acquisition and sustainment of 5G capabilities and services. - Provided technical and acquisition support to the JADC2 Cross Functional Team (CFT), provided coordination and AO support for reviews of JADC2 Reference Architecture, and developed JADC2 Implementation Plan products to support critical cross-functional team timelines and deliverables. - Continued efforts to ensure US/France datalink interoperability between 4th/5th gen platforms and sustained support to the United States/United Kingdom Federated Network C3 joint cooperation group. - Provided acquisition leadership and technical support to Department of War Chief Information Office-led Electro-Magnetic Spectrum efforts. - Executed Assured and Alternate Positioning, Navigation and Timing (PNT)(A&APNT) Integrated Acquisition Portfolio Review (IAPR) analysis. Team evaluated current programs of record, assessed ability to deliver PNT data to operational users in contested theaters, determined utility of ALTPNT capabilities to deliver required performance, and made recommendations to senior leaders on appropriate improvements to operations and funding to deliver the required capabilities to the joint warfighters to support global Combatant Commands. - Executed analysis and staffing to support OUSW(A&S) standup of the M-Code Aviation Receivers Enterprise ACAT1D program. - Developed the FY 2026 Joint Tactical Network Center Management Plan and Tri-Military Department Resource Plan which align the DoW's prioritized Joint communications needs and requirements between the Tactical Communications Senior Steering Group, the Communications Technology and Waveform Working Group, Service sponsors, and other key Stakeholders. - Executed co-chair responsibilities of the PNT oversight council, performed oversight and cross-Service coordination of PNT modernization acquisitions to improve DoW warfighting capability. - Executed Defense Against Hypersonic Threats (DAHT) IAPR. Executed a detailed data call from all hypersonic defense and potential hypersonic defense programs, organized data and conducted detailed analysis, and presented findings to OUSW(A&S) and OSW Stakeholders. - Executed a Missile Defense System (MDS)In Progress Review (IPR)to OUSW(A&S) to ensure visibility and advocacy in OSW for the Missile Defense Agency single major defense acquisition program. - Performed portfolio management of SATCOM, PNT, and Missile Defense acquisitions. Identified Agency and multi-Service programmatic disconnects for development, fielding, and operations of space, ground, and user capabilities; engaged with joint community to develop resolution courses of action - Provided ODASD(SSIPM) leadership as co-chair of the Enterprise Satellite Communications Steering Group (ESC SG), overseeing efforts for SATCOM resourcing, Commercial SATCOM services, MUOS terminal fielding, Hybrid SATCOM Terminal development and fielding, and SATCOM Ground Infrastructure upgrades, to coordinate development, procurement, and fielding for synchronized SATCOM capabilities. - Planned and organized the Middle Tier of Acquisition (MTA) Advisory Board review of several program, including the Space Development Agency Proliferated Warfighter Space Architecture Tranche 3 Transport Layer, T3 Tracking Layer, and T3 Custody

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
Layer programs, ensuring documents were sufficient, stakeholder offices coordinated on documents, and Acquisition Decision Memorandums completed expeditiously to support program schedules. - As the Primary Action Officer on three GAO audits, ensured GAO was provided documents and contacts needed, led report review efforts, and coordinated DoW response to report recommendations. - Coordinated OUSW(A) level inputs for the Joint Industrial Base Working Group (JIBWG) annual Industrial Base Unfunded Priority List (UPL). Supported 10 USC 4815 "Unfunded Priorities of the National and Industrial Base: Annual Report. NC3: - Supported the NC3 Capability Portfolio Manager with analysis presented to senior leadership bodies (Strategic Deterrence Deputy's Management Action Group, Council on Oversight of the National Leadership Command, Control, and Communications System (CONLC3S), etc.) and recommended investment and policy alternatives. - Conducted NC3 IAPR which identified schedule and integration risks, with focused on next generation communications and networking needs that pace threats and connect the President to nuclear forces. - Partnered with United States Strategic Command (USSTRATCOM) NC3 Enterprise Center to implement plan to ensure protection of critical NC3 information through publication of Protection Guidance Memo and Data Protection Decision Aid envision of security assurance policy and developing a long-term plan for implementing security solutions to NC3 government and industrial base partner using emerging commercial standards. - Supported the recapitalization of the nation's nuclear deterrent, drove risk reduction in nuclear delivery system modernization programs, enhanced sustainment of fielded nuclear capabilities, supported Department-wide efforts to execute according to the NPR implementation plan. SDC: - Led numerous Department-wide engagements and review to compete OUSW(A&S) Sentinel Intercontinental Ballistic Missile (ICBM) Program Nunn-McCurdy evaluation and Sentinel ICBM Program Technical Baseline Review, fostered whole of government support for the program's initial outreach to facilitate future program restructure efforts. - Conducted tow In Progress Review (IPR) for the Acquisition Category ID (ACAT 1D) Sentinel ICBM Program and two IPRs for the Long Range Standoff Weapon (LRSO) Program, reviewing cost, schedule, performance, and risk of these critical strategic deterrence programs. The Sentinel Program IPR provided an update on the progress of the Sentinel ICBM Program restructure, as directed from the OUSW(A&S) Sentinel ICBM Program Nunn-McCurdy Acquisition Direction Memorandum (ADM). For LRSO, the IPRs ensured a thorough examination of the program's execution within the Engineering and Manufacturing Development phase and secured OUSW(A&S) ADMs authorizing advanced procurement of obsolete parts to reduce program risk as it approaches its Production Phase within the acquisition life cycle. - Conducted an IPR for the ACAT 1D Nuclear-Armed, Sea-Launched Cruise Missile (SLCM-N) Program established per the FY24 NDAA requirement, and completed statutorily required briefings to Congress

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
- Continued analysis building on the congressionally mandated 20-year Reentry Vehicle through the Aeroshell Working Group and other forums to support reentry vehicle industrial base requirements. - Continued successful advocacy with Test Resource Management Center for nuclear systems testing and infrastructure support/upgrades - Directly supported the Administration's review of Major Defense Acquisition Programs (MDAP) with analysis presented to senior leadership bodies to include the Nuclear Weapons Council Working Groups and sub-working groups to support investment and policy opportunities within nuclear modernization activities. Completed an air-leg Nuclear Forces IAPR to inform strategic decisions impacting the nuclear acquisition enterprise by assessing interdependencies and risks across modernization and sustainment portfolios. SNI: - Completed a significant National Intelligence Acquisition Board with the OUSW(A&S) and DDNI(P&C) approving MS A entry for a next generation intelligence collection capability for the Intelligence Community and the DoW. - Coordinated 3 Acquisition Decision Memorandums for OUSW(A&S) and DDNI(P&C) approving the procurement of long-lead materials to accelerate development of key intelligence capabilities. - Facilitated the execution of 3 IPRs in the Space C2 portfolio and 2 IPRs for programs in Space Control. Enabled assured access to space delivering on-demand orbital and sub-orbital services, materiel, and capabilities to the warfighter achieving 12 National Security Space launches. - Coordinated activities with the services and key OSW stakeholders to achieve approval for 3 space-based programs entry into the Middle Tier of Acquisition Pathway - Provided major support and contribution to the execution of a Big-6 IAPR for C-C5ISRT with our sister DASD. - Established a new ACAT 1D Special Interest Program for a critical classified program addressing. FY 2026 Plans: C4ISR: - Execute A&S co-chair function of the C3LB governance council, performing oversight and cross-Service coordination of public safety communications, tactical radio and networks, TDL, and common data link modernization acquisitions to improve DoW system interoperability. - Perform acquisition oversight/management, programmatic (cost, schedule, & performance), and technical data assessment to ensure continued progress of Intelligence Community Major Systems Acquisitions and Special Interest Acquisition, including projected increases for space based ISR and targeting capabilities. - Execute further JADC2 IAPRs, evaluate current and emerging JADC2 acquisitions to identify acquisition challenges and proposed extensible reforms to the Defense Acquisition System, the Planning, Programming, Budgeting & Execution process, and the Joint Capabilities Integration & Development Systems.

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2025	FY 2026	FY 2027
- Provide technical and acquisition support to the JADC2 CFT, provided coordination and action officer support for reviews of JADC2 Reference Architecture, and developed JADC2 Implementation Plan products to support critical cross-functional team timelines and deliverables. - Provide technical assessments and enterprise-level analysis in support of OUSW(A&S)'s role as the Principal Staff Assistant on Common Data Links and Joint Cyber Command & Control Systems; develop CDL database; conduct assessment of BE-CDL compliance - Continue support to OUSW(A&S) International Cooperation activities in line with the interim National defense strategy to strengthen alliances and attract new partners. Continue coordination for Yockey waivers, DoW advocacy requests, and policy issues. Work with France to define an interoperability roadmap for 2030 and beyond. - Continue the TDL capability roadmap by synchronizing Department acquisition strategies to field next generation waveforms, gain efficiencies, and maintain Interoperability between the Services, allies, and partner nations. - Oversee acquisition and sustainment activities designed to mature, increase the capacity, capability, and resiliency of DoW's intelligence, surveillance, and reconnaissance space, airborne, and terrestrial data processing, exploitation, transportation, and distribution networks - Provide acquisition leadership and technical support to DoW CIO-led Electro-Magnetic Spectrum efforts as well as strategy and roadmap development to support Congressional and DoW senior leader deliverables. - Continue oversight of JTNC coordination activities and maintain the JTNC Management Plan as a living document reflecting priorities from the Tactical Communications Senior Steering Group, the Communications Technology and Waveform Working Group, service sponsors, and other key stakeholders. NC3: - Support the NC3 Capability Portfolio Manager with analysis presented to senior leadership bodies (NC3 Deputy's Management Action Group, Council on Oversight of the National Leadership Command, Control, and Communications System (CONLC3S), etc.) and recommended investment and policy alternatives. Conduct NC3 Integrated Acquisition Portfolio Review to evaluate and identify schedule and integration risks associated with sensing and situation monitory better integrate command nodes and decision makers and decision making in support of nuclear operations. - Partner with USSTRATCOM NC3 Enterprise Center to evolve the NC3 Capability Planning Guidance for FY 2028-2032. Revise and implement solutions to ensure NC3 protection of critical NC3 information though revision of security assurance policy and developing a long-term plan for implementing security solutions to NC3 government and industrial base partner using emerging commercial standards. Strategic Deterrence and Capabilities:

A. Mission Description and Budget Item Justification

The Defense Exportability Features (DEF) Program funds activities to support identification of major defense acquisition programs for possible export and the planning for design and incorporation of exportability features earlier in the acquisition life cycle, including, but not limited to, during the research and development phases of these programs. Features include, but are not limited to, technology and engineering design activities such as capability differentials, anti-tamper, system assurance, and software assurance. Activities include the development of program protection strategies for the program; the design and incorporation of exportability features into the system; implementation of exportability requirements into contracts; and other research, development, test, and evaluation activities.

Defense exportability features play a critically important role in Department of War (DoW) efforts to build partner capacity and increase defense sales as directed by the President. Funding supports building joint and coalition environments by enabling the export of DoW systems to a wide range of partner nations, resulting in improved security and interoperability with the U.S. Joint Force.

In addition to operational benefits, by providing these resources up front, the United States and partner nations save significant resources and reduce delivery delays by incorporating exportability features earlier in the acquisition life cycle vice retrofitting an operational program of record system. Retrofitting requires substantial delay while program protection measures are incorporated prior to export. Failure to identify the full range of Critical Program Information (CPI) early in a DoW program's design phase can have a major impact on affordability and schedule. The Defense Exportability Features (DEF) Program funds activities to support identification of major defense acquisition programs for possible export and the planning for design and incorporation of exportability features during, but not limited to, the research and development phases of these programs. Features include, but are not limited to, technology and engineering design activities such as capability differentials, anti-tamper, system assurance, and software assurance. Activities include the development of program protection strategies for the program; the design and incorporation of exportability features into the system; implementation of exportability requirements into contracts; and other research, development, test, and evaluation activities.

The FY 2026 spend plan amount for Research, Development, Test & Evaluation, Defense-Wide for DEF includes \$6,684 thousand of discretionary and \$500,000 thousand of mandatory (reconciliation) for a total of \$506,684 thousand.

A. Mission Description and Budget Item Justification

The DEF Program funds activities to support identification of major defense acquisition programs for possible export and the planning for design and incorporation of exportability features during, but not limited to, the research and development phases of these programs. Features include, but are not limited to, technology and engineering design activities such as capability differentials, anti-tamper, system assurance, and software assurance. Activities include the development of program protection strategies for the program; the design and incorporation of exportability features into the system; implementation of exportability requirements into contracts; and other research, development, test, and evaluation activities.

Defense exportability features play a critically important role in DoW efforts to build partnership capacity and increase defense sales. Funds support building joint and coalition environments by enabling the export of DoW systems to a wide range of partner nations, resulting in improved security and interoperability. In addition to the operational benefits, by providing these resources up front, the United States and partner nations will save significant resources by more efficiently designing and producing exportable U.S. systems.

Failure to identify the full range of CPI early in a DoW program's design phase can have a major impact on affordability and schedule when programs have to retrofit program protection measures prior to export. Early development of export variants, including systems design approaches to integrate exportable anti-tamper protection and differential capability requirements to lower production costs, makes it possible to improve quality and timely deliveries to allies and partners and may enhance U.S. industry's share of the global marketplace.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: DEF Program	15.201	6.684	5.943
Description: The DEF Program enables DoW programs to develop and incorporate technology protection features in designated systems during, but not limited to, the research and development phase of such systems to prepare them for export. By facilitating the export of U.S. defense systems, DoW enhances the U.S. defense industrial base, strengthens the military capabilities of U.S. allies, and increases coalition interoperability.			
Program activities that were funded in FY 2025 included:			

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2027 Office of the Secretary Of Defense			Date: April 2026		
Appropriation/Budget Activity 0400 / 5		R-1 Program Element (Number/Name) PE 0605022D8Z / <i>Defense Exportability Features (DEF) Program</i>		Project (Number/Name) 013 / <i>Defense Exportability Features (DEF) Program</i>	
B. Accomplishments/Planned Programs (\$ in Millions)			FY 2025	FY 2026	FY 2027
- Tactical High Power Microwave Operational Responder (THOR) (Air Force): Developed a detailed design of THOR to the Mjöltnir-E system incorporating the exportability features identified during Phase 1A. The specific exportability features were incorporated into the detailed design during the completion of the Phase 1A Study. - Surface Antisubmarine Warfare Synthetic Trainer (SAST) (Navy): SAST performed a Feasibility Design Analysis defining software solutions and provided an engineering development plan for completing technology control requirements for Under Sea Warfare (USW) Embedded Training to secure and protect Enhanced Entity Modeling. - Integrated Solutions for Situational Awareness (ISSA) (Space Force): ISSA is conducting design activity execution and software architecture implementation for exportability features such as data modularity, data libraries, classification markings, as well as the refinement of a secure web-based access. FY 2026 Plans: The DEF Program enables DoW programs to develop and incorporate technology protection features in designated systems during, but not limited to, the research and development phase of such systems to prepare them for export. By facilitating the export of U.S. defense systems, DoW enhances the U.S. defense industrial base, strengthens the military capabilities of U.S. allies, and increases coalition interoperability. Program activities that are planned in FY 2026 include: - Tactical High-Power Microwave Operational Responder (THOR) (Air Force): THOR will implement Phase 2 technical recommended exportability changes to processors and add an adjustable tracking functionality feature by implementing novel and non-novel algorithm changes. - Surface Antisubmarine Warfare Synthetic Trainer (SAST)(Navy): SAST to design and develop a prototype of centralized entity database graphic user interface as well as standardize acoustic entity components and parameters for applicable foreign military sales systems. - Alecto Counter-Unmanned Aerial System High Powered Microwave (Alecto) (Air Force): Alecto will conduct an initial technical feasibility study, analysis of embedded sensitive technologies; and assess options to develop and incorporate technology protection features into Alecto. - Vehicle Protection System Base Kit (VBK) (Army): VBK to conduct initial feasibility analysis of software and physical aspects of the system supporting the development of multiple exportable versions for Five-Eyes, NATO, and other partner nations.

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2025	FY 2026	FY 2027
6.8MM Ammunition (Army): 6.8mm ammunition will conduct feasibility and design analysis leading to the development of an exportable version of the ammunition for partner nations using M7 and M250 weapons systems. FY 2027 Plans: Help DoW programs plan for, study, and incorporate exportability features in line with Executive Order 14268; DoW guidance, including DoW instruction (DoWI) 5000.85, Major Capability Acquisition, that requires DoW programs to design their systems for exportability as the default acquisition approach; and the requirements development system that integrates exportability into the DoW requirements planning process. Program activities that are planned to be funded in FY 2027 include: - Alecto Counter-Unmanned Aerial System High Powered Microwave (Alecto) (Air Force): Alecto will conduct a follow-on design activity focused on embedded sensitive technologies; and initial designs of identified technology protection features in Alecto. - Vehicle Protection System Base Kit (VBK) (Army): VBK to conduct design analysis and initial development of software and physical aspects of the system supporting the development of multiple exportable versions for Five-Eyes, NATO, and other partner nations. - Army-Long Range Persistent Surveillance-Mobile (ALPS-M)(Army): ALPS-M Sensor system to conduct initial feasibility study for the determination and initial design analysis for anti-tamper measures. - Sentinel A4 (AN/MPQ-64A4) Radar (Army). Program to conduct initial program protection study, initial analysis of firmware and software changes needed to protect critical program information. - Airborne High Frequency Radio Modernization (AHFRM)(Air Force). Program to conduct initial design analysis for software/firmware for export version of radio. - Terrain Following/Terrain Avoidance Radar (TF/FA) (Special Operations Command): TF/TA Radar to conduct initial technical feasibility and design cost analysis supporting the development of an exportable version of the radar.

Note

New Start (Y/N): No

+\$23.253 million is required to support the Next Generation Resource Management Systems (NGRMS) including \$9.539 million specifically dedicated to accelerating NGRMS development and deployment activities.

+\$250.000 million is required to implement and sustain system, automation, and artificial intelligence initiatives to achieve audit success.

A. Mission Description and Budget Item Justification

As the Department of War's strategic, operational, and tactical plans and objectives transform the war fighter with new capabilities and doctrine, the budgeting and accountability of funds used to pursue the Department's objectives will become more complicated and detailed allowing senior leaders to make decisions with supporting rationale for the taxpayer. Incorporating information technology towards current and emerging business processes manifesting into a state-of-the art system of systems will result in increasing efficiencies, timely diagnostics, and reducing lifecycle costs to maintain, sustain, and repair.

This initiative exploits emerging technology, processes, trends, capabilities, and techniques to incorporate state-of-the-art information technology enabling the ability, agility, and level of fidelity to collect, process, administrate, and report resource management data and to automate business processes within a more robust analytical environment within the Office of the Under Secretary of War (Comptroller) (OUSW(C)).

The FY 2026 spend plan amount for Research, Development, Test & Evaluation, Defense-Wide for OUSW(C) includes \$9,627 thousands of discretionary and \$14,000 thousands of mandatory (reconciliation) for a total of \$23,627 thousand.

Next Generation Resource Management Systems (NGRMS):

The OUSW(C) is responsible for advising the Secretary of War on all Defense budgetary and fiscal matters, for Defense budget development and execution, and for overseeing financial management across the Department. The OUSW(C) has a broad set of responsibilities in supporting the Planning, Programming, Budget, and Execution (PPBE) process. The Office of the Director, Cost Assessment and Program Evaluation (CAPE), provides independent analytic advice to the Secretary

UNCLASSIFIED

Exhibit R-2, RDT&E Budget Item Justification: PB 2027 Office of the Secretary Of Defense		Date: April 2026
Appropriation/Budget Activity 0400: <i>Research, Development, Test & Evaluation, Defense-Wide I BA 5: System Development & Demonstration (SDD)</i>		R-1 Program Element (Number/Name) PE 0605027D8Z I <i>OUSW(C) IT Development Initiative</i>
of War on all aspects of the Defense program, including alternative weapon systems and force structures, the development and evaluation of program and defense program alternatives, and the cost-effectiveness of defense systems. There is a critical need for the development of a state-of-the-art information technology system to modernize and replace multiple, antiquated legacy systems and processes used to formulate, justify, present, and defend the entire Department of War budget in the OUSW(C) to meet Title 10 and Title 31 mission and reporting requirements. NGRMS is critical in formulating the DoW Budget and thereby providing the necessary fund requests to defend the homeland, deter strategic attacks against the United States, our Allies and partners. By formulating and presenting the DoW budget, NGRMS, through our Services, is helping to deter aggression, yet ensuring that we are prepared to prevail in conflicts with a prioritization to the Chinese challenge in the Indo-Pacific and the Russian challenge in Europe. Through a strong DoW Budget, NGRMS is a major factor in building a resilient Joint Force and Defense ecosystem. The Comptroller's plan for mitigating the deficiencies and capability gaps associated with current systems is the development of the NGRMS. The OUSW(C) and CAPE use multiple systems to formulate, justify, distribute, and execute the DoW budgets. The information managed by the budget formulation and programming systems has been redundant, and reconciliation of information is difficult and inefficient. These systems require extensive manpower investments to provide executives the information needed to make timely key financial decisions. The OUSW(C) and CAPE require a more efficient and effective Defense budget environment that optimizes the budget cycle to ensure users are processing and reporting efficiently, and DoW Senior Leadership has the information to make informed, critical decisions. With the department's implementation of NGRMS, data collection and reconciliation processes that were once redundant, labor intensive, and slow have now been streamlined to the point where OUSW(C) and CAPE can reliably meet the increasingly compressed budget timelines—outcomes that would have been impossible to achieve under the legacy systems, clearly demonstrating the need for sustained funding preserve this momentum. The OUSW(C) requires capabilities to provide for the effective formulation, and justification of the Defense budget to be adaptable and modern. The requirement is for: • Automated exchange and reconciliation of budget data • Improved efficiency through the utilization of a unified budgetary model • Instantaneous ability to generate data for management reviews and decisions • Capability to accommodate emerging business practices • Agile methods to launch and terminate new development efforts more quickly • Seamlessly combine the out puts of multiple efforts at various levels of maturity for organizational responsiveness and alternative resource allocation for innovation adoption • Strategic integration of Agentic Artificial Intelligence (AI), Large Language Model (LLM) Training, and Robotics Process Automation (RPA) tools As of the 3rd Quarter FY 2022, the NGRMS has been developed and has deployed Initial Operational Capability (IOC) to all Department of War Services and agencies. The system has been designed as a single system with a unified data source for OUSW(C) and CAPE, which supports the reforming and modernizing of the PPBE process. It provides a single, integrated system that employs the latest technologies to fulfill the Department's financial management responsibilities in an effective, efficient, and adaptable manner. The new system's agile development approach compliments the continuous and ongoing studies and changes to the PPBE and appropriation processes to prevent stagnant complexities. It also provides twenty-first century information technology that allows users to view information from multiple fully integrated modules simultaneously, e.g., current year budget submission, decision documents from previous years, and budget execution information.

A. Mission Description and Budget Item Justification

The Office of the Under Secretary of War (Comptroller) (OUSW(C)) is responsible for advising the Secretary of War on all Defense budgetary and fiscal matters, for Defense budget development and execution, and for overseeing financial management across the Department. The OUSW(C) has a broad set of responsibilities in supporting the Planning, Programming, Budget and Execution (PPBE) process. The Office of the Director, Cost Assessment and Program Evaluation (CAPE), provides independent analytic advice to the Secretary of War on all aspects of the Defense program, including alternative weapon systems and force structures, the development and evaluation of programs and defense program alternatives, and the cost-effectiveness of defense systems.

OUSW(C) and CAPE use multiple systems to formulate, justify, distribute, and execute DoW budgets. The information managed by the budget formulation and programming systems is redundant, and reconciliation of information is difficult and inefficient. These systems require extensive manpower investments to provide executives the information needed to make timely key financial decisions. The OUSW(C) and CAPE require a more efficient and effective Defense budget environment that optimizes the budget cycle to ensure users are processing and reporting efficiently and DoW Senior Leadership has the information to make informed, critical decisions.

The OUSW(C) requires capabilities to provide for the effective formulation, and justification of the Defense budget to be adaptable and modern. This includes the following:

- Automated exchange and reconciliation of budget data
- Improved efficiency through the utilization of a unified budgetary model
- Instantaneous ability to generate data for management reviews and decisions
- Capability to accommodate emerging business practices
- Agile methods to launch and terminate new development efforts more quickly
- Seamlessly combine the outputs of multiple efforts at various levels of maturity for organizational responsiveness and alternative resource allocation for innovation adoption

As of the 3rd Quarter FY 2022, the NGRMS has been developed and has deployed Initial Operating Capability (IOC) to all Department of War Services and agencies. The system has been designed as a single system with a unified data source for OUSW(C) and CAPE, which supports the reforming and modernizing of the PPBE process. It provides a single, integrated system that employs the latest technologies to fulfill the Department's financial management responsibilities in an effective, efficient, and adaptable manner. The new system's agile development approach compliments the continuous and ongoing studies and changes to the PPBE and

appropriation processes to prevent stagnant complexities. It also provides twenty-first century information technology that allows users to view information from multiple fully integrated modules simultaneously, e.g., current year budget submission, decision documents from previous years, and budget execution information.				
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026	FY 2027
Title: Next Generation Resource Management System		7.287	9.627	23.253
Description: Plan, develop, test and evaluate the system components (i.e. unified database, expert system, cross domain security, enterprise service bus, applications, services) and supportability requirements in modernizing the budget formulation, programming execution, and reporting capabilities for the Department of War. Activities will include, but not be limited to, the preparation of all documentation required for Clinger-Cohen Compliance and acquisition regulations, developing requests for proposals, and oversight and management of contracts and deliverables.				
FY 2026 Plans: FY2026 planned accelerated development will include additional cyber security enhancements (as necessary), additional data and structure standardizations, cloud sustainment & protection (STRATUS), including additional Containerization as a Service (CAAS) deployments, Budget Exhibits' reform, integration of the programmatic exhibit collection (sunset CAPE's legacy tool (SNAP/SNAP-IT), development/deployment of the NGRMS as a Service, integration of AI & Robotics Process Automation (RPA) capabilities, enhanced training tools using AI in both the NIPR & SIPR environments, deployment of a full instance of the NGRMS (including all modules) on NIPR and more robust analytical ties to execution.				
FY 2027 Plans: FY2027 planned development will include continued cyber security enhancements (as necessary), full sunset of Comptroller Information Systems (CIS), cloud sustainment & protection (STRATUS), including additional CAAS deployments (as necessary), Budget Exhibits' reform, integration of the remaining programmatic exhibit collection (sunset CAPE's legacy tool (SNAP/SNAP-IT), development/deployment of the NGRMS as a Service, determine requirements for syncing Budget to Appropriation (B2A) with the NGRMS for end-to-end views of the data streamlined processes, coupled with robust analytical ties to execution.				
FY 2026 to FY 2027 Increase/Decrease Statement: The increase for the NGRMS from FY 2026 to FY 2027 is due to acceleration of development/deployment schedules to securely integrate the latest technologies in accordance executive orders 14110, 14179, and 14141. The system continues to move to Full Operational Capability (FOC). The additional funds will meet the future development efforts to accelerate, reform and modernize the existing processes, directly supporting the wholistic visibility of data across all processes.

Note

To support multiple enterprise wide systems modernization efforts that impact the entire Department.

A. Mission Description and Budget Item Justification

Artificial Intelligence, Automation, and Financial Systems:

This request seeks additional funding to implement, sustain, and fully realize benefits from previous investments for automation, artificial intelligence (AI), and financial systems for FY 2027 and beyond.

These technologies will automate internal controls to sustain the opinion and reduce the annual cost of audit sustainment.

This effort supports the Department's goal of using these technologies to achieve an unmodified audit opinion as directed in the Secretary of War's memo "Achieving a 2028 Unmodified Financial Statement Audit Opinion" dated June 16, 2025. A portion of this funding will be used to execute this directive.

The RDT&E request supports new enhanced digital infrastructure and software licenses necessary for AI solution development and prototyping. RDT&E will also be used to modernize existing systems, develop new capabilities, and evaluate whether legacy systems should be retired. This includes technology innovations, developing system upgrades, testing, and transition planning to retire outdated platforms that support DoW's auditability goals. This includes interoperability improvements to ensure older systems can communicate with new platforms. With the focus on enterprise / Enterprise Resource Planning (ERP)-centric solutions, the procurement and implementation of additional system capabilities will be required.

As part of the Department's focus to reform Advana to accelerate AI and enhance auditability, the OUSW(C) is establishing Advana for Financial management, from the War Data Platform, to support its financial operations and audit. The request supports the development of new AI and automation capabilities in support of the audit.

To accelerate the modernization of DoW's financial management system environment, the FY 2027 request capitalizes on the initiatives that the Department began. The request will accelerate the consolidation of the DoW's financial operations into a highly centralized, ERP-centric model, enforcing new data standards that generate savings. Concurrently, the OUSW(C) will use AI and Robotic Process Automation (RPA) bots to automate high-volume, error-prone manual tasks, such as, validating journal entries, reconciling account balances, and retrieving evidential matter. This will lead to directly improving data accuracy and audit readiness.

The FY 2027 budget request also provides for development of classified systems for Treasury payments, collections and disbursing that will support the Department of War and the intel community. The savings from this investment will appear in reduced working capital fund rates from DFAS services due to decommission of legacy systems and elimination of labor currently performing reconciliations and data entry in, and between, multiple systems.				
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026	FY 2027
Title: Artificial Intelligence, Automation, and Financial Systems		0.000	0.000	250.000
Description: This program supports the Department’s enterprise financial management and reporting modernization efforts, including the retirement of legacy systems, development and deployment of automation and AI capabilities, as well as the transition to a secure, centralized ERP centric environment. This will support audit remediation, data integrity, and compliance with federal mandates through continued modernization of core financial systems. These investments strengthen financial accountability, improve operational efficiency, and ensure the Department can meet long term audit and mission requirements.				
FY 2026 Plans: N/A.				
FY 2027 Plans: In FY 2027, the program will accelerate its modernization by leveraging AI and automation to enhance audit remediation efforts and drive financial transformation. A primary focus will be evolving the Universe of Transactions (UoT) into a more integrated, AI-driven solution, which includes designing new data architecture, creating automated reconciliation algorithms, and implementing AI-powered variance analysis tools. This initiative supports key modernization efforts, such as the advancements of the Intra-Governmental Transactions (IGT), Fund Balance with Treasury (FBwT), and financial reporting reconciliations, while simultaneously enabling the retirement of high-risk legacy financial systems.				
This will empower the OUSW(C) to sustain critical investments to support the essential data engineering required for reliable data pipelines, preventing inconsistencies that could undermine audit readiness. Collectively, these actions—along with upgrades to systems—will propel the Department toward a secure, centralized, ERP-centric environment, positioning it to successfully meet its FY 2028 audit objectives.				
FY 2026 to FY 2027 Increase/Decrease Statement: The increase from FY 2026 to FY 2027 reflects the Department’s accelerated transition to a modern, secure, and audit ready financial management environment. It supports accelerated legacy system retirement, expansion of automation and AI enabled internal controls, and the sustainment and completion of key modernization efforts such as the deployment of new software capabilities that will be used to advance Advana for FM. This will strengthen data quality, interoperability, and system reconciliations to meet FY 2028 audit objectives.

Remarks		
D. Acquisition Strategy The program will use a multi-contract acquisition approach to accelerate legacy system retirement and deliver modernized financial capabilities. Existing enterprise contract vehicles will be leveraged for upgrades to various financial systems, ensuring continuity and reducing integration risk. Competitive task orders and modular service contracts will support automation expansion, AI-enabled internal controls, data quality improvements, and interoperability enhancements. Specialized classified development will be executed through secure, cleared vendor contracts. This diversified contracting strategy enables rapid delivery, reduces cost and schedule risk, and ensures timely completion of key modernization efforts to meet FY 2028 audit objectives.

A. Mission Description and Budget Item Justification

This program supports the Department's initiative to Build Sustainable and Long-Term Advantage.

Defense-wide Electronic Procurement Capabilities, Defense Pricing, Contracting, & Acquisition Policy (DPCAP) provides for the development of critical enterprise-wide e-business requirements for the procurement community. These requirements result from statute, regulation, process re-engineering, internal control requirements, and audit findings. This program provides for the introduction of innovative, time and cost-saving technologies into procurement processes across the Department. Resources are provided to conduct agile software development and testing on new or modified defense-wide e-business applications to ensure system and application development, integration, and demonstration of production representative systems and capabilities.

The FY 2027 request for Research, Development, Test & Evaluation, Defense-Wide for ASW(A)/DPCAP includes \$7,918 thousand of discretionary and \$17,607 thousand of mandatory for a total of \$25,525 thousand.

Defense Industrial Base:

The mandatory funds will be used to accelerate Acquisition Transformation initiatives and comply with Executive Order (Jan 7 2026) "Prioritizing the warfighter in Defense Contracting and Secretary of War Directive (Nov 7, 2025) "Transforming the Defense Acquisition System into the Warfighting Acquisition System to Accelerate Fielding of Urgently Needed Capabilities to Our Warriors" – Specifically resources will help Stabilize Demand Signals, Increase Supplier responsiveness, and operate a Wartime Production Unit to ensure Department of War operates at maximum capability and the Defense Industrial Base is poised to respond to increases in production needed by the Department. Plans will focus on deploying additional enterprise-wide capabilities in to increase capability of the acquisition workforce to execute Rapid Acquisition Services and Agile Prototyping as part of overall Acquisition Transformation and partnership with the defense industrial base. Acquisition Transformation efforts within DPCAP, including Deal Team negotiations and efforts, strategies to eliminate late cost and pricing submissions that drive higher contract costs, and regulatory updates to accelerate acquisition timelines. Support will also develop new tools for clearance officials and contract negotiators, such as pricing indices, commercial parts pricing and lookup capabilities, and enhanced Bill of Materials (BOM) discovery, to improve negotiation outcomes. Additionally, the effort advances Defense Federal Acquisition Regulation Supplement (DFARS) transformation and Federal Acquisition Regulation (FAR) rewrite acceleration, reduces commercial item masking practices, and expands approaches to strengthen Intellectual Property sharing when government funds research and development. Initiatives will increase focus on current capabilities with AI enhancements. We will develop enterprise requirements coming from emerging statutes and regulations for the procurement

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Defense-Wide Electronic Procurement Capabilities- Contingency	9.138	9.234	7.918
Description: FY 2025 focused on improving the identification and tracking of government furnished property (GFP) and resolving audit findings – completing Phase IV capabilities in the Procurement Integrated Enterprise Environment (PIEE) GFP Module to support Component accountable property systems’ ability to consume government furnished property transactional and lifecycle data to support the Financial Improvement and Audit Readiness (FIAR) audit. Defense Pricing, Contracting, and Acquisition Policy (DPCAP) focused on development of Enhanced Agency Accounting Identifier to improve the timely posting for acceptance for the DoW accounting systems. Additionally, we started development of Conformance 2.0 which will improve data visibility of large DoW contracts that execute numerous contract modifications. We further improved PIEE modules Joint Appointment Module (JAM) and Solicitation Portal Module (SPM) to improve usability and update data to align with financial and policy audit findings. We completed transition of former Defense Contract Management Agency (DCMA) contract administration capabilities. We continued to enhance supply chain risk data mining and data collection capabilities in the Supplier Performance Risk System (SPRS) supporting statutory requirements. We leveraged robotics and automation efforts for streamlining procurement processes and expanding data mining – implementing capabilities to support annual procurement data validation requirements. We developed enterprise requirements coming from emerging statutes and regulations for the fourth estate contract writing capability and completed initial deployment of the 4th estate contract writing capability.			
FY 2026 Plans: FY 2026 plans will focus on deploying additional enterprise-wide capabilities in PIEE to support both the Services’ contract writing capabilities and Procure-to-Pay (P2P) initiatives with a special focus on the modernized clause logic capability including potential

support to classified contracting activities. Develop enterprise requirements coming from emerging statutes and regulations for the procurement community. Enhance the suite of procurement data standards and to address items intended to close gaps identified by Component financial audits. Continue to enhance the 4th estate contract writing module for identified requirements beyond the initial minimal viable product, addressing items identified during initial deployment. Continue to enhance supply chain performance and risk data mining and data collection capabilities in the SPRS supporting on-going statutory requirements and DoW supply chain initiatives. Continue to develop the procurement analytics area of Advana, leveraging artificial intelligence capabilities for increasing detail for decision-makers. Plans in FY 2026 are to speed delivery of capabilities of the enterprise capabilities in the Procurement Integrated Enterprise Environment (PIEE), including enhancements to the 4th Estate's Electronic Contract Writing Module (ECWM) to complete data migration from the retiring Procurement-Desktop Defense (PD2). FY 2027 Plans: FY 2027 plans will focus on deploying additional enterprise-wide capabilities in PIEE to increase capability of the acquisition workforce to execute Rapid Acquisition Services and Agile Prototyping as part of overall Acquisition Transformation and partnership with the defense industrial base. Acquisition Transformation efforts within DPCAP, including Deal Team negotiations and efforts, strategies to eliminate late cost and pricing submissions that drive higher contract costs, and regulatory updates to accelerate acquisition timelines. Support will also develop new tools for clearance officials and contract negotiators, such as pricing indices, commercial parts pricing and lookup capabilities, and enhanced Bill of Materials (BOM) discovery, to improve negotiation outcomes. Additionally, the effort advances DFARS transformation and FAR rewrite acceleration, reduces commercial item masking practices, and expands approaches to strengthen Intellectual Property sharing when government funds research and development. Initiatives will increase focus on current capabilities with AI enhancements. We will develop enterprise requirements coming from emerging statutes and regulations for the procurement community, which we expect because of the Revolutionary Federal Acquisition Regulation Overhaul. We will continue to enhance supply chain performance and risk data mining and data collection capabilities in the SPRS supporting on-going statutory requirements and DoW supply chain initiatives, and we will continue to develop the procurement analytics area of ADVANA, leveraging artificial intelligence capabilities to support senior leader decision making. FY 2026 to FY 2027 Increase/Decrease Statement: The FY 2026 to FY 2027 request decreased by \$1.316 million due to contract services reductions tied to acquisition efficiency initiatives.

A. Mission Description and Budget Item Justification

This program provides microelectronics demonstration activities that enable warfighting systems and platforms to keep pace with commercial microelectronics technological advances, reduce reliance on obsolete microelectronics, and mitigate the Department's reliance on sole source and offshore foundries for assured state-of-the-art (SOTA) microelectronics. It focuses on enduring access to a multiplicity of modern on shore manufacturing processes, leveraging commercial volumes to maintain long term viability and protects the intellectual property (IP) of the microelectronic parts that are manufactured.

These activities support the 2026 National Defense Strategy Line of Effort to supercharge the United States Defense Industrial Base through building out capacity, empowering innovators and adopting new advancements in technology, guided by the Department's policy on Assured Access to Trusted Microelectronics. Additionally, the National Defense Authorization Act (NDAA) for Fiscal Year 2025, Sec 922, codifies the assurance needs of the DoW by ensuring, pursuant to policies related to hardware and software assurance and supply chain risk management, that the software and hardware developed, acquired, maintained, and used by the Department are free from intentional and unintentional vulnerability during the life-cycle of development and deployment of assured, trustworthy defense systems.

Microelectronics are critical enablers for all existing and future warfighting systems. This program delivers trusted and assured microelectronics-enabled capabilities to the warfighter in three ways:

- First, by providing the Department access to SOTA microelectronics design and emulation tools and IP libraries, advanced fabrication nodes, and advanced packaging and test capabilities, leveraging commercial device implementations as well as the development of unique DoW-designed devices for both warfighting and dual use;
- Second, by increasing assurance in the integrity and performance of microelectronics through evidence-based assurance methodologies; the development and application of analytic techniques and methods for verification and validation of microelectronics designs, 3rd party IP, physical implementations, functionality, and

supply chain. It improves situational and counterintelligence awareness of threats to DoW microelectronics; and develops and implements technology protection best practices; and						
• Third, by developing technologies to improve size, weight, power, latency, bandwidth and resilience of DoW systems and platforms. It does this through advanced chip manufacturing and packaging, developing next-generation multi-chip packages, radiation hardened microelectronics, and demonstrating advanced analog, digital, and mixed-signal technologies leveraging an array of materials for communications, radar, munitions, electronic warfare, sensors and imaging applications.						
•						
This program's technology investments and innovations support the U.S. domestic microelectronics ecosystem including fostering partnerships with industry to rapidly incorporate market-driven commercial advances within military systems. In addition, this program directly supports the priority of building a resilient Joint Force and warfighting ecosystem of key capabilities and builds pathways to adapt SOTA commercial and dual-use technologies to DoW needs. The program stimulates the domestic microelectronics innovation ecosystem and partnering with industry to rapidly incorporate market-driven commercial advances to improve military capabilities.						
An assured supply of trusted microelectronics is a U.S. Government-wide concern, this program interfaces with the services and interagency partners and stakeholders to capture requirements, create opportunities for collaboration and joint force alignment, to reduce the overall cost of microelectronics technologies, limit unneeded duplication, and enable faster technology transition to the warfighter.						
This activity is being led by the Under Secretary of War for Research and Engineering.

A. Mission Description and Budget Item Justification

This project establishes multiple strategic partnerships with existing commercial state-of-the-art (SOTA) domestic foundries to develop a data-driven, evidence-based approach to supply chain protection and demonstrate the assured manufacture of advanced electronic components. It enables the DoW to leverage the rapid advancements in microelectronics technology while maintaining trust and assurance in microelectronics with on shore advanced fabrication capabilities.

Successful implementations will transition SOTA technologies into DoW systems and platforms, enable access to multiple on shore commercial microelectronics facilities, establish secure design capabilities, and implement a data-driven evidence-based approach to supply chain protection. Additionally, this project drives collaboration with industry to apply evidence-based assurance methodologies.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Access to State-of-the-Art (SOTA) Microelectronics - Demonstration	52.650	80.722	2.062
Description: This project implements multiple foundries' process design kits (PDKs) to provide resilience in manufacturing resources to satisfy the government's needs to fabricate critical microelectronic components and to reduce dependence on single sources. Hardware solutions are demonstrated through dedicated and multi-project wafer runs at multiple foundries. Commercial foundries generate enormous amounts of data as part their quality assurance practices to improve reliability and increase yield. This project collects commercial foundry data and implements evidence-based assurance methodologies to quantitatively evaluate performance and security improvements in the design and test stages of the microelectronics lifecycle, to mitigate risk to the Department. The Rapid Assured Microelectronic Prototypes (RAMP) effort established the ability to fabricate secure, controlled DoW designs in on shore commercial foundries. The effort established multiple strategic partnerships with commercial domestic microelectronics design vendors and foundries to develop a data-driven, risk-based approach to supply chain protection and demonstrated assured

B. Accomplishments/Planned Programs (\$ in Millions)									FY 2025	FY 2026	FY 2027
manufacture of advanced electronic components. RAMP demonstrated the technical means for protecting intellectual property (IP) and informed decision makers responsible for updates to export regulations applicable to advanced microelectronics technologies.											
The RAMP-Commercial (RAMP-C) effort enables the DoW to maintain full access to U.S. commercial state-of-the-art (SOTA) design, foundry, and advanced packaging capabilities and the ability and infrastructure for the DIB and commercial companies to meet DoW's unique and persistent needs for microelectronics, including for radiation hardened microelectronics among others. The project reduces the need to source SOTA commercial integrated circuits from offshore suppliers and demonstrates evidence-based assurance methods throughout the microelectronics lifecycle and supply chain.											
FY 2026 Plans:											
• Maintain program of record access to assured fabrication flow and fund multi-project wafer production runs at multiple SOTA domestic sources.											
• Enable commercially supported and enduring U.S. logic foundry capability for the DoW.											
• Develop and demonstrate novel capabilities for design with assurance.											
Provide access to leading edge domestic wafer foundry ecosystem.											
• Develop and demonstrate emulation-based evidence-based assurance design flows in leading EDA tools.											
• Construct domain-specific architectures that leverage commercial intellectual property (IP), EDA, and processes enabling accelerated prototype demonstration and transition.											
• Develop, evaluate, and initiate insertion of IP, for application-specific integrated circuit (ASIC) and chiplet security including authentication, firmware attestation and decryption and system-on-chip interface encryption, tools and techniques to protect silicon IP during manufacturing and test phase, including multi-chip package (MCP).											
FY 2027 Plans:											
Demonstrate, test and evaluate program-targeted chips in concert with transition partners. These efforts include application specific integrated circuits (ASICs) for communications and imaging applications.											
FY 2026 to FY 2027 Increase/Decrease Statement:											
The decrease of \$78.66 million between FY 2026 and FY 2027 is due to priority realignment for DoW critical technologies.

A. Mission Description and Budget Item Justification

Advanced packaging provides essential performance improvements, size, weight, power, and cost (SWAP-C) benefits, and unique opportunities to disaggregate DoW requirements into smaller and lower cost chiplets while maximally leveraging state-of-the-art (SOTA) commercial technologies. However domestic advanced packaging capabilities are limited and the heterogeneously integrated (HI) chiplet ecosystem is nascent. This project is a collaborative effort among the DoW, Defense Industrial Base (DIB), and domestic commercial industry to expand existing capabilities to demonstrate advanced packaging and test solutions that meet DoW needs.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Access to Advanced Packaging and Testing - Demonstration	46.137	27.737	25.782
Description: This project is demonstrating chiplets and advanced packaged microelectronics to meet DoW requirements. The Stimulating Transition for Advanced Microelectronics Packaging (STAMP) effort involves partnerships between DoW program offices and defense industrial base (DIB) partners to enable transition of multi-chip packaging (MCP) prototypes developed under the State-of-the-art Heterogeneously Integrated Packaging (SHIP) project into DoW systems. The Strategic Transition of Microelectronics to Accelerate Modernization by Prototyping and Innovating in the Packaging Ecosystem (STEAM PIPE) project ensures HI and chiplet prototypes have a defined pathway into DoW systems. FY 2026 Plans: STEAM PIPE is testing advanced MCP technologies in DoW relevant environments and enabling access to advanced packaging processes with capabilities to support ITAR requirements. The Government Lab Advanced Microelectronics – Evaluation & Reporting (GLAM-ER) project is providing DoW labs access to advanced MCP prototype development kits to upskill the government workforce and to assess the prototype capabilities for meeting future DoW requirements. Conduct sub-system and system demonstrations leveraging heterogeneous integrated packaging for DoW transition targets. • Develop advanced packaging prototypes for DoW transition in collaboration with program offices and the (DIB). • Evaluate prototype hardware development kits for meeting DoW future needs.

B. Accomplishments/Planned Programs (\$ in Millions)								
• Develop, test, evaluate, and demonstrate a range of chiplets and multi-chip packages to address DoW needs based on requirements of identified transition partners. These chiplets include capabilities for advanced compute acceleration, high performance RF communications signal amplification and transceivers, digital logic and digital signal processing, anti-jam characteristics, physical miniaturization, root-of-trust and root-of-security, and high-speed data conversion. FY 2027 Plans: • Adaptive Compute Acceleration Platform Chiplet (“ACAP”) will complete productization in 1Q FY 2027. • Performance Optimization with Wideband Enhanced Radio-Frequency Unified Package (“POWER-UP”) Multi-Chip Package (MCP) integrating gallium nitride (GaN) high-power amplifiers (HPA), GaN low-noise amplifiers (LNA), and a silicon germanium (SiGe) radio-frequency integrated circuit (RFIC) within a single package fabricated in 150 nm GaN process for GaN MMICs. “BLUE SHELL” to extend the frequency of the POWER-UP MCP, leveraging 90 nm GaN process to increase the maximum MMIC operating frequency, including design, fabrication, and assembly of test boards for functional verification following package assembly. • Prototype Open Architecture Transition Acceleration Chiplet (PORTAL) disaggregation of programmable logic (e.g., FPGA) and Digital Signal Processing (DSP) functionality to optimize FPGA and DSP power, performance, and area requirements on a device- and application-specific basis. FY 2027 plans include advanced packaging, reliability testing, and integration of PORTAL prototypes into existing hardware as a demonstration of PORTAL’s interoperability aimed at modernization programs for the F-15, F-22, and F-35 countermeasures platforms. • Multi-Channel Anti-Jam (MCAJ) Chiplet (MACH-SP): Functional block disaggregation to optimize a GPS MCAJ chiplet based on MGUE Increment 2 ASIC; anti-jam test module verification and anti-jam testing. • “Bantam Bay” Multi-Chip Package (MCP) to reduce the size of the SHIP-RF MCP-1 chip by ~50% with the goal of a 32 mm × 22 mm package size. FY 2027 plans focus on fabrication, packaging, and testing the MCPs. • Ultra-Wideband Quad-Transceiver Chiplet integrating UCle with the proven architecture and data converter cores of proprietary chiplet to enable full Nyquist signal processing. A demonstrator MCP will be developed with two Ultra-Wideband Quad-Transceiver chiplets integrated in a back-to-back configuration on a silicon interposer to facilitate verification and validation (V&V). Parallel development includes the control algorithms, firmware, and documentation, as well as finalization of the test board design. • Root-of-Security (RoS) Chiplet: Implement Root-of-Trust (CMRT) intellectual property (IP), integrated into a multi-chip package (MCP) with an existing root-of-performance (RoP) field-programmable gate array (FPGA) chiplet. FY 2027 activities include RoS chiplet fabrication in GlobalFoundries 12LP, packaging, and T&E aimed at demonstrating a 50% bill of materials reduction at the circuit card assembly (CCA) level. • Multi-Chip Package (MCP) integrating a Universal Chiplet Interconnect Express (UCle)-enabled data converter and FPGA chiplets onto a silicon interposer fabricated using 3-Dimensional Universal Package (3DUP) technology for denser integration		<table border="1"> <thead> <tr> <th>FY 2025</th><th>FY 2026</th><th>FY 2027</th></tr> </thead> <tbody> <tr> <td></td><td></td><td></td></tr> </tbody> </table>	FY 2025	FY 2026	FY 2027

A. Mission Description and Budget Item Justification

The DoW relies on a small number of specialty suppliers to develop and acquire the application specific integrated circuits (ASICs) and specialized or modified commercial components required to satisfy military needs for radiation hardened digital and analog microelectronics.

By partnering in the demonstration of SOTA material sources, foundries, and packaging facilities, the DoW is aligning commercial practices with unique needs for performance and functionality, and encouraging open access design to stimulate innovation and drive affordability. Expanding the manufacturing capability and capacity of facilities for fabrication, packaging, and testing are all enablers to ensuring availability of radiation hardened microelectronics.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Access to Radiation Hardened-, RF-, and Opto-Electronic - Demonstration	46.745	24.326	23.358
Description: Government-unique trusted design and manufacturing flows have been developed to enable a tier of trust for select ASIC parts including processors, memory, microcontrollers, field programmable gate arrays (FPGAs), and radiation-tolerant processors. The DoW is partnered with the interagency to demonstrate radiation hardened components that permit systems to operate in space and other harsh environments. State-of-the-practice (SOTP) and SOTA technologies are being characterized and developed in support of Radiation Hardened by Process (RHBP) and Radiation Hardened by Design (RHBD) activities to satisfy radiation hardening requirements of DoW programs. Radio frequency (RF)- and opto-electronic (RF/OE) technologies are critical enablers of asymmetric DoW capabilities for efficient, robust, and high-performance communications in the congested electromagnetic spectrum operating environment, as well as in dual-use applications. RF/OE efforts are developing and demonstrating RF Gallium Nitride (GaN) and integrated photonic material sources, foundries, and packaging resources and facilities to demonstrate and transition these capabilities into DoW systems and platforms. FY 2026 Plans: • Demonstrate SOTP and SOTA technologies utilizing RHBP and RHBD activities in support of DoW programs with radiation hardened requirements.

Appropriation/Budget Activity 0400 / 5				R-1 Program Element (Number/Name) PE 0605294D8Z / Trusted and Assured Microelectronics				Project (Number/Name) 905 / DOW Unique NDS RADHARD - Demonstration			
B. Accomplishments/Planned Programs (\$ in Millions)									FY 2025	FY 2026	FY 2027
• Transition developed RH technologies into space and strategic programs. Increase capacity for RHBD technologies to support additional DoW programs. • Demonstrate RF Gallium Nitride (GaN), co-packaged optics (CPO), power Silicon Carbide (SiC), and multi-chip packages (MCP) to enable compact transceivers, artificial intelligence training for edge compute, and other critical warfighting and national security applications. • Demonstrate high-voltage power SiC electronics and high-temperature peripherals for unique DoW applications. • Demonstrate next generation beyond complementary metal oxide semiconductor (CMOS) technologies that advance capabilities of state-of-the-art for tactical transceivers and processing systems, for communications, electronic warfare, and radar applications. FY 2027 Plans: • Demonstrate developed technologies for tactical datalink applications, including developments in optical communications, GaN technology, and multi-chip packaging advancements to improve the data rate and link range in representative environments, and accelerate transition to the warfighter. • Demonstrate and validate the manufacturing readiness and performance of radiation hardened devices and materials, antenna and radio units, and optical communications devices for electromagnetic spectrum maneuverability. FY 2026 to FY 2027 Increase/Decrease Statement: The decrease of \$0.968 million between FY 2026 and FY 2027 is due to priority realignment for DoW critical technologies.

D. Acquisition Strategy			
To ensure the Military Aviation and Installation Assurance Siting Clearinghouse (Clearinghouse) Technical Studies Program has access to qualified expertise, the Deputy Assistant Secretary of War for Energy Resilience and Optimization will collaborate with the Washington Headquarters Services Acquisition Directorate. This collaboration will focus on sourcing, acquiring, and maintaining highly proficient technical subject matter experts. The Clearinghouse, mandated by Title 10, Section 183a, assesses the potential adverse impacts of energy projects (particularly those affecting military radar systems, operations, research, development, testing, evaluation, and training) on DoW activities. These assessments are conducted through research and development projects undertaken by Federally Funded Research and Development Centers (FFRDCs) and DoW-Affiliated University Research Centers (UARCs), utilizing task orders under the Assistant Secretary of War, Acquisition and Sustainment's Analytic & Technical Support Services (ATSS) Indefinite Delivery/ Indefinite Quantity (IDIQ) contract.

A. Mission Description and Budget Item Justification

The FY 2027 request for Acquisition Integration and Interoperability (AI2) includes \$92,689 thousand of discretionary and \$575,868 thousand of mandatory for a total of \$668,557 thousand. The mandatory funds support Program 952 Acquisition Integration and Interoperability which delivers significant return on investment for the Department's Acquisition Transformation Strategy through incentivizing development and execution of operational integration activities earlier in the development cycle of key systems when costs are lower. This funding will also support the expansion of the Defense Industrial Base through rapidly operationalizing mature capabilities from non-traditional or small business vendors that do not have immediate access to warfighters, test ranges, labs, or program offices.

The Acquisition Integration and Interoperability (AI2) program spearheads the Department's effort to create an enduring acquisition infrastructure for delivering integrated joint, system-of-systems capabilities, and establish the necessary policies, forums, and processes to (1) enable the delivery of integrated defense capabilities, leveraging Military Department and service-specific system acquisition; (2) drive adoption of threat-based mission thread analysis to inform acquisition, resourcing, and requirements decisions; and (3) support acquisition portfolio reviews to drive resourcing and enterprise decisions. The AI2 mission supports the Secretary of War's (SECWAR's) goals of reforming our acquisition process and rapidly fielding emerging technologies.

Program institutionalizes the lessons learned from the Department's Competitive Advantage Pathfinders (CAP) and Integrated Acquisition Portfolio Reviews (IAPR) and aligns service-specific system acquisition programs, prototypes, and Science and Technology (S&T) projects to deliver joint integrated capabilities. The program executes studies, analyses, and pathfinding efforts to (1) govern the processes across the Defense Acquisition System to integrate and align portfolios and programs across the lifecycle from Services, Office of the Secretary of War (OSW) Components, and Combatant Commands (COCOMs); (2) executes operational integration to support the acceleration of joint, low-cost, near-term capabilities and create an enduring infrastructure, tools, and processes for Service and OSW teams to better integrate system-of-systems capabilities; and (3) remove regulatory and institutional barriers towards leveraging service-unique acquisitions for joint requirements.

Program supports the Joint Operational Integration Program (JOIP) to execute operational integration costs to facilitate, enable, and accelerate capability development and delivery of joint capabilities. The JOIP agilely applies funding against existing or emerging systems requiring system-of-systems integration, rapid operationalization of new or dual-use technologies, or sharing capabilities across the Services. The JOIP is a critical part of the Department's Acquisition Transformation Strategy and will deliver significant return on investment through incentivizing developing and executing operational integration activities earlier in the development cycle of key systems when costs are lower.

Title: Acquisition Integration and Interoperability		14.167	13.365	92.689
Description: Program funding institutionalizes the lessons learned from the Department’s Competitive Advantage Pathfinders (CAP) and Integrated Acquisition Portfolio Reviews (IAPR) and aligns service-specific system acquisition programs, prototypes, and Science and Technology (S&T) projects to deliver joint integrated capabilities. The program executes studies, analyses, and pathfinding efforts to (1) Govern the processes across the Defense Acquisition System to integrate and align portfolios and programs across the lifecycle from Services, OSW Components, and Combatant Commands (COCOMs); (2) Create an enduring infrastructure, tools, and processes for Service and OSW teams to better integrate system-of-systems capabilities; and (3) Remove regulatory and institutional barriers towards leveraging service-unique acquisitions for joint requirements. FY25 funding was used to deliver critical outcomes for our core missions. - Developed and delivered an Integrated Acquisition Portfolio Review for C-C5ISRT focused on right-of-launch activities that was combined with our prior year Left-of-Launch Review. - Developed a transition readiness matrix to inform our JOIP activities and Acquisition Transformation Strategy - Leading acquisition reform, including executing the largest share of Acquisition Transformation Strategy initiatives of any single organization within OUSW(A&S). - Integrated Air Force’s modular, multiple munitions palletized launch system with multiple airframes across the Services and Allies. - Tested a new process for crypto certification through funding operational integration costs for Small Form Factor Weapons Attributable Radio Multi-Mode (SWARMM) Family 4 (SF4) Radios. - Delivering solution for C-C5ISRT orchestration with Service and OSW partners through the integration of existing Battle Management solutions for C-C5ISRT. - Integrating the Tactical Operation Center-Light (TOC-L) with existing Army/Navy systems to deliver inherent interoperability for TOC-L and critical INDOPACOM communications systems. - Program acceleration and transition of critical joint capabilities, including Joint Fires Network. - Leading a joint, DoW-wide effort to enable Modular Open Systems Architecture (MOSA) across the DoW. - Transition DAVE into sustainment and emplace contracts that will overhaul the digital acquisition environment. - Led a review and revision of acquisition intelligence policy, which will improve intelligence supportability to acquisition programs throughout the Services and reduce intelligence production delays in the Defense Intelligence Enterprise. - Delivered the Department’s API-first strategy, which drives an ability to make interoperability between software an inherent function. - Developed and are implementing the SECWAR’s software transformation strategy that preceded and is in direct support of the Acquisition Transformation Strategy

Appropriation/Budget Activity 0400 / 5	R-1 Program Element (Number/Name) PE 0605649D8Z / <i>Acquisition Integration and Interoperability (AI2)</i>	Project (Number/Name) 952 / <i>Acquisition Integration and Interoperability</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
FY 2026 Plans: AI2 is facilitating integrated defense capabilities, leveraging Military Department and service-specific system acquisition, expanding Integrated Acquisition Portfolio Reviews, supporting counter-C5ISR (Command, Control, Computing, Communications, Cyber, Intelligence, Surveillance, Reconnaissance and Targeting) and Surface Strike Kill Webs for the pacing threat, including integration and alignment of the Department's portfolios and governance bodies. In FY26, AI2 is delivering a SSKW IAPR that will assess the health of the Department's ability to close Long Range Kill Chains at scale and speed. AI2 is continuing to support C-C5ISR and is the primary office in OUSW(A&S) supporting the SW's Mission Engineering & Integration Activity, where AI2 owns the integration functions for MEIA. Finally, AI2 is continuing to execute its Joint Operational Integration Program for FY26, which includes closing out key FY25 projects for joint operational integration efforts to include Joint Common Munitions Launcher Integration, Nuclear Command, Control and Communications (NC3) Integration and Joint Mass Effectors Integration. In FY26, AI2 is funding projects aligned to capability gaps identified by AI2 and the Services for SSKW – accelerating key aspects of the kill web. FY 2027 Plans: AI2 will continue its existing missions to drive institutional reform in the Acquisition system and create enduring processes that enable the accelerated delivery of joint, integrated capabilities. AI2 will complete its planned establishment to cover down on its critical functions for Joint Mission Acquisition Management, Joint Operational Integration Program (JOIP), Acquisition Contingency Teams (ACT), and support for Acquisition Transformation Strategy. \$3.325 million of the request will support robust capability portfolio management analyses, including the new Joint Mission Acquisition Managers (JMAM) that execute enterprise analysis of how acquisition portfolios support missions and operational outcomes. The President's Budget Request for 2027 also fully funds JOIP where AI2 will fund \$72.977 million of operational integration activities to accelerate the development and delivery of existing or emerging weapon systems requiring system-of-systems integration, operationalization of new technology, or sharing capabilities across the Services. AI2 will collaborate closely with the new Mission Engineering & Integration Activity, new Portfolio Acquisition Executives, the Joint Rapid Acquisition Cell, and the Service Acquisition Executives' Rapid Capabilities Offices to identify efficiencies, streamline mission-based capability delivery, integrate operational "fight tonight" capabilities, transition new operationally viable technologies to programs of record. AI2 has a robust intake, assessment, and validation process that will oversee the onboarding and execution of operational integration activities that improve our ability to close joint kill webs across multiple joint operational problems through system-of-systems integrations, rapid operationalization of mature technology, and cross-decking of existing Service capabilities to other Services

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
\$3.92 million will support AI2's ACTs that will serve as a Joint Program Office Incubator to derisk transition of new, joint products into Programs of Records that enable the Department to scale and sustain at speed. This will also provide critical acquisition specialist support to OUSW(A&S)'s Digital Acquisition Platform. \$3.79 million will be dedicated towards Integration as a Service (IaaS) capacity that will support the execution of specific projects under the JOIP. These will be engineering services firms specializing in systems integration hired to support the Program Offices and/or vendors that own the systems where integration is required. \$4.234 million will provide the DoW's SW Cadre with FFRDC support to continue to enable the development of policy and enabling functions for the Department's Software Acquisition Pathway. \$4.441 million will be set aside for administrative support, ASW(A) management reserve. <i>FY 2026 to FY 2027 Increase/Decrease Statement:</i> This increase provides full funding for the JOIP and scales AI2 to fully support its original mission.			
Accomplishments/Planned Programs Subtotals		14.167	13.365
C. Other Program Funding Summary (\$ in Millions) N/A			
Remarks			
D. Acquisition Strategy			
AI2 will be executed through a series of approaches. For its continued Services from prior years focused on core AI2 functions, AI2 will utilize existing FFP contracts with industry partners as well as STE from FFRDCs. For its new activities in support of executing JOIP, standing up additional JMAMs, or staffing the ACTs, AI2 will contract directly with firms to provide onsite staff support for each of these functions, except for IaaS capacity. The IaaS effort will be executed in tight conjunction with vendors who own the existing systems for JOIP, and AI2 will contract with professional engineering services firms that specialize in systems integration for capabilities aligned to the JOIP effort. In executing the JOIP, Portfolio Acquisition Executives, Rapid Capability Offices, and Combatant Commands nominate candidate projects on a semi-annual basis. AI2 assesses and selects the priority operational integration projects to fund that will deliver an operational capability. JOIP is an operational integration program and will not select any project below Technology Readiness Level 7, or a system that requires significant prototyping. AI2 will select projects with the highest operational impact and return on investment that falls into one of the three categories: system-of-systems integration, rapid operationalization of mature technology, or cross-decking of existing Service capabilities. For most cases, AI2 will be augmenting Service programs with money to pay down critical urgent joint requirements solvable through operational integration. In those cases where it is a rapid operationalizing of a mature technology or there is not an existing agreement with the government, AI2 will contract directly

Note

New Start (Y/N): No

A. Mission Description and Budget Item Justification

This program supports the DoW's priorities to Rebuild our Military and Reestablish Deterrence and supports the Office of the Under Secretary of War for Acquisition and Sustainment (OUSW(A&S)) Radiological and Nuclear Defense Capability Development (RNDCD) Program.

It is dedicated to modernizing R/N capabilities for the warfighter. An annual investment strategy is used to meet emergent operational needs which are validated by the Joint Force and yield fielded capabilities within one to three years.

The program supports the modernization of radiological and nuclear (R/N) defense capabilities that enable the Department to prevent R/N attacks on the homeland and the Joint Force abroad through integrated deterrence. The program provides the Joint Forces the tools needed to survive and operate in and through a R/N environment through networked R/N detection, indication, and identification capabilities in support of the National Defense Strategy's deterrence by denial strategy and prioritization of the Nuclear Deterrence Posture within the FY 2027 Defense Planning Guidance.

This program funds labor, materials, and travel to support the requirements of this program, performed by a government agency or by private individuals or organizations under a contract with the government, for activities and acquisitions including Research, Development, Test, and Evaluation (RDT&E), assessments and analyses, research studies, education, and other activities related to capability development and fielding.

A. Mission Description and Budget Item Justification

This program supports the DoW's priorities to Rebuild our Military and Reestablish Deterrence and supports the Office of the Under Secretary of War for Acquisition and Sustainment (OUSW(A&S)) Radiological and Nuclear Defense Capability Development (RNDCD) Program.

It is dedicated to modernizing R/N capabilities for the warfighter. An annual investment strategy is used to meet emergent operational needs which are validated by the Joint Force and yield fielded capabilities within one to three years.

The program supports the modernization of radiological and nuclear (R/N) defense capabilities that enable the Department to prevent R/N attacks on the homeland and the Joint Force abroad through integrated deterrence. The program provides the Joint Forces the tools needed to survive and operate in and through a R/N environment through networked R/N detection, indication, and identification capabilities in support of the National Defense Strategy's deterrence by denial strategy and prioritization of the Nuclear Deterrence Posture within the FY2027 Defense Planning Guidance.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Radiological and Nuclear Mod Sys Dev/Demo	2.041	3.293	3.090
Description: The Radiological and Nuclear Defense Modernization: Systems Development and Demonstration program invests in the maturation of prototypes; integration of technologies, systems and components; developmental, environmental, and operational test and evaluation; and transition of capabilities that improve DoW's capability to detect and identify radiological and nuclear threats. The program leverages significant S&T investments by the DoW, other Federal agencies, and industry to accelerate and enable transition to fielded capabilities. Resulting fielded capabilities protect the warfighter; support indications and early warning systems as well as command and control systems; and enable the disablement or defeat of WMD and their delivery systems.			
FY 2026 Plans: - Developed, transitioned, and fielded operational R/N Detection, Identification, Early warning, and Command Control capabilities to the Joint Force and the National Guard Bureau. - Partnered with the Military Services and Defense Agencies to mature and transition advanced prototypes to fielded R/N detection and identification capabilities.

D. Acquisition Strategy			
The Office of the Assistant Secretary of War for Nuclear Deterrence, Chemical, & Biological Defense Policy & Programs (OASW(NDCBD)) establishes annual priorities based on national and DoW strategies and Administration guidance. Based on those priorities, NDCBD solicits project proposals from Combatant Commands, Military Services, and Defense Agencies to enhance Joint Force lethality. To be selected, a proposed project must have a validated requirement, an engaged requirements champion, a viable acquisition strategy, and a qualified program management office. A technology project must identify its starting and desired end-state Technology Readiness Level. Likewise, the end-user for any proposed project must demonstrate a long-term plan for acceptance and sustainment of a fieldable capability. Project period of performance is typically 12-24 months.

A. Mission Description and Budget Item Justification

The FY 2027 request for Research, Development, Test & Evaluation, Defense-Wide for Under Secretary of War, Acquisition and Sustainment (USW(A&S)) includes \$2,985 thousand of discretionary and \$7,975 thousand of mandatory for a total of \$10,960 thousand. The mandatory funds extend the NC3 Next Trade Space Study to analyze the appropriate mix of sensors, correlation centers, data processing computational needs, automation algorithms, and decision tools to support nuclear decision making when under threat of a growing quantity and type of missile threats. This analysis is currently ongoing under Phase 3 of the study, but the complexity of the modeling and simulation efforts will drive subsequent analysis that supports both USSTRATCOM as NC3 Enterprise Lead and the Golden Dome for America capabilities. Results will deliver acquisition ready solutions for decision and consideration in the FY 2029 program and budget review. Establish a program to commission a designated independent agency, such as a FFRDC to conduct an annual review of the NC3 Enterprise. This review would be executed independently but with access to Department plans, programs, data, and personnel. The agency would operate with a standing charter to provide a "Red Team" perspective on enterprise capabilities, vulnerabilities, strategies, and execution progress. The independent review would be chartered to establish a living oversight process focused on two primary efforts: first, tracking and assessing the Department's progress in addressing the findings and recommendations from the original Section 1649 report (i.e., "burning down" the action list); and second, continuously monitoring the evolving threat and technology landscape. This dynamic scope ensures the Department is held accountable for past findings while empowering the assessment and review team to generate new recommendations as adversaries develop new capabilities or as new technologies emerge that could strengthen or threaten the NC3 system.

Deliver a tailored model-based analytical environment to support annual NC3 enterprise portfolio reviews that evaluate high priority risk areas and deliver decision-ready insight with supporting data. This effort expands a modeling tool built for the NC3 Next Trade Space Study to enable limited scope trade studies for near term risk areas that require resourcing and programmatic decisions by the NC3 Capability Portfolio Manager in the Office of the Under Secretary of War for Acquisition and Sustainment. In the upcoming fiscal year, this model would be tailored for the unique challenge associated with transitioning nearly 1,000 user terminals to a new constellation in an aggressive five-year timeframe Expand current efforts to protect critical information for NC3 Next Generation capabilities to address growing cyber threats, such as exfiltration of NC3 data from industrial base and the use of artificial intelligence to expose vulnerabilities. Establish guidelines, tools, and technical solutions for program offices to implement at the appropriate security classification level to address these risks.

This program supports the Department's initiatives to Restoring Warrior Ethos, Rebuilding Military Capabilities and Re-establishing Deterrence

UNCLASSIFIED

Exhibit R-2, RDT&E Budget Item Justification: PB 2027 Office of the Secretary Of Defense		Date: April 2026
Appropriation/Budget Activity 0400: <i>Research, Development, Test & Evaluation, Defense-Wide I BA 5: System Development & Demonstration (SDD)</i>		R-1 Program Element (Number/Name) PE 0605772D8Z I <i>Nuclear Command Control and Communications (NC3)</i>
This program supports the Under Secretary of War for Acquisition and Sustainment (OUSW(A&S)) roles as Principal Staff Assistant (PSA) for Nuclear Command Control and Communications (NC3) and NC3 Capability Portfolio Manager (CPM) and Department of War Directive 3730.02. The role of the NC3 PSA and NC3 CPM is to ensure alignment of NC3 acquisition, procurement, modernization, sustainment, interoperability and resources to deliver effective current and future NC3 capabilities, and proactively manage the NC3 portfolio to align NC3 programs with DoW nuclear weapons platform and delivery systems sustainment and modernization efforts. The NC3 Portfolio consists of approximately 200 systems, platforms, networks, and applications. The goals of the CPM are to 1) assess NC3 modernization programs and their integration, synchronization, and contribution to the NC3 enterprise, 2) monitor the readiness of operational NC3 systems, 3) identify performance gaps and make recommendations on technology upgrades and prototyping to enable the future capabilities to outpace the threat, and 4) support data-driven portfolio management by developing the necessary tools and processes to assess and manage integrated programmatic and technical risks. This includes the analytical expertise, and information storage and retrieval systems to support the continuing development of CPM for managing the complex NC3 enterprise. These efforts will simultaneously support the Commander, U.S. Strategic Command (USSTRATCOM) as NC3 Enterprise Lead; NC3 Enterprise Center (NEC); systems engineering and architecture development entities; the Under Secretary of War for Research and Engineering (USW(R&E)), the Joint Staff, and the Services. This program supports the capability portfolio-based approach (DoW Directive 7045.02, "Capability Portfolio Management"). This program funds development of new tools, technical assessments, and planning for the CPM to manage the NC3 enterprise. This includes: 1) developing analytical tools for improving NC3 enterprise-level management and programmatic and technical risk assessments; 2) supporting the office of primary responsibility for NC3 enterprise capability portfolio management, to include assessing current capability, complying with statutory mandates, and conducting NC3-related studies, analyses, and policy updates; 3) assessing DoW Component plans, programs, and budgets for adequacy and execution (including courses of action development and recommendations); 4) identifying, prototyping, evaluating, and recommending new technology for inclusion in the NC3 system; and 5) developing NC3 corrective action and risk mitigation plans to support the NC3 CPM investment recommendations to senior DoW leadership.. .

A. Mission Description and Budget Item Justification

This program supports development and operation of analytical tools to evaluate authoritative data (cost, schedule, performance, risk) on NC3 Portfolio programs to maximize portfolio alignment to strategic priorities and capabilities. It will create integrated development and delivery schedules for NC3 programs. These tools will forecast system/capability degradation as well as plans for capability replacement, improvement, or replacement in the context of the larger NC3 enterprise. It also provides the technical expertise to support risk management analysis (with an emphasis on system design, development and acquisition) of the NC3 enterprise and will develop strategies for synchronizing NC3 preplanned improvements. It will support the timely exchange of program and capability status information between elements of the NC3 enterprise, the Office of the Secretary of War(OSW) staff, and the combatant commands with a goal of increasing the use of electronic means to provide current and accurate information on key elements of the NC3 enterprise.

The effort will develop robust, integrated capability plans and schedules for NC3 capabilities to clarify system dependencies and identify disconnects. It will also support cross-department collaboration for development of enterprise-wide approaches for capability management. This includes: (1) vertical and horizontal integration activities within the Department and with the interagency where appropriate; (2) a coordinated portfolio-based approach to planning, programming, budgeting and execution; (3) reform efforts at the legislative, governance, policy, management and execution levels; 4) protection of information and technology that support or enables technology-based capability development for the NC3 warfighting domain and 5) supports the identification, evaluation, and incorporation of promising technology for inclusion in the NC3 system.

New Start (Y/N): N

A. Mission Description and Budget Item Justification

In FY 2027, JFN will complete testing of and deliver v3.0 software capabilities and multi-level security (MLS) capability enhancements. The latter provides an MLS All-source Persistent Targeting Common Operating Picture and hybrid-cloud architecture that integrates the tactical edge with current operational capabilities and networks with JFN. v3.0 also integrates Generative AI models in special access facilities to enable decision superiority for fires across the JFN. Additionally, FY 2027 will see the completion of delivery of outstanding JFN Operations Centers and nodes in USINDOPACOM.

The Joint Fires Network (JFN) is a multi-domain resilient fires-informing decision network at theater strategic and operational levels that provides a persistent targeting common operating picture and mission command applications at the SAP level to enable top echelon decision makers to optimize allocation of weapons across Services and partners at speed and scale.

The FY 2026 spend plan amount for Joint Fires Network includes \$0 thousand of discretionary and \$24,000 thousand of mandatory (reconciliation) funding for a total of \$24,000 thousand.

A. Mission Description and Budget Item Justification

In FY 2027, JFN will complete testing of and deliver v3.0 software capabilities and multi-level security (MLS) capability enhancements. The latter provides an MLS All-source Persistent Targeting Common Operating Picture and hybrid-cloud architecture that integrates the tactical edge with current operational capabilities and networks with JFN. v3.0 also integrates Generative AI models in special access facilities to enable decision superiority for fires across the JFN. Additionally, FY 2027 will see the completion of delivery of outstanding JFN Operations Centers and nodes in USINDOPACOM.

The Joint Fires Network (JFN) is a multi-domain resilient fires-informing decision network at theater strategic and operational levels that provides a persistent targeting common operating picture and mission command applications at the SAP level to enable top echelon decision makers to optimize allocation of weapons across Services and partners at speed and scale.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Joint Fires Network (JFN)	-	0.000	0.000
Description: The Joint Fires Network (JFN) is a multi-domain resilient fires-informing decision network at theater strategic and operational levels that provides a persistent targeting common operating picture at the SAP level to enable top echelon decision makers to optimize allocation of weapons across Services and partners at speed and scale.			
FY 2026 Plans: In FY 2026, the JFN will transition from prototype to program of record led by a JFN Integrated Program Office (IPO). DAF PEO C3BM will serve as the lead component with Service and DISA deputies. JFN v2.0 product baseline will be released, to include updates to the MLS architecture, cloud hosting, additional multi-domain C2 planning features, predictive ISR, and Battle Management C2 applications. JFN will support INDOPACOM capability development, exercise, and rehearsal and cross-CCMD experimentation to inform requirements for the extension of JFN across multiple Combatant Commands, geographic regions, allies and partners. CDAO will establish the integration framework between CJADC2 capabilities and JFN and ensure bi-directional data sharing between capabilities. The first operations center at INDOPACOM will be activated and additional JFN nodes will be integrated via CDAO's tactical data mesh efforts. JFN nodes outside of the INDOPACOM have been committed to CYBERCOM, SPACECOM, STRATCOM, and EUCOM. After the initial transition year, budget and execution oversight will be retained at the OSW level by CDAO in FY 2027 to ensure a continued focus on CCMD requirements.			
After successive JFN v1.0, 1.5, and 1.8 product updates are tested through 2025, the JFN v2.0 product baseline will be released and include updates to the MLS architecture, cloud hosting, additional multi-domain C2 planning features, predictive ISR, and a

A. Mission Description and Budget Item Justification

The Enterprise Energy Information Management (EEIM) supports the interim National Defense Strategy (NDS) to build a more lethal force through modernization of key capabilities, the NDS defense objective of establishing an unmatched twenty-first century National Security Innovation Base (NSIB) that effectively supports Department operations and sustains security and solvency, and the NDS strategic approach of reforming the Department's business practices by simultaneously increasing performance and affordability while still minimizing risk. Established in FY 2013 and tasked with supporting the Department's goals for audit readiness, energy efficiency, Real Property (RP) accountability, and to improve data quality and integration across the full spectrum of sustainment business functions. Department of War (DoW) Real Property Information Management (RPIM) is used to maintain accurate and accessible data for all DoW real property assets. The Enterprise Energy Information Management (EEIM) Business Process Re-engineering (BPR) activities, develop and publish data standards. Funding supports accountability requirements, such as, reconciliation of enterprise real property inventory records and development of asset management processes, business rules and associated data standards.

Funding also supports fielding an enterprise Real Property Information Management platform coupled with an independent verification and validation capability, providing access to real time data through Web Services Description Language (WSDL) in support of timely, data-driven decision-making. The Real Property Information Portal also hosts a build out of data stores and portal requirements for Energy Resiliency and Conservation Investment Program (ERCIP) management as well as, the Construction Management Portal (CMP).

The FY 2026 spend plan amount for DoW Enterprise Energy Information Management (EEIM) includes \$6,382 thousands of discretionary and \$3,000 thousand of mandatory (reconciliation) for a total of \$9,382 thousands.

A. Mission Description and Budget Item Justification The real property inventory fulfills requirements of Executive Orders (EO) to achieve and maintain real property accountability and is a key component supporting both audit readiness and life-cycle asset management activities. This funding provides the department independent verification and validation needed to reconcile data errors, promoting improved data quality, and facilitating interoperability with Service systems to provide an enterprise view of asset management across the real property lifecycle from acquisition to disposal. Oversight and configuration management of business rules and standards are used to determine requirements, manage inventory records, and improve business processes. This initiative includes development and procurement of the enterprise data warehouse for integrating existing and future EI&E systems and database needs. The required Real Property Unique Identifier (RPUID) process is included in this enterprise system.												
B. Accomplishments/Planned Programs (\$ in Millions)									FY 2025	FY 2026	FY 2027	
Title: Real Property Accountability									2.506	5.774	1.940	
Description: The Assistant Secretary of War (ASW) for Energy, Installations, and Environment (EI&E) is the Senior Real Property Officer for the DoW, responsible for accountability and utilization of all DoW Real Property Assets. This funding provides the department an enterprise data warehouse coupled with an independent verification and validation capability. The DoW Real Property accountability efforts are mandated by EO and Public Law (PL) for improved reporting and utilization of federal real property, and to support data driven decisions.												
FY 2026 Plans: Continue to support reconciliation and audit corrective action plan efforts by identifying errors/inconsistencies in Real Property inventory records, asset accountability and management processes, and business rules and associated data. Bring Real Property Information Management (RPIM) platform and WSDL implementation to Initial IOC and complete links to ADVANA. Ensure improved data quality supporting multiple analyses and provide quality management mechanism for all of the DoW real property information.												
FY 2027 Plans: Continue to support reconciliation and audit corrective action plan efforts by identifying errors/inconsistencies in Real Property inventory records, asset accountability and management processes, and business rules and associated data. Bring Real Property

A. Mission Description and Budget Item Justification

FY 2027 - The real property inventory fulfills requirements of Executive Orders (EO) to achieve and maintain real property accountability and is a key component supporting both audit readiness and life-cycle asset management activities. This funding provides the department independent verification and validation needed to reconcile data errors, promoting improved data quality, and facilitating interoperability with Service systems to provide an enterprise view of asset management across the real property lifecycle from acquisition to disposal. Oversight and configuration management of business rules and standards are used to determine requirements, manage inventory records, and improve business processes. This initiative includes development and procurement of the enterprise data warehouse for integrating existing and future EI&E systems and database needs. The required Real Property Unique Identifier (RPUID) process is included in this enterprise system.

Note: Starting FY 2027 the Clearinghouse is no longer using 050305304 Pcode 307. In FY 2027, the Clearinghouse will have its own Program Element and Pcode.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Clearinghouse (Prior Years) & Real Property Information Management (FY 2027 and out)	4.384	0.608	0.633
Description: FY 2025 - FY 2026 The Clearinghouse works with FFRDCs and DOW UARCs to identify impacts to DOW assets and capabilities from energy projects and to identify technical mitigation measures necessary to overcome potential degradation of DOW assets and capabilities (Clearinghouse has a new PE and Pcode for FY 2027, prior years funding (FY 2025 & FY 2026) only applies to the Clearinghouse).			
FY 2027 - RP Information Management - The Assistant Secretary of War (ASW) for Energy, Installations, and Environment (EI&E) is the Senior Real Property Officer for the DoW, responsible for accountability and utilization of all DoW Real Property Assets. This funding provides the department an enterprise data warehouse coupled with an independent verification and validation capability. The DoW Real Property accountability efforts are mandated by EO and Public Law (PL) for improved reporting and utilization of federal real property, and to support data driven decisions			
FY 2026 Plans: FY 2026 - Clearinghouse Plan - Funding will be used to refine and accelerate the deployment of promising energy project interference mitigation solutions to restore and enhance military assets and capabilities. Research and development will continue to be done primarily through work with Federally Funded Research and Development Centers (FFRDCs) and universities. Results

A. Mission Description and Budget Item Justification

Counterproliferation (CP) Advanced Development prioritizes investments aligned to the Defense Planning Guidance (DPG) and supports the 2026 National Defense Strategy (NDS) objective of peace through strength with advanced development of capabilities that reestablish deterrence and rebuild our military. Program investments in CP capabilities, enable the Department to maintain credible options to defend the homeland against weapons of mass destruction (WMD) use. Investments result in capabilities that take action to neutralize nuclear, chemical, biological and radiological materials of concern (2026 NDS).

This program fields new capabilities to operating units with assigned CP/CWMD missions that disrupt, degrade, delay, deny, and defeat adversary nuclear, chemical, and biological weapons, delivery platforms, command and control systems, and hardened and deeply buried targets. Fielded capabilities provide exquisite tactical situational awareness, low visibility methods of maneuver, and the ability to employ immediate effects without diminishing future military options that supports the Administration's CP priorities, enabling active campaigning that supports the Administration's CP priorities, mitigating escalatory risk.

Funding is prioritized for projects that close Joint Force warfighter capability gaps, including the defense along the First Island Chain (FIC) and the western hemisphere. An annual investment strategy is used to meet emergent operational requirements that are validated by the Joint Force. This yields new fielded capabilities within one to two years.

This program funds labor, materials, and travel in support of its requirements, performed by a government agency or by private individuals or organizations under a contract with the government, for activities and acquisitions including Research, Development, Test & Evaluation (RDT&E), assessments and analyses, education, and other activities related to capability development and fielding of bio-deterrence, nuclear modernization, homeland missile defense, one-way attack autonomous systems, and maritime/FIC territory superiority.

D. Acquisition Strategy			
The Office of the Assistant Secretary of War for Nuclear Deterrence, Chemical, and Biological Defense Policy and Programs (OASW(ND-CBD)) establishes annual priorities based on national and the DoW strategies and Administration guidance. Based on those priorities, OASW(ND-CBD) solicits project proposals from Combatant Commands, Military Services, and Defense Agencies. To be selected, a proposed project must have a validated requirement, an engaged requirement champion, a viable acquisition strategy, and a qualified program management office. In support of CWMD campaigning, a technology project must identify its starting and desired end-state Technology Readiness Level. Likewise, the end-user for any proposed project must demonstrate a long-term plan for acceptance and sustainment of a fieldable capability. Project period of performance is typically 12-24 months.

A. Mission Description and Budget Item Justification

This program supports the Department's initiatives to Deter Aggression, Defend the Homeland, Provide Nuclear Deterrence, and Build Sustainable and Long-Term Advantage.

The Radiological and Nuclear (Rad/Nuc) Detection Gear Modernization and Procurement for the Joint Force research and development activities (RDAs) enhance DoW's capabilities to campaign across the domains of threats and spectrums of conflict by: improving our capability to operate in the Radiological and Nuclear environment – including in the information and early warning domain; reinforcing our own warfighting advantages by providing increased capability to detect and identify radiological and nuclear threats; and enhancing our interoperability and access to address acute forms of coercion. This program is specifically geared to provide improved rad/nuc detection, indications and identification capability to the warfighter and to upgrade obsolete equipment (National Defense Strategic Guidance).

RDAs provide enhanced Rad/Nuc capabilities. The Domestic Prepare against weapons of mass destruction (WMD) portfolio enables DoW to provide Joint force and National Guard capability development for radiological and nuclear (R/N) capability development, acquisition and modernization funding to prepare for or to respond to any emergency involving nuclear, and radiological events in the United States; will ensure DoW strategic direction aligns with the National Defense Strategy's priority for Homeland Defense; is a necessary action in the Homeland to improve resilience; and promotes integrated deterrence of WMD with state, local and other federal agencies.

The Domestic Prepare against WMD portfolio is executing along cohesive lines of effort (LOEs) designed to prepare the Joint Force for a Future Operating Environment in which adversary pursuit or possession of WMDs pose threats ranging from existential to tactical, and limit U.S. strategic choices.

The Office of the Secretary of War uses the Domestic Prepare against WMD portfolio to invest strategically in projects across the Military Services, Combatant Commands, and Defense Agencies. Funding is prioritized for projects that close Joint Force warfighter capability gaps. An annual investment strategy is used to meet emergent operational, and capability needs validated by the Joint Force and the National Guard Bureau, yielding new fielded capabilities within one to two years.

The Domestic Prepare against WMD portfolio: Systems Development and Demonstration program invests in maturation of prototypes; integration of technologies, systems and components; developmental and operational test and evaluation; and transition to fielded capabilities that improve capability to detect and identify

A. Mission Description and Budget Item Justification

This program supports the Department's initiatives to Deter Aggression, Defend the Homeland, Provide Nuclear Deterrence, and Build Sustainable and Long-Term Advantage.

The Radiological and Nuclear (Rad/Nuc) Detection Gear Modernization and Procurement for the Joint Force research and development activities (RDAs) enhance DoW's capabilities to campaign across the domains of threats and spectrums of conflict by: improving our capability to operate in the Radiological and Nuclear environment – including in the information and early warning domain; reinforcing our own warfighting advantages by providing increased capability to detect and identify radiological and nuclear threats; and enhancing our interoperability and access to address acute forms of coercion. This program is specifically geared to provide improved rad/nuc detection and identification capability to the warfighter and to upgrade obsolete equipment (National Defense Strategic Guidance).

RDAs provide enhanced Rad/Nuc capabilities. The Domestic Prepare against weapons of mass destruction (WMD) portfolio enables DoW to provide Joint force and National Guard capability development for radiological and nuclear (R/N) capability development, acquisition and modernization funding to prepare for or to respond to any emergency involving nuclear, and radiological events in the United States; will ensure DoW strategic direction aligns with the National Defense Strategy's priority for Homeland Defense; is a necessary action in the Homeland to improve resilience; and promotes integrated deterrence of WMD with state, local and other federal agencies.

The Domestic Prepare against WMD portfolio is executing along cohesive lines of effort (LOEs) designed to prepare the Joint Force for a Future Operating Environment in which adversary pursuit or possession of WMDs pose threats ranging from existential to tactical, and limit U.S. strategic choices.

The Office of the Secretary of War uses the Domestic Prepare against WMD portfolio to invest strategically in projects across the Military Services, Combatant Commands, and Defense Agencies. Funding is prioritized for projects that close Joint Force warfighter capability gaps. An annual investment strategy is used to meet emergent operational, and capability needs validated by the Joint Force and the National Guard Bureau, yielding new fielded capabilities within one to two years.

The Domestic Prepare against WMD portfolio: Systems Development and Demonstration program invests in maturation of prototypes; integration of technologies, systems and components; developmental and operational test and evaluation; and transition to fielded capabilities that improve capability to detect and identify radiological and nuclear threats. This program bridges the gap between basic research to accelerate and enable transition of technologies to fielded capabilities by leveraging significant science and technology (S&T) investments made by the Department of War, other Federal agencies, and industry.

This program funds labor, materials, and travel to support the requirements of this program, performed by a government agency or by private individuals or organizations under a contract with the government, for activities and acquisitions including RDT&E, assessments and analyses, research studies, education, and other activities related to capability development and fielding.			
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
Title: Domestic Prepare Against WMD Description: The Domestic Prepare Against WMD: Systems Development and Demonstration program invests in maturation of prototypes; integration of technologies, systems and components; developmental and operational test and evaluation; and transition to Rad/Nuc Defense fielded capabilities. Significant S&T investments in prototype development by the Department of War, other Federal agencies, and industry are leveraged, capitalizing on mature technologies to accelerate and enable transition to fielded capabilities. Resulting fielded capabilities protect the warfighter, support indications and early warning, command and control, defend vulnerabilities in networks, programs, facilities, and weapons systems; and enable the disablement or defeat of WMD and their delivery systems. Funding is realigned to PE 0605755D8Z beginning in FY 2026.		1.497	-

New Start (Y/N): No

A. Mission Description and Budget Item Justification

The Chief Digital and Artificial Intelligence Officer (CDAO) mission is to accelerate DoW adoption of data, analytics, and artificial intelligence (AI) to enable decision advantage from the boardroom to the battlefield. This includes improving CJADC2 in support of the Joint Warfighting Concept through three lines of effort:

-Data Integration Layer: These efforts mature management of DoW operational data and deploy a tactical edge data mesh (EDM) to enable data integration among new and legacy systems. EDM is a resilient, interoperable data integration service connecting sensors, weapons, and other battlefield assets for enhanced situational awareness and coordination into a cloud environment. EDM leverages commercial software, a government-owned software development kit (SDK), and open application programming interfaces (APIs) to integrate government and vendor systems, facilitate tactical data sharing, and incorporate artificial intelligence/machine learning (AI/ML) capabilities at the edge. EDM supports multi-domain operations across echelons, including enhanced C2 and fires in contested environments by optimizing data exchange among Denied, Disrupted, Intermittent, and Limited (DDIL) communication paths.

-Mission Command Applications: This effort integrates data, analytics, and AI in support of the seven Joint warfighting functions leveraging a common government owned/contractor operated data stack that adheres to open architecture principles. Requested funding purchases licenses for access to Joint commercial software tools for Joint Force and Services on multiple networks, engineering support to integrate new data sources and digitize workflows, maintenance of a DevSecOps pipeline to allow third party vendors to develop and field applications on shared digital infrastructure, funding for those third party vendors to close CJADC2 gaps, and cloud compute costs needed to run applications and workflows.

-Global Experimentation: This effort supports experimentation efforts for Joint Command and Control (C2) capabilities leveraging CCMD and Service exercises. Experiments evaluate data integrations and digital workflows in the context of real mission use cases, on live networks, and with real data and users.

• Reprogrammings	9.550	-			
• SBIR/STTR Transfer	-3.998	-			

Change Summary Explanation

Beginning in FY 2025 Combined Joint All-Domain Command & Control (CJADC2)-related funding was re-aligned from PE 0604123D8Z to this PE in support of Congressional guidance. A Reprogramming action (BTR) was done in FY 2025 to fund Maven Smart System (MSS) from PE 0604123D8Z and PE 0604133D8Z.

The FY 2026 President's Budget submission did not include FY 2027 funding projections. Therefore, no comparison between budget positions is available for FY 2027.

A. Mission Description and Budget Item Justification

The DIL funding line contains efforts to mature management of DoW operational data and deploy a tactical edge data mesh (EDM) to enable data integration among new and legacy systems. EDM is a resilient, interoperable data integration service connecting sensors, weapons, and other battlefield assets for enhanced situational awareness and coordination into a cloud environment. EDM leverages commercial software, a government-owned software development kit (SDK), and open application programming interfaces (APIs) to integrate government and vendor systems, facilitate tactical data sharing, and incorporate artificial intelligence/machine learning (AI/ML) capabilities at the edge. EDM supports multi-domain operations across echelons, including enhanced C2 and fires in contested environments by optimizing data exchange among Denied, Disrupted, Intermittent, and Limited (DDIL) communication paths. The tactical edge data mesh provides real time understanding at tactical level C2 into the data layer for the department in Joint C2 system.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Data Integration Layer (DIL) for CJADC2	163.325	26.324	52.797
Description: The DIL program invests in EDM nodes, data integration with EDM, and data interoperability improvements.			
FY 2026 Plans: In FY 2026 CDAO fields additional tactical edge data mesh nodes and data integrations to support tactical-to-strategic data linkages in high priority locations. CDAO continues to support API-enabled data integrations and hardware deployments in order to support Joint C2, counter-drone missions, and other priorities.			
FY 2027 Plans: Continue to field additional tactical edge data mesh nodes to build out capability supporting Department priorities. Additionally, CDAO will continue working with Echelon 1 and Echelon 2 components to prioritize API level data integrations for the nodes. CDAO continues to improve blue data objects and enterprise cross-domain solution capabilities for more robust operational-to-tactical C2. Continue work with Joint organizations to provide tactical C2 for counter drone threats.			
FY 2026 to FY 2027 Increase/Decrease Statement: FY 2027 increase due to Edge Data Mesh usage and related contract support. The increase allows accelerated deployment of nodes and deployments to keep pace with the expansion of the overall Joint C2 commercial architecture and support strategic priorities.			
Accomplishments/Planned Programs Subtotals	163.325	26.324	52.797

A. Mission Description and Budget Item Justification

This effort integrates data, analytics, and AI in support of the seven Joint warfighting functions leveraging a common government owned/contractor operated data stack that adheres to open architecture principles. Requested funding purchases commercial Joint C2 software licenses for Services and the Joint Force foron multiple networks, engineering support to integrate new data sources and digitize workflows, maintenance of a DevSecOps pipeline to allow third party vendors to develop and field applications , funding for those third party vendors to close CJADC2 gaps, and cloud compute costs needed to run applications and workflows. Joint C2 capabilities draw from tactical data bridges to the strategic level in order to provide live battlespace awareness and decision advantage to commanders on a single pane of glass.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Mission Command Applications	103.241	240.485	2,030.963
Description: This program funds licenses for Joint Force and Services on multiple networks, engineering support to integrate new data sources and digitize workflows, maintenance of a DevSecOps pipeline to allow third party vendors to develop and field applications on MSS, funding for those third party vendors to close CJADC2 gaps, and cloud compute costs needed to run applications and workflows.			
FY 2026 Plans: CDAO will continue to procure Joint C2 licenses and engineering support for the Joint Force—including Combatant Commands, National Guard Bureau, and the Joint Staff. This includes the ability to share new applications and data integrations across user organizations, and the ability to leverage AI in Joint C2. Funding also supports government-owned DevSecOps pipeline to integrate 3rd party applications into Joint C2 under open architecture to expand the vendor base able to develop applications on data Joint C2 data stack. Finally, funding supports cloud computing costs associated with these capabilities.			
FY 2027 Plans: Funding will expand enterprise access to Joint C2 capabilities to Services across echelon and provide deliberate, sustained development and enterprise-wide integration. Funding will streamline acquisition, establish rigorous testing and evaluation standards, and create clear lines of accountability for performance and management. Finally, funding will advance globally interconnected environment for operations, planning, and intelligence workflows supported by shared access to real time data on the battlespace..			
FY 2026 to FY 2027 Increase/Decrease Statement:			

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2027 Office of the Secretary Of Defense		Date: April 2026	
Appropriation/Budget Activity 0400 / 6	R-1 Program Element (Number/Name) PE 0604122D8Z / JADC2 Development and Experimentation Activities	Project (Number/Name) 668 / Mission Command Applications	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
FY 2027 increase reflects transition of Joint C2 from rapidly deployed product to program of record for the Department's enterprise joint warfighting capability. Funding will enable maturation of capability from fragmented deployments to Joint enterprise tooling fully supported across all domains. The FY 2027 increase of \$1,589 million expands access to Maven Smart System (MSS) across the Joint Force and Services in support of the Department's Joint Force AI-Enabled Headquarters initiative. MSS is a cloud-based mission command application that aggregates thousands of discrete data streams into AI-enabled workflows, securing decision advantage across all domains. This funding will provide common access to the platform, alongside foundational software development and programmatic operations, to consolidate the Department's software-centric C2 onto a single pane of glass. The FY 2027 increase also reflects \$60 million for VJOC. The Virtual Joint Operations Center (VJOC) initiative will establish resilient, globally accessible command and control through a virtual command and control capability. Combining on-prem hardware and commercial software, VJOC provides low-bandwidth access to mission command applications, significantly increasing operational tempo and survivability. CDAO will leverage VJOC to provide a browser-based virtual command center for real-time situational awareness for low-connectivity users at the tactical edge. This augments cloud-based mission command applications, including Maven Smart System, with low-connectivity, tactical-edge functionality.			
Accomplishments/Planned Programs Subtotals		103.241	240.485
C. Other Program Funding Summary (\$ in Millions) N/A			
Remarks In FY 2026 the new project code 668 was created to identify the Mission Command Application efforts in PE 0604122D8Z.			
D. Acquisition Strategy N/A			

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2027 Office of the Secretary Of Defense										Date: April 2026		
Appropriation/Budget Activity 0400 / 6					R-1 Program Element (Number/Name) PE 0604122D8Z / JADC2 Development and Experimentation Activities				Project (Number/Name) 669 / Global Experimentation (GIDE)			
COST (\$ in Millions)	Prior Years	FY 2025	FY 2026	FY 2027 Base	FY 2027 OOC	FY 2027 Total	FY 2028	FY 2029	FY 2030	FY 2031	Cost To Complete	Total Cost
669: Global Experimentation (GIDE)	0.000	-	26.788	26.135	-	26.135	26.652	27.164	27.792	28.350	-	-
Quantity of RDT&E Articles	-	-	-	-	-	-	-	-	-	-		

A. Mission Description and Budget Item Justification

The Global Information Dominance Experimentation (GIDE) line comprises iterative, metrics-based experimentation with Combined Joint All-Domain Command and Control (CJADC2) capabilities and concepts. Experimentation events leverage CCMD and Service exercises to test Joint C2 capabilities and third party vendors in the context of real mission use cases, on live networks, and with real data and users. Capabilities that prove successful in experimentation rapidly field to warfighters on the spot because they are software-based.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Global Experimentation (GIDE)	-	26.788	26.135
Description: This program supports Joint C2 experimentation efforts, to test new data, analytics, and AI capabilities in support of Joint C2 and in coordination with CCMD and Service experiments. GIDE also provides engineering support for data and application integrations, planning and coordination of events in alignment with Service and CCMD experimentation, and metrics-based assessment of experimentation events.			
FY 2026 Plans: In FY 2026, CDAO will continue experimentation with the Joint Staff, Combatant Commands, and the Services. This project will cover continued iteration on capability and concept development for CCMD warfighting objectives, and integration of CCMD and Service C2. The project will also continue to scale user adoption of data-centric C2 workflows across JS, CCMDs, and the Services.			
FY 2027 Plans: In FY 2027 experimentation within the GIDE project will continue to align with Service and CCMD exercises and incorporate novel third party and Joint C2 capability in experimental settings.			
FY 2026 to FY 2027 Increase/Decrease Statement: FY 2027 decrease reflects reorientation away from software delivery and independent experimentation efforts to alignment with Service and CCMD experimentation events.

A. Mission Description and Budget Item Justification

This effort integrates data, analytics, and AI in support of the seven Joint warfighting functions leveraging a common government owned/contractor operated data stack that adheres to open architecture principles. Requested funding purchases licenses for Joint access to Joint C2 capabilities on multiple networks, engineering support to integrate new data sources and digitize workflows, maintenance of a DevSecOps pipeline to allow third party vendors to develop and field applications on operational networks, funding for those third party vendors to close CJADC2 gaps, and cloud compute costs needed to run applications and workflows. This line also supports the efforts to mature management of DoW operational data and deploy a tactical edge data mesh to enable data integration among new and legacy systems' and Joint C2 experimentation.

B. Accomplishments/Planned Programs (\$ in Millions)	FY 2025	FY 2026	FY 2027

A. Mission Description and Budget Item Justification

This program supports the Secretary of War priorities of rebuilding the military and reestablishing deterrence by optimizing core readiness functions to achieve peace through strength. The National Defense Strategy (NDS) for 2026 emphasizes innovation to enhance U.S. military capabilities and deter potential adversaries.

This program supports the Defense Readiness Reporting System (DRRS), the single, comprehensive readiness reporting system for the Department of War mandated under Section 117, Title 10 U.S. Code. The system measures, in an objective, accurate, and timely manner, the capability of the armed forces to carry out the National Security Strategy prescribed by the President, as well as, the defense planning guidance provided by the Secretary of War, and the National Military Strategy (NMS) prescribed by the Chairman of the Joint Chiefs of Staff. DRRS hosts information and applications used to support the Geographic and Functional Combatant Commanders, the Services, Combat Support Agencies, the Joint Staff and the Office of the Secretary of War.

DRRS is the evolution of readiness reporting to a more comprehensive system, better able to meet the Department's current and future readiness information challenges. Included in these challenges is the expansion in scope of the entities who can and do report readiness. Shifting from solely resource centric readiness reporting to a resource informed mission and capabilities-based reporting system, oriented towards the NMS, makes substantially more complex demands on readiness reporting, but portrays a far more relevant and holistic picture of readiness. The challenges associated with sourcing and evaluating the readiness of our forces engaged in on-going real operations, mean that force managers need applications that will query the entire Department for suitable, available organizations to meet current needs. DRRS continues to incorporate more data and develop more capable functionality to meet the evolving needs of both the operational employers of the Force, but also those responsible for Force Generation.

The National Defense Authorization Act for FY 2019 revised Title 10 of U.S. Code and provided the Department direction requiring growth in the DRRS program and identified the program's need to maintain the technical currency necessary to quickly meet future challenges associated with providing senior leaders with relevant and timely information. Such initiatives include implementing the complex data structures and visualization tools needed to operationalize the Department's Enterprise Force Structure, reporting at lower organizational levels consistent with how Forces are employed.

Title: Defense Readiness Reporting System		11.205	8.492	8.921
Description: The Defense Readiness Reporting System (DRRS) establishes a capabilities-based, adaptive, near real-time readiness information system for DoW. DRRS measures the readiness of military forces and supporting infrastructure to accomplish their designed and assigned missions. DRRS integrates a host of key technologies to achieve an information system that supports Service tailored assessment tools, analytic capabilities, and force presentation tools. DRRS contains readiness metrics and data to support the Military Services, Combatant Commands, Combat Support Agencies, Joint Staff, and OSW's readiness management functions, including reports to Congress; and continues to incorporate the new metrics, data, and capabilities necessary to meet the Department's evolving readiness information needs. FY 2026 Plans: • Continue integration into DRRS of new data sources and the creation of new functionality, made available through the integration of AI technology, necessary to support readiness reporting improvements, the capture strategic readiness metrics, and the functionality required by evolving DoW readiness reporting needs. • Complete cloud migration of DRRS into Azure Cloud through the Joint Warfighter Cloud Computing (JWCC) contract to achieve system efficiencies and cost savings. • Rollout of the modernized application programming interface (API) with mission partners. • Refinement and consolidation of Service-specific input tools for improved performance within the DRRS application. • Rolling out Total Force Viewer in DRRS that leverages Enterprise Force Structure, (formerly GFM DI), integrated with readiness data. • Refinement and consolidation of Service-specific input tools for improved performance within the DRRS-S application. • Initial development of the lines of effort for the readiness reporting system (R2S) effort to define the near and long term future of the readiness reporting enterprise. This effort encompasses decision support, technology, artificial intelligence, and policy updates. • Integrate the major policy updates from the new Department of War Manual for readiness reporting, including integrated resource and capability reporting. • Pilot the need for readiness data at the top secret level. FY 2027 Plans: • Continue integration into DRRS of new data sources and the creation of new functionality, made available through the integration of AI technology, necessary to support readiness reporting improvements, the capture strategic readiness metrics, and the functionality required by evolving DoW readiness reporting needs.

A. Mission Description and Budget Item Justification

This program supports the Department's initiatives to Restoring Warrior Ethos, Rebuilding Military Capabilities and Re-establishing Deterrence.

The Joint Systems Architecture Development (JSAD) program element supports the Office of the Under Secretary of War, Acquisition and Sustainment (OUSW (A&S)), Office of the Deputy Under Secretary of War for Platform and Weapon Portfolio Management (DASW PWPM) mission to use Capability Portfolio Management (CPM) to analyze, manage, and inform acquisition and resourcing decisions in platform and weapon portfolios, to include air, surface, electronic, and cyber warfare systems. The program is broken up into two focus areas: Portfolio Systems Acquisition (PSA), supporting air, land, sea, and undersea warfare portfolios, programs, and associated munitions, including munitions acceleration efforts in support of the Deputy Secretary-chaired Munitions Acceleration Council, and Electromagnetic Warfare (EW), supporting the statutory responsibilities of the EXCOM.

All efforts support DASW PWPM's goal to deliver the best equipment and systems to the warfighter, and to do so by performing top down, national security strategy-driven, capabilities-based acquisition planning by fully leveraging Department and acquisition transformation initiatives.

The JSAD program enables collaborative efforts to achieve these goals with a focus on Major Defense Acquisition Programs (MDAPs) and integrated acquisition portfolio management. These efforts entail integrated roadmaps to support acquisition investment decisions, and assessments of MDAPs and other linchpin acquisition efforts in a capability area context. Such activities in the JSAD project are focused on three areas:(1) integrated acquisition portfolio analysis; (2) acquisition roadmaps; and (3) acquisition decision support. These efforts guide the development and fielding of integrated acquisition systems in order to achieve Joint mission capabilities across the operational domain to defend against global threats.

The Department uses enterprise-wide approaches which include:(1) horizontal integration within the Department and unity of effort through greater interagency collaboration; (2) engaging in a coordinated and portfolio-based approach to planning, programming, budgeting and execution; and (3) implementation of significant Department reforms at the governance, management and execution levels.

A. Mission Description and Budget Item Justification

This program supports the Department's initiatives to Restoring Warrior Ethos, Rebuilding Military Capabilities and Re-establishing Deterrence, and the National Security Strategy, especially in the areas of capability advantage and military superiority.

These efforts entail integrated roadmaps to support acquisition investment decisions, and assessments of MDAPs and other linchpin acquisition efforts in a capability area context. PSA funds provide support in the areas of (1) integrated acquisition portfolio analysis; (2) acquisition roadmaps; and (3) acquisition decision support. Focus areas include capability portfolio management of air, land, sea, and undersea warfare portfolios, programs, and associated munitions; munitions acceleration efforts in support of the Deputy Secretary-chaired Munitions Acceleration Council; and Acquisition Transformation activities, executing the Department's Acquisition Transformation Strategy. These efforts guide the development and fielding of integrated acquisition systems in order to achieve Joint mission capabilities across the operational domain to defend against global threats.

A. Mission Description and Budget Item Justification												
This program supports the Department's initiatives to Restoring Warrior Ethos, Rebuilding Military Capabilities and Re-establishing Deterrence.												
This includes efforts which supports Electromagnetic Spectrum Operations (EMSO) capability recommendations for Departments priorities to include Golden Dome Homeland defense and Strategic Deterrence within the Indo Pacific region. The EW project funds capability advancements that focus on transitioning programs to the warfighter. The Electromagnetic Warfare (EW) line also aligns Department efforts with key allies under the AUKUS Pillar II EW working group, to institutionalize cooperative acquisition and ultimately increase warfighter lethality.												
B. Accomplishments/Planned Programs (\$ in Millions)									FY 2025	FY 2026	FY 2027	
Title: Electromagnetic Warfare									2.271	2.428	4.843	
Description: FY 2025 Accomplishments:												
- Completed EW EXCOM analysis of EW Counter-C5ISR capabilities and Electromagnetic Spectrum Operations Operational Assessment.												
- Delivered survivability analysis of High Value Airborne Assets within current and future operational scenarios.												
- Continued cross-Service collaboration on and demonstrations of EW materiel solutions in Army and Navy.												
- Completed demonstration of situational awareness and tracking capability in support of blue kill webs.												
- Continued to develop international partnerships in EW capabilities with key allies, including Australia and the UK.												
- Continued to analyze Department EW capability gaps to inform future DoW EW investment in programs and systems.												
FY 2026 Plans:												
- Lead Integrated Acquisition Portfolio Reviews and support Joint Staff Capability Portfolio Management Reviews in support of Capability Portfolio Management for EW and C-C5ISRT programs.

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
- Provide EMSO capability recommendations for Departments priorities to include homeland defense and deterrence efforts aligned with NDS priorities. - Respond to congressional and DoW requests for information and support Government Accountability Office reports - Continue to identify opportunities for Cross-Service EW collaboration, including EW research and development, acquisition programs, multi-purpose hardware and software, and other initiatives to increase EW investment efficiencies and promote interoperability. FY 2027 Plans: - Lead Integrated Acquisition Portfolio Reviews and support Joint Staff Capability Portfolio Management Reviews in support of Capability Portfolio Management for EW and C-C5ISR programs. - Provide EMSO capability recommendations for Departments priorities to include homeland defense and deterrence efforts aligned with NDS priorities and Golden Dome for America Executive Order. - Continue Counter – Unmanned Aerial System (C-UAS) signal of interest library to enable cost avoidance in system acquisition and interoperability across Service acquisition programs and integrate with the Intelligence community. - Continue the Munitions Requirements Process for Non-Kinetic Effectors for the Services across Combatant Commands. - Lead the C-C5ISR Mission Engineering effort for A&S, in support of integration and solutions identification aligned to the Joint Staff operational problem. - Lead the Electronic Warfare Working Groups with AUKUS Pillar II and ADACC. Dominance in the electromagnetic spectrum requires interoperable, non-kinetic effects against adversary C5ISR and weapons systems. The EWWG must accelerate delivery by focusing on operational demonstration. - Respond to congressional and DoW requests for information and support Government Accountability Office reports - Continue to support Acquisition Transformation efforts in the acquisition areas of electromagnetic attack, electromagnetic support, electromagnetic protection, and modernizing systems engineering.

Program Change Summary should reflect the following corrections:

- 1) Previous President's Budget for FY 2025 is \$782.643 million.
- 2) Reprogramming for FY 2025 is -\$1.568 million.
- 3) Previous President's Budget for FY 2026 is \$542.773 million.
- 4) Congressional Adds for FY 2026 is \$265.300 million.
- 6) Reprogramming for FY 2026 is -\$0.570 million.

A. Mission Description and Budget Item Justification

The Test Resource Management Center (TRMC) Central Test and Evaluation Investment Program (CTEIP) supports the Department's priorities to rebuild the military and re-establish deterrence. Since its inception in FY 1990, CTEIP has provided development of the most needed, high-priority Test and Evaluation (T&E) capabilities for joint/multi-Service requirements. CTEIP investments address strategic requirements related to Hypersonics, Directed Energy, Cyber, Electronic Warfare, Nuclear Effects, Space, Autonomy, Multi-Domain Operations, and Affordable Attributable Mass. Other CTEIP investments align with high priority test needs and common range infrastructure. CTEIP uses a corporate investment approach to combine T&E needs from Service, Department, and other Government agencies in order to maximize opportunities for joint efforts and avoid unwarranted duplication of test capabilities.

CTEIP evaluates and selects for execution proposals that align to national strategic guidance and USW(R&E) priorities, provide the greatest return on investment, make efficient use of limited test resources, leverage industry capabilities and Service investments, and promote joint solutions to fill test capability gaps. CTEIP provides enterprise solutions that benefit the whole Department. These investments are needed to ensure the Department's readiness to test and field rapidly emerging technologies and weapon systems that defend our homeland, deter aggression, and achieve peace through strength.

A. Mission Description and Budget Item Justification

The Test Resource Management Center (TRMC) Central Test and Evaluation Investment Program (CTEIP) develops needed, high-priority Test and Evaluation (T&E) capabilities for joint/multi-Service requirements. CTEIP efforts include Hypersonics, Directed Energy, Cyber, Electronic Warfare, Nuclear Effects, Space, Autonomy, Multi-Domain Operations, and Affordable Attributable Mass. Other CTEIP investments align with high priority test needs and common range Infrastructure.

CTEIP uses a corporate investment approach to combine T&E needs from Service, Department, and other Government agencies in order to maximize opportunities for joint efforts and avoid unwarranted duplication of test capabilities. CTEIP evaluates proposals and selects those that align to national strategic guidance, provide the greatest return on investment, make efficient use of limited test resources, leverage Service investment, and promote joint solutions to fill test capability gaps. CTEIP provides enterprise solutions that benefit the Department as a whole.

These investments are needed so that test capabilities keep pace with U.S. and adversary technical advances as well as with rapidly evolving threats. CTEIP responsibilities include special studies, analyses, project improvements, quick reaction efforts, and strategic planning related to test capabilities and infrastructure. CTEIP investments increase efficiency and reduce the cost of testing on the Department's major ranges and test facilities. CTEIP provides efficiencies within the Department by sharing test resources that enable data collection and use between the test and training communities.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Central Test and Evaluation Investment Program	695.746	542.203	1,153.754
Description: In FY 2025, CTEIP developed enterprise solutions for high-priority T&E needs in critical technology areas. Highlights include: Hypersonics - Continue build out of "fly the mission on the ground" hypersonic wind tunnels - Build capacity for hypersonic arc heater testing - Develop rocket motors to support hypersonic testing on the high-speed test track- Restore a full-scale subsonic wind tunnel to allow testing of Future Vertical Lift platforms and other rotary wing aircraft - Develop large scale (high fidelity) supersonic and hypersonic aerodynamic test capability to support next-generation hypersonic weapon separation

Program Change Summary should reflect the following corrections:

- 1) Previous President's Budget for FY 2025 is \$209.008 million.
- 2) Previous President's Budget for FY 2026 is \$210.878 million.
- 4) Congressional Reduction for FY 2026 is -\$21.000 million.
- 6) Reprogramming for FY 2026 is -\$0.1880 million.

A. Mission Description and Budget Item Justification

The Test Resource Management Center (TRMC) Joint Mission Environment Test Capability (JMETC) program supports the Department's priorities to rebuild the military and re-establish deterrence. The JMETC program provides a Department-wide test capability to support system-to-system interoperability testing, mission-level environment testing, and cyber event operations, including cyber testing, cyber training, cyber experimentation, and cyber mission rehearsal. The JMETC program implements the infrastructure capabilities defined in the Department's "Testing in a Joint Environment Roadmap" to provide acquisition program managers a robust nation-wide capability to "test like we fight." The JMETC program provides a persistent, distributed test and evaluation (T&E) capability that supports system development to measure and improve interoperability performance and cyber resiliency, and provides a software acquisition pathway that otherwise would not be readily available to Service/Component acquisition programs. The JMETC program is funded within the Research, Development, Test and Evaluation (RDT&E) Management Support Budget Activity because it provides test capability in support of RDT&E programs. By linking distributed facilities, as well as providing the necessary tools, services and subject matter expertise, the JMETC program allows acquisition programs to efficiently evaluate their warfighting capability in a realistic joint mission environment. The JMETC program has been aligned to national strategic guidance to advance the Department's readiness to experiment and test the development of resilient, survivable, federated networks and information systems from the tactical level up to strategic planning, as well as test and assess cyber defenses that deter aggression and achieve peace through strength.

The FY 2026 spend plan amount for the Joint Mission Environment Test Capability includes \$189,690 thousand discretionary funding and \$250,000 thousand mandatory funding, for a total of \$439,690 thousand.

	FY 2025	FY 2026	FY 2027
Title: JMETC Distributed Test	127.736	125.922	162.855
Description: In FY 2025, JMETC Distributed Test continued to expand the Department's enterprise-wide test capability to support system-to-system interoperability testing and mission-level environment testing. Highlights include: - Delivered advanced, scalable analytic capabilities, such as the CHEETAS framework, which accelerated data analysis from hours to minutes for critical INDOPACOM missions and major acquisition programs - Expanded distributed test and experimentation usage by adding additional nodes supporting Combatant Command requirements - Enhanced network connectivity to support joint force exercises and enable collaboration with mission partners - Established unclassified federated cloud prototype, creating a cost-effective solution that ensures cloud interoperability between services and provides the T&E community with wider access to enterprise capabilities - Improved All Domain Test Range (ADTR) to support joint experimentation at Combatant Commands			
FY 2026 Plans: In FY 2026, JMETC Distributed Test continues to support the Department's enterprise-wide distributed test, big data analysis, and experimentation capabilities. Highlights include:

A. Mission Description and Budget Item Justification

The National Cyber Range Complex (NCRC) is composed of cyber ranges and a secure distributed network infrastructure to service the cyber range user community. The NCRC currently consists of five functional cyber ranges, including the National Cyber Range in Florida as well as four Regional Service Delivery Points (RSDP) located in Hawaii, Alabama, Maryland, and Massachusetts. To enhance the Department's cyber range test and training capability and capacity, the NCRC is being expanded with additional cyber ranges co-located with key Service organizations at Naval Information Warfare Center Atlantic (NIWC LANT), SC; Naval Air Station Patuxent River (NAS Pax River), MD; and 46th Test Wing Eglin Air Force Base (AFB), FL to support an increase of cyber testing of Blue systems as well as training of cyber warfighters. The JMETC Multiple Independent Level of Security (MILS) Network (JMN) currently links sites across the Department, industry, and academia, providing secure access between cyber ranges, laboratories, and facilities. Both the cyber ranges and the network infrastructure are accredited to support multiple levels of security classifications, specifically configured to meet particular cyber event requirements. The NCRC investments have been aligned to support the National Defense Strategy in improving cyber defense, cyber resilience, cyber lethality, and the continued integration of cyber capabilities into the full spectrum of military operations.

The NCRC conducts cyberspace test and training events for the full spectrum of Department customers including research, development, acquisition, testing, training and operational Cyber Mission Forces (CMF). The NCRC executes wide variety of event types including science and technology (S&T) demonstrations, developmental test and evaluation (DT&E), operational test and evaluation (OT&E), security controls assessments, capability assessments, cyberspace operations training, development and refinement of cyberspace tactics, techniques, and procedures (TTP), cyber forensics/malware analysis) and cyberspace operations mission rehearsal. The NCRC enables acquisition programs to conduct cybersecurity test and evaluation in an operationally representative cyberspace environment enabling identification, validation and mitigation of vulnerabilities. The NCRC also supports training, mission rehearsal and certification of the CMF in support of US Cyber Command by enabling operational forces to efficiently evaluate cyber warfighting capability in a realistic joint mission environment to include bi-lateral and multi-national exercises.

The NCRC provides secure facilities, technology, processes, and workforce to rapidly create hi-fidelity, mission-representative friendly, neutral, and adversarial cyberspace environments.

The NCRC also facilitates integration of distributed organizations with different missions and workforce relevant to cyber operations (e.g., cyber operators, penetrations testers, cyber assessors, cyber observers, cyber analysts, etc.). The NCRC supports cyber activities across of a full spectrum of Blue systems, including weapon platforms, C4I systems, business systems, network devices, and other systems vulnerable to a cyber-attack. The NCRC extensively utilizes automation to minimize human error, to reduce the time required to set-up for a cyber event, and to ensure repeatable results. In addition, the NCRC employs post-event sanitization techniques on all assets after exposure to malicious code to restore back to a known, clean state, which allows for reuse in future events.

The NCRC has a multidisciplinary workforce with software, systems, network, virtualization, automation, system administration, and cybersecurity subject matter expertise. In support of successful planning and execution of hosted events, the NCRC workforce helps users define and refine their event objectives, assists with identifying and prioritizing potential vulnerabilities, designs virtualized cyber environments, develops customized traffic generation and instrumentation solutions, integrates third party hardware and software, executes cyber events on behalf of the user, provides cooperative vulnerability and penetration assessments, performs detailed cyber analysis, and delivers detailed reports with actionable information to decision makers. In addition, the NCRC workforce supports both the Executive Agent for Cyber Test Ranges and the Executive Agent for Cyber Training Ranges, to identify and address relevant needs, define and promulgate standards, and seek efficiencies through focused investments.				
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026	FY 2027
Title: JMETC National Cyber Range Complex (NCRC)		64.522	63.768	71.845
Description: In FY 2025, the NCRC continued to advance warfighter capabilities and system resiliency by providing operationally representative cyberspace environments for testing, training, experimentation, and mission rehearsal. Highlights include: - Conducted 73 cyber events, including cybersecurity test and evaluation support to Major Defense Acquisition Programs (MDAP) and smaller acquisition programs, as well as cyber training events to multiple Combatant Commands and Service organizations - Continued to support testing systems and subsystems across multiple domains (land, air, sea, and space) relevant to manned and unmanned aircraft, surface ships, command and control systems, data management platforms, weapons platforms, satellites, radars, and missile defense systems - Conducted 13 Cyber Table Top (CTT) exercises to help acquisition programs identify and prioritize potential vulnerabilities for further assessment and mitigation in the acquisition lifecycle - Continued to support Service Cyber Mission Forces (CMF) with training, certification, mission rehearsal and TTP development focused events - Achieved initial operational capability at the cyber range co-located with Naval Air Station Patuxent River, MD - Achieved initial operational capability of JMN Distributed Network Operations Center (NOSC) in Orlando, FL serving as the continuity of operations plan (COOP) site to the NOSC at Redstone Arsenal, AL				
FY 2026 Plans: In FY 2026, the NCRC continues to expand capability and capacity to address the growing demand for cybersecurity test, training, experimentation, and mission rehearsal. Highlights include: - Continue to conduct and support cyber test and training events at the cyber range co-located with Naval Information Warfare Center Atlantic, SC for the R&D, acquisition, and training communities to include major Combatant Commands - Continue to conduct and support Cyber Table Top (CTT) exercises to help acquisition programs identify and prioritize potential vulnerabilities in the development life cycle - Achieve full operational capability at the cyber range co-located with Naval Air Station Patuxent River, MD - Achieve initial operational capability at the cyber range co-located with Eglin Air Force Base (AFB)

Note

New Start (Y/N): No

Program funding was realigned from the Office of the Director of Operational Test and Evaluation (DOT&E) to A&S in FY 2027.

A. Mission Description and Budget Item Justification

Live Fire Testing - Joint Aircraft Survivability Program (JASP) is the Department of War's (DoW) focal point for joint service enhancement of military aircraft non-nuclear survivability. The JASP is chartered by the Commander of the U.S. Navy Naval Air Systems Command, the U.S. Assistant Secretary of the Army (Acquisition Logistics and Technology), and the Commander of the U.S. Air Force Life Cycle Management Center to increase the affordability, readiness, and effectiveness of Tri-Service aircraft through joint coordination and development of survivability technologies, design tools and assessment methodologies. The JASP coordinates and conducts RDT&E to improve military aircraft survivability, develop and standardize aircraft survivability M&S, facilitate information exchange on aircraft survivability, and support aircraft survivability education for the DOW and U.S. aircraft community. Each chartering command provides a senior aircraft survivability expert for the JASP Principal Members Steering Group, which guides the program and approves projects for funding. The JASP assesses and reports on U.S. military aircraft combat damage incidents through the Joint Combat Assessment Team (JCAT).

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Joint Aircraft Survivability (JASP)	-	-	9.020
Description: In FY 2025 the JASP, under DOT&E, continued work on 23 multi-year RDT&E projects and initiated 13 new projects approved by the JASP Principal Members Steering Group and OSW/DOT&E. The JASP supported NDS objectives to “Defend the Homeland” and “Prevail in Conflict” by developing measures to defeat advanced guided threats coupled with quantifiable improvements in digital and hardware in the loop modeling and simulation capability and credibility. Improving aircraft force protection by advancing system hardening against guided and unguided kinetic and non-kinetic threats. Building a resilient joint force through the development of more efficient test and evaluation tools, including M&S, which enable more effective aircraft survivability capability development. In FY25 JASP continued development of cyber survivability M&S tools to support weapon system defense and resiliency assessments and aircraft cyber incident response methodology, processes and tools. The Joint Combat Assessment Team (JCAT) continued to support the Air Force, Army, Marine Corps and Navy by assessing aircraft combat damage incidents, training operators on threat effects and combat damage assessment, and reporting their findings to combatant commanders and the DoW science and technology and acquisition communities. JCAT worked with the Intelligence Community and INDOPACOM to develop and exercise aircraft combat damage reporting CONOPS for the future. The JASP continued supporting aircraft survivability education and information exchange through internet sites (restricted access and

classified), by publishing the Aircraft Survivability Journal, developing educational materials and conducting training for the DoW and their contractors. <i>FY 2027 Plans:</i> In FY 2027, the JASP will continue work on multi-year RDT&E projects and initiate new projects approved by the JASP Principal Members Steering Group and OSW/OUSW(A&S). The JASP will support the NDS objectives to “Defend the Homeland” and “Prevail in Conflict” by developing measures to improve threat situational awareness, defeat adversary advanced radio frequency, infrared and multimode guided threats, and provide quantifiable improvements in digital and hardware-in-the-loop M&S capability and credibility. Improve aircraft force protection by advancing system hardening against kinetic and non-kinetic threats. Support the NDS objective to ‘Build a Resilient Joint Force’ by funding the development of more efficient capabilities to advance, test and evaluate aircraft survivability against kinetic and non-kinetic threats. The JCAT will continue to support the Air Force, Army, Marine Corps, and Navy by assessing aircraft combat damage incidents, training operators on threat effects and combat damage assessment, and reporting their findings to combatant commanders and the DoW science and technology and acquisition communities. The JASP will continue supporting aircraft survivability education and information exchange through internet sites (restricted access and classified), by publishing the Aircraft Survivability Journal, developing educational materials and conducting training for the DoW and their contractors. The JASP will initiate, continue and complete other projects as approved by the JASP Principal Members Steering Group and OSW/ OUSW(A&S). <i>FY 2026 to FY 2027 Increase/Decrease Statement:</i> Increase from FY26 to FY27 is due to realignment from DOT&E to A&S.

A. Mission Description and Budget Item Justification

The Systems Engineering program element establishes dedicated funding to carry out the duties as described in 10 U.S.C 133a and the Department of Defense Directive 5137.02, “Under Secretary of Defense for Research and Engineering (USD(R&E)),” dated July 15, 2020. In alignment with the 2026 National Defense Strategy (NDS), particularly the line of effort to “Supercharge the U.S. Defense Industrial Base,” the program element supports key activities such as reforming the acquisition process, rapidly fielding emerging technologies, and building a resilient Joint Force. These efforts are foundational to the NDS overarching goal of “Restoring Peace Through Strength.”

This funding supports presidential priorities as documented in Executive Order 14265, “Modernizing Defense Acquisitions and Spurring Innovation in the Defense Industrial Base” and is a key enabler of the Department’s “Acquisition Transformation Strategy (ATS),” supporting the ATS goal to field technology and modernize systems at a rate that outpaces our adversaries. Specifically, this funding advances the ATS pillar to “Develop High Performance Systems through Rigorous Enterprise Technical and Execution Excellence.” It achieves this by driving the modernization and adoption of critical disciplines, including systems engineering, digital and model-based systems engineering, and software engineering. Furthermore, it accelerates the implementation of modular open systems approaches (MOSA) to promote interoperability and competition. In alignment with the ATS pillar to “Elevate and Empower the Acquisition Workforce,” this funding supports vital workforce development initiatives to build and sustain the talent required to deliver capability with speed and agility.

A. Mission Description and Budget Item Justification

The Systems Engineering project provides resources to develop and promote advanced engineering principles, techniques, and practices across the Department of War (DoW); connects and strengthens the technical community; develops the engineering and technical workforce; advances and manages standards; and provides technical expertise for independent engineering assessments to advance the development and adoption of emerging technologies with speed and agility. Engineering is the backbone of technology development and transition, playing a crucial role in turning innovative ideas into practical and real solutions. On behalf of the Under Secretary of War for Research and Engineering (USW(R&E)), this project executes the following activities:

- Supports DoW's initiatives to modernize the DoW's systems and software engineering practices to include the use of modular open systems approaches (MOSA) and advanced systems engineering techniques to build systems capable of seamlessly incorporating new technologies to respond to emerging threats.
- Furthers the adoption of digital engineering, modeling, and simulations to allow the DoW to rapidly field and implement innovative technologies for the Joint warfighter.
- Furthers the adoption of modern Agile/DevSecOps (Development, Security, and Operations) software practices and improves cross-organizational collaboration to modernize DoW software processes, capability, and expertise.
- Facilitates execution of the Secretary of War initiative to modernize software acquisition to acquire, deliver, and iterate on our weapon and business systems software. Supports collaboration and management activities through the DoW Software Modernization Senior Steering Group in coordination with the Office of the Under Secretary of War for Acquisition and Sustainment (OUSW(A&S)), DoW Chief Information Officer (CIO), and the Military Services.
- Improves delivery of advanced capability to warfighters by modernizing reliability and maintainability, manufacturing and quality, system safety, human systems integration, and value engineering practices.
- Identifies, develops, manages, and provides access to standardization processes and products for the defense community to promote interoperability, reduce cost, and sustain readiness.
- Leads production of policy, guidance, and workforce development initiatives for the DoW engineering and technical workforce.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Systems Engineering	21.011	19.767	18.858
Description: The Systems Engineering project supports and improves the DoW's efforts in systems engineering, digital engineering, modular open systems approach (MOSA), software modernization, and standardization management. In addition, the funds facilitate workforce development to ensure the DoW maintains its advantage in warfighter readiness in a rapidly evolving technological environment.			
FY 2026 Plans:			

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2027 Office of the Secretary Of Defense			Date: April 2026		
Appropriation/Budget Activity 0400 / 6		R-1 Program Element (Number/Name) PE 0605142D8Z / <i>Systems Engineering</i>		Project (Number/Name) 142 / <i>Systems Engineering</i>	
B. Accomplishments/Planned Programs (\$ in Millions)			FY 2025	FY 2026	FY 2027
• Continue to support model-based systems engineering (MBSE) to enable faster adoption and deployment of the critical technology areas by developing organizational, workforce, project, and model transition guidance to lead the Department in transitioning to a data and application programming interface (API)-first MBSE approach. • Continue to coordinate software engineering modernization in areas of enterprise cloud services, software factories, DevSecOps (Development, Security, and Operations), continuous delivery pipelines, and applications of artificial intelligence in the warfighting domain. • Support the DoW in its efforts to advance its digital engineering (DE) and modeling and simulation (M&S) efforts to align with industry leading practices. • Continue to identify gaps in engineering policy and guidance. Develop updates or new policies to address gaps. • Update the digital engineering guidance documents. • Revitalize the value engineering discipline by issuing updated guidance and recognizing achievements. • Update the Systems Engineering Guide for Systems of Systems. • Continue to develop the workforce of tomorrow by working with Military Departments, Warfighting Acquisition University, and other DoW Agencies to identify critical workforce competencies and deploy essential training and credentials in critical technical skill areas. • Continue to lead the DoW Digital Talent Management Forum. Support collaboration across the Office of the Secretary of War (OSW) and the Military Services to enhance workforce management by unifying and streamlining Department-wide digital talent (e.g., software engineering) efforts. • Serve as OUSW(R&E)'s lead representative on the DoW Talent Management Executive Council, providing input on workforce development and recruiting initiatives. • Continue to build a resilient Joint Force and defense ecosystem by engaging with technology demonstration efforts to develop next-generation data analytics and rapid prototypes; collaborating within OSW to address the digital transformation needs of independent technical risk assessments (ITRAs); and executing prototyping efforts in the area of APIs to modernize the DoW's approach to interoperability. • Continue to provide engineering expertise to OUSW(R&E)'s critical technical reviews and ITRAs. • Continue to advance foundational engineering practices (including reliability and maintainability, manufacturing and quality, system safety, human systems integration, and value engineering) to improve readiness and enhance lethality and effectiveness. • Continue to serve as the Defense Standardization Executive, coordinating standards activities with the DoW community and the Defense Standardization Program Office. FY 2027 Plans: • Continue to assist the practitioner in the development of their capabilities in the digital engineering ecosystem. • Continue to advance the implementation of the Secretary's Acquisition Transformation Strategy (ATS) by modernizing systems engineering practices and enabling the Department to better leverage rigorous technical assessments that inform the calculated risk decisions, trade-offs, and transformative outcomes the ATS demands.

A. Mission Description and Budget Item Justification

The Engineering Architectures project advances efforts in system-of-systems architecture for the Department of War. The project supports the development of an enterprise-wide strategy to integrate existing and future systems to improve the Department's technological advantage in joint, multidomain operations.

Systems Engineering and Architecture (SE&A) develops policy, guidance, and training to enable rigorous engineering and the accelerated delivery of affordable, innovative, and operationally relevant mission capabilities for U.S. all-domain dominance in an environment with scarce resources, near-peer threats, and continual, rapid, and complex technological change. On behalf of the Under Secretary of War for Research and Engineering (OUSW(R&E)), this project executes the following activities:

- Supports acquisition programs in the development and execution of system-of-systems engineering and architectures to enable accelerated delivery of innovative mission capabilities.
- Supports the development of enterprise system-of-systems engineering architecture guidance to facilitate improved interoperability in acquisition programs.
- Develops a workforce capable of fielding and sustaining enterprise system-of-systems engineering and architectures.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Engineering Architectures	2.899	3.339	3.134
Description: The Engineering Architectures project supports and improves OUSW(R&E)'s efforts in Nuclear Command, Control, and Communications (NC3) and Combined Joint All-Domain Command and Control (CJADC2) as they progress through the acquisition life cycle. In addition, the funds support the development of policy and guidance for system-of-systems (SoS) architectures.			
FY 2026 Plans: • Establish a DoW systems engineering and architecture community of practice to share best practices and areas of concern. • Continue providing NC3 systems engineering and architecture assistance to USW(A&S) and Commander USSTRATCOM. • Assist Commander USSTRATCOM in the development of updates to the NC3 Enterprise Engineering Management Plan. • Prototype with non-traditional contractors novel methods to address practitioner pain points related to development architectures. • Expand technical assistance to other Joint capabilities (e.g., Joint Cyber Warfighting Architecture (JCWA)). • Maintain and expand the SoS and architecture community of practice. • Build an engineering and architecture body of knowledge for enterprise architectures.

A. Mission Description and Budget Item Justification

The Office of the Under Secretary of War for Personnel & Readiness (OUSW(P&R)) Studies and Analysis Support program serves to leverage specialized expertise and critical capabilities designed to help meet varied research, study, and analytical support needs in the manpower, personnel, force readiness, training, education, force safety, family support, resiliency, and health services portfolios. This funding supports intellectually rigorous, relevant, and timely assessments of policies, programs, and procedures across the P&R enterprise. Funded research, studies, program evaluations, surveys, and analysis support P&R roles in executing the interim National Defense Strategy in a proactive and forward leaning posture, focusing on a strategic programmatic and policy framework for the future.

This program advances P&R's statutory title 10 and Principal Staff Assistant responsibilities with respect to promoting a ready and agile Total Force positioned to execute the Department's mission.

Funding is leveraged to address key strategic and long-term challenges facing the Department and includes targeted assessments to support program evaluation and efficacy. It also encompasses comprehensive research and complex exploration to support data-aligned, insights-driven, and outcome-based decision-making and critical analysis to develop needed evidentiary bases for policy development or modification.

A. Mission Description and Budget Item Justification

The Office of the Under Secretary of War for Personnel & Readiness (OUSW(P&R)) Studies and Analysis Support program serves to leverage specialized expertise and critical capabilities designed to help meet varied research, study, and analytical support needs in the manpower, personnel, force readiness, training, education, force safety, family support, resiliency, and health services portfolios. This funding line supports independent, intellectually rigorous, relevant, impartial, objective, and timely assessment of policies, programs, and procedures across the P&R enterprise. Funded research, studies, program evaluations, surveys, and analysis support P&R in executing the National Defense Strategy and Department of War (DoW) leadership priorities in a proactive and forward leaning posture, focusing on a strategic programmatic and policy framework for the future of the Department's force development, talent management, and readiness. Funding is leveraged to address critical and complex, inter-disciplinary strategic long-term challenges facing the Department, and includes targeted assessments to support program evaluation and efficacy. It also encompasses comprehensive research and complex exploration to support data-aligned, insights-driven, and outcome-based decision-making and critical analysis to develop needed evidentiary bases for policy development or modification in support of the Administration's priorities, congressional direction, and Secretary of War direction.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Studies and Analysis Support – OSW	6.174	5.264	5.255
Description: P&R's Studies and Analysis Support program is focused on efforts that align with the National War Strategy, particularly a joint warfighting ecosystem that is supported by a ready and capable Total Force. Resources fund Federally Funded Research and Development Centers (FFRDCs), University Affiliated Research Centers (UARCs), and other contracts for studies, analysis, research, and surveys that address the strategic challenges facing P&R and the Department of War, reflect enterprise-wide equities, focus on strategic programmatic and policy frameworks, and fund efforts that we cannot accomplish internally.			
FY 2026 Plans: • Advance strategic readiness assessments and modeling across time horizons and threat environments to strengthen anticipatory planning, resource prioritization, and decision advantage. • Undertake an independent, nonpartisan review of the Department's COVID-19 vaccine policy to assess decision-making, implementation, and impacts on readiness, personnel, and public trust, ensuring future medical readiness requirements align with established waiver practices and maintain confidence across the Force.

Note

New Start (Y/N): No

A. Mission Description and Budget Item Justification

The FY 2026 spend plan amount for Nuclear Matters Management Support includes \$12,384 thousands of discretionary and \$15,000 thousand of mandatory (reconciliation) for a total of \$27,384 thousands.

The mission of Nuclear Matters is to ensure the continued credibility, safety, security, resiliency, and effectiveness of the U.S. nuclear deterrent to deter adversaries, assure allies and partners, and achieve U.S. objectives if deterrence fails—today and in the future. Nuclear Matters serves as the Department of War (DoW) focal point for the modernization and sustainment of the U.S. nuclear weapons stockpile, as well as for a wide range of nuclear counter-terrorism and counter-proliferation issues.

The funds for this program are used to support research, development, test and evaluation efforts as well as studies and analyses for nuclear weapons modernization, sustainment, security, use control, nuclear weapons stockpile safety, and survivability requirements. Funds are also used to develop and implement plans for the future of the stockpile and broader nuclear deterrent; infrastructure analyses and assessments; DoW-National Nuclear Security Administration (NNSA) Nuclear Weapons Council (NWC) activities, as mandated by Title 10 U.S. Code, section 179; radiological and nuclear emergency response efforts; and management of international programs of nuclear cooperation, particularly with respect to enhancing international nuclear safety and security. Nuclear Matters is also responsible for policy development and implementation for personnel reliability; nuclear weapons, nuclear command and control, and special nuclear materials security; use control; nuclear weapons transportation; physical security equipment; countering nuclear threats; and nuclear and radiological incident response. Additionally, Nuclear Matters serves as a focal point for DoW activities and initiatives related to countering the threat from nuclear terrorism and nuclear proliferation.

Nuclear Matters is leading a series of efforts to provide data-driven support to integrated portfolio management for 21st century nuclear deterrent sustainment and modernization. The United States is modernizing all three legs of its nuclear triad and is also reconstituting its nuclear weapons production capability at roughly the same time, while simultaneously sustaining weapons and systems that have aged well beyond their original design lives. The NWC and similar bodies seek to manage the transition from legacy Cold War delivery systems and weapons to replacement systems and warheads and make decisions that will affect U.S. national security through the end of the 21st century. To field a modern, threat-informed, nuclear deterrent that will keep pace with evolving adversary capabilities, it is necessary to conduct a variety of assessment and study efforts to enable data-driven decisions concerning the future of the U.S. nuclear deterrent.

To meet the 2023 National Defense Authorization Act requirement to implement a portfolio management framework for nuclear forces, the Office of the Assistant Secretary of War for Nuclear Deterrence, Chemical, and Biological Defense Policy and Programs will lead a nuclear integration and analysis cell to identify and analyze risks and opportunities across the nuclear enterprise. This effort will leverage advanced data analytics, enterprise risk management, and modeling and simulation tools

A. Mission Description and Budget Item Justification

The mission of Nuclear Matters is to ensure the continued credibility, safety, security, resiliency, and effectiveness of the U.S. nuclear deterrent to deter adversaries, assure allies and partners, and achieve U.S. objectives if deterrence fails—today and in the future. Nuclear Matters serves as the Department of War (DoW) focal point for the modernization and sustainment of the U.S. nuclear weapons stockpile, as well as for a wide range of nuclear counter-terrorism and counter-proliferation issues.

The funds for this program are used to support research, development, test and evaluation efforts as well as studies and analyses for nuclear weapons modernization, sustainment, security, use control, nuclear weapons stockpile safety, and survivability requirements. Funds are also used to develop and implement plans for the future of the stockpile and broader nuclear deterrent; infrastructure analyses and assessments; DoW-National Nuclear Security Administration (NNSA) Nuclear Weapons Council (NWC) activities, as mandated by Title 10 U.S. Code, section 179; radiological and nuclear emergency response efforts; and management of international programs of nuclear cooperation, particularly with respect to enhancing international nuclear safety and security. Nuclear Matters is also responsible for policy development and implementation for personnel reliability; nuclear weapons, nuclear command and control, and special nuclear materials security; use control; nuclear weapons transportation; physical security equipment; countering nuclear threats; and nuclear and radiological incident response. Additionally, Nuclear Matters serves as a focal point for DoW activities and initiatives related to countering the threat from nuclear terrorism and nuclear proliferation.

Nuclear Matters is leading a series of efforts to provide data-driven support to integrated portfolio management for 21st century nuclear deterrent sustainment and modernization. The United States is modernizing all three legs of its nuclear triad and is also reconstituting its nuclear weapons production capability at roughly the same time, while simultaneously sustaining weapons and systems that have aged well beyond their original design lives. The NWC and similar bodies seek to manage the transition from legacy Cold War delivery systems and weapons to replacement systems and warheads and make decisions that will affect U.S. national security through the end of the 21st century. To field a modern, threat-informed, nuclear deterrent that will keep pace with evolving adversary capabilities, it is necessary to conduct a variety of assessment and study efforts to enable data-driven decisions concerning the future of the U.S. nuclear deterrent.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Nuclear Integration and Risk Management	4.721	3.582	12.920
Description: Nuclear Integration and Risk Management will establish a nuclear forces capability portfolio management function within the Assistant Secretary of War for Nuclear Deterrence, Chemical, and Biological Defense Policy and Programs to execute the statutory requirement identified in Title 10, USC 138(4) to serve as the principal Department of War civilian responsible for oversight of portfolio management for nuclear forces established by section 499c of Title 10.

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
FY 2026 Plans: This effort will result in achieving key Office of the Secretary of War-level metrics, including: - Improve understanding of the health and wellness of the Nuclear Enterprise and its enabling contributors; - Identify and exploit schedule and fiscal opportunities in nuclear modernization efforts; - Improve nuclear enterprise supply chain management; - Improve understanding of strategic advantage relative to the increasing threats posed by Russia and China; and - Identify and mitigate gaps and seams across the five major components of the nuclear enterprise. FY 2027 Plans: This effort will result in achieving key Office of the Secretary of War-level metrics, including: - Development of critical enterprise models to identify chokepoints across enterprise requiring mitigation to enable pursuance of opportunities; - Improve understanding of health and wellness of the Nuclear Enterprise and its enabling contributors; - Identify and exploit schedule and fiscal opportunities in nuclear modernization efforts; - Improve understanding of strategic advantage relative to the increasing threats posed by Russia and China; and - Identify and mitigate gaps and seams across the five major components of the nuclear enterprise. FY 2026 to FY 2027 Increase/Decrease Statement: FY 2026 to FY 2027 increase reflects the need to increase modeling capability and capacity at scale due to increasing programmatic and geopolitical risk to address future enhancements to the DoW nuclear modernization and sustainment efforts.			
Title: Nuclear Weapons Council (NWC) Description: The NWC is a joint DoW and Department of Energy (DOE)/National Nuclear Security Administration (NNSA) organization established by Congress to facilitate cooperation and coordination between the two Departments as they fulfill their dual agency responsibilities for U.S. nuclear weapons stockpile management. FY 2026 Plans: - Drive the activities on the statutorily-required Joint DoW-DOE NWC and its support committees to include the Nuclear Weapons Council Standing and Safety Committee, the Compartmented Advisory Committee, the Action Officer group, as well as newly formed working groups related to advanced capabilities, budget certification, and aeroshells. FY 2027 Plans:		0.842	0.433
		0.425

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
- Conduct oversight of Nuclear Weapon Incident Exercises for the DoW, in coordination and cooperation with other U.S. Government Agencies (to include state/local/tribal) and NATO Partners. FY 2026 to FY 2027 Increase/Decrease Statement: FY 2026 to FY 2027 decrease reflects minor deviation in budget priorities.			
Title: Nuclear Incident Response and North Atlantic Treaty Organization (NATO) and International Nuclear Programs Description: In accordance with Presidential Policy Directive 35, US Nuclear Weapons Command and Control, Safety and Security and the DoW implementer, DoWD S-5210.81, the DoW will establish policy on nuclear weapons procedures for responding to U.S. nuclear weapons accidents and incidents and serve as the technical advisor to the Secretary of War in the event of a nuclear accident or incident. Coordinates with other U.S. Government Agencies and allies to ensure their standards complement DoW efforts for responding to accidents and incidents. Regularly consult with NATO allies through the High-Level Group, which is the senior advisory body to the NATO Nuclear Planning Group, consisting of subject matter experts and supporting the Assistant Secretary of War for Nuclear Deterrence, Chemical, and Biological Defense, Policy and Programs in their role as Vice-Chair of the HLG. The HLG is comprised of national policy makers and experts from Allied capitals. The United States participates in several international programs of cooperation regarding nuclear weapons with foreign governments and regional defense organizations that involve unclassified and classified information exchanges. In general, these agreements are designed to promote safety and security, advance stockpile stewardship, and collaborate in counter-proliferation efforts. FY 2026 Plans: - Serve as Chair of the Nuclear Weapons Accident and Incident Subcommittee tasked in Federal response plans and national directives with the responsibility to coordinate and execute U.S. nuclear weapons incident and accident response policy. - Coordinate overseas nuclear weapon safety, security, and survivability issues, including supporting storage and nuclear command, control, and communications infrastructure, with the Department of State, Combatant Commands, Services, and other DoW organizations. FY 2027 Plans: - Serve as Chair of the Nuclear Weapons Accident and Incident Subcommittee tasked in Federal response plans and national directives with the responsibility to coordinate and execute U.S. nuclear weapons incident and accident response policy.		0.373	0.155

- Coordinate overseas nuclear weapon safety, security, and survivability issues, including supporting storage and nuclear command, control, and communications infrastructure, with the Department of State, Combatant Commands, Services, and other DoW organizations. FY 2026 to FY 2027 Increase/Decrease Statement: FY 2026 to FY 2027 decrease reflects minor deviation in budget priorities.				
Title: Stockpile Planning and Decision Making Description: To meets its security needs and those of its allies, the U.S. will need a safe, secure, and reliable nuclear deterrent for the foreseeable future. There's increased risk, absent nuclear testing, in assuring long-term safety and reliability of today's aging stockpile—the legacy warheads left over from the Cold War. Today's nuclear weapons enterprise is not sufficiently responsive to technical problems in the stockpile, or to potential emerging threats. The task is to ensure the U.S. nuclear weapons stockpile and supporting infrastructure, meets long-term national security needs. FY 2026 Plans: - Conduct life cycle activities in support of the nuclear weapons stockpile under DoWD 3150.01, Joint DoW-DOE/NNSA Nuclear Weapon Life-Cycle Activities and DoWM 5030.55, DoW Procedures for Joint DoW-DOE Nuclear Weapons Life Cycle Activities. - Manage DoW RDT&E activities for nuclear warheads to include B61, W76, W78, W80, B83, W87, W88 Weapons. - Support studies for warhead replacement. FY 2027 Plans: - Conduct life cycle activities in support of the nuclear weapons stockpile under DoWD 3150.01, Joint DoW-DOE/NNSA Nuclear Weapon Life-Cycle Activities and DoWM 5030.55, DoW Procedures for Joint DoW-DOE Nuclear Weapons Life Cycle Activities. - Manage DoW RDT&E activities for nuclear warheads to include B61, W76, W78, W80, B83, W87, W88 Weapons. - Support studies for warhead replacement. FY 2026 to FY 2027 Increase/Decrease Statement: FY 2026 to FY 2027 decrease reflects minor deviation in budget priorities.		1.259	0.955	0.945
Title: Nuclear Matters Technical Support Description: Support to Nuclear Matters includes the following: - Managing the operational, technical, and administrative support for the NWC and its subordinate bodies for a safe, secure, effective, and credible nuclear deterrent. - Developing and coordinating all reports to the President and Congress as mandated by public law including the Report on Stockpile Assessments, Nuclear Weapons Stockpile Memorandum, NWC Certification of the NNSA Budget, Nuclear Weapons		5.575	3.956	4.097

A. Mission Description and Budget Item Justification

This program supports the Department's initiatives to defend the homeland and deter China.

The Networks and Information Integration program supports executing congressionally mandated DoW positioning, navigation, and timing (PNT) governance through the PNT Oversight Council, Military Global Positioning System (GPS) user equipment (MGUE) modernization, developing alternative PNT capabilities, managing PNT policy, and participating in interagency PNT support to U.S. national critical infrastructure through the National Space-based PNT Executive Committee. In support of the interim National Defense Strategy, resilient PNT and GPS services provide a battlespace advantage through precision targeting, intelligence, surveillance, and reconnaissance (ISR), efficient logistics, and force tracking. The joint force is modernizing PNT capabilities to use GPS M-code and incorporate alternate PNT information via a modular open systems approach. Assured PNT services are a critical requirement to successfully prosecute joint military operations and protect the homeland.

The integrated planning and management project oversees national-level command and control capabilities development and interoperability through the National Leadership Command Capabilities Management Office (NMO). The NMO ensures timely situational awareness and decision tools for senior leaders, supporting the DoW CIO's oversight of critical command, control, and communications (C3) assets. Focus areas include national leadership C3 systems, national security/emergency preparedness, DoW support to civil authorities, continuity of government, and cyber mission indications and warnings.

A. Mission Description and Budget Item Justification This program supports the Department's initiatives to defend the homeland and deter China. The Networks and Information Integration program supports executing congressionally mandated DoW positioning, navigation, and timing (PNT) governance through the PNT Oversight Council, Military Global Positioning System (GPS) user equipment (MGUE) modernization, developing alternative PNT capabilities, managing PNT policy, and participating in interagency PNT support to U.S. national critical infrastructure through the National Space-based PNT Executive Committee. In support of the interim National Defense Strategy, resilient PNT and GPS services provide a battlespace advantage through precision targeting, intelligence, surveillance, and reconnaissance (ISR), efficient logistics, and force tracking. The joint force is modernizing PNT capabilities to use GPS M-code and incorporate alternate PNT information via a modular open systems approach. Assured PNT services are a critical requirement to successfully prosecute joint military operations and protect the homeland. The integrated planning and management project oversees national-level command and control capabilities development and interoperability through the National Leadership Command Capabilities Management Office (NMO). The NMO ensures timely situational awareness and decision tools for senior leaders, supporting the DoW CIO's oversight of critical command, control, and communications (C3) assets. Focus areas include national leadership C3 systems, national security/emergency preparedness, DoW support to civil authorities, continuity of government, and cyber mission indications and warnings.												
B. Accomplishments/Planned Programs (\$ in Millions)									FY 2025	FY 2026	FY 2027	
Title: Support to Networks and Information Integration (NII)									9.366	15.496	26.878	
Description: The Networks and Information Integration program supports executing congressionally mandated DoW positioning, navigation, and timing (PNT) governance through the PNT Oversight Council, Military Global Positioning System (GPS) user equipment (MGUE) modernization, developing alternative PNT capabilities, managing PNT policy, and participating in interagency PNT support to U.S. national critical infrastructure through the National Space-based PNT Executive Committee. In support of the interim National Defense Strategy, resilient PNT and GPS services provide a battlespace advantage through precision targeting, intelligence, surveillance, and reconnaissance (ISR), efficient logistics, and force tracking. Appropriation/Budget Activity 0400 / 6	R-1 Program Element (Number/Name) PE 0605170D8Z / <i>Support to Networks and Information Integration (NII)</i>	Project (Number/Name) 170 / <i>Support to NII</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
The integrated planning and management project oversees national-level command and control capabilities development and interoperability through the National Leadership Command Capabilities Management Office (NMO). The NMO ensures timely situational awareness and decision tools for senior leaders, supporting the DoW CIO's oversight of critical command, control, and communications (C3) assets. Focus areas include national leadership C3 systems, national security/emergency preparedness, DoW support to civil authorities, continuity of government, and cyber mission indications and warnings. FY 2026 Plans: Oversee Military Global Positioning System (GPS)/ positioning, navigation, and timing (PNT) management and planning to meet warfighter requirements. Develop Military Global Positioning System (GPS) user equipment (MGUE) "roadmap" for joint force fielding. Manage DoW positioning, navigation, and timing (PNT) Oversight Council activities, supporting structure, and support the National Space-Based PNT Executive Committee. Provide technical expertise and oversight for command, control, and communications (C3) systems and platforms, maritime information systems (MIS), and submarine fiber optic cables (SFOC). Provide requirements analysis, identify communications capability shortfalls and interoperability issues, assess equipment performance issues, and explore future communications improvements for C3 systems and platforms, MIS, and SFOC. Manage PNT security documentation (DoDM-O4650.11, DoDI 4650.08, operation plan/concept plan annexes). Coordinate with U.S. Space Command (USSPACECOM) and U.S. Strategic Command to implement GPS protection profiles and navigation warfare (NAVWAR) concepts. Manage National Airspace System activities affecting PNT, including Red Key Sundown policy, with the U.S. Air Force (USAF) and Federal Aviation Administration. Support the Deputy Secretary of War and DoW CIO with research, studies, and electromagnetic spectrum access activities. Apply NAVWAR concepts through the Joint Navigation Warfare Center and USSPACECOM to develop doctrine, training, and material solutions.

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2025	FY 2026	FY 2027
Oversee DoW PNT investment strategy, aligning material solutions with the Joint Capabilities Integration and Development System and the Defense Acquisition System. Implement PNT and NAVWAR policy instructions and PNT system compliance. Analyze and promote alternative positioning, navigation, and timing (PNT) delivery, modular open systems approach standards, and modeling/simulation tools. Task the intelligence community to assess Military Global Positioning System (GPS) threat vectors and PNT delivery means; assess operational gaps; and refresh PNT equipment maintenance. Develop directives and manuals to implement the PNT Strategy. Accelerate development and fielding of advanced GPS receivers. Maintain and update GPS receiver equipment inventory. Address prioritized platforms in fielding plans and guidance. Administer the PNT Oversight Council and PNT Executive Management Board, including subordinate working groups. Address North Atlantic Treaty Organization PNT interoperability through standardization agreements and allied navigation plans. Ensure cybersecurity of all DoW PNT enterprise elements. Additional funding for resilient PNT capabilities and electronic battlespace awareness. Oversee the transition to operations of the modernized GPS control segment. Partner with Under Secretary of War for Research and Engineering to accelerate alternate PNT development and prototyping for programs of record.

Note

New Start (Y/N): No

The Defense Operations Security program funding was realigned under General Support to OUSW(I&S) RDT&E portfolio, to better align resources and programs. Funding was transferred from the Defense Counterintelligence and Security Agency (DCSA) for the Applied Research Lab for Intelligence & Security (ARLIS) and Critical Technical Program Information Capability (CTPIC), which will provide a base of support for contracting efforts applicable to the Department of War (DoW) Intelligence Community (IC). Addition funding was provided to support the first-ever classified neural/physiological lab and an Information Competition Simulator.

A. Mission Description and Budget Item Justification

This RDT&E program supports the 2025 National Security Strategy (NSS) and the 2026 National Defense Strategy (NDS). Funding will develop the capabilities to defend the homeland; deter China in the Indo-Pacific; increase burden-sharing with U.S. Allies and Partners; and supercharge the Defense Industrial Base.

Funding advances global Defense Intelligence Enterprise (DIE) and Defense Security Enterprise (DSE) initiatives that address emerging trends in data & AI architecture, technology oversight, and technology acceleration. Initiatives will establish an enterprise-wide, agentic data federation; architect solutions with industry and the interagency; and synchronize technical requirements. They will align decision-making and technical oversight; deploy technical workflows; publish technical metrics; and enhance governance. Finally, they will accelerate strategic-level data science; oversee academic engagement and enhanced capabilities; and accelerate tactical-level prototyping and integration. Specifically, this effort will align with the Office of the Under Secretary of War for Research & Engineering (OUSW(R&E)) to build DISE capabilities that support Applied Artificial Intelligence (AAI) and Quantum and Battlefield Information Dominance (Q-BID) capabilities.

The 2026 NDS and Defense Planning Guidance (DPG) provide prioritization of budget items.

The FY 2026 spend plan amount for RDT&E includes \$8,468 thousand of discretionary and \$5,000 thousand of mandatory (reconciliation) for total of \$13,468 thousand.

A. Mission Description and Budget Item Justification

Intelligence Activities require expert engineering and technical assessments on a wide range of classified operational capabilities that directly support the 2026 NDS and DPG priorities. This program: 1) Provides personnel to fully integrate data/AI capabilities throughout the DISE; 2) Improve oversight; 3) Deploy/Sustain capabilities that accelerate technology (ARLIS, CTPIC); 4) Transition an AI capability that monitors ISR activities throughout the military services and Department of War Agencies on a near-real-time basis, and promotes active oversight to improve their operational efficiency; 5) Conducts studies of strategic ISR capabilities to ascertain strategic sufficiency and alignment to the 2026 NDS and DPG priorities; and 5) Conducts Research and Development of high-impact, intelligence-focused technologies related to OUSW(R&E) Critical Technology Areas (CTA) (examples: AAI; Q-BID).

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: General Support to OUSW(I&S)	5.555	3.468	8.276
Description: OUSW(I&S) developed an AI capability to monitor DoW's ISR activities on a near-real-time basis. OUSW(I&S) published studies on these capabilities to improve their operational efficiency and delivery. OUSW(I&S) engaged academia and commercial ventures to produce timely recommendations on technical collection, data transport and integration, analytical tradecraft, and policy. Efforts were used to inform decision-makers and warfighters. OUSW(I&S) promoted studies that realized the efficiencies of a wide range of classified ISR operational capabilities that directly support INDSG and DPG priorities. OUSW(I&S) supported the development of tools that investigated OPSEC violations and prepared recommendations to avoid violations in the future. OUSW(I&S) deployed personnel to enhance program protection during experimentation. FY 2026 Plans: - Fully integrate data/AI capabilities throughout the DISE by creating a unified data architecture. - Improve technology oversight capabilities, allowing for greater efficiencies. - Identify ways to accelerate the creation of prototypes and their subsequent deployment.

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2025	FY 2026	FY 2027
- Expand AI capabilities to support ISR to non-traditional sources, further enabling active oversight and promoting operational efficiency. - Initiate new research projects on technical collection, data transport and integration, analytical tradecraft, and policy, and produce outputs that inform senior decision-makers and warfighters. - Promote studies that realize efficiencies of a wide range of classified ISR operational capabilities that directly support 2026 NDS and DPG priorities - Conduct Research and Development of high-impact, intelligence-focused technologies related to CTAs. The NDAA for FY 2025 directs the SECWAR to establish Commercial Classified Infrastructure as a service (ClaaS) Pilot program to streamline access to shared classified commercial infrastructure, increasing industry competition. USW(I&S) requires funding to support prototyping of ClaaS and industrial security procedure revisions based on Space Development Agency Requirements. FY 2027 Plans: - Identify future opportunities to expand the DISE enterprise data architecture to include industry initiatives. - Improve technology oversight capabilities, allowing for greater efficiencies. - Expand opportunities for experimentation. - Expand AI capabilities to support ISR to non-traditional sources, further enabling active oversight and promoting operational efficiency. - Initiate new research projects on technical collection, data transport and integration, analytical tradecraft, and policy, and produce outputs that inform senior decision-makers and warfighters. - Promote studies that realize efficiencies of a wide range of classified ISR operational capabilities that directly support 2026 NDS and DPG priorities - Conduct Research and Development of high-impact, intelligence FY 2026 to FY 2027 Increase/Decrease Statement: The increase from FY 2026 to FY 2027 is due to a realignment of ARLIS and CTPIC from DCSA to OUSW(I&S) which will provide a base of support for contracting efforts applicable to the DoW IC. This funding provides basic services for ARLIS to provide world-class academic research in support of operational customers.

A. Mission Description and Budget Item Justification

DoW Small Business Innovation Research (SBIR) and Small Business Technology Transfer (STTR) programs are designed to provide small, high-tech businesses opportunities to propose innovative ideas and solutions in response to technological challenges posed by the DoW Components that will address existing and emerging national security threats and to develop new military capabilities. The SBIR and STTR programs are critical pathways for the Department to tap the innovation of America's small business community and research institutions to support development of cutting-edge technologies that will increase the readiness, modernization and lethality of the Joint Force.

A. Mission Description and Budget Item Justification The goals of the OSW Small Business Technology Transfer (STTR) program is to stimulate a partnership of ideas between small business concerns (SBCs) and research institutions through DoW funded research or research and development (R/R&D). By providing awards to SBCs or cooperative R/R&D efforts with research institutions, DoW supports innovation and economic growth to generate decisive and sustained U.S. military advantages. This program supports high priority projects within the DoW Components, their missions, and the Warfighter.												
B. Accomplishments/Planned Programs (\$ in Millions)									FY 2025	FY 2026	FY 2027	
Title: Small Bus Technology Transfer Description: The set-aside program that funds cooperative R/R&D projects for small businesses in partnership with research institutions. The STTR program contributed to the readiness and modernization of the Joint Force and improved operational capabilities through the innovative research topics initiated in the following areas: In FY 2025: - Maintained oversight and execution of STTR program activities in accordance with statutory requirements; - Strengthened collaboration between small businesses and research institutions through improved guidance and outreach; - Implemented new reporting and policy directives from the anticipated FY 2026 SBIR/STTR program reauthorization; - Improved visibility into STTR performance and outcomes through DSIP enhancements; - Aligned STTR topics and execution with DoW Critical Technology Areas (CTAs); Emerging results from these STTR topics will be reported in FY 2026.									42.444	-	-

A. Mission Description and Budget Item Justification

The goals of the Office of the Secretary of War (OSW) Small Business Innovation Research (SBIR) program is to stimulate technological innovation, increase private sector commercialization of federal research and development (R&D), increase small business participation in federally funded R&D, and foster participation by minority and disadvantaged firms in technological innovation. Leveraging the innovation of small business concerns is an important contributor to the development of the cutting edge technologies that will generate decisive and sustained U.S. military advantages by increasing the readiness, modernization and lethality of the Joint Force. This program supports high priority projects within the DoW Components, their missions, and the Warfighter.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Small Bus Innovation Research Description: The set-aside program for small business supports mission-oriented R&D with the goal of providing advanced capabilities to the Warfighter and commercializing those technologies, resulting in a vibrant small business innovation base supporting economic growth and technology innovation. The SBIR program contributed to the readiness and modernization of the Joint Force and improved operational capabilities through the innovative research topics initiated in FY 2025 in the following areas: In FY 2025, the OSW SBIR/STTR Program Office contributed to the readiness and innovative advancement of critical technology areas supporting the Department by funding SBIR topics to the following organizations: -National Geospatial-Intelligence Agency (NGA) -Strategic Capabilities Office -Deputy Chief of Technology Officer for Science and Technology Office -DoW Chief Digital and AI Office -Defense Logistics Agency -United States Special Operations Command -Defense Microelectronic Activity -Defense Advanced Research Projects Agency	112.606	-	-

A. Mission Description and Budget Item Justification

Under the authority defined in 15 U.S.C. 638 (y), Commercialization Readiness (CR) Program (CRP), OSW established the “OSD Transitions SBIR/STTR Technology (OTST) Program”. The CR Program is a dynamic, results-oriented response to the Congressional challenge to the DoW in 2006 to deliver more advanced SBIR/STTR technologies faster to our warfighters. The OTST program is an interim technology maturity phase (Phase II) inserted into the SBIR/STTR development process and is structured to be a technology pull to meet requirements that address potential and emerging requirements.

B. Accomplishments/Planned Programs (\$ in Millions)

A. Mission Description and Budget Item Justification

The Office of the Under Secretary of War for Research and Engineering (OUSW(R&E)) is the focal point on all matters pertaining to the Department's Research and Engineering (R&E) enterprise, technology development and transition, developmental prototyping, experimentation, and administration of testing ranges and activities. The OUSW(R&E) mission is to ensure continuous advancement of technology and innovation within the DOW enterprise and oversight lead for critical capabilities managed by defense agencies and field activities.

Within OUSW(R&E), the Office of the Assistant Secretary of War for Critical Technologies OASW(CT) is responsible for managing and overseeing the set of critical technology areas (CTAs) vital to maintaining the United States' national security that are designated by the OUSW(R&E). While many technologies may cross between these categories, these groupings represent the broad and different approaches that are required to advance technologies crucial to the Department. By focusing efforts and investments into these designated critical technology areas, the Department will accelerate transitioning key capabilities to the Military Services and Combatant Commands. As the Department's technology strategy evolves and technologies change, the critical technology areas will be updated to the technology priorities.

The Critical Technology Analysis (CTA) program funds engineering, scientific, and analytical support for the designated CTAs and programs within OASW(CT). Funds in this PE directly support the organization and are critical to developing and continuously updating research and technology development roadmaps, studies, and analysis as required by Section 217 of the National Defense Authorization Act for fiscal year 2021.

A. Mission Description and Budget Item Justification

The Project Code (Pcode) 892 funds engineering, scientific, and analytical support for the designated CTAs and the supporting programs within OASW(CT). Funds in this Pcode directly support the organization and are critical to developing and continuously updating research and technology development roadmaps, studies, and analysis as required by Section 217 of the National Defense Authorization Act for fiscal year 2021.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Critical Technology Analysis	-	11.665	10.913
Description: The OASW(CT) is responsible for developing the Department's roadmap efforts for the critical technology areas designated by the USW(R&E). Identification of leading edge technology is critical in delivering capability to the warfighter and maintaining the competitive advantage. Funding for research, technical analysis and management, and other advanced research methods will allow for success in identifying game changing technology investments for the Department's modernization efforts. FY 2026 Plans: The Office of the Assistant Secretary of War for Critical Technologies (OASW(CT)) will continue to conduct research, studies, and analyses to support updates to and advancement of the critical technology roadmaps related to OUSW(R&E) priorities. Also, funds will be utilized for studies and analyses with focus not only on closing gaps and identifying overlap, but providing lead-ahead capabilities across all CTAs, the critical technology area industrial base and workforce, including universities. In addition to the CTA analysis and roadmap studies, funds for this project will substantially enhance mission support capabilities for the OASW(CT) to include contractor support for Program Management, System Engineering, Financial Management, and Administrative Support. These mission support elements are essential to the OASW(CT), the CTAs currently identified, and ultimately the mission of OUSW(R&E). FY 2027 Plans: FY 2027 plans will be a continuation from FY 2026.

These mission support elements are essential to the OASW(CT), the CTAs currently identified, and ultimately the mission of OUSW(R&E). <i>FY 2026 to FY 2027 Increase/Decrease Statement:</i> The total decrease of \$0.752 million from FY 2026 to FY 2027 for contract services is undertaken in direct support of the President's executive order, which prioritizes cost efficiency, transparency, and the consolidation of services. This measure represents a deliberate workforce optimization strategy designed to streamline resources while safeguarding against adverse impacts to modernization initiatives and overall mission effectiveness.

A. Mission Description and Budget Item Justification

This program supports the Department of War's (DoW) Office for Small Business Innovation, which is responsible for the oversight, management and execution of the DoW's Small Business Innovation Research (SBIR) and Small Business Technology Transfer (STTR) programs.

These programs are a primary driver for the Secretary of War's key lines of effort and critical technology areas by directly contributing to the U.S. defense industrial base, helping to deter China, and defending the homeland through technological superiority. By investing nearly three billion dollars annually in American small businesses. The SBIR/STTR programs build a resilient and secure domestic innovation ecosystem, fielding cutting-edge capabilities for the Warfighter and reducing reliance on foreign supply chains. Furthermore, these funds ensure the DoW Office for Small Business Innovation can plan, manage, and execute the statutory intent and goals of SBIR/STTR as identified in 15 U.S.C. 638.

The DoW components participating in the SBIR/STTR programs include: Army, Navy (to include the Marine Corps), Air Force, Space Force, Defense Advanced Research Projects Agency (DARPA), Missile Defense Agency (MDA), Defense Threat Reduction Agency (DTRA), U.S. Special Operations Command (SOCOM), Defense Logistics Agency (DLA), Defense Microelectronics Activity (DMEA), Defense Health Agency (DHA), Defense Human Resources Activity (DHRA), and the Office of the Undersecretary of War for Research and Engineering (OSW).

A. Mission Description and Budget Item Justification

The Small Business Innovation Research (SBIR) program and the Small Business Technology Transfer (STTR) programs are highly competitive programs that encourage domestic small businesses to engage in federal research, development, test and evaluation (RDT&E) with the potential for commercialization. Through a competitive awards-based program, SBIR/STTR enables small businesses to explore their technological potential and provide the incentive to profit from its commercialization. By including qualified small businesses in the nation's research and development (R&D) arena, high-tech innovation is stimulated, and the United States gains entrepreneurial spirit as it meets specific research and development needs.

The SBIR/STTR programs are executed in three phases. The purpose of Phase I is to determine the scientific technical and commercial merit, and feasibility of ideas submitted under the SBIR/STTR programs. Phase II is the principal research or research and development effort and is expected to produce a well-defined deliverable prototype. Phase III SBIR/STTR efforts derive from, extend or conclude Phase I or Phase II efforts, and are not funded with SBIR/STTR R7D dollars. Under Phase III, companies participating in the SBIR/STTR programs are expected to obtain funding from the private sector and/or non-SBIR/non-STTR government sources to develop the prototype into a viable product or non-R&D service for sale in military and/or private sector markets. Phase III provides a competitive acquisition advantage to American small businesses as it allows for a sole-source avenue to contract award.

This Program funds the administrative support to the SBIR/STTR programs including: policy development and oversight; surveillance of program execution for participating DoW agencies; outreach and training; hosting, operation, improvement, and maintenance for the Defense SBIR/STTR Innovation Portal (DSIP); planning and execution of the OSW SBIR/STTR portfolio; reporting and data analytics; financial management, planning, and execution; strategic communication of the DoW technological needs; transition; oversight and implementation of the DoW Due Diligence Program; and the liaison between Congress, SBA, and the GAO.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: SBIR Challenge Admin	5.346	5.411	8.435
Description: This project is the only source of funds for the coordination, administration, and execution of the Department's SBIR/STTR programs in accordance with statute, Small Business Administration (SBA) SBIR/STTR Policy Directive, and DoW policies and regulations. The DoW's Office for Small Business Innovation's Director is tasked with oversight and execution of essential SBIR/STTR Program activities that are required by law.			
FY 2026 Plans: Sustain and provide oversight of the Due Diligence Program;

A. Mission Description and Budget Item Justification

This program supports the President's priority to achieve peace through strength, and the Department's priorities to advance deterrence, work with Allies and partners to reorient to key threats and build a resilient War industrial base and acquisition process.

This program develops and implements effective technology and program protection to support rapidly and securely fielding military technologies. We must protect sensitive technologies and military programs from theft, diversion, and exploitation by our strategic competitors.

Maturing and implementing the Office of the Under Secretary of War for Research and Engineering's (OUSW(R&E)) technology priorities requires a healthy and capable U.S. National Security Innovation Base (NSIB). The targeting of U.S. capabilities by our strategic competitors creates the potential to degrade core U.S. military technological advantages through unwanted technology transfer to and from the NSIB.

Unwanted technology transfer includes exfiltration of unclassified technology, sensitive data, and of intellectual property, and malicious introduction of supply chain risk, jeopardizing DoW's ability to maintain the technology advantage required to support the lethality and survivability of the Joint Force.

DoW's technology and program protection plan includes:

(1) Research Security to ensure the intellectual capital generated by the NSIB are not stolen or exploited.

(2) Development of tools and techniques to ensure the Department's strategic technology investments are protected to enable the U.S. to engage in technology transfer at the time, place, and parties of our choosing.

Appropriation/Budget Activity 0400: Research, Development, Test & Evaluation, Defense-Wide I BA 6: RDT&E Management Support		R-1 Program Element (Number/Name) PE 0605797D8Z I Maintaining Technology Advantage				
(3) Securing acquisition programs, systems, and components through robust program protection planning that holistically and efficiently manages technology and program risk without impeding capability delivery to the warfighter.						
The Department will support these three efforts by developing the appropriate suite of analytic tools and protection activities across the science and technology (S&T) and acquisition enterprise and programs to address the threat over the long term. S&T protection focuses on ensuring the integrity of the research enterprise through execution of due diligence on technology development efforts. Acquisition program protection comprises traditional War Acquisition System activities, such as Program Protection Planning and Independent Technical Risk Assessment, and developing new concepts, training, and best practices, such as Secure Cyber Resilient Engineering, to address ever evolving threats to our acquisition programs and our ability to deliver military capability to the warfighter.						
B. Program Change Summary (\$ in Millions)		FY 2025	FY 2026	FY 2027 Base	FY 2027 OOC	FY 2027 Total

A. Mission Description and Budget Item Justification

As the Department develops advanced technologies, it must use a rigorous, repeatable methodology to protect technology advantage. For example, the Department will establish and implement procedures to protect critical technology in science and technology (S&T), encompassing the lifecycle of basic and applied research, advanced technology development, prototyping, and technology transition to programs. This includes driving consistency across risk-based security reviews for fundamental research and Small Businesses Innovation Research / Small Business Technology Transfer (SBIR/STTR) programs. This also include working with the acquisition community to identify Programs of Record and S&T Projects that require enhanced protection to maintain U.S. technological advantage. The production, updating, and use of Technology Area Protection Plans (TAPPs) generate consistent protection of critical technology, provide foundational guidance for communicating about the technology to particular audiences, and inform protection and controls integrated with technology promotion activities. The implementation of the guidance and TAPPs have broad impacts across DoW and interagency-wide activities associated with critical technologies, including development of protection practices with DoW research performers (e.g., the DoW and national laboratories, academia, small businesses, and the broader industrial innovation base); international agreements; counterintelligence and law enforcement priorities and activities; export controls; and foreign investment screening through the Committee on Foreign Investment in the United States (CFIUS).

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Science and Technology (S&T) Protection	13.851	11.503	13.920
Description: This project supports efforts to maintain DoW's technology advantage by establishing activities to ensure accountability for mitigating strategic competitor exploitation of technologies critical to national security objectives. This project will develop and oversee S&T guidance and practices for informed horizontal protection of emerging and critical technology areas.			
FY 2026 Plans: - Update as needed DoW risk-based security review practices (e.g., fundamental research, SBIR/STTR) that are consistent across the DoW and mitigate foreign influence in S&T efforts. - Implement DoW risk-based security reviews for fundamental research to mitigate foreign influence in S&T efforts across OSW. - Prioritize Programs of Record and S&T Projects that require enhanced protection to maintain U.S. technological advantage. - Update TAPPs at the speed of relevancy and technology development to drive horizontal protection for Critical Technology Areas, at the rate of 2 per year. - Institutionalize and update data-driven models and capabilities that enable data-informed identification and implementation of courses of action that appropriately protect DoW technology advantage.

A. Mission Description and Budget Item Justification

The DoW established a joint analysis capability, the Joint Acquisition Program and Exploitation Cell (JAPEC), to produce analytics products in support of the technology protection mission, such as for foreign investment screening; engage with acquisition, intelligence, counterintelligence, and law enforcement sources to determine consequences of, and appropriate preventative/mitigation actions against unwanted technology transfer; and assess controlled unclassified technical information losses. JAPEC detects and characterizes past technology losses, conducts damage assessments of lost information, and provides insights with predictive value to support and promote activities. JAPEC enables comprehensive, detailed assessments of U.S. military technological vulnerability, as well as inform the development and application of effective policies, countermeasures, and enforcement actions to preserve U.S. technical superiority in all warfighting domains. JAPEC engages with select allies and partners to develop protection efforts across the extended supply chains resulting from the partnerships created by the global S&T community.

JAPEC and supporting organizations synchronize, integrate, coordinate, and inform DoW efforts to protect critical technologies from malign investment by strategic competitors and to combat malign activities. JAPEC conducts trend analysis of protection efforts for the Department's critical acquisition programs and technologies, incorporates findings into protection processes and activities, and analyzes losses, to determine consequences and appropriate courses of action, such as deterrence of our strategic competitors as well as promotion of the NSIB.

JAPEC also manages OUSW(R&E)'s responsibilities for CFIUS, including the assessment, review, and investigation of transactions on the CFIUS docket, especially those pertaining to critical technology, sensitive personal data (such as genomic data), and the NSIB, as well as the identification of "non-notified" transactions that are not yet before CFIUS but which may raise national security concerns for OUSW(R&E) programs and mission space, meriting formal review. This line of effort involves the initial screening of all CFIUS transactions (to determine OUSW(R&E) equities), coordination with subject matter experts who provide vulnerability and consequence information to support the analysis of the risks to national security presented by each transaction affecting OUSW(R&E) mission space, and full market analytics, enhanced with business intelligence to consider risks presented by aggregate industry investment trends and the 2025 America First Investment Policy to scrutinize and prohibit Chinese investments in critical technology sectors.

JAPEC is also the focal point for related efforts, such as OUSW(R&E)'s screening of mergers and acquisitions for antitrust consideration, when they might impair the health of the War Industrial Base, and OUSW(R&E)'s export control activities where JAPEC provides technical advice and recommendations to the War Technology Security Administration regarding regulations of, and applications for licenses to export critical technology.

This project also funds collaborative activities to ensure consistent technology protection guidance and actions across the DoW enterprise, leading the way for reviving our War industrial base and reforming acquisition processes on technology and program protection matters.

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
Title: Joint Acquisition Protection Exploitation Cell (JAPEC) Description: Integrate controlled unclassified information, to include Controlled Technical Information (CTI), protection efforts across the DoW to proactively mitigate losses resulting from unwanted technology transfer and to exploit opportunities to combat strategic competitors that may threaten U.S. military advantage. FY 2026 Plans: - Continue driving towards consistent technology protection guidance and actions across the DoW enterprise by integrating, synchronizing, and deconflicting activities across the Department. Fund pilot programs to explore new concepts and capabilities in support of Department-wide protection activities. Focus on intellectual property protection activities, War industrial base threat assessment improvements, holistic horizontal program protection, and critical program information identification and protection. - Continue to mature the Critical Technology Area (CTA) protection lines of effort involving transactions subject to CFIUS and outbound investment regulations, export license applications, intellectual property, and domestic mergers and acquisitions, through analytic products to illuminate trends (such as among non-notified transactions in critical technology that may merit the attention of CFIUS), at a rate of hundreds of transactions per year spanning all CTAs, enhanced with business intelligence and AI/ML capabilities. - Support and inform the NSC and DoW stakeholders when they are formulating and implementing the administration's national and international policies to appropriately protect technology. FY 2027 Plans: - Continue driving towards consistent technology protection guidance and actions across the DoW enterprise by integrating, synchronizing, and deconflicting activities across the Department. Fund pilot programs to explore new concepts and capabilities in support of Department-wide protection activities. Focus on intellectual property protection activities, War industrial base threat assessment improvements, holistic horizontal program protection, and critical program information identification and protection. - Continue to mature the CTA protection lines of effort involving transactions subject to CFIUS and outbound investment regulations, export license applications, intellectual property, and domestic mergers and acquisitions, through analytic products to illuminate trends (such as among non-notified transactions in critical technology that may merit the attention of CFIUS), at a rate of hundreds of transactions per year spanning all the CTAs, enhanced with business intelligence and AI/ML capabilities. - Support and inform the NSC and DoW stakeholders when they are formulating and implementing the administration's national and international policies to appropriately protect technology. - Leverage AI capabilities to identify new and emerging technologies warranting focused protection - Improve FY19 NDAA Section 1286 List entity nomination process. B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
The increase of \$1.387 million between FY 2026 and FY 2027 reflects the increasing demand for subject matter expertise and complementary capabilities offered by business intelligence and AI/ML to illuminate trends in this rapidly changing space. We will leverage these capabilities to identify new and emerging technologies that are being targeted and to improve the nomination process to more frequently update the FY 2019 NDAA Section 1286 List. The increase also supports increased prioritization of non-traditional and classified protection mechanisms.

A. Mission Description and Budget Item Justification

The Department of War (DoW) must address System Security Engineering risk, including cyber resilience, cybersecurity, and supply chain risks to DoW networks, weapon systems, and information stored and processed on both the DoW and the War Industrial Base (DIB) unclassified contractor information networks that The Department of War (DoW) must address System Security Engineering risk, including cyber resilience, cybersecurity, and supply chain risks to DoW networks, weapon systems, and information stored and processed on both the DoW and the War Industrial Base (DIB) unclassified contractor information networks that support DoW programs. Advanced persistent threats (APTs) that can evade commercially available security tools and defeat generic security best practices, drives the need for diligent program protection planning and execution.

This project supports implementation of DoDI 5000.83, Technology and Program Protection to Maintain Technological Advantage. Activities carried out for Program Protection Planning include providing Program Protection Plan (PPP) review and oversight for Acquisition Category 1D Acquisition Programs and providing guidance to ensure consistency and comprehensive protection of the acquisition program. Program protection planning must address protection of controlled technical information, critical program information, critical components and critical mission functions; and integration of system security policies and acquisition and S&T practices, secure cyber resilient engineering activities, and system security risk reduction activities.

This initiative is developing new and maturing existing system security engineering methodologies and capabilities to advance DoW Programs' ability to protect critical information, functions, and components. This initiative is supporting the education and training of system security and program protection acquisition professionals through the establishment and course development of War Acquisition Credentials.

This project funds continual engagement with other Department stakeholders, acquisition programs, and the War industrial base to ensure protection of controlled unclassified information; improve software and hardware assurance mitigations and management of information communication technology (ICT) supply chain risk management risks; improve integration of cybersecurity into the engineering processes through secure cyber resilient engineering methods; improve software assurance and hardware assurance practices; mature processes to identify and protect Critical Program Information; and mature processes to integrate War exportability features to allow for expedited transfer of U.S. War systems. This project supports the maturation of SSE and assurance best practices through community and working group engagements. Methodologies, tools, and capabilities are made available and scaled through enterprise resources to maximize adoption.

Activities funded by this initiative support DoD Instruction 5200.44 Trusted Systems and Networks with the use of proven mitigation techniques and tools, the ongoing refinement of ICT risk management processes, and creation of needed technology; implementation of DoD Instruction 5200.39 Critical Program Information (CPI) Identification and Protection Within Research, Development, Test, and Evaluation (RDT&E) and DoD Directive 5200.47 Anti Tamper to identify and protect Critical

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026	FY 2027
Title: Program and Technology Protection		4.738	4.929	7.272
Description: This project provides system security engineering and secure cyber resilient engineering policy, guidance and technical implementation assessments to inform and reduce risks in sharing and storing Controlled Technical Information and data, improve mitigation of ICT supply chain risk management risks, improve integration of cybersecurity into the engineering processes, improvements in War exportability and anti-tamper practices, improve processes and tools to identify Critical Program Information and improve program protection planning. Activities carried out support implementation of DoD Instruction 5000.83, Technology and Program Protection to Maintain Technological Advantage; DoD Instruction 5200.44 Trusted Systems and Networks; DoD Instruction 5200.39 Critical Program Information (CPI) Identification and Protection within RDT&E and DoD Directive 5200.47E Anti Tamper to identify and protect Critical Program Information; DoD Instruction 8582.01 Security of Unclassified DoW Information on Non-DoW Information Systems.				
FY 2026 Plans: Continue review and support of ACAT 1D Acquisition Program Protection Plans (PPP) and Independent Technical Risk Assessments. Normalize disparate supply chain risk management (SCRM) activities in collaboration with Department stakeholders to ensure consistent application of SCRM principles. Improve program adoption of high assurance techniques to continuously re-certify software, supporting continuous integration and rapid fielding. Continue advancing the state of the practice of system security engineering. - Improve efficiency and effectiveness of Program Protection in the DoW acquisition lifecycle through incorporation of a fully digital, dynamic Program Protection Plan. - Deliver capabilities to support the implementation of program protection in DoW programs through enterprise services. Institutionalize Critical Program Information identification, horizontal protection guidance and anti-tamper methods delivered in FY 2025.

Mature System Security Engineering education and training for the acquisition professional workforce and develop methodologies to determine effectiveness of system security and cyber resilience initiatives. FY 2027 Plans: Continue review and support of ACAT 1D Acquisition Program Protection Plans and Independent Technical Risk Assessments. Improve efficiency and effectiveness of Program Protection in the DoW acquisition lifecycle through incorporation of a fully digital, dynamic Program Protection Plan. Transition of Program Protection Planning to a data driven processes informing the execution and tracking of protection activities and deploying digital first capabilities to enable horizontal protection. Establish a new platform allowing DoW programs to link knowledge management resources and DoW capabilities with System models and artifacts to improve the efficiency to System Security Engineering. Expand digital capabilities, enabling the rapid assessment of threat, vulnerability, and strategic planning data to provide timely and actionable information to DoW Programs. Develop and track metrics to determine effectiveness of system security and cyber resilience initiatives, workforce development and acquisition program adoption of system security engineering methods. Establish pathfinders to enhance exportability of weapon systems. Integrate information operations into holistic enterprise portfolio protection. Automate software recertification to accelerate delivery of high consequence software and enable fielding of secure and resilient DoW weapon systems. FY 2026 to FY 2027 Increase/Decrease Statement: The increase of \$2.343 million between FY 2026 and FY 2027 fully supports the Secretary of War's priority to more rapidly field lethality, and the Deputy Secretary of War's priorities for digital-first operations and speed over process. It transitions a process-heavy program protection plan to an entirely new, data-driven approach and establishes an enterprise resource to streamline

A. Mission Description and Budget Item Justification

This program supports the Department's initiatives to rebuilding the military by rapidly fielding emerging technologies.

This program provides mission support to the Under Secretary of War (USW), Research and Engineering (R&E) covering a wide range of studies and analysis in support of the R&E program and its impacts on the Department's decision to fund RDT&E efforts. Such activities include: (1) identification and development of new technological opportunities; (2) insertion of new technologies into warfighting systems and operations; and (3) management and evaluation of the effectiveness of technology programs.

Note

In order to better align and support the Joint Warfighting Concept, the Homeland Defense Capability Development initiative is focused on unmanned and counter unmanned systems science and technology (S&T) innovation.

A. Mission Description and Budget Item Justification

The Homeland Defense Capability Development Initiatives project uniquely engages with the Services, Combatant Commands, and our federal partners on critical S&T initiatives to both develop emerging unmanned systems technology and technology countering unmanned system threats to our military forces and installations across all domains. Work in this project explores and identifies critical technology needs across the domains of Air, Land, Sea, and Space, and enables development of synergistic platforms and weapons systems S&T strategies to include unmanned and counter unmanned systems technologies across the kill chain and their applications to future force projection and protection capabilities as identified in the 2026 National Defense Strategy.

Key technology applications complement the Office of the Under Secretary of War for Research and Engineering's (OUSW(R&E)) Critical Technology areas.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Homeland Defense Capability Development Initiatives	2.782	2.852	3.943
Description: The Homeland Defense Capability Development Initiatives project uniquely engages with the Services, Combatant Commands, and our federal partners on critical S&T initiatives to both develop emerging unmanned systems technologies and counter unmanned system threats to our military forces and installations across all domains. Work in this project explores and identifies critical technology needs across all domains, and supports development of synergistic enabling platforms and weapons systems S&T strategies and roadmaps to include unmanned and counter unmanned systems technologies, munitions, power and energy, advanced materials, position, navigation and timing, quantum science, biotechnology, future generation wireless technology, and their applications to future force projection and protection capabilities as identified in the 2026 National Defense Strategy.			
Key technology applications complement the Office of the Under Secretary of War for Research and Engineering's (OUSW(R&E)) Critical Technology areas.

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2025	FY 2026	FY 2027
Identify and evaluate system-level approaches to improve defensive measures that decrease the effectiveness of attacks against friendly forces and their assets from threat unmanned systems. Continue assessment of technologies to counter autonomous systems, swarms, and intelligence, surveillance, and reconnaissance (ISR) unmanned systems capabilities; Use modeling and simulation analysis results of large-scale counter unmanned systems capabilities based in the homeland to improve current/future technical capabilities of both friendly and adversarial unmanned systems; Complete Joint Allied counter-swarm analyses as part of the United States/United Kingdom Stocktake agreement and the US-Israel Operational Technology Working Group (OTWG); Transition capabilities to operational prototypes and fielding to the Warfighter; Continue counter unmanned systems technology cooperation initiatives with Allies from the Indo-Pacific region; Continue strategic studies, analyses, modeling and simulations to identify critical technologies required to enable advanced force projection and protection capabilities and mitigate future adversarial threats across Air, Land, Sea and Space domains. FY 2027 Plans: - Continue assessment of technologies to counter autonomous systems, swarms, and intelligence, surveillance, and reconnaissance (ISR) unmanned systems capabilities -Continue to investigate emerging technologies and threats tied to unmanned surface vehicles (USV), unmanned underwater vehicles (UUV), unmanned ground vehicles (UGVs), and subterranean vehicles and foster activities across the Defense Research Enterprise to develop technical solutions to address these threats. - Continue strategic studies, analyses and modeling to identify critical technologies required to enable advanced force projection and protection capabilities and mitigate future adversarial threats across Air, Land, Sea and Space domains. - Support counter UAS technology cooperation initiatives with The North Atlantic Treaty Organization (NATO) countries and allies from the Indo-Pacific regions. - Continue to sponsor and champion S&T recommendations derived from strategic Model Based Systems Engineering approaches. - Support Department-wide activities to address current and emerging adversary unmanned systems by identifying and fostering development of novel technology solutions. - Increase studies/assessments for assured-positioning, navigation and timing (A-PNT). FY 2026 to FY 2027 Increase/Decrease Statement: The increase of \$1.091 million between FY 2026 and FY 2027 reflects additional assessment/analysis of A-PNT technologies.

Note

FY 2025 funding is incorrectly reflecting \$4.402 million; actuals should reflect \$30.704 million.

A. Mission Description and Budget Item Justification

The Laboratory Resource Management project provides funding for the Defense Laboratory Office within the USW(R&E). The Defense Laboratory Office mission is to craft policy and provide the oversight necessary to both preserve current, and develop future, DoW in-house laboratory capabilities such that they continue to generate mission-critical innovations that increase the U.S. military advantage and enhance U.S. national security. The Defense Laboratory Office advocates and supports the DoW laboratory system in three areas: (1) facilities and infrastructure; (2) personnel and quality of workforce; and (3) technology transfer. FY 2022 added the Central Lab Investment Program (CLIP). This effort seeks to address infrastructure gaps within the Department's Laboratory community by establishing a dedicated funding stream for the DoW's laboratories to address infrastructure issues, including facility planning, design, construction, sustainment repair, and/or modernization.

The DoW Laboratory Enterprise consists of more than 60 laboratories with approximately 67,000 employees (approximately 50,000 of whom are scientists and engineers).

Section 211 of the National Defense Authorization Act (NDAA) for FY 2017 also transferred the management of the laboratory demonstration program at Science and Technology Reinvention Laboratories (STRLs) from the Under Secretary of War for Personnel and Readiness (USW(P&R)) to the Under Secretary of War for Research and Engineering (USW(R&E)).

Section 218 of the NDAA for FY 2018 amended the authority by re-designating management to the USW(R&E).

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Laboratories and Personnel Office	0.000	3.663	3.689
Description: Provides advocacy, strategic planning, and policy development for the DoW's laboratories. Develops proposals and investment strategies for laboratory infrastructure, technology transfer programs, and personnel development.			
FY 2026 Plans:			

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2027 Office of the Secretary Of Defense		Date: April 2026		
Appropriation/Budget Activity 0400 / 6	R-1 Program Element (Number/Name) PE 0605798D8Z / Defense Technology Analysis	Project (Number/Name) 796 / Laboratory Resource Management		
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026	FY 2027
Propose and evaluate best practices for planning, programming, and executing infrastructure construction projects at DoW Science and Technology Reinvention Laboratories (STRLs) and support methodologies for assessing their readiness to achieve their missions. FY 2027 Plans: This project will continue to support the Deputy Assistant Secretary of War for S&T with contract support, studies and analysis to develop policy, and provide the oversight necessary to execute current, and develop future, DoW in-house laboratory efficiencies such that they continue to generate mission-critical innovations that increase the U.S. military advantage,enhance U.S. national security, and execute the Secretary of War’s initiatives for a more technologically advanced military. Specific portfolios include: - S&T Workforce and STRL oversight - R&D Lab Infrastructure revitalization - Human and animal subject research - Medical, chemical, and extreme environment research policies FY 2026 to FY 2027 Increase/Decrease Statement: Minor budget increase of .026 million between FY 2026 and FY 2027.				
Title: Central Lab Investment Program (CLIP) Description: This effort is targeting the modernization and recapitalization of critical Science & Technology (S&T) infrastructure gaps within the Department’s Laboratory community. The competitive program conducts an annual call for S&T topics for DoW laboratories to address failing infrastructure issues and modernization to include facility planning, design, construction, sustainment repair, and/or modernization of critical research capabilities to keep the laboratories globally competitive to advance military technologies. In addition, CLIP proposals can include acquisition of unique equipment and tools to replace vital research capital equipment, enabling the laboratories to devote their RDT&E funding to critical research and development and offset their sustainment, repair, and modernization (SRM) funding gap. FY 2026 Plans: FY 2026 CLIP project awards will be made in FY 2026. Proposal selection and award prioritization is based on DoW mission impact, alignment with S&T priorities, cross-laboratory collaboration, and project executability. In addition, plans for the “FY 2027 CLIP Call For Proposals” will be initiated followed by FY 2027 CLIP proposals received and evaluated in FY 2026, pending award in FY 2027. A. Mission Description and Budget Item Justification

The Department's key expertise for reviewing and guiding research and engineering (R&E) programs resides in the (OUSW(R&E)). The OUSW(R&E) staff augment their responsibilities through connections to technology experts in various fields throughout academia, industry, and government.

This project provides engineering, scientific, and analytical support to the OUSW(R&E) in its responsibility for direction, overall quality, and content of the science and technology (S&T) program. This activity conducts assessments and analyses to ensure maximum utilization of research and development funds to accomplish the overall objectives of the S&T program. It ensures the technology being developed is affordable and minimizes system development risk. Funds are required for technical, analytical, management support, travel, and publications.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Defense Support Teams	8.927	9.087	9.591
Description: This project provides engineering, scientific, and analytical support to the OUSW(R&E) in its responsibility for direction, overall quality, and content of the S&T program. Furthermore, it ensures that the technology being developed is affordable and minimizes system development risk.			
FY 2026 Plans: Executed efforts related to engineering, scientific, analytical, and managerial support to the OUSW(R&E) in developing strategies, plans, and policies to develop and exploit technology; conduct technology analyses, make recommendations, and develop guidance for S&T plans and programs; review acquisition programs and make recommendations to optimize effectiveness of the DoW investments; and oversight of S&T issues and initiatives and respond to Congressional special interests.			
FY 2027 Plans: The FY 2027 plans will continue the efforts related to engineering, scientific, analytical, and managerial support to the OUSW(R&E) in developing strategies, plans, and policies to develop and exploit technology. - Conduct technology analyses, make recommendations, and develop guidance for S&T plans and programs. - Review acquisition programs and make recommendations to optimize effectiveness of the DoW investments. - Oversight of S&T issues and initiatives and respond to Congressional special interests.

A. Mission Description and Budget Item Justification

The objectives of the Defense Science Study Group (DSSG) program are to: (1) identify emerging leaders of science and technology in both the traditional disciplines and in new or interdisciplinary fields related to defense needs; (2) introduce these individuals to the national security community and current defense issues and needs; (3) foster in them a long-term interest in defense issues and needs;(4) create a network of informed, talented, and involved alumni within key disciplines and research centers that are critical to national security; and (5) provide continuing opportunities for those who complete the program to bring their experience and talents to bear on issues and challenges confronting national security.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: The Defense Science Study Group (DSSG) Program	-	1.000	1.000
Description: Each class runs for two years and consists of 15-20 members. The members spend approximately twenty-two days per year working with the program, typically with four sessions per year, specifically two eight-day sessions during the summer and two three-day sessions during the academic year. The program has five general components: (1) an overview of the national security community and meetings with senior military commanders and civilian officials with an emphasis on S&T programs; (2) visits to Joint Commands and military installations to receive briefings, meet personnel from all levels, and observe military operations; (3) visits to intelligence organizations and to the Executive Office of the President; (4) interaction with a group of mentors to the program who have distinguished careers in the national security arena as former military commanders, civilian officials, or technical advisors; and (5) the preparation of "think pieces", which allow the members to personalize their DSSG experience, to focus on a particular area of importance to DoW, and to begin to establish contacts with individuals in DoW with related interests. DARPA will maintain its role as funder of the program while passing technical oversight and collaboration opportunities to OUSW(R&E). FY 2026 Plans:

A. Mission Description and Budget Item Justification

The Defense Technology Analysis (DTA) project funds engineering, scientific, and analytical support for the Office of the Under Secretary of War for Research and Engineering (OUSW(R&E)) and specifically the Officer of Deputy Chief Technology for Critical Technologies (ASWCT). The ASW(CT) supports the USW(R&E) by prioritizing the National Defense Strategy modernization lines of effort in order to maintain competitive advantage against adversaries. The efforts funded in this project directly support and are critical to developing and continuously updating research and technology development roadmaps as required by Section 217 of the National Defense Authorization Act for FY 2021.

B. Accomplishments/Planned Programs (\$ in Millions)	FY 2025	FY 2026	FY 2027
Title: Defense Technology Analysis Description: The ASW(CT) is responsible for developing the Department's roadmap efforts in the fourteen modernization priority areas: Directed Energy, Hypersonics, Integrated Sensing and Cyber, Trusted AI & Autonomy, Integrated Sensing & Cyber, Microelectronics, Space Technology, Renewable Energy Generation & Storage, Advanced Computing & Software, Human-Machine Interfaces, Advanced Materials, Biotechnology, Quantum, and Future G. Identification of leading edge technology is critical in delivering capability to the warfighter and maintaining the competitive advantage. Funding for research, technical analysis and management, and other advanced research methods will allow for success in identifying game changing technology investments for the Department's modernization efforts. The project realigned from Defense Technology Analysis (PE 0605798D8Z) to Critical Technology Analysis (PE0605711D8Z) in FY 2026.	8.000	-	-

Quantity of RDT&E Articles	-	-	-	-	-	-	-	-	-	-		
A. Mission Description and Budget Item Justification												
The Alternative Positioning, Navigation, and Timing (PNT)project uniquely engages with the Services, Combatant Commands, and our federal partners on critical S&T initiatives to develop emerging PNT technology, sources, and countering small unmanned system threats to our military forces and installations across all domains and all threat environments. Work in this project explores PNT technology and solution needs across the domains of Air, Land, Sea (surface and undersea), and Space, and enables development and maturation of new transitionable maps, sensors, data fusion hubs, and integration techniques targeting GPS-denied or GPS-degraded environments include navigation-quality magnetic anomaly maps and sensors; augmented space-based, non-GPS satellite navigation and time distribution, platform and mission tailored alternative PNT fusion solutions, and best practices for alternative PNT integration through software and hardware. These activities support multiple, new critical technology areas in Office of the Under Secretary of War for Research and Engineering (OUSW(R&E)).												
B. Accomplishments/Planned Programs (\$ in Millions)									FY 2025	FY 2026	FY 2027	
Title: Alternative PNT									-	-	113.000	
Description: Provides trusted, tailorable, MOSA-compatible PNT sources, solutions, and technology options for all platforms in all domains. Closes the gap to transition alternative PNT solutions and integration techniques to Services for resiliency in GPS-denied or GPS-degraded environments.												
FY 2027 Plans:												
- Develop, design, and deliver trusted navigation and timing data, resilient augmented PNT systems, and receivers to enable trusted use of all viable non-GPS, space-based signals for PNT, which enables use of precise time and positioning from multiple constellations.												
- Mature and rapidly integrate MOSA-compliant sensors tailored to platforms and for domain-specific requirements to establish an alternative PNT technology and capability pipeline for end users.												
- Collect authoritative data and develop more accurate methods to provide navigation-quality magnetic anomaly mapping products for key areas of interest.												
- Develop and deliver methods to account for platform interference for magnetometers to enable rapid magnetic anomaly navigation transition to operations.												
- Begin experimentation and evaluation of hardware and software integration techniques of PNT technology, sensors, and solutions to meet platform mission critical and safety requirements.

A. Mission Description and Budget Item Justification

This program carries out the duties in accordance with Title 10 U.S.C. Section 133a, FY 2018 National Defense Authorization Act (NDAA) (Public Law 115-91) section 838, and Department of War (DoW) Directive 5137.02 dated July 15, 2020 and as outlined in the 2026 National Defense Strategy and the 2026 Acquisition Transformation Strategy. In FY 2020, the Under Secretary of War for Research and Engineering (OUSW(R&E)) established the Developmental Test, Evaluation, and Assessments (DTE&A) organization to provide consolidated Developmental Test and Evaluation (DT&E) and Independent Engineering Assessment functions in a single office. The DTE&A organization serves as the principal advisor to the Secretary of War; USW(R&E); and the Under Secretary of War, Acquisition and Sustainment (USW(A&S)) on DT&E, Independent Technical Risk Assessments and other independent engineering assessments in the DoW. The assessment products developed by this program inform investment decisions for Warfighter capabilities that align to critical Department priorities including Nuclear Modernization, Virginia-class submarines, executable surface ships, Homeland Missile Defense, One Way Attack/Autonomous Systems, and Munitions. This program supports the Department's initiatives to rebuild the military and reestablish deterrence.

The Office of the Under Secretary of War for Research and Engineering (OUSW(R&E)) engages with Major Defense Acquisition Programs (MDAPs) within the Adaptive Acquisition Framework, providing engineering and DT&E/Cybersecurity DT&E planning expertise to ensure decision-quality data is available at major engineering program reviews and program milestones. This engagement directly helps Program Managers succeed in rebuilding the military and rapidly fielding emerging technologies. OUSW(R&E) engages with programs to help meet interoperability requirements to deepen interoperability and Strengthen Alliances. Finally, OUSW(R&E) works with Director, Operational Test and Evaluation to streamline T&E policy and guidance to improve test efficiency and reduce acquisition cost and schedule to reform acquisition processes.

This program supports and improves the engineering and DT&E efforts of MDAPs, Rapid Prototyping/Fielding efforts, and other Special Interest (SI) acquisition programs designated by USW(R&E) or USW(A&S) as they progress through the acquisition/development lifecycle; supports development of the acquisition workforce Test and Evaluation (T&E) career field; and supports development of policy and guidance for the conduct of DT&E and Cyber DT&E within the DoW. This program

A. Mission Description and Budget Item Justification

The Development Test & Evaluation (DT&E) project 804 provides resources to support Major Defense Acquisition Program (MDAP) and Rapid Prototyping/Fielding Program Managers, Chief Developmental Testers, and Lead DT&E Organizations in the development of comprehensive, efficient, and innovative DT&E strategies/plans to support key acquisition milestones and engineering decisions. This project also supports the Under Secretary of War for Research and Engineering (OUSW(R&E)) to manage the Test & Evaluation (T&E) career field and curriculum for the Department of War (DoW) acquisition workforce and develop policy and guidance for the conduct of DT&E within DoW. On behalf of the USW(R&E) this project executes the following activities:

- Support acquisition programs in the development of comprehensive, efficient, and innovative test strategies that can be documented in Test and Evaluation Master Plans (TEMPs). For Acquisition Category (ACAT) ID programs, review and approve/disapprove the DT&E strategy/plans within the TEMP. For ACAT IB and IC programs, review the DT&E strategy/plans within the TEMP and provide a recommendation to the Service Milestone Decision Authority as to whether or not the strategy is adequate.
- Support rapid prototyping, rapid fielding, and technology demonstrations efforts in the development of tailored comprehensive, efficient, and innovative DT&E strategies/plans.
- For ACAT ID programs, provide independent DT&E Sufficiency Assessments to the Defense Acquisition Executive at the Milestone B and C decisions with the goal of reducing discovery of performance issues later in the acquisition lifecycle when deficiencies are more costly to correct.
- For ACAT IB and IC programs, provide an independent DT&E program assessment to the Service Milestone Decision Authority prior to the development Request for Proposal (RFP) release decision point and at the Milestone B and C decisions with the goal of reducing discovery of performance issues later in the acquisition lifecycle when deficiencies are more costly to correct.
- When requested by the Secretary or Deputy Secretary of War, provide independent developmental test assessments in support of Under Secretary of War for Acquisition and Sustainment (USW(A&S)) and Service Major Defense Acquisition Programs.
- Support the development of independent technical risk assessments and advise the Secretary on the progress toward meeting Key Performance Parameters, technology maturation, reliability growth projections, interoperability, and cyber resilience before any decision to grant Milestone A or B approval, or enter into low-rate initial production or full-rate production for ACAT ID programs or when requested by the Secretary.
- Support the Scientific Test and Analysis Techniques Center of Excellence (STAT COE) that provides scientific analytical expertise to service MDAPs.
- Identify the DoW test infrastructure gaps and support development of the OUSW(R&E) test resources strategic plan.
- Evolve the DT&E 'state of practice' to keep pace with emerging technologies and improve test efficiency to field systems faster.
- Coordinate with Director, Operational Test and Evaluation to improve T&E efficiency and make best use of integrated testing.

A. Mission Description and Budget Item Justification

The Cybersecurity Development Test and Evaluation (DT&E) for Weapon Systems project 048 provides dedicated resources to support Major Defense Acquisition Program (MDAP) and Rapid Prototyping/Fielding Program Managers, Chief Developmental Testers, and Lead DT&E Organizations in the development of comprehensive, efficient, and innovative cyber DT&E strategies to support key acquisition milestones and engineering/programmatic decisions. Cyber DT&E includes cybersecurity and cyber resilience as the components of cyber survivability. On behalf of the Under Secretary of War for Research and Engineering (USW(R&E)) this project executes the following activities:

- Support acquisition programs in the development of comprehensive, efficient, and innovative cyber DT&E strategies that can be documented in Test and Evaluation Master Plans (TEMPs). For Acquisition Category (ACAT) ID programs, review and approve/disapprove the cyber DT&E strategy/plans within the TEMP. For ACAT IB and IC programs, review the cyber DT&E strategy/plans within the TEMP and provide a recommendation to the Service Milestone Decision Authority as to whether or not the strategy is adequate.
- Support rapid prototyping, rapid fielding, and technology demonstrations efforts in the development of tailored comprehensive, efficient, and innovative cyber DT&E strategies/plans.
- Support the development of independent technical risk assessments and advise the Secretary on the progress towards meeting the cyber survivability Key Performance Parameter before any decision to grant Milestone A or B approval, or enter into low-rate initial production or full-rate production for ACAT ID programs or when requested by the Secretary.
- Identify DoW cyber test infrastructure gaps and support development of the OUSW(R&E) test resources strategic plan.
- Evolve the cyber DT&E 'state of practice' to keep pace with emerging technologies and improve test efficiency to field systems faster.
- Coordinate with Director, Operational Test and Evaluation to improve cyber T&E efficiency and make best use of integrated testing.

A. Mission Description and Budget Item Justification

The Independent Engineering Assessments project 149 provides resources to support Major Defense Acquisition Program (MDAP) Program Managers and Chief Engineers/Systems Engineers in the development of comprehensive, efficient, and innovative engineering strategies/plans to support key acquisition milestones and engineering decisions. For Acquisition Category (ACAT) ID programs, this project also conducts independent engineering assessments, including Independent Technical Risk Assessments (ITRAs), and assessments at the Preliminary and Critical Design Reviews. On behalf of the Under Secretary of War for Research and Engineering (USW(R&E)) this project executes the following activities:

- Support acquisition programs in the development of comprehensive, efficient, and innovative systems engineering strategies. Provide Systems Engineering support to ACAT ID programs. For ACAT ID programs, review and approve/disapprove the System Engineering Plans (SEPs) to ensure engineering activities, strategies, and plans are comprehensive and consistent with best practices.
- Monitor and advise USW(R&E) and Under Secretary of War for Acquisition and Sustainment (USW(A&S)) on technical and engineering aspects of MDAPs and select alternate acquisition pathway programs to ensure they are adequate to support fielding and the achievement of cost, schedule and performance goals to include readiness, i.e., producibility, reliability, maintainability, sustainment, and other considerations.
- For ACAT ID programs, provide ITRAs to the Defense Acquisition Executive (DAE) at the Milestone (MS) A, B, and C decisions with the goal of identifying technical risk and outlining potential mitigation measures that should be considered during program execution. For select high priority ACAT IB and IC programs, review and approve service conducted ITRAs prior to the applicable milestone decision point.
- For ACAT ID programs, conduct Preliminary and Critical Design Review assessments to inform the Defense Acquisition Executive of technical risks, maturity of the technical baseline, and the program's readiness to proceed in accordance with statute.
- For ACAT ID programs, the ITRA and Preliminary Design Review (PDR) assessments support the DAE decision to approve MS B in accordance with statute. They also support the DAE as the milestone decision authority in satisfying requirements to notify congress a written record of the decision to grant MS B for a major defense acquisition program including identification of risks, mitigation measures, and technology maturity in accordance with statute.
- Support acceleration of USW(R&E) modernization initiatives in accordance with the interim National Defense Strategy (NDS).
- Conduct other technical reviews as requested, such as Nunn-McCurdy certification reviews, Non-Advocate Reviews, focused technical assessments, schedule risk assessments, and software readiness reviews to identify and mitigate program risk.
- Coordinate with the Services to improve engineering practices for Major Defense Acquisition Programs (MDAPs) and rapid prototyping/fielding programs. Identify, document, and share lessons learned to improve Systems Engineering across the DoW.
- Guide Service and other component organizations in the development planning process to ensure proposed MDAP programs are executable within acceptable levels of risk.

A. Mission Description and Budget Item Justification

This program supports the Office of the Director, Cost Assessment & Program Evaluation (CAPE) by funding assessments that help to resolve budget and programmatic issues across the full range of the Department's activities. Projects that support this effort help to inform leadership on program alternatives, capability concept development, design and cost, as well as the appropriate balance of capabilities across the force. They also help to identify how well the Department is meeting its expenditure goals, and how well the force can implement the interim National Defense Strategy. These RDT&E resources support critical studies and analyses to assist senior DoW leaders in optimally balancing the lethality, partnership, and reform levels of effort to carry out the interim National Defense Strategy.

This program provides for analytical research across the entire spectrum of defense issues and concerns. The research agenda focuses on near to long-term problems identified by the Secretary of War, addressing difficult and complex questions linked to program alternatives for current and future capabilities and forces in order to enhance senior leadership's deliberations and decision-making.

This program provides the scientific and technical engineering services needed for research studies in the development of models and simulations and the evaluation of current analytical tools and scientific methods used to evaluate and assess weapons systems and warfighting capabilities for warfighting environments and scenarios, and related force structure. Deliverables from this program will include reports, briefings, and analyses designed to illuminate critical issues facing the Department. Outcomes include recommendations for new modeling techniques, programmatic alternatives, and scenario development.

The FY 2027 budget proposal continues resources to support the Enterprise Visibility and Maintainability of Operation and Support Costs (EVAMOSC). EVAMOSC supports CAPE's responsibility to develop and maintain a database of actual operating and support (O&S) costs for major weapons systems, as required in 10 USC Ch. 137, Sec. 2337a and further refined by Sec. 832 of the 2019 NDAA. Additionally, the EVAMOSC data capability will directly support development and reporting of readiness metrics associated with implementation of the interim National Defense Strategy. In FY 2027, CAPE will continue to develop an enterprise data platform to serve as the authoritative source of O&S cost data for major weapon systems.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: OSW Support for Programming Budget	8.418	7.434	7.160
Description: This program provides for analytical research across the entire spectrum of defense issues and concerns. The research agenda focuses on near to long-term problems identified by the Secretary of War and addresses difficult and complex questions linked to program alternatives for current and future capabilities and forces in order to enhance senior leadership deliberations and decision-making.			
FY 2026 Plans: Studies, analyses, and assessments will be focused on: - Improving cost analysis tools to inform program, budget, and Defense Acquisition Board reviews. - Supporting the Weapon System Acquisition Reform Act (WSARA) requirements by independently assessing, analyzing, and where appropriate, updating cost indices, inflation rates, and escalation rates used in preparing the President's Budget for major acquisition programs.

Description: EVAMOSC addresses CAPE's responsibility to develop and maintain a database of actual operating and support (O&S) costs for major weapons systems, as required in 10 USC Section 4325. Additionally, the EVAMOSC data capability will directly support development and reporting of readiness metrics associated with implementation of the interim National Defense Strategy.												
FY 2026 Plans: Further develop and maintain an enterprise data platform of O&S cost data for major weapon systems: - Develop and execute data ingestion pipelines, business rules, logic models, and data catalogues to support collection, reporting, and analysis of enterprise-level O&S cost data. - Perform system administration, security, and user management functionality for an enterprise data asset anticipated to provide services to over 3,000 users across the DoW. - Deliver services via an advanced database in an Amazon Web Service Cloud environment, acquire data from more than 75 source data systems, and map this data to all DoW weapons systems using standardized O&S cost data definitions.												
FY 2027 Plans: Further develop and maintain an enterprise data platform of O&S cost data for major weapon systems: - Develop and execute data ingestion pipelines, business rules, logic models, and data catalogues to support collection, reporting, and analysis of enterprise-level O&S cost data. - Perform system administration, security, and user management functionality for an enterprise data asset anticipated to provide services to over 3,000 users across the DoW. - Deliver services via an advanced database in an Amazon Web Service Cloud environment, acquire data from more than 75 source data systems, and map this data to all DoW weapons systems using standardized O&S cost data definitions.

A. Mission Description and Budget Item Justification

This program supports the Office of the Director, Cost Assessment & Program Evaluation (CAPE). It funds assessments that help the Analysis Working Group (AWG) as required in the FY 2024 NDAA Sec 902 to assist the Secretary and Deputy Secretary in guiding the analytic community and ensuring strategic analysis products are robust and of the highest quality. The end goal is an analytic enterprise that is agile, responsive, and provides sound decision support for the Secretary and Deputy Secretary. This program provides for analytic research across the Department to guide reform of the Department's analytic enterprise. Projects that support this effort help to develop a high performing and innovative analytic enterprise with the right policies, structures, people, and tools to support timely strategic decisions that create an advantage for the U.S Military now and into the future.

	FY 2025	FY 2026	FY 2027
Title: Analysis Working Group (AWG) Support	0.879	5.155	11.668
Description: The Analysis Working Group (AWG) was established to marshal and guide the Department's analytic capabilities. This group is advancing key strategic priorities by improving the analytic underpinning available for senior leader decisions and addressing necessary enterprise reforms (e.g., data sharing and knowledge management) across the analytic community.			
FY 2026 Plans: Studies, analysis and assessments will be focused on: -Establishing clear priorities and standards to focus analyst on decision support -Improving transparency across the analytic community -Improving the quality of and expanding access to data -Evolve the methods and tools used in strategic analysis			
FY 2027 Plans: Initiatives will include studies, analyses, and assessments focused on continuing efforts to promote transparent, robust, integrated, and well-designed analysis through - Development of data and knowledge management - Evolving the methods and tools used in strategic analysis - Closing analytic gaps to underpin key senior leader decisions

Note

New Start (Y/N): No.

Responsible AI requirements have been realigned to Alpha-1 Development PE 0604133D8Z in FY 2026 as this better aligns the intent of the AI requirements.

A. Mission Description and Budget Item Justification

The Chief Digital and Artificial Intelligence Officer (CDAO) supports the Department's initiatives to build an enduring competitive advantage, while forging a resilient Joint Force and defense ecosystem. The CDAO is responsible for strengthening and integrating data, artificial intelligence, and digital solutions in the Department in support of the interim National Defense Strategy and Section 1513 of the National Defense Authorization Act (NDAA) for FY 2023. The CDAO Responsible AI (RAI) Division ensures the Department is provided with the technical tools and resources efficiently assess and assure its AI-enabled capabilities, to support rapid fielding of capabilities that are lethal, performant, and reliable. The CDAO RAI Division supports the strategic priority of addressing institutional management priorities, the strategic objective of strengthening governance and removing policy barriers, and the performance goal of overseeing the development, acquisition, testing, and integration of Responsible AI and AI Assurance tools and processes across the Department, as outlined by the Responsible AI Strategy & Implementation Pathway (S&IP). The CDAO Responsible AI (RAI) Division is the Department's lead for Responsible AI and AI Assurance, including managing the Department's AI Assurance Portal (which provides access to the AI testing and monitoring tools, resources, and artifacts from across the Department), leading the development of technical tools, best practices, resources, governance, and strategy & policy guidance related to responsible AI and AI Assurance; and leads the Department's work on AI Assurance Policy (established by the CDAO Charter).

The RAI Division fulfills the functions of both RAI Capability Development and the building of an RAI Customer Ecosystem. The RAI Division provides critical tools and infrastructure and best practices to all DoW Partners. This includes the building and release of the RAI Toolkit and RAI Toolkit Web Application, the AI Assurance Portal, DoW Data and Model Card Templates and supporting software, the Department's Frontier AI Red Teaming Program (for the AI RCC), technical guardrails and benchmarks for Frontier AI, enterprise-wide AI Assurance Tools, RAI & AI Assurance support to the Services, the development and validation of the Department's AI Assurance policies, and various technical resources for topics including Red Teaming, Human Machine Teaming, Stakeholder Engagement, Risk Management, etc. Additionally, CDAO RAI Division has built and continues to grow the DoW RAI Ecosystem, through chairing the Department's RAI Working Council, leading the Department's RAI Community of Interest, Chairing (through appointment by the White House) the Federal Government's CAIO AI Risk Management Working Group, co-chairing NATO's working group on AI Assurance, and leadership of other AI Assurance projects and bodies within the inter-agency and internationally.

In FY 2026 and beyond, the CDAO RAI Division will continue to integrate best practices and guidelines on developing AI technologies and build them into modular RAI Toolkits and to address specific Use Cases addressed to the Department's most urgent needs around lethality and efficiency. This work will be highlighted in FY 2025, as the RAI Division will run multiple RAI Toolkit validation experiments and pilots with our DoW partners, integrate those lessons learned into RAI Toolkit V2,

while providing specific Toolkits to address frontier AI and DoDD 3000.09 Autonomy in Weapon Systems. Throughout the FYDP, RAI Division will continue to build and integrate the RAI Ecosystem, through industry, inter-agency, and international leadership including leading the stand up of a collaboration with the leading AI Labs on frontier AI Red Teaming (in support of the AI RCC), standing up a frontier AI policy experimentation and validation initiative with the leading AI Labs, chairing the Federal Government's Chief AI Officer Council Risk Practices Working Group (which sets the recommended risk process and resources for the government to meet White House policy and requirements), and the RAI Development Group (RAIDG) (which provides technical and developer support on key RAI issues to priority DoW projects).

Note

This Program Element (PE) is a new start in FY 2027.

A. Mission Description and Budget Item Justification

This program supports the integration of data across multiple sources that currently reside on antiquated and disparate systems. The outcome of this program funding will be a modern, unified analytical platform that supports Department-wide analytic products for informing key resourcing decisions. Outdated systems limit the ability of analysts to perform deep analysis across the broad portfolio of the Department's programs and prohibit data integration across multiple streams, affecting the efficient responsiveness to decision makers. This new platform will empower the Department to more effectively fuse data across currently stove-piped organizational and functional boundaries, leveraging modern tools and the ongoing data investments of other organizations in the Department to increase the speed and efficiency of cost analyses and funding projections.

The development and utilization of advanced software, including the integration of AI and Large Language Models (LLMs), will enhance analytical fidelity, increase the efficiency of data modeling, and be a significant leap forward in analytical capabilities. With more powerful and efficient tools, this program will provide senior Department leaders with the data-driven insights necessary to optimize budgets, identify potential savings, and ensure resources are directed to our most critical national security priorities.

Key Fiscal Year 2027 activities include: A) foundational systems engineering analysis to ensure synergies with other Department data efforts, B) replacing the data environment and computing capacity, and C) building and piloting the first tranche of tools and applications.

A. Mission Description and Budget Item Justification

The Office of Net Assessment (ONA) is reestablished to provide the Secretary of War, Deputy Secretary of War, and other senior DoW leaders with independent, long-term assessments of fundamental security issues. The ONA is administratively realigned under the Director of Administration and Management (DA&M), while the Deputy Secretary of War provides direct functional management of the Director of Net Assessment (DNA). The office identifies emerging threats, technologies, and geopolitical trends, examining the comparative military capabilities and potential of the U.S. and its adversaries. These net assessments address near and long-term challenges, enabling U.S. military forces to counter the technological advantages of potential adversaries. This effort directly supports the National Defense Strategy (NDS) and aligns with the Department's priorities to Defend the Homeland, Deter China, accelerate warfighting capabilities, and strengthen alliances.

A. Mission Description and Budget Item Justification												
The Office of Net Assessment develops and coordinates analyses that examine the standing trends and future prospects of U.S. and other military capabilities and military potential. The net assessments address near and long-term problems and opportunities for the U.S. military forces to help counter technological advantages of potential U.S. adversaries. These efforts will pursue research to analyze the future security environment.												
B. Accomplishments/Planned Programs (\$ in Millions)									FY 2025	FY 2026	FY 2027	
Title: Technology and Resource Analysis									2.903	3.461	3.264	
Description: The Office of Net Assessment develops and coordinates analyses that examine the standing trends and future prospect of U.S. and other military capabilities and military potential. The net assessments address near and long-term problems and opportunities for the U.S. military forces to help counter technological advantages of potential U.S. adversaries. These efforts will pursue research to analyze the future security environment.												
FY 2026 Plans: Continue and initiate efforts to pursue research that identifies new technological innovations and analyzes the future security environment, with a sharpened focus on areas critical to deterring adversaries and rebuilding military strength. - Prioritize Threat-Driven Innovation: Continue analysis on future concepts of operation and possible courses of action and responses to emerging capabilities, with a particular emphasis on countering the capabilities of potential adversaries, specifically China. This analysis will inform requirements for modernizing our forces and rebuilding the industrial base. - Focus on Critical Technology Areas: Continue investment in a Biosciences Net Assessment and initiate analysis in future warfare areas to assess potential revolutionary advances, including nuclear modernization (NC3), counter-small UAS initiatives, and one-way attack/autonomous systems. - Resource Readiness & Lethality: Initiate analysis in information areas for potential advanced capability demonstrations and a potential Net Assessment, while simultaneously identifying potential offsets from lower-priority programs to resource core readiness and munitions. - Support Homeland Defense: Incorporate analysis related to Homeland Missile Defense and potential threats along the Southwest Border to support efforts to defend the homeland.												
FY 2027 Plans:

Note

New Start (Y/N): No

The Defense Innovation Board (DIB) has merged into the Defense Science Board (DSB) to create a singular advisory body, the Science, Technology, and Innovation Board (STIB). The DoW established the STIB on February 25, 2026, and terminated the DIB and DSB on March 3, 2026.

Funding in this program will be realigned to a new Program Element and the program name change Science, Technology, and Innovation Board (STIB) will be reflected in the FY 2028 budget request, IAW DOD Directive 7045.20.

A. Mission Description and Budget Item Justification

The Defense Innovation Board (DIB) has merged into the Defense Science Board (DSB) to create a singular advisory body, the Science, Technology, and Innovation Board (STIB). The STIB is a discretionary advisory committee chartered to provide independent advice and recommendations on matters supporting the Department of War's (DoW's) scientific, technological, and innovative enterprises. The STIB operates under the provisions of the Federal Advisory Committee Act (FACA) (chapter 10 of Title 5, United States Code (U.S.C.), Government in the Sunshine Act, and other applicable federal statutes, regulations, and policies.

STIB RDT&E Funding covers travel and contract costs associated with the completion of five to six studies annually at the direction of Department leadership pursuant to the Federal Advisory Committee Act (FACA) of 1972 (chapter 10 of Title 5, United States Code (U.S.C.), Government in the Sunshine Act, the STIB charter, DoD Instruction 5105.04, "Department of War Federal Advisory Committee Management Program", and other applicable federal statutes, regulations, and policy.

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
On an annual basis the STIB program is anticipated to cover travel and contract costs associated with the completion of five to six studies annually at the direction of Department leadership pursuant to the FACA.			
FY 2026 Plans: In FY 2026, the STIB is anticipated to cover travel and contract costs associated with four Quarterly meetings and the completion of five to six studies at the direction of Department leadership pursuant to the Federal Advisory Committee Act (FACA) of 1972 (chapter 10 of Title 5, United States Code (U.S.C.), Government in the Sunshine Act, the STIB charter, DoD Instruction 5105.04, "Department of War Federal Advisory Committee Management Program", and other applicable federal statutes, regulations, and policy. This includes the completion of the Congressionally mandated assessment on the "Designation of Certain Facilities on Kwajalein Atoll as a Major Range and Test Facility Base," pursuant to Section 245, National Defense Authorization Act (NDAA) Fiscal Year (FY) 2025; and Section 907 of the National Defense Authorization Act (NDAA) for Fiscal Year 2026 requiring a comprehensive study to determine the optimal organizational structure under the Office of the Secretary of War (OUSW) for digital solutions engineering and software delivery across the Department. These studies, often highly classified, will provide independent advice and recommendations on matters concerning science, technology, manufacturing, acquisition processes, and other topics of special interest to the DoW. The STIB will utilize contracted services to procure professional, analytical, and administrative services, to include the tasks of planning, preparation, execution, administrative support, logistics, documentation, and travel for STIB, Subcommittee and Task Force meetings and conferences.			
FY 2027 Plans: In FY 2027, the STIB is anticipated to cover travel and contract costs associated with four Quarterly meetings and the completion of five to six studies at the direction of Department leadership pursuant to the Federal Advisory Committee Act (FACA) of 1972 (chapter 10 of Title 5, United States Code (U.S.C.), Government in the Sunshine Act, the STIB charter, DoD Instruction 5105.04, "Department of War Federal Advisory Committee Management Program", and other applicable federal statutes, regulations, and policy. This includes the completion of Section 907 of the National Defense Authorization Act (NDAA) for Fiscal Year 2026 requiring a comprehensive study to determine the optimal organizational structure under the Office of the Secretary of War (OUSW) for digital solutions engineering and software delivery across the Department. These studies, often highly classified, will provide independent advice and recommendations on matters concerning science, technology, manufacturing, acquisition processes, and other topics of special interest to the DoW. The STIB will utilize contracted services to procure professional, analytical, and administrative services, to include the tasks of planning, preparation, execution, administrative support, logistics, documentation, and travel for STIB, Subcommittee and Parent Board meetings and conferences.			
FY 2026 to FY 2027 Increase/Decrease Statement: Decrease in FY 2027 is due to a reduction in contract services and travel.

Note

New Start (Y/N): No

A. Mission Description and Budget Item Justification

The Department of War's (DoW) priorities regarding safety and occupational readiness are comprehensive and revolve around the core principle of taking care of its people to ensure a resilient, ready, and lethal Total Force. This effort supports that core principle, and its requirements are aligned to DoW/Federal strategic direction, including the DoW Digital Modernization Strategy, DoW and Federal Data Strategies, the DoW Safety and Occupational Health (SOH) Strategic Plan, and other priorities, including Warfighter Performance Optimization and enterprise-wide data analytics.

To protect the force, preserve combat power, and multiply readiness, we must provide sufficient resources to integrate safety, occupational health, and warfighter performance optimization into Department operations and investments in our weapons systems, platforms, and infrastructure. Ensuring the safety and occupational readiness of our workforce requires an enduring culture of safety-mindedness with consistent and standardized mishap, near-miss, and hazard reporting. According to the 2020 National Commission on Military Aviation Safety (NCMAS) report, this begins with a centralized system and processes with which to gather, synthesize, and report Safety information at all levels. In addition to the NCMAS report, Section 184 of Title 10, United States Code Service (10 USC 184) directs the Department to establish uniform data collection standards and a centralized collection system and repository for mishap information. Currently, the DoW collects SOH information from disparate, incomplete, and often overlapping sources - a process that hinders opportunities for timely and in-depth trending and analysis to support Department-wide risk management and mishap prevention efforts. Many of the DoW Components, including some of the Combatant Commands, do not have an adequate safety information management system to enter, track, or manage mishaps, near-misses, or hazards. Without such a system and process, the Department is unable to effectively identify and analyze trends across the Department, share lessons learned, and track corrective actions in response to recommendations. This effort addresses the Congressional requirements and fulfills capability gaps through modernization of the Total Force Risk Reduction (TFRR) (formerly Force Risk Reduction or FR2) tool to a safety information case management system. The system will be based on the Department's safety business processes and data standards, which are being incorporated into Department of War Instruction (DoWI) 6055.07 "Mishap Notification, Investigation, Reporting, and Record Keeping." A central SOH information management system based on the safety business processes and data standards will be available for all DoW Components, providing the capability to those Components without an existing automated tool. It will continue to consolidate all SOH information serving as the Department's authoritative repository for standardized, enterprise-wide data, and ensuring leaders have current, accurate, and actionable safety information and insights to forecast, mitigate, and prevent future mishaps, injuries, and occupational illnesses, and to drive safety innovation and modernization. Additionally, these analytics serve as a basis for creating standardized, enterprise-wide metrics for warfighter performance, allowing the Department to connect safety outcomes directly to operational readiness and lethality. Expanding TFRR functionality is the most efficient and effective approach to providing a compliant centralized safety collection and information management capability and repository.

Oversight of the Department's safety enterprise requires a deliberate data informed focus and priority commensurate with the Department's overall governance approach.			
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
Title: Force Safety & Occupational Health (FSOH) Description: Modernize the Total Force Risk Reduction (TFRR) tool with a safety information case management tool for entering, tracking, and managing the lifecycle of mishaps, near misses, and hazards from identification through investigation to implementation of recommendations for mitigation, as well as the sharing of lessons learned and best practices. Incorporate warfighter performance optimization domain data to standardized, enterprise-wide metrics to enhance readiness, prevent injuries, accelerate recovery, and reduce high-risk behaviors. FY 2026 Plans: FY 2026 plans supports the Department's commitment to a centralized, standardized, and actionable safety and occupational health information repository, driving long-term risk mitigation and operational resilience. The TFRR tool addresses gaps in mishap, near-miss, and hazard reporting, which are essential for protecting the lives, health, and welfare of the DoW workforce. This request also expands RDT&E funding to target priority occupational and environmental health and safety risk management and warfighter performance optimization opportunities informed by data analysis and insights. FY 2027 Plans: FY 2027 request provides continued support for the successful management of the TFRR tool while funding the final phase of modernizations begun in FY 2026 to enhance the ability to forecast, mitigate, and prevent future mishaps, injuries, and occupational illnesses, directly contributing to operational readiness. This request also supports the expansion of warfighter performance data to inform prioritization of risk management, performance optimization, and occupational readiness efforts. FY 2026 to FY 2027 Increase/Decrease Statement: FY 2026 to FY 2027 decrease reflects a reduction in contract services.		1.850	1.690

A. Mission Description and Budget Item Justification

The FY 2026 spend plan amount for Research, Development, Test & Evaluation, Defense-Wide for Cyber Resiliency & Cybersecurity Policy includes \$23,899 thousands of discretionary and \$60,000 thousands of mandatory (reconciliation) for a total of \$83,899 thousands.

This program supports the Department's initiatives to Revive the Warrior Ethos, Rebuild Our Military, and Reestablish Deterrence.

The Cyber Resiliency & Cybersecurity Policy (CR&CP) program supports the efforts of the Office of the Under Secretary of War, Acquisition and Sustainment (OUSW A&S) to cyber harden priority Department of War (DoW) missions and enhance the cyber lethality of the Joint Force. The CR&CP program enables the Cyber Warfare Directorate (CWD) to conduct Capability Portfolio Management to enhance the Department's capability to cyber harden priority DoW missions, enabling weapon systems, supporting DoW Installation Critical Infrastructure (ICI) and defend supporting Commercial Critical Infrastructure (CCI) from cyber-attack.

The CR&CP program funds Cybersecurity Supply Chain Risk Management (C-SCRM) efforts that implement DoW priorities and Congressional direction aligned with enhancing C-SCRM. In addition, this program funds initiatives that enhance the security of the Department's sensitive unclassified information residing within the Defense Industrial Base (DIB) and enhance the cybersecurity of priority DoW production lines. The CR&CP program also funds Capability Portfolio Management for Joint Cyber Capabilities used by the Cyber Mission Force.

This program funds the following critical efforts:

1) Cybersecurity for Weapon Systems and Critical Infrastructure: Conduct Capability Portfolio Management and lead the Department's Strategic Cybersecurity Program (SCP) to continue critical weapon systems and ICI cybersecurity assessments and mitigations and cyber harden priority Department of War (DoW) missions. Office of Assistant Secretary of War for Acquisition (ASW(A))/Cyber Warfare Directorate (CWD) Cyber Resiliency efforts are aligned with the following initiatives:

Assess:

- Conduct mission level cyber risk assessments for priority War Missions in support of Combatant Commands (CCMDs). Conduct enhanced mission level cyber risk assessments/wargames for the Missile Defense Mission and key supporting missions in support of Golden Dome for America. Conduct supporting tabletop exercises (TTXs).

- Conduct Cyber Risk Assessments for ICI and CCI in support of CCMDs and asset owners. - Conduct Integrated Sensing Monitoring Experiments (ISMx) and Sensing and Monitoring Pilots to assess the performance of Cybersecurity Sensing and Monitoring capabilities for WS and ICI. Inventory / Prioritize: - Develop, sustain, and employ the Cyber Risk Mitigation Tool (CRMT), an Enterprise-wide decision support tool for tracking and prioritizing cyber vulnerability assessments and mitigations. Develop CCMD specific cyber risk scorecards/risk matrices. - Prioritize and advocate for Cyber Risk Mitigations based upon mission analysis conducted by program offices, the National Security Agency (NSA), Cyber Risk Assessment teams, USCYBERCOM (USCC), and other cybersecurity professionals. Mitigate: - Advocate and oversee cyber risk mitigation funding for priority ICI and commercial critical infrastructure (CCI) supporting Golden Dome for America based on a prioritized list of assets. - Advocate for and oversee cyber risk mitigation funding aligned with cyber hardening priority DoW production lines. - Advocate for and oversee cyber risk mitigation funding aligned with cyber hardening priority USTRANSCOM missions. - Conduct SCP POAM periodic updates with Services and Agencies for prioritized DoW weapon systems. Enhance Governance: Conduct 4-Star Level Integrated Acquisition Portfolio Reviews (IAPRs) that address cybersecurity / cyber hardening / cyber defense for priority DoW missions. 2) Weapon System Cyber Security – CCI Cybersecurity // Cybersecurity Supply Chain Risk Management (C-SCRM): In collaboration with the Department of War Chief Information Office (DoW CIO), conduct the C-SCRM in support of FY2019 NDAA Section 889, and Title 10 USC Section 3252 and Section 4713. Partner with other DoW organizations and the DIB / CCI sectors to demonstrate / assess cost-effective and scalable cybersecurity services that augment and/or enhance existing commercial capabilities and services. Focus on identifying options and assessing the efficacy of cybersecurity services for small-to-medium sized DIB / CCI companies that are critical to the DoW supply chain but lack sufficient cybersecurity capabilities to protect CUI, data integrity, and availability of DIB supply chain. 3) Capability Portfolio Management for Cyberspace Operations: Conduct Capability Portfolio Management of the Joint Cyber Capabilities employed by Cyber Mission Force in collaboration with USCYBERCOM. Improve cyber lethality of the capabilities of Joint Cyber Warfighting Architecture (JWCA) supporting offensive and defensive cyberspace operations and improve the readiness of the Cyber Operations Forces to operate in a cyber-contested environment, including the ability to Defend the Homeland and key capabilities such as Golden Dome. Work across the Department to reform acquisition processes and accelerate the adoption of modern software practices to deliver warfighting capability at the speed of need.

A. Mission Description and Budget Item Justification

The Cyber Resiliency & Cybersecurity Policy (CR&CP) program supports the efforts of the Office of the Under Secretary of War, Acquisition and Sustainment (OUSW A&S) to cyber harden priority Department of War (DoW) missions and enhance the cyber lethality of the Joint Force. The CR&CP program enables the Cyber Warfare Directorate (CWD) to conduct Capability Portfolio Management to enhance the Department's capability to cyber harden priority DoW missions, enabling weapon systems, supporting DoW Installation Critical Infrastructure (ICI) and defend supporting Commercial Critical Infrastructure (CCI) from cyber-attack.

The CR&CP program funds Cybersecurity Supply Chain Risk Management (C-SCRM) efforts that implement DoW priorities and Congressional direction aligned with enhancing C-SCRM. In addition, this program funds initiatives that enhance the security of the Department's sensitive unclassified information residing within the Defense Industrial Base (DIB) and enhance the cybersecurity of priority DoW production lines. The CR&CP program also funds Capability Portfolio Management for Joint Cyber Capabilities used by the Cyber Mission Force.

This program funds the following critical efforts:

1) Cybersecurity for Weapon Systems and Critical Infrastructure: Conduct Capability Portfolio Management and lead the Department's Strategic Cybersecurity Program (SCP) to continue critical weapon systems and ICI cybersecurity assessments and mitigations and cyber harden priority Department of War (DoW) missions. Office of Assistant Secretary of War for Acquisition (ASW(A))/Cyber Warfare Directorate (CWD) Cyber Resiliency efforts are aligned with the following initiatives:

Assess:

- Conduct mission level cyber risk assessments for priority Defense Missions in support of Combatant Commands (CCMDs). Conduct enhanced mission level cyber risk assessments/wargames for the Missile Defense Mission and key supporting missions in support of Golden Dome for America. Conduct supporting tabletop exercises (TTXs).
- Conduct Cyber Risk Assessments for ICI and CCI in support of CCMDs and asset owners.
- Conduct Integrated Sensing Monitoring Experiments (ISMX) and Sensing and Monitoring Pilots to assess the performance of Cybersecurity Sensing and Monitoring capabilities for WS and ICI.

Inventory / Prioritize:

- Develop, sustain, and employ the Cyber Risk Mitigation Tool (CRMT), an Enterprise-wide decision support tool for tracking and prioritizing cyber vulnerability assessments and mitigations. Develop CCMD specific cyber risk scorecards/risk matrices.

Title: Cyber Resiliency & Cybersecurity Policy		38.755	13.899	30.746
Description: FY 2025 Accomplishments:				
Conduct Cyber Risk Assessments in support of Combatant Commands (CCMDs). Mission Level Cyber Risk Assessments (MLCRA): - In response to a request from the USSPACECOM DCOM, observed USSPACECOM EXERCISE APOLLO GRIFFIN (AG) 25-2. Briefed CDR and DCOM on "cyber risk" to USSPACECOM missions and provided DCOM readout on cyber components of AG-25-2.

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
- Developed After Action Report (AAR), and Out Brief for the Mission Resilience III Wargame conducted in support of U.S Northern Command (USNORTHCOM). Briefed findings to senior leaders at USNORTHCOM, USSPACECOM, USCYBERCOM, USSTRATCOM, and USINDOPACOM. MR III Wargame findings shaped and influenced enhanced cyber wargame funding for Golden Dome for America. - In support DoW Cyber Defense Command, planned and executed Cloud TTX I, identifying key challenges for Cloud Providers to operate in a contested cyberspace environment. Cyber Risk Assessments: - Completed six CRAs for Mission Partners across the DoW including a high priority special request from USINDOPACOM and initiated planning for DoW Installation Critical Infrastructure (ICI) Cyber Risk Assessments in support of CCMDs. In support of USINDOPACOM, conducted in depth CRA of Joint Base Pearl Harbor / Hickam and Honolulu International Airport. Conducted CRA of multiple DoW munitions production lines and informed development of production line cyber risk mitigation plan. Integrated Sensing and Monitoring Experiments: - Planned and executed two Integrated Sensing and Monitoring Experiments (ISMx) in collaboration with key mission partners. ISMX findings highlighted areas for investment to improve Department's capability for conducting cybersecurity sensing and monitoring on priority mission systems. Inventory/Prioritize: - In consultation with the services, JS, CCMDs, combat support agencies, refined the requirements and desired functionality for the Cyber Risk Mitigation Tool (CRMT) into categories of strategic, operational, and tactical. - Advanced application of the Joint Risk Assessment Methodology to assessing cyber risk to priority DoW missions. Conducted Cyber Risk Assessment Sprint in collaboration with USSPACECOM and DoW CIO. Mitigate: - In support of Executive Order 14186 developed and refined Golden Dome Cybersecurity Initiative in collaboration with CAPE, resulting in \$485M in enhanced cyber risk assessment and cyber risk mitigation in support of the Golden Dome initiative. - In support of SecWar cybersecurity priorities, matured oversight of the Strategic Cybersecurity Program through stand up off the SCP Executive Steering Group and conducted 21 Strategic Cybersecurity Program (SCP) 180 Day POAM Updates with Army, Navy, Air Force, Space Force, and MDA. - Developed Big Beautiful Bill Reconciliation inputs to enhance cyber hardening of DoW production lines and priority USTRANSCOM infrastructure.

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
-Briefed Joint Logistics Board on findings of the Cyber Defense of the Global Logistics Mission IAPRs and drove decisions on key cyber risk mitigation actions. - Developed and coordinated the Strategic Cybersecurity Program (SCP) Policy for issuance. - Developed and coordinated plan for annual report to Congress on the SCP covering FY24. - Supported development of Initial Capabilities Document (ICD) for cybersecurity sensing and monitoring at scale on key cyber terrain. - Developed Framework for applying Zero Trust Principles to WS and ICI. - Continued oversight of the \$250 million in funding for DoW ICI Cyber Hardening. - Supported Cyber Supply Chain Risk Management initiatives across the Department including support to implementation of Section 889/1656 Prohibitions on covered information and communication technologies for programs in acquisition and sustainment. - Provided written and oral testimony in support of Maryland Senate Bill 871, which created standards for enhancing the cybersecurity posture of water and waste water providers in the State of Maryland (MD), which support 11 important DoW installations. - Conducted Critical Infrastructure Cybersecurity Engagement with MD National Guard in support of State of Maryland aligned with Water Cybersecurity. Enhance Governance: - Supported multiple OUSW(A&S) Integrated Acquisition Portfolio Reviews (IAPR) with cybersecurity contributions as a factor in determining overall acquisition risk. - Conducted Phase II of Cyber Defense of the Global Logistics Mission IAPR in collaboration with USTRANSCOM and briefed results to 4-Star Level forum chaired by the USW(A&S). Weapon System Cyber Security - Cybersecurity Supply Chain Risk Management(C-SCRM): In support of SecWar cybersecurity priorities, enhanced implementation of DoW C-SCRM with development and coordination of a Section 3252 exclusion package and refinement of Section 3252 removal and exclusion processes. Capability Portfolio Management for Cyber Capabilities: - Conducted Capability Portfolio Management for Joint Cyber Warfighting Capabilities in accordance with DoWD 7045.20. Informed the DepSecWar directed Counter C5ISR-T Integrated Acquisition Portfolio Review (IAPR) by providing cyber related inputs including DOTMLPF-P analysis. - Continued to provide Principal Staff Assistant (PSA) oversight to USCYBERCOM Component Acquisition Executive as the command executes joint cyberspace operations capabilities System of Systems (SoS) Systems Engineering & Integration (SE&I) Authority delegated to the command through an Acquisition Decision Memorandum in July 2023.

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2025	FY 2026	FY 2027
- In support of USCYBERCOM, enhanced acquisition oversight of the Joint Cyber Warfighting Architecture (JWCA), DoW's only "Cyber Lethality" Platform (\$7.7 FYDP), which is employing the Software Acquisition Pathway (SWP) at scale. - Conducted Cyber Defense AI Pilot in collaboration with MARFORCYBER to evaluate application of leading-edge AI capabilities in Experiment IRON LENS. FY 2026 Plans: Assess: Conduct Cyber Risk Assessments in support of CCMDs: - Mission Resilience (MR) Games: Complete MR IV with a Focus on Missile Defense in support of Golden Dome for America. Develop enhanced Cyber Attack/Cyber Defense Scenarios for Golden Dome. Prepare for MR V with CCMDs. - Cyber Risk Assessments (CRAs): Perform multiple CRAs for Mission Partners across the DoW in support Department priorities, with an enhanced focus on Missile Defense and Production Lines Installation Critical Infrastructure (ICI) for priority DoW programs. Inventory/Prioritize: Cyber Risk Information Management: - Achieve full operating capacity (FOC) on the JWICS instance of the CRMT. - Focus on adding Service datasets, vulnerability data, threat reporting, and other datasets to meet stakeholder needs, as appropriate. - Fully integrate CCMA impact data in CRMT at all classification levels that are FOC. - Expand use and integration of CRMT at strategic (JS, SCP), operational (MLCRA, CCMDs), and tactical levels (services, and program offices). - Refine impact and risk models to ensure that data collected is accurate, agile, and reflects changes to priorities and current senior leader strategies. Complete model to SCP prioritization of mission impact to select systems for SCP assessment and integrate into the enterprise tool, CRMT. - Develop tailored cyber risk scorecards/dashboards for the Missile Defense Mission in support of Golden Dome for America. Mitigate: - Lead the Department's Strategic Cybersecurity Program (SCP) to continue critical weapon systems and defense critical infrastructure cybersecurity assessments and mitigations. - Conduct cybersecurity posture sustainment for priority C2 and data processing nodes aligned with Golden Dome. - Provide oversight of the mitigation of cyber vulnerabilities and the modernization of control systems in ICI on DoW bases that support Golden Dome.

A. Mission Description and Budget Item Justification

The Defense Civilian Training Corps (DCTC) program was established in FY 2023 and funded under the Department of Defense Acquisition Workforce Development Account (DAWDA). DCTC is aligned under the Office of Under Secretary of War for Acquisition and Sustainment (OUSW(A&S)). The DCTC program is directed by 10 U.S.C. Ch 113 with the purpose to prepare selected students for public service and meet critical skill gaps in acquisition, digital and critical technologies, science, engineering, finance, and other civilian occupations determined by the Secretary of War. Chapter 113 requires the Secretary of War, acting through the Under Secretary of War for Acquisition and Sustainment (USW(A&S)), to establish units at any accredited civilian educational institution authorized to grant baccalaureate degrees.

Using Chapter 113 direction and FY 2023 and FY 2024 DCTC appropriated funding, both an add by Congress (the PB23 and PB24 request did not include a request for DCTC funding), the USW(A&S) deployed in August 2023 a pilot two-year (junior and senior) ROTC-like program preparing future acquisition and sustainment civilians, with DCTC pilot units at four universities. The first DCTC cohort was comprised of 85 undergraduate scholars who started DCTC in August 2023 and graduated May 2025. The second DCTC cohort is comprised of 100 undergraduate scholars (juniors) who graduate in May 2026. The third cohort is comprised of 100 participants and will graduate May 2027. The DCTC pilot program is completed and ends with graduation of the third cohort. The DCTC program provides scholar education and development through DoW-context undergraduate classes and DoW real-world challenge projects sponsored by DoW field organizations which also host project-based summer internships with mentoring. DCTC classes cover DoW mission, structure and functions, the defense acquisition system and functions, innovation and technical literacy. The DCTC program includes completion of scholar security clearances and use of hiring authorities at graduation for immediate placement in jobs at DoW organizations. DCTC strengthens the DoW talent (supply-side) pipeline with new-hire DoW civilians, prepared with a high state of readiness and the warfighting acquisition mission ethos needed to achieve the Secretary of War priorities to Rebuild the Military and Reestablish Deterrence.

A. Mission Description and Budget Item Justification

The Defense Civilian Training Corps (DCTC) program is directed by 10 U.S.C. Ch 113 with the purpose to prepare selected students for public service and meet critical skill gaps in acquisition, digital and critical technologies, science, engineering, finance, and other civilian occupations determined by the Secretary of War. With the requested FY 2026 funding, DoW will continue the two-year DCTC acquisition and sustainment-focused education and development program, piloting with the four universities and testing model improvements.

A. Mission Description and Budget Item Justification

Current national security challenges impose varied and unpredictable demands on the Department of War's munitions inventories. The requirement of the Department is to produce rapidly and at scale, a reliable supply of diverse weapons systems and supplies to ensure operational readiness amidst unpredictable volatile global events. A rigid, program-by-program approach to funding and production is insufficient to meet these diverse and evolving needs, highlighting the necessity for a more flexible and holistic acquisition strategy. This program directly addresses this shortfall by advancing promising manufacturing technologies and processes to improve operational readiness across the Joint Force. By accelerating the delivery of critical weapon systems through novel designs, innovative production techniques, and advanced manufacturing, this program is a key component of the Department's strategy to rebuild our military capabilities and re-establish credible deterrence.

This program identifies and pilots ways to build and maintain surge production capacity and resilience for critical weapons. Additionally, it draws lessons from novel designs, innovative production techniques, advanced manufacturing, affordable mass systems, and a modular open system approach. To execute the National Defense Strategy's (NDS) goal of allied industrial integration, this program develops interoperable manufacturing technologies and processes. These advancements create tangible pathways for allied and partner nations to co-produce critical capabilities, accelerating fielding timelines and strengthening our collective defense posture. The efforts will include scalable pilots that further the Acquisition Transformation Strategy.

This program develops and implements policy, procurement, and production best practices to build enduring industrial capacity. It supports the NDS's drive to supercharge the U.S. Defense Industrial Base to modernize and strengthen our military to maintain a competitive edge. The analysis and assessment of flexible and scalable manufacturing approaches will further enable the Office of the Undersecretary of War for Acquisition & Sustainment (OUSW(A&S)) to mobilize the defense and commercial industrial base and arm U.S. troops, as well as allies and partners so they can expand their role in burden-sharing. These efforts support the mission of the future Wartime Production Unit to rebuild the U.S. defense industry to be able to maintain and surge American manufacturing capability and capacity and to deliver weapons at the speed of relevance.

A. Mission Description and Budget Item Justification

To modernize our defense industrial base, this PE funds development of technologies, processes, and analytical groundwork needed to accelerate weapon system delivery. This includes funding for advanced manufacturing pilots, developing best practices for scalable production, and creating a more resilient and integrated industrial network with our allies.

This Program Element delivers three main categories of outputs:

1. Surge Production Capacity and Resilience: Builds scalable and resilient production capacity to meet rapidly evolving national security needs. For example:

- Piloting production techniques to enable rapid, scalable manufacturing.
- Applying lessons from novel methods to legacy manufacturers to increase throughput.
- Mobilizing industry to produce common parts, reducing inefficiencies and strengthening supply chains.

2. Advanced Manufacturing and Process Innovation: Identifies innovative technologies to improve efficiency and accelerate deliveries. For example:

- Completing the Pathfinding Innovation pilot to detect and mitigate production failures.
- Integrating non-traditional suppliers to alleviat supply chain bottlenecks.
- Modernizing production processes with flexible, scalable manufacturing approaches.

3. Industrial Base Analysis, Policy, and Best Practices: Funds expert analysis and strategic planning needed to strengthen the defense industrial base. For example:

- Recommending new policies for procurement and production.
- Assessing different manufacturing approaches to find the most flexible and scalable options.
- Developing the strategic framework for the future Wartime Production Unit.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Assessments and Analyses on Advanced, Flexible, and Scalable Manufacturing Approaches	-	5.458	6.215
FY 2026 Plans: Pathfinding Innovation: Activity on advanced manufacturing applications and pilot partnerships. Identify pathfinder projects for initial award, to be executed through FY 2027.

Appropriation/Budget Activity 0400 / 6	R-1 Program Element (Number/Name) PE 0606775D8Z / <i>Joint Production Accelerator Cell (JPAC)</i>	Project (Number/Name) 780 / <i>Joint Production Accelerator Cell</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
Affordable Mass: Establish a plan for a government reference architecture and pilot an exemplary MOSA-compliant interface. Identify pathfinder projects for initial award, to be executed through FY 2027. FY 2027 Plans: Continue and expand initiatives that directly support NDS priorities. These plans focus on delivering capabilities faster and more effectively by strengthening both the domestic industrial base and our network of allies and partners. Pathfinding Innovation: Complete pilot on proactive failure analysis detection and mitigation. This effort leverages lessons learned and AI to predict and address common production failure modes to better assess failures/defects during processing before they are discovered in the finished product during acceptance testing – saving time and money during production. Affordable Mass: Complete pilot to examine novel manufacturing methods and processes that enable production of weapons at scale and speed. Apply these lessons learned to legacy manufacturers to increase their production throughput. The pilot will include an assessment of sources of savings in affordable mass systems, including looking at novel processes and manufacturing methodologies, as well as potential common parts, materials, components, or subsystems and how this increases their ability to produce quickly at scale. These insights will aid surge production and seek to find lessons that can be applied to higher end systems. Leveraging Non-traditional Suppliers to Mitigate Supply Chain Constraints: Rapid increases in production demand for munitions and other critical systems have exposed capacity constraints and bottlenecks at the sub-tier supplier level. This initiative seeks to alleviate these chokepoints by identifying non-traditional suppliers for materials and components essential to both U.S. and foreign-made systems in our inventory. Mobilizing Industry to Produce Common Parts or Sub-Systems: The proliferation of unique, system-specific components creates production inefficiencies, increases costs, and heightens the risk of obsolescence due to limited demand. To counter this, the Department will drive a strategic shift toward component commonality. The Department will identify critical parts suitable for standardization and map production capacity for them across the Defense and Organic Industrial Bases (DIB/OIB), thereby creating more resilient and efficient supply chains. FY 2026 to FY 2027 Increase/Decrease Statement: FY 2026 to FY 2027 increase of \$757 thousand is to continue to identify and pilot ways to build and maintain surge production capacity and resilience for critical weapons.

934: <i>Sustainment Transition Capabilities</i>	0.000	-	30.000	29.408	-	29.408	29.633	-	-	-	-	-

A. Mission Description and Budget Item Justification

FY 2022 NDAA Section 142 requires the Department to transition Sustainment functions from the F-35 Joint Program Office to the Military Departments (MILDEPs) of the Air Force and Navy no later than end of 2027. The Under Secretary of War (USW) Acquisition & Sustainment (A&S) Report to Congress dated 30 January 2023, states that the MILDEPs will achieve Initial Operating Capability (IOC) by end of 2027 to act as the Inventory Control Point (ICP) and reach Full Operating Capability (FOC) by end of 2029. Additionally, for NDAA Section 142 to effectively occur, FY 2024 NDAA Section 1005 mandates that the Department achieve an unmodified audit opinion by the end of 2028.

To achieve both statutory requirements and allow the MIPDEPS to assume ICP control by the end of 2027, the Department requires a Logistics Information Technology (LogIT) network that will facilitate necessary data exchange via Department standard Defense Logistics Management Standard (DLMS) transactions with the F-35 prime vendor systems. Once the network is established the Departments' financial and business systems will have enabled capability for full asset visibility, financial transactions, and Inventory Control Points (ICPs) accountability and functional operations. This investment will deliver that data architecture design, implementation, and capability which will provide the MILDEPs with the necessary asset visibility and controls to assume full ICP responsibilities from the prime vendors. F-35 spares are currently maintained within the current Prime vendor databases. The vendor did not use established standardized Department of War supply and inventory control processes or systems when the F-35 program originated. As a result, this prevents the Department from easily capturing spares data and accountability for audit, capitalizing the parts and assuming full ICP responsibilities from the prime vendors.

The establishment of the data architecture and exchange will allow the Department to establish total automated asset visibility and accountability of the spares pool, begin the transition of the spares inventory to the MILDEPs as ICPs for lifecycle management, and to execute daily supply chain management of the spares pool as ICPs. This transition will be accomplished through establishing provisioning and cataloging actions of the F-35 spares, estimated in value around \$15 Billion. Provisioning and cataloging the spares will convert the spares to National Stock Numbers (NSNs) facilitating their integration into the Working Capital Fund and Defense Logistics Agency's (DLAs) Warehouse Management System (WMS) and other Department Accountable Property Systems of Record for worldwide inventory management and asset visibility. The outcome will provide the MILDEPs with necessary data elements to accomplish demand planning, procuring and repairing spares.

The RDT&E funds will be used to ensure the necessary data architecture is designed and implemented to automate data between the prime vendors and the Department's business systems. The Deputy Chief Finance Officer (DCFO) requires a mandated milestone of October 2026 for Services to financially report on the program to ensure two years of clean data in support of an unmodified opinion two years later in October of 2028, as mandated by FY 2024 NDAA Section 1005. Additionally, the Secretary of War has mandated accountability of all contractor possessed property by the end of FY 2026. To accomplish this mandate, the design and production of the data architecture will be built early in 2026 for testing and validation. Follow on funding in FY 2027 and FY 2028 will drive incremental development

Appropriation/Budget Activity 0400: <i>Research, Development, Test & Evaluation, Defense-Wide I BA 6: RDT&E Management Support</i>	R-1 Program Element (Number/Name) PE 0606829D8Z I <i>Sustainment Transition Capabilities</i>
--	--

of data pipelines to facilitate FY 2022 NDAA Section 142 ICP transition to the MILDEPs (i.e. linking requisitions within industry systems to the MILDEPS so they can perform ICP functions).

Note: The program will use both RDT&E and Procurement funding to accomplish the program requirements to meet FY 2022 NDAA Section 142 implementation schedules and NDAA Section 1005 mandates. Procurement funding will be used to support the program requirement for FY 2022 NDAA Section 142 implementation.

The Office of the Secretary of War Procurement, Defense-Wide P-5 for OUSW(A&S) - Procurement Programs captures the programs procurement requirement needs to complete the full funding to complete both: FY 2022 NDAA Section 142 implementation schedule and FY 2024 NDAA Section 1005 mandates. The Procurement dollars will fund the technical data needed to support the aforementioned Provisioning and Cataloging of the spares to enable the MILDEPs to perform their ICP functions of demand planning and procuring the parts, as well as create NSNs for ingestion into Department systems such as DLA's WMS to provide inventory asset visibility.

A. Mission Description and Budget Item Justification

FY 2022 NDAA Section 142 requires the Department to transition Sustainment functions from the F-35 Joint Program Office to the Military Departments (MILDEPs) of the Air Force and Navy no later than end of 2027. The Under Secretary of War (USW) Acquisition & Sustainment (A&S) Report to Congress dated 30 January 2023, states that the MILDEPs will achieve Initial Operating Capability (IOC) by end of 2027 to act as the Inventory Control Point (ICP) and reach Full Operating Capability (FOC) by end of 2029. Additionally, for NDAA Section 142 to effectively occur, FY 2024 NDAA Section 1005 mandates that the Department achieve an unmodified audit opinion by the end of 2028.

To achieve both statutory requirements and allow the MIPDEPS to assume ICP control by the end of 2027, the Department requires a Logistics Information Technology (LogIT) network that will facilitate necessary data exchange via Department standard Defense Logistics Management Standard (DLMS) transactions and the F-35 prime vendor systems. Once the network is established the Departments' financial and business systems will have enabled capability for full asset visibility, financial transactions, and Inventory Control Points (ICPs) accountability operations. This investment will deliver that data architecture design, implementation, and capability which will provide the MILDEPs with the necessary asset visibility and controls to assume full ICP responsibilities from the prime vendors. F-35 spares are currently maintained within the current Prime vendor databases. The vendor did not use established standardized Department of War supply and inventory control processes when the F-35 program originated. As a result, this prevents the Department from easily capitalizing the parts and assuming full ICP responsibilities from the prime vendors.

The establishment of the data exchange will allow the Department to begin the transition of the spares inventory into the ICPs for lifecycle management. This transition will be accomplished through establishing provisioning and cataloging actions of the F-35 spares, estimated in value around \$15 billion. Provisioning and cataloging the spares will convert the spares to National Stock Numbers (NSNs) facilitating their integration into the Defense Logistics Agency's (DLAs) Warehouse Management System (WMS) for worldwide inventory management and asset visibility. The outcome will provide the MILDEPs with necessary data elements to accomplish demand planning, procuring and repairing spares.

The RDT&E funds will be used to ensure the necessary data architecture is designed and implemented to automate data between the prime vendors and the Department's business systems. The Deputy Chief Finance Officer (DCFO) requires a mandated milestone of October 2026 for Services to financially report on the program to ensure two years of clean data in support of an unmodified opinion two years later in October of 2028, as mandated by FY 2024 NDAA Section 1005. To accomplish this mandate, the design and production of the data architecture will be built early in 2026 for testing and validation.

Follow on funding in FY 2027 and FY 2028 will drive incremental development of data pipelines to facilitate FY 2022 NDAA Section 142 ICP transition to the MILDEPs (i.e. linking requisitions within industry systems to the MILDEPS so they can perform ICP functions).

Remarks			
D. Acquisition Strategy			
- The Department has already identified a high level Operational Overview and System Level Overview to build data pipelines from industry data sources to Enterprise requirements via the Defense Automated Addressing System (DAAS) as translator and broker to support audit; additional analysis is continuing to determine if the same architecture will support sustainment transition and ICP to the MILDEPs. - An Other Transactional Authority (OTA) Agreement is awarded to deliver definitization of the data architecture as a prototype to include identifying necessary data elements to support Defense Logistics Management Standard (DLMS) transactions within DAAS, maximizing the use of existing pipelines, establishing data delivery, and testing implementation; additionally MILDEPs and DLA have stated they have their own vehicles to secure additional resourcing to update their relative business architecture; - Capability to see assets and financial transactions in support of audit will be delivered first in incremental, Minimum Viable Products (MVPs); - Later MVPs will be agreed upon and delivered to support sustainment transition to the MILDEPs as ICP, likely in 2027/2028 after audit financial reporting requirements are developed, tested and delivered. - Technical Interchange Meetings (TIMs) with industry are in progress with three completed in FY2025 to validate data deliver requirements and sourcing of the necessary data elements, as well as cost and schedule expectations. - Additional Program Increment Planning sessions and completion of the industry TIMs will validate the use of DAAS and inform MILDEPs on whether additional work is needed within their Service enterprises to ensure data is communicated to necessary systems to enable audit and sustainment transition. - Follow on investment in 2027 and 2028 will fund any necessary additional work within the Defense Logistics Agency or the MILDEPs to complete the architecture.

Note New Start (Y/N): No A. Mission Description and Budget Item Justification This program supports Department of War (DoW) Data Strategy, specifically enabling next-generation approaches to protect data as it is a strategic asset. The Defense Operations Security Initiative (DOSI) establishes and leads the Department's next-generation Operations Security (OPSEC) capability development and affiliated investment strategy. Investments support DoW's current and emerging OPSEC capability gaps, including countering advances in non-U.S. Intelligence, Surveillance, and Reconnaissance (ISR) capabilities and denying the understanding of U.S. capability, capacity, readiness, and critical technology and information from adversaries. These investments spur and accelerate Department innovation and preserve U.S. technology superiority. DOSI analysis and engineering lead the community's ability to sustain and maximize technology advantage as they are transitioned to Service and Agency programs for sustainment, maintenance, and capacity programming. Test and evaluation analyses establish measure and countermeasure effectiveness in current and emerging operational environments.												
B. Program Change Summary (\$ in Millions)				FY 2025	FY 2026	FY 2027 Base	FY 2027 OOC	FY 2027 Total

A. Mission Description and Budget Item Justification												
DOSI establishes and leads the Department's next-generation OPSEC capability development and affiliated investment strategy. Investments support DoW's current and emerging OPSEC capability gaps, including countering advances in non-U.S. ISR capabilities and denying the understanding of U.S. capability, capacity, readiness, and critical technology and information from adversaries. These investments spur Department innovation and preserve U.S. technology superiority. DOSI analyses and engineering activities lead the community's ability to sustain and maximize technology advantages as they are transitioned to Service and Agency programs for sustainment, maintenance, and capacity programming. Results of tests and evaluations enable the community to identify OPSEC measure and countermeasure effectiveness in current and emerging operational environments.												
B. Accomplishments/Planned Programs (\$ in Millions)									FY 2025	FY 2026	FY 2027	
Title: Defense Operations Security Initiative									3.046	2.458	-	
Description: RDT&E investments denied or complicated the ability of our adversary to use Artificial Intelligence (AI) to understand U.S. capabilities, capacity, readiness, and critical technology and information. Past investments accelerated cutting-edge Department innovation toward preserving U.S. information and technology superiority. DOSI's analyses and engineering activities enabled the OPSEC community's ability to sustain and maximize technological advantages.												
FY 2026 Plans:												
- Leverage the Applied Research Laboratory for Intelligence & Security (ARLIS) to conduct analysis of foreign ISR capabilities, develop risk mitigation measures, and support the proliferation of coordinated OPSEC measures.												
- Support Research and Development efforts of cutting-edge DoW Intelligence Community Programs of Record and Science and Technology efforts by identifying and assessing adversary threats, proposing mitigation measures, and developing an information system that facilitates OPSEC monitoring.												
- Continue to oversee research, development, and testing on next-generation capabilities that counter foreign ISR capabilities and deny adversaries' understanding of U.S. capability, capacity, and readiness.												
- Continue research, development, prototyping Analysis and testing on capabilities or processes that better enable the OPSEC community practitioners.

D. Acquisition Strategy			
The acquisition, management, and contracting strategy involves the following: • Adhere to guidance outlined in DoD 5000, Directive 7, Federal Acquisition Regulations (FAR), and FAR Supplement Policies and Procedures. • RDT&E OPSEC capabilities, systems, tools, products, and services are delivered through a disciplined yet agile process that ensures signature management and signature obfuscation capabilities are available for DoW components. • Sustain an acquisition process that is responsive and responsible to internal and external customers and stakeholders. • Continue to support the warfighter's need for capabilities that dominate today's dynamic, networked battlespace by providing strategy across the DoW for the planning and execution of OPSEC.

A. Mission Description and Budget Item Justification

This program provides programmatic and management support for biosurveillance activities and programs. Supports program Management and systems engineering activities for biosurveillance development activities. Supports iterative assessment and stakeholder coordination engagements. Resources establishment of the Biosurveillance Consortium. Activities will facilitate robust and continuous coordination across all Biosurveillance (BSV) stakeholders, including the Biosurveillance Program Group (BPG) and the Biodefense Council, to ensure alignment with Departmental priorities.

A. Mission Description and Budget Item Justification

Supports and enables Department initiatives to modernize legacy information technology (IT)-based systems, infrastructure, and supporting portfolio management tools and processes to achieve cost efficiency, mission effectiveness and improved IT investment management across the DoW Information Network (DoWIN). Provides technical studies and analysis to inform Department-wide strategies, policies, and investments for the enterprise information environment and business mission areas. Provides studies and analysis to inform and support modernization or replacement of disparate SNaP-IT, DITIP, and DITPR systems – which currently lead to data inconsistency – with a unified process based on detailed business process maps, system designs, and data dictionaries. The program delivers timely, accurate, and transparent information to leadership, enabling better decision-making. It enhances combatant command capabilities by analyzing major cloud initiatives, implementing DevSecOps practices for secure software development, improving network efficiency and resilience through assessments and recommendations, and conducting research to inform strategic objectives.

	FY 2025	FY 2026	FY 2027
Title: IT investments and modernization	0.000	4.294	6.416
FY 2026 Plans: Provide comprehensive IT systems engineering, optimizing portfolio management by addressing operational, economic, and technical factors. Perform studies and analysis for enterprise-wide initiatives (enterprise service adoption, cloud computing, DevSecOps) to increase DoWIN efficiency, effectiveness, and resilience while reducing technical debt. Conduct performance assessments, develop modernization plans, and provide investment recommendations to enhance network infrastructure and services, architectures, designs, and testing to standardize and automate secure configurations to improve security, increase access to mission applications, and enable resilient data centers and cloud services. Conduct research and analysis on improving IT investment efficiency across the DoW, exploring topics such as joint information dissemination, identity management, data management, artificial intelligence (AI)/machine learning (ML), cloud computing, and DevSecOps. Provide technical expertise through congressionally directed independent assessments and research projects related to critical IT areas, including: defense business systems; data and architecture; IT standards; IT category management; network

Note

New Start (Y/N): No

A. Mission Description and Budget Item Justification

Fifth-generation (5G) wireless networking is critical for U.S. national security and Joint Force modernization. The DoW is increasing warfighter lethality by accelerating the adoption of advanced, scalable, and resilient 5G networking and weapons systems capabilities, ensuring Joint operational effectiveness in contested electromagnetic operational environments.

The Secretary of War's 5G Wireless Networking Cross-Functional Team (5G CFT), mandated by Congress, accelerates 5G adoption across the DoW. The 5G CFT coordinates DoW 5G policy, research, and acquisition activities, supporting National Defense Strategy objectives to defend the U.S. homeland and deter China through strength.

The DoW is implementing 5G for military applications, from improving coverage on installations to deploying tactical communications capabilities in austere environments. The DoW will continue developing advanced 5G network architectures, implementing cybersecurity and zero trust enhancements, and expanding RAN intelligent controller capabilities. The military departments (MILDEPs) will continue to budget and execute investments into 5G cellular and wireless technologies within their specific program elements.

The FY 2026 spend plan amount for 5G CFT includes \$22,122 thousand of discretionary and \$148,620 thousand of mandatory (reconciliation) for a total of \$170,742 thousand.

The DoW is implementing 5G for military applications, from improving coverage on installations to deploying tactical communications capabilities in austere environments. The DoW will continue developing advanced 5G network architectures, implementing cybersecurity and zero trust enhancements, and expanding RAN intelligent controller capabilities. The military departments (MILDEPs) will continue to budget and execute investments into 5G cellular and wireless technologies within their specific program elements.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: 5G Cross Functional Team (CFT) Support	10.292	22.122	5.893
Description: 5G wireless networking is critical for U.S. defense modernization and modern warfare. The DoW is accelerating 5G adoption to operate effectively anywhere, anytime, even in contested environments, ensuring U.S. military superiority and national security.			
FY 2026 Plans: Advise MILDEPs on developing 5G transition plans and integrating 5G into existing programs of record. Leverage commercial technologies to solve tactical problems and support warfighters. Advise DoW on 5G policy, acquisition, sustainment, and resourcing to maintain U.S. military superiority. Advance and support DoW's commercial and public-private 5G initiatives.

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
Facilitate cross-coordination and collaboration on DoW, interagency, and international 5G efforts; implement the 5G Standards Strategy; and participate in the Third Generation Partnership Project (3GPP) and the Alliance for Telecommunications Industry Solutions (ATIS) through proxy representation. Execute and transition 3-tranche projects to the military departments (MILDEPs) for sustainment. Streamline and support commercial carriers' on-premises 5G infrastructure and incentivize additional required infrastructure. Collaborate across DoW, interagency, international, and industry partners to advance DoW-unique capabilities in commercial specifications for 5G and beyond. Continue execution and oversight of the 5G private network strategy and implementation plan. <i>FY 2027 Plans:</i> Reduce scope to CIO functions. <i>FY 2026 to FY 2027 Increase/Decrease Statement:</i> The decrease reflects the 5G CFT sunset and realigns funds to higher priority C3 activities.

Note

The Economic Defense Unit (EDU) was funded with mandatory funds only in FY 2026.

A. Mission Description and Budget Item Justification

The mission of the Economic Defense Unit (EDU) is to support some of the Department of War's (DoW) Economic Competition activities by providing analysis, recommendations, insights, and other support to ensure alignment with DoW objectives and in support of the DoW's National Defense Strategy, National Military Strategy, and National Defense Industrial Strategy. Additionally, the office will develop requirements for Economic Competition activities that may include access, basing, and overflight; countering mobilization of adversaries; countering defense industrial base activities by adversaries; and ensuring access for the United States to critical materials and capabilities. It will also provide economic analysis and advisory input on DoW contracting and other commercial approaches meeting criteria developed by the Director of EDU, and sponsor and conduct regular tabletop exercises and activities to assess the economic impacts of DoW decisions during crisis and conflicts.

The EDU's economic weapon system will integrate economic competition workflows into a single system in order to (1) Enable data-driven coordination across economic competition activities; (2) Improve collaboration via recurring system usage by EDU; (3) Establish an enduring operating model for data acquisition and integration; (4) Support planning and execution of economic competition activities at scale.

The FY 2027 request for EDU includes \$403,903 thousand of discretionary and \$189,378 thousand of mandatory for a total of \$593,281 thousand. The mandatory funds EDU's investment program which will make strategic equity and control investments in companies that align with its mission. This includes securing access to critical minerals and materials, enhancing access, basing and overflight, countering adversary mobilization and countering adversaries defense industrial base. Through these targeted investments, the EDU aims to strengthen national security, promote economic resilience, and counter the strategic influence of global competitors. The FY 2027 mandatory funds continue efforts from FY 2026 to make critical investments in the defense industrial base.

The FY 2026 spend plan amount for Research, Development, Test & Evaluation, EDU, includes \$0 thousand of discretionary and \$266,450 thousand of mandatory for a total of \$266,450 thousand.

Title: Investment Program	-	-	403.903
Description: EDU will support and make strategic equity and control investments in companies that align with its mission. This includes securing access to critical minerals and materials, enhancing access, basing and overflight, countering adversary mobilization and countering adversaries defense industrial base. Through these targeted investments, the EDU aims to strengthen national security, promote economic resilience, and counter the strategic influence of global competitors.			
FY 2027 Plans: EDU will rapidly accelerate U.S. defense production capabilities and secure vulnerable supply chains, the EDU plans to deploy a diversified portfolio of flexible financing mechanisms. In FY 2027, the requested funding will directly support the issuance of targeted grants, direct loans, financial options, equity investments, and strategic purchase commitments. These tools are designed to bridge critical gaps in commercial production and scale emerging technologies critical to the warfighter. A core component of the EDU's FY 2027 operational plan is the utilization of commercial-like deal structuring. Rather than relying solely on traditional procurement models, the EDU will leverage appropriated funds to catalyze broader market participation. By integrating mandatory private capital commitments and performance-based incentive structures into its agreements, the EDU will

Note

New Start (Y/N): No

A. Mission Description and Budget Item Justification

Chemical and biological weapons (CBW)-based threats continue to evolve in response to changing geopolitics and emerging technologies. Each of the nations that are deemed as threats to United States (U.S.) national security are believed to have and/or be developing chemical and/or biological weapons. The Department of War (DoW) must be prepared to eliminate these threats during and/or after the execution of a contingency operation or in support of a diplomatic breakthrough, enabling the U.S. to achieve peace through strength and strengthen deterrence.

Chemical Weapons Convention (CWC) and Biological Weapons Convention (BWC) obligations and DoW strategic guidance demand the Department maintain a complete and enduring capability to assess and destroy CBW, regardless of location or environment. In accordance with the CWC and BWC, the U.S. must be prepared to “destroy [chemical/biological] weapons in its possession or under its jurisdiction or control.” It is critical for the DoW to match CBW-based threats by possessing the capabilities to directly disable or defeat WMD threats prior to use. This capability must provide operational flexibility that enables early action and expedient destruction, from small-scale disablement and defeat in a non-permissive or austere environment to large-scale destruction of a foreign CBW stockpile in a post-contingency or permissive environment. These capabilities will positively influence deterrence and project Peace Through Strength.

Our current capabilities are inadequate to support these requirements, and we are currently unable to invest in the development and/or improvement of capabilities to eliminate CBW on the scale required. The Department must be proactive in ensuring we are prepared to eliminate known and expected CBW threats before adversary use against U.S. military or civilian personnel at home or abroad or our allies.

The Chemical and Biological Weapons Elimination (CBWE) Research and Development Activities (RDAs) support the Department’s initiatives to rebuild our military and reestablish deterrence by ensuring a complete and enduring capability to assess and destroy chemical and biological weapons (CBW), regardless of location or operational environment. This program addresses Joint Force priorities, tasks, and requirements. Fiscal Year (FY) 2027 request is for the advanced development and improvement of chemical weapons assessment, disablement, and destruction technologies in support of service and joint warfighter requirements.

The CBWE portfolio provides material solutions that enable DoW to prevent adversary acquisition, transfer, deployment, and use of CBW as well as meet U.S. Chemical Warfare Convention (CWC) treaty obligations.

UNCLASSIFIED

Exhibit R-2, RDT&E Budget Item Justification: PB 2027 Office of the Secretary Of Defense	Date: April 2026
---	-------------------------

Appropriation/Budget Activity 0400: <i>Research, Development, Test & Evaluation, Defense-Wide I BA 7: Operational Systems Development</i>	R-1 Program Element (Number/Name) PE 0607162D8Z I <i>ChemBio Weapons Elimination Technology Improvement</i>
---	---

The CBWE portfolio will execute along several Lines of Effort (LOEs) to help prepare the Joint Force for a future operating environment in which adversary possession of Weapons of Mass Destruction (WMDs) pose threats ranging from tactical to existential, and limit U.S. strategic choices. These LOEs will create options for assessment and destruction of recovered chemical warfare material within the U.S., as well as chemical and biological warfare material across the continuum of conflict, including materiel solutions for the destruction of small-scale weaponized and bulk CBW agents, and solutions for the elimination of nation state CBW programs and stockpiles.

The Office of the Secretary of War uses the CBWE Portfolio to invest strategically in projects to fill validated requirements from the Services, Combatant Commands, combat support agencies, and defense agencies. Funding is prioritized for projects that close Joint Force and domestic assess, disable and/or destroy capability gaps. An annual investment strategy is used to prioritize and meet capability needs.

The CBWE Technology Improvement program invests in upgrades, enhancements, and modifications to systems used to assess, disable, and/or destroy chemical and biological weapons and material – foreign and domestic. Funds are used for integration of operational prototypes into fielded systems, or other upgrades and enhancements, including any necessary test and evaluation.

This program funds labor, materials, and travel requirements, performed by a government agency or by private individuals or organizations under a contract with the government, for activities and acquisitions including Research, Development, Test & Evaluation (RDT&E), assessments and analyses, and other activities related to capability development and fielding.

Remarks			
D. Acquisition Strategy			
The Office of the Deputy Assistant Secretary of War for Chemical, Biological, Radiological, and Nuclear Defense, Chemical and Biological Weapons Elimination Directorate (ODASW(CBRND/CBWE)) establishes annual priorities based on National strategies and senior leader guidance. Based on those priorities, solicits project proposals from Combatant Commands, Military Services, Defense Agencies, and interagency partners. To be selected, a proposed project must have a validated requirement, an engaged requirement champion, a viable acquisition strategy, and a qualified program management office. A technology project must identify its starting and desired end-state Technology Readiness Level. Likewise, the end-user for any proposed project must demonstrate a long-term plan for acceptance and sustainment of a fieldable capability.

A. Mission Description and Budget Item Justification

The Industrial Base Analysis and Sustainment Support (IBAS) program element line is one component of a broader Department of War (DoW) investment strategy to strengthen the competitive posture of the Defense Industrial Base (DIB) and secure domestic supply chains. Residing within the Warfighting Investments, Resourcing, and Execution (WIRE) Directorate within the Office of the Assistant Secretary of War for Industrial Base Policy (OASW(IBP)), IBAS investments are used both discretely and in combination with other DoW investment programs, such as WIRE's Defense Production Act (DPA) Title III, to ensure collaborative and non-duplicative investment supporting critical DIB and United States (U.S.) supply chain issues. The IBAS program element supports WIRE priorities through investment in prime and sub-tier suppliers, which mitigate supply chain risks and eliminate production capacity bottlenecks in accordance with current Presidential, National Security Council, and Secretary of War guidance during times of presidential transition priorities, goals and objectives. IBAS program element investments are further synchronized across the Department through coordination with other research and development programs, including but not limited to the Defense-Wide Manufacturing Science and Technology Program (MSTP) residing in the Office of the Under Secretary of War for Research and Engineering (OUSW(R&E)).

IBAS Support was established in accordance with 10 United States Code (U.S.C.) Section 4817 and Section 865 of the FY 2026 NDAA, Industrial Base Fund. The ability of the United States to maintain readiness and to surge and sustain in response to an emergency directly relates to the capacity, capabilities, and resiliency of our manufacturing industry, and the DIB and relevant supply chains. IBAS authorities and flexibility are key components to building the industrial capabilities needed to innovate, produce, and sustain the weapon systems for today and tomorrow.

The IBAS program provides the Department with a unique capability to achieve the strategic aims of the National Defense Strategic Guidance (NDSCG) which calls for a strong, resilient, responsive and healthy U.S. Defense Industrial Base that underpins current and future U.S. force readiness. This program is uniquely positioned to improve the U.S. DIB's competitiveness and ability to respond to the Department's needs by applying focused investments to 1) monitor and assess the current state of the DIB, 2) address critical issues in the DIB relating to urgent operational needs, 3) address supply chain vulnerabilities, and 4) support efforts to expand the DIB.

Global supply chain disruptions have become more common, with recent events highlighting risks and vulnerabilities that undermine our national security.

Management Process – In order to successfully execute the FY 2027 budget, the IBAS Program Office within the OASW(IBP) will oversee the health of the IBAS portfolio and projects. The IBAS Program Office collaborates with relevant Military Department or defense agency technical leads to develop, coordinate, and execute acquisition strategies and implementation plans for each strategic focus area.

A. Mission Description and Budget Item Justification

Global supply chain disruptions have become more common, with recent world events highlighting risks and vulnerabilities that undermine our national security. The 2022 Industrial Capabilities Report (ICR) report outlined strategic focus areas and enabling capabilities, associated vulnerabilities, and recommendations to strengthen the DIB.

The FY 2027 IBAS budget request reflects the DoW's commitment to ensuring our supply chains can provide our warfighters with decisive advantage. This budget includes investments to respond to Executive Orders, emerging and modernization priorities and technologies, and other defense requirements. The IBAS budget is the result of significant coordination for each strategic focus area via the Deputy's Management Action Group (DMAG), which developed an integrated and prioritized investment strategy to address the most pressing needs for each focus area, to include mapping to investment authorities. The FY 2027 IBAS budget request reflects the outcome of the DMAG recommendations and has been coordinated to complement adjacent investments by related programs including the Defense Production Act Title III and Manufacturing Technology (ManTech) programs, and within the Military Services. Accordingly, investments in the following strategic focus areas will establish, sustain, and expand domestic capabilities and capacities to build more sustainable and resilient supply chains.

Strategic & Critical Minerals - Nearly every DoW weapons system, information technology resource, and supply chain — from cutting-edge missile defense systems to petroleum refining — relies on critical minerals and materials. These include, but are not limited to, rare earth elements (REEs), germanium, vanadium, titanium, lithium, cobalt, gallium, and specialized alloys essential for various defense applications. In particular, the midstream minerals processing is heavily controlled by single nations for numerous materials. For example, a significant portion of global REE processing is concentrated in a single nation as well as other critical materials necessary for microelectronics manufacturing. A disruption in any critical mineral or material supply chain, whether due to world events or planned for geopolitical reasons, significantly affects the DoW's ability to manufacture a wide range of platforms and equipment and is thus a serious risk to national security. A resilient supply chain for critical mineral oxides, metals, and specialized alloys is required to enable continued manufacture and sustainment of DoW systems. To provide domestically made specialized alloys and materials, the entire critical mineral supply chain must be supported: from mining ores, to processing and enriching the ores, to extraction of individual mineral oxides, to metallization, to creation of specialized alloys using domestic metals, and finally to qualification of domestic alloys and materials in end-use defense applications. The DoW must also be ready to address shortfalls in other elements such as gallium, scandium, noble gases, titanium, vanadium, germanium and other materials used in traditional defense systems, microelectronics, hypersonics, specialized electronics manufacturing processes which will require additional funding.

To mitigate the most pressing critical mineral supply chain risks, the DoW will utilize FY 2026 funding to fund a domestic metallization capability for critical materials. This key supply chain node must be addressed to enable the manufacture of specialized alloys and materials from domestically processed metals and for use in other specialty applications. Efforts will enable reshoring various mineral processing capabilities to support the aluminum and zinc industries as well for specialty by-products including but not limited to gallium, germanium, vanadium, and tungsten. The department will need to be agile and respond to emerging priorities as supply chain

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2027 Office of the Secretary Of Defense		Date: April 2026
Appropriation/Budget Activity 0400 / 7	R-1 Program Element (Number/Name) PE 0607210D8Z / <i>Industrial Base Analysis and Sustainment Support</i>	Project (Number/Name) 819 / <i>Industrial Base Analysis and Sustainment</i>
risks emerge amid global competition for materials and export restrictions being implemented by other countries. To support the broader domestic mining and mineral processing industry, developing and expanding the workforce will help ensure that the developing industry will have sufficient labor to enable the industry to produce materials domestically. Significant additional funding beyond the current programmed level is needed to address other key critical mineral supply chain shortfalls that pose a threat to national security. Additional funding would allow the program to tackle further shortfalls in supply chains including sourcing, processing, materials manufacturing, recycling, and qualification of materials into DoW supply chains. Additional funding would also enable addressing challenges with peripheral supply chains in processing chemicals, alternative feedstock & recovery projects for critical minerals and materials, and emerging critical mineral concerns due to global events such as export restrictions. Critical minerals and materials investments are necessary to establish a resilient, commercially sustainable domestic- and ally-controlled mine-to-materials supply chain by FY 2027 in accordance with E.O. 14241 and U.S.C. 10 Section 4872. Furthermore, recent DFARS 252.225-7052 which requires manufacturers for defense applications to source all materials for Samarium-Cobalt and Neodymium-Iron-Boron REE magnets from domestic sources by 2027, which is one instance of supply chain risk. Significant investment in critical mineral supply chains is needed to comply with these laws and divest from reliance on foreign controlled supply chains for critical materials. Any delay in funding this capability will jeopardize the success of all domestic materials-making efforts by the U.S. defense or commercial industrial bases. This would likely render defense manufacturers unable to comply with federal regulations concerning restrictions on critical minerals used in end products and could delay delivery of critical DoW systems such as the F-35, which requires specialized alloys using a multitude of materials for each plane, and Virginia-class submarines, which require specialized materials for each vessel. Many platforms will be affected if immediate action is not taken to secure the critical materials industrial base and develop a resilient supply chain. Kinetic capabilities - Kinetic capabilities, which include precision guided missiles/munitions, hypersonic weapons, directed energy weapons, small-unmanned aircraft systems , multi-domain counter-unmanned systems, critical chemicals, and one-may-attack attritables, to enable the military to project power, neutralize threats, and achieve strategic objectives in an increasingly complex global landscape. Moreover, robust kinetic capabilities provide the U.S. with a strategic advantage in international negotiations and diplomacy. To maintain the kinetic edge and ensure warfighters have the tools they need to succeed, continued investment in research, development, test, evaluation, manufacturing, and high-capacity production is required. The projects undertaken by this program are of paramount importance to the nation's defense and security, and the support of government leaders in this critical endeavor is essential. The DoW will launch efforts to: 1) Address supply chain vulnerabilities of missiles and hypersonic weapons, munitions, small UAS and their critical components; 2) Update material specifications, including production and quality testing requirements; and 3) Foster sub-tier suppliers and competition in the kinetic capabilities sector industrial base to improve production capacity while reducing costs. FY 2027 primary focus efforts will expand missiles and hypersonic solid rocket motor global supply chains to alleviate disruptions have become more common, with recent world events. Microelectronics – Microelectronics components are the foundation of a modern economy and military systems. Various vulnerabilities such as lack of domestic advanced manufacturing capabilities and diminished capacity threaten the DoW's ability to source microelectronics needed to sustain programs of record. To prepare the Department for increased global economic and strategic challenges, the DoW must take action to ensure access to the microelectronic components needed to sustain our defense programs and systems effectively and affordably. To maintain a competitive edge, the Department also needs a better strategy to transition leading edge technology developed by both government and industry to DoW programs of record. To respond to the threat and establish a secure and assured domestic supply chain, the DoW will pursue multiple lines of microelectronics efforts. Microelectronics efforts in the IBAS Program are 1) Expanding the number of qualified		

UNCLASSIFIED

Exhibit R-2A, RDT&E Project Justification: PB 2027 Office of the Secretary Of Defense		Date: April 2026
Appropriation/Budget Activity 0400 / 7	R-1 Program Element (Number/Name) PE 0607210D8Z / <i>Industrial Base Analysis and Sustainment Support</i>	Project (Number/Name) 819 / <i>Industrial Base Analysis and Sustainment</i>
domestic lower-tier suppliers providing leading edge microelectronics and packaging global supply chain disruptions have become more common, with recent world events highlighting risks and vulnerabilities that undermine our national security. 2) The integration of an enterprise-wide microelectronics digital engineering (DE) ecosystem with an established DoW Microelectronics DE infrastructure, independent continual assessment of digital engineering infrastructure, electronic design automation tools, intellectual property, and services, and digital engineering and design acceleration pilot projects. 3) Demonstration and qualification of emerging state of the art microelectronics in RF technologies to meet the increasing Size, Weight, Power, and Cost (SWAP-C) requirements for Programs of Record (PoRs). 4) Upstream material security for electronic materials to address domestic upstream sub-tier manufacturing capacity for the defense industrial base. 5) Development and integration of an enterprise-wide microelectronics parts repository to provide solutions to critical defense industrial base diminishing manufacturing sources and material shortages (DMSMS) issues. The 2022 Industrial Capabilities Report (ICR) report outlined strategic focus areas and enabling capabilities, associated vulnerabilities, and recommendations to strengthen the DIB. Manufacturing – Advanced manufacturing (including, but not limited to the use of subtractive, additive, and hybrid methods) is critical to the development, procurement, and sustainment of all major defense systems. While the use of additive and hybrid methods is increasing, machine tools touch virtually every metal and plastic product in modern society, and traditional cast and forged parts are found in 20 percent of the products representing the U.S. Gross Domestic Product. Despite continuing innovation, industry consolidation and offshoring since the 1960’s have hollowed out domestic capability, reducing or eliminating competition and increasing our dependence on other nations, including China. To mitigate these risks, the Department will continue to invest in five strategic lines of effort: 1) Metalworking Infrastructure supporting production and research in the organic and commercial industrial base; 2) Feedstock Production to provide timely, assured access to reliable sources of supply for the refined and semi-fabricated metals, materials, and related capabilities required to produce cast, forged, and alternative parts for the Department; 3) Forward Production to increase the operational availability of deployed forces by offsetting the adverse impacts of distance within contested logistics environments by assuring timely, forward repair and production of key parts and components, to include auxiliary support functions such as innovative power production, storage, conditioning, and distribution systems for precision manufacturing and prototyping. Exhibition of these capabilities in Joint exercise environments is key to IBAS strategy for iterative production of forward manufacturing assets; 4) Qualification and Certification to enhance technological overmatch by speeding Joint Force adoption and integration of products produced using new materials and manufacturing methods and processes; and 5) Metrology, Testing, and Data Analytics to collect, process, store, and provide the precise data required to support planning and analysis for decision making, research, development, production, and sustainment on a global scale. Manufacturing will also work with the Workforce Development sector to develop and resource specific projects to improve the Manufacturing workforce’s size, capacity, skills, and cost-effectiveness. Workforce – The DoW relies on a skilled workforce to innovate, produce, and sustain our weapon systems. Decades of erosion across workforce development pipelines jeopardize and threaten our industrial base’s ability to remain competitive. Workforce is a critical enabler for all DIB technology, mission, and market sectors. Analytically informed IBAS industrial workforce investments catalyze the development of sustained, regionally focused public-private partnerships (between companies, state/ local governments, academia, non-profits, industry associations, and other entities) to strategically close shortfalls in recruitment, training capacity/quality, and hiring/ retention. Efforts will continue to focus on recruitment, training, placing and retaining skilled workers in support of defense priority states / regions coordinating with other interagency programs, and leveraging authorities from other departments to support priority defense programs. FY 2027’s primary effort will be the continuation and sustainment of major, multi-year efforts across the defense industrial base sectors including existing and future workforce projects under a DoW national workforce development campaign aligned with the 2025 National Talent Strategy published by the Departments of Labor, Commerce, and Education.

Exhibit R-2A, RDT&E Project Justification: PB 2027 Office of the Secretary Of Defense		Date: April 2026		
Appropriation/Budget Activity 0400 / 7	R-1 Program Element (Number/Name) PE 0607210D8Z I Industrial Base Analysis and Sustainment Support	Project (Number/Name) 819 I Industrial Base Analysis and Sustainment		
Energy Storage and Batteries – Due to the small DoW market share and customized battery requirements, the DoW is unable to fully leverage the large commercial investment in state-of-the-art energy storage technology. The nearly 100 percent foreign battery supply chain limits the DoW’s ability to field battery enabled weapons/ platforms free of adversary supply chain control. To mitigate these risks, DoW is investing to develop domestic assured access to batteries through three focus areas: 1) Initiate studies to define the aggregate demand for energy storage and batteries across the DoW; 2) Pivot to commercial standards and batteries to the maximum extent possible; and 3) Establish internal DoW safety testing capacity for energy storage and batteries for future weapons systems. FY 2027 efforts will initiate recommendations from the DoW demand analysis and examine opportunities to apply commercial sourcing applications.				
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026	FY 2027
Title: Industrial Base Analysis and Sustainment (IBAS) Support		975.130	801.720	1,177.356
Description: IBAS currently focuses efforts and investments for all fiscal years in the categories listed above and below, continuing investments to mitigate supply chain risks and on-going assessments for both traditional defense sectors and cross-cutting sectors. Investments in Strategic & Critical Minerals, Kinetic Capabilities, Microelectronics, Manufacturing, Workforce, and Energy Storage and Batteries.				
The FY 2026 spend plan amount for IBAS includes \$273,379,000 thousand of discretionary and \$10,925,004 thousand of mandatory (reconciliation) for a total of \$11,198,383 thousand. \$1,100,000 thousand is reserved in support of Drone Dominance under DOGE.				
FY 2026 Plans:				
1. Strategic & Critical Minerals				
Critical Materials and Rare Earth Elements (REE): Continue efforts initiated in prior years to establish, sustain, and improve domestic rare earth capabilities and value-added manufacturing in support of defense and essential commercial product production. Prioritize investment of current funding allocation in midstream production of REE products through metallization, in line with the administration’s goal of a domestic mine-to-magnet supply chain. Support efforts to reshore various mineral processing efforts to support the aluminum and zinc industries as well for specialty by-products including but not limited to gallium, germanium, vanadium, and tungsten. To support the broader domestic mining and mineral processing industry, developing and expanding the workforce will help ensure that the developing industry will have sufficient labor to enable the industry to produce materials domestically.				
Additional funding in FY 2026 enables addressing numerous additional priorities including support of domestic minerals processing industry by funding the development of supply for precursor and reagent chemicals used in minerals processing. Expand support for critical upstream capabilities in response to market forces and anticipated increased demand. Continue to address new supply chain challenges, including non-allied export controls on materials and technology as well as dramatically increased costs and lead times. Begin testing and continue engineering/construction of domestic processing lines in support of the DoW’s efforts to address supply chain risks associated with the dependence on foreign non-allied countries. Continue efforts

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2025	FY 2026	FY 2027
initiated in prior years to reduce dependence on non-allied countries for essential equipment and materials for the processing of REEs. Continue to support and explore prototype technologies and processes for REE separation and processing to support new domestic sources, with increased emphasis on recycling. Support qualification efforts for domestic REE suppliers to become qualified for use in DoW supply chains. Develop domestic Germanium and Gallium sources and processing infrastructure to refine and purify these materials for use in microelectronics. 2. Kinetic Capabilities IBAS investments will continue targeting the capability and affordability of hypersonic weapon systems in coordination with the Services and OSW stakeholders. These efforts will focus on improving production capacity and cost reduction of the Air Force Air-launched Rapid Response Weapon (ARRW) to address the high demand operational needs in support of Combatant Commander. IBAS will increase the production capacity of solid rocket motors (SRM), SRM components, and propulsion to meet surge expectations. FY 2026 plans will initiate low-cost hypersonic prototyping to support INDO-PACOM operational needs. IBAS will advance manufacturing improvements of group 3 tactical reconnaissance UAS mass production options coupled with group 3 one-way-attack UAS to support ongoing combat operations abroad and in support of counter cartel operations. IBAS will initiate engagements with OIB partners to modernize manufacturing at our nation's depots and arsenals. 3. Microelectronics Upstream Materials Security – One such investment includes facility modernization to save the only electrodeposited copper plating facility in North America from permanently closing in the Spring of 2025. Based on stakeholder interviews with the DoW Primes and their sub-tier suppliers, it is estimated that this early IBAS investment prevented 6–18-month delays for over 30 DoW programs and deepened dependency on foreign sources. Continued work in this effort will address critical DIB supplier bottlenecks in the areas of sub-tier manufacturing capacity improvements for electronic products, manufacturing capability expansions to provide expanded product offerings for the DoW and establish domestic sources for critical upstream manufacturing materials. Secure Packaging - IBAS has successfully initiated onshoring of two key strategic advanced packaging technologies: 300mm wafer preparation and bumping, and fan out wafer level packaging technology. These existing investments are already impacting DoW programs of record, by enabling the manufacturing of novel hardware security solutions that require specialized packaging processes otherwise inaccessible in the DIB. Advanced RF Prototype Sensor Development – Efforts will continue developing a Prototype X-band and Multi-band Radars for Homeland Cruise Missile Defense to be used for the Fire Control Radar program. Current activity analysis determines that enhancements targeting transitioning capabilities will be necessary during FY 2026 activities. During FY 2026, Low Rate Initial

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
Production (LRIP) activities to support NORAD and USNORTHCOM will include addressing supply chain risks by adapting commercial technology to defense applications and improvements to provide critical Size, Weight, Power and Cost (SWAP-C) advantages. Enterprise Parts Management – Efforts will continue developing Enterprise microelectronics parts repository for DMSMS issue resolution and case management. Current activity includes delivery of Minimum Viable Product (MVP) 1 to support initial Service user needs. 4. Manufacturing (Castings and Forgings, Extended Deterrence, Qualification Certs) In FY 2026, the IBAS program leveraged a significant increase in funding to deliver even more changes to Industry 4.0-enabled production and metrology processes, automated/robotics equipment and processes, and computational tools that speed and supplement the production of cast and forged products, as well as initial development and testing of advanced/alternative materials, products, and processes, including those with improved corrosion-resistance. IBAS also worked with Service, Combatant Command, and Interagency partners to create, equip, and provide initial staffing to a forward deployed manufacturing capability on Oahu and to support COCOM-sponsored exercises in the INDOPACOM theater. IBAS sectors coordinated closely to increase the size and depth of capabilities for quickly educating and training new metalworkers and government metals experts to increase production of qualified workers with the up-to-date knowledge, skills, and abilities to succeed in metalworking and related fields in the Organic Industrial Base (OIB) and commercial industrial base. IBAS also continued to execute specific plans to right size and improve the capabilities of C&F-related joint/government/ industry/academic centers of excellence. The program continued to support, and expand as appropriate, the scope of specific projects to provide timely, assured access to the refined metals (especially titanium, modern alloys, and refractory metals) in the form of bar and plate stock, wire, and powder, as well as other materials, semi-fabricated products, and ceramic refractories needed to produce superior cast, forged, and additively manufactured parts. IBAS Program personnel continued to refine relevant strategic documents as conditions evolved, to support development and execution of new projects as needed. 5. Workforce Industrial Skills Development and Acceleration (National Imperative for Industrial Skills (NIIS) initiative): The portfolio of over 50 pilot efforts funded in FY 2025 will continue in FY 2026 at various planned programmatic stages, refining multiple elements or segments of the initiative's 'Industrial Skills Workforce Development Model.' Many ongoing and to-be awarded NIIS efforts are designed to familiarize, train, and recruit students presently in K-12 and career and technical education (CTE) pipelines. Our efforts connect skilled workers with manufacturing competencies and introduce them to skillsets needed to support the DIB.

Appropriation/Budget Activity 0400 / 7	R-1 Program Element (Number/Name) PE 0607210D8Z / <i>Industrial Base Analysis and Sustainment Support</i>	Project (Number/Name) 819 / <i>Industrial Base Analysis and Sustainment</i>	
B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
As part of the NIIS initiative, continued investment will be made to restore the might of American manufacturing by providing necessary recruiting, training, job placement, and wrap-around support needed to introduce and retain the best workers in the DIB. Additionally, IBAS will continue to invest in data analytics projects to 1) more deeply assess needs across program lifecycles, 2) better understand competing needs for production and maintenance workforces across multiple defense programs, and 3) improve IBAS program industrial workforce risk management investment and policy decisions, especially in critical defense areas such as the U.S. Indo-Pacific Command, the New England region, the Great Lakes region, and the West Coast Region. Submarine Industrial Base Workforce: IBAS, in partnership with the Navy submarine enterprise, will continue to invest in the industrial base's development of the necessary recruitment functions, education and training programs, and worker retention/ wraparound support for critical workforce development needs. The sustained objective is to accelerate the path to establishing at-scale regional training systems and other workforce pipeline delivery capabilities to provide sufficient numbers of "ready-to-work" high skill technical tradespeople supporting production levels meeting the nuclear Navy's submarine modernization requirements. Continue to build out regional training systems in New England, Virginia, Great Lakes region, Gulf Coast and West Coast, with continued special focus on Indo-Pacific sustainment needs as well as advanced training programs and the associated curricula for skilled professionals in the realms of welding, machining, non-destructive testing, fiber optics and additive manufacturing. This includes identifying new workforce supply sources and opportunities, to grow the American DIB workforce, through informed data analytics. This strategy relies on the use of regional coordinators to help establish and improve essential organizational regional relationships and better align DoW, other U.S. Government agency capabilities, state/local, and nongovernmental investments in each defense critical region. 6. Energy Storage and Batteries Initiate efforts that assess viability of moving to a standardized Lithium-ion battery to improve battery performance upon deployment of the DoW Lithium Battery Database 3) ensure the availability of lithium battery safety expertise for joint military effort. FY 2027 Plans: 1. Strategic & Critical Minerals Critical Materials and Rare Earth Elements (REE): Continue efforts initiated in prior years to establish, sustain, and improve domestic minerals production capabilities and value-added manufacturing in support of defense and essential commercial product production. Prioritize investment of current funding allocation in midstream production of minerals products through metallization, in line with the administration's goal of a domestic mine-to-material supply chain. Additional funding in FY 2027 would enable addressing numerous additional priorities including support of additional domestic minerals processing industry by funding the development of supply for precursor and reagent chemicals used in critical minerals

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2025	FY 2026	FY 2027
processing. Expand support for critical upstream capabilities in response to market forces and anticipated increased demand. Continue to address new supply chain challenges, including non-allied export controls on materials and technology as well as dramatically increased costs and lead times. Begin testing and continue engineering/construction of domestic minerals processing lines in support of the DoW's efforts to address supply chain risks associated with the dependence on foreign non-allied countries. Continue efforts initiated in prior years to reduce dependence on non-allied countries for essential equipment and materials for the processing of REEs. Continue to support and explore prototype technologies and processes for REE separation and processing to support new domestic sources, with increased emphasis on recycling. Support qualification efforts for domestic REE suppliers to become qualified for use in DoW supply chains. Develop domestic Germanium and Gallium sources and processing infrastructure to refine and purify these materials for use in microelectronics. 2. Kinetic Capabilities IBAS investments will expand supply chains and the industrial base of the top 11 missiles critical to the defense of the nation. Focus will be on tier 2–4 suppliers and known bottlenecks to enable a steady manufacturing capacity improvement to replenish inventories and provide our warfighters engaged in combat operations the tools to win on the battlefield. Missile efforts will focus on establishing a second source solid rocket motor (SRM) capability while boosting component manufacturing of rocket nozzles, actuators, and thermal batteries. IBAS will continue to implement cost reduction and production capacity improvements of hypersonic missiles within the defense industrial base. Projects include Thermal Protection System (TPS) machining changes, advanced processing for affordable TPS, and adoption of next generation TPS and payload adaptor supporting a 2nd source all up round, SRM integration, and flight tests for large hypersonic missiles. Additionally, IBAS will continue capacity improvements for air-launched hypersonic missile supply chain components and platform integration. IBAS will support manufacturing capacity for mid-range scaled hypersonic missile system prototypes with a resilient supply chain. Investments will expand the group 3 tactical reconnaissance and one way attack small, unmanned aircraft system (sUAS) industrial base focusing on delivering improved systems to warfighters for rapid operational assessments. IBAS will prioritize the onshoring of small sUAS motors and batteries to reduce Chinese market dominance by targeting domestic companies manufacturing sUAS components sourced by the US or our allies. IBAS will continue supporting the munitions & energetics OIB ranging from small arms to 155mm, low-cost weapons, and munition enhancements. IBAS funding adds capabilities to build low-cost options to combat the growing unmanned systems threat from the air, surface, underwater, and ground domains with improved munitions, one-way-attack semi-autonomous systems, and counter-swarming autonomy capabilities to enable cost effective detection, tracking, identification, and mitigation options. Counter sUAS capabilities will prioritize scaled directed energy weapons aligned to the Joint Interagency Task Force 401. 3. Microelectronics Upstream Materials Security – Funding and establishment of projects that bolster the domestic PrCB and/or advanced substrate defense industrial base. Work in this effort will address critical DIB supplier bottlenecks in the areas of sub-tier manufacturing

capacity improvements for electronic products, manufacturing capability expansions to provide expanded product offerings for the DoW and establish domestic sources for critical upstream manufacturing materials.			
Secure Packaging – Planned efforts will focus on providing access and availability to secure facilities that can perform one or more of the advanced packaging fabrication processes to include Advanced Packaging and Heterogenous Integration, Heterogenous 2.5D Integration, and Heterogeneous 3D Integration.			
Advanced RF Prototype Sensor Development – Efforts will continue developing a Prototype X-band, Ku-Band, Multi-Band Radars, and RF Opto-electronic systems for Homeland Cruise Missile Defense to be used for the Fire Control Radar program. Current activity analysis determines that enhancements targeting transitioning capabilities will be necessary during FY 2027 activities. During FY 2026, Low Rate Initial Production (LRIP) activities to support NORAD and USNORTHCOM will include addressing supply chain risks by adapting commercial technology to defense applications and improvements to provide critical Size, Weight, Power and Cost (SWAP-C) advantages.			
Microelectronics Digital Engineering – Planned efforts for FY 2027 will include awards for this project to modernize the way that the DoW specifies and acquires microelectronics by developing digital engineering methodologies.			
Enterprise Parts Management – Planned efforts for FY 2027 will include completion of Minimum Viable Product (MVP) 2 and full system deployment of a microelectronics parts repository to address Enterprise-wide DMSMS issues.			
4. Manufacturing (Castings and Forgings, Extended Deterrence, Qualification Certs) In FY 2027 Manufacturing Sector funding will add new infrastructure efforts to: increase melt capability for specialty steels; expand capability to produce ammunition bodies; revitalize industrial capabilities to produce a variety of aluminum and titanium products; emplace hybrid and automated manufacturing capabilities in CONUS and forward; and modernize facility infrastructure supporting large monolithic forgings, resilient steels production, and industrial surge capacity. New investments will also address the root causes of qualification and certification backlogs and address production delays resulting from problems associated with existing standards and policies, as well as data collection, processing, storage and analysis to support rapid qualification of new materials and manufacturing equipment and processes. Additional investments support infrastructure projects to enable progress on key efforts supporting the rapid development, testing, and qualification of new metal alloys and manufacturing processes. These efforts will: improve product quality, production, and efficiency; sustain and expand metalworking workforce development capabilities to further propagate the positive impacts of automation on worker capability and cost-effectiveness; and sustain and enhance efforts to secure the upstream materials supply chain to mitigate or eliminate dependence upon foreign adversaries. All IBAS Manufacturing Sector investments are vetted through the Defense Castings, Forgings, and Machine Tools Working

D. Acquisition Strategy The IBAS program office established the Government-run Cornerstone Other Transaction Agreement (COTA) in 2018 to award the majority of the IBAS program projects. COTA leverages expertise and personnel at the Army Contracting Command in Rock Island, Illinois to execute DIB resiliency and supply chain initiatives that focus on prototype projects, which, enables increasing DIB capabilities and capacities over a broad range of DoW requirements. Other acquisition vehicles such as the General Services Administration (GSA) and other Military Service and Defense Agency vehicles are used as required if IBAS program requirements exceed COTA's annual capacity.

A. Mission Description and Budget Item Justification

Counterproliferation (CP) Advanced Development prioritizes investments aligned to the Defense Planning Guidance (DPG) approved on August 7, 2025, and supports the 2026 National Defense Strategy (NDS) objective of peace through strength with advanced development of capabilities that reestablish deterrence and rebuild our military. Program investments in CP capabilities, enable the Department to maintain credible options to defend the homeland against WMD use. Investments result in capabilities that take action to neutralize nuclear, chemical, biological and radiological materials of concern (2026 NDS).

This program modernizes currently fielded capabilities for operating units with assigned CP/CWMD missions to disrupt, degrade, delay, deny, and defeat adversary nuclear, chemical, and biological weapons, delivery platforms, command and control systems, and hardened and deeply buried targets. Program investments enable modernized WMD deterrence and CP capabilities that provide flexible options across all domains, including tactical situational awareness, low visibility methods of maneuver, and the ability to employ immediate effects without diminishing future capabilities, enabling active campaigning that supports the Administration's CP priorities, mitigating escalatory risk.

In accordance with the DPG, funding is prioritized for projects that close Joint Force warfighter capability gaps to defend territory along the First Island Chain (FIC) and the western hemisphere. An annual investment strategy is used to meet emergent operational needs validated by the Joint Force, yielding new fielded capabilities within one to two years.

This program funds labor, materials, and travel in support of its requirements, performed by a government agency or by private individuals or organizations under a contract with the government, for activities and acquisitions including Research, Development, Test & Evaluation (RDT&E), assessments and analyses, education, and other activities related to capability development and fielding of bio-deterrence, nuclear modernization, homeland missile defense, one-way attack autonomous systems, and maritime/FIC territory superiority.

A. Mission Description and Budget Item Justification

Counterproliferation (CP) Advanced Development prioritizes investments aligned to the Defense Planning Guidance (DPG) approved on August 7, 2025, and supports the 2026 National Defense Strategy (NDS) objective of peace through strength with advanced development of capabilities that reestablish deterrence and rebuild our military. Program investments in CP capabilities, enable the Department to maintain credible options to defend the homeland against WMD use. Investments result in capabilities that take action to neutralize nuclear, chemical, biological and radiological materials of concern (2026 NDS).

This program modernizes currently fielded capabilities for operating units with assigned CP/CWMD missions to disrupt, degrade, delay, deny, and defeat adversary nuclear, chemical, and biological weapons, delivery platforms, command and control systems, and hardened and deeply buried targets. Program investments enable modernized WMD deterrence and CP capabilities that provide flexible options across all domains, including tactical situational awareness, low visibility methods of maneuver, and the ability to employ immediate effects without diminishing future capabilities, enabling active campaigning that supports the Administration's CP priorities, mitigating escalatory risk.

In accordance with the DPG, funding is prioritized for projects that close Joint Force warfighter capability gaps to defend territory along the First Island Chain (FIC) and the western hemisphere. An annual investment strategy is used to meet emergent operational needs validated by the Joint Force, yielding new fielded capabilities within one to two years.

This program funds labor, materials, and travel in support of its requirements, performed by a government agency or by private individuals or organizations under a contract with the government, for activities and acquisitions including Research, Development, Test & Evaluation (RDT&E), assessments and analyses, education, and other activities related to capability development and fielding of bio-deterrence, nuclear modernization, homeland missile defense, one-way attack autonomous systems, and maritime/FIC territory superiority.

N/A			
D. Acquisition Strategy			
The Office of the Assistant Secretary of War for Nuclear Deterrence, Chemical, and Biological Defense Policy and Programs (OASW(ND-CBD)) establishes annual priorities based on national and DoW strategies and Administration guidance. Based on those priorities, OASW(ND-CBD) solicits project proposals from Combatant Commands, Military Services, and Defense Agencies to enhance Joint Force lethality. To be selected, a proposed project must have a validated requirement, an engaged requirement champion, a viable acquisition strategy, and a qualified program management office. A technology project must identify its starting and desired end-state Technology Readiness Level. Likewise, the end-user for any proposed project must demonstrate a long-term plan for acceptance and sustainment of a fieldable capability. Project period of performance is typically 12-24 months.

A. Mission Description and Budget Item Justification

This program supports the DoW's priorities to Rebuild our Military and Reestablish Deterrence and supports the Office of the Under Secretary of War for Acquisition and Sustainment (OUSW(A&S)) Radiological and Nuclear Defense Capability Development (RNDCD) Program.

An annual investment strategy is used to meet emergent operational needs which are validated by the Joint Force and yield fielded capabilities within one to three years.

The program supports the modernization of radiological and nuclear (R/N) defense capabilities that enable the Department to prevent R/N attacks on the homeland and the Joint Force abroad through integrated deterrence. The program provides the Joint Forces the tools needed to survive and operate in and through a R/N environment through networked R/N detection, indication, and identification capabilities in support of the National Defense Strategy's deterrence by denial strategy and prioritization of the Nuclear Deterrence Posture within the FY2027 Defense Planning Guidance.

This program funds labor, materials, and travel to support the requirements of this program, performed by a government agency or by private individuals or organizations under a contract with the government, for activities and acquisitions including Research, Development, Test, and Evaluation (RDT&E), assessments and analyses, research studies, education, and other activities related to capability development and fielding.

	FY 2025	FY 2026	FY 2027
Title: Radiological and Nuclear Defense Modernization Operational Systems Development	0.912	2.941	2.794
Description: The Radiological and Nuclear Defense Modernization Operational Systems Development PE will invest in the modernization of fielded capabilities to improve DoW's capability to detect and identify radiological and nuclear threats; integration of technologies, systems and components; operational test and evaluation of fielded capabilities to new end users; and delivery of field and table top exercises to identify, refine, and address materiel and non-materiel gaps and requirements in R/N defense. This program seeks to merge previous research, development, and acquisitions efforts across DoW to field common and interoperable capabilities across the Joint Force.

A. Mission Description and Budget Item Justification

The DoW CIO information systems security program (ISSP) provides focused defense cybersecurity and information assurance technology and technical solutions research, development, testing, and integration critical to meet Title 10 U.S. Code Section 2224 (10 U.S.C. §2224) (Defense Information Assurance Program); Public Law 113-283 (Federal Information Security Modernization Act of 2014); Office of Management and Budget (OMB) Circular A-130; multiple DoW cybersecurity-related instruction series, such as 8500, 8510, 8520, 8530, and 8540; Executive Order 14028, “Improving the Nation’s Cybersecurity”; National Defense Authorization Act (NDAA) for Fiscal Year (FY) 2022, Section 1528; National Cybersecurity Strategy (March 2023), OMB M-22-09, “Moving the U.S. Government Toward Zero Trust Cybersecurity Principles”; National Security Memorandum 8, “Memorandum on Improving the Cybersecurity of National Security, Department of Defense, and Intelligence Community Systems”; FY 2022 – 2026 DoW Strategic Management Plan; DoW CIO 2024 Defense Industrial Base Cybersecurity Strategy; and DoW CIO 2022 Zero Trust (ZT) Strategy.

ISSP assists the DoW CIO and mission partners in: developing cybersecurity governance processes; modernizing communications security (COMSEC) and cryptography, including post-quantum solutions; integrating and synchronizing the DoW information environment; enhancing communications cybersecurity and national security system protection; adopting ZT cybersecurity principles; defending against supply-chain attacks; overseeing cybersecurity risk management; developing and sustaining defense industrial base (DIB) cybersecurity activities; and integrating cybersecurity standards across the DoW.

A. Mission Description and Budget Item Justification

The DoW CIO information systems security program (ISSP) provides focused defense cybersecurity and information assurance technology and technical solutions research, development, testing, and integration critical to meet Title 10 U.S. Code Section 2224 (10 U.S.C. §2224) (Defense Information Assurance Program); Public Law 113-283 (Federal Information Security Modernization Act of 2014); Office of Management and Budget (OMB) Circular A-130; multiple DoW cybersecurity-related instruction series, such as 8500, 8510, 8520, 8530, and 8540; Executive Order 14028, "Improving the Nation's Cybersecurity"; National Defense Authorization Act (NDAA) for Fiscal Year (FY) 2022, Section 1528; National Cybersecurity Strategy (March 2023), OMB M-22-09, "Moving the U.S. Government Toward Zero Trust Cybersecurity Principles"; National Security Memorandum 8, "Memorandum on Improving the Cybersecurity of National Security, Department of Defense, and Intelligence Community Systems"; FY 2022 – 2026 DoW Strategic Management Plan; DoW CIO 2024 Defense Industrial Base Cybersecurity Strategy; and DoW CIO 2022 Zero Trust (ZT) Strategy.

ISSP assists the DoW CIO and mission partners in: developing cybersecurity governance processes; modernizing communications security (COMSEC) and cryptography, including post-quantum solutions; integrating and synchronizing the DoW information environment; enhancing communications cybersecurity and national security system protection; adopting ZT cybersecurity principles; defending against supply-chain attacks; overseeing cybersecurity risk management; developing and sustaining defense industrial base (DIB) cybersecurity activities; and integrating cybersecurity standards across the DoW.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Information Systems Security Program Plans and Accomplishments	29.804	24.524	35.214
Description: This program directly contributes to both integrated deterrence and the development of enduring advantages. Regarding integrated deterrence, the program strengthens the DoW's ability to deter aggression through enhanced resilience of its information systems and networks. This resilience acts as a deterrent by making U.S. systems less vulnerable to attack and disruption, thereby reducing the potential adversarial gains. Furthermore, the program supports strategic competition with China and addresses persistent threats from Russia, North Korea, Iran, and violent extremist organizations by providing the cybersecurity tools and expertise necessary to defend against their evolving cyber capabilities.

B. Accomplishments/Planned Programs (\$ in Millions)			FY 2025	FY 2026	FY 2027
In terms of building enduring advantages, the program focuses on adapting and fortifying the defense ecosystem. This includes modernizing cybersecurity infrastructure, implementing advanced security protocols like Zero Trust, and fostering a culture of cybersecurity awareness and vigilance. By continuously improving the defense ecosystem's cybersecurity posture, the program ensures that the U.S. maintains a technological and operational advantage in the face of increasingly sophisticated cyber threats. This proactive approach ensures long-term security and resilience, contributing to the overall strategic advantage of the United States. FY 2026 Plans: Collaborate with industry to develop new cybersecurity technologies for legacy network upgrades, evolving into new cybersecurity architectures and command and control capabilities. Develop and refine policies for acquisition program protection strategies and oversight. Develop strategies, standards, and tools for supply chain risk management, collaborating with industry on global sourcing standards. Evaluate cyber activities to efficiently mitigate investment decisions using cybersecurity metrics, supporting policy development, refinement, and oversight. Formulate programmatic advice and participate in advisory and governance bodies. Accelerate cloud security guidance and procedures by commercial cloud service providers. Refine and oversee comprehensive secure mobility processes, policies, and cybersecurity capabilities. Continue tactical networks, coalition, and mission partner networks development and engineering support. Develop and implement strategies to defend against sophisticated cyber adversaries and large-scale incidents, including threat-based system security engineering and developing critical design artifacts. Support analyses on DoW cloud-based computing cybersecurity, risk factors, and mitigation controls refinement, as part of the Risk Management Framework (RMF) to accelerate DoW cloud adoption. Refine and integrate policies with the RMF, supportive standards, guidance, efficiencies, and web-based processes to strengthen information system controls and protections. Continue improving built-in cybersecurity, mission assurance, mitigation analyses, and vulnerability detection (hardware and software testing) in acquisition programs.

A. Mission Description and Budget Item Justification

The DoW CIO defense industrial base (DIB) cybersecurity initiative includes the Cybersecurity Maturity Model Certification (CMMC) program, cybersecurity strategy, policy, and capability development efforts to support our DIB partners and our DIB supporting capabilities. This program works side-by-side with other DoW CIO programs, including the DoW CIO information systems security program (PE 0303140D8Z), to provide focused DoW capability requirements to assess DIB contractor and subcontractor compliance with existing federal contract and controlled unclassified information (CUI) protection requirements, protecting the information from cybersecurity risks, including advanced persistent threats. It also includes efforts to develop, test, and distribute DoW cybersecurity services for DIB partners and stakeholders. This program works in alignment with/to meet the FY 2022 – FY 2026 DoW Strategic Management Plan, DoW CIO 2024 DIB Cybersecurity Strategy, and DoW CIO 2022 Zero Trust (ZT) Strategy. This program also supports defending the homeland and revitalizing America's DIB by transforming the future force foundation and adapting and fortifying our defense ecosystem.

C. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026	FY 2027
Title: DIB Cyber security initiative Description: The DoW CIO defense industrial base (DIB) cybersecurity initiative includes the Cybersecurity Maturity Model Certification (CMMC) program, cybersecurity strategy, policy, and capability development efforts to support our DIB partners and our DIB supporting capabilities. This program works side-by-side with other DoW CIO programs, including the DoW CIO information systems security program (PE 0303140D8Z), to provide focused DoW capability requirements to assess DIB contractor and subcontractor compliance with existing federal contract and controlled unclassified information (CUI) protection requirements, protecting the information from cybersecurity risks, including advanced persistent threats. It also includes efforts to develop, test, and distribute DoW cybersecurity services for DIB partners and stakeholders. This program works in alignment with/to meet the FY 2022 – FY 2026 DoW Strategic Management Plan, DoW CIO 2024 DIB Cybersecurity Strategy, and DoW CIO 2022 Zero Trust (ZT) Strategy. This program also supports defending the homeland and revitalizing America's DIB by transforming the future force foundation and adapting and fortifying our defense ecosystem. FY 2026 Plans: Amend publication of 32 Code of Federal Regulations (CFR) CMMC program rule to incorporate latest revision to National Institute of Standards and Technology (NIST) cybersecurity guidelines. Continue FY 2025 base program initiatives. Phased CMMC program implementation in FY 2026 will result in additional initiatives. Update the CMMC Enterprise Mission Assurance Support Service (eMASS) database on non-secure internet protocol router (NIPR) and finalize initial develop and deploy a secure internet protocol router (SIPR) instantiation, to include integrating and using cross-domain solutions. Analyze and track CMMC performance metrics to ensure effective program management and identify potential operational impacts to the CMMC ecosystem. Partner with the military departments and other agencies and their initiatives to improve DIB CS. FY 2027 Plans: Continue to assess the feasibility and support emerging commercial services, tools, and platforms that provide insights into DIB and DoW supply chain relevant cybersecurity threats and vulnerabilities. Continue to partner with the DIB sector, DoW Components, and other government agencies to demonstrate cost-effective and scalable cybersecurity services that augment and/or enhance existing commercial capabilities and services.		14.956	10.687	17.077

C. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026	FY 2027
Continue with FY 2026 base initiatives. Begin the CMMC Phase 2 implementation, focusing on CMMC third party assessment organizations (C3PAO) certification assessments. Continue to sustain and enhance CMMC eMASS (on NIPR), the Dow's enterprise tool to support CMMC assessment management needs and metrics tracking. Develop and deploy a SIPR CMMC eMASS instantiation, to include integrating and using cross domain solutions. Continue to revise the CMMC requirements as required to incorporate changes to NIST cybersecurity guidelines. Continue efforts to integrate CMMC eMASS with the Suppliers Performance Risk System (SPRS). Continue to develop and promote short training videos and other training material to clarify key aspects of the CMMC program implementation. Expand training as required to incorporate the 32 CFR and 48 CFR changes. <i>FY 2026 to FY 2027 Increase/Decrease Statement:</i> Increase in FY 2027 request is due to level setting of funding due to increased DIB requirements.

A. Mission Description and Budget Item Justification

The Policy R&D Program supports the National Defense Strategy by providing analysis to overcome military security challenges. The global security environment is dynamic and complex. Continuous research and analysis is necessary for understanding foreign military structures and capabilities, as well as for developing mid- to long-term anticipatory and strategic perspectives on security issues. These perspectives can then guide necessary changes to policies, strategies, processes, and capabilities that advance U.S. and interests. This program blends multiple research disciplines including policy, sciences, and engineering to better understand matters affecting strategy, planning, management of international alliances and partnerships, crisis preparedness and response, budgetary and operational oversight, cyber and space challenges, special operations, homeland defense, nuclear and missile defense, and other emerging threats to the national security of the US. The program also supports statutorily directed requirements related to Office of the Under Secretary of War for Policy mission areas.

• Reprogrammings	-	-			
• SBIR/STTR Transfer	-0.125	-			
• Other Adjustments	-0.001	-0.001	-	-	-

Change Summary Explanation

The decrease of -\$126 thousand in FY 2025 is due to a -\$125 thousand SBIR/STTR reduction, and -\$1 thousand for other adjustments.

The decrease of -\$47 thousand in FY 2026 is the result of a congressional reduction for expired authorization in 15 U.S.C. 638 (SBIR/STTR) (P.L. 119-21 Sec 8151) and a small reduction for other adjustments.

A. Mission Description and Budget Item Justification

The Policy R&D Program supports the interim National Defense Strategy by providing analysis to overcome military security challenges. The global security environment is dynamic and complex. Continuous research and analysis is necessary for understanding foreign military structures and capabilities, as well as for developing mid- to long-term anticipatory and strategic perspectives on security issues. These perspectives can then guide necessary changes to policies, strategies, processes, and capabilities that advance U.S. and interests. This program blends multiple research disciplines including policy, sciences, and engineering to better understand matters affecting strategy, planning, management of international alliances and partnerships, crisis preparedness and response, budgetary and operational oversight, cyber and space challenges, special operations, homeland defense, nuclear and missile defense, and other emerging threats to the national security of the US. The program also supports statutorily directed requirements related to Office of the Under Secretary of War for Policy mission areas.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Future Security Challenges	2.394	2.286	2.030
Description: Provides program management oversight and technical support to identify current and emerging future security challenges to the Department, and for international cooperation activities with Allies and international partners to confront these challenges. Anticipates exploitation of technology, including available and advanced capabilities, and work with the international commercial sector and academia concerning adversary's application of technology. Program explores processes and policy to integrate international capabilities across the spectrum of security challenges.			
FY 2026 Plans: Continue FY 2025 efforts to include: • The INDO-PACOM AOR remains an area with increased emphasis and the program will continue to perform trend analysis and developing mitigation options. • Develop opportunities to apply risk management methodologies to identified program areas. • Working with our international partners, develop net-centric enterprise technologies to remove international sharing barriers identified with maritime information, intelligence, and data being collected by DoW and foreign governments. • Research military competition among nations in the Far and Middle East and highlight potential capabilities and policies each nation may utilize in future armed conflicts. • Continue to enhance strategies and relationships with European nations based on the exchange of information through education opportunities and existing policies.			

UNCLASSIFIED

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026	FY 2027
• Research and analyze particular Far (China) and Middle East countries as it relates to their decision-making process, financial position, leadership, political dynamics, technical abilities and internal social tensions and stability. • Continue research efforts within the Services and Combatant Commands to better analyze and demonstrate enduring counterinsurgency operational capabilities. FY 2027 Plans: Continue FY 2026 efforts to include: • The INDO-PACOM AOR remains an area with increased emphasis and the program will continue to perform trend analysis and developing mitigation options. • Develop opportunities to apply risk management methodologies to identified program areas. • Working with our international partners, develop net-centric enterprise technologies to remove international sharing barriers identified with maritime information, intelligence, and data being collected by DoW and foreign governments. • Research military competition among nations in the Far and Middle East and highlight potential capabilities and policies each nation may utilize in future armed conflicts. • Continue to enhance strategies and relationships with European nations based on the exchange of information through education opportunities and existing policies. • Research and analyze particular Far (China) and Middle East countries as it relates to their decision-making process, financial position, leadership, political dynamics, technical abilities and internal social tensions and stability. • Continue research efforts within the Services and Combatant Commands to better analyze and demonstrate enduring counterinsurgency operational capabilities. FY 2026 to FY 2027 Increase/Decrease Statement: The decrease of \$-0.256 million between FY 2026 and FY 2027 is due a reduction in contract services undertaken in direct support of the President's executive order, which prioritizes cost efficiency, transparency, and the consolidation of services. This measure represents a deliberate workforce optimization strategy designed to streamline resources while safeguarding against adverse impacts to modernization initiatives and overall mission effectiveness.				
Title: Long Term Competitions (LTC) Program		3.000	3.000	3.000
Description: Request supports the Long Term Competitions (LTC) program which is an analytical effort chartered to provide the DoW senior leadership with an understanding of key long-term developments and dynamics in specific areas of the global security environment, and to develop competitive strategies for their consideration as the Department seeks to address these long term challenges. The LTC Program will provide rigorously analyzed competitive strategy recommendations to these senior DoW leaders, and will require the support of organizations and experts outside of government to deliver the highest quality analysis, concepts and recommendations. Funding for the LTC program will be used to: bring outside experts into Task Force

A. Mission Description and Budget Item Justification

This program supports the Department's initiatives to defend the homeland and deter China by modernizing command, control, and communications (C3) capabilities.

The DoW CIO provides strategic direction and oversight for C3 capabilities, including tactical communications, infrastructure, satellite communications (SATCOM), airborne intelligence surveillance and reconnaissance, electromagnetic spectrum management, positioning, navigation, and timing, Defense Information Systems Network infrastructure, commercial mobile devices, and emerging 5G capabilities.

The C3 modernization program provides technical analysis and systems engineering to ensure warfighters have an information advantage through C3 systems and shapes the Combined Joint All Domain Command and Control (CJADC2) technology foundation.

Specifically, this program enables the research, analysis, evaluation, and management of communication networks in a contested spectrum environment. This includes providing secure information access and services (e.g., cryptographic modernization) and supporting Combined Joint All Domain Command and Control (CJADC2) efforts by refining joint protocols.

C. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026	FY 2027
Rationalize current satellite communications (SATCOM) tools to the SATCOM Operational Management and Situational Awareness Tool and migrate to the Joint Warfighting Cloud Capability (JWCC) environment.				
Govern and oversee modernized modem fielding (enterprise SATCOM gateway modem, Army/Air Force anti-jam modem) and Mobile User Objective System (MUOS) terminal fielding, per the Chairman of the Joint Chiefs of Staff direction.				
Analyze and identify modern transmission security mitigation controls to improve DoW's next-generation commercial SATCOM utilization.				
Evolve SATCOM networks toward a digital intermediate frequency (IF) modem architecture.				
Continue SATCOM International Standards Committee analysis.				
Support allied and coalition interoperability efforts (North Atlantic Treaty Organization (NATO) migration plan, Joint Strike Fighter partner interoperability, information exchange agreements, command, control, and communications (C3) integration).				
Analyze multi-national information sharing programs and initiatives, related acquisition strategies, and functional requirements.				
Implement satellite communications (SATCOM) gateway optimization, resiliency, and broadband force design initiatives.				
Develop a hub-based high-frequency communications concept for protected high-rate communications in satellite-denied environments.				
Develop a resilient, secure, and adaptive tactical information technology infrastructure for contested environments.				
Modernize DoW's spectrum-dependent systems for all-domain maneuver and fires superiority.				
Modernize spectrum data, data collection, databases, storage retrieval, and aggregation.				
Develop artificial intelligence-enabled spectrum data analytics.				
Modernize electromagnetic battle management, situational awareness, and command and control (C2) integration.				
Provide analysis and policy guidance on DoW tactical 5G technology use.

C. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026	FY 2027
Analyze tactical processing nodes system engineering and architecture. Secure intelligence, surveillance, and reconnaissance (ISR) data and encryption over wireless platforms (including unmanned aircraft systems). Lead the narrowband communications services analysis of alternatives (AoA) working group. Analyze coalition command and control (C2) and multinational information sharing to guide Mission Partner Environment development. Analyze select joint and military service command and control (C2) programs/initiatives to promote enterprise data and services. Implement common mission network transport capability. Adopt and evolve enterprise mission services to support the Defense Message System (DMS) and joint communications architecture. Conduct follow-on analysis to implement the Global Command and Control System AoA recommendations. Analyze joint force capability needs to enable C2. Evaluate enterprise operations center architectures and information requirements to support C2 investment decisions. Analyze joint command, control, and communications (C3) requirements, capability gaps, and integrated priority lists. Develop data ontologies and National Information Exchange Model compliant network management information exchange package documents. Analyze wireless architectures and advanced technologies to inform Department-wide policies and implement mobility solutions. Oversee waveform policies and technical specifications compliance. Implement DoW commercial mobility and systems engineering analysis on DoW mobility unclassified capability (DMUC)/DoW mobility classified capability.

C. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026	FY 2027
Support DMUC derived credentials implementation.				
Refine Configuration Management & Device Management (CMD) certification processes, mobile application/device management guidelines, DoW mobile public key infrastructure guides, and personal user-based enforcement guidelines; update the approved CMD product matrix.				
Conduct implementation assessments to refine mobile application and device strategies.				
Continue CMD and voice encryption technical and business case analyses.				
Analyze tactical secure voice cryptographic interoperability specification implementation on tactical radios.				
Update the tactical radio and communication security modernization plan.				
Develop interoperable land mobile radio (LMR) standards to support public safety communications.				
Implement LMR policy and refine procedures to support DoW's LMR implementation.				
Analyze DoW waveform development and management.				
Maintain DoW-approved waveform baseline and authoritative repository.				
Analyze waveform technologies to improve tactical data link network robustness and scalability.				
Develop guidance and programming recommendations to integrate trusted systems, networks, concepts, and processes into the acquisition and maintenance of DoW information systems, enclaves, and services, including tactical communication commodities purchase and integration.				
Review/refine Electronic Flight Bag procedures.				
Implement the DoW Enterprise Mass Warning and Notification system and modernize Next Generation 9-1-1.

Funds mandatory (reconciliation) Joint Modular Emitter Interface Standards and System Proliferation (JMEIS) requirements. <i>FY 2027 Plans:</i> FY 2027 request also invests in Joint Modular Emitter Interface Standards and System Proliferation (JMEIS) requirements. JMEIS will leverage ongoing test and training threat emulator efforts to produce a joint standard for industry to build to and for the Department to acquire in order to fill the gap in electromagnetic spectrum systems for warfighter training purposes. These standards include the integration of major emitter components, data and electronic file requirements, and range infrastructure controls. The JMEIS effort will fill the training gap created by a reliance on limited, exquisite test-fidelity emitters and extremely low-cost, low-capability emitters. <i>FY 2026 to FY 2027 Increase/Decrease Statement:</i> The increase in FY 2027 is due to increased JMEIS requirements.

A. Mission Description and Budget Item Justification

In accordance with Section 1401 of the Bob Stump National Defense Authorization Act for Fiscal Year 2003 (Public Law 107-314), the Homeland Defense (HD) Technology Transfer Program is a congressional program mandated to identify, evaluate, and transfer DoW dual-use technologies that have application to first responders at federal, state, and local levels, in support of homeland security.

The program ensures a successful and balanced transfer of dual-use technology equipment and information to first responders without impeding military readiness by (a) accelerates development technologies, (b) increases effectiveness of equipment transfers, (c) transfers technology through a transitional effort that has dual utility to improve homeland security, and (d) enhance public safety without degrading military readiness. The HD Tech Transfer program meets Congress' intent and supports the interim National Defense Strategy through continuously delivering viable dual-use technologies to enhance first responder critical mission requirements during major crises and steady-state operations.

Homeland Defense Technology Transfer Program works closely with Homeland Defense Integration and Defense Support of Civil Authorities leadership as well as intra- and inter-agencies on potential technologies and excess equipment that provide long-term sustainable support to the first responder with the intent to lessen the number of "request for assistance" from Federal and State partners. This approach not only bolsters first responder support during civil unrest and natural disasters, it enables the Department to focus on it's strategic national security objectives.

In addition to the transferring emerging DoW dual-use technologies in support of the first responder community, HD Tech Transfer works aggressively to build partnership capacity with agencies and stakeholders that have shared equities. As such, HD Tech Transfer works in partnership with the Naval Postgraduate School, Center for Homeland Defense and Security and the National Security Innovation Network to conduct academic research projects to assess gaps and shortfalls in areas such as border security and wildland fires. Each comprehensive study project culminates in a formal "final report" that provides proposed technology solutions and policy recommendations for senior leaders to consider in relations to the grand challenges within their respective communities. Moreover, HD Tech Transfer works with a variety of DoW activities, defense laboratories, private vendors, and first responders when conducting "test and evaluation" to determine technology modifications and application for product end-users i.e., law enforcement, firefighters, and emergency medical service personnel. DoW's excess property program, HD Tech Transfer coordinated with the Defense Logistics Agency to ensure that appropriate excess military equipment and property is made available to the first responder community on an expedited basis.

• Other Adjustments		-0.004	-0.001	-	-	-
Change Summary Explanation						
The decrease of -\$38 thousand in FY 2025 is the result of a small decrease of -\$34 thousand for /SBIR/STTR and another adjustment of \$4 thousand.						
The decrease of -\$13 thousand in FY 2026 is the result of a congressional reduction for expired authorization in 15 U.S.C. 638 (SBIR/STTR) (P.L. 119-21 Sec 8151) and a small decrease for cancelled account.						
The FY 2026 President’s Budget submission did not include FY 2027 funding projections. Therefore, no comparison between budget positions is available for FY 2027.						
C. Accomplishments/Planned Programs (\$ in Millions)				FY 2025	FY 2026	FY 2027
Title: Homeland Defense Technology Transfer Program				1.829	1.758	1.730
Description: Provide outreach through coordination, academic partnerships, and cooperation with inter-agency partners to provide dual-use technology and equipment to first responders. Ensure DoW components conduct Technology Transfer programs that are appropriate for the respective first responder end-user. Provide information to stakeholders on equipment and technology use and availability.						
FY 2026 Plans:						
Continue efforts in support of the first responder community.						
- Use a consortium of subject matter experts/governance councils to prioritize technology transfer requirements and expedite DoW dual-use

A. Mission Description and Budget Item Justification

This program supports the Department's initiatives to Deter Aggression, Defend the Homeland, Provide Nuclear Deterrence and being prepared to prevail, and Build Sustainable and Long-Term Advantage.

The Radiological and Nuclear (R/N) Detection Gear Modernization and Procurement for the Joint Force research and development activities (RDAs) enhance DoW's capabilities to campaign across the domains of threats and spectrums of conflict by: improving the Department's capability to survive and operate in the Radiological and Nuclear environment – including in the information and early warning domain; reinforcing our own warfighting advantages by providing increased capability to detect and identify radiological and nuclear threats; and enhancing our interoperability and access to address acute forms of coercion. This program is specifically geared to provide modern improved networked R/N detection, indications and identification capability to the warfighter and to upgrade obsolete equipment and increase capability to continue to operate in the R/N environment (Interim National Defense Strategic Guidance and the 2023 CWMD Strategy).

RDAs provide enhanced R/N capabilities. The Radiological and Nuclear Defense Capability Development portfolio enables DoW to provide Joint Force and National Guard capability development, acquisition and modernization funding to prepare for and respond to any emergency involving nuclear and/or radiological events in the United States; provide a capability for the Joint Force to withstand, operate through, and recover from an R/N event and will ensure DoW strategic direction aligns with the National Defense Strategy's priorities; is a necessary action to improve resilience; and promotes integrated deterrence of WMD with state, local and other federal agencies.

The Radiological and Nuclear Defense Capability Development portfolio is executing along cohesive lines of effort (LOEs) designed to prepare the Joint Force for a Future Operating Environment in which adversary pursuit or possession of WMDs pose threats ranging from existential to tactical, and limit U.S. strategic choices.

The Office of the Secretary of War uses the Radiological and Nuclear Defense Capability Development portfolio to invest strategically in projects across the Military Services, Combatant Commands, and Defense Agencies. Funding is prioritized for projects that close Joint Force warfighter capability gaps. An annual investment strategy is used to meet emergent operational and capability needs validated by the Joint Force and the National Guard Bureau, yielding new fielded capabilities within one to two years.

---	---

The Radiological and Nuclear Defense Capability Development portfolio: Systems Development and Demonstration program invests in maturation of prototypes; integration of technologies, systems and components; developmental and operational test and evaluation; and transition to fielded capabilities that improve capability to detect and identify radiological and nuclear threats. This program bridges the gap between basic research to accelerate and enable transition of technologies to fielded capabilities by leveraging significant science and technology (S&T) investments made by the Department of War, other Federal agencies, and industry.

This program funds labor, materials, and travel to support the requirements of this program, performed by a government agency or by private individuals or organizations under a contract with the government, for activities and acquisitions including RDT&E, assessments and analyses, research studies, education, and other activities related to capability development and fielding.

New Start (Y/N): No

This PE consists of funding and activities funded in prior years under RDT&E PE 0604123D8Z Dem/Val Foundation Enablers and O&M to provision the War Data Platform, formerly Advana; DoW's enterprise data, analytics, and AI platform. It combines these activities into one BA08-funded PE to enable more effective management of the War Data Platform as an enterprise software-centric capability. The Combatant Command Embedded Support teams that leverage the War Data Platform are included in this PE, specifically within the 676 project code named "Business and Mission Analytics".

A. Mission Description and Budget Item Justification

This program funds capabilities and activities to make disparate DoW datasets more widely accessible, understandable, interoperable, and actionable across the DoW enterprise by providing the enterprise data stack, analytic tools, and data engineering expertise to improve DoW decision making across multiple functional areas and organization levels. Furthermore, these foundational investments are essential to enable advanced AI inference, allowing for the operational deployment of machine learning models to generate predictive insights and accelerate decision-making. This includes enhancing user platform and data, increasing the number of data sources, improving data quality, and driving enablement across the DoW workforce to effectively leverage the data and analytic capabilities provided through War Data Platform.

Change Summary Explanation

FY 2026 funded in new PE 0608140D8Z includes funds from RDT&E PE 0604123D8Z Dem/Val Foundation Enablers and O&M for War Data Platform. "Advana" as it was historically known, underwent a name change to the War Data Platform per the Secretary of War's memorandum, "Transforming Advana to Accelerate Artificial Intelligence and Enhance Auditability," dated January 9, 2026.

The FY 2026 President's Budget submission did not include FY 2027 funding projections. Therefore, no comparison between budget positions is available for FY 2027.

A. Mission Description and Budget Item Justification

This program funds capabilities and activities to make disparate DoW datasets more widely accessible, understandable, interoperable, and actionable across the Department of War (DoW) enterprise by providing the government-owned, contractor operated enterprise data stack, analytic tools, and data engineering expertise to improve DoW decision making across multiple functional areas and organization levels. This includes speeding data access, increasing the number of data sources, improving data quality and driving enablement across the DoW workforce to effectively leverage the data and analytic capabilities provided through War Data Platform.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: War Data Platform Infrastructure	-	229.751	313.029
Description: Requested funding supports continued development, improvement, security, and sustainment of the War Data Platform providing enterprise data and analytics. The War Data Platform is focused on expanding the core data integration layer to provide standardized data access that streamlines secure, rapid development and integration of agentic AI and other applications Department-wide. This includes maintaining core infrastructure, updating and improving the enterprise data architecture, and platform services to support a growing user base, improving the quality of and access to data sources, and delivering data in support of the DoW AI Strategy. FY 2026 Plans: Funding is maintaining core compute infrastructure, data, tooling, service desk, and engineering to support a growing userbase including sustainment of existing applications, data sources, customers, and capabilities. CDAO will continue to invest in driving a scalable self-service architecture. FY 2026 funding is supporting the follow-on War Data Platform acquisition and contracting strategy, which is diversifying the vendor base while procuring and integrating best of breed commercial capabilities. FY 2027 Plans: Funding will maintain core compute infrastructure, data, tooling, service desk, and engineering to support a growing userbase including existing applications, data sources, customers, and capabilities. CDAO will continue to invest in driving a scalable self-service architecture. For FY 2027 the primary focus of the War Data Platform is to modernize the data integration layer, implement Zero Trust Architecture and SIPR/JWICS infrastructure modernization deployment. FY 2026 to FY 2027 Increase/Decrease Statement: The FY 2027 budget request includes an increase to support the War Data Platform, formerly Advana, driven by increased usage and license growth, as well as expanded cloud services across NIPRNet, SIPRNet, and JWICS. Within this overall increase, an

B. Accomplishments/Planned Programs (\$ in Millions)		FY 2025	FY 2026
additional \$3 million invests in the Next Generation Technology / Autonomy – War Data Platform - Zero Trust Implementation effort, enabling comprehensive Zero Trust security measures for the War Data Platform operating on the nation's classified network, SIPRNet and JWICs. In an era of persistent cyber threats from sophisticated state-level adversaries, traditional network perimeter security is no longer sufficient to protect our most sensitive national security data. This investment will directly fund the deployment of advanced Identity and Access Management (IAM) solutions, including procuring and integrating new software modules for continuous identity verification, the implementation of micro-segmentation capabilities through network infrastructure configuration and policy enforcement point deployment, and the integration of continuous monitoring and threat detection tools by acquiring specialized analytics platforms and security orchestration tools. By implementing these measures, the CDAO mitigates the risk of unauthorized access and lateral movement by attackers, thereby protecting our classified data, ensuring the integrity of our analytical capabilities, and modernizing our defensive posture to guarantee a more secure, resilient network for the warfighter.

D. Acquisition Strategy			
OUSW(R&E) CDAO currently procures War Data Platform support and capabilities through a number of assisted acquisition partners and ~20 core contract vehicles with several different performers. Several bridge contracts are in place for core integration and implementation, through which OUSW(R&E) CDAO procures cloud computing, commercial tools and licenses and data engineering support to run the platform. There are several major contract actions in process driving competition across all layers of the technical stack. Several Department organizations also self-fund their War Data Platform compute costs and engineering support for specific use-cases and data products leveraging core War Data Platform infrastructure and tools.

A. Mission Description and Budget Item Justification

The Business & Mission Analytics project enables DoW organizations to better leverage data, analytics, and artificial intelligence capabilities to improve decision making in multiple functional and cross-functional areas. Through the delivery of enterprise capabilities, services, and best practices, we empower business and warfighting operators to leverage data to achieve decision advantage. Funding continues to sustain existing products that supports customers across the Department, including: the Joint Staff, Combatant Commands, OSW Principal Staff Assistants, and cross-service efforts.

This is comprised of 4 major areas:

- (1) The War Data Platform Program Office manages our centralized budget,
- (2) Support acquisition management,
- (3) Program considerations and documentation,
- (4) Contracts management and agile management.

Product teams provide centralized customer support, data discovery, user onboarding, drive accountability of product and technical roadmaps via increment planning and WDP metrics, provide platform access, training and enablement for the entire user base and upskill the workforce in accessing and using WDP's data and AI capabilities.

Principal Staff Assistant (PSA) Support is an enabler to ensure seamless integration of data and automation products into decision-making capability. They include support for data scientists, data engineers and data product support for tools to design and build high-quality products for executive customers with enterprise-level impact. It enables CDAO to support new and existing customers by enhancing our operating model and business practices to deliver high quality data products to any tool, application or environment across the Department, thereby driving enterprise scaling that is platform and tool agnostic.

The Combatant Command Embedded Support (CES) portfolio is an enabler of operational success and national security objectives, directly supporting the Department of War's (DoW) ability to execute strategic operations, maintain regional stability, and adapt to dynamic global challenges. By providing centralized management of contracting digital talent labor embedded across all Combatant Commands, this portfolio ensures seamless integration of data capabilities into mission-critical processes on both the War Data Platform, Maven Smart System and other platforms as required for mission success.

B. Accomplishments/Planned Programs (\$ in Millions)

Appropriation/Budget Activity 0400 / 8	R-1 Program Element (Number/Name) PE 0608140D8Z / <i>Enterprise Platform and Capabilities Software Pilot Program</i>	Project (Number/Name) 676 / <i>Business Mission Analytics</i>									
B. Accomplishments/Planned Programs (\$ in Millions)											
Description: The Business & Mission Analytics project enables DoW organizations to better leverage data, analytics, and artificial intelligence capabilities to improve decision making in multiple functional and cross-functional areas. Through the delivery of enterprise capabilities, services, and best practices, we empower business and warfighting operators to leverage data to achieve decision advantage. Funding continues to sustain existing products that supports customers across the Department, including: the Joint Staff, Combatant Commands, OSW Principal Staff Assistants, and cross-service efforts. FY 2026 Plans: Funding is procuring data scientists, data engineers, data product support for tools to design and build high-quality products for warfighters with enterprise-level impact. It is enabling CDAO to support new and existing customers by enhancing our operating model and business practices to deliver high quality data products to any tool, application or environment across the Department, thereby driving enterprise data delivery that is platform and tool agnostic. FY 2027 Plans: Funding will procure data scientists, data engineers, data product support for tools to design and build high-quality data products for warfighters with enterprise-level impact. Data product teams will scale to meet the current demand and efforts will stay consistent. FY 2026 to FY 2027 Increase/Decrease Statement: The increase is due to establishing Advana as an Enterprise Program of Record. The War Data Platform serves as the cornerstone of the Department's data-driven decision-making system. The platform faces compute shortfalls and aging data architecture and framework that is affecting its ability to fully deliver data and analytic capabilities, impacting operational agility and the speed of intelligence insights. Modernizing the data architecture as the requirement of expanding, increasing, and optimize the underlying data layer to expand throughput to reduce latency to ensure the platform can meet the demands of the modern warfare. The investment is to ensure the performance, scalability, and optimizing latency of this critical national security asset but also guarantees sustained development and support, providing the warfighters with an information advantage of the enterprise data platform.		<table border="1"> <thead> <tr> <th>FY 2025</th> <th>FY 2026</th> <th>FY 2027</th> </tr> </thead> <tbody> <tr> <td></td> <td></td> <td></td> </tr> <tr> <td align="center">-</td> <td align="center">94.913</td> <td align="center">132.095</td> </tr> </tbody> </table>	FY 2025	FY 2026	FY 2027				-	94.913	132.095

A. Mission Description and Budget Item Justification

The Secure Unclassified Network (SUNet) provides critical infrastructure for fast-moving AI development missions, Interagency Task Force groups, and experimental DoW missions that cannot be met by other existing capabilities. SUNet is the Department's only one off Department of Defense Information Network (DODIN), Government-owned (GOTS) network and compute platform that is authorized to support data and missions up to the CUI level. SUNet adheres to DoW Risk Management Framework standards and is accessible anywhere in the world with internet. The platform acts as a sandbox and provides segmented, customizable areas of compute and storage for DoW and mission partners to rapidly onboard, collaborate, develop, and validate cutting edge commercial software and tools. Mission owners across the Department rely on SUNet's flexible and accessible infrastructure to achieve their AI/ML missions and maintain operational advantage.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: SUNet	-	58.138	32.407
Description: SUNet provides critical infrastructure for fast-moving AI development missions, Interagency Task Force groups, and experimental DoW missions that cannot be met by other existing capabilities. Mission owners across the Department rely on SUNet's flexible and accessible infrastructure to achieve their AI/ML missions and maintain operational advantage.			
FY 2026 Plans: FY 2026 is funding the current platform, growth, and required technical refreshes. Funding is supporting a major modernization initiative; FY 2026 funding is supporting a prototype for the next generation of SUNet, and ultimately the transition of the prototype to an authorized production system.			
FY 2027 Plans: FY 2027 funding will continue to fund the legacy platform, as well as fund the development of the next generation SUNet system. The deliberate overlap of the legacy system and next generation system will ensure continuity of operations for AI/ML mission owners across the Department, as well as using recently procured hardware. Once the next generation SUNet is authorized and at Full Operating Capacity, FY 2027 funding will support the orderly migration of customers to the new system. The next

Note

In FY 2026, Data Reform Initiative/Analysis Working Group (AWG) was created to provide visibility on AWG activities for reporting and tracking purposes.

A. Mission Description and Budget Item Justification

The Analysis Working Group (AWG) assists the Secretary and Deputy Secretary of War in guiding the analytic community to ensure analysis products are robust and of the highest quality. The end goal is an analytic enterprise that is agile, responsive, and provides sound decision support for the Secretary and Deputy Secretary. Funding for this project supports analytic research across the Department to guide reform of the Department's analytic enterprise. Projects that support this effort help develop a high performing and innovative analytic enterprise with the right policies, structures, people, and tools to support timely strategic decisions that create an advantage for the U.S Military now and into the future.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Data Reform Initiative (AWG)	-	4.436	4.244
Description: The Analysis Working Group (AWG) was established to marshal and guide the Department's analytic capabilities. This group is advancing key strategic priorities by improving the analytic underpinning available for senior leader decisions and addressing necessary enterprise reforms (e.g., data sharing and knowledge management) across the analytic community. CDAO funding supports data access and interoperability, new analytic tools, training, and studies to advance DoW data and AI adoption. FY 2026 Plans: Prioritized studies and reform the analytic enterprise through enhanced modeling and simulation (M&S) and infrastructure improvements (facilities, hardware, software, and data) as agreed upon and allocated by Analysis Working Group. Develop the analytic skills of new and existing strategic analysts running AWG-prioritized models, to include but not limited to desk-side/on-the-job training or short courses to better assist the DoW community with analytical research for senior leader decisions. FY 2027 Plans: Prioritized studies and reform the analytic enterprise through enhanced modeling and simulation (M&S) and infrastructure improvements (facilities, hardware, software, and data) as agreed upon and allocated by Analysis Working Group. Note

New Start (Y/N): Yes

This is a new start in FY 2027.

A. Mission Description and Budget Item Justification

The Department of War (DoW) relies on a multitude of mission-critical modeling and simulation (M&S) codes and tools that are utilized across the munitions, platforms and warfighter communities. This program's mission is for the sustainment of these M&S codes to keep them functioning at appropriate levels to support key DoW mission spaces.

M&S codes have been previously developed by OUSW(R&E) and DoW programs and are continuously and incrementally improved and enhanced adding new capabilities that support evolving mission criteria. Enhancements and improvements are commonly distributed in new releases and versions of the software and are increasingly more adaptable to digital engineering frameworks that enable Machine Learning (ML) and automated workflows. M&S codes enable detailed design and performance assessments, augment physical testing to improve system performance and reduce costs, and support weapons employment and mission planning.

Sustainment of the M&S codes includes several activities to ensure they are functioning and executing at efficient and optimal levels. Compatibility testing of new releases to assess proper functionality on DoW systems, including within the DoW High Performance Computing ecosystem. Installation and configuration support for compatibility with DoW system requirements. Debugging and troubleshooting user problems, and direct support from the software developers for complex use cases. Developing and updating training materials for efficient implementation with users. Thorough review of the source code for new releases to ensure any sensitive content is stripped, while remaining intelligible.

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Weaponneering Code Sustainment	0.000	-	23.071
Description: The M&S Codes support design, development and operational activities relevant across the entire life cycle of munitions, weapons and platforms for the warfighter, starting with early design and discovery phases and continuing through support and assessments for in-service systems. Sustainment of the M&S Codes encompasses users across OSW, Army, Navy, Air Force, and DOE.			
FY 2027 Plans: - Release of new versions of DOE developed computational physics codes and associated databases to DoW users. - Sustainment of Engineering tools such as Fast Air Target Encounter Penetration (FATEPEN) used to simulate weapons effects on high value targets in challenging environments.

Note

New Start (Y/N): No

Project title has been changed from "DAVE and Data Visibility" to "Acquisition Digital Transformation Program" which reflects the new activities and purpose of this project.

A. Mission Description and Budget Item Justification

Acquisition Visibility supports the Department's effort to implement Executive Order 14265 "Modernizing Defense Acquisitions and Spurring Innovation in the Defense Industrial Base." By leveraging machine learning, artificial intelligence (AI) and other digital tools, Acquisition Visibility will rapidly and iteratively transform the Department's acquisition digital systems and processes with an emphasis on speed, flexibility, and execution. To achieve this, Acquisition Visibility will build a joint multi-cloud enterprise digital infrastructure for hosting digital platforms and AI tools; provide data engineering, data science, and digital governance expertise to build enterprise data pipelines and develop data governance standards; develop and deploy production joint data integration platform(s) and Department-wide acquisition visibility applications(s); and operational and algorithmic test and evaluation expertise and tools.

The FY 2027 request for Acquisition Visibility - Software Pilot Program includes \$64,364 thousand of discretionary and \$109,176 thousand of mandatory for a total of \$173,540 thousand. Acquisition Visibility mandatory funding for \$109,176 thousand will allow the Department to scale efforts to leverage digital and AI tools within the acquisition system to reduce administrative burden and plan acquisitions that deliver weapons faster than our adversaries. It will automate the preparation, verification, and approval processes of portfolio/program strategies to enable acquisition professionals to focus on capability delivery and mission outcomes, while simultaneously ensuring greater speed and quality. The funding will also support risk-informed and mission-based analysis and kill chain analysis for mission threads.

B. Accomplishments/Planned Programs (\$ in Millions)									FY 2025	FY 2026	FY 2027	
Title: Acquisition Digital Transformation Program									17.251	17.301	64.364	
Description: Acquisition Digital Transformation Program enables the Department to achieve two primary initiatives, Digitize Acquisition and Portfolio Scorecards and Data-driven Decisions. The scope of these initiatives includes all active portfolios, 1000+ programs, and 6+ pathways.												
Through the Digitize Acquisition initiative, the Acquisition Digital Transformation Program will enable the Department’s acquisition workforce and system to accomplish key results that include: - Significantly reducing the number of milestone/gate reviews - Accelerating approvals at all levels - Minimizing the number of acquisition documents required for programs and reviews - Scaling efforts to leverage digital and AI tools to enable greater acquisition speed and quality - Enable portfolio and programs reviews to focus on mission and operational outcomes.												
Through the Portfolio Scorecards and Data-driven Decisions initiative, the Acquisition Digital Transformation Program will enable the Department’s acquisition workforce and system to accomplish key results that include: - Supporting the implementation of Acquisition Transformation Strategy (ATS) and expanded authorities - Architecting digital systems and streamlining data collection, transformation, and presentation processes - Establishing outcome focused metrics - Addressing identified data gaps

- Publishing enterprise portfolio scorecards to effectively measure portfolio and programmatic performance e.g., speed, delivery, cost, across all levels (DAE, SAE, PAE, PM) - Enabling full acquisition visibility and by-exception approach to oversight FY 2026 Plans: (\$1.947 million) Scaffolding and Infrastructure - Initiates the building of a joint enterprise digital infrastructure in an IL-5 GovCloud for DevSecOps and hosting digital platforms and AI tools. (\$11.095 million) Data Collection, Processing, and Integration – refactors the data engineering, data science, and digital governance capabilities to enable enterprise data pipelines and data governance standards. Also initiates the development and deployment of a prototype joint data integration platform(s) to begin the process of replacing legacy data systems on IL-5. (\$1.650 million) Acquisition Visibility and Workflow Transformation – Initiate the development and deployment of a Department-wide acquisition visibility application prototype to replace legacy systems on IL-5. (\$1.814 million) Human-Centered Design, Measurement and Testing – establishes a new capability centered on Human-Machine Teaming and workflow transformation. Serves as the independent component for the program, optimizes the functional interface between users and advanced digital/AI models to reduce cognitive workload and eliminate operational latency. FY 2027 Plans: (\$15.512 million) Scaffolding and Infrastructure - Build and scale a multi-cloud joint enterprise digital infrastructure on IL-5, IL-6, and JWICS for DevSecOps and hosting digital platforms and AI tools. (\$32.583 million) Data Collection, Processing, and Integration – expands data engineering, data science, and digital governance capabilities to enable enterprise data pipelines and data governance standards. Scales the development and deployment of a production joint data integration platform(s) which replaces legacy data systems on IL-5, IL-6, and JWICS. (\$9.150 million) Acquisition Visibility and Workflow Transformation – Build and scale a Department-wide acquisition visibility application which replaces legacy systems on IL-5, IL-6, and JWICS. (\$4.233 million) Human-Centered Design, Measurement and Testing – expands the prior year's capability which is centered on Human-Machine Teaming and workflow transformation. Serves as the independent component for the program, optimizes the functional interface between users and advanced digital/AI models to reduce cognitive workload and eliminate operational latency. FY 2026 to FY 2027 Increase/Decrease Statement:

N/A			
Remarks			
D. Acquisition Strategy			
Acquisition Digital Transformation Program enables two initiatives and develops and fields digital capabilities across 5 core product lines and 3 enabling lines of efforts. The program will rapidly iterate to develop and delivery capability to end users. The contracting strategy will include multiple performers on one or more OTA prototypes with common, defined success criteria. Performers that meet the success criteria and are determined to be able to effectively meet the programs production-level requirements will be selected for OTA production awards. Initiative #1: Digitize Acquisition - Scale & Automate the Acquisition System Initiative #2: Portfolio Scorecards - Measure Performance & Full Acquisition Visibility Core Product Lines – (1) scaffolding and infrastructure, (2) data collection, processing, and integration, (3) acquisition visibility and workflow transformation, (4) AI models and orchestration, and (5) human-centered design, measurement and testing. Enabling lines of effort – (1) digital governance, (2) authorizing official-as-a-service, and (3) acquisition marketplace.

Note

FY 2026 funding was a congressional add of \$75 million.

A. Mission Description and Budget Item Justification

As directed by the National Defense Authorization Act (NDAA) FY 2025 Sec. 861, the Accelerate the Procurement and Fielding of Innovative Technologies (APFIT) program competitively selects projects in coordination with the Service Acquisition Executives and the Joint Staff. Project selection is guided by the National Defense Strategy with a focus on building enduring advantages through making the right technology investments and strengthening the resiliency and adaptability in our industrial base. APFIT conducts a merit-based, internal Department of War (DoW) process to solicit, evaluate, and select projects for \$10 million - \$50 million of procurement funding with priority to those provided by small businesses and non-traditional defense contractors. This program helps deliver capabilities to the Services and Agencies by providing critical procurement funding to programs with production-ready capability and a current procurement funding disconnect, thereby enabling the transition of the program across the "valley of death".

A. Mission Description and Budget Item Justification

The Accelerate the Procurement and Fielding of Innovative Technologies (APFIT) program is authorized in Section 861 of the National Defense Authorization Act (NDAA) for FY 2025. APFIT is a competitive, merit-based internal DoW process to solicit, evaluate and select projects for \$10 million to \$50 million of procurement funding, with priority to those provided by small businesses and non-traditional defense innovators. APFIT accelerates the delivery of these capabilities to the Services and Agencies by providing critical procurement funding to programs with production-ready capability and a current procurement funding disconnect, thereby enabling the transition of the program across the "valley of death".

B. Accomplishments/Planned Programs (\$ in Millions)

	FY 2025	FY 2026	FY 2027
Title: Accelerate the Procurement and Fielding of Innovative Technologies (APFIT)	0.000	-	-
Description: APFIT funding supports the Assistant Secretary of War for Mission Capabilities objective to accelerate transition and fielding of innovative technologies throughout the Department of War. The purpose of the APFIT program is to facilitate transition of capabilities developed by small business or non-traditional performers into initial production. Project selection is guided by the National Defense Strategy, the Under Secretary of the War for Research and Engineering National Defense Science and Technology Strategy, and the Chairman's Gap Assessment, with input from the Joint Staff, the Under Secretary of War for Acquisition and Sustainment, and the Service Acquisition Executive Offices.			
Accomplishments/Planned Programs Subtotals	0.000	-	-

	FY 2025	FY 2026
Congressional Add: APFIT 26-2 Selection Cycle	-	75.000
FY 2026 Plans: This funding enables the APFIT program to accelerate fielding of software capabilities to the joint force. The APFIT program will use this funding for software projects submitted as part of the APFIT 26-2 selection cycle which concludes in May 2026. Selected projects will be provided by a small business or non-traditional defense contractor, have immediate operational impact, require \$10 million to \$50 million in funding to bridge the 'valley of death', and show a path to sustained use beyond the APFIT funded licenses. The APFIT program anticipates selecting two to seven software projects as part of the 26-2 selection cycle. Selections will

Note

New Start (Y/N): No

As a result of system limitations at the time of submission, FY 2025 Actuals were erroneously reported under Projects 755 and 765 (DIU Fielding Execution). This funding was executed under Projects 496 DIU Fielding (\$363.324 million) and 613 Support to COCOMs (\$213.150 million).

A. Mission Description and Budget Item Justification

The Defense Innovation Unit (DIU) mission is to strengthen U.S. national security by accelerating the adoption of commercial technology and externally developed products connecting American entrepreneurs and commercial technology companies to Department needs at speed. DIU serves as the Department's center of excellence for commercial technology adoption and product transition, available to Portfolio Acquisition Executives and program offices across the Department. DIU is the Department's primary interface with the nontraditional and commercial ecosystem for rapid product adoption and transition.

In support of the Secretary of War's directive to transform the Defense Innovation Ecosystem to Accelerate Warfighting Advantage, DIU will: 1) Focus on high technologies that produce overmatch domination; 2) Focus on technologies that reduce the number of Soldiers, Sailors, Airmen, Marines, and Guardians in harm's way; 3) Focus on capabilities that can scale quickly and dramatically reduce costs.

Funding in this Program Element is requested to support agile research, development, test and evaluation, procurement, production, modification, and operation and maintenance requirements, including the initial acquisition of end-items for operational use.

Program Element 0608776D8Z executes the Department's requirement under two project codes beginning in FY 2026: 496 - DIU Fielding and 613 - Support to COCOMs.

Project Code 496: Supports the agile research, development, test and evaluation, procurement, production, modification, and operation and maintenance requirements, including the initial acquisition of end-items for operational use.
